Edited By

Venerble Ashin Sajjana (*dvipīṭakadhara*)

Namo tassa Bhagavato Arahato Sammāsambuddhassa!
Homage to the Exalted One, the *Arahat* Buddha Supreme

Mahānamakkāra - Buddhapanāma
I begin with due respect to the Buddha

Munendakko yeko dayudayarūṇo ñānavitthiṇṇabimbo,
vineyappānoghāṃ kamlakathitaṃ dhamaramsivarehi.
Subodhesi suddhe tibhavakuhare byāpitakkittinañca,
tilokekaccakkum dukhasahanam taṃ mahesim namāmi.

Dayudayarūṇo = being possessed of a great compassion, like the morning sun which brings forth light to the darkness. *Ñānavitthiṇṇabembo* = having *sabbaññuta ñāṇa* of expansive magnitude. *Eko* = having appeared in this universe and being single

uncompared. *Yomunendakko* = the Buddha the brilliant sun. *Suddhe* = being beautiful, clean and peaceful. *Tibhavakuhare* = being at three life and three spheres, the so-called *karma-rûpa-arûpa*. *Nibbattam* = already made His appearance by virtue of the *parami* (perfection or perfect past deeds). *Kamlakathitam* = to be nominated as a “lotus”. *Vineyappânoyam* = to those humans, *devâs*, brahma and many a living beings. *Dhamma-ramsivarehi* = with the light of noble *desanâ* of the noble-beings which enables living beings to see the right path to *nibbâna*. *Subodhesi* = has arisen with the ability to see the Four Ultimate Reality with penetrative eye of wisdom.

Byâpitikkittinañca = because of the incomparable *sîla-samâdhi-paññâ* (good character) in this living world and reaching the *byammâ* plane. *Tilokekaccekkuṃ* = the single eye for the three planes of *byammâ*, *devâs* and humans. *Dukhamasahanam* = tolerating, like the great earth, things intolerable. *Mahesim* = having acquired, by way of investigating and practising, special characters such as *sîlakkhandha*, *samâdhikkhandha*, *paññakkhandha*, *vimuttikkhandha* and *vimuttiñânadassanakkhadha*. *Taṃ munindakkaṃ* = To that sun called the Buddha. *Ahaṃ* = I. *Namâmi* = Begin, with faith and humbleness, paying homage by three *cetanas kâya*, *vacî* and *mano* through the three doors.

An Auspicious Night (*Bhaddekarattasuttan*)

Before *Bhaddekarattasuttan*, description will be first made of *paccekkha ñâṇa* (the practical knowledge) and *anvaya ñâṇa* (theoretical knowledge), related to meditating on the past and future, which the *yogavacara* persons (practicing individuals) should know beforehand.

Paccekkha Ñâṇa and Anvaya Ñâṇa (The Practical and Theoretical Knowledge)

Aniccatto manasikarato adhimokkhabhahulassa saddhindriyana âdhipateyaṃ hoti, bhâvanâya cattâindriyâni tadanvayâ hunti (Padisam.-: 245).

Tadanvayâ hontîti taṃ anugâminî taṃ anuvuttinî hunti (Padisam.- Tṭha.- 2: 161).

Paññavato bhikkhave ariysaâvakassa radanvayâ saddhâ santhâti, ... (Sam.-3: 195).

Tadanvayâti taṃ anugacchamânâ, anuvuttamânâti atto (Sam.- Tha.- 3: 279).

Anvaye ñâṇanti cattâri saccâni paccakkhatto disvâ yathâ idâni, evuṃ atîtepi imeva pañcakkhandhâ dhukkhasaccam, ayameva tahnâ samudayasaccham, ayameva nirodho nirodhasaccam, ayameva maggo maggasaccanti evuṃ tassa ñâṇassa anugatiyaṃ ñâṇam (Dî.-Tṭha.-3: 202).

Anvaya ñâṇantianugamana ñâṇam. Paccekkhato disvâti cattâri saccâni magga-ñâṇena paccakkhatto disvâ (Dî.-Tî.-3: 234).

In accordance with the above *Atthakathâ dîkâ* (Commentary) *anvaya* is of two kinds: *tadanvaya dhamma* and *anvaya ñâṇa*. Then the *anvaya ñâṇa* too is of

1. One that consistently follows *Vipassanâ Ñâṇa* (insight knowledge) and
2. One that consistently follows the *Ariya Magga Ñâṇa* and *Phala Ñâṇa* (Noble Path knowledge and Fruit knowledge).

Of these two the *anvaya ñāna* that consistently follows *Vipassanā Ñāna* will first be dealt with.

Extracts from *Upanissasuttan*

Jānato aham bhikkhave passato āsavam khayam vadāmi, no ajānato no ajānako no apassato. Kañca bhikkhave jānato tim passato āsavānam khayō koti.]

1. *Iti rūpam, iti rūpassa samudayo, iti rūpassa atthaṅgamo.*
2. *Iti vedanā. R*
3. *Iti saññā. R*
4. *Iti sañkhāra. R*
5. *Iti viññānam, iti viññānassa samudayo, iti viññānassa atthaṅgamoti (Sam.-1: 267).*

Noble Ones ... I preach the nature of *Ariya Magga* and *Phala* (Noble Path and Fruit), where all *āsava* (cankers) are not present any more, only to those who on their own know penetratively by *sammāditthi ñāna* (the knowledge of right understanding) and who see penetratively by *sammāditthi ñāna*. I do not preach to those who do not know or see on their own penetratively by *sammāditthi ñāna*.

Noble Ones ... what is that they know and see on their own penetratively by *sammāditthi ñāna* so that *āsava*-free *Ariya Magga* and *Phala* are attained?

1. (a) This is (*rūpa*) corporeality,
(b) These are the nature and cause of corporeality,
(c) These are the nature and cause of cessation of corporeality.
2. (a) This is *vedanā* (suffering),
(b) These are the nature and cause of the *vedanā*,
(c) These are the nature and cause of cessation of *vedanā*.
3. (a) This is *saññā* (perception)
(b) These are the nature and cause of *saññā*,
(c) These are the nature and cause of cessation of *saññā*.
4. (a) These are the *cetasika* (mind and mental properties),
(b) These are the nature and cause of *cetasika*,
(c) These are the nature and cause of cessation of *cetasika*.
5. (a) This is *viññāna* (cognition),
(b) These are the nature and cause of *viññāna*,
(c) These are the nature and cause of cessation of *viññāna*.

Only those individuals who see and know the above five penetratively by knowledge of right understanding (*sammāditthi ñāna*) can the *āsava*-free *Ariya Magga* and *Phala* appear (*Sam.-1: 267*).

What this *desanā* (doctrine) means is as follows:

1. The five corporeality
2. The cause or formation of these five = formed with *samudaya* (arising) = *samudaya* = nature of rising
3. Cessation of these five corporeality = ceased with disappearance = disappearance = the nature of disappearance with time (or age). Only when these three are penetratively known and seen by *sammāditthi ñāna* can *Ariya Magga Ñāna* and *Phala Ñāna*, wherein all the *āsava* have ceased, be attained.

The Commentaries and Subcommentaries have explicitly have explained these as given below.

Jānatoti jānantassa. Passatoti passantassa. Dvepi padāni ekatthāni, byañjana-meva ñānaṃ. Evum santepe “jānato”ti ñāṇalakkhaṇaṃ upādāya puggalaṃ niddisati. Jānenalakkhaṇaṃ hi ñānaṃ. “Passato”ti ñāṇappabhāvum upādāya. Passanappabhāvum hi ñānaṃ, ñāṇasamaṅgipuggalo cakkhumā viya cakkhunā rūpāni, ñāṇena vivutte passati. R.

No ajānato no apassatoti yo pana na jānāti na passati, tassa no vadāmīti atto. Etena ye ajānato apassatopi samsārādīhiyeva suddim vadanti, tepatikkhattā hunti. Purimena padadvāyena upāyo vutto, iminā anupāyaṃ patisedheti (Sam.-Tha.-2: 49).

1. *Jānato passatoti ittha dassanaṃ paññācakkhunāti āha “dvepi padāni ekatthāni”ti. Evum santepeṭi padadvāyassa ekatthatepe ñāṇalakkhaṇa ñāṇappabhavavissayassa tathā-dassanabhāvavirodhanāti attho. Tenāha “jānalakkhaṇaṃ hi ñāṇa”ati ādi. Ñāṇappabhavanti ñāṇubhāvena ñāṇakiccavisayobhānti attho. Tenāha “ñāṇa vivatte dhamme-passati”ti. Jānato passatoti ca jānanadassanamokkhena puggalādhithānā desanā pavut-tāti āha “ñāṇalakkhaṇaṃ upādāyā”tiādi (Sam.-Tī.-2: 63).*

“Ñāṇalakkhananti ñānassa sabhāvum, visayassa yathāsabhāvabonanti attho (Ma.-Tī.-1: 146).

Ñāṇappabhāvanti ñāṇānubhavum, ñāṇakiccaṃ visayobhasananti attho (Ma.-Tī.-1: 146-147).

2. *Jānatoti vā pubbabhāgañāṇena jānato, aparabhāgena ñāṇena passato (Sam.-Tī.- 2: 63).*

3. *Jānatoti vā vatvā na jānanam anussavākāraparivitakkamattavasana idhādhip-petam, attha kho rūpānivīya cakkhuviññāṇena rūpādi tesaṃ ca samudayādi ke paccekkhe katvā dassananti vibhāvetum “passatoti vuttanti evum vā ittha attho (Sam.-Tī.- 2: 63).*

Jānato eva passato evāti evemettha niyamo icchito, na aññatthā visesābhāvato anitthāpannovāti tassa niyamassa phalaṃ dassetum “no ajānato no apassato”ti vittanti āha “yopana na jānāti, na passati, tassa no vadāmīti attho”ti. Iminā Khandhānaṃ pariññā āsavekkhayassa ekantikakārananti dasseti (Sam.- Tī.-2: 64).

Paccekkhakaranatthena ñātapariññā tīranapriññā ca gahitā hoti (Sam.- Tī.-2: 65).

The meaning in the opening of the above Commentaries and Subcommentaries are

Jānato = to the ones who know, *passato* = to the ones who see. These two words have similar meaning, the difference being in the wording. Though the two words of different structural pattern bear a similar meaning, *jānato* refers to the one having ability to understand the nature of concentration rightly and penetratively. Indeed, *ñāṇa* (knowledge), i.e., *sammāditthi ñāṇa*, possesses the character of understanding the true nature of concentration penetratively.

Passato refers to the ones who see the true nature of concentration by the power of *ñāṇa*. Indeed, *ñāṇa* (*sammāditthi ñāṇa*) is endowed with the power of seeing the true nature of concentration. As the form and figure are seen by one through the sense of physical eye (cognition by sight), so also the ones with *sammāditthi ñāṇa* see the true

nature of concentration through the light shone by the ñâna (*Sam.-Tha.-2: 49*).

No ajânato no apassato. To him who knows not and sees not [craving for the five aggregates, the nature of suffering due to these, and *atthiñgama* (disappearance)] I do not preach the *Ariya Magga Phala* (Noble Path), the terminus of *âsava*. This is the concept of what has been said above. By the concept of *No ajânato no apassato*, those who see not and know not, still in the sphere of rounds of rebirth, are preaching the freedom from rounds of rebirth. Such individuals must be disregarded (*Sam.-Tha.-2: 49*).

Again the Venerable Sayadaw explained the concept of the above in three ways:

1. *No ajânato no apassato* = to him who knows and sees.

In these two, “sees” should be taken philosophically as to see with eye of wisdom. *Mansa cakkhu* (*pasâda cakkhu*), the sight through physical (or absolute) eye, should not be taken as its real meaning. Therefore, the two terms *jânato* (he who knows), *passato* (he who sees) have similar conceptual sense.

Evum santepi = The expression that “though these two words have different structural pattern, of similar meaning” indicates *jânato* = to him who knows, *passato* = to him who sees, have same essence.

1. Concentration of the (*ñânalakkhana*) character of the knowledge which penetratively knows the nature of the object.
2. The nature of knowledge (*ñânappabhâva*) which shed light so that the nature of the object can be visualized.

The sense of the nature of ability to see, as mentioned above, has been described by two different words because they do not oppose one another in their conceptual sense. Therefore, the commentator has stated *jânanalakkhanam hi ñânam* = knowledge has the character of knowing the true nature of the object penetratively.

Ñânappabhâva possesses the nature light which enables one to see the nature the object rightly by the light shed by the power of wisdom. (This is in concord with *visayobhâsarasâ padîpodîya* in the Commentary *Atthasâlinî* (*Abhi.- Tha.-1:166*). That is why the Commentator Sayadaw has expatiated *ñânenâ vivatê dhamme passati* = he who has *samâditthi ñâna* (right of wisdom) can see the *dhamma* by the shining light of knowledge (*Sam.-tî.-2-63*).

[N.B. The Light of Wisdom is treated on pp. in this volume]

2. In another way *janato* means he who knows by knowledge what has come in the past.
3. In another way *passato* means he who knows by knowledge what is to come in future.
 - (a) *Anussava* (hearsay, report) via your teachers and parents you come to know by your knowledge
 - (b) *Âkâparitakka* (study of condition, careful consideration) you come to know via your thought and logical reasoning.

Just knowing by such knowledge is not applicable here. In fact, it is like just as

visualizing corporeality's by physical eye, the following should be visualized by eye of wisdom:

- (i) *Rûpa* (material quality), *vedanâ* (suffering), *saññâ* (perception), *sankhâra* (impermanence), *viññâ* (cognition)--the five aggregates as objects of grasping,
- (ii) The origin of the cause of arising and the nature of these five aggregates as objects of grasping,
- (iii) The cause and nature of cessation of these five aggregates = the nature of *udaya* (disappearance or destruction).

To make visualizing the above three more explicit, note that the Buddha preached *passato* = to him who sees to stress the point that only he who sees by his own eye of wisdom through *paccekkha ñâna* or the practical knowledge (*Sam.-Tī.-2: 63*).

Anussava and Ākâparitakka

Here *anussava* and *ākâparitakka* are once again explained.

Anu anu savanam ānussavo (*Sam. Tī.-2: 166*).

Pramparâgatassa evum kirassâti ānussavanam (*Sam. Tī.-2: 317*).

The knowledge handed down from the parents, grand and great grand parents and the teachers = what you know is termed as *anussava*. In this *Upanissa sutta janato* = to him who knows, *passato* = to him who sees are indicated not for those who just know, by his knowledge handed down from his forefathers and teachers, the five aggregates of grasping, the cause and nature of cessation of these five aggregates = the nature of *atthiñgama* (disappearance or destruction). This kind of knowledge does not represent the knowledge of eradication of factors of *āsava*.

Ākâraparisakkoti yuttiparikappanâ (*Sam. Tī.-2: 317*).

Thinking, reasoning and analysis of the logic of factors is referred to as *ākâraparisakka*. In *Upanissa sutta* too *janato* = to him who knows, *passato* = to him who sees do not refer to the one who just know by knowledge of *ākâraparisakka*. [Lord Buddha's *dhamma* are not a field of *atakkâvacara* (impractical) *takkîs* (thinkers)] (*Ma.-2: 291*).

Paccekkha Ñâna

Katamâ ca bhikkhave sammâdotthi, yan kho bhikkave dukkhe ñânam, dukkha samudaye ñânam, dukkha nirodhe ñânam, dukkha nirodhagâminiyâ patipadâya ñânam. *Ayam vuccati bhikkhave sammâditthi* (*Ma.-1: 88*).

Bhikkhus what is sammâditthi ? (right understanding)

Bhikkhus There is

1. The knowledge in understanding the *Dukkha Saccâ* (Noble Truth of Suffering)
2. The knowledge in understanding the *Samudaya Saccâ* (Noble Truth of Arising) the cause of *dukkha* (suffering)

3. The knowledge in understanding the *Nirodha Saccâ* (cessation of suffering)
4. The knowledge in understanding the *Magga Saccâ* (Noble Truth of Path), cessation of suffering which leads of *Nibbâna*. *Bhikkhus* such a kind of knowledge is the *Sammâdīṭṭhi ñâna* (*Ma*.-1: 88; *Mahâsatipathânasuttan*).

Relevant to the above *desanâs* there are *Catusaccasammâdīṭṭhi*, four *Sammâdīṭṭhi ñâna* (Four kinds of knowledge of right understanding). This knowledge is referred to as *Paṇḍita ñâna* (the practical knowledge). In this *suttan* only those who know and see by virtue of *Paṇḍita ñâna* are the ones qualified for *jânato* = he who knows, *passato* = he who sees.

1. The five aggregates as the object of grasping
2. Their impermanent nature
3. The nature of their disappearance

The preaching has been made of the Noble Path and Fruition, where factors of *âsava* have ceased, for those who know and see the above three by means of their practical knowledge.

Hence, those seeking cessation of the cause of *âsava* (cankers), the *Ariya Magga* (the Noble Path) should first try to see the following three penetratively through practical knowledge, called *Sammâdīṭṭhi ñâna* (the knowledge of right understanding):

1. The five aggregates as the object of grasping
2. Their impermanent nature
3. The nature of their disappearance

It must be noted that one should first try to be able to know and see penetratively through the right understanding, (as mentioned above) called practical knowledge, the object one is after.

Now once again the five aggregates as the object of grasping, their impermanent nature the nature of their disappearance, will be explained one by one.

What *Upâdânakkhandhâ* Is The five aggregates as the object of grasping

Yam kañci bhikkhave rūpaṃ atītânâgatapaccuppanaṃ ijjhattaṃ vâ bahiddhâ vâ olârikam vâ sukhumaṃ vâ hīnaṃ vâ pañītaṃ vâ yaṃ dure santike vâ sâsavum upâdâniyaṃ, yaṃ vuccati rūpupâdânakkhandho (*Sam*.-2: 39; *Khandhsuttan*).

With *tahnâ dīṭṭhi* (wrong understanding), whence *âsava* factors (resident in the 31 planes) arise , the clinging like “I”, “mine” -- including

1. All the *rūpa* (material factors) of the past
2. All the *rūpa* factors of the future
3. All the *rūpa* factors of the present
4. All the internal *rūpa* factors
5. All the external *rūpa* factors
6. All the gross *rūpa* factors
7. All the delicate *sukhuma rūpa* factors
8. All the inferior quality *hīna rūpa* factors
9. All the Noble *pañīta rūpa*

10. All the *dhûra rūpa* (away from the knowledge of the meditating yogi)

11. All the *santika rūpa* (close to the knowledge of the meditating yogi).

All the *rûpas* (material bodies) existing on the basis of these 11 characters are the *rûpupâdânakkhandhâ* (material body as the object of grasping).

Similarly each of the following has to be under *rûpupâdânakkhandhâ* has been expatiated (*Sam.*- 2: 39).

Eleven kinds of *vedanâ* factors as *vedanupâdânakkhandhâ* (suffering as the object of grasping), 11 kinds of *saññâ* factors as *saññupâdânakkhandhâ* (cognition as the object of grasping), 11 kinds of *Cetasika sankhâra* (impermanent mental concomitants) factors as *sankhârûpakkhandhâ* (mental concomitants as the object of grasping), 11 kinds of *viññâna* factors as *viññupâdânakkhandhâ* (perception as the object of grasping).

Therefore, as in the above-mentioned *Upanisa sutta desanâ* where *tahnâ* (defilement), *ditthi* (error or wrong view) the root of *âsava*, such as “I”, “mine”, which are based on the 11 characters called *rûpânakkhandhâ*, the Buddha admonished

1. *Iti rūpam* = this is *rûpa* (corporeality or material body)
2. *Iti vedanâ* = this is *vedanâ* (suffering)
3. *Iti saññâ* = this is *saññâ* (perception)
4. *Iti sankhâra* = this is *sankhâra* (impermanence)
5. *Iti viññânam* = this is *viññânam* (modes of cognition)

In admonishing so, the question is which kind of knowledge did the Buddha refer to in ‘this is *rûpa*; this is *vedanâ*; this is *saññâ*; these are impermanent *cetasika* ?

The answer to the above is as follows.

Iti rūpam -- Iti vedanâ

Tattha itī rūpanti idam rūpaṃ, ettakaṃ rūpaṃ, ito uddham rūpaṃ natthīti rupanasa bhāvañceva bhūtopādāyabhedanā ādim katvā lakkhana rasa paccupatthana pada thānavasena anavasesarūpapariggaho vutto. “R.”

Iti vedanâtiâdisupi ayam vedanâ, ettakâ vedanâ, ito uddham vedanâ natti. ayam saññâ. Ime sankhâra. Idam viññânam, ettakam viññânam, ito uddham viññânam natthīti vedayita-sañcānanaabhisankhārana-vijānanasabhāvañceva sukhâdi-rūpasññâdi-phassâdi-cakkhuvīññânâdibhedanā ādim katvā lakkhana-rasa-paccupatthana-padatthānavasena anavasesavedanâ-saññâ-sankhâra-viññânâpariggaho vutto (*Di.ttha*-2: 53; 273).

Iti rūpanti ettha ***itī***-saddo idam-saddena-sammānutthoti adhippāyenâha - “***idam rūpanti***. Tayidam sarūpaggaḥabhāvato anavasesapariyādānam hotīti âha “***ettam rūpam, na ito pram rūpam attīti***. ***Itīti*** vâ pakâratte nipâto, tassamâ “***itī rūpanti*** Iminâ bhūtopādâdivasena attako rūpassa pabhedo, tena sadhim rūpam anvasesato paruyâdiyisvâ dasseti. ***Sabhâvatoti*** rupanasabhâvato, cakkhâdi vunnâdi sabhâvato ca. ***Vedanâdisupīti*** etta -- “ayam vedanâ, ettakâ vedanâ, na ito pram vedanâ attī”ti sabhâvato vedanam pajânâtī”ti âdinâ, ***sabhâvatotica*** “anubhavanasabhâvato, sâtâdisa-bhâvato cā”ti evamâdinâ yojetabbam (*Dī.-Tī.*-2: 320).

Question. The Lord Buddha instructed practicing bodies to repeatedly contemplate, culture and analyze the five aggregates as object of grasping and their nature, such as - this is *rûpa*, this is *vedanâ*, this is *saññâ*, these are *cetasika sankhâra*, this is *viññâna* - by means of *sammâditthi ñâṇa* (right understanding). They the question may be asked as to how the practicing yogis would know the five aggregates as the object of grasping, and how would they concentrate by means of the *sammâditthi ñâṇa*.

Answer. The following is the answer to the above.

1. This is the *rûpa* (material body); this much is the nature of *rûpa*, no more no less than this. It is so because of the causes such as hot, cold, etc., *rûpasantati* (continuity of the material body) of the past = possesses dissimilar to the *rûpasantati* of the future = processes occurring in various forms called *rûppanasibhâva* (the character of the *rûpa*) = assume the nature of impermanence (general character common to all material qualities), twenty-eight sensitive material qualities and tangibility beginning with which *lakkhana-rasa-piccupathan-padatthan* (character-taste-reappearance-approximate cause), by which material qualities are completely deduced by means of knowledge of right understanding = must concentrate to attain complete realization is meant here.

In “this is *vedanâ*, etc.” too

2. This is *vedanâ*, this much is the *vedanâ*, no more *vedanâ* beyond this.
3. This is *saññâ* (physical cognition). R.
4. These are *cetasika* and *sankhâra*. R.
5. This is *viññâna*, this much is the *viññâna*, no more *viññâna* beyond this.
2. Nature of sensation of *vedanakkhandhâ* (suffering as object of grasping)
3. Nature of sensation of *saññakkhandhâ* (physical mode of cognition)
4. The nature of the cause and resultant formation of *sankhâranakkhandhâ* (impermanent material qualities)
5. Each of the *sankhâranakkhandhâ* causes is capable of respective resultant formation
2. Recognition of different sensations of *vedanakkhandhâ* as suffering (*vedanâ*) and *sukha* (mentally pleasurable) etc.
3. Recognition of different sensations of *saññakkhandhâ* as *rûpa* and *saññâ* etc.
4. Recognition of different sensations of *sankhâranakkhandhâ* as *phassa* (touch) and *cetanâ* (volition) etc.
5. Recognition of different sensations of *viññâkkhandhâ* as *cakkhu* (consciousness by way of sight) and *viññâṇ* (material consciousness).

Beginning with these and the power of *lakkhana, rasa, paccupatthan, padatthan* the *saññâ, vedanâ, sankhâra*, and *viññâna* are instructed to be separately analyzed and cultured. What it meant is that phenomena of *saññâ, vedanâ, sankhâra* and *viññâna* (mind-element) are all to be completely known by the knowledge of *sammâditthi* (the right understanding) = concentrate to understand (*Di.-ttha.-2-53*).

With reference to the explanations given by the above doctrines the practicing yogi has to

1. *Bhûtarûpa* (formed corporeality), *upâdârûpa* (derived corporeality) etc. of the 28 species, *pathavî* (earth), *âpo* (water), *tejo* (fire), *vâyo* (air) and each of their respective

lakkhana (character), *rasa* (taste), *paccuppatthan* (reappearance), and *padatthan* (proximate cause)

2. *Sukhavedanâ* (mentally pleasurable suffering), *dukkhavedanâ* (painful suffering), *somanassa* (mental ease), *domanassa* (mentally painful), *upekkhâvedanâ* (suffering due to equanimity) and each of their respective *lakkhana* (character), *rasa* (taste), *paccuppatthan* (reappearance), and *padatthan* (proximate cause),

3. *Rûpasaññâ*, *saddasaññâ*, *gandhasaññâ*, *rasasaññâ*, *pholapphasaññâ*, *dhammasaññâ* and each of their respective *lakkhana* (character), *rasa* (taste), *paccuppatthan* (reappearance), and *padatthan* (proximate cause),

3. *Phassa*, *cetanâ*, *ekaggatâ*, *jîvita*, *manasikâra* (intension), etc., 50 groups of *cetasika* as species included in *sankhâra* as object of grasping, and each of their respective *lakkhana* (character), *rasa* (taste), *paccuppatthan* (reappearance), and *padatthan* (proximate cause),

5. *Cakkhuvîññâna* (consciousness by way of sight), *sotavîññâna* (consciousness by way of hearing), *ghânâvîññâna* (consciousness by way of smell), *jihvâvîññâna* (consciousness by way of taste), *manovîññâna* (consciousness by way of mind) etc., and each of their respective *lakkhana* (character), *rasa* (taste), *paccuppatthan* (reappearance), and *padatthan* (proximate cause).

The practicing individual has to concentrate and culture these by means of *sammâditthi ñâna* to see and know the object penetratively. Only known and seen this way, such as

1. This is *rûpa*,
2. This is *vedanâ*,
3. This is *saññâ*,
4. These are *sankhâra*,
5. This is *vîññâna*

Only then the *yogâvacara* is said to know and see. In doing so

Cakkhumâ viya cakkhunâ rûpani (*Sam.-ṭtha.- 2: 49*),

Rûpâni viya cakkhuvîññânena rûpâdîni tesam̐ ca samudayodike paccekkhe katvâ dassanam̐ (*Sam. Tī.- 2: 63*).

In accordance with explanations given in Commentaries and Subcommentaries, as a man sees material objects by *cakkhu ñâna* so also a meditator, through the help of light shed by concentration and cultivation, cultivate these *dhamma* penetratively and maintained by *sammâditthi ñâna* called *paccekkha ñâna*.

Only knowing and seeing this way can the Noble Path and Fruit, where all the *âsava* ceased to exist, be attained. In so admonishing, the Buddha referred not to those who do not know and see penetratively by *sammâditthi ñâna* to eradicate all the factors of *âsava* to attain the Path leading to *Ariya Magga*.

Following these doctrines, with due respect, this treatise titled “*NIBBANAGAMINIPATIPADĀ*” was written to include

1. Meditation and cultivation on the *rûpupâdhânakkhandha* (28 species of material qualities), included in the *upâdânakkhandhâ* to attain *paramaṭtha* (the ultimate truth) by

means of knowledge of right understanding (*sammâditthi ñâna*) referred to as *paccekkha ñâna*. How this is cultured is given in the Meditation Exercise on Corporeality. (see Vol. I).

2. Included in the *Pañcuppâdânakkhandhâ* (the five aggregates as object of grasping) are *vedanapâdânakkhandhâ* (feeling as object of grasping), *saññupâdânakkhandhâ* (perception as object of grasping), *sankhârûpekkhandhâ* (*sankhâra* as object of grasping) and *viñânupâdânakkhandhâ* (consciousness as object of grasping). These are meditated by *sammâditthi ñâna* called *paccakkhan ñâna* to attain the knowledge of *paramattha ñâna*.

3. This is referred to as Meditation Exercise on *Nâma*. This section is presented in Vol. II.

The nature of *rûpa* (material phenomenon), *nâma* (mental phenomenon) and elements of *paramattha* (ultimate truth) are included in the *Pañcuppâdânakkhandhâ* (the five aggregates as object of grasping). They are individually analyzed, concentrated and cultivated by the power of *paccupathan* and *padathan*, and *sammâditthi ñâna* called *paccakkhan ñâna*. This is referred to as *Lakkhanâdicatukka* (see Vol. IV).

In continuation, the second part of *Upanisassuttan* given above -- *Iti rūpassa samudayo*. R. *Iti vinñānassa samudayo*--will further be explained.

Iti rūpassa samudayo. R. Iti vinñānassa samudayo

Iti rūpassa samudayoti evum avijjāsamudayadivasena pañcahākārehi rūpassa samudayo (Dī-Ttha.-2: 373).

Tassa vitthāro “avijjāsamudayo rūpasamudayo, tahnāsamudayo rūpasamudato, kammāsamudayo rūpasamudayo, āhārasamudayoti rūpasamudayoti, nibbattilakkhanan passantopi rūpakkhādhassa udayam passatīti (Patisam. 53).

Evum veditabbo (Tī.-Ttha.-2: 53).

Avijjāsamudayāti avijjāya uppādā, atthibhāvāti attho. Nirodhanirodhī hi uppādo atthibhāvācakopi hoti, tassamā pūtimabhavasiddhāya avijjāya sati imassamim bhavē rūpasamudayo. Rūpassa uppādo hotīti attho. “Tahnāsamudayo”tiādisuppi eseva nayo. Āhārasamudayoti ittha pana pavattipacceyesu kabalikārāhārassa balavatāya so eva gahito. Tassamim pana gahite pavattipaccayatāsamaññena utucittāni gahitāneva huntīti catusamutthānikarūpassa paccayo udayadassanm vibhāvitamevāti datthabbam.

“Nibbattilakkhanan”tiādinā kālavasena udayadassanamāha. Tattha ***nibbattilakkhananti*** rūpassa uppādasankhātā sañkhatalakkhanam. ***Passantopīti*** na kevalam paccayasamudayameva. Ha kho khanato udayam passantopi. Addhānavasena hi patthamam udayam passitvā thitio punna santativasena disvā anukkamena khanavasena passati (Dī.tī.-3-53: 54).

Nibbattilakkhananti addhā-santati-khanavasena rūpassa uppādam, uppādoyeva sankhatalakkhanattā lakkhananti ca vutto (Patisam.- Tha.- 1: 235).

In the opening of the Commentaries and Subcommentaries with reference to the above *Patisambhidāmagga* the object of meditating instructions such as ***Iti rūpassa samudayo*** is as given below.

Contemplation on the *Samudaya* of *Rūpakkhādhā*

1. Because of *avijjā* (ignorance) the material quality born of *kamma* is formed.

2. Because of *tahnâ* (craving) the material quality born of *kamma* is formed.
3. Because of *upâdan* (grasping) the material quality born of *kamma* is formed.
4. Because of *sankhâra* (action of mind) the material quality born of *kamma* is formed.
5. Because of *kamma* (action) the material quality born of *kamma* is formed.
- * The nature of formation of material quality born of *kamma*.
6. Because of *citta* (mind/thought) the material quality born of mind is formed.
- * The nature of formation of material quality born of mind.
7. Because of *utu* (physical change) material quality born of *utu* is formed.
- The nature of formation of material quality of born of *utu*.
8. Because of *âhâra* (nutrition/food) material quality of born of *âhâra* is formed.
- * The nature of formation of material quality born of *âhâra*.

These are the objects of concentration. A broader treatment on this object of concentration is made, Vol. V, in section on *Vipassanâ*, and *Samudayadhammânupassî* in Method of Concentration on *Udayabbaya* in a broader sense.

In the contemplation—because of ignorance material quality born of *kamma* is formed—the distinct causal factor = due to distinct cause a distinct result occurs should be concentrated. This contemplating phenomenon is the *paccayato udayadassana* = nature of *samudaya* by way of cause = contemplating on the result due to the cause. Concentrating on the nature of the formation of material quality born of *kamma* and that born of consciousness is the causal relationship called *khanato udayadassan* = concentrating for a moment on the nature of *samudaya* = concentrating on the formation momentarily.

In this contemplation too —

Cakkhumâ viya cakkhunâ rūpâni (Sam. Tha.- 2: 49).

*Rūpâni viya cakkhuvinnâna rūpâdini tesam ca samudayâdike paccakkhe katvâ
dassanam (Sam. Tī.- 2: 63).*

According to these teaching—like a man seeing material bodies by physical cognition so should a practicing individual (*yogâvacara* or a meditator) be contemplating on these factors by the knowledge through which these are appreciated penetratively via *sammâditthi ñâna* called *paccekkha ñâna*.

To be able to do so a meditator should have cultivated the following:

1. The respective causes of *avijjâ* (ignorance), *tahnâ* (craving), *upâdan* (grasping), *sankhâra* (mental action), *kamma* (action) etc.
 2. *Rūpa-vedanâ-saññâ-sankhâra-viññâna*, the resultant factors.
 3. Because these causes, the respectively results distinctly occur, and the nature of cause-effect correlation.
- (These belong to the knowledge of *Nâma-rūpapariccheda* and of *Paccayapriggaha*) (insight knowledge or analytical knowledge of mind and matter, and the knowledge of causal relationship).

Only those *yogâvacara* (meditators) who have cultivated these knowledge of *Nâmarūpapariccheda* and of *Paccayapriggaha* will be able to concentrate on the

sammudayadhammânupassi (repeated recollection of *sammudaya dhamma*). Therefore, this meditation has been explained by the Sayadaw in section on *Udayabbaya ñâna* by Commentary of *Visuddhi Magga* (see *Visuddhi* - 2: 266).

In this contemplation *avijjâ*, *tahnâ*, *upâdân*, *sankhâra*, *kamma* are the real causes of the present *rûpa* and *nâma* factors of the five *upâdânakkhandhâ*, included in the *vipâkâ vatta* (function of the effect of one's actions). As to when these causes made their appearance, the following extracts from *Patisambhidâ Magga* will give the answer.

Extracts from *Patisambhidâ Magga*

The Past Five Causes

Purimakammabhavassamem moho avijjâ, âyûhanâ sankhârâ, nikanti thnâ, upagamanam upâdânam, cetanâ bhavoti ime pañca dhammâ Purimakammabhavassamem idha patisamdhivyâ paccayâ (*Patisam.*-50).

Tattha, purimakammabhavassamenti purime kammabhava, atîtajâtiyam kammabhava kriyamâneti attho (*Abhi.-ttha.*-182; *Visuddhi*-2: 214).

During previous life, when *kamma* (a cause), called *kammabhava* (active functioning of life in relation to the past) was cultivated

1. Nature of the wrong notion of the Four Noble Truth, and of male, female, individuality, sentient being, human being, *devâ*, *brahmâ* etc., are all *avijjâ* (ignorance).

2. Human life = man's material body = *devâs'* material body, and the factors that cause appearance of these, *kusala* (good deed), *akusala* (bad deed) (done with *mettâ* or without *mettâ*) are all *sankhâra* (arising, action of mind).

3. Human life, life of *devâ* etc., and the nature of attachment to these material *kamma* are all *tahnâ*.

4. The nature of attachment mentally upon these life and material *karma* all belong to *upâdan* (derived from grasping).

5. Such *kuso cetanâ* (meritorious action) or *akuso cetanâ* (non-meritorious action) all mean *bhava* (rounds of rebirth).

(*Kammabhava* = *kamma*, action. In concentrating on *vipassanâ* (insight), effort must be made of *cetanâ* (volition). In concentrating on cause-effect correlation, effort must be made of *kammasatti* (potent action) = *kamma* (action).

In this way, if *kammabhava* (active life) of the past life = if *kamma* is distinctly present, these five that have appeared = that are making their appearance then these five *dhamma* are the five corporeality of the rebirth in the present life (*Patisam.*-50).

In these five causal factors *avijjâ*, *tahnâ* and *upâdan* are the consequences of craving. *Sankhâra* and *kamma* are the consequences of the action. These are the five past causes. Because of these five past causes the following five present results have appeared. These results are the *vipâkavatta* (function of effect of one's action).

The Five Species of Present Resultants

Idha patisandhi viññânam, okkanti nâmarûpam, pasâdo âyatanam, phattho phasso, vedayitam vedanâ, ime pañca dhammâ idhûpapattibhvassamem purekatassa kammassa paccayâ (*Patisam.*-50).

In the present life

1. The nature of connection, liability to connect, of a past life with the present one, the *patisandhe citta* (rebirth consciousness), or *vipâka citta* (consciousness of consequences of one's action) is the *viññâna* (mental cognition).
2. The nature of entrance into mother's womb is the *nâmarûpa* (mind and matter).
3. *Pasâda* (clearness or clarity) like *cakkhu* (sight) etc. are the *salâyatana* (sense objects).
4. Nature of contact as object or liable to make contact is the *phassa* (Contact).
5. The nature of or factor of feeling of the object as concentration is the *vedanâ* (suffering).

In this way in the present life if there is *jâti* (birth), called the *upapattibhava* (resultant way of next life), the these five *dhamma*, which have appeared and the appearance completed, are the results of the *kamma* cultivated during previous existence (*Patisam.*-50).

The Five Species of The Present Causes

Idha paripakkattâ âyatanânam moho avijjâ, âyûhanâ sankhâra, nikanti tahnâ, upagamanam upâdânam, cetanâ bhavoti ime pañca ghammâ idha kammabhavassamem âyattem patisandhiyâ paccayâ (*Patisam.*-50).

In the present existence, due to maturity of *Âyatana* (groups of sense objects)

1. The nature ignorance of the Four *Sacca* (the Four Noble Truth), wrong concept of being male, female, individuality, animals, human, celestial *devâs*, brahmâ etc. are all *avijjâ*.
2. The appearance of five corporeality like human life = material human body, life of celestial being = material body of celestial being, etc. and the factors, which make these appear, such as *kusala* and *akusala* (actions meritorious or not) are all *sankhâra*.
3. The nature of clinging to these material *kamma* (material bodies) are all *tahnâ* (desire).
4. The nature of attachment mentally to such *kamma* bodies and *kammavatthu* is *upâdan* (grasping).
5. Such and such *kusocetanâ* (meritorious volition) or *akusocetanâ* (non-meritorious volition) means *bhava* (life/ a form of rebirth). (*Kammabhava* = *kamma*).

In this way if these five categories are present as *kammabhava* (sensual existence) in the existing life, there occurs rebirth as the resultant (*Patisam.*-50).

[Note. In the present life incident *âyatana* mind is enjoyable, but mostly unable to create a *bhava* resulting from effort to produce a new life during preceding one. So the Buddha preached stressing the point of maturity of *âyatana dhamma*].

The Five Future Resultants

Âyattem patisandhi viññânam, okkanti nâmarûpam, pasâ âyatanam, phuttho phasso vedayitam vedanâ, ime pañca dhammâ upapattibhavassamem idhakatassa kammassa paccayâ (*Patisam.*-51).

1. Rebirth consciousness, in other words rebirth consciousness, which has the nature or tendency to again relate a present life with a previous one is the mental factor.

2. The nature of formation as in conception in the maternal interior is the *nâma-rûpa* mind and material factor).
3. Visual feeling is the *salâyatana* (sense as object)
4. Nature of contact as object or liable to make contact is the *phassa* (Contact).
5. Nature of enjoyment in senses, and categories of sensation is the *vednâ* (suffering).

Therefore in future life, if there is *upapattibhava* (resultant way of next life) called *jâti* (birth), these five categories would be derived from the previously cultivated *kamma* (*Patisam.-51*).

Classification of Period

In this *paticcasamuppâda* (cause-result relationship) *desanâ* are 12 categories: *avijjâ, sankhâra, viññâna, nâma-rûpa, salâyatana, phassa, vedanâ, tahnâ, upâdan, bhava, jâti, jaramarana*.

These 12 categories, as instructed by *Patisambhidâmagga* (Analysis of Path in *Pâli*) the period have been recognized by *Abhidhammatthâ Saṅgâha* (the collection of doctrines) as given below.

Avijjâ sankhâra atîto addhâ, jâti, jarâmaranam anâgato addhâ, macche attha paccuppanno addhâ (*Abhidhammattha saṅgaha* - 132).

Avijjâ and *sankhâra* are the categories of the long past period. *Jâti* (rebirth), *jarâmarana* (decay, death) are the categories of the period to come (future period). In between these two are *viññâna, nâma-rûpa, salâyatana, phassa, vedanâ, tahnâ, upâdan, bhava* (= *kammabhava*), the categories of the present period (*Abhidhammattha Saṅgaha* - 132).

The 12 factors of *Paticcasamupâda* are classified by the periods with the present existence placed midway between the past and the future. This is the doctrine indicating the repetition and correlation between each of the 12 factors of *Paticcasamupâda*. Similarly the contemplation can be made, as much as possible, the repetition and correlation between on the individual factors of the *Paticcasamupâda* by concentrating the mind on the past and future *bhava*.

Atîtepi paccayâ ceva paccayasamuppannadhammâ ca, anâgatepi etarahipi paccayâ ceva paccayasamuppannadhammâ ca (*Abhi.-Tîha.- 2: 242*).

1. In the past too, there are only the phenomena of causes and results.
2. In the future too, there are only the phenomena of causes and results.
3. In the present too, there are only the phenomena of causes and results.

Relevant to the explanation given by the above *Sammohavinodanî Athhakathâ* (Commentary on Dispelling of being Infatuated), to know that on the past also there are factors of cause and result, the cause and result of two or three previous lives should be cultivated.

Ekadesato jânitabbam

Vipassakena pana kammantaraṇca ekadesato jânitabbam (*Visuddhi* - 2: 237).

Ekadesato jânitabbam *anavasesato jâtitum na sakkâ avisayattâ. Sabbena sabbam ajânane paccayapriggaho na paripûrati* (*Mahâdî* - 2: 380).

Ditthadhammavedanīyakam = action fruitful in the present life, *upapajjavedanīyakam* = action that is going to be fruitful in the second life, *aprapriyavedanīyakam* = action that will be fruitful from third life to the attainment of *Nibbāna* etc. *Kamma* (action) are of various kinds. Among them

A meditator exercising on *vipassanā* (insight) should know in part with considerable strength or weakness in *kamma* called *kammantara* (*kamma*-formation); *kamma* of different categories, of inferior quality or superior quality results of actions, cleanliness or not of mental actions so-called mental formation. These are *ekadesa* = in part which are to be mentally cultivated. The disciples are unable to attain complete accomplishment of these *kammantara* and *vipākkantara* (Fruit-formation). It is so because these are not the affairs of *sāvakas* (disciples), but are only of the omniscience and perfectly enlightened ones, *Sabbñāṇūsammāsambhuddha*.

If the *kammantara* and *vipākkantara* (factors of cause and results of *kamma*), then the knowledge of acquiring the cause or result referred to as *paccayapariggaha ñāna* (knowledge based on acquisition) will never be accomplished (*Visuddhi*- 2 - 237; *Mahādi* -2 - 380).

A *yogāvacara* individual (a meditator) meditating on the *kamma* and its results by *sammāditthi ñāna* on the *kamma* and its results by *sammāditthi ñāna*, especially on the fact that due to cultivation surrounded by *avijjā*, *tahnā* and *upādan* in the past, the rebirth *nāma-rūpa*, the resultant *vipāka* of the present are formed. In such way of cultivation, the question arises as to should one be contented with what has been acquired by hearsay from one's teachers? The answer follows.

Ñānasamaṇḍi puggalo cakkhumā viya cakkhunā rūpāni, ñānena vivate dhamme passati
(*Sam.-ttha*.-2:49).

Jānatoti vā vattvā na jānanam anussavākāraprivitakkamattavasena idhādhippetam, atha kho rūpāni viya cakkhuviñānena rūpādāni tesaṃ ca samudayādiḥ paccakkhe katvā dassananti vibhāvetum “passato”ti vattanti evum vā ettha attho (*Sam.-Tī*.-2: 63).

Satisfaction with the knowledge of hearsay, heard and taught by the teacher is what you know = hearsay knowledge and is unacceptable here. The fact that just knowing by thinking on the basis of the prevailing state (or condition), such as “This could be it. This could it”, is just your own knowledge acquired through thinking. Such a knowledge also is not acceptable here. Indeed, what is acceptable is that just as seeing a material body through the physical eye, so should a *yogāvacara* (meditator) see by the light of *vipassanā* insight called *paccaya pariggaha* knowledge. By means of the *vipassanā* insight, the *upādāna-kkhandhā* (the five-fold clinging to the existence), the nature of the origin of *upādāna-kkhandhā*, the nature of its ceasing etc., should be known penetratively by the right understanding called the practical knowledge. Here such a knowledge as *dassana* = knowledge, sight, only is acceptable (*Sam.-Tha*.-2-49; *Sam.-tī*.-2-63).

Could We Know and See This Way

As a disciple, could a meditator know, penetratively by insight knowledge, the categories of action of mind cultivated with *avijjâ*, *tahnâ*, and *upâdan* of the past rebirth material, cause the derived resultant of the present appear? It is a question made by those of good deed would like to know the answer. If you are not contended, then continue on the following.

Nibbatti Passitabbâ

Those *yogâvacara* individuals who have acquired analytical knowledge of mind and matter and familiar with the knowledge analytically, should contemplate concentrating on the *nâma-rûpa*, *sasnkhâra dhamma* and their causes with emphasis on the three properties of existing things. In so exercising the *vipassanâ* Patisambhidâmagga instructed the concentration to be made so that *nibbatti lakkhanâ* (properties of formation) is apprehended in your mind (*Patisam.* - 53: 54). With regard to the *nibbatti lakkhanâ*

Commentary on *Patisambidâ* give the following three expiations.

Nibbatti lakkhananti addhâ-santati-khanavasena rūpassa uppâdam, uppâdoyeva sañkhatalakkhanatta lakkhananti ca vutto (Patisam-Tha- 1: 235).

Nibbatti is of three categories: *addhânibbatti*, *santatinibbatti*, *khananibbatti*.

1. In a lifetime from birth to death the properties of *rûpa* and *nâma* (the material and mental properties) are the groups of the present factors. The nature of appearance of these properties is the *addhânibbatti* (present formations).

2. The material and mental properties within a series of form and of mind are the groups of the present. The nature of formation of these true factors of the present is the *santatinibbatti* (continuity of forms).

3. Three species of *khana* (moment) such as *upâda* (the arising) - *thî* (the static) - *bhin* (perishing away), which are included in the mind and material qualities, are the categories of the *khana* (momentary) present. The nature of formation of the *khana*-present *khananibbatti*.

4. Furthermore, Commentary on *Visuddhimagga* recommended that contemplation must be made of the appearance again and again of *kammajarûpa*, derived from *kamma*, from birth *khana*. This is *kammatanibbatti*. Similarly the formation of thought moment due to mind, of physical change, and of food are to be known and visualized by concentration through *vipassanâ ñâna*. Characteristic of *nibbatti* (material body), relentless formation and destruction, and their character formation called *nibbattilakkhana* (character of rising) should be cultured by *vipassanâ* method of concentration (*Visuddhi* -2-249-252).

5. Again, through the *kamma* (action) of the long past life from rebirth mid to the origin of the phenomenon of mind, the features of *nibbatti* during formation, coincidence of mind doors, the causes due to which phenomena of mind start to appear—the features of *nibbatti*—are to be contemplated by *vipassanâ* method (*Visuddhi* -2: 252-253).

A Brief Instruction to Meditation

... *kâlena rūpam sammatitabbam, kâlena arūpam. Rūpam sammasantena rūpassa nibbatti passitabbâ. Seyathidam--idam rūpam nâma kammâdivasena catûhi kâranehi nibbatti. Tattha sabbesam sattânânam rūpam nibbattamânânam patthamam kammato nibbatti. Patisandhikkhaneyeva hi gabbhaseyakânânam tâva tisantivasena vatthu-kâya-bhâvadassakasankhâtâni temsarûpâni nibbattanti, tâni ca kho patisandhicittassa uppâdakkhaneyeva. Yathâ ca uppâdakkhane, tathâ thitikkhanepi bhangakkhanepi ...*
(*Visuddhi* 2: 248-249)

Yathâ ca rūpam sammasantena rūpassa, evum arûoam sammasantenapi arûpassa nibbatti passitabbâ. Sâ ca kho ekâsîti lokiyacittuppâdavasena. Seyathidam -- idañhi arûpam nâma pûrimabheva âyûhitakammavasena patisamdhiyam tâva ekûnavîsati-cittuppâdappabhedam nibbatti (*Visuddhi*-2: 252).

Nibbatti passitabbâ — from the time of rebirth to throughout life time formation material and mind called the nature of *nibbatti* is to be contemplated — means contemplation should be made by always following the doctrines by knowledge of *anumâna* = inference should be contemplated. Following such an incessant concentration, meditation becomes impinging on the mind = concentration may also become fruitful by contemplating practical knowledge (*Mahâtî*-2: 399).

This knowledge of inference is the one formed during the past. A disciple should not be contented with this knowledge only. In fact contemplation should be made to attain the next step, *paccakkha ñâna* (the practical knowledge).

This means that if a meditator, who has attained *sammâ ditthi* (the right understanding), starts to exercise concentration on the material body, the nature of each of the Four Great Elements are to be concentrated

1. The nature of hardness of the Earth-element.
2. The nature of flowing and cohesion of the Water-element.
3. The nature of the hotness of the Fire-element.
4. The nature of the support of the Air-element.

Suppose natural phenomena of the Four Great Elements are cultured to start with. As soon as they are cultivated, it will be very hard to concentrate and culture on the material features and the natural phenomena of each element of the Four Great Element by penetrative mental quality. These individual phenomena, called the nature of ultimate reality can, however, be cultured if the meditator is of the status of *Ariyas* (the Noble Ones) like the Venerable *Sariputtara* and the Venerable *Bahiyadârûciriya*.

Within each group of *rûpakalâpa* (a combination of material bodies) are the natural phenomena of their own of the Four Great Elements. Following the instructions given by the doctrines, the natural phenomena, such as the nature of hardness, flowing, hotness and support are to be exercised and cultured by the knowledge. In doing so, the meditator, whose *ñâna* (knowledge) has not as yet arrived at knowing the natural phenomena of the Four Great Element called the *paramatta* (the ultimate truth) could still not split the bulk of such *rûpa* or the aggregates of material bodies (referred to as *santatighana* = continuity of the solid mass, *samûhaghana* = obligatory solid mass, *kiccaghana* = aggregated solid mass etc.). Therefore, his *bhavanâ ñâna* (knowledge of

meditation) can only be exercised in the field of *santatipaññatti* (notion of continuity of solid mass), *samûhapaññatti* (notion of obligatory solid mass) and *kiccapaññatti* (notion of aggregated solid mass).

These concepts (or notions), however, are the ones from which the *paramatta*, called the essence of element, can be derived. It is a concept of *pathavî kasina* (circle of earth) perception derived from concentration on the circles of earth dispersed in the 10 directions, and it is not the *paññatti* (notion) from which the ultimate reality of the element cannot be attained. Nor it is the space-circle from which the ultimate reality of the elements cannot be derived.

Since the perception of duration of the *santatipaññatti* are still lingering on him, the meditator has to be exercising on the nature of the Four Great Element, such as hardness, flowing, hotness and support. While concentrating in this way, the knowledge of the mental culture is completely attained. Only then are the material character of the individual groups of the Four Great Element, called the ultimate real element can penetratively be cultured. (see Meditation on *Rûpa* for detail).

Similarly when contemplation is made on the *nibbattilakkhanâ* (phenomenon of formation) too, the meditator should concentrate on the material and mental formation of rebirth due to the *kamma* of the past, also due to the past *kamma* the material and mental formations, included in *vipâkavatta*, occurring throughout the life time, the nature of arising of material and mental formation of rebirth (nature of *nibbatti*), if the *bhâvanâ ñâna* is still immature, the meditator could not cultivate at once. According the Buddha's *desanâ* — there are 30 classes of *rûpa* during the period of rebirth, 34 if it is *tihissomanassa* (three-fold mental case) — by power of *anumâna* knowledge which follows instructions in the doctrines, and the concentration is made by imagination. But the exercise should be continued until *paccakkhan ñâna* (practical knowledge) is acquired.

In practicing by *anumâna* (inference), at a time when *bhâvanâ ñâna* is still immature, *rûpa-nâma* are cultivated in sequence directed towards the rebirth phenomenon. Because much emphasis was made on mental exercise in the field of *paññatta* all along the *sansarâ*. In such consciousness are included the mind-door impressions called conceptual attention, due to culture of which images of these conceptions sometimes appear in a practicing *yogi* (*yogâvacara*). These aggregates are due to present still of the concept of duration of compactness and the configuration. These, however, are the ones from which the concept of essence of the element, referred to as the ultimate reality, can be derived. Since the meditator still has this conceptual knowledge of the compactness, massive, etc., he has to continue exercise on the Four Great Element. If successful, culture of mind and material qualities further can be made. Every time the image of the concept appears, this method has to be applied. If the exercise along this trend and mental culture matured, then the phenomenon of form from its origin to mind and material of rebirth will penetratively be visualized by mean of the *sammâditthi ñâna*, called the practical knowledge.

If the concentration is continued in this way, and the maturity of mental culture acquired surrounded by *avijjâ*, *tahnâ*, and *upâdam* and be cultivated by means of these *avijjâ*, *tahnâ*, *upâdam* and *sankhâra*, mind and material of the rebirth, and the respective results of actions of mind and material, and the phenomena of *nibbatti* will be visualized.

(see section *Paticca samuppâda* for more details).

In this meditation by penetrative practical knowledge appearance of the respective results of mind and material of rebirth *avijjâ*, *tahnâ*, *upâdam* and *sankhâra* are the respective causes are *Paccayato udayadassana* = method of contemplation on cause-result phenomenon of appearance of the mind and material formation, the phenomena of *upâda* by penetrative knowledge is the *khanato udayadassana* = contemplation on the momentary formation. (see section on *Udayabbayañâna* for more detail).

What Kind of Action Is It

In concentrating so *Samyotta*, Commentary scriptures which describe *Upanisa suttan* (*Sam.-Tha.*-2-49; *Sam.Ti.*-2-63) expounded as a man sees different kinds of *rûpâyon* (visible material factors) by means of *cakkhu ñâna* (knowledge of sight), so should a practicing yogi see mental and material causes, *pacñcânakkhandhâ* (the Five Corporeality), initiation of material body formation, phenomenon of the nature of *nibbatti*, due to the causes such as *avijjâ*, *tahnâ*, *upâdam* and *sankhâra* etc., difference of respective results of mental and material form of rebirth, the nature of *samudaya* should be seen penetratively by *sammâditthi ñâna* called *paccekkha ñâna*.

Only if one knows and sees this way and only he who knows and sees this way, can *Magga Ñâna* (Path-Knowledge), where all the phenomena of *âsava* (the fetters) have ceased, be attained is what the Buddha has expatiated in *Upani Suttan*.

Again in the Commentary of *Visuddhi Magga* (*Visuddhi* 2-237) it has been indicated that an individual exercising on the *vipassanâ* insight should try to penetratively know, in part the formation and results of the mind and material forms, by means of the *paccekkha ñâna* (practical knowledge).

Therefore, a Noble one, when culturing the causes of the Past, should concentrate in such a way that as different visual forms are recognized by the consciousness of visual perception so should *avijjâ*, *tahnâ*, *upâdam* and *sankhâra* of the Past *kamma* be acquired by the light of *vipassanâ* knowledge.

Among the sentient beings, one is different from another with regard to the *avijjâ*, *tahnâ*, *upâdam*, the *sankhâra kamma* also is different among individual beings.

Some wish to be a monk and so performed *karma*-formation in the Past to be reborn as a male. Such an action is surrounded by wrong-knowing as a “male” is *avijjâ* (ignorance), attachment to a male’s life *tahnâ* (craving), holding on to it mentally *upâdan* (grasping). Some wish to be female. Some wish to be a female and so performed *karma*-formation in the Past to be reborn as a female. Such an action is surrounded by wrong-knowing as a “female” is *avijjâ* (ignorance), attachment to a female’s life *tahnâ* (craving), holding on to it mentally *upâdan* (grasping).

In the same way, individuals are usually dissimilar in action of mind. Some meditating individuals enjoy more benefit from the action of alms offering, some from exercise in *sîla* (virtue), and some from *bhâvanâ* (mental culture). In the alms offering action again, some benefit from donation of food, some from offering of flowers, and some from donation of robe. Similarly in the action of *sîla*, some are benefited from the

Five Precepts, some from Eight Precepts, and some from Ten Precepts. In mental culture too, some are benefited by *Ānâpâna* (in-breath and out-breath mental culture), some by *mettâ bhâvanâ* (cultivation by mind of love to all living beings), and some by *kasinabhâvanâ* (mental cultivation of hypnotic circles). {Here special reference is made to *upâcâra* (approach), *kâmâvacara* (world of pleasures), and *sammâdhijo* (concentration)}.

In this way *kamma* may differ among each other in the *yogâvacara* (meditating individuals). They should concentrate and culture on the fact that *avijjâ* (ignorance), *tahnâ* (craving) and *upâdan* (grasping) differ, that due to such differences as the *avijjâ*, *tahnâ*, *upâdam* and *sankhâra*, the five aggregates of male, female, celestial being, brahma etc., arise. As such results with different forms are recognized by the sense of physical eye, so should they be mentally visualized and cultured by *sammâditthiñânacakkhu* (the right understanding eye of wisdom) called the *paccakkhañânacakkhu* (eye of practical knowledge). Only known and seen this way, then — *itirûpam samudayo*. R. *Itivîññânassa samudayo* — *Samudaya* as the object of contemplation will be acquired, as given in *Upanisa Suttan*.

Stop a While and Ponder

Suppose you the noble one are at the age of 60. Your mind and matter of rebirth are the mind and matter of the five aggregates of the object of grasping when you began as a conceptus within your mother 60 years ago. Initiation of these mind and matter of rebirth, the nature of *nibbatti* = nature of the causes are to be cultured by the *paccakkhanñâna*, as instructed in the Commentaries and Subcommentaries.

Again these mind and matter of rebirth etc. of the five aggregates, grasping which are functions of the effect of your action caused by *avijjâ*, *tahnâ*, *upâdam* and *sankhâra*, and *kamma*, are also —

Purimakammabhavassamim (Patisam.-50).

Purimakammabhavassamenti purime kammabhava atitajâtiyam kammabhava kariyamâneti attho (Abhi. ttha.-2-182; Visuddhi-2-214).

Such are the collections of *dhamma* formed during the cultivation of *kammabhava* in the Past, the Commentary and Subcommentary instructed.

The Lord in *Upanisasuttan* preached that

Because of such conspicuous causes as *avijjâ*, *tahnâ*, *upâdam* and *sankhâra*, *dhamma* respectively, the nature of formation of the five corporeality, initiation of the five material quality of rebirth, the *nibbattilakkhanâ* (the character of the formation) = nature of arising.

He who sees and knows by *paccakkhañâna* can *Ariya Magga Phala* (the Noble Path and Fruition), where all *âsava* factors no more exist, can be attained. He who does not see and know by the *paccakkhañâna* cannot attain *Ariya Magga Phala* (the Noble Path and Fruition), where all factors of *âsava* have ceased. The nature of the formation of future result due to the present cause, the formation of such a cause, the nature of formation of the future results, called the nature of formation, should be concentrated in a similar way as above. {The Method of Contemplation is treated in detail in section on

Paticca samuppâda, Vipassanâ and Udayabbaya Ñâna }.

So you the noble one should consider whether or not the factors of the Past and Future or the causes and results involved in your Past and Future life be concentrated so as to know and see penetratively by *sammâditthi ñâna*.

Mental Culture of the Past and Future by means of *Anvaya Ñâna*

Anamataggoyam bhikkhave sansâro, pubbâ koṭi na paññâyati (Sam.-2: 121).

In accordance with these doctrines, a living being can recollect his past *sansarâ* journey sequentially by means of *ñâna*. But it is too long a journey to know the point of initiation. The formation (or arising) and disappearance throughout this journey of *rûpanâma sankhâra* (the material and mental qualities), and their causes and results cannot be completely concentrated nor cultivated nor analyzed via *ñâna* by a *sâvaka* (a disciple).

Dogho balâna sansâro, saddhammam avijânatami (Khu.-1: 22; Dhammapada).

So long too is the future *sansarâ* journey for humans without moral sense (foolish humans in short) who are still ignorant of the *dhmma* of the nobles called the Four Noble Truth. The arising and disappearance throughout this journey of the *rûpanâma sankhâra*, and causes and results cannot be completely concentrated nor cultured nor analyzed, via *ñâna*, by a *sâvaka*.

Again during a life time *addhâpaccupanna* (the long present) extending from the start of rebirth to death, *rûpanâma sankhâra* that have been formed, and the causes and results cannot be completely concentrated nor cultured nor analyzed via *ñâna* by a *sâvaka*. This is because only *ekadesa* = concentration, culture and analysis via *ñâna* can partly be made by the *sâvakas*.

Once again let me explain a little further. Along a life time from rebirth to death, a multitude of material bodies, that have been formed, forming and to be formed, are too many in the existence of a sentient being. Let alone those formed, in the forming and be formed, the material bodies during the continued existence as arising, static and perishing away states, all the material bodies of medium-sized human are, assumed on the basis of knowledge, would be atom-sized particles of *donamattâ* = **a quarter** of a unit in weight (*Visuddhi*-1-361). In each of these minute particles there always are the Four Element. But *sâvakas* cannot concentrate on each and every element contained in each particle. Only some element in some particles can be concentrated. Some *pathavî dhātu* (earth-element) can be captured in the concentration, but some are left out of it. Note that so also will be the *âpo dhātu* (water-element), and *upâdârûpa* (the derived material bodies).

Similarly in a life time there will be a number of *cakkhuvinnâna* = a number of *cakkhuvinnânavîthi* (process of *cakkhuvinnâna*), and from among these a number of *cakkhuvinnâ* = a number of *cakkhuvinnânavîthi* could have been collected by a *sâvaka*. A number of *cakkhuvinnâ* = a number of *cakkhuvinnânavîthi* could have escaped a *sâvaka*'s collection. It should be noted that a similar phenomena occur in *sotavinnâna* = *sotavinnânavîthi*.

In exercising *vipassanā* on *nāma-rūpa* called *addhāpaccuppanna* (the long-period present), only a fraction of the whole can be cultivated, a larger fraction escaped the exercise and being cultivated.

In exercising *vipassanā* on *nāma-rūpa* called *addhāpaccuppanna* (the long-period present), only a fraction of the whole can be cultivated by a meditator. Other fraction escaped the meditation. So also in concentrating on the Past and Future, some will be collected, but others escaped the collection. The *nāma-rūpa* left uncollected become more and more in magnitude.

In the same way, in exercising on the cause-effect factors, only a small fraction will be collected. That which escaped collection becomes more and more. It is because the *sāvaka* (disciple) can collect only a small fraction of *kamma-kamma* results during that moment.

The Buddha is endowed with 12 *vipākas* (consequences of action). For each *vipāka* a particular *kamma* is present. Similarly, each *sāvaka* during his life time must naturally have encountered many kinds of agreeable and disagreeable objects (*Itthārammana* and *Anitthārammana* respectively). Encountering agreeable objects is due to *kusalakamma* (meritorious actions) of many a kind in the past. Encountering disagreeable objects is due to *akusalakamma* (non-meritorious actions) of many kinds in the past. The objects *kamma* and *kamma* resultants cannot be completely concentrated by a *sāvaka*, because it is not their affair. The *kamma-kamma* resultant which has been contemplated and cultured is very few. That on which no *vipassanā* exercise and cultivation have been made have become a lot more and more.

The causes and results of the *rūpa* and *nāma* objects called *sankhāra* objects that have been cultivated by *vipassanā ñāna* (insight knowledge) and those which have been concentrated are referred to as **ditṭha sankhāra dhamma** (*dhamma* that have been seen). Those that have escaped collection are referred to as **aditṭha sankhāra dhamma** (*dhamma* that have not been seen), as used by Visuddhi Magga.

Paccekkhato ditthassa ārammanassa (Visuddhi-2: 280).

When *sankhāra* object is concentrated and visualized by *vipassanāsamādītṭhi* (right understanding insight) called *paccakkhan ñāna* so was it explained in this.

Visuddhi Magga Commentator Sayādaw also has explained this *ditṭha dhamma* as *sampatiditṭha* = **sampatiupatṭhita** *sankhāra dhamma*, **aditṭha dhamma** as **sampati aditṭha** = **sampati anupatṭhita** *sankhāra dhamma* (*Mahātī*.-2: 442).

Sampatiditṭhi (presently seen) = *sampatiupatṭhita sankhāra* are the *sankhāra dhamma* which has been collected by *paccekkhana ñāna* called *vipassanā ñāna* (insight knowledge). *Sampati aditṭha* = *sampati anupatṭhita* (appeared after now) *sankhāra* are groups of *sankhāra dhamma* which have escaped collection, and are not concentrated by *paccekkha ñāna* called *vipassanā ñāna*. Such *sampati aditṭha* = *sampati anupatṭhita sankhāra dhamma* which have escaped concentration are collected by *anvaya ñāna*. Contemplation by means of *anvaya ñāna* of cause-result factors called *paccaya pariggaha ñāna* (knowledge founded on acquisition), has been explained in the Commentary of *Visuddhi Magga* as follows.

So evum paccayato nâmarûpassa pavattem disvâ yatthâ idam etarahi, evum atîtepi addhâne paccayo pavattittha, anâgatepi paccayato pavvattissatîti samnupassati (Visuddhi- 2-234-235).

Sampaditthi (presently seen) = *sampatiupatthita sankhâra* are the *sankhâra dhamma* which have been collected by *paccekkha ñâna* called *vipassanâ ñâna* (insight knowledge). *Sampati aditthi* (not seen presently) = *sampati anupatthita* (appeared after now) are the groups of *sankhâra dhamma* which have escaped collection, and not cultivated, by *paccekkha ñâna* called *vipassanâ ñâna*. Such *Sampati aditthi* = *sampati anupatthita sankhâra dhamma* which have escaped collection are concentrated by *anvaya ñâna*. Contemplation by *anvaya ñâna* of cause-results factors called *paccaya pariggaha* (*ñâna* formation by acquisition) has been explained in the *Visuddhi Magga* as

So evum paccayato nâmarûpassa pavattem disvâ yatthâ idam etarahi, evum atîtepi addhâne paccayo pavattittha, anâgatepi paccayato pavvattissatîti samnupassati (Visuddhi-2: 234-235).

Pavattem disvâti etarahi pavattem disvâ evumti iminâ na kelanam sappaccaya bhavamattameva paccâmattham, yâdisehi paccayeti, tâdisehi avijjâdi paccayeheva atîtepi pavattatthati paccayasadisatâpi paccayâmatthâtî datthabbam (Mahâtî-2-313).

When the meditating monk penetratively knows and sees by *sammâditthi ñâna* called the *paccakkha ñâna* that *nâma-rûpa dhamma* of the present are the results of *avijjâ, tahnâ, upâdan, sankhâra, kamma* etc.— “Just as the appearance of the present *nâma-rûpa* are due to the cause like *avijjâ*, etc.— in the past period too this *nâma-rûpa* has come into being due to the causes of *avijjâ*.” In the future also due to the causes like *avijjâ* etc. the *nâma-rûpa* will appear. Contemplation has to be made repeatedly in this way by *anvaya ñâna* (*Visuddhi-2: 243; Mahâtî-2: 237*)

Because of past causes the present results are formed. Because of the present causes will the future results be formed. Only when such cause-effect relations have been concentrated by *paccakkha ñâna*, then those that have escaped the concentration are collected by methods based on *anvaya ñâna*. It should be noted that because of the past cause the present result is formed; because of the present cause the future result will be formed. And if these *dhamma* are still unknown, unseen, and not concentrated at all via *paccakkha ñâna*, and so too is in the past-future contemplation. These are not the affairs of *anumâna* (a guesswork). (For clearer and more information, see *Visuddhi-2: 233, 235*).

An Insistence to a Meditator

You noble one also—*paccaya pariggaha ñâna* = a knowledge that can analyze and maintain the incidence of the result due to the cause, and when the knowledge has been cultivated, maintain the above causes and results of the past and future by means of *anvaya ñâna*. (Way of cultivation of the cause-result *dhamma* is given in detail in section on *Paṭicca samuppâda*. Refer to that section if need be).

Concentration of *vipassanâ* by means of *anvaya ñâna* will be described in the section on *vipassanâ*. But before going to it the concept of the present as given in *Udayabbaya ñâna* (knowledge of arising and disappearing) will be discussed.

Extracts from *Patisambhidâ Magga*

Jâtam rūpam paccuppanam, tassa nibbattilakkhanam udayo, viparinâmalakkhanam vayo, anupassanânam. R. Jâta vijjâ paccupannâ, sattâ nibbattilakkhanam udayo, viparinâmalakkhanam vayo anupassanâ ñâna . R. Jâto bhavo paccuppanno, tassa nibbattilakkhanam udayo, viparinâmalakkhanam vayo anupassanâ ñânam (Ptisam.- 52; Visuddhi-2: 265).

Paccupannarūpam nâma jâtam khanattayapariyâpananti attho. Tam pana âdito dupariggahanti santatipaccupannavasena vipassanâbhiniveso kâtabbo (Mahâtî.-2: 414).

By the duration of arising rebirth as *upâda-thî-bhin* (arising-static-perishing away), formation of distinct material bodies, the *paramattadhammasabhâva* (the nature of the ultimate truth), the *attabhava* (material body) that should be achieved = the *paramattadhammasabhâva*, the group still possessing *attabhava* is the *paccuppanna* (the present). (This is to mean that the *rûpa* which is still in the formation in which is involved all the three *khanas*: *upâda, thî, bhin*). The properties of *sankhata*, (being conditioned) *sankhatalakkhanâ* (the properties of *sankhata*) are to be taken to represent the beginning of the *rûpa* formation, which is the present, is the *udaya* = formation. The *sankhatalakkhanâ* that is to be taken as changeable and destructible is *vaya* = damage or destruction.

Knowledge of repetitive concentration on *udaya*—*vaya* is the knowledge of the *udayabbayânupassanâ ñâna*. R.

In this *desanā* from *avijjā* to *pattibhava* called birth (birth-rebirth existence), the characters of *paticca samupāda* are all equally the present.

If the present life is analyzed by periods with characters of *paticca samupāda* in the middle, then *avijjā sankhāra* are *dhamma* groups of former period. *Viññāna*, *nāma-rūpa*, *salāyatana*, *phassa*, *vedanā*, *upādan* and *bhava* (*kammabhava*) are the *dhamma* groups of the present period. *Upapattibhava* termed *jāti* are the *dhamma* groups of the future. These *dhamma* are all equally included in the present.

As mentioned above — it must be noted that, in accordance with the opening of *Mahātīkā* — *paccuppannarūpam nāma jātam khanattayapariyāpannanti attho* (*Mahātī.*-2: 419), reference is made to the period when the three *khanas* (moments) are inclusive.

What it means is that it is true that this *avijjā* (mentioned above) is the past period that has occurred in the past. {it refers only to the *avijjā*, the basic cause of *vipākavatta dhamma* of the *paccuppannabhava* (the present life)}. This *avijjā*, however, when formed in the past was distinct as *upāda-thī-bhin* moments. At that duration, when the *avijjā* was apparently occurring, it is only the present *dhamma*. The formation and disappearance of this present *avijjā* must be contemplated by *udayabbaya ñāna*. This *ñāna* is the *paccakkha ñāna*.

In the same way, due to causes such as *avijjā*, *tahnā*, and *upādan*. *sankhāra*, and *kamma* cultivated in the present life (or due to *aparapariyavedaniya kamma* cultivated during the past life, *upapattibhava* termed *jāti* (birth) that is to appear is the *dhamma* of the future period. This *upapattibhava* is going to appear distinctly as *upāda-thī-bhin* in the future. This *bhava*, in arising and static states, is also the present. The arising and perishing away of the present life is concentrated by the *udayabbayānussaya ñāna*.

It must be realized that the remaining *dhamma* from *sankhāra* to *upādan* have been instructed to be taken as the present period.

To Note What the Real Meaning Is

In whichever period, the past, future or present, the *dhamma* might have existed, still existing or going to exist, if *vipassanā* is exercised on these to arrive at the *khanpaccuppanna* (momentary present), the *dhamma* you are concentrating at, *upāda* (continued formation), *bhin* (continued perishing), the three characters are alternately concentrated to see through the *udayabbaya ñāna*.

Attha addhānavasena pageva udayam passitvā tthitto idha santativasena disvā anukkhamena khnavasena passati (*Mahātī.*-2: 241).

Rūpam atītānāgatapaccuppannam aniccam khyatthena (*Patisam.*-51).

Tassamā esa yam atītānā rûpam, tam yassamā atīteyeva khīnam, nayimam sampattanti aniccam khayetthena (*Visuddhi*-2: 245; Section on *Sammansana ñāna*).

Visuddhi Magga Commentator, with reference to *Patisambhidhā Magga*, has indicated the above mentioned *rûpam atītānāgatapaccuppannam aniccam khyatthena* = as the *rûpa* of the past, future and present has the nature of cessation, destruction, they are to be contemplated as *anicca* (impermanence).

“Corporeality of past ended in the past, never reaching the present as a continuation.

Since it has the nature of ending and destruction, it is *anicca*.”

In the ways as above the past, future and present *dharmā* are divisible by means of the long period, and it has been instructed to contemplate these by *kalāpasammesa* (grasping groupwise) *ñāna* named as *vipassanā* (insight) (see *Visuddhi*-2-245).

As so instructed, the five *upādanakkhandhā* = *āyatana* (12 classes) = 18 *dhatu*, 12 characters of *paticca samuppāda* etc., the ultimate reality of elements, are cultivated by a meditator as the past, future and present periods by means of *sammāsana ñāna*.

As the meditator is able to exercise *vipassanā* by the power of *addhā* of the period, *udaya* (formation), (destruction = *vaya*) will already be seen by *Sammāsana ñāna*. Visualized this way, when a meditator has successfully acquired *sammāsana ñāna* and reached *udayabbaya ñāna* stage, a series of *rūpasantati* and *nāmasantati*, called a series of *santati*, by the power of which arising (and disappearance) of *rūpa* and *nāma* are concentrated by *udayabbayanupassana ñāna*. Always by the power of *khana* (moment) = *vipassanā* is exercised arrived at *khanapaccuppanna*. These *sankhāra dhamma* which are cultivated this way by the *vipassanā ñāna* to arrive at the *khanapaccuppanna* are the *sampatiddhiṭṭha sankhāra*. The past and future *dharmā* that have been left uncollected by the *vipassanā ñāna* are the *sampatiaditṭha sankhāra* (*Visuddhi*-2-280; *Mahāṭī*.-2-442).

When the meditator has completely concentrated the arising and disappearance *dharmā* of the *santatiditṭha sankhāra* by means of *udayabbayanupassanā ñāna* referred to as the *paccakkha ñāna*, the past and future called *sampatiditṭha sankhāra* are contemplated in continuation by *anvaya ñāna* as instructed by the Commentary of *Visuddhi Magga*.

Evum ekekassa khandhassa udayabbayadassana dassa dassa katvā paññāsalakkhanāni vāttani. Tesam vasena evumpi rūpassa udaya evumpi rūpassa vayo, evumpi rūpam udeti, evumpi rūpam vetīti paccayato ceva khanato ca vatthāreva mansikāram karoti-Tassevum manasikararo “iti kirime dhammā ahuttvā sambunti, hutvā pativantī”ti ñānam visadataram hoti. Tassevum paccayo ceva khanato ca dvedhā udayabbatam passato saccapaticcasamuppādanayalakkhanabheda pakatā hanti (*Visuddhi*-2-267).

Evum manasikaro na yāva udayabbayañānam uppajjati, tava udayabbayā sulu pakatā na huntīti katvā vuttam “iti karimē dhammā. R. Pativentī”ti, nayadassanavesena vā evum vattam patthamañhī paccuppannadhammānam disvā atṭha atītanāgate nayam neti (*Mahāṭī*.-2-423).

What the above Commentary and Subcommentary mean is as follows.

The Five Udaya Ñāna at Rūpakkhandhā (The Rise in the Five Kinds Knowledge on Material Body)

1. *Avijjā samudayā rūpasamudayo*,
2. *Tahnā samudayā rūpasamudayo*,
3. *Kamma samudayā rūpasamudayo*,
4. *Āhāra samudayā rūpasamudayo*,
5. *Nibbattilakkhanam* (*Patisam*.-53-54; *Visuddhi*-2-266).

1. Because of *avijjā*, the material body born of *kamma* is formed,

2. Because of *Tahnâ*, the material body born of *kamma* is formed,
3. Because of *Kamma*, the material body born of *kamma* is formed,
4. Because of *Āhâra*, the material body born of *kamma* is formed,
5. The nature of the formation of *rûpa* (corporeality).

**The Five *Vaya Ñâna* at *Rûpakkhandhâ*
(The Fall in the Five Kinds of Knowledge on Material Body)**

1. *Avijjâ nirodha rûpanirodha*,
2. *Tahnâ nirodha rûpanirodha*,
3. *Kamma nirodha rûpanirodha*,
4. *Āhâra nirodha rûpanirodha*,
5. *Viparinâma lakkhanam (Patisam.-53-54; Visuddhi-2-266).*

1. Because of cessation of *avijjâ*, material body born of *kamma* ceased,
2. Because of cessation of *Tahnâ*, material body born of *kamma* ceased,
3. Because of cessation of *kamma*, material body born of *kamma* ceased,
4. Because of cessation of *Āhâra*, material body born of *kamma* ceased,
5. The nature of cessation of *rûpa* = the nature of destruction.

In this way there are five kinds of *udayañâna*, five of *vaya ñâna*, which added to a total of 10 kinds of *udayabbaya ñâna*. In the five corporeality, therefore, there will be 50 kinds. (see Section on *Udayabbaya Ñâna* of *Vipassanâ*).

As the nature of each *udaya* and *vaya* are concentrated by *udayabbayanupassanâ ñâna*, 50 characters 10 for each corporeality, are indicated in *Patisamdâmagga*. In accordance with the method of concentration described broadly above as —

“This is the cause of which the *rûpa* is formed,
This is the cause of which the *rûpa* ceased,
So is the *rûpa* formed,
And so the *rûpa* is destructed, —

Paccayato udayabbayadassana = concentration on the fact that because of the nature of the cause, the result is formed, because of cessation of cause, the result ceases, ***Khanato udayabbayadassana*** = concentration on the nature of cessation and destruction by the nature of the *upâda-thî-bhiñ* called *paccuppannakhana* of the *rûpa-nâma*. By these two methods of *udayabbaya* on a broad base the arising and perishing away are concentrated and taken to heart.

“In this way this *dhmma* which was not there formerly, may suddenly appear, arises and disappears.” To a practicing yogi, this knowledge will become especially clear.

Therefore, in the concentration of practicing yogi who is exercising with the knowledge of *udayabbayadassana*, *paccayatodayabbayadassana*, *khanatodayabbayadassana*, by these two phenomena, arising and perishing away of the five corporeality will become clear as

1. The Four Ultimate Truth,
2. The *Paticca samuppâda dhamma*, the *paticca samuppanna dhamma*,
3. The four methods called *Ekatta* method,

4. The Five *Aniccalakkhanâ* (The Five Impermanent characters etc. of the five characters (Visuddhi-2-267).

A Note by Venerable Pye Sayadaw

In a meditator, taking to heart this much, *udayabbaya ñâna* cannot be attained yet. As that much of *udayabbaya* are inconspicuous, they are vaguely guessed by *anumâna*. Because of this condition, it was comparatively indicated by “*Iti kirime dhammâ. R. Pativanti*” stated with reference not to *paccakkha* but to *anumâna kira-saddâ* (presumptive faith).

In other words, by *nayadassana* (for the purpose of seeing), the meaning was given this way. Firstly *udayabbaya* of *paccuppanna dhamma* (*dhamma* of the present) are accomplished by *paccakkha*, and later this method is employed for the past and future (Pye *Visuddhimagga nissaya*, 5: 165).

This note by Venerable Pye Sayâdaw is the translation of the the part contained in *Mahâtîkā* Vol. II (*Mahâtî.*-2: 423).

In this expression — In a meditator, taking to heart this much, *udayabbaya ñâna* cannot be attained yet. As that much of *udayabbaya* are inconspicuous, they are vaguely guessed by *anumâna*. Because of this condition, it was comparatively indicated by “*Iti kirime dhammâ. R. Pativanti*” stated with reference not to *paccakkha* but to *anumâna kira-saddâ* (presumptive faith) — it was asserted that once the *udayabbaya* of the *sankhâra dhamma* have been seen by *paccakkha ñâna*, then these *dhamma* are no more required to be concentrated presumptively by *anumâna ñâna*. This assertion was not satisfactory and, therefore, SubCommentator Sayâdaw added a second method. The Venerable Pye Sayâdaw explained the second method as:

In other words, by *nayadassana* (for the purpose of seeing), the meaning was given this way. “Firstly *udayabbaya* of *paccuppanna dhamma* (*dhamma* of the present) are accomplished by *paccakkha*, and later this method is employed for past and future” .

According to this explanation, a meditator must first have cultivated as causes:

1. All the Five *Paccuppannakkhandhâ* (the Present Five Corporeality) are results of the causes such as *avijjâ, tahnâ, upâdan, sankhâra, kamma* etc..
2. The causes of *avijjâ, tahnâ, upâdan, sankhâra, kamma* etc. (when at the duration of *Arahattamagga*, the 4th Path), cessation which would never ever be formed again, the *anuppâdanirodha*, due to which the five corporeality cease never ever forming again, the nature of *anuppâdaniriodha* (giving rise to cessation),
3. The arising and perishing away of the Five Present Corporeality, the *udayabbaya* = *nibbatti lakkhanâ, viprinâmalakkhanâ* —

are to have been cultivated by the *udayabbayanupassanâ ñâna* called *paccakkha ñâna*. Only after cultivation by the *paccakkha ñâna*, then the method of *anvaya ñâna* is accepted as the method for exercising on the past and future *dhamma*. This *anvaya ñâna* is the one that always follows *vipassanâ ñâna*.

To be Noted Carefully

The opening of *Mahâtîkā* (Commentary) runs as —

Paccuppannadharmânâṃ udayabbayaṃ disvâ (*Mahâtî.*-2: 423)

In the passage ‘After seeing the *udayabbaya* of *paccuppanna dhamma* —

1. Because of the distinct formation of the causes like *avijjâ, tahnâ, sankhâra, kamma* etc. distinctly arise,
2. The cessation of the causes like *avijjâ*, etc., by the nature of law of cessation, the resultant five corporeality cease,
(These two are phenomena of *paccayato udayabbaya*)
3. The arising of the *paccuppanna dhamma* = *nibbatti lakkhanâ* = destruction = *viprinâma lakkhanâ* (character subject to change)
(These two are phenomena of *khanato udayabbaya*)

Paccuppannadhammânâ udayabbayaṃ disvâ (Mahâtî.-2: 423)

In this passage remember that both the *paccayato udayabbaya* and the *khanato udayabbaya* of the *udayabbaya* are inclusive. Only when the two kinds of *udayabbaya*, have been cultivated by *paccakkha ñâna* referred to as *udayabbayanupassanâ*, then concentrate on the past and future by the same old method of *anvaya ñâna*. It is the traditional law in practice which has to be taken with respect.

Again *Visuddhimagga atthakatthâ (Visuddhi-2-249)*. In *rûpa nibbattipassa âkâra* was instructed due to *sankhâradhammâ* cultured surrounded by *avijjâ, tahnâ, upâdan* etc. during the previous life, formation of mental properties of rebirth, along one’s lifetime, respective causes which result in mental properties of *bhava* together with those of the six-door are concentrated by *vipassanâ ñâna*.

Therefore, with reference to *paccuppannadhamma* note that from the material quality of rebirth, relevant properties of the five corporeality, are involved.

Therefore, when *vipassanâ* is exercised with the knowledge of the two kinds of *udayabbayadassana* on the *paccuppannadhamma*, start is made from the Five Material Quality of rebirth. (see *Udayabbaya Ñâna*, Section on *Vipassanâ*).

Now again concentration by *Anvaya ñâna* in *Bhanganupassanâ ñâna* will be described.

How Contemplation is made by *Anvaya Ñâna* in *Bhanganupassanâ Ñâna*

Attha vâ so evum viratto yatthâdittham sankhâragatam, tathâ aditthampi anvayañânavasena nirodheti, no samudeti. Nirodhatova manasikaroti. Nirodhamevassa passati, nosamudayanti attho (Visuddhi-2:279).

Evum virattoti evum bhanganupassanâ viratto. Yatthâ dittham sampati upatthitam sankhâragatam nirodheti nirodham manasikaroti. Aditthampi atinâgatam anvayañânavasena yatthâ idam etarahi, etam itarepîti anuminanto nirodheti mansikatassâpi nirodham karoti, no samudhefîti itthâpi eseva nayo, no samudayam manasikarotîti attho. (Mahâtî.-2: 442).

Attha vâ = in a way. *Evum* = this *bhanganupassanâ* is followed (= always follow this knowledge of *bhanganupassanâ*), *viratto* = lack of attachment. *So yogâvacara* = that meditator. *Dittham* = seen by own self, *sankhâragatam* = *sankhâra dhamma*. *Nirodheti nirodham manasikaroti yatthâ* = as if cessation was taken to heart. *Tatthâ* = similarly. *Aditthampi* = past, future and *sankhâra dhamma* which are not seen. *Anvaya ñâna*

vasena = by power of analytical knowledge. (*Etarahi* = at present. *Idam yatthâ* = just as this present and *sankhâra* are seen). *Evum tatthâ* = in the same way. *Tampi* = that past, future and *sankhâra dhamma* that are not seen. *Evum sabhâvameva* = so there is nature of cessation, destruction. *Iti* = in this way. *Anuminanto* = by comparison). *Nirodheti* = *nirodham manasikaroti* = *nirodha* (cessation) is taken to heart. *No samudeti* = no *samudayam manasikaroti* = *samudaya* (passion) is not taken to heart. *Nirodhatova* = only by means of cessation. *Manasikaroti* = taken to heart. *Asankhâragatassa* = of that *sankhâradhamma*. *Nirodhameva* = on only the cessation. *Passati* = concentrated. *Samudayam* = on *samudaya*. *No passati* = not concentrated (*Pye Visuddhimagga Nissaya*-5-207-208).

In other words, as the meditator who is free from evil influence, *raga*-free (lust free) is always directed towards the *bhanganupassanâ ñâna*, not clinging on to the *sankhâra dhamma* {by dissociating himself from *râga* for a considerably long period of time by *vikkhambhanapa* (way of withdrawal from lust)}. Then cessation of all *dhamma*, that should be known and seen by *bhanganupassanâ ñâna*, and the cessation taken to heart.

The past, future and *sankhâra dhamma* are taken expectantly by power of *anvaya ñâna*. As the present *bhanganupassanâ ñâna* called the present called *paccakhañâna* enables the meditator to know and see the *sankhâra dhamma*, so also the past, future and the *sankhâra dhamma* that have not yet been seen by the *bhanganupassanâ ñâna* called *vipassanâ ñâna* (insight knowledge) are to be taken to cease in the coming period. In this way the nature of cessation, the *nirodha dhamma*, whatever the case may, is taken to heart. The arising *samudaya* is not taken to heart. By way of cessation = the cessation only is taken to heart. The cessation of the sum total of *sankhâra dhamma* alone are concentrated, but not the arising *samudaya*. All this is what the above *Patisambhidâ Magga* really means (*Visuddhi*-2:279; *Mahâî.2*: 442).

Ārammananvâyena, ubho ekavavatthanâ.

Nirodha adhimottatâ, vāyakkhaṇavipassanâ (Patisam. -55).

Ārammananvayena = as the object really seen presently is always followed. *Ubho* = the object presently seen and unseen. *Ekavavatthanâ* = division by means of the only nature of arrested moment. *Nirodhe* = at relentless cessation of the *sankhâradhamma* called *khaṇikanirodha* (momentary cessation). *Adhimottatâ* = being inclined to. *Esâ* = This is. *Vāyakkhāna vipassana* = mental exercise on the nature of destruction of the *sankhâradhamma*, or character of this destruction.

Ārammananvayena ubho kavavatthanâti paccakkhato ditṭhasa ārammaṇassa anvayena anugamanena yatṭha idam tatṭhā atītepi sankhâragatam abhijjīṭṭha, anāgatepi bijjissatīti evum ubhannaṃ ekasabhāveneva vavatṭhāpannti atṭho. Vattampi cetam porānethi —

*“Samvijjamāhmī visuddhadassano,
tadanvayam neti atītanāgate.*

*Sabbepi sankhâragatâ palokino,
ussâvabandû suriyeva uggate”ti (Visuddhi-2: 280).*

Ubhoti ditthâ ditthabhâvena dvepe ârammnâni. Ekavatthanâti khanabhangu-ratâya samânâti vavatthapanâ. Samvijjâmânahmîti paccakkhato upalabbhamâne paccuppanne. Visuddhassanoti bhangassanassa paribandhavimenena visuddhañâno. visuddhabhangassanoti attho. Tadanvayam netîti tassa paccuppannasankhârabhanganadassino ñânassa anvayam anugatabhûtam ñânam pavatteti. Kattha pana pavattetîti âha “atîtanâgate”ti. Atîte nâgate ca sankhâragate. Sabbepîtîadi tassa pavattanâkâradasanam (Mahâtî-2: 443).

Ñâtanca ñânanca ubhoppi vipassati (Visuddhi-2: 278).

Ârammananvayena atto ekavatthnâ = dhamma named ñâta, dukkha saccâ, samudaya saccâ, which have been prenatratively seen and known, vipassanâ ñâna named ñâna (knowledge) {the socalled lokîmagga saccâ (the Right Path Dhamma of ordinary world)}. As this sankhâra object, known as ñâta ñâna dhamma, was always followed, and as one knows the perishing of the paccuppannadhamma and the sankhâra dhamma which is definitely seen by the knowledge of anubanga ñâna so also the sankhâra dhamma of the past has perished. In future too they will perish. Concentration should well be made with the notion that these objects, the dittha (seen) and adittha (not seen) object, by vipassanâ ñâna, are continuously perishing away. This is the essence of the above descriptions. Indeed, the commentators of the early days have expounded as —

Samvijjâmânahmî. R. Uggate. (Vide supra)

Samvijjâmânahmî = by means of paccakkha, by paccakkha ñâna cultivated, the whole paccuppanna sankhâra dhamma (= means the dhamma that are seen). Visuddhassano = especially clean, that which concentrate on the destruction of the sankhâra dhamma, the meditator who has the bhanganupassanâ ñâna. Tadanvayam = the vipassanâ ñâna which always follows bhanganupassana ñâna directed at paccuppanna of the perishing of sankhâra dhamma. Atîte = sankhâra dhamma of the past, anâgate = sankhâra dhamma of the future. Neti = reflects = makes it happen. Sabbepi = entirely. Sankhâraggatâ = sankhâra of the past, future and present. Palokino = possesses the nature of perishing. Kiniva = as to how it all happens = suriye = As the sun. Uggate = rises. Ussavabandû = the now. Palokatiiva = disappear (Visuddhi-2-280).

When a meditator, who especially has the clean anubhangâ ñâna, concentrating on the perishing away of all the paccuppannadhamma sankhâra by means of paccakkhâ ñâna acquired through paccakkha (practice), always following the bhanganupassanâ ñâna for which viassanâ ñâna is formed — as this sankhâra object known as ñâta ñâna dhamma was always followed, and as one knows the perishing away of paccuppanna dhamma, the sankhâradhamma, which is definitely seen by the knowledge of anubanga ñâna, so also the sankhâradhamma of the past perished. The all complete past, future and present sankhâra dhamma have the nature of perishing away. These happen in a way similar the disappearance of snow when exposed to sunlight (Visuddhi-2-280; Mahâtî-2-433).

Nirodhe Adhimuttâ = Inclination to Khananirodha

Nirodhe adhimuttatâti evum ubhannam bhangavasena ekavavatthânam katvâ tassamaññeva bhanghasankhate nirodhe adhimuttatâ taggâretâ tannañnatâ tapponatâ tappabhâratati atthâ. Vayalakkhanavipassanâti esâ vayalakkhanavipassanâ mâti vittamî hoti (Visuddhi-2-280).

Bhangasankhate nirodhe, na nibbanasankhâteti addhippayo. Esâti yâ arammanavayena ubho ditthâ dittthe khaṇabanguratâya ekanhâvena vevatthâppanâ, esâ vayalakkhane viparinâmalakkhane vipassanâ bhanganupassanâti attho (Mahâtî.-2: 443).

= *Nirodhe adhimuttatâ* = *khananirodhañca* mediation means = in this way *dittha sankhâra* and *aditthâ sankhâra*, the two objects of the *vipassanâ ñâna*, by virtue of incessantly perishing moments, are similar — classified and emphasized only in the momentary cessation referred to as cessation momentarily of the perishing of these *sankhâra dhamma*. Taking to heart these phenomena of inclination only to that *khananirodha*, and of the respect to *khananirodha* are *nirodha adhimuttatâ* = cessation is taken to heart. Thus concentrated by *paccakkha* = following *sankhâra* object by concentration with *paccakkha ñâna ditthâ* and *aditthâ* objects are considered to be similar by way of *khanabhanga* means concentration on the perishing called *vayakhanânupassanâ* = *bhanganupassanâ* (Visuddhi-2-280; Mahâtî.-2: 443).

Objects of Concentration by *Bhangânupassanâ Ñâna*

Dhamma on how to concentrate on these *vipassanâ* by *bhangânupassanâ* via *paccakkha* have been expatiated in *Paṭisambhidâmagga* in this way.

Katham ârammanam patisankhâ bhangânupassane paññâ vipassane ñânam — rūpârammanata cittaṃ upapajjitvâ bijjati, tam arammanam patisankhâtassa cittassa baṅgam anupassati. R.

Vedanârammanatâ. R. Sankhâramma. Viññânârammanatâ. Cakkhu. R. Jarâmaranârammanatâ citamm upapajjitvâ abhijjati, tam ârammanam patisankhâ tassa citassa bhaṅgam anupassati (Patisam.-55).

= *Rûpâ*, *vedanâ*, *saññâ*, *sankhâra*, *viññâ* etc. of *sankhâra* object are to be concentrated with the notion of their nature of their *khaya-vaya* (to be liable to extinction and perishing) = cultivated by *vipassanâ* way. The knowledge that recognizes the nature of the incessant perishing away of the *vipassanâ* on which concentration is being made do exist. Such a knowledge is the *vipassanâ ñâna* (insight knowledge) = should be recognized as *bhangânupassanâ ñâna*. How does that knowledge then come into existence?

Vipassanâ citta (the insight mind), the only object of which is on *rûpa* (material) *dhamma*, can arise and perish. That material object is visualized by the nature of *khaya-vaya*, and the knowledge of the nature of the *khaya-vaya* which is the cause of perishing of *vipassanâ citta* is repeatedly concentrated by the *vipassanâ citta* in the wake of the previous one. R. (Patisam.-55).

Ñâta dhamma* and *Ñâna Dhamma* *Dhamma of Realization and of Knowledge

In this field of *bhangânupassanâ*, the objects of meditation by *vipassanâ ñâna* (insight knowledge), because they are the *dhamma* known penetratively by *vipassanâ*

ñâna, are the *Ñâta dhamma*. These *ñâta dhamma* including the five *khandhâs* (corporeality), 12 classes of *âyatana*, 18 of *dhâtu* (elements) and the 12 classes of *paticca samuppâda* from *avijjâ* (ignorance) to *jarâ* (decay) and *marana* (death). The *vipassanâ* knowledge that concentrates on the nature of perishing of these *sankhara dhamma* is the *Ñâna dhamma*.

Meditation has to be made alternately on the three properties of the existing things, taking the nature of the perishing away of these *ñâta dhamma* as object of concentration. This knowledge of *vipassanâ* concentration = *vipassanâ* meditating *citta* and its nature of perishing away is taken as the object for *vipassanâ citta* that follows and concentrated on the three properties of the existing things alternately. Therefore, the commentators of the early days had instructed as

Ñâtañca ñânañca ubhopi vipassati (Visuddhi-2-278; Paṭisam.-tha.-1-239).

Meditate on both *ñâta* and *ñâna dhamma*. These *ñâta* and *ñâna* are the objects of concentration of the *bhangânupassanâ ñâna*. The *ditṭha sankhâra dhamma* are to be discerned by the *paccakkha ñâna* called *bhangânupassanâ ñâna*. Remember that these *ditṭha sankhâra dhamma* include the 12 classes of *paticca samuppâda* from *avijjâ* to *jarâ marana*.

At this point, according to *jâti*, *jarâ* and *marana* — *Jâtijarâmaranavuntânâ khandhânâ vasena pariyâyena vuttânî (Paṭisam.-tha.-1-222)*. *Jarâmaranasîsena cittha jarâmaranavuntava dhammâ gahitâ (Sam.-tî.-2-78)*. This refers to material bodies that possess the distinct nature of *jâti*, *jarâ*, *maranâ dhamma*.

Cittanti cittha sasampayttacitam adhippetam (Paṭisam.-tha.-1-239).

Here instruction is given to discern on the perishing of previous *vipassanâ citta* by the later *vipassanâ citta*. In instructing so, *vipassanâ citta* together with contemporary *sasampayttacetacika dhamma* on the basis of *citta* (mind) is required. The *vipassanâ citta* together with contemporary *sasampayuttacetacika dhamma* based on mind means series of *mahâkuso* (meritorious), *manodvârîka* (mind door) and process of *viapssanâ jhâna* occurring in the mind of practising noble ones (*ariyas*) and noble humans.

Therefore, if practising individual (the meditator) would like to exercise on these characters of *paticca samuppâda* by knowledge of *hangânupassanâ ñâna*, both *ñâta* and *ñâna* factors must be concentrated on.

The features of *paticca samuppâda* from *avijjâ* through *jarâ* to *marana*, classified by the three periods, are groups of *ñâta dhamma*. The *vipassanâ ñâna*, the insight knowledge, (= *bhavaṅgânupassanâ ñâna*), by which the destruction these *ñâta dhamma*, taken as object of concentration, are (= the process of the *jhanic* state *vipassanâ* via mind door for the worldling and practising individuals) *ñâna dhamma*. The *vipassanâ ñâna*, insight knowledge (= *bhavaṅgânupassanâ ñâna*), by which the nature of destruction of these *ñâta dhamma* are taken as the object in the concentration, are (= the process of the *jhanic* state *vipassanâ* via mind door for the worldlings and practising individuals) *ñâna dhamma*. Only when these *ditṭhasankhâra dhamma* have successfully been discerned penetratively by *bhangânupassanâ ñâna*, referred to as *paccakkha ñâna*, then by means

of *anvaya ñâna* that always follows *bhangânupassanâ ñâna*, the past and future *sankhâra dhamma*, which are not presently seen, are concentrated by the same method. This *anvaya ñâna* is that knowledge which always follows the insight knowledge.

The object of contemplation *iti rūpassa atthaṅgamo* etc., as exposed in the *Upanissasuttan*, indicated above, will again be presented in continuation.

Iti rūpassa atthaṅgamo. R. Iti viññâṇassa atthaṅgamo.

Iti rūpassa atthaṅgamoti evum avijjânirodhadivaseṇa pañcahâkârehi rūpassa atthaṅgamo. Vedanâdisupi eseṇa nayo. ayamattāha sankhepo, vattharo pana visuddhimagge udayabbayañânakatthâya vatto (Dî.-tha.-2-373).

1. *Avijjânirodhâ, rūpaniroduhoti paccayanirodhatthena rūpakkhandhassa vayam passati,*
 2. *Tahnânirodhâ rūpaniroduhoti paccayanirodhatthena rūpakkhandhassa vayam passati,*
 3. *Kammanirodhâ rūpaniroduhoti paccayanirodhatthena rūpakkhandhassa vayam passati,*
 4. *Âhâranirohâ rūpaniroduhoti paccayanirodhatthena rūpakkhandhassa vayam passati,*
 5. *Viprinâmalakkhanam passantopi rūpakkhandhassa vayam passati.*
- Rûpakkhandhassa vayam passantopi imâni pañca lakkhanâni passati (Patisam.-53; Visuddhi-2: 266).*

In concord with these *desanâs*, meditation in brief are as follows.

1. Because of cessation of *avijjâ* the *rûpa* ceases, (*Anuppâdhanirodha*)
2. Because of cessation of *tahnâ* the *rûpa* ceases, (*Anuppâdhanirodha*)
3. Because of cessation of *kamma* the *rûpa* ceases, (*Anuppâdhanirodha*)
4. Because of cessation of *âhâra* the *rûpa* ceases, (*Anuppâdhanirodha*)
2. The nature of cessation of *rûpa* the *rûpa* ceases, (*Uppâdhanirodha*).

ANUPPÂDANIRODHA

Avijjânirodho rūpaniroduhoti anâgatabhavassa paccayabhûtâya imassamim bhava avijjâya arahattamaggañânena nirodhe kate paccayâbhâvâ anâgatassa rūpassa anuppâdo nirodho hotîti attho. Paccayanirodhatthenâti paccayassa niruddhabhâvenâti attho. Norodho cittha anâgatapatissandhipaccayânam idha avijjâtahnâkammânamyeva nirodho (Ptisam.-Tha.-1: 236).

Avijjânirodho rūpaniroduhoti eggamaggañânena avijjâya anuppâdanirodhato anâgatassa rūpassa anuppâdanirodho hoti paccayâbhâve abhâvato.

Paccayanirodhatthenâti avijjâsankhâtassa anâgate uppajjanakarûpapaccayassa niruddhabhâvena. Tahnânirodho kammanirodhoti itthâpi eseṇa nayo (Mahâtî-2: 421).

Throughout the rounds of rebirth the *rûpa* and *nâma dhammas* come to their end after going through arising-static-perishing away trend. This cessation, if the causes still remain, has a chance to make a reappearance in future. Perishing and cessation at the

end (*bhaṅga*) of these *sankhâra dhammas* are called *uppâdhanirodha* (cessation, but reappearable).

When *arahatthamagga* (the 4th Path) is achieved, *avijjâ, tahnâ, sankhâra* and *kamma*, which are completely eradicated due to, and by *arahatthamagga* via virtue of *samucchedapa*. They cease in such a way they never reappear. This is the *anuppâdanirodha* (cessation, but reappearable). If the *arahatthamagga ñâna* (the knowledge of the 4th Path), however, has not been acquired and these *avijjâ, tahnâ, upâdana, sankhâra* and *kamma* have not ceased, these very *avijjâ, tahnâ, upâdana, sankhâra* and *kamma* are the causative factors for the next life called the future rebirth.

But if a noble meditator tried to arrive at *arahattamagga* then, due to *arahattamagga*, the *avijjâ, tahnâ, upâdana, sankhâra* and *kamma* cease in a way that they will never be formed once again. This is the *uppâdanirodha*. In this way when *avijjâ, tahnâ, upâdana, sankhâra* and *kamma* by nature of *anuppâdanirodha*, the future rebirth, called *rûpa* and *nâma* (mind and matter) ceases by non-reappearable cessation. This is the *anuppâdanirodha*.

Similarly, *citta* (mind), *utu* (physical change), *âhâra* (nutrition) etc., named *pavattipaccaya* (cause-derived forms) cease once and for all, and never formed again in future. When they cease by nature of *anuppâdanirodha*, future material phenomena of mind, of physical change and the material quality born of nutrition (each of which has a chance to reappear if respective causes still prevail) of future also cease. This is *anuppâdanirodha*.

The *yogâvacara* individual should discern, by *udayabbayanupassanâ ñâna*, called *paccakkha ñâna*, the cessation of mind and material of the future rebirth etc. of the Resultant Five Corporeality by way of *anuppâdanirodha* nature. This cessation occurs due to cessation of the factors of the 4th Path of *avijjâ, tahnâ, upâdana, sankhâra* and *kamma*. Continuous perishing of the Five Aggregates by *bhaṅkhana* called *uppâdananirodha*, and it should be discerned in the same way.

If the *yogâvacara* individual attempting to acquire, by *udayabbayânupassanâñânâna* called *paccakkha ñâna*, is still at *puthujana* (worldling) stage, then the attainment of the *arahatthamagga* (the 4th Path) may occur in the life future to the present one, or it may be in the future life just as *Ghatibhyamâ* did. If the attainment certainly of the 4th Path is at the *Pacchimabhavika* (later past) of the present life, then that period of the acquirement of the 4th Path will be the future of the present existence. If the attainment of the 4th Path certainly is in one of the later lives, the the period of the acquirement of 4th Path is a future life.

At the time of acquirement of the *arahattamagga* in future, when such causes as *avijjâ, tahnâ, upâdana, sankhâra* and *kamma* cease, because of the 4th Path, by nature of *anuppâdanirodha*, discernment should made of the cessation of mind and matter of the Five Corporeality of the future, following death, by nature of *anuppâdanirodha*. Should it be contemplated by *paccakkha ñâna* or *anvaya ñâna*? Answer to this is as follows.

Ñânasamaṅgi puggato cakkhunâ viya cakkhunâ rūpâni, ñânenā vivaṭṭe dhamme passati
(*Samī.-Tha.-2: 49*).

Janatoti vâ vattvâ jânanam anussvâkâraparivitakkamattavasena idhâdhippetam attha
kho rūpâni viya cakkhuñânena rūpâdini tesam ca samudayadike paccakkha katvâ

dassanti vibhâveton “passato”ti attanti evum vâ ittha attho (Sam.-Tī.-2: 63).

As a man with physical eye sees a variety of mental objects by consciousness by way of sight, a meditator possessed of *vipassana* insight referred to as *udayabbaya ñâna*, must discern by light of wisdom emitted by the *vipassanâ ñâna* being exercised upon, the following.

Na jhânam anussavâkâraparivitakkamattavasena idhippetam (Sam.-Tī.-2-63).

Anussaya understanding, knowledge handed down from the teachers, such as “This may be it. This is what probably is.”, thinking on the basis of environmental factors = *âkâraparivitakka* = knowledge acquired by mere thinking are not relevant here.

However, *patthamahñi paccuppanadhammânâṃ udayabbayaṃ disvâ attâ atinâgtâte nayam neti (Mahâṭī.-2-423)*, as stated in *Mahâṭīkā*, the *upâdânakkhandhâ* (the factor of five-fold clinging to the existence) which are the *paccuppannadhammas* (the present *dhammas*), the nature of their formation (*sankhâra*) and their dissolution (*atthagama*) are to be discerned by the *udayabbaya ñâna* referred to as *paccakkha ñâna* (practical knowledge). Once discerned successfully by *paccakkha ñâna*, the *sankhâra dhammas* (the factors of the formation) of the past and future can be discerned in the same way. It should, however, be noted that

- (1) The five *upâdânakkhandhâ*, which are the *dhammas* of the present,
- (2) The nature of their *samudaya*,
- (3) The nature of their dissolution,

when discerned by *udayabbaya ñâna* called *paccakkha ñâna*, are not free from the past and future.

Now the extracts from *Upanisassuttan* have come to an end.

Extracts from *Āsvakkhaya Suttan*

Jhânatoham bhikkave passato âsavânâṃ khayam vadâmi, no ajhânato no apassato.

Kaṇṇa bhikkhave jhânato kam passato âsavânâṃ khayoti?--“idaṃ dukkhan”ti bhikkhave jhânato passato âsavânâṃ khayoti, “ayam dukkhasamudayo”ti bhikkhave jânatopassato âsavânâṃ khayoti, “ayam fukkhanirodhagâmini patipadâ”ti bhikkhave jhânato passato âsavânâṃ khayoti. Evum kho bhikkhave jhânato evum passato âsavânâṃ khayoti (Khu.-1: 265; Itivuttaka).

Bhikkhus I preach the attainment of ariyamagga (the Noble Path), where dhammas of âsava cease, to those who know and see. I do not preach the attainment of ariyamagga to those who know not and see not. (Aham ariyamaggâṃ vadâmi vattam hoti (Itivattaka-Tha-311).

Bhikkhus What dhammas do those individual know and see to have attained the Noble Path where âsava dhammas have ceased?

1. *Bhikkhus Those who know and see as “This is the Noble Truth of Suffering” will*

acquire the *ariyamagga* where all *âsava dhammas* have ceased.

2. *Bhikkus* Those who know and see as “This is the Noble Truth of the cause of Suffering” will acquire the *ariyamagga* where all *âsava dhammas* have ceased.
3. *Bhikkus* Those who know and see as “This is the Noble Truth of the cessation of Suffering” will acquire the *ariyamagga* where all *âsava dhammas* have ceased.
4. *Bhikkus* Those who know and see as “This is the the pactice leading to *Nibbâna* where the Suffering has ceased = Noble Truth of the Path”, will acquire the *ariyamagga* where all *âsava dhammas* have ceased.

Bhikkhus ...only he who knows and sees this way will acquire the Noble Path, where all *âsava dhammas* have ceased (*Khu.-1: 265; Itivuttaka*).

The Openings of Commentary - The First Opening

Jhânatoti jhânantassa. Passatoti passantassa. Yadipi Imâni dve pi padâni ekattâni, byaññhanamevanânañ, evuñ santepi “jhânato”ti ñânalakḥhanam uppâya. Puggalam niddisati. Jhânanalakḥhanam hi ñânam. “Passato”ti ñânappabhâvuñ upâdâya. Dassanappabhâvuñ hi upâdâya ñânasamingi puggalo cakkhumâ viya viya puggalo cakkhunâ rūpâni, ñâṇena vivutte dhamme passati (Itivuttaka-Tha.-310)

Jhânato = only he who knows, *passato* = only he who sees (*Jhânato eva passato evâti evamatthe niyamo icchito. (Sam. Tî-2: 64).*

Though these two structurally different terms bear the same essence, the term *jhânato* indicates the individual, on the basis of character of his ability to know penetratively the true nature of the objection question. Indeed, *Samâdithi ñâna* (the knowledge of right understanding) possesses the character of knowing penetratively the true nature of the object.

The term *passato* refers to an individual who is capable of seeing the true nature of the object by means of power of knowledge. Indeed, *Sammâditthi ñâna* (the knowledge of right understanding) is endowed with the power of seeing the object in its true nature. As an individual could see the material being (*rûpa*) by physical eye, so a meditator with competent *sammâditthi ñâna* could see the true nature of the Four Noble Truth by the light of wisdom having property of brilliance (*Itivuttaka-Tha.-311*).

The Second Opening of the Documentary

Atha vâ jhânatoti anubodha ñâṇena jhânato. Passatoti pativedhañâṇena passato (Itivuttaka-Tha.-310).

In other words, *jhânato* refers only to him who knows by *anubodhañâna*. *Passato* refers only to him who knows by *pativedañâna* (penetrative knowledge).

Duvidham hi saccañânam anibidhañânam pativedhañânañca. Attha anubidhañâna lokiyam anussavâdivasena nirodhe magge ca pavuttati. Pativedhañânam lokuttaram nirodhamârammanam katvâ kiccato cattâri saccâni pativijehati (Visuddhi-1-142).
Duvidam hi saccañânam lokiyam lokuttarañca. Lokikam duvidam anubodhañânam paccavekkhanañânañca. Anubodhañânam âdikammikassa anussivâdivesena nirodhe magge ca pavuttati. Dukhe samudaye ca ârammanakarena vasena. Paccavekkheñânam pativaddhasaccassa catîsupi saccam ârammanakarañavasena. Lokuttaram pativedhañânam katvâ cattâri saccâni pavijjhati (Patisam.-1: 342).

In the *santâna* (life continuum) *vipassanâ* exercising monk, who is a worldling, before arriving at *Ariyamagga* (Noble Path), attaining the knowledge of the Noble truth of Suffering and the Noble Truth of Formation is a priority. In these two are

1. *Uggahapativedha* = penetratively understanding by learning the relation between the truth of suffering and of formation.
2. *Paripucchâpativedha* = penetratively understanding by repetitive requisition of the meaning regarding the relationship between the truth of suffering and of formation.

The knowledge of truth (*sacca ñâna*), which penetratively knows the Four Noble Truth, is of two kinds: *lokîsacca ñâna* (knowledge of truth of mundane) and *lokuttarâsacca ñâna* (the knowledge of truth of supra-mundane). Again the *lokîsacca-ñâna* can be of *anubodha ñâna* (knowledge acquired from the predecessors) and *paccavekkhana ñâna* (reviewing knowledge). In the mind of a worldling who has just gained momentum in the practice of meditation (a beginner in meditation in short), the truth of the supra-mundane, such as *asankhatadhâtu* (non-dynamic element), the knowledge of peacefulness, called *nibbâna dhamma* which is the Truth of Cessation, and *Ariya Magga* (Noble Path) which can concentrate on the Noble Truth of Cessation, and the Noble Eight Path. These appear in the meditator by three means, viz., by following the conception acquired by

1. *Anussava* = knowledge acquired from the teachers.
2. *Âkâraparivitakka* = knowledge acquired by presumption that: if there is such a *dhamma* as death, then there must be one where there is no death.”
3. *Dothinijjhânakkhantianugata* = by concentration, by being satisfied = satisfaction on the conception by thinking.

Such a knowledge acquired via the above three means is also called *anubodha-ñâna*, the *anubodha* knowledge (It is the *Anumâma*, the knowledge acquired through the guesswork. This *anubodha* knowledge appears in one by concentrating on *dukkha-saccâ* and *samudayasaccâ* (the Truth of suffering and of formation) as the object of concentration. (It is the knowledge from personal experience, the *paccakkhañâna*). The *paccavekkhañâna* (reviewing knowledge) appears in the Noble Ones, who have penetratively concentrated and cultured the Four Noble Truth by power of concentration on each and every one of the Four Noble Truth. *Pativedhañâna* (penetrative knowledge), the *lokottarasaccâñâna* and element of peacefulness, or the *Nibbâna dhamma* called the *dhamma* of Truth of Cessation is concentrated as the object and penetratively knows the Noble Truth (*Visuddhi*-1: 142; *Patisaṃ*.-*Tha*.-1: 342).

Evamassa pubbabhâge dvîsu saccesu uggahaparîpucchasavanadâ renasamma-sanapativedho hoti, dvîsu savanapativedoyeva. Aparabhage tîsu kiccatopativedho hoti, nirodhe ârammanapativedho. Tatthâ sabbampi pativedhoñânanam lokuttaram. Savanadharanasammasanañânam lokuttaram. Savanadhanasammasanañânam lokiyaṃ kâmvacaram (Abhi.-Tha.-2: 109).

In the life continuum (*santâna*) of a monk, a worldling, who has just gained momentum in the practice of meditation, before arriving at *Ariya Magga*, which is the Noble Truth of Suffering and Noble Truth of Cause, knowledge has to be attained by

1. *Uggahapativedha* = learning the text related to *Dukkhasaccâ* (the Noble Truth of Suffering) and *Samudayasaccâ* (Noble Truth of Cause), and acquiring the knowledge penetratively.

2. *Paripucchâpativedha* = knowing penetratively the meaning of *Dukkhasaccâ* and *Samudayasaccâ* by enquiring repeatedly.

3. *Savanapativedha* = knowing penetratively the meaning of *Dukkhasaccâ* and *Samudayasaccâ* by listening respectfully.

4. *Dhâranapativedha* = knowing penetratively the meaning of *Dukkhasaccâ* and *Samudayasaccâ* by learning by heart.

(These four are the knowledge acquired by being taught and by hearing).

5. *Samasanapativedha* = knowing penetratively by contemplating on the Three characters (*Anicca*, *Dukkha* and *Anatta*) of the *Dukkhasaccâ* and *Samudayasaccâ* as the object. (It is all the Path Knowledge, the method of attaining insight).

These are the five kinds of *pativedha* (penetrations). This *pativedha* is the *dhmma* of good *kamma* of *loki* (mundane) *mahâkusala* (great deed) by *Nirodhasaccâ* and *Maggasaccâ*.

Nirodhasaccam ittham kantam manâpam, maggasaccam

Kantam manâpam (Saṃ.-Tha.-3: 160)

"*Nirodhasaccâ* is a necessary and adorable *dhmma*. so is the *Maggasaccâ*."

By listening this way to the noble ones penetratively. knowledge is acquired = *Savanapativedha* = This only just what you. (Before arriving at *Ariyamagga* = a section on *Pubbabhâpatipadha*).

After *Upacârakhana* (preliminary moment) of *Ariyamagga*, there occurs the knowing of *Dukkhasaccâ* analytically (*pariññâkicca*, the analytical function), elimination of *Samudayasaccâ* (the truth of arising), the function of elimination and meditation on the *Maggasaccâ*, the function of meditation. Functionally they are *pariññâpativedha* (penetration analytically), *pahânapativedha* (analytical elimination) and *bhâvanâpativedha* (analytical meditation). At the *Nirodha* *saccâ* called the non-dynamic element (*asankhatadhâtu*) *nibbâna* *Armmânapativedha* = objectively knowing penetratively = (*Sacchikiriyapativedha* = knowing penetratively as the object). These *pativedhañâna* (the analytical knowledge) belong to the *lokuttarâ* (supra-mundane).

When culturing *Ariyamagga* (the Right Path) in accordance with ***Pativedhaññânam***, all the five of the *Uggahapativedha*, *paripucchâpativedha*, *Savanapativedha*, *Dhâranapativedha* and *Sammasanapativedha* are not to be cultured. Only *Paññâpativedha*, *Pahânapativedha*, *Bhâvanâpativedha*, *Arammanapativedha* of the supra-mundane are to be cultured. Therefore it has been indicated as — *Sabbampi pativedhaññânam lokuttaram* = all *pativedhañâ* belong to *lokuttarâ* (*Mûlatî-2-72*).

In other words the five kinds of analytical knowledge, such as *uggahapativedhañâna* etc., are the basic cause of the supra-mundane analytical knowledge so that these five can also be referred to literally (by way of *phupacara*) as *pativedhañâna*. In this sense, with reference to *sabbanpi pativedhañâna*, the knowledge such as *uggahapativedhañâna* etc., can also be concentrated (*Mûlatî-2: 72*).

Only to those who know by *anubodhañāna* and see by *pativedhañāna* the Four Noble Truth do the Buddha expatiates the attainment of the Noble Path (*Ariya Magga*) where all the cankers (*āsava dhamma*) have been eradicated, but not to those who do not know or see in these ways. This is the essence of the meaning of the above documentary. Again the writer has explained in another way.

The Third Opening of The Documentary

Patilomato vā dassanamaggena passato, bhāvanāmaggena jhānato (Itivattaka-Tha-310).

In one way, it means — I only preach the attainment of the Noble Path (*Ariya Magga*), where all the cankers (*āsava dhamma*) have been eradicated, to those who see the *Ariyamagga* by means of reverse *patiloma* (contrast) and to those who know Four Noble Truth by means of the above three *Magga*. I do not preach to those who do not see and know in this way.

The Fourth Opening of the Documentary

Keci pana "ññātatīranapahānapariññāhi jhānato, sikkhapattavipassanāya passato"ti vadanti (Itivattaka-Tha: 310).

I preach only to those who know, by three kinds of analytical knowledge such as knowledge by analysis (*ññātapariññā*), *tīranapariññā* () and *pahānapariññā* (knowledge by analytical elimination), the Four Noble Truth of the mundane, and to those who, have attained peak of the insight knowledge (*Sikkhāpatti vipassanā*) and know the Four Noble Truth of the mundane by this insight knowledge, the attainment of the Noble Path (*Ariya Magga*), where all the cankers (*āsava dhamma*) have been eradicated (*Itivattaka-Tha-310*).

[Note. The three classes of *pariññā* will be treated later. The knowledge of the Four Noble Truth of the mundane via insight knowledge is treated in *Udayabbayañāna* of the Section on *Vipassanā*].

The Fifth Opening of the Documentary

Atha vā dukkhaṃ pariññābhisamayena jhānato, nirodhaṃ sacchikiriyābhisamayena passato. Tadubhaye ca sati pahānabhāvanābhisamayā siddhā eva huntīti catusaccābhisamayo vatto hoti (Itivattaka-Tha: 310).

In still the other way it means, I preach only to those who know *dukkha saccā* by means of *pariññābhisamaya* (condition of congregated knowledge), *samudaya saccā* by means of *pahānabhisamaya* (condition of congregated analytical knowledge of elimination), *nirodha saccā* by *sacchikiriyābhisamaya* (condition of congregated knowledge of concentration), *magga saccā* by means of means of *bhāvanābhisamaya* (condition of congregated knowledge of meditation), the attainment of the Noble Path

(*Ariya Magga*), where all the cankers (*âsava dhamma*) have been eliminated. I do not preach the attainment of the Noble Path (*Ariya Magga*), where all the cankers (*âsava dhamma*) have been eradicated, to those who do not know by these means (*Itivattaka-Tha-310*).

Extracts from *Khadirapatta sutta* and *Kûtâgâ sutta* Dhamma

Yo ca kho bhikkhave evum vadeya "aham dukkham ariyasaccam yathâbhûtam anabhisamacca, dukkha samudayaam ariya saccam yathâbhûtam anabhisamacca, dukkhanirodha-gâminam patipatam ariya saccam anabhisamacca, sammâ dukkhassantam karissâm"ti netam thânam vijjhati (Saṃ.-3: 394; Saṃ.-3: 383).

Anabhisamaccâti ñhânena anabhisamâgantvâ. Appativijjhitvâti attho. (Saṃ.-Tha.-3: 330)

Bhikkhus If any one said " Without knowing penetratively, by my own, of the *dhamma* of *dukkha ariya saccâ* (the Noble Truth of Suffering), of the *samudaya ariya saccâ* (the Noble Truth of the Cause of Suffering), of the *nirodha ariya saccâ* (the Noble Truth of the Cessation of Suffering), and of the *magga ariya saccâ* (the Noble Truth of the Path), where all the sufferings have ceased, the *nibbâna*, truly by the right understanding (*sammâ ditthi*), I would acquire freedom from the suffering of the cycle of rebirth", then such a statement is preposterous (*Saṃ.-3-394; Saṃ.-3.-383*).

That this statement is absurd has been expatiated by the Buddha in relation to an example. What it means is as follows.

Bhikkhus If any one said "I am going to build a house with its upper storey but without its lower (and foundation) parts." Then there is no way to happen what he has said. Similarly " Without knowing penetratively, by my own, of the Four Noble Truth truly by the right understanding (*sammâ ditthi*), I would eradicate completely the suffering of the cycle of rebirth." Such a statement is a preposterous one (*Saṃ.-3: 394*).

Again in *Saccasamyutta khadirapatta sutta* (*Saṃ.-3: 383-384*) too it has been preached as follows.

Bhikkhus If any one said "I will make a cup using leaves of accasia, pine and goose berry to carry water, and I will use them as ear ornament", then what he said is absurd. In the same way" Without knowing penetratively, by my own, of the Four Noble Truth truly by the right understanding (*sammâ ditthi*), I would eradicate completely the suffering of the cycle of rebirth." Such a statement is a preposterous one (*Saṃ.-3: 383-384*).

In continuation it has been preached once again as:

Yo ca kho bhikkhave evum vadeya "aham dukkham ariyasaccam yathâbhûtam abissamacceya, dukkha samudayaam ariyasaccam yathâbhûtam abissamacceya, dukkhanirodam ariyasaccam yathâbhûtam abissamacceya, dukkha nirodha gâminam patipadan ariyasaccam yathâbhûtam abissamacceya, sammâ dukkhassantam karissâ"ti thânametam vijjhati (Saṃ.-3:384, 394).

Bhikkhus If any one said " With penetrative knowledge of my own of the *dhamma* of *dukkha ariya saccâ* (the Noble Truth of Suffering), of the *samudaya ariya saccâ* (the Noble Truth of the Cause of Suffering), of the *nirodha ariya saccâ* (the Noble Truth of the Cessation of Suffering), and of the *magga ariya saccâ* (the Noble Truth of the Path), where all the sufferings have ceased, the *nibbâna*, truly by the right understanding (*sammâ ditthi*), I would acquire freedom from the suffering of the cycle of

rebirth", then what he said is the reality (*Sam.*-3:384; *Sam.*-3: 394).

With an example it was again explained as

Bhikkhus If any one said "I am going to build a house with lower (and foundation) parts first after which its upper storey will be made." Then what he has said will happen (*Sam.*-3-394).

Bhikkhus If any said "I will make a cup using leaves of lotus, dipterocarpus and gwe-tauk (a bitter-tasting leave used in making soup) to carry water, and I will use them as ear ornament", then what he said is a truth (*Sam.*-3: 384).

Bhikkhus In the same way as these examples, if any one said " With penetrative knowledge of my own, of the Four Noble Truth truly by the right understanding (*sammâ ditthi*), I would eradicate completely the suffering of the cycle of rebirth." Such a statement is a reality (*Sam.*-3: 383-384).

Again the Lord has expatiated as follows.

Tasmâ hita bhikkhave "idaṃ dukkhan"ti yogo karaniyo "ayaṃ dukkhasamudayo"ti yogo karaniyo, "ayaṃ dukkhanorodho"ti yogo karaniyo, "ayaṃ dukkhanirodhagâminî patipadâ"ti yogo karaniyo (*Sam.*-3: 384; *Sam.*-3: 394).

Bhikkhave in this *desanâ*, therefore, you should make effort to know that

1. "This the Noble Truth of Suffering."
2. "This is the Noble Truth of the Cause of Suffering."
3. "This is the Noble Truth of the Cessation of Suffering."
4. " This is the Noble Truth of the Path leading to the *nibbâna*, the Cessation of the Suffering." (*Sam.*-3: 384; *Sam.*-3: 394).

In these suttan the Buddha has insisted the followers to make effort to understand the Four Noble Truth. Therefore, those who want to escape from the suffering of the cycle of rebirth must be determined to make effort to understand the Four Noble Truth to be able to escape from the recurrent of suffering of rebirth.

The following is the answer to as to how the penetrative knowledge can be acquired of the Four Noble Truth.

Vattasaccâ — Vivattasaccâ

Tattha purimâni dve saccâni vattam, pacchimâni vattam. Tesu bhikkhuno vatte kammathânâbhivesohoti, vivatte natthi abhiniveso (*Abhi.*-*Tha.*-2: 109; *Dî-Tha.*-3: 160).

Of these Four Noble Truth the previous Noble Truth of Suffering and Noble Truth of the Cause of Suffering are the *vattasaccâ* (the Truth of Suffering). The Noble Truth of Cessation of Suffering and Noble Truth of the Path, of the later occurrence, are the *vivattasaccâ* (the Truth of Eradication of Suffering, the *Nibbâna*). Of these two, the *vattasaccâ* and *vattasaccâ*, *vivattasaccâ* is the object of meditation (*vipassana* exercise) for the practicing monks = concentration. No meditation = concentration is made on the *vivattasaccâ* as the object of meditation (*Abhi.*-*Tha.*-2: 109; *Dî-Tha.*-3: 160).

In accordance with the instructions given by the above Commentaries, the practicing individuals should take the Noble Truth of Suffering and the Noble Truth of the Cause of Suffering of the Four Noble Truths as the object of concentration. Effort must be made to concentrate on these by means of *uggahapativedha*, *savanapativedha* and *dhâranapativedha*, called knowledge by learning, and *sammasanapativedha* referred to as *vipassanâ ñâna* (insight knowledge) to know penetratively = knowledge acquired via practice. Once successful by knowledge acquired from learning, the Noble Truth of Suffering and Noble Truth of Cause of Suffering are cultured and taken to heart by insight knowledge so that the knowledge through practice is attained. Now a further explanation will be made of the Noble Truth of Suffering and the Noble Truth of the Cause of Suffering.

The Doctrine of the Noble Truth of Suffering (The *Dhamma* of *Dukkha Ariya Saccâ*)

Katamañca bhikkhave dukkham ariyasaccam. "Pañcupâdânakkhandhâ" tissa vacanîyam. Rûpupâdânakkhandho vedanupâdânakkhandho saññupâdânakkhandho sankhârûpâdânakkhandho viññânupâdânakkhandho. Idam vuccati bhikkhave dukkham ariyasaccam (Sam.-3: 373; Khandhasuttan)

Bhikkhus What is the *Dhamma* of the Noble Truth of Suffering? The answer should be *Upâdânakkhandhâ* (the factor of 5-Fold Clinging to Existence). What then are the *upâdânakkhandhâ*? They are *rûpupâdânakkhandha* (the Aggregate of the Matter), *vedanupâdânakkhandhâ* (the Aggregate of the Sensation), *saññupâdânakkhandhâ* (the Aggregate of perception), *sankhârûpâdânakkhandhâ* (the Aggregate of mental formation or reaction) and *viññânupâdânakkhandhâ* (the Aggregate of consciousness). *Bhikkhus* These Five Aggregates are the *Dhamma* of the Noble Truth of Suffering (*Sam.-3: 373; Khandhasuttan*).

According to this *desanâ*, note that *rûpupâdânakkhandha*, *vedanupâdânakkhandhâ*, *saññupâdânakkhandhâ*, *sankhârûpâdânakkhandhâ*, *viññânupâdânakkhandhâ*, referred to as the Five-Fold *Upâdânakkhandhâ* are the Noble Truth of Suffering.

What *Upâdânakkhandhâ* is

Yam kiñci bhikkhave rūpam atītānāgatapaccuppannam ijjhattam vā bhahiddhā vā olārikam vā sukhumaṃ vā hīnam vā panitam vā dūre santike vā sāsavum upādānīyam, ayam viccati rūpupādānakkhandha (Sam.-3: 39; Khandhāsuttan).

Bhikkhave The root of the object of cankers, *Āsava*, (situated in the 31 Planes), the erroneous craving such as "I, mine, etc." are

1. All the past material factors,
2. All the future material factors,
3. All the present material factors,

4. All the internal material factors,
5. All the external material factors,
6. All the gross material factors,
7. All the delicate material factors,
8. All the ignoble (inferior) material factors,
9. All the Noble material factors,
10. All the distant material factors (far from the intelligence of the meditating individual),
11. All the nearby material factors (nearby the intelligence of the meditating individual).

All these 11 existing as material factors are to be called *rûpupâdânakkhandha* etc. (*Sam.*:2: 39).

Vedanupâdânakkhandha etc. are also expatiated in a similar way. Therefore, the wrong understanding, which is the root of the object of canker, *Āsava*, such as "I, mine", of the 11 classes of *upâdânakkhandhâ* existing as material factors are the Dhamma of Noble Truth of Suffering. This must be respectfully accepted as is preached by the Buddha.

Included in this *upâdânakkhandhâ* are the Five *Upâdânakkhandha* of Past and of Future. How are they contemplated? By *paccekkha ñâṇa* (practical knowledge) or *anvaya ñâṇa* (theoretical knowledge)? The answer is as given below.

Dassanappabhâvum hi upâdâyâ ñâṇa samñgî puggalo cakkhunâ rūpâni, ñâṇena vivatte dhamme passati (Itivattaka-Tha. 310).

Jânatativâ vatvâ na jhânanaṃ anussavâkâraparivitakkamattavasena idhâdhippetam, attha kho rūpâni viya cakkhuññâṇena rūpâdîni, tesam ca samudayâdike paccekhe katvâ dassananti vibhavesom "passato"ti vuttanti evum vâ ettha atto (Sam.-Tî.-2: 63).

As a man sees the material bodies by physical eye, a meditator sees the *dhamma* of the Noble Truth of Suffering and the Noble Truth of the Cause of Suffering by virtue of insight knowledge called the *paccekkha ñâṇa*, the ultimate truth of the nature of the object of concentration, which can be visioned in its true nature by the power of knowledge due to right understanding created by *vipassanâ* (meditation). To emphasize the essence of the meaning *passato* is added after preaching as *jhânato (Itivattaka-Tha.: 310; Sam.-Tî.-2: 63).*

[Note. The Noble Truth of Cause of Suffering, which is the true Cause of the Five-Fold Material of Birth of the *dhamma* of the present Noble Truth of the Cause of Suffering based on the Five-Fold Clinging to Existence. And they are part of the material body of the past. It will become clear in the Section on *Samudaya Saccâ*].

If it is so then should the past and future factors be not meditated by means of *anvaya ñâṇa*? The answer is as follows.

Nayadassanavasena vâ evum vuttam. Pathavanhñi paccuppanadhammâtam udayabbaya disvâ attha atatânâgate nayam neti (Mahâtî.-2: 423).

It can be put in another way by *Nayadassana* (for the purpose of seeing). To begin with, *udayabbaya* (the arising and perishing away) of present factors (*paccupannadhamma*) are exercised by *paccakha* (pactically). The past and future *dhammas* are later practiced in this way (*Pyī. Visuddimagganissaya* – 5: 265).

Care must be taken of the fact that in taking *udayabbaya* of the present *dhammas*, the following are to be included.

1. *Paccayato udayabbaya* (founded on arising and perishing away). Because of the distinct causes such as ignorance, craving, attachment, causative factors, action etc., the resultant five material factors etc. of the Five-Fold Material Factors are clearly formed. The arising and perishing away due to distinct causes such as ignorance, craving, *upādan*, *sankhāra* and *kamma* ceasing by nature of *anuppādanīrodha*, the resultant five material factors come to cease by nature of *anuppādanīrodha*.
2. *Khanato udayabbaya* (momentary arising and perishing away) = momentary formation and dissolution of the five resultant five-fold material factors. In another way — [*Sappaccayanāmarūpapvasena tilakkhanam āropetvā* (*Ma.-Tha.* 1: 281)]. Arising and perishing away of the cause and result referred to as *udayabbaya*.

Hence the resultant Five *upādānakkhandhā* are the *dhamma* of the Truth of Suffering. The causes *avijjā*, *tahnā*, *upādan*, *sankhāra* and *kamma* are the *dhamma* of the Truth of Cause of Suffering. The two kinds of *udayabbaya*: *paccayato udayabbaya* and *khanatoudayabbaya*, of the Truth of Suffering and Truth of the Cause of Suffering seen by means of *paccakha* called *vipassanā dhamma ditthi* (right understanding of insight). When visioned in this way, the past and future are contemplated in a similar way by *anvaya ñāna*. This is the answer to the above query.

***Abhiññan and Vipassanā* (Power and Meditation)**

1. A statement that past can be concentrated by *pubbenivāsānussati abhiññan* (higher wisdom of remembrance of one's former state of existence),
2. A statement that the future can be concentrated by *anāgata ñāna* (knowledge yet to come), which is a part of *dibbacakkhu abhiññana* (the Heavenly eye).

These two statements are acceptable on the basis of factual substance. The fact that the past and future (the Five Aggregate) can be contemplated by *vipassanā ñāna* (insight knowledge) is not satisfactorily acceptable. With regard to the latter, *Sammāsambuddha* (the Perfectly Enlightened Buddha) himself has expounded in the opening of the doctrines as follows.

*Yehi ti keci bhikkhave samanā vā byamanā vā anekavihitam pubbenivāsam
anussaramānā anussaranti, sabbete pañcupādānakkhandhe anussaranti etesam vā
aññataram (Khajjaniya sutta).*

Pubbenivāsanti idam na abhiññāvasena anussaranam sandhāya vattam, vipassanāvasena pana pubbenivāsam anussarante samayabyāmane sandhāyetam vuttam.
Tenevāha “sabbete pañcupādānakkhandhe anussaranti etesam vā aññasaram”ti.

Abhiññâvasena hi samanussarantassa khandhâpi upâdhânakkhandhâpi pannattîpi ârammanam hoti yeva. Rûpanyena anussarantîti evum hi anussaranto na aññam kañci sattam vâ puggalam anussaranti, atîte pana niroddham rûpakkhandhâmeva anussaranti. Vedanâdisupi ese va nayo (Sam.-Tha.-2: 266).

Vipassanâvasenâti etarehi rûpavedanâdayo anussâritvâ "Pubbepâham évum vedanâ ahosiñti atîtânâ rûpavedanâdipam paccuppannehi visesâbhavadassanâ vipassanâ, tassâ vipassanâya vasena (Sam.-Tî.-2: 235).

Bhikkhus If *samana* and *byamana* reminisce along a series material body or bodies of the past, they can do so by virtue of their knowledge. Those *samana* and *byamana* who can reminisce, by virtue of their knowledge, can do so of all the Five-Fold Material Factor or each one of these (*Sam.-2: 71; Khajjaniya sutta*).

In using the term *pubbenivâsa* (reminiscent of the past) in this text, the Buddha does not mean the remembrance of of the previous life by power of *pubbenivâsânussatiabhiññâna* (reminiscent of the former birth). If the Buddha, however, does mean *pubbenivâsânussatiabhiññâna*, then *pubbenivâsa* has been used referring to *samana* (a monk or one who has eradicated defilements) and *byamana* (a *brahmana*). It is because of this that the Buddha expounded as:

"Sabbete pañpâdânakkhandhe anussaranti etesañ vâ añataram."

"The *samana* and *byamana* who can reminisce by virtue of the order of the Five-Fold Material Factors and each of these individually, can do so by virtue of knowledge." The reason for this preaching is as given below:

To the *samana* and *byamana* who can reminisce the material factors of previous birth by virtue of *pubbenivâsânupana abhiññâna*

1. The Five-Fold Material Bodies included in the supra-mundane *dharmma*.
 2. The Five-Fold Clinging to Existence not included in the supra-mundane *dharmma*,
 3. The body-related racial characters, physical features, nutrient, *sukha* (mental ease), *dukkha* (suffering) etc., and
 4. The perception of various names
- are the object of *pubbenivâsânussati abhiññâna*.

The Buddha, on the other hand, does not expatiate that these above four factors can be reminisced orderly. The Lord only indicates that the Five-Fold Clinging to Existence or any one of these Five of the previous birth can be reminisced. Therefore, the Buddha does not mean can be made of the material factors of the former birth by means of *pubbenivâsânussati abhiññâna*. The Buddha only means that *Paramattha dhamma sabhâva* (the nature of the ultimate *dharmmas*) can be reminisced by *vipassanâ ñâna* (insight knowledge). What it all means is that *rûpa*, *vedanâ*, *saññâ*, *sankhâra*, *viññâna* etc., which have ceased in the past, can be recollected by the insight knowledge (*Sam.-2: 71; Sam.-Tha.-2: 266*).

Vipassanâvasena = Power of Vipassanâ

After *rûpa*, *vedanâ*, *saññâ*, *sankhâra* and *viññâna* of the present have been recollected = being analytically concentrated — "In the long past life also, I have had *rûpa*,

vedanâ, saññâ, sankhâra and *viññanâ*" — these past factors were similar to those of the present. There is *vipassanâ ñâna* which can vision the fact, such as "In the long past life also, I have had *rûpa, vedanâ, saññâ, sankhâra* and *viññanâ*", that there is no difference between the past and the present *rûpa, vedanâ, viññanâ* and *sankhâra*. This means that the material factors that existed in the past can be recollected in order (*Sam.-Tî.-2: 235*).

These are the evidences from the doctrines indicating the differences between the powers of *pubbenivâsanussati abhiññâ* and *vipassanâ ñâna*, are to be concentrated and can be concentrated by virtue of *vipassanâ ñâna*. Now in continuation, rules and regulation followed by people of olden days by means of which past and future factors are meditated will be presented.

Notes from *Anusaya Suttan*

Then Râhulâ approached the Buddha, paid homage, get seated at an appropriate place, and put to the Lord the following question.

My Lord In what way should one know and see so that the clinging "I" = wrong view, the attachment "mine" = *tahnâ* (craving), latent boastfulness = conceit, would not occur in the body living or non-living and arising signs together with *viññâna*?

The the Buddha instructed as follows.

*Yaṃ kinci Râhula rūpaṃ atītânâgatapaccuppannaṃ ajjâtam vâ bahiddhâ vâ olârîka vâ sukhumaṃ vâ hîtanam vâ panîtam vâ yaṃ dure santike vâ, sabbaṃ rūpaṃ "netam mama, nesohamasamî, na meso attâ"ti evametam yathâbhutam sammappaññâya passati. Yâkâci vedanâ. R. Yâkâci saññâ. Yekeci sankhâra. Yaṃ kinci viññânam atītânâgata paccuppannaṃ ajjattam vâ bahiddha vâ olârîkam vâ sukhumaṃ vâ hînam vâ panîtam vâ yaṃ dure santike vâ, sabbaṃ viññânam "netam mama, nesohamasmi, na neto attâ"ti evametam yathâbhutam sammappaññâya passati. Evum kho Râhula janato evum passato imasam ca saviññânake kâye bahiddhâ ca sabbanimittesu ahañkâra mamañkâra mânâsayâ na huntîti (*Sam.-1: 444*).*

1. Râhulâ That all material things of the past and future, which occur internally or externally, which are coarse = *olarika*, which are subtle = *sukhuma*, which are inferior = *hîna*, superior = *panita*, which are far = *dure*, near = *santika* are seen and known as = "Netam mama, nesomahasmi, na meso attâ."

= This material body is not I, this material body is not I. This material body is not mine or not myself. By means of *vipassanâ ñâna* (insight knowledge) and *Magga ñâna* (Path knowledge) these are seen precisely as they truly are.

2. Feeling = That all Suffering R.
3. Perception = That all perceptions R.
4. Formation = That all the arising of mind and mental factors R.
5. Conscious Mind = That all the cognitions R.

Râhulâ Only in those who know and see in this way the internal, the external, living and non-living and arising signs of perception of I = the wrong view, clinging like mine = *tahnâ*, latent boastfulness = conceit will not arise (*Sam.-1: 444; Anusaya suttan*)

Netam mama nesoha masmi na meso attâti samanupassâmi aniccaṃ dukkham

anattâtisamanupassâmi (Ma.-Tha.-4: 232; Channovâda suttan atthakathâ).

In accordance with the opening of the Commentary, note that meditation on the five *upâdânakkhandha* (the Five-Fold clinging to the Existence) of the past and future as the object - *netam mama, nesohamasmi na meso attâ* - and meditation on the general

characters such as *anicca* (impermanence), *dukkha* (suffering) and *anatta* (non-self) as the object are the same. In so meditating, the five-fold clinging to existence of the present, past and future as object are all included in concentrating on these five. In meditating on the five-fold *upâdânakkhandhâ*, existing as 11 classes, the question arises as to which *ñâna* (knowledge) is involved, *paccakkha ñâna* or *anvaya ñâna*. See the following *Athakathâ* (Commentary) *Tikâ* (Book of Meaning) opening for the answer.

Sammappaññâya passati saha vipassanâya maggapaññâya sutthu passati
(*Sam.-Tha.-2: 197; Anusaya Suttan Atthakathâ*).

Samma. R. passatîti pubbâbhâge vipassanâne na sammasanavasena, maggalakkhane abhisamaya vasena sutthu attapaccakkhana ññânaena passati (Sam.-Tî.2: 181).

Sammappaññâyapassati = vision by the right knowledge means vision by insight knowledge and Noble Path knowledge (*Sam.-Tha.-2: 197*).

In *vipassanâ* prior to the Noble Path, the Five-Fold Clinging to Existence, existing as 11 classes, as the object are analytically concentrated. By virtue this concentration the impermanent, suffering and non-self characters of the five-fold *upâdânakkhandhâ* are seen penetratively by one's own self through the right insight vision called *attapaccakkha ñâna*. In the case of Noble Path moment (*ariyamaggakkhana*), the five-fold *upâdânakkhandhâ*, existing as 11 classes, and which are the Truth of Suffering, contemplated via *kicca ditthi* (via penetrative understanding) penetrative knowledge of *priññâbisamaya* (analytical understanding) by virtue of which *ariya magga sammâditthi* (right understanding of the Noble Path) called *attapaccakkha ñâna* (acquired practical knowledge) the *upâdânakkhandhâ* are seen penetratively. (The penetrative knowledge without infatuation. By rejection of *moha* (dullness) which prevents the understanding the Truth of Suffering) (*Sam.Tî.-2: 181*).

N.B. The insight knowledge, which has the ability to mentally culture the the factors of

Five-Fold Clinging to Existence as the object, has been explained as ***attapaccakkha ñâna***. When the factors of impermanence, of suffering and of non-self of the presently cultured *dhammas* have been accomplished, the *dhammas* of the past and future, but are not presently cultured, can also be meditated in the same way by means of *anvaya ñâna*.

Notes from *Mahârâhulvâda Suttan*

Once Râhulâ,, following the Buddha, went into the town of Savatthi for alms reception. Râhulâ, who was interested in becoming the elder son of the King Cakkavatta, was admonished by the Buddha.

"Yaṃ kinci Râhula rūpaṃ atītānāgatapaccuppannaṃ ajjattaṃ vā bahiddhā vā olāka vā sukhumaṃ vā hīnaṃ vā paṇītaṃ vā yaṃ dure santike vā, sabbaṃ rūpaṃ 'netam mama, nesohamasmi, na meso attā'ti evumetaṃ yatthābhutaṃ sammappaññāya dathaabbam"
(*Ma.-2: 84*).

Râhulâ That all material beings of the past and future, which occur internally or externally, which are coarse = *olarika*, which are subtle = *sukhuma*, which are inferior = *hîna*, superior = *panita*, which are far = *dure*, near = *santika* are seen and known as = "*Netam mama, nesomahasmi, na meso attâ*." "This material body is not I, this material body is not mine." (= concentrated as *anicca*, *dukkha* and *anatta*). Meditate the truth in this way by right *vipassanâ ñâna* (*Magga paññâ* or the Path knowledge) (*Ma.-2: 84*).

It has been instructed to concentrate on the *vednâ*, *saññâ*, *sankhâra* and *viñañ* of the four material body in a similar way (*Ma.-2: 84*).

Here too all the *paccakkha ñâna*, called *vipassanâ sammâditthi* and *ariya magga sammâditthi* are mentally cultured via *sammappaññâya*. At the time when the Buddha expounded *Mahârâhula suttan*, Râhulâ was a laity only 18 years of age. It must be noted that, because of this condition, it was instructed that in concentrating on the Five-Fold Clinging on the Existence (the five *upâdânakkhandhâ*) existing as the past, the future and the present etc. of 11 classes attempt must first be made to arrive at *attapaccakkha ñâna* called *vipassanâ sammâ ditthi*.

Notes on *Anattalakkhana Suttan*

In scriptures in Pâli are many doctrines instructing to meditate on the past and future *upâdânakkhandhâ*. From among these doctrines, some will be extracted from the *Anattalakkhan Suttan* which will be most relevant and familiar to you.

The Buddha explained to *sotapana* (those who have entered the stream), and being nominated as *pañcavaggî* (a company of five) about the impossibility of the five corporeality to follow one's own wish called *avasavattanattha* (powerless to obligate one's wishes) = the nature of *anatta* (non-self). After this explanation, question and answer on the five corporeality in the form of *anicca*, *dukkha* and *anatta* individually. When the Company of Five (*pañcavaggî*) have presented that the five corporeality are only the *dhammas* of *anicca*, *dukkha* and *annata*, the Buddha instructed the object of mental culture as follow.

Tasmâ tîha bhikkhave "Yam kiñci rūpam atîtânâgatapaccuppanam ajjattam vâ bahiddhâ vâ olârikam vâ sukhumam vâ hînam vâ yam dure vâ santike vâ, sabbam rūpam mama, nesohasmi, na neso attâ"ti evametam yatthâbhutam sammappaññâya datthabham (*Sam.-2: 56*).

Bhikkhus the Five Aggregates are only the *dhammas* of *anicca*, *dukkha* and *anatta* and, therefore, in this teaching (doctrine of the Buddha) my sons, meditate on the following in their true nature by *vipassanâ paññâ* and *magga paññâ*.

All the *dhammas* of the material things of the past, future and present, all the internal factors occurring inside your life continuum, and those that occur external to you, coarse and subtle material factors, inferior and superior factors, all the far and nearby material factors, existing as 11 classes.

These are mentally cultured "*netam mama, nesohamasmi, na meso attâ*" as

1. This material body is not mine (= as suffering)

2. This material body is not I (= as impermanence)
3. This material body is not myself (as non-self) (*Sam.*-2: 56).

In the 4-Fold Mental Factors (the *Four Namakkhandhâ*), such as *vedanakkhandhâ* (the Aggregate of Feeling) etc., are also instructed by Buddha to be meditated in a similar way.

In this way the Five Aggregate of the past and future are included in *vipassanâ* exercise as described in the *desanâ* of this *Anattalakkhana Suttan*. In accordance with these instructions, the members of *pañcavaggiya* (refers to the her Three Path High Factors for members *pañcavaggiya*) arrived at *attapaccakkha ñâna*, referred to as *maggâ sammâditthi ñâna* by meditating on the five *upâdânakkhandhâ* (which always follows *desanâ* knowledge) existing as 11 classes by virtue of exercise in *vipassanâ*. Because of this exercise these members, who are named *pañcavaggiya*, in the wake of accomplishment of *Anattalakkhana Suttan* attained the *Arahatta Phala* (Fruit as the attainment of the last and highest stage of the Path).

Imasmiñ ca pana vayâkaranasmiñ bhaññâmâne bhikkhunam anupâdhâya âsavehi cittâni vimussinsu (*Sam.*-2: 56).

Only the meaning of *Anattalakkhana Suttan*, but not the verse, was expatiated to the members of *pañcavaggiya* and they were not attached to the five *upâdânakkhandhâ* any more by the wrong understanding of I, mine, etc. but released from *âsava* totally (*Sam.*-2: 56).

Instruction of the meditation on *anicca*, *dukkha* and *anatta* alternately in the form of question and answer is referred to as *Teparivattadhamma desanâ*. Hundreds of similar *Teparivattadhamma desanâ* are present in the Buddha's doctrine. Most of these are found in *Khandhavaggasamyut*. The Buddha, the compassionate and the completely enlightened, has repeatedly instructed these, and those practicing individuals who are willing to acquire *nibbâna dhammas* should obediently follow these instructions.

At this instant, of the Four Noble Truth described in *Āsavakkhaya Suttan*, *Dukkha Ariya Saccâ* (the Noble Truth of Suffering has been explicitly explained. Now again (*Samudaya Ariya Saccâ*) the Noble Truth of Arising of Suffering will be dealt with.

Samudaya Ariya Saccâ

(The *Dhamma* of the Noble Truth of Arising of Suffering)

In the *Abhihammâ* (*Abhi.*-2: 211-215) *Saccavibañ* of *Vibañ Pâli*, the Buddha has expatiated

1. *Tahnâ* (craving) as the Truth of Arising,
2. *Tahnâ* together with all the *kilesa* (defilements) as the Truth of Arising,
3. *Tahnâ*, *kilesa* together with all *akusala* (ill deeds) as the Truth of Arising,
4. All the factors of *akusala*, and *alobha* (disinterestedness), *adosa* (amity) and *amoha* (non-delusioned) = the three factors of primary *kusala* (good deeds) which are the root of all *âsava* factors and which make all beings go round and round in the cycle of rebirth as the Truth of Arising,

5. All that is *akusala* and the *kusala* which is the root of factors which make all beings go round and round in the cycle of rebirth as the Truth of Arising.

The Truth of Arising (*samudaya saccâ*) has been classified by five methods in this way. Referring to this *desanâ Sammohavinodanî Atthakathâ* and *Visuddhi Magga Atthakathâ* have explained as follows.

Tattha yasmâ kusalâkusalakammamî avisesena samudayacassanti saccavibaṅge vattam
(*Abhi.-Tha.-2: 185; Visuddhi-2: 216*).

= All the *kuso* (good deeds) and *akuso* (bad deeds) are indicated as *cetanâ* (volition), *cetanâsampayuttadhamma*, especially in general as *samudaya saccâ* (Truth of Arising), by the Buddha in *Saccavibhaṅ Pali* text (*Abhi.-Tha.-2: 185; Visuddhi-2: 216*).

In such doctrines as *Vibhaṅ and Dhammacakka* (Wheel of the Doctrine) the *tahnâ* (the craving) has been admonished as *samudaya saccâ*. This was made so to give as an example by extracting a fact in the direction of explanation being given. A mature seed, with its moisture and starch contents still intact, will grow into a plant of its own kind when planted in a soil with necessary factors like water, soil, favorable weather and light. So also with the support of *tahnâ* (craving) a life would result, the kind of life which corresponds to the action of *kuso* (good deeds) or *akuso* (bad deeds). A burnt seed is depleted of its moisture and starchy contents, and the power to grow into a plant is lost. So too the life of noble individuals, in whose material and mental continuum the *kuso* and *akuso* accompanied by *tahnâ* called *kilesa* (defilement) once resided, will no longer be able to come into being. Therefore, in the arising of a life, called the Truth of Suffering, the primary directing force for such a life and such and such object of attachment are the primary cause. That is the reason why the Buddha expatiated that primarily *tahnâ* is the Truth of Suffering. The same applies to Nos. 2, 3, and 4 mentioned above.

The fifth method (of the above mentioned), in which all *kuso* and *akuso* (good and bad deeds) actions are indicated as the Truth of Suffering, is the method of *Nippadesa* (separately) by the Truth of Suffering are completely treated without leaving a trace untouched. Again in *Aṅgutthora Pali, Tikanibatti, Titthâyatana Suttan*, the Lord has expounded as follows.

Notes from *Titthâyatana Suttan*

Katamaṇca bhikkhave dukkhasammudayaṃ ariyasaccaṃ, avijjâpacayâ sankhâra, sankhârapaccayâ viññânaṃ, viññânapaccayâ nâmarûpaṃ, nâma rūpapaccayâ salâyatana-paccayâ phasso, phassapaccayâ vedanâ, vedanâpaccayâ tahnâ, tahnâpaccaya upâdânaṃ, upâdânapaccayâ bhavo, bhavapaccayâ jâtî, jâtîpaccayâ jarâmaranaṃ soka parideva dukkha domanassupâyâsâ sambhavuntî, evametassa kevalassa dukkhakkhandhassa samudayo hoti. Idam vuccati bhikkhave ariyasaccaṃ (Aṃ.-1: 178).

Bhikkhus What is *Samudaya Ariya Saccâ* (the Noble Truth of Arising) that causes the *dukkha* (suffering)? Because of *avijjâ* (ignorance) *sankhâra* is formed. Because of *sankhâra*, *viññâṇa* (concept) is formed. Because of the concept mind and material factors are formed. Because of the formation of the mind and material factors *salâyatana* (sense as the object) is formed. Because of *salâyatana* formation *phassa* (touching or contact) is formed. Because of *phassa vedanâ* (feeling) is formed. Because of formation of *phassa tahnâ* (craving) is formed. Because of *tahnâ upâdana* (grasping)

is formed. Because of grasping a life is formed. Because of life formation birth results. Because of birth *jarâ* (ageing), *marana* (death and decay), *soka* (grief), *pariveda* (crying), *dukkha* (suffering), *domanassa* (mental pain), and *upâyâsa* (turbulent factors) come into existence. In this way the nature of the cause and of formation of a multitude of *dukkha*, which are non-*sukha*-inducing make their appearance. Bhikkhus The nature of this cause-result relationship = *Paticca samuppâda* (the Causal relationship) should be called the Noble Truth of Causes of Arising which is the cause of suffering (*Am.-1: 178*).

A meditator, who wish to be relieved of the cycle of rebirth, must try to vision penetratively the four *Ariya Saccâ* (the Four Noble Truth) by *sammâ ditthi ñâna* (the knowledge of right understanding). He should not forget that among these Four Truth are also included the cause-result relationship the *Paticca samuppâda* which is the truth of *samudaya saccâ* (the Truth of Arising).

How the *Saccâ* (Truth) is Cultured in the Character of *Paticca sammupâda*

Tattha ayasmâ kusalâkusalakammañ avisesena samudayasaccanti saccavibañge vuttam, tasmâ avijjâpaccayâ sankhârâti avijjâya sakhârâ dutiyasaccappabhavum dutiyasaccam, sankhârehi viññânam dutiyasaccappabhavum pathamasaccam. Viññânâdhi nâmarûpâdini vipâkavedanâpariyosânâni pathamasaccappabhavum pathamasaccam, vedanâya tahnâ pathamasaccappabhavum dutiyasaccam, tahnâya upâdânâni dutiyasaccappabhavum dutiyasaccam, upâdânato bhavo dutiyasaccappabhavum pathamadutiyasaccadvayam. Bhavato jâti dutiyasaccappabhavum pathamasaccam, jâtiyâ jarâmaranam pathamasaccappabhavum pathamasaccanti evum tâvidam saccappabhavato viññâtabbam yathâraham (Abhi.-2: 185; Visuddhi-2: 216-217).

In Saccavibañ Pâli all the *kuso* and *akuso* functions, which are created (*cetanâ*, *cetanâ*-related *sampayutta dhamma* etc., are not particularly differentiated), are generally expounded by the Buddha to be *samudaya saccâ* too. Therefore, when the 12 classes of *paticca samuppâda* (the causal relationship), are categorized by way of *saccâ* (the Truth)

Avijjâ, sankhâra, tahnâ, upâdana, kammabhava are the groups of *samudaya saccâ*. It is the *dutiya saccâ* (the second truth *dhamma*).

Viññâna, nâmarûpa, saḷayatana (the sense as object), *phassa* (contact), *vedanâ* (feeling), *upapattibhava* (resultant way of next life) such as *jâti* (birth), *jarâ* (ageing) and *marana* (death and decay), which are the factors of *vipâka vatta* (functions of the effects of one's action) are all grouped as *dukkha saccâ* (the truth of suffering). This is *pathama saccâ* (the first truth). In short, note these in this way.

In the case of *avijjâ paccayâ sankhârâ* (ignorance based on mental formation), the *avijjâ* (ignorance) is the *samudaya saccâ*, so also is the *sankhâra*. Therefore, all the factors of mental formation, formed due to *avijjâ*, are the *avijjâ* called *samudaya saccâ*, from which originated the *sankhâra* referred to as *samudaya saccâ*. This is said to be the *dutiya saccâ* of the *dutiya saccâ* origin.

In the case of *sakhârâ paccayâ viññânam* (*sankhâra* based on cognition), the *sankhâra* is the *samudaya saccâ*, and *viññânam* is the *dukkha saccâ*.

In the case of *vedanā paccayā tahnā* (*vedanā* based on craving), *vedanā* is the *dukkha saccā*. Craving is the *samudaya saccā* (the truth of arising). *Tahnā* derived from the *vedanā* is the *dutiya saccā* (second truth) originating from the *pathama saccā* (the first truth) (= *dukkha saccā*).

In the case of *tahnā paccayā upādānam* (craving based on *upādāna*) *Tahnā* as well as *upādāna* are *samudaya saccā*. Therefore, *upādāna* derived from craving is the *dutiya saccā* (= *samudaya saccā*) from which originated the *dutiya saccā* (*samudaya saccā*).

In *upādāna paccayā bhavo* (life based on *upādāna*) *upādāna* is *samudaya saccā*. The *kammabhava* (sensual existence) is the *samudaya saccā*. The *upapattibhava* (life due to rebirth) is *dukkha saccā*. Therefore, life derived from attachment is the *dutiya saccā* (= *samudaya saccā*) from which originated the *pathama saccā* *dutiya saccā*.

In *bhava paccayā jāti* (the rebirth based on *bhava*) *bhava* = *kamma bhava* is the *samudaya saccā*. *Jāti* is the *dukkha saccā*. Therefore, rebirth derived from the sensual existence is *dukkha saccā* (= *samudaya saccā*) on which *pathama saccā* has its origin.

In the case of *Jati paccayā jarāmaranam* (ageing and decay based on rebirth), *jāti* as well as *jarāmaranam* are the *dukkha saccā*. Therefore, *jarāmarana* (ageing and decay), which arises due to *jāti* is the *pathama saccā* (= *dukkha saccā*) from which originates *pathama saccā* (= *dukkha saccā*) (*Abhi.Tha.-2: 185; Visuddhi-2: 216-217*).

According to these expositions *avijjā*, *tahnā*, *upādāna*, *sankhāra* and *kamma* are all *dharmas* of *samudaya saccā*. *Viññāṇa*, *nāma*, *rūpa*, *salāyatana*, *phassa*, and *devadāna* are groups *dharmas* of *dukkha saccā*. These are to be understood this way.

Atīte hetavo pañca, idāni phalapañcakam.

Idāni hetavo pañca, āyatam phalapañcakam (*Abhi.-Tha.-2: 182; Visuddhi-2: 214*).

In accordance with the above opening of the doctrines which, with reference to *Patisambhidā Magga*, have described, and have to be noted as

1. When sensual existence was created, the five causes cultured in the past, such as *avijjā*, *tahnā*, *upādāna*, *sankhāra* and *kamma*, which are the truth of arising due to which the five present results, which are the truth of suffering, such as *viññāṇa*, *nāma*, *rūpa*, *salāyatana*, *phassa*, *vedanā* etc, have appeared vividly.
2. The five present causes, such as *avijjā*, *tahnā*, *upādāna*, *sankhāra* and *kamma*, cultured in the present existence, which are the truth of arising due to which the five future results which are the truth of suffering, such as *viññāṇa*, *nāma*, *rūpa*, *salāyatana*, *phassa*, *vedanā* etc, will also appear vividly.

As a man would see the physical objects via consciousness by way of sight, so would a meditator endowed with *vipassanā sammāditthi ñāṇa* (the insight knowledge of right understanding) see the nature of the present results due to the past causes, and future results because of the present causes. The above **Upanisa Suttan** *athakathā tīkā* and **Āsavakkhaya Suttan** *athakathā* have explained how a meditator can see the nature the causal relationship of the past causes and present results, the present causes and the future results by *paccekka ñāṇa* (paractical knowledge) called the *vipassanā sammāditthi ñāṇa*.

The Buddha has also admonished in Āsavakkhaya Suttan that if nature of formation of *dukkha saccā* due to *samudaya saccā* as the cause cannot be appreciated by *sammāditthi ñāṇa*, the *Ariya Magga* (the Right Path), where *dhammas* of *āsava* have been abolished, cannot be attained. Therefore those, who are willing to acquire *nibbāna* appreciated via *Ariya Magga ñāṇa* and *Phala ñāṇa* (the Path and Fruit knowledge), must try to penetratively know the fact that *dukkha saccā* is formed due to *samudaya saccā*. Put in another way, *samudaya ariya saccā* (Noble Truth of Arising of Suffering) as the cause of *dukkha samudaya ariya saccā* should be penetratively appreciated in its entity. Following the attainment in this way of penetrative appreciation by practical knowledge, meditate on the *dhammas* of the past and future, which are *aditha* (not of present), by *anvaya ñāṇa* (theoretical knowledge).

The Power of Ñāṇā-kkhanikakamma (Various Unstable or Momentary Causes)

Among the five-fold causes of the past, which are the basic causes of the present existence, five *paccuppanbhava paṭisandhe khandhā* (the five-fold materials of the present rebirth) etc., *kammabhava* (active or sensual life) = *kamma* also is one of the factors. This *kamma*, by virtue of *ñāṇā-kkhandhā*, is the cause of *kamma dhammas* which can be of help in formation of *vipāka khandhā* (result of one's action). Since the causative factors and the resultant factors appear at different period of time, (different temporary factors formed on the basis of *kamma*) *ñāṇā-kkhanikapaccayakamma* = from the moment of the present resultant factors different *kamma* factor of the causes which have occurred at different moment. Then the question is "When did this *kamma* factor of the cause make its appearance?. The answer is as given follows.

Kammapaccayenāti anekānampi kappakotīnam matthake attano phalam uppādeton samatthena ñāṇākkhanikakammapaccayenāti attho. Kusalākusalāñhi kammaṃ attano pavattikkhane phalaṃ na deti. Yadiyadeya. Yaṃ manusso devalokūpagāṃ kusalakammaṃ karoti, tassānubhāvena tasamañyeva khane devo bhavēya. Yasamañ pana khane avijjamānampi kevalaṃ katattāyeva dittheva dhamme upapajje vā pariyāye avasesa-paccayasamāyoge sati phalaṃ uppādeti niruddhāpi purimasappādikiriyā viya kālantare pacchimasippādikiriyāya. Tasmā ñāṇākkhanikakammapaccayoti vuccati (Abhi-Tha.-3: 374; Pathāna atthakathā).

What *kammapaccaya* (formed by *kamma* as the cause) means is that, in not a single but even in tens of millions of worlds, actions that have been made in the previous life, and which could bring forth one's own results by virtue of *ñāṇākkhanikakammapaccaya* (results of the different kinds momentary factors formed by *kamma* as the cause) could be of supporting cause.

Reason. The *kusala and akusala kamma* (the good and bad deeds) in the forming stages, as *upāda-thī-bhaṅga khana* (arising-static-perishing away moments), are not powerful enough to give rise to resultant factors. If these two momentary deeds could give rise to the resultant factors, then a wordling would cultivate *kusala* (good deed) which the cause for arriving at the heavenly abode. If so, by virtue of that good deed, the wordling would attain a heavenly being during that cultivating moment. But it was not to be so. The possibility is that the deed has been cultivated at that moment. During that cultivating moment, the good deed of the other moments do not as yet exist as *upāda-thī-*

bhaṅga. But because the good deeds have been acquired as the sole action:

1. If that *kamma* happens to be *ditthadhammavedanīya* action (the result that is to be suffered during the present existence) — that has to be visualized during *paccuppan bhava* (the present life)
2. If that *kamma* happens to be *upapajjavedanīya* action (the result that is to be suffered during the second life adjacent to the present one) — that occurs during the second life immediately following the present life
3. If that *kamma* happens to be *aparāpariyavedanīya* action (the result that has to be suffered during neither the present nor second but the consecutive lives starting from the third onwards, then —

If it happens to be *kusala* (good deed) - or *gatisampatti*, *upadhisampatti*, *kāla-sampatti*, *akusala* (bad deed), and if they conspicuously combined with the remaining causes such as *gatisampatti*, *upadhisampatti*, *kālasampatti*, then there can be a resultant factor (see *Abhi.-Tha.-2*: 421).

The way it happens is this. What has been learnt in early days would of assistance and helpful to the present learning, though the time period of the two are different. In the same way, culture of volition called *kamma* may not give rise to result at that instant, but would of helpful to produce result only in the later moments. Therefore, *ñāṇākhanika* = the *cetanā* (volition) from moment of appearance of result to respective moments (of different moments) resultant formations (*Abhi.-Tha.-3*: 374; *Pathāna Athakathā*).

DUKKHA SACCĀ AND SAMUDAYA SACCĀ (The Truth of Suffering and of Arising of Suffering)

The five *upādānakkhandhā* which existed as 11 classes of the past, future and present etc. are the *dukkha ariya saccā* (Noble Truth of Suffering) and have clearly been explained above. Now once again *samudaya saccā* will be explained.

On the basis of *samudaya saccā* as the true cause of the five *upādānakkhandhā* of present existence, if the *tahnā* (attachment) is taken as *samudaya saccā* by method of *padhāna*, then that *tahnā* has to be analyzed as to when it did happen to occur.

*Rûpârûpaṃ pañcakkhandhā, taṃ hoti dukkhasaccam, taṃ samudhâpikâ purimatahnâ
samudaya saccam.*

The *nāma rūpa* are the five corporeality. Those five corporeality are the truth of suffering. The (*tahnā*) craving that has been cultured during previous existence, which can cause the truth of suffering, is the *samudaya saccā* (*Abhi.Th.-2*: 68-69).

As explained above, if *avijjā*, *tahnā*, *upādāna*, *sankhāra* and *kamma*, or *sankhāra* and *kamma* cultured surrounded by *avijjā*, *tahnā* and *upādāna* are taken as being based on *samudaya saccā*, as explained with reference to *patisambhidā magga pāli - atīte hetavopaṇṇa* etc.- and in accordance with these opening of the doctrines - this *samudaya saccā* is also a fact cultivated during the former life.

For the purpose of logical reasoning, a further explanation will be made. As it is clear that because of the *samudaya saccā* as the cause, *dukkha saccā* has resulted. In these cause and result phenomena, consideration should be made as to which comes first,

the cause or the result. If a meditator accepts the fact that the *samudaya saccâ* as the cause occurs at a moment different from that of the resultant *dukkha saccâ*, i.e. each has its own moment of formation. The difference in their formative moments by virtue of *ñāṇākkhanikakamma*, the cause *samudaya saccâ* which can give rise to *dukkha saccâ* as the resultant are evident. If this assumption is accepted, i.e. because of the cause *samudaya saccâ*, the resultant *dukkha saccâ* has arisen for it is due to the cause that the result has occurred, then one of the doors on the path to *nibbâna* would have opened for the meditator.

In considering the five past phenomena, keep *kamma* as the prime factor which can be raised by virtue of *ñāṇākkhanika kamma*. Because that *kamma* is of *ñāṇākkhanika kamma* kind, if the fact that *samudaya saccâ* is first formed in of wake which the *dukkha saccâ* appears as the resultant is accepted, then consider once again which is formed first, the *samudaya saccâ* or *dukkha saccâ*.

Talking of a man on his present life, at the moment of commencement from a female gamete inside his mother, the three corporeality *kalâpas*, such as *kâyadassaka kalâpa*, *bhâvadassaka kalâpa*, *hadyadassaka kalâpa*, and 30 classes of corporeality, and if being a *tihita* individual, then there will be 34 species mind and mental properties.

These 34 *nâma* (mental) properties are as follows.

1. Conscious mind = *viññâṇa* = 1 *somanassahagutta ñânasampayutta mahâvipâta citta*,
2. Thirteen of *cetasikka* (Mind and metal properties) known as *aññasamâna* (both bad good ways),
3. Nineteen of *sobhanadhârana cetasikka* connected with all the *sobhancitta*,
4. One *Paññaṇḍare cetasikka*.

Making up 34 in all.

Included in this 34 are

1. *Vedanâ* (suffering) is the *vedanakkhandhâ* (aggregate of sensation/suffering)
2. *Saññâ* (perception) is the *saññâkkhandhâ* (aggregate of perception)
3. The remaining 31 are the *sankhârakkhandha* (aggregate of mental formation)
4. Consciousness = *viñâna* is the *viñânakkhândhâ* (aggregate of consciousness).

The 30 kinds of *rûpa* (corporeality) are the *rûpakkhândhâ* (aggregate of matter) and 34 kinds of *nâma* are four kinds *nâmakkhândhâ* (aggregate of mind), coming to a total of five *khandhâ* (five aggregate of matter). They are the *upâdânakkhandhâ* (the five aggregate as object of clinging). These five aggregates are *sankhittena pañcupâdânakkhandhâ* (*Sam.*-3: 369). In accordance with the expression in *Dhammacakkyâ desanâ* they are the groups of *dukkha saccâ dhammas* (truth of suffering). For a human being (a worldling), therefore, it is the *dukkha saccâ* which has to come first in the present life.

If that *dukkha saccâ* is the result of *samudaya saccâ*, as indicated in the *desanâ*, the cause-resultant relationship phenomenon, in which *samudaya saccâ* comes first and *dukkha saccâ* later if considered from point of view of *nâṇākkhanika kamma*. If this can be accepted, then *samudaya saccâ*, the cause of *dukkha saccâ*, then that *samudaya saccâ* does not belong to the present existence but that which has been cultured in one of the previous life. And a meditator can easily accepted this explanation.

If the *samudaya saccâ*, surrounded by *avijjâ*, *tahnâ*, *upâdâna*, were cultured during the past life, the question is which past life. The answer is that it might be one of the two:

1. *Upapajjavedanîya kamma*,
2. *Aparapariyavedanîya kamma*.

Suppose the *kamma* is *upapajjavedanîya kamma*, then it was the *kamma* which was cultivated during the first past life. If it is the *aparapariyavedanîya kamma*, then it was the *kamma* cultivated during the second or third past or one earlier than these two. Be it the *upapajjavedanîya kamma* or *aparapariyavedanîya kamma*, a meditator should concentrate, by *samâditthi ñâna* called *paccekkha ñâna*, on that *kamma* named *samudaya saccâ*, or due to that *kamma* named *samudaya saccâ*, there appear in this present existence the *patissandhe* (rebirth) and the five *upâdânakkhandhâ* (the five aggregate of clinging to existence) etc. as the resultant *dukkha saccâ* (the truth of suffering). Only by knowing and seeing this way can *ariya magga* (Noble Path), where all the factors of *âsava* (fetters) have completely been abolished, be attained as the Buddha has expatiated in Upanissa Suttan.

If that *kamma* named *samudaya saccâ* were *aparapariyavedanîya* kind of *kamma*, then concentration by *paccekkha ñâna* should be made in such a way as to penetratively know the fact that this *kamma* was cultivated during the second past life etc. Cultivation of this past *kamma* would have to be made via *samâditthi ñâna* referred to as *paccekkha ñâna*. Contemplation on this is explained in more details in section on Ahâra Suttan of Paṭicca samuppâda in Nibbânagâminipatipadâ Vol. 3).

If you cannot agree, because of your own belief called *âdânaggâhî*, with the fact that the *kamma* which has been practised and cultured at a certain life in the past resulted in the five *patissandhe khandhâ* (five-fold aggregate of rebirth) of the present life. Then the followings will also have to be considered again as to whether or not they are required.

1. For *Sammâsambodhi Bodhisattas* four *asankkheyya* and 100 thousands of worlds
2. For *Paccekabuddha Bodhisattas* two *asankkheyya* and 100 thousands of worlds
3. For *Aggassâvaka Bodhisattas*, one *asankkheyya* and 100 of thousands of worlds
4. For *Mahâsâvaka Bodhisattas*, a hundred of thousands of worlds

For those respective period of time each has spent in practising and cultivating in *dhammas* of perfection named *abhinihâra* (resolve to become a buddha) by a way leading to *bodhi ñâna* (knowledge of enlightenment) in the hope of acquiring it. The reason is the rejection of the fact that because of *kamma*, called *samudaya saccâ*, of the previous existence the present *dukkha saccâ*, called five *upâdânâkkhandhâ* (the five-fold aggregate of clinging for existence) have resulted. This rejection is as good as not accepting *kamma* and its resultant formation. The failure of accepting this *kamma*-result correlation is doomed to have committed a dangerous great blunder of *ditthi* (wrong view) called *ahetikaditthi* (an opinion without a moral condition), *akiriyaditthi* (non-performing opinion) and *natthikaditthi* (a sceptic opinion). It is similar to going down *niyataditthi* (destiny of wrong view), the drain of great depth self-confidently.

It is true that *tahnâ* is the *samudaya saccâ*. The present *tahnâ*, the *samudaya saccâ*, however, is not the cause of the present five *patissandhekhandhâ* (the five aggregate of rebirth).

If the assertion that the present *dukkha saccâ* is the result of the cause *samudaya saccâ* is accepted then, as indicated in the above doctrines, you can try to wish for a life in heavenly sovereignty by performing a good deed. If it is true that the cause of present *dukkha saccâ* is the present *samudaya saccâ*, then your wish will be fulfilled instantly. But it was not so. In a similar way, you carry out a meritorious deed and wish for being free from becoming aged, from suffering, death and decay. If the appearance of *dukkha saccâ* as a result of the *samudaya saccâ*, both of the present, were indeed the truth, your wish for not becoming aged, no suffering, no death and decay would be fulfilled in no time. But it has never happened. Similarly, a sixty-year old may wish for rejuvenating into a very good looking 16-year old by performing meritorious deeds. If the cause-result relation of the present *samudaya saccâ* and the present *dukkha saccâ* were, in fact, true then a very handsome 16-year old would have appeared immediately. But however much you made wishes by performing good deeds, you never become a handsome 16-year old. You will still be aged, haggard, never going back to your youth and remain old. As a matter of fact, if the present *dukkha saccâ* were truly the result of the present *samudaya saccâ* by conducting meritorious works and the wishes fulfilled, then there will no more be the aged and ugly, those who are suffering, and those who are short-lived.

What the above descriptions, with examples, really mean is this. If a meditator is aware of just the present *samudaya saccâ* and the present *dukkha saccâ*, then he is not able to know the nature of formation of the *dukkha saccâ* as the resultant of the cause *samudaya saccâ*. It is because clearly it is due to the *samudaya saccâ* cultivated during the past existence that the present *dukkha saccâ* has resulted, and that which is cultivated during this life cause the *dukkha saccâ*, such as the five *patisandhekhandhâ* etc., of the coming existence will be formed as a result. It has been mentioned in Upanissa Suttan and Āsavekkhaya Suttan, as expounded by the Buddha that without the penetrative knowledge, acquired via *paccekkha ñâṇa*, in oneself of the truth of *dukkha saccâ* appearing as a result of *samudaya saccâ*, *ariya magga ñâṇa* (knowledge of noble path) cannot be attained.

If a meditator does not meditate, by *paccekkha ñâṇa*, on the past then he can in no way know, by means of *paccekkha ñâṇa*, the *sankhâra kamma* called *samudaya saccâ* surrounded by *avijjâ*, *tahnâ*, *upâdâna* cultivated at a certain previous existence. Why? Because he did not. If the *samudaya saccâ* cultivated during certain previous life is not penetratively seen by means of *paccekkha ñâṇa*, then the meditator cannot know, by *paccekkha ñâṇa*, the appearance of the present *dukkha saccâ* as a result of the past *samudaya saccâ*. The Buddha has expatiated that if the formation of the present *dukkha saccâ*, such as the five-fold aggregate of rebirth etc., caused by the past *samudaya saccâ* cannot be penetratively seen by *paccekkha ñâṇa*, then *âsava*-free *ariya magga* cannot be acquired. In the same way, if a meditator does not meditate, by *paccekkha ñâṇa*, on the future, then he can in no way know, by means of *paccekkha ñâṇa*, the *sankhâra kamma* called *samudaya saccâ* surrounded by *avijjâ*, *tahnâ*, *upâdâna* cultivated during the present existence. Why? Because he did not. The Buddha did not expatiate that if the formation of the future *dukkha saccâ*, such as the five-fold aggregate of rebirth etc., caused by the present *samudaya saccâ* cannot be penetratively seen by *paccekkha ñâṇa*, then *âsava*-free *ariya magga* can be acquired.

Similarly, if a meditator does not concentrate on the future, then he cannot see the future *dukkha saccâ* penetratively, via *paccekkha ñâna* (pactical knowledge) called the *sammâditthi ñâna* (the right understanding), as the result of the present *samudaya saccâ*. Why? Because he did not concentrate on the future. The Buddha did not teach that without knowing penetratively by *paccekkha ñâna* called *sammâditthi ñâna* the formation of future *dukkha saccâ* because of the present *samudaya saccâ*, one can attain the *ariya magga* where *âsavas* have been abolished.

Therefore, to know penetratively by *paccekkha ñâna* the appearance of the future *dukkha saccâ* as a result of the present *samudaya saccâ*, a meditator has to start by cultivating on the past and future corporeality by the *paccekkha ñâna*.

The *samudaya saccâ* cultivated during the past existence are just the parts of aggregate of the past. The present *dukkha saccâ* derived from the past *samudaya saccâ* are also just the part and parcel of the present aggregate. What has been cultivated as *samudaya saccâ* in the present existence and which would become the future *dukkha saccâ* are the parts of future aggregate.

A further explanation will make these statements become clearer. Among the past phenomena or of the *samudaya saccâ* cultured in the past *avijjâ*, *tahnâ*, *upâdâna* etc. are *kilesa vatta* (functions of lust), *sankhâra-kamma* are the *kamma vatta* (functions of one's action). The five *patibandha* etc. (the five aggregate of rebirth) of human being which is the *kusalavipâka vatta* phenomenon (result of the function of good deed) and the *sankhâra kamma* which can give rise to *kammaja rūpa* (material quality born of *kamma*) are just the *kusala sankhâra kamma*.

Here *avijjâ*, *tahnâ*, *upâdâna* etc. are not the factors which can give rise solely to the *avijjâ*, to *tahnâ* and to *upâdâna*. They are formed accompanied by the relative *cetasikka* (mind and mental properties). For the *putthujana* (worldling) generally they occur naturally as mind-derived greediness. If it is the *lobhamû* (the root of greed), the *somanassasahagutta* (formed with feeling of joy), *ditthikatasampayuta* (associated with recently seen) *sankhârîka citta* (mind associated with *sankhâra*), then in each of these *akusala citta* (mind associated with bad deed) there will be 20 mental factors of mind and mental properties. These are as follows.

<i>Somanassasahagutta dithigatasampayutta lobhamû asankhârîka citta</i>	– 1
<i>Aññasamânacetacikka</i>	– 13
<i>Moha ahirika anuttappa uddhicca</i> called <i>akusalasâdhâranacetacika</i>	– 4
<i>Lobha + ditthi</i>	– 2
Total	<u>20</u>

In each of the respective *jocittakkhana* will be 20 mind and mental factors. Because of the presence of factors which have the potential of giving rise to *patissandhe* as a result (rebirth as a resultant), they are the *manodvârikahovîthi* (mental phenomena of mind-door processes) mental phenomena. In this *citta* (mind) + *cetacikka* (mind and mental properties) = mental factors –

1. *Vedanâ* is the *vedanakkhandhâ*,
2. *Saññâ* is the *saññakkhandhâ*,

3. Remaining (17) *cetacikka* are *samkhâkkhandhâ*,
4. (*Lobhamû*) *Viññâna ñâṇa* is the consciousness of *viññânakkhandhâ*,
summing up to a total of four *nâma khandhâ* (mental factors)
5. The 54 kinds of the material factors nominated as *sasambhârahadaya* together with the *hadaya vatthu*, which form the base of these mental factors, are *rûpakkkhandhâ* – totaling as the five *khandhâ* (the five aggregate). (see meditation *Rûpakammathâna* for number these 54 kinds).

These past four mental aggregate which are called the *kilesavatta* (functions of the *kilesâ*) are parts of the past aggregate resulting from the five *upâdânak-khandhâ* correspondingly, called the *vipâkavatta* (function of the effects of one's action). These existed in the past as the five *bhavañkhandhâ* etc., called the *manodvâra*.

Again, the *sankhâra-kamma*, if confined to the worldling, the basic cause of the five aggregate which existed as *tihittasomanassa patisandhe* of a good man, has existed as the *tihittasomanassa patisandhe* in the past. And his present *sankhâ-kamma* are the result of those cultivated in the past. These *kamma* may either be *upapajjanîya kamma* or *aparâpariyavedanîya kamma*.

Cetanâhaṃ bhikkave kammaṃ vadâmi, cetayitvâ kammaṃ karoti kâyena vâcâyâ manassâ (Aṃ-2-363; Abhi.- 4: 290).

In such *desanâ* (doctrines), the Buddha has expounded *cetanâ* (volition) as the prime factor for *kamma*. Therefore, in accordance with *sankhâra-kamma*, *cetanâ* should primarily be taken as the prime factor.

Cetanâsampayuttadhammânaṃ pana kammabhâvo kammacatukkena dîpito (Abhi.- Tha.- 1: 131).

In accordance with the opening of *Athâsâlinî athakathâ*, *cetanâ*, which is the *cetanâsampayutta dhamma*, and the corresponding *citta cetasikka sampayutta* factors are also indicated in the *Aṅguttora catukkanipâta Bujjaṅga Suttan (Aṃ.-1:559)* by the Buddha to be the *kamma*. (see that Suttan for detail).

For that reason, *cetanâ* and its corresponding *cetanâsampayutta dhamma* are to be taken with reference to *sankhâra-kamma*. The *sankhâra-kamma*, which are the basic causes of the five aggregate of the *tihittasomanassa patisandhe* of a good man existing as *tihittasomanassa patisandhe*, are also the *somanassasahagutta ñâṇasampayutta mahâkusala cetanâ* and the *cetanâsampayutta dhamma*. There are 34 categories of *kusala cetanâ* and *citta cetacikka*. They are as follows.

<i>Somanassasahagutta ñâṇasampayutta kusala citta</i>	- 1
<i>Añsasamâna cetacikka</i>	- 13
<i>Sobhanasâdhârana cetacikka</i>	- 19
<i>Paññañdare cetacikka</i>	- 1
Total	34

In these 34 mental factors

1. *Vedanâ* is the *vadanakkhandhâ*,

2. *Saññā* is the *saññakkhandhā*,
3. The remaining 31 are the *sañkhārakkhandhā*,
4. *Somanassasahagutta ñānasampayutta mahākusala citta* is *viññānakkhandhā*,
5. Material bases of these mental factors are *rūpakkhandhā*,

When added together they come to be the five *khandhā* (the five aggregate).

These *sankhāra-kamma* are the factors which have the force to produce the five *paccuppana patisandhe* etc., which are *vipākavatta dhamma*, and for which they are just the *manodvārika jovīthi* (mind-door based process of apperceiving) mental processes.

Each *jocittakkhana* has 34 mental factors.

Kâmâvacara kusalassa kammassa katattā upacittā (*Abhi.-1*: 104).

According to these *desanā*, the *manodvārika jovīthi* too have occurred not only once but many times. They are the groups of *kammavatta dhamma*. These *kammavatta dhammas* also are parts of the past aggregate which had appeared based on the five *bhavañkhandhā* etc. of *upādānakkhandhā* called *vipākavatta* during the past life.

The *kilesavatta*, *kammavatta* and *vipākavatta* mentioned above, which are the the past five aggregate, and a practicing meditator must already have cultured these in the first place. He must have analytically concentrated these via *paccakkha ñāna*. Further he must already have analytically cultured, by means of *paccakkha ñāna*, all these five *patisandhekahndhā* etc. of the *vipākavatta dhammas* which had appeared due to the *kilesa vatta* and *kammavatta* factors.

Only after having cultured these by this kind analytical knowledge can one be able to analytically culture, as a step further, the fact that the past *kammavatta* appeared due to the past *kilesavatta*, and because of these past *kammavatta* that the present five *patisandhe* aggregate are formed.

If, however, the basic causes of the present *vipākavatta* which are the past *kilesa-vattakhandhā*, the past *kammavatta khandhā*, and their bases the past *vipākavattakhandhā* are not cultivated at all, not concentrated at all, and not seen penetratively by *paccakkha ñāna* at all, the meditator would have accumulated a multitude of unknown factors. Then this meditator will not have acquired the penetrative knowledge of the fact that the past *kamma vatta* was caused by the past *kilesavatta* and the present *vipākavatta* caused by the past *kamma vatta*. Because of the *samudaya saccā* cultivated in past the present five aggregate etc. of *patisandhe*, called *vipāka vatta dukkha saccā*, are distinctly formed, and if these are not known penetratively by *paccakkha ñāna*, then the *ariya magga* where the all *āsava* factors have been annihilated will not be attained, as expounded by the Buddha.

Again, there are *kilesa vatta* and *kamma vatta* called *avijjā*, *tahnā*, *upādāna*, *sankhāra* and *kamma* being cultivate presently. These *kilesa vatta* and *kamma vatta* are the cause for the future *vipāka vatta* factors. If you, as a meditator, cultivate the *kâmâvacara*, *mahā kusala*, *sankhāra-kamma* in anticipation of becoming a monk in the future life, then you have committed the following errors.

1. The nature of wrong consciousness as a monk is an ignorance,
2. The clinging to a monk's life is the *tahnā*,

3. Mentally attached to the monk's life is an *upâdâna*,

And these are the three *kilesa vatta*. Suppose you are still existing at the stage of *rihitputhujana*. Then these factors of *kilesa vatta* are groups of *lobhadithi* in general. If you have happily made a wish, then there will 20 species of mind and mental properties as the wish was conditioned by *somanassa vedanâ*. They are the the four *nâma khandhâ* (mental aggregate). Their material bases are the *rûpakkhandhâ*. When added together they come to be the five aggregate.

Again, the *sankhâra kamma* called the *kamma vatta*, if they are of *somanassaha gutta*, *nana sampayutta*, *tihitta kâmvâvacara kusala* kind, then there will be 34 species of mind and mental properties. They are the four *nâma khandhâs*. Their material bases are the *rûpakkhandhâ*. When added together they amount to be the five aggregate.

As mentioned in Patisambhidhâ Pâli *Edha paripakkattâ âyatanânânam* (Patisam.: 50),

according to which these *kilesa vatta* and *kamma vatta* are the groups of *dhamma* can arise when the *indriye* (control principle) has matured. These *kilesa vatta*, *kamma vatta*, and *jhocitta* which have the potential to give rise to the (future birth), are the groups of *nâma dhamma* which lie within the process of *manodvârîka jovîthi*.

Let us say a noble meditator is a 60-year old. Suppose also that he had wished for the life of a monk by performing good deeds throughout his life time. If so, then the *kilesa vatta* and *kamma vatta* have taken place before attaining the age of 60, and if he continues such a wish even after arriving at 60 years of age, these *dhammas* can still occur. These *dhammas* can appear only if they are based on the *vipâka vatta*, which are the five *bhavañkhandhâ* etc., called *manodvâra*.

As these *kilesa vatta* and *kamma vatta* are the causes of future *vipâka vatta*, this *kamma* can an *âcînna kamma* (practiced *kamma*). It may also be *âsanna kamma* (near cause). Suppose you are a *chânâlâbhî* (intelligent) individual longing for the life of a *bhymmâ* in stead of wishing for a monk's life, and the *jhâna* you have attained still lingers on to the time of death, then the cause of future *bhymmâ*'s life or *bhymmâ*'s *khandhâ* may be *garuka kamma* (bent on *kamma*).

If it is the *âcînna kamma*, then this *âcînna kamma* might have been one that was practiced before attaining the age of 60. Or it may be the *âcînna kamma* that is going to be cultured after 60 and prior to death. The knowledge which can analytically appreciate and culture *nâma* (mind) and *rûpa* (matter), called *nâmarûpa pariccheda* (analytical knowledge of mind and matter), the nature of relationship of the present resultant and the past cause, and of the future result and the present cause etc. which can be cultured by virtue of *paccayapariggaha nâna*, and the *vipassanâ ñâna* (insight knowledge) by means of which the five *upâdânakkhandhâ* can be concentrated as the characteristic object, and the *cetanâ* (volition) conditioned by these knowledge are said to be the *vipassanâ cetanâ*. This *vipassanâ cetanâ* called the *vipassanâ kamma* can also be *âcînna kamma*.

Ettha "no ce bhikkhave ceteti no ca pakappeti, atha kho anusseti"ti evum bhagavatâ dutiyanaye pubbabhâge bhavanibbattaka kusalâkusalâyûhanam, pakappanañca vinâpi bhavesu dithâdînavassa yogino anussayapaccayâ vipassanâcetanâpi patisadhijanakâ

hoti (Sam.-Tī.-2: 83).

In accordance with the Samyuttatīkā opening with reference to Cetanā Suttan, the *vipassanācetanā* = the *vipassanā kamma* also have the potential to form *paṭisandhe* (rebirth).

Āyatim patisamdhiyā paccayo hotīti sankhārūpakkhāsampayuttakammasa balvattā teneva sugatipatisadhiyā dīyamānāya abhinandanasañkhāto lobhakilesa anāgate kāmāvacarasugatipatisandhiyā paccayo hoti. Yassamā kilesasahāyaṃ kammaṃ vipākaṃ janeti, tassamā kammaṃ janakapaccayo hoti, kilesa upatthambhaka paccayo (Paṭisam.- Tha.-1: 250).

Āyatim patisandhiyā paccayo hoti = the *citta* (mind) which follows the *sankhārūpa ñāṇa* of the *puthujana* (worldling) is indicated by *Paṭisambhidhā Pāli (Paṭisam.- 60)* to be cause of the future *paṭisandhe* (rebirth). What it means of is this. If the *vipassanā kamma*, conditioned by *sankhārūpakkhā ñāṇa*, is powerful, and if this *vipassanā kamma* itself causes the *sugatipatisandhe* as a result, then *abhinandha dhamma* called *lobha kilesā*, and which has the affinity for *sankhārūpakkhā ñāṇa*, will in future be the cause of the *kāmāvacara sugati paṭisandhe*. The *vipassanā kamma*, in combination with *lobha kilesā*, will directly result in *vipāka* resultant. Therefore, the *vipassanā kamma* is the *janaka* cause giving rise to direct a result. *Upatthambhaka dhamma*, supported by *kilesā kamma*, is the causative factor (*Paṭisam.-Tha.-2: 250*).

Therefore the *ācinna kamma*, which is about to give a result, is the kind of *kamma* that frequently occurs in a time span from maturation of *indares* to the time prior to death. Since it is this kind of *kamma*, it is a *dhamma* called *addhāpaccuppana* among the three classes of present.

If this *ācinna kamma* is indeed going to give a result in future, then the meditator must first concentrate on this *kamma* by *samādītthi ñāṇa* called *paccakkha ñāṇa*. It should be noted that this is the kind of *kamma* that will go on appearing any time throughout the duration of life.

Again if the *āsanna kamma*, which is cultured just before death, has the chance to truly produce future *paṭisandhe* etc. which is the *vipāka vatta* as a resultant, then endeavour is made to penetratively see this *kamma* by means of *samādītthi ñāṇa* called *paccakkha ñāṇa*. It must, however, be noted that, since *āsanna kamma* is cultured just prior to death, it unlike the *kamma* presently cultivating on the cause and result prevailing at the present period.

Again if the meditator is *chānalābhī* individual and if the *mahagutakusala*, called the *garuka kamma*, is definitely about to give a result, then this *kamma* must be cultured and seen penetratively by *samādītthi ñāṇa* called *paccakkha ñāṇa*.

After this *kamma* has been cultured, *vipāka vatta*, which are the the future five *paṭisandhekkhandhā* etc. are cultured and seen penetratively via *samādītthi ñāṇa* called the *paccakkha ñāṇa*. Only after cultivating this way, the following has to be cultured.

Due to *sankhāra kamma*, surrounded by *avijjā*, *tahnā*, *upādāna*, referred to as the *samudaya saccā*, acquired during the present, the nature of the appearance of groups of

dukkha saccâ which are the future five *patisandhekhandhâ* called *vipâka vatta dhammas* are visualized penetratively and cultured by *samâditthi ñâna* called the *paccakkha ñâna*. (For detail on the way of culturing see section on Paticcasaṃupphâda).

If the meditator is still not satisfied with the statement that the appearance of the future *dukkha saccâ* due to the cause of the present *samudaya saccâ* can be cultured by *paccakkha ñâna*, then go through the opening of the doctrines given below.

Ñânasamañgî puggalo cakkhumâ viya cakkhunâ rūpâni, ñâṇena vivatte dhamme passati
(*Sam.-Tha.-2:49; Upanisassuttan*).

Dassanappabhâvum hi upâdâya ñâṇa samañgî puggalo cakkhumâ viya puggalo
cakkhunâ rūpâni, ñâṇena vivatte dhamme passati (*Itivuttaka.-Tha.: 310; Āsavekkhaya*
Suttan).

Janatoti vâ vatvâ na jânanam anussavâkârapaviritakkamattavasena idhâdhippetam, atha
kho rūpâni viya cakkhuññâṇena rūpâdâni tesam ca samudayâdike paccakhe katvâ
dassananti vibhâvetun "passato"ti vuttanti evum vâ ettha attho (*Sam.-Tî.-2: 63*).

As a man could see a variety of material bodies with his physical eyes, so would a meditator, endowed with *vipassanâñâna*, see the *paramatthasabhâva* object in its very true nature by virtue of knowledge acquired through *vipassanâ* he is exercising. Through the light shone by the knowledge acquired while exercising on *vipassanâ*, he would see the following.

1. The five *upâdânakkhandhâ* such as *rûpa-vedanâ-saññâ-sankhâra-viññana*,
2. The distinctness of the causes such as *avijjâ, tahnâ, upâdâna, sankhâra, kamma* etc. = because of these distinct causes the nature of *samudaya* (arising) of distinct result such as the five *upâdânakkhandhâ*; the nature of the formation these *upâdânakkhandhâ* distinctly as *upâda* which is the *nibbatti* character,
3. Cessation, at the time of *arahatta magga*, of the causes such as *avijjâ, tahnâ, upâdâna, sankhâra, kamma* etc. by means of *anuppâdanirodha* (non-reappearable cessation) = because of cessation via non-returnable means, the cessation of the resultant five *upâdânakkhandhâ* by *parinibbânacuti* (released from death and rebirth), and the nature of this release, perishing away of these five *upâdânakkhandhâ* called *viparinâmalakkhanâ* (character of *dhamma* subject to change) which is of the nature of *nirodha* (= said to be *uppâdanirodha*).

This means to say that the above can be seen by means of *vipassanâ samâditthi* (*vipassanâ* insight). This knowledge is not a speculation based on what has been told by predecessors, called *anussava* knowledge = not the kind of knowledge handed down from the previous ones. It is not a knowledge acquired by speculation based on the appearance and speculation such as "this might be it" = not the kind of knowledge acquired by *âkâra-parivitakka* (careful consideration) (= *uppâdanirodha*, a sudden, unusual event of cessation) (*Sam.-Tha.-2: 49*).

Again, within the three moments of the past, future and present lie the five *upâdânakkhandhâ* designated as cause *khandhâ* and resultant *khandhâ* also are the objects on the characters of which the concentration has to be made by means of the *vipassanâ*

samâditthi ñâna called *paccakkha ñâna*. (This does not mean all the past factors all along the circle of past existence, nor all the future factors of the circle of future life). In this contemplation will be included the following.

The five *kilesa vatta khandhâ* and the five *kamma vatta khandhâ* reckoned as the past five causes, the five *bhavañ khandhâ* etc. of the past five *khandhâ*, which are the base of the *kilesa vatta* and *kamma vatta*.

Because of the past five causes the present five *patibandha khandhâ*, the five *bhavañ khandhâ* etc., which are the present five *upâdânakkhandhâ*, have appeared clearly, and based on these have appeared the five *kilesa vatta khandhâ* and the five *kamma vatta khandhâ* have appeared.

Because of these present causes such as *kilesa vatta* and *kamma vatta* would in future appear the resultants like the future five *patibandha khandhâ* etc. of the future five *upâdânakkhandhâ*.

If you are still not contented with the above statements, the peruse the following sermons given in the doctrines.

Yam kañci Râhula rūpam atītânâgata paccuppanam. R. Sabbam rūpam "netam ma ma, nesohamassamī, na meso attā"ti eva metam yathābhūtam sammappapaññāya passati (Sam.-1: 444).

Yam kañci Râhula rūpam atītânâgata paccuppanam. R. Sabbam rūpam "netam ma ma, nesohamassamī, na meso attā"ti eva metam yathābhūtam sammappapaññāya datthabbam (Ma.-2: 84).

Tassamā hita bhikkhave ... Yam kañci rūpam atītânâgata paccuppanam. R. Sabbam rūpam "netam ma ma, nesohamassamī, na meso attā"ti evametam yathābhūtam sammappapaññāya datthabbam (Sam.-2: 56).

Sammappapaññāya passatīti saha vipassanāya sulu passati (Sam.-Tha.-2: 197).

Samma. R. passatīti pubbabhāge vipassanāññānena sammasanavasena, maggakkhane abhisamayavasena sulu attā paccakkhena passati (Sam.-Tī.-2: 181).

The Buddha has instructed Râhula and the five *vaggiya* to concentrate on the five *upâdânakkhandhâ*, which existed as the past, future and present etc. of 11 kinds, as *anicca* (impermanence), *dukkha* (suffering) and *anatta* (non-self), and to contemplate on their true nature by means of *vipassanā paññā* and *maggā paññā*, called *sammappaññā* (true wisdom). Here the indication is restricted to concentration by *vipassanā ñâna*. The essence of these book of doctrines are as given below.

Sammappaññāya passatī In *vipassanā*, which is prior to *ariya magga*, the past, future and present *upâdânakkhandhâ* are taken as object of concentration, by virtue of which the impermanence, suffering and non-self of these *upâdânakkhandhâ* are truly acquired by *vipassanā sammâditthi*, called *attapaccakkha ñâna* (Sam.-Tha.2: 197; Sam.-Tī.-2: 181).

This is the end of explanation on the *samudaya sacca*. If you are still unsatisfied, then go through the following passages extracted from *desanā*.

Extracts from Mahânîdâna Suttan

Gambhîro câyam ânanda paticcasamuppâdo gambhîrâvabhâso ca. Etassa cânanda dhammassa ananubodhâ appativedhâ evamayam pajâ tantâkusajâtâ kulaganthikajâtâ muñjapabbajabhûtâ apâyam duggatim vinipâtam sansâram nâtivattati (Dî.-2: 47; Sam.-1: 318).

Ananubodhâti ñâtapariññâvasena anubujjhanâ.

Appativedhâti tîranappahânapariññâvasena appativijjhanâ. (Dî.-Tha.- 2: 88).

Ânandhâ The logic of this *paticcasamuppâda* (causal relationship) deep. And because of its depth it appears apparently deep to one's mind. *Ânandâ* this causal relationship should be appreciated by *ñâtapariññâ* (intelligently known) called *anubhoda-ñâna* (perceptual knowledge). If not appreciated accordingly then no one will know the attainment of the *magga* (Path) and *phala* (Fruit) by way of *tîranapariññâ* and *pahânapariññâ*, called the *pativedha ñâna* (penetrative knowledge). Because of such an ignorance the living beings are entangled in worldly affairs not unlike *muja* and *pabbaja* grasses (these grass are used as feet wiper, which after being used for a long time, become torn and worn out so that neither beginning nor end would be made out). It is similar to a nest of female weaver bird. They will be struggling in a tangle of worldly affairs in the rounds of rebirth. They would not able to escape from the rounds of *apâyaduggati* (an unhappy existence) to which they fallen in disarray and without any hope or expectation and the rounds of *sugati* (a happy existence) besides *apâya* (Dî.-2: 47; Sam.-1: 318).

With reference to the above Mahânîdâna Suttan, the Commentaries have made the following recommendations.

Iduñhi gambhîrato agâdham, nânâyaggahanato dûrabiyânam, ñânâsinâ samâdhipavarasilâyam sunisitena —

Bhavacakkhamapadâletvâ, asanivicakkamiva aniccanimmathanam.

Samsârabhayamatîto, nakoci supinantarepayatti (Abhi.-Tha.-2: 189; Visuddhi-2: 221).

This logic of *paticca samuppâda* (causal relationship) is deep, and because being deep, there can be no support. Particular methods of this relationship are complex like an inaccessible thicket of bushes, and difficult to escape from it. Without breaking through these factors of causal relationship, which have the property of torturing the worldling, by virtue of *samâditthi*, no one has escaped even in the dream from these catastrophic phenomena (Abhi.-Tha.-2: 189; Visuddhi-2: 221).

A meditator who is truly longing for *nibbâna* must make effort to analytically and penetratively understands the nature of causal relationship by means of *ñâtapariññâ* called *anubhoda ñâna*, *tîranapariññâ* called *pativedha ñâna* and *pahânapariññâ*, all referred to as the three *pariññâna*.

Anubhodhâ appativedhâ = failure again and again to know by *anubodha ñâna*, failure to know the attainment of fruit of the Path penetratively is doomed to encounter the state of being lost and the rounds of rebirth which one cannot overcome. The Buddha, being sympathetic and merciful towards the living beings, has himself

expatiated this by his knowledge of *desanā*. Therefore, those who want to be free from rounds of existence must make effort to know this factor analytically and penetratively by the three *pariññā pañā* called the *pativedha* understanding. It is not attempted to know by speculation called *anumāna* (knowledge by inference) understanding, nor is it the knowledge imparted by the teachers. This will have to be well understood.

Since the suffering from the rounds of rebirth can only be escaped if the logic of *paticca samuppāda* is understood analytically by the three *pariññā*, these three *pariññā* will be dealt with in continuation. The *pariññā* associated with the *paticca samuppāda* is of two kinds: *lokīpariññā* (*pariññā* of mundane) and *lokuttarāpariññā* (*pariññā* of supra-mundane). The *lokīpariññā* again is of three different kinds: *ñātapariññā*, *tīranapariññā* and *pahānapariññā*. In the *lokuttarāpariññā* also are *ñātapariññā*, *tīranapariññā* and *pahānapariññā*. Now these *pariññā* will be described.

The Three Kinds of *Lokīpariññā*

Ñātapariññā — If *lakkhana-rasa-paccuppathāna-patathāna* of the *paticca samuppāda* characters of *avijjā*, *sankhāra*, *viññāna*, *nāma-rūpa*, *salāyatana*, *phassa*, *vedanā*, *tahnā*, *upādāna*, *bhava*, *jāti*, *jarāmarana* etc. can be digested and concentrated, then that knowledge is *nāmarūpapaticcheda ñāna*. (for the way to cultivate see section on *Lakkhanādicatukka*).

Again if the formation of *sankhāra* due to *avijjā*, of *viññāna* due to *sankhāra*, of *nāma-rūpa* due to *viññāna* etc. of the nature of causal relationship can be seen penetratively via knowledge by one's self, then that knowledge is the *paccayapariggaha ñāna* (knowledge of discerning cause and effect).

These two *nāma-rūpapariccheda ñāna* (knowledge that discerns mentality and corporeality as two separate groups) and *paccayapariggaha ñāna*, the knowledge which can understand analytically the *sankhāra* states, and which should be understood, as the object of *vipassanā ñāna* are **ñātapariññā**.

Tīranapariññā — The features of *paticca samuppāda* such as *avijjā*, *sankhāra*, *viññāna*, *nāma-rūpa* etc. are

- A. to understand by knowledge the fact that formation is followed by destruction and it is *anicca* (the impermanence)
- B. to understand by knowledge the fact that the effects of formation and destruction are always torturing, a feature of *dukkha* (suffering) and it is the *dukkha*,
- C. to understand by knowledge the fact that in essence what has been formed is not an indestructible material *atta* (self), but a feature of *anatta* (non-self), the *sammasana ñāna* and *udayabbaya ñāna* which can investigate and determine *anicca* as, *dukkha* as *dukkha*, and *anatta* as *anatta*,
- D. ***paccayato udayabbaya ñāna*** which can see the distinct results, such as of the *viññāna*, *nāma-rūpa*, *salāyatana*, *phassa*, *vedanā*, etc. which form the aggregate of the *vipāka vatta*, due to distinct causes such as *avijjā*, *tahnā*, *upādāna*, *sankhāra*, *kamma* etc.; ***paccayato udayabbaya ñāna*** which visualize that fact that because of the causes such as *avijjā*, *tahnā*, *upādāna*, *sankhāra*, *kamma* of the *arahatta magga* which have ceased by nature of *anuppāda nirodha*; ***paccayato veyadassana ñāna*** which is able to visualize the

fact that because of such a kind of cessation, the *viññāna*, *nāma-rūpa*, *salāyatana*, *phassa*, *vedanā*, etc. which form the aggregate of the *vipāka vatta* have come to cease completely by nature of *anuppāda nirodha*; ***khanato udayadassana ñāna*** which can recognize the *nibbattilakkhanā* which is the formation of salient features *paticca samupāda*; ***khanato vayadassana ñāna*** which can appreciate perishing of these features of *paticca samupāda* by nature of *vaya* called *viparināmalakkhanā*

[Note. These *paccayato udayadassana ñāna*, *paccayto vayadassana ñāna* are the *paccayto udayabbayadassana ñāna*. The *khanato udayadassana ñāna*, *khanato vayadassana ñāna* are the *khanato udayabbayadassana ñāna*].

These two *sammasana ñāna* and *udayabbaya ñāna* are termed ***ūranapariññā***. This is wisdom by virtue of which *anicca*, *dukkha* and *anatta*, the phenomena of *paticca samuppāda* are known by investigation, determination and analysis.

Instructions of the *Patisambhidā Magga Pāli*

To meditate on the features of *paticca samupāda* by *udayabbayanupassanā ñāna* the *Patisambhidā Magga Pāli* has instructed as given below.

Jâtā avijjā paccuppanā, tassā nibbattilakkhanam udayo, viparimānalakkhanam vayo, anupassanā ñānam. R. Jâto bhavo paccuppanno, tassa nibbattilakkhanam udayo, viparimānalakkhanam vayo, anupassanā ñānam (Paṭisamb.- 52).

1. The *paramattha dhamma sabhāvalakkhanā* (*dhamma* of the ultimate truth specific character) in the making, called *paramattha attabhāva* (the ultimate truth of individuality) still acquiring, *avijjā* within the three moments of *upāda-thī-bhañ* is the *paccuppanna dhamma* (the present state). The initial stage of the formation of *avijjā* which is the present, the *nibbattilakkhanā* is the formation = *udaya*. *Viparināma lakkhanā* (features subject to change) is destruction = *vaya*. The ability to repeatedly discern on the *udaya* and *vaya* is the *udayabbayanupassanā ñāna* (knowledge of meditating on the arising and dissolution of the object).

2. The *paramattha dhamma sabhāvalakkhanā* (*dhamma* of the ultimate truth specific character) in the making, called *paramattha attabhāva* (the ultimate truth of individuality) still acquiring, *sankhāra* within the three moments of *upāda-thī-bhañ* is the *paccuppanna dhamma* (the present state). The initial stage of the formation of *sankhāra* which is the present, the *nibbattilakkhanā* is the formation = *udaya*. *Viparināma lakkhanā* (features subject to change) is dissolution = *vaya*. The ability to repeatedly concentrate on the *udaya* and *vaya* is the *udayabbayanupassanā ñāna*.

[Note. If these *avijja* and *sankhāra* are the causes of *Paccuppanna patisandhe* and the five *khandhas* etc. of the *vipākavatta*, then these two are the groups of the *dhammas* of the past according to the statement *avijjā sankhārā atīto addhā*. The *vipassanā ñāna* which can discern them during their *upāda* (arising stage) and during their *bhañga* (disappearing stage) has been expounded by the Buddha to be the *udayabbayanupassanā ñāna*. These *dhammas* have existed during the past period as *upāda-thī-bhin*. These *dhammas*, while existing within the three general characters, are also called the *paccuppanna dhammas*. Note also that the same applies to the *dhamma* of *Paticca samuppāda* given below].

4. The *paramattha dhamma sabhâvalakkhanâ* (*dhamma* of the ultimate truth specific character) in the making, called *paramattha attabhâva* (the ultimate truth of individuality) still acquiring, *viññâna* within the three moments of *upâda-thî-bhañ* is the *paccuppanna dhamma* (the present state). The initial stage of the formation of *viññâna* which is the present, the *nibbattilakkhanâ* is the formation = *udaya*. *Viparinâma lakkhanâ* (features subject to change) is dissolution = *vaya*. The ability to repeatedly con-
template on the *udaya* and *vaya* is the *udayabbayanupassanâ ñâna*.

[Note. *Ye tâva âcariyâ mahâvihâravâsinova yathâ viññânam, evum ñâmarûpam, salâyatana, phassa, vedanâ, paccayam, paccayuppannañca sasantatipariyâpannam dîpanto vipâkameva icchanti* (Mahâtî.-2: 323).

From aspects of *suttana*, in culturing the *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, and *vedanâ*, the *mahâvihâravâsî* would like to include the *vipâka vatta* of the causes and results during formation only (Mahâtî.-2: 323).

In accordance with this opening acquire the *vipâka vatta* and *nâma-rûpa* by *vipâka viññâna* based on the *nâma-rûpa* to come and on *viññâ*. In this *viññâ-nâmarûpa* are included all the *vipâka vatta*, *viññâna* and *nâma-rûpa* which can be formed at any stage from *patisandhe* (birth) to *cuti* (death). This is the *addhâ paccuppanna* (a present period from the birth consciousness to the death consciousness) *dhamma* among the three kinds of *paccuppanna*. Here is an advice for you gentleman. Suppose you are going to live for a hundred years. Suppose again that you are at present 60 years old. Then your *patisandhe viññâna* and *nâma-rûpa* have appeared during the past 60 years and the *cuti viññâ* and *nâma-rûpa dhammas* will only have a chance to appear in the remaining 40 years. And it has been expatiated that these *vipâka vatta dhammas*, which can make their appearance at any time from birth to death, are also *paccuppanna dhammas*. From point of view of *addhâ*, these all *addhâ paccuppanna dhammas*, but if viewed from *khana paccuppanna* (momentary present) point these *dhammas* have the chance to arise during the past, future or the present as the case may be. No matter when these *dhammas* arise, be it during their formation or going to be formed, they are only of the *upâda-thî-bhañga* (arising, static and dissolution) phenomena. If you are discerning on these *dhammas* by means of *udayabbayâ nupassanâ ñâna*, concentrate on them during their arising *upâda* and during their dissolution *bhañga*.]

4. The *paramattha dhamma sabhâvalakkhanâ* in the making, called *paramattha attabhâva* still acquiring, the *nâma-rûpa* within the three moments of *upâda-thî-bhañ* is the *paccuppanna dhamma* (the present state). The initial stage of the formation of *nâma-rûpa* which is the present, the *nibbattilakkhanâ* is the formation = *udaya*. *Viparinâma lakkhanâ* is dissolution = *vaya*. The ability to repeatedly contemplate on the *udaya* and *vaya* is the *udayabbayanupassanâ ñâna*.

5. The *paramattha dhamma sabhâvalakkhanâ* in the making, called *paramattha attabhâva* still acquiring, the *nâma-rûpa* within the three moments of *upâda-thî-bhañ* is — *cakkhâyatana* (eye-base sense), *sotâyatana* (ear-base sense), *ghânâyatana* (nose-base sense), *jhivâyatana* (tongue-base sense), *kâyâyatana* (body- or skin-base sense), *manâyatana* (mind-base sense) — the *salâyatana* which also is *paccuppanna dhamma*. The initial stage of the formation of *salâyatana* which is the present, the *nibbattilakkhanâ*

is the formation = *udaya*. *Viparinâma lakkhanâ* is dissolution = *vaya*. The ability to repeatedly contemplate on the *udaya* and *vaya* is the *udayabbayanupassanâ ñâna*. (This *salâyatana dhamma* also can arise at any time from conception to the whole life time of a worldling).

6. The *paramattha dhamma sabhâvalakkhanâ* in the making, called *paramattha attabhâva* still acquiring, the *phassa* called *cakkhusamphassa* (reaction of the eye), *sotasamphassa* (reaction of the ear), *ghânasamphassa* (reaction of the nose), *jhivâsamphassa* (reaction of the tongue), *kâyasamphassa* (reaction of the skin/body) and *manosamphassa* (reaction of mind) etc. , within the three moments of *upâda-thî-bhañ* is also the *paccuppanna dhamma* (the present state). The initial stage of the formation of *phassa* which is the present, the *nibbattilakkhanâ* is the formation = *udaya*. *Viparinâma lakkhanâ* is dissolution = *vaya*. The ability to repeatedly contemplate on the *udaya* and *vaya* is the *udayabbayanupassanâ ñâna*.

[Note. This *phassa* also is a *dhamma* that can come into being throughout the life time whenever the door, the object and *viññâna* become associated, giving respective results. Suppose a meditator has taken the *cakkhusamphassa* as an object and discern on its arising and perishing away as the character by means of *udayabbayânupassanâ ñâna*. Then this *cakkhusamphassa* is just a kind of *dhamma* associated with *cakkhu viññâna*. It is included in *cakkhu dvâra vîthi* (eye door thought process consciousness). It is the *ahita vipâka nâma dhamma* (a mental property of bad *kamma*-formation). The *udayabbayânupassanâ ñâna* concentrating on this *phassa* is *mahâkusala manodvârîka jovîthi* (the great moral mind-door thought process consciousness). (This statement refers only to a yogi, a blessed worldling, who is in the prime of his *udayabbaya ñâna* possession). The *cakkhu dvâra vîthi* and the *manodvârîka jovîthi* are not simultaneous processes. One occurs after another. In the same way, the *cakkhusamphassa* and *udayabbayânupassanâ ñâna* are not the *dhammas* that would occur in one *cittakkhana* (thought moment) in association with one another. Let alone a *cittakkhana*, these two *dhammas* would not arise in association even within one thought process.

Dve pana phassâ vâ vedanâ vâ saññâ vâ cetana vâ cittâni vâ ekato uppajjanakâni nâma natthi, ekekameva uppajjati (Ma.-Tha.-4: 60).

Within a thought moment no two *phassa*, nor *vedanâ*, nor *saññâ*, nor *cedanâ*, nor *citta* can arise simultaneously; it is natural that only one can occur at single a time (*Ma.-Tha.-4: 60*).

Therefore when *cakkhusamphassa* is arising by way of the *upâda-thî-bhañga*, the *udayabbaya nupassanâ ñâna*, included in *mahâkusala manodvârîka vipassanâ jovîthi*, has not yet appeared via *upâda-thî-bhañga*. Again when this *udayabbaya nupassanâ ñâna*, which is concentrating on the *cakkhusamphassa* as *upâda-thî-bhañga* is arising, the *cakkhusamphassa* is not the kind of *dhamma* which still remains arising by *upâda-thî-bhañga*. It is so because no two different consciousnesses can appear within the duration of a *cittakkhana*. This *udayabbayâ nupassanâ ñâna*, however, can meditate on and see the *cakkhusamphassa* during its *upâda* (arising) and *bhañga* (dissolution) stages. Hence the Patisambhidhâ Magga Pâli has expounded as follow.

Jâto phasso paccuppanno, tassa nibbattilakkhanam udayo, vipariññâmalakkhanam vayo,

anupassanâ ñâna (*Patisam.*: 52).

(For its translation see No. 6 above).

Because *udayabbayâ nupassanâ ñâna* and the object *cakkhusamphassa* cannot arise within a single *cittakkhana*, while *udayabbayâ nupassanâ ñâna* is in existence as *upâda-thî-bhañga* the *cakkhusamphassa* cannot be present as *upâda-thî-bhañga*. Care must be exercised in the fact that the *paccuppanna* here does not necessarily means the popular *paccuppanna* of daily use.]

7. The *paramattha dhamma sabhâvalakkhanâ* in the making, called *paramattha attabhâva* still acquiring, the *vedanâ* such as *cakkhusamphassajâ vedanâ* (suffering), *sotasamphassajâ vedanâ*, *ghânasamphassajâ vedanâ*, *jhivâsamphassajâ vedanâ*, *kâya-samphassajâ vedanâ* and *manosamphassajâ vedanâ* etc., within the three moments of *upâda-thî-bhañ* is also the *paccuppanna dhamma*. The initial stage of the formation of *phassa* which is the present, the *nibbattilakkhanâ* is the formation = *udaya*. *Viparinâma lakkhanâ* is dissolution = *vaya*. The ability to repeatedly concentrate on the *udaya* and *vaya* is the *udayabbaya nupassanâ ñâna*.

8. The *paramattha dhamma sabhâvalakkhanâ* in the making, called *paramattha attabhâva* still acquiring, the *tahnâ* such as *rûpatahnâ* (craving of form), *saddatahnâ* (craving of sound), *ghanda tahnâ* (craving of smell), *rasa tahnâ* (craving of taste), *pholabba tahnâ* (craving of touch) and *dhamma tahnâ* (craving of mental phenomena) etc., within the three moments of *upâda-thî-bhañ* is also the *paccuppanna dhamma*. The initial stage of the formation of *tahnâ* which is the present, the *nibbattilakkhanâ* is the formation = *udaya*. *Viparinâma lakkhanâ* is dissolution = *vaya*. The ability to repeatedly discern on the *udaya* and *vaya* is the *udayabbayanupassanâ ñâna*.

[**Note.** The object of concentration by *udayabbaya nupassanâ ñâna* is the *tahnâ*. It is the *akusala dhamma*. The *udayabbayâ nupassanâ ñâna* that appears in the *santâna* (continuum) of yogis of a worldling status is the *kusala dhamma*. The *kusala* and *akusala dhammas* do not arise simultaneously within a period of *cittakhana*. It must be noted that these two are not the kind of *dhammas* that occur at the same time. However, this *tahnâ* has the chance to appear at any time throughout *addhâ paccuppanna* existence whenever the conditions prevail. The *udayabbatâ nupassanâ ñâna* possesses the ability to exercise *vipassanâ* concentration on the *tahnâ* during its *upâda* and *bhañga* phases.]

9. The *paramattha dhamma sabhâvalakkhanâ* in the making, called *paramattha attabhâva* still acquiring, the corresponding *upâdana* such as *kâmutupâdana* (clinging to sensual form), *ditthupâdana* (clinging to wrong view), *sîlabbatupâdana* (clinging to ceremonial observances), *attavâdupâdana* (clinging to one's own personality) etc., within the three moments of *upâda-thî-bhañ* is also the *paccuppanna dhamma*. The initial stage of the formation of *upâdana* which is the present, the *nibbattilakkhanâ* is the formation = *udaya*. *Viparinâma lakkhanâ* is dissolution = *vaya*. The ability to repeatedly discern on the *udaya* and *vaya* is the *udayabbayanupassanâ ñâna*.

Upapattihetubhûtam kammam kammabhavo. Kammâbhinibbattâ khandhâ upapattibhavo (*Visuddhi*-2: 208; *Abhi*,-*Tha*.-2: 177).

Upapattibhuvupattiyeve jâti (*Mahâtî*.-2: 334)

With reference to the above stanza life is of *kammabhava* (sensual existence) and *upapattibhava* (process of becoming). The *kamma*, which is the cause of *upapattibhava*, is the *kammabhava*; the aggregates which arise as a result of this *kamma* are the *upapattibhava*. The rising of this *upapattibhava* is the *jāti* (the future life). If the period of *paccuppanna* is taken to present the midway, then the *kammabhava* is *addhā paccuppanna*, the *upapattibhava* called the *jāti* represents the time to come. This *bhava* will again be described as two separate kinds.

Jāto bhavo paccuppanno, tassa nibbattilakkhaṇaṃ udayo, viparināmalakkhaṇaṃ vayo, anupassanāñānaṃ (Paṭisam.: 52).

10 (A) The *paramattha dhamma sabhāvalakkhaṇā* in the making, called *paramattha attabhāva* still acquiring, the *kammabhava*, within the three moments of *upāda-thī-bhaṇ* is the *paccuppanna dhamma*. The initial stage of the formation of *kammabhava* which is the present, the *nibbattilakkhaṇā* is the formation = *udaya*. *Viparināma lakkhaṇā* is dissolution = *vaya*. The ability to repeatedly discern on the *udaya* and *vaya* is the *udayabbayanupassanā ñāna*.

(B) The *paramattha dhamma sabhāvalakkhaṇā* in the making, called *paramattha attabhāva* still acquiring, the *upapattibhava*, within the three moments of *upāda-thī-bhaṇ* is the *paccuppanna dhamma*. The initial stage of the formation of *upapattibhava* which is the present, the *nibbattilakkhaṇā* is the formation = *udaya*. *Viparināma lakkhaṇā* is dissolution = *vaya*. The ability to repeatedly discern on the *udaya* and *vaya* is the *udayabbayanupassanā ñāna* (Paṭisam.: 52).

It must be noted that in the above Patisambhidā Magga Pāli all the *paṭicca samuppāda* factors from *avijjā* to *upapattibhava*, called *jāti*, have been equally treated as the *paccuppanna dhamma*. But if a breakdown is made on a temporal basis, if the present period is taken to represent the mid-period, then

1. *Avijjā* and *sankhāra* are the *dhamma* groups of the first past period.
2. *Viññāna*, *nāma-rūpa*, *salāyatana*, *phassa*, *vedanā*, *tahnā*, *upādāna*, and *kamma-*
3. *bhava* are the *dhamma* groups of the present period.
4. The *upapattibhava*, named the *jāti*, is the *dhamma* group of the future period.

All these *dhammas* have been expatiated to be the *paccuppannadhamma*. It must be noted that this expation means the *paccuppannadhamma* involved in *udayabbayanupassanā ñāna*.

Now what it means is this. In discerning on these *paṭicca samuppāda* features via *udayabbayanupassanā ñāna*, arising *upāda* and dissolving *phases bhaṇga* of these features must be mentally captured by virtue of this *ñāna*. These *dhammas*, during *upāda* and *bhaṇga* phases, are *paccuppanna dhammas*. Now go on to the following opening of the book of doctrines.

Jātanti nibbattam patiladdhattabhāvum. Ayam hi jātāsaddo khanattayasamaṅgitam sandhā vutto — "yedhammā jātā bhūtā"tiādīsu viya, na atītaṃ —

*"Ye te jātā, na te santi, ye na jātā, tattheva te.
Laddhattabhāvā no bhaggā, teva santi sabhāvato"ti —*

.

Ādīsu viya. Nāpi jātātā mattam, "yam tam jātā bhūtam sañkhat" antādīsu viya. Tenāha "jātā rūpā paccuppann"anti. Paccuppannarūpaṃ nāma jātāṃ khaṇattayapariyāpannati attho (Mahāṭī.-2: 419).

Jāta is an *attabho* (a form) that come into being and which can be acquired. (The *attabho* is said to have attained when *paramattha dhātu*, the ultimate element, that has materialized via *upāda-thī-bhaṅga* into distinct form).

This *jāta-saddā* has been expatiated as follows.

Ye dhamma jātā bhūtā — (*Abhi.-1: 213*). These *dhammas* are really formed and distinctly so. As explained in the texts, with reference to *upāda-thī-bhaṅga* called *khaṇattayasamaṅgī* = the state of being complete with all the three *khanas* (moments), it is expounded as *jātā rūpā paccuppannam* (*jātā, avijjā, paccuppanna*) etc. in the *Patisambhidhā Magga Pāli*.

"*Ye te jātā na te santi. R. Teva santi sabhāvato* = These *dhammas* have already arisen, hence these past *dhammas* are no longer present. Those which have not arisen yet are the future *dhammas* and are not present yet. The *dhammas* which have materialized via *upāda-thī-bhaṅga* into distinct form is the *paramattha dhātu*, which have not dissolved yet, but still in existence. These are the only *dhammas* which are still present as *sankhata paramattha sabhāva* (ultimate reality produced by specific actions). In such cases *jāta saddā* is expatiated as not referring to past *dhammas*.

"*Yam tam jātā bhūtam sankhatam (Dī.-2: 119; Sam.-3: 141)*. A resultant *dhamma* has appeared, and distinctly so. This is the result of combined actions of the causes. That *dhamma* will dissolve and cannot be wished not to do so."

In these doctrines, *jātasaddā* is expounded to be just the formation = *jātamatta*. In this stanza *jātā rūpā paccuppannam*. *R. Jātā avijjā paccuppannā* etc., the *jātasaddā* does not even instruct *jātamatta* = the nature of just the formation. What is instructed is that it is complete with the three *khanas* (moments) such as *upāda-thī-bhaṅga* called *khaṇattayasamaṅgī*. Therefore what it is means that — *jātā rūpā paccuppannam* = the present corporeality, *jātā avijjā paccuppannā* = the present *avijjā* is the *dhamma* included in the three moments as *upāda-thī-bhaṅga* (*Mahāṭī. 2: 419*). This should suffice to apprehend *paccuppanna dhamma* in section on *udayabbayā nupassanā ñāna*. But this not all there is to it. In *Āhāra Suttan* *desanā* of *Nidānavaggasamyutta Pāli* instruction was oriented towards past factors. Therefore, meditation can be made on the causal relationship, *paticca samuppāda* of the consecutive pasts. For instance see the following to note.

1. *Avijjā, sankhāra* (*dhamma* groups of second past period).
2. *Viññāna, nāma-rūpa, salāyatana, phassa, vedanā, upādāna, kammabhava* (*dhamma* groups of the first past).
3. *Jāti, jarāmarana* (*dhamma* groups of the *paccuppanna* period).

This has to be understood. (For concentration on a broader base see Sections on *Paticca samuppāda* and *Udayabbayā nupassanā ñāna*).

This *Udayabbayā nupassanā ñāna* also is the *Tīraṇapariññā*. The above descriptions made in association with the characters of *Paticca samuppāda*, which are –

1. *Ñâtapariññâ* called *Nâma-rûpa pariccheda ñâna*, *paccaya pariggaha ñâna*,
2. *Tîranapariññâ* called *Sammasana ñâna*, *Udayabbaya ñâna*.

Suppose you want to analyze as to whether these *pariññâ ñâna* are *paccakkha ñâna* or *anvaya ñâna*. Then examine the following extracts from Samyutta Pâli, Athakthâ Tîkâs.

Virâgampâham bhikkave saupanisam vadâmi, no anupanisam. Kâ ca bhikkave virâgassa upanisâ. "Nibbidâ"tissa vacanîyam. Nibbidampâham bhikkave upanisam vadâmi, no anupanisam. Kâ ca bhikkhave nibbidâya upanisâ, "yathâbhûtañânadassan"anatissa vacanîyam (Sam.-1: 268; Upanisa Suttan).

Nibbidâti nibbdâñânâ. Etena balavipassanam dassati. Balavippassanâti bhayatûpathânâ ñânâ âdînavânupassane ñânâ moncitukamayatâñânâ sankhârûpekkhâñânânti catonnam ñânâ adhivacanam. Yathâbhûtañânadassananti Yathâsabhâvabhâvajânânasankhâtam dassanam. Etena tarunavipassanam dassati. Tarunavipassanâ hi balavipassanâya paccayo hoti. Tarunavipassanâti sankhâra-pariccheda ñânâ kankhâvitarane ñânâ sammasane ñânâ maggamagge ñânânti catonnam ñânâ adhivacanam (Sam.-Tha.-2: 50).

Paccakkhakaranattena ñâtapariññâ tîranapariññâ ca gahitâ hoti (Sam.-Tî.-2: 65).

Bhikkhus I preach to you that the Arahattamagga, where *râga* (lust) has been eradicated, arise because of the cause. I do not preach to you that it arises with cause. What is the cause of the Arahattamagga? It is the *nibbidâ ñâna* (knowledge of aversion) which has become wearied of worldly life. Bhikkhus I preach to you that the *nibbidâ ñâna*, which have had enough of this life, also arises due to the cause. I do not preach to you that it has arisen without a cause. Then what is the cause of knowledge of getting enough of the worldly life, the *nibbidâ ñâna*? It is the *yathâbhûtañânadassana*, the knowledge of vision by power of which the nature of truth of *sankhâras* are appreciated (Sam.-1: 268; Upanisa Suttan).

Nibbidâñâna — *Bhayatûpathânâ ñâna* (the knowledge that concentrate on the fear), *âdînavânupassanâ ñâna* (the knowledge that realizes evil consequence), *muncitukamayatâ ñâna* (knowledge and *sankhârûpekkhâ ñâna* the four kinds of knowledge called powerful *bhalavavipassanâ ñâna*. This *bhalavavipassanâ ñâna* is said to be the *nibbidâ ñâna*. This *nibbidda ñâna* is the very cause of attaining the *arahatta magga*.

Yathâbhûtañânadassana — This is the knowledge which has the ability to understand the true nature of the *Sankhâras*. *Tarunavipassanâ* is the *vupassanâ ñâna* in its early (or immature) stage. (1) *Sankhârapariccheda ñâna* referred to as the *nâma-rûpapariccheda ñâna*, (2) *Kankhâvitarana ñâna* referred to as the *paccayapariggaha ñâna*, (3) *Sammasana ñâna*, (4) *Maggâmagga ñâna* referred to as *udayabbayâ nupassanâ ñâna* — these four are the ***tarunavipassanâ*** = *vipassanâ ñâna* in its early stage. Now this *tarunavipassanâ* is the very cause of *balavavipassanâ* (Sam. Tha.-2: 50).

In ***Yathâbhûtañânadassana*** *ñâtapariññâ* called the *nâma-rûpapariccheda ñâna* and *paccayapariggaha ñâna*, *tîranapariññâ* called the *sammasana ñâna* and the *udayabbayânupassanâ ñâna* with reference to which the meaning of *yathâbhûtañâna-*

dassana has been given in the atthakathâ. Because of the nature of the concept that they have the ability to have clear vision of the *sankhâra dhammas* called *dukkha saccâ*, *samudaya saccâ* etc. by means of *paccekkha*, the *ñâtapariññâ* and *tîranapariññâ* are taken from aspect of *yatthâ-bhûtadassana* to give the meaning (*Sam.-Tî.-2: 65*).

In accordance with the above Pâli Atthakathâ Tîka note as follows.

1. *Nâma-rûpapariccheda ñâna* which is the knowledge that can discern the corporeality and mentality of *paticca samuppâda* as two separate groups,
2. *Paccayapariggaha ñâna* which is the knowledge that can discern on the nature of the cause and its consequences separately as *paticca samuppâda* factors which occurs again and again,
3. (i) *Paccayato udayavaya*, (ii) *Khanato udayavaya* of these *paticca samuppâda* characters — the two kinds of features called formation and dissolution, the *udayavaya* and the true nature of their being *anicca* (impermanence), *dukkha* (suffering) and *anatta* (non-self) which can be visualized mentally by *sammasana ñâna* and *udayabbayâ nupassanâ ñâna* — these are the *paccekkha ñâna* (the practical knowledge).

If so, the question arises as to whether cannot these *paticca samuppâda* characters be concentrated by means of *anvaya ñâna* (reviewing knowledge). This can be answered based on the following.

*Nayadassanavasena vâ evum vuttam. Pathmañhi paccuppannadhammânâ
udayabbayam disvâ atha atîtânâgate nayam neti (Mahâtî.-2: 423).*

In other words — it is stated by *nayadassa* in this way. In the first place discern on the *udayabbaya* of the *paccuppanna dhammas* (the present *dhammas*), following which concentrate on those of the past and future in a similar way (*Pyî.-Visuddhimagga nissaya -5: 165*).

Note. After culturing *paccuppanna dhamma* indicated in this *udayabbaya ñâna*, and *udayabbaya* of these *paccakkha dhamma* by means of *paccakkha ñâna*, meditate on the *dhammas* of the past and future following this way.

Ñâtapariññâ and *tîranapariññâ* which are associated with the characters of the *paticca samuppâda* have been treated, and now *pahânapariññâ* will be described in continuation.

Pahânapariññâ — The meditation on the dissolution only of the three general characters, taken alternately as objects, of the *paticca samuppâda* are the knowledges from *bhañga ñâna* to higher order *vipassanâ ñâna*. These are called ***Pahânapariññâ*** because it enables one to analytically to know that has to known and relieving momentarily from factors of *kilesâ* that have to be eradicated, the states of *anicca*, *dukkha* and *anatta*, which are the characters of *paticca samuppâda*. These are the three *lokupariññâ*.

In *Patisambhidâmagga* Pâli (*Patisam.- 55*), the list of objects of concentration by knowledge of *bhañgâ nupassanâ ñâna* have been counted from *avijjâ* (ignorance) to *jarâmarana* (ageing, decay and death) of the characters of *paticca samuppâda*. So a meditator should concentrate on these characters of *paticca samuppâda* by the knowledge

of *bhaṅgā nupassanā ñāna*. In the exercise of *viapssanā* via *bhaṅgā nupassanā ñāna*, the objects on which the *vipassanā* is made, the characters from *avijjā* to *jarāmarana* are the **sampatidittha sankhāra dhammas**. The *avijjā* etc. which have escaped concentration by *bhaṅgā nupassanā ñāna* are the **sampatiadittha sankhāra dhammas**. These *sampatiadittha sankhāra dhammas* are explained as — *aditthampi atītāgatam* — etc. (Mahātī.-2: 442). The following instruction is directed to exercise *vipassanā* concentration on the past and future, which are *sampatiadittha sankhāra dhammas*, by means of *anvaya ñāna*.

Atha vā so evum viriyatto yathādittam sankhāratam, tathā aditthampi anvayañānavasena nirodheti, no samudeti. Nirodhatova manasikaroti. nIrodhamevassa passati, no samudayanti attho (Visuddhi-2: 279).

Evumvirattoti evum *bhaṅgānupassanāsārena viratto. Yathā dittam sampati sankhāratam nirodheti norodham manasikaroti, aditthampi atītānāgatam anvayañānavasena yathā idam etarahi, evum itarepīti anuminanto nirodheti manasikatassāpi nirodham karoti. No samudehīti ettāpi eseva nayo, no samudayam manasikarotīti attho (Mahātī.-2: 442)*

Ñātañca ñātañca ubhopi vipassati (Visuddhi-2: 278)

Because the *dhammas* such as *avijjā* to *jarāmarana* in *paticca samuppāda* are the object to exercise *vipassā* meditation on via *bhaṅgā nupassanā ñāna*, they are the **ñāta**. The knowledge which is concentrating on these *ñāta dhammas* is **ñāna**. In *bhaṅgā nupassanā ñāna* a meditator has to meditate on the dissolution of the *ñāta* taking it as the object. The dissolution of these *ñāta dhammas* too are taken a object and meditate on it. And these are the *pativipassanā* and is the kind of knowledge which takes both *ñāta* and *ñāna* as object in concentrating. These *ñāta* and *ñāna dhammas* are referred to as the *sankhāra dhamma*.

As the meditator always follows the *bhaṅgā nupassanā ñāna* way, and who is free of attachment *rāga* (by being able to be deflected for a considerable duration from), can take to heart the followings which appear at the commencement of practically visible knowledge--

1. The *ñāta dhammas* from *avijjā* to *jarāmarana*,
2. The *ñāna dhammas* called *vipassanā ñāna* which is discerning on the perishing away of these *ñāta dhammas*.

In the same way as taking these *dhammas* to heart, the *sampati adittha* which has been meditated, not visualized and therefore has not appeared at the commencement of practically visible knowledge = the *sampati anupatthita* (those from *avijjā* to *jarā maana*) so should the past and future *sankhāra dhammas* be taken, by means of *anvaya ñāna*, as to be perishable. In such meditation, the present *sankhāra dhammas* as well as the past and future *sankhāra dhammas* are comparatively taken as objects and the nature of their cessation taken to heart, but not the *samudaya* (arising) of their's. It means that these *dhammas* are taken from view point of cessation = only cessation is taken to heart. The concentration is made on the nature of their cessation, but not their *samudaya* (Visuddhi - 2: 279; Mahātī.-2: 442).

Them Three Lokuttara Pariññā

At the end of *lokīpariññā pañā* called *vipassanā* knowledge the *ariyamagga dhamma* distinctly appears taking *asankhata dhātu* (absolute element), element of freedom (from the worldly affairs) the *nibbāna dhamma* as the object. This *ariyamagga dhamma* knows penetratively the respective defilements that have to be absolutely eradicated and *asankhata dhātu*, element of freedom, and *nibbāna dhamma* by the *samuccheda* (abandoned defilements permanently). Therefore, the *ariyamagga dhamma* is definitely named *pahāpariññā*.

Ariyamagga dhamma is the vision of the object penetratively = to the *asankhata dhātu*, the element of freedom the *nibbāna dhamma* objectively via *Āramanapatideva*. In knowing so support is acquired by the force of *ārammanapativeda* of the *asankhata dhātu*, the element of freedom the *nibbāna dhamma*. Because of such a support the *moha dhamma* (bewilderment factor), which is a hinderance to knowledge of the Four Noble Truths, is completely eradicated. By this eradication acquirement of the knowledge of the Four Noble Truths is simultaneously attained. The knowledge of the Four Noble Truths by way of *kiccasiddhi* (acquired knowledge) is called *asammohapativeda*. Then the *ariyamagga dhamma* knows the *Nirodha Saccā* (Truth of Cessation of Suffering) by virtue of *ārammanapativeda*. By virtue of *asammohapativeda* the *Dukkha Saccā* (the Truth of Suffering), the *Samudaya Saccā* (the Truth of Arising) and *Magga Saccā* (the Truth of the Path) are known. Because of knowing this way, the *ariyamagga dhamma* has completely acquired the knowledge of *dukkha saccā* and *samudaya saccā*, called *paticca samuppāda* features, and the nature of inter-relationship among these features. Viewed from these aspects the *ariyamagga dhamma* also is known as *ñātapariññā*.

Again this *ariyamagga dhamma* also annihilates completely the *moha* (delusion) which hinders the appreciation of the *anicca*, *dukkha* and *anatta* factors. By annihilating so, the characters of the *paticca samuppāda* named *dukkha saccā* and *samudaya saccā*, referred to as *rūpa-nāma-cause-consequence* = *sankhāra dhammas*, and the function of investigating and analysing these *dhammas* by *kiccasiddhi* are simultaneously accomplished. Therefore, when viewed from this aspect *ariyamagga dhamma* can also be nominated as *tīranapariññā*. These are the three *lokuttarapariññā*.

Only if the relationship of the cause and consequences, *paticca samuppāda*, are penetratively known by one's self via the *lokīpariññā* and *lokuttarapariññā*, of three each, called the *attapaccekkha ñāna*, can this knowledge be called knowledge by *anubodha ñāna* and *pativedha ñāna*. One can escape from *apāya* (miserable existence), *samsāra* (rounds of rebirths), *dukkha* (suffering) and *samsāra vatta dukkha* (suffering due to one's action) besides *apāya*, only if the *dhammas* of the *paticca samuppāda* are penetratively known by one's self via *attapaccekkha ñāna*. There never has been an instance, even in the dream, where any one escaped from the *samsāra vatta dukkha* without knowledge of visualizing, by *anubodha ñāna* and *pativedha ñāna* called the *attapaccekkha ñāna*, the *dhammas* of the *paticca samuppāda*. This is all there is to the extracts from the above Mahānidāna Suttan.

In discerning via *sammāditthi ñāna*, by a *yogāvacara* individual (a meditator), on *paticca samuppāda dhammas*, formation of *sankhāra* due to *avijjā*, formation of *viññāna* due to *sankhāra* etc. are not the only objects to concentrate on, but also on the process of

cessation of *sankhâraloka*, such as the cessation of *sankhâra* due to cessation of *avijjâ*, the cessation of *viññâna* due to cessation of *sankhâra*. It was instructed to do so by the Buddha himself in Kiccâna Suttan and other Suttanas (see *Sam.-1*: 257 etc.).

The formation *udaya* of the *sankhâra* is said to be **Lokasamudaya**, and its dissolution *vaya* the *lokanirodha*. In another way, the process of formation of *sankhâra* due to *avijjâ*, and the formation of *viññâna* due to *sankhâra* also is called **Lkasamudaya**, and also **Anulomapaccayâkâra**. The complete cessation of *avijjâ* due to *arahattamagga* = **asesaviraga**, non-reappearable cessation = cessation by nature of **Anuppâdanirodha** due which the resultants of *sankhâra* etc. ceased completely = **asesaviraga** = dissolution by means of non-reappearable cessation etc. of the process of cessation of *sankhâraloka* is also the **Lokanirodha**, and also called the **Patilomapaccâkâra**.

These *lokasamudaya*, *lokanirodha* which are arising and perishing away of the *sankhâra* and *anulomapaccâkâra* = *anulomapaticca samuppâda*, *patilomapaccayâkâra* = philosophy of *patilomapaticca samuppâda*, and when these are concentrated what would be the results? Should a meditator be contented with what has been handed down from the predecessors? Should one be meditating speculatively by means of *anvaya ñâna* only? To these questions, the following is the answer extracted from Kiccânagotta Suttan.

Extract from Kiccânagotta Suttana

Once the Buddha was staying in the City of Sâvatthi. Then the Venerable Kiccânagotta approached the Buddha, took a seat at an appropriate place, and after paying homage, enquired of the Buddha a right answer to his query. My Lord it has said that the right view = *sammâditthi*, the right view = *sammâditthi*. Now what is the right view = *sammâditthi*? In answer to this query, the Buddha sermon *desanâ* nominated as the Kiccânagotta Suttana. The following are some extracts from this *suttana*.

Dvayanissito khâyam kiccâna loko yebuñyenaattitañceva natthitañca. Lokasamudayam kho kiccâna yathâbhûtam sammappañâya passato yâ loke natthitâ, sâ na hoti. Lokanirodham kho kiccâna yathâbhûtam sammappañâya passato yâ loke atthitâ, sâ na hoti. Upayupâdâbhinivesavinibbandho khvâyam kiccâna loko yebuñyena, tañcâyam uyupâdânam cetaso adhithânam abhinivesânusayam na upeti na upâdiyati "attâ me"ti. "Dukkameva uppajjânam uppajjati, dukkham nirujjhatî"ti na kañkhati na vicikicchati, aprarpaccayâ ñânamevassa ettha hoti. Ettâvatâ kho kiccâna sammâditthi hotîti (Sam.-1: 257-258).

Sammappaññâya passatoti sammappaññâ nâma vipassanâ maggapaññâ, tâya passantassâti attho (Sam.-Tha.-2: 31).

Appica lokasamudayanti anulomapaccayâkâram. Lokanirodhanti patilomapaccayâkâram. Lokanissaye passantassâpi hi paccayânam anucchedena paccayuppanassa anucchedam passato yâ natthîti ucchedadithi uppajjeya, sâ na hoti. Paccayanirodham passanassâpi paccayanirodhena paccayuppananirodham passato yâ

atthîti sassatadithi uppajjeya, sâ hotîti ayappamattha attho (Sam.-Tha.-2: 31).

Aparappaccayâti na aparappaccayena, aññassa apattiyâyetvâ attapaccekkhaññanamevassa ettha hotîti. Ettâvatâ kho kiccâna sammâditthi hotîti evum sattasaññâya pahînattâ etthakena sammâdassanam nâma hotîti missakasammâditthiñ âha (Sam.-Tha.-2: 32).

Ayampîti na kevalam khanato udayavayanîharananayo, atha kho paccayato udayavayanîharanayopi (Sam.-Tha.-2: 37).

Na parappaccayenâti parassa asaddahanena. Missakalmmâditthiñ âhâratî nâma-rûpa-paricchedato patthâya sammâditthâyâ vuttattâ lokiya lokuttaramissakam sammâditthiñ avoca (Sam.-Tha.-2: 38).

Kiccâna All the santient beings mostly are clinging to the fact that (the belief that self always remains as self) one's form is everlasting, and that (self has a limit) there is a time when self exists not any more (a view called *sassatadittihi ucchedaditthi*).

Kiccâna He who sees, by *vipassanâ ñâna* and *magga ñâna*, the nature of the cause of arising and of resultant formation in its true perspective of the *sankhâra loka*, there does occur such a thing as non-existence in such a person (a clinging to the belief that the self lost its existence one the living being died).

Kiccâna In *sankhâra dhammas* the clinging such as "mine, mine", attachment by craving = *tahnupaya*, attachment to the view of "the assume I" = *ditthupaya*, strong attachment = *upâdana* (clinging), deep rootedness = *abhinivesa* (adherence to one's belief) factors mostly wrapped the santeint beings around.

This Noble One, my disciple, do not adhere to, clings to nor cultivate in his citta these adherence = *upaya*, the strong clinging = *upâdan*, as the the assume I.

He does not have wrong belief nor wrong thought such as "***Dukkham*** *uppajjamânânam uppajjati, dukkham nirujjhamânânam nirujjhati* = **If something formed, it the suffering that is formed, if cessation occurs, then it is the dukkha which does cease**".

Aparapaccayâ ñânamevassa ettha hoti = This disciple does not depend upon others to have acquired such belief. He knows by him self by virtue of the *Attapaccekkha ñâna*. *Kiccâna* This much will suffice to have the right view = *sammâditthi* (Sam.-1: 257-258).

Lokasamudaya — Lokanirodha

Arising and Cessation of Mundane

Formation of *sankhâra* due to *avijjâ* and of *viññâna* due to *sankhâra* called the process of formation of called the mundane *sankhâra* = *anulomapaccayâkâra* = *anulomapaticca samuppâda dhamma* is called ***Lokasamudaya***. *Nibbatilakkhanâ* called *upâda* (arising) of the characters of the *paticca samuppâda*, such as *avijjâ*, *sankhâra* - etc. is also called the ***Lokasamudaya***.

Absolute dissolution (by way of *asesavirâga* and *anuppâdanirodha*) of *avijjâ* is due to *arahattamagga*. Because of this dissolution, by means of the non-reappearing cessation, the resultant *sankhâra* ceases (by way of *asesavirâga* and *anuppâdanirodha*) completely by non-reappearing cessation which is the process of dissolution of *sankhâra*

= *patilomapaccayâkâra dhamma* = *patilomapaticca samuppâda dhamma* is also referred to as **Lokanirodha**. The dissolution of *avijjâ*, *sankhâra*, etc., which are the characters of *paticca samuppâda* and which are subject to change called *viparinâma lakkhanâ*, are also termed **Lokanirodha**.

If stated with reference to *Patisambhidâ Pâli*, *avijjâ*, *tahnâ*, *upâdana*, *sankhâra*, *kamma dhammas* etc. for which *sanmudaya saccâ dhamma* as their cause clearly arises = clearly present. Due to this the cause *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedana* etc. referred to as the resultant five clinging aggregates, the *dukkha saccâ* (the truth of suffering), has clearly formed. These are all called the **Lokasamudaya**.

Avijjâ, *tahnâ*, *upâdana*, *sankhâra*, *kamma* etc., with *samudaya saccâ dhammas* as the cause, ceased absolutely because of the *arahattamagga* (via the *asesavirâga*, *anuppâdanirodha*), by means of a non-reappearable dissolution. Due to such a cessation the resultant *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedana* etc. called the five clinging aggregates which are the truth of suffering ceased (via the *asesavirâga*, *anuppâdanirodha*) through a process of non-reappearable cessation, are also called **Lokanirodha**. The dissolution of the five clinging (or dissolution of the cause and consequences) by means of *viparinâma lakkhanâ* is also the **Lokanirodha**.

When the noble disciple, the follower of the Buddha, discerns on the formation and process of formation, of cessation and its process by *vipassanâsammâditthi ñâna*, he would know that —

Dukkameva uppajjamânânam uppajjati, dukkham nirujjhamânânam nirujjhati = If it arises, then it is the *dukkha* which arises; if it ceases, then it is the *dukkha* which ceases. In him there is no doubt, no scepticism.

As explained above *avijjâ*, *tahnâ*, *upâdana* called the *kilesavatta dhamma* (the factors of recurrent of defilements) are just the *upâdânakkhandhâ* (clinging aggregates). The *sankhâra – kamma*, referred to as *kamma vatta* (recycle of action), are also just the *upâdânakkhandhâ*. So are the *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedana* etc., which are the *vipâkavatta dhammas*. These *upâdânakkhandhas* are — *sankhittena pañcuppâdânakkhandha dukkhâ* (*Dî.-2:243*; *Ma.-1: 82*; *Ma.-3: 292*; *Abhi.-2” 105*), in accordance with *desanâs*, only the *dukkha dhammas* which are being tortured by the phenomena of arising and perishing all the time.

It is expatiated as “if it arises, it is the *dukkha* which arises; if it ceases, it is the *dukkha* which ceases” and the meditator understands this arising and the process of arising, and ceasing and the process of ceasing of the *sankhâraloka* by *sammâditthi ñâna* and *maggasammâditthi ñâna*. In understanding the arising and its process, dissolution and its process of the *dukkha* referred to as *lokasamudaya* and *lokanirodha*, which kind of knowledge is involved, the *paccekkha ñâna* or *anvaya ñâna*? See the following for the answer.

Aparapaccayâ ñânamevassa ettha hoti (*Sam.-2: 32*).

Aparapaccayâti na parappacayena, aññassa apattiyâyetvâ attapaccekkhaññânamevassa ettha hotîti (*Sam.-Tha.-2: 32*).

In accordance with the opening of the Pâli text, this is not the kind of knowledge that ends up in individuals who acquired it by words of mouth from his predecessors. The Buddha expounded that, in fact, “In this case the disciple does not depend on others, he understands it by his self via *attapaccekka ñâna* (practical knowledge). Therefore, this understanding is the knowledge of *attapaccekka ñâna*.

In this Suttana, the Buddha has expatiated with reference to the combination of these *lokî* and *lokuttara sammâditthi* which are the *vipassanâsammâditthi* called the *lokî-sammâditthi* and *lokuttarasammâditthi* called *maggasammâditthi*.

Nâma-rûpaparicchedato patthâya sammâditthiyâ vattattâ lokiya lokuttaramissakam sammâditthim avoca (Sam.-Tî.-2: 38).

As the Buddha has sermoned *sammâditthi ñâna* (knowledge of right understanding) starting from *nâmapariccheda ñâna* (knowledge that discerns the corporeality and mentality as two separate groups), the *sammâditthi*, the combined *lokîlokuttara*, has been said to have indicated in this suttana (*Sam.-Tî.-2: 38*).

This *sammâditthi* is the *catusaccasammâditthi* (the right understanding of 4-fold noble truth). These are the right understanding of the truth of suffering, the right understanding of the truth of origin of suffering, the right understanding of the truth of the cessation of suffering, and the right understanding of the truth of Path. The Buddha has instructed this knowledge of right understanding as *attapaccekka ñâna* in Kiccânagutta Suttan. The same explanation has been given in the Atthakatthâ (book of meaning). That the Buddha has expounded from the *nâma-rûpapariccheda ñâna* to *catusaccaditthi* called the *attapaccekka ñâna* has again been indicated by the teachers.

In *Nibbânagâminipatipdâ* also, the followings have been written in accordance with the instructions given by the Buddha’s doctrines, Atthakathâ and Tîkâ.

1. Concentration on corporeality called *rûpakkhandhâ* by *attapaccekka ñâna* to discern penetratively until *paramatta* is attained has been described in section on Rûpakammatthâna. (Vol. I).
2. Concentration on corporeality called *rûpakkhandhâ* by *attapaccekka ñâna* to discern penetratively until *paramatta* is attained has been described in section on Nâmakammatthâna. (Vol. II).
3. The process of origin of *sankhâra loka*, called the *lokasamudaya*, which is the *anulomapaccayâkâra* = *anuloma paticcasamuppâda dhammas*, and concentration on these made by *attapaccekka ñâna* to discern penetratively until *paramatta* is attained has been described in section on Paticcasamuppâda. (Vol. III).
4. Culturing of the *sankhâra dhammas* by way of their *lakkhana* (character), *rasa* (taste), *paccuppatthâna* (manifestation), and *padatthâna* (proximate cause) has been described in section on Paticcasamuppâda. (Vol. IV).
5. Discerning penetratively of formation and its process, cessation and its process of these *lokasamudaya* and *lokanirodha* is has been described in section on Vipassanâ. Especially in Udayabbayânupassanâ ñâna section, they are given under the names ***Samudayadhammânupassî Section***, ***Vayadhammânupassî Section*** and ***Samudayavayadhammânupassî Section***. (Vol V).

6. *Vipassanâ* exercise on the *adittha* past and future *sankhâra* (which do not belong to the present) *anvaya ñâna* has been described in section on Udayabbayânupassanâ. (Vol. VI).

What *Anvaya Ñâna* Is

Included in the knowledge of *catusaccasammâditthi ñâna* is *dukkha saccâ* named the five-fold *upâdânakkhandhâ* which are meditated so as to attain *paramatta* which understands penetratively by means of *sammâditthi*, which understand the *samudaya saccâ* penetratively = *sammâditthi* which penetratively understands the formation of *dukkha saccâ* because of *samudaya saccâ*. *Vipassanâ ditthi* penetratively knows the true facts of the impermanence, of the suffering and of arising to a stage of *khanikanirodha* (momentary cessation). The dissolution of the *samudaya saccâ dhammas* by means of *anuppâdanirodha* due to which *dukkha saccâ dhammas* cease by way of *anuppâdanirodha* is understood penetratively by *vipassanâditthi*. The discerning *lokîmagga dhamma* referred to as *vipassanâ ñâna* (insight knowledge); the knowledge of *vipassanâditthi* that penetratively understands the facts of *anicca*, *dukkha* and *anatta* of these *lokîmagga dhammas*; the *maggasammâditthi* which penetratively understands *asanñkhata dhātu*, *nibbâna dhātu* referred to as *nirodha saccâ* by *ârammanapativedha*; the knowledge of *maggasammâditthi* that penetratively understands *dukkha saccâ*, *samudaya saccâ* and *maggâ saccâ dhammas* by means of *asammohapativedha* etc. are all *sammâditthi ñâna* and are instructed by the Buddha to be ***Aparappaccaya ñâṇa = Attapaccakkha ñâṇa***. The Atthakthâ, Tikâ also have explained in a similar way. If so a question arises as to whether or not an ***anvayañâṇa*** is involved in these *catusaccasammâditthi ñâṇa*. The following will answer this question.

Dhamme ñânanti ekapativedhavasena catusaccadhamme ñânam catusaccabbhantare nirodhasacce dhamme ñânañca, yathâha “tattha katamaṃ dhamme ñânam, catûsu maggesu catûsu phalesu ñâna”nti (Abhi.-2: 341; Tî.-Tha.-3: 202).

Anvaye ñânanti cattâri saccâni paccekkhato disvâ yathâ idâni, evum atîtepi anâgatepi imeva pañcakkhandhâ dukkhasaccam, ayameva tahnâ samudayasaccam, ayameva nirodho nirodhasaccam, ayameva maggo maggasaccanti evum tassa ñânassa anugatiyam ñânam (Tî.-Tha.-3: 202).

Anvaye ñânanti anuaye ñânam, dhammañâssa anugamane ñânam, paccavakkhananânassetam nâmam (Saṃ.-Tha.-2: 62).

Dhammañâna — *Ariyamagga ñâṇa* penetratively knows, taking the *dhamma* of *nibbâna*, the *nirodha saccâ*, as the object by way of *ârammana pativedha* which bears a meaning as the penetrative knowledge. By annihilation of *moha* which hinders the understanding of the truths such as *dukkha saccâ*, *samudaya saccâ*, and *maggâ saccâ*, acquired the penetrative knowledge by virtue of *asammohapativedha*. *Ariyaphala ñâṇa* (the Noble Fruit Knowledge) understands these, by taking the *dhamma* of *nibbâna*, *nirodha saccâ*, via a penetrative knowledge of *asammohapativedha*. Seeing and knowing this way, *ariyamagga ñâṇa* included in the 4-fold *ariyamagga* and the *ariyaphala ñâṇa*, included in the 4-fold *ariyaphala*, are all called the *dhamma ñâṇa*.

Anvaya ñâna — *Anvaya ñâna* sees the Four Noble Truths penetratively and presently via *paccekkha ñâna* (practical knowledge). In a similar way this knowledge knows “in the past as well as in future, only these five *khandhas* (5-fold clinging aggregates) are the *dukkha saccâ*, only the *tahnâ* is the *samudaya saccâ*, only the *nirodha nibbâna* noble *dhamma* is the *nirodha saccâ*, and only the eight *maggañ* are the *magga saccâ*.”

In this way *anvaya ñâna* is the kind of knowledge that always follows the *dhamma ñâna* (*Ti.-Tha.-3*: 202).

Anvaya ñâna is a knowledge which is formed corresponding to *dhamma ñâna*. A knowledge which always follows the *dhamma ñâna*. The name *anvaya ñâna* is the name of *paccavekkhana ñâna* (reflective knowledge) (*Sam.-Tha.-2*: 62).

Therefore, note that *paccavekkhana ñâna* which arises corresponding to *dhamma ñâna* referred to as the *ariyamagga ñâna*, *phala ñâna* = a reviewing knowledge is called the ***anvaya ñâna***. In *lokuttarâcattusaccâsammâditthi ñâna*, note that *anvaya ñâna* is not included. This is all about the *anvaya ñâna*, a knowledge that always follows *lokuttarâ ariyamagga ñâna* and *phala ñâna*.

The Anvaya Ñâna that always follows the Vipassanâ Ñâna

Nâma-rûpaparicchedato patthâya sammâditthiyâ vuttattâ lokiyalokuttaramissakâm sammâditthi avoca (*Sam.-Ti.2*: 38).

As explained above by the teacher, the Buddha has preached the *sammâditthi ñâna* starting from *nâmaparicche-da ñâna* and because of this there also is *anvaya ñâna* which always follows *vipassanâ ñâna* named *lokîcatusaccasammâditthi ñâna*. As the *anvaya ñâna*, which always follows the *ariyamagga ñâna* and *phala ñâna*, is just only the reflective *paccavekkhana ñâna*, and is not included in *lokuttara catusaccasammâditthi ñâna*. Similarly *anvaya ñâna*, which always follows the *vipassanâsammâditthi ñâna* referred to as *lokîcatusacca sammâditthi*, is just only a kind of *paccavekkhana ñâna*. It is not included in *lokî catusaccasammâditthi ñâna*. It is because *lokî catusaccasammâditthi ñâna* has been described as *aparappaccaya ñâna* by the Buddha in *Kiccânagutta Suttana*, and this *aparappaccaya ñâna* explained as *attapaccekkha ñâna* by *atthakathâ*.

See *Nibbânagâminipatipadâ* Vol. I in sections on *Vipassanâ*, *Udayabbayânupassanâ* for clarity of the Four Noble Truth during period of *lokîvipassanâ*. Similarly for discerning on the past and future *sankhâra* by *anvaya ñâna* which always follows the *vippasanâ sammâditthi ñâna* is given in section on *Vipassanâ*, *Udayabbayânupassanâ*, *Bhañgânupassanâ*.

Lokîcatusaccasammâditthi

The Buddha has critically analyzed the Eight Maggañ Dhamma in sections on *Dhammânupassanâ*, *Magga saccâ* of *Mahâsatipatthâ Suttâna*. Among these eight, *Sammâditthi* has been classed as four groups.

Katamâ ca bhikkave sammâditthi. Yam kho bhikkave dukkhe ñânam, dukkha-samudaye ñânam, dukkhanirodheñânam, dukkhanirodhagâminiyâ ñânam. Ayam vuccati bhikkhave sammâditthi (*Ma.1*: 88).

Bhikkhus What is *sammâditthi*? Bhikkhus ... The following four knowledges are the *sammâditthi* (*Ma.1: 88*).

1. The knowledge that recognizes the *dukkha saccâ*.
2. The knowledge that recognizes the *samudaya saccâ* which is the cause of *dukkha*.
3. The knowledge that recognizes the *nirodha saccâ* of *dukkha*.
4. The knowledge that recognizes the *magga saccâ* which leads to *Nibbâna* where *dukkha* has been eradicated (the practice leading to the Path for attainment of *Nibbâna*).

Discussion of Early Great Mathera

In this *satipatthâna desanâ* the Buddha has discussed on eight-fold *maggañ* and treated each analytically in the section on *magga saccâ*. On this fact there had been a discussion, called *dhammasâkicchâ* among the great matheras. The discussion on the practice of *satipatthâna* on the eight *maggañ* classes in Mahâsatipatthâna Suttana was focussed upon as to whether

1. *Pubbâsatipatthânamagga* = is the *lokîsatipatthâna* to be practiced prior to attaining the *ariya magga* or
2. Has it been sermoned as combined *lokîlokuttara* called *missakamagga*.

The mathera Tipitakacûlanâga said it is *pubbâgasatipatthâna magga* = the *satipatthâna magga* which has to be fulfilled prior to acquiring *ariya magga*. The Tipitakacûla mathera, the teacher of Tipitakasûlanâga mathera, has indicated *missakamagga* as the *pubbâgasatipatthâna magga*, a combination of both *lokîsatipatthâna magga* and *lokuttarasatipatthâna magga*. But Tipitakasûlanâga mathera, as a student replied that it is the *pubbâgasatipatthâna magga*, and the teacher repeatedly said it is the *missakamagga*. Because of this repeated sermon by the teacher, the student does not prevent him from doing so but has to remain quiet.

Later Tipitakacûla mathera, in an attempt to find the right answer, recited the Mahâsatipatthâna Pâli and found in its conclusion that the Buddha has admittedly state the right answer.

Yo hi koci bhikkhave ime cattaro satipatthâne evum bhâveya satta vassâni .. (Ma.-1: 90)

Bhikkave If a certain meditating monk meditated on the 4-fold *satipatthâna*, as I have instructed, for seven years (... he could attain either *arahatta magga* or, if there still are remnant *kilesâ*, *anâgâmi magga*). When he arrived at this stanza, he came to realize what the right answer is.

Lokuttaramaggo upajjitvâ satta vassâni titthamâno nâma natthi (Ma.-Tha.-1: 235).

Lokuttarâmagga is not going to remain throughout the seven years' duration
(*Ma.-Tha.-1: 235*).

The Buddha decisively expounded as “the *missaka magga* I have mentioned is not attainable in the Mahâsatipatthâna Suttan, but only the *pubbâgasatipatthâna magga* is, as Cûlanâga has realized” (*Ma.-Tha.-1: 235*).

In this *pubbâsatipatthâna magga* are included the four kinds of *sammâditthi* too. These four are the kinds of knowledge that a meditator must have exercised

and acquired before arriving at the the *ariya magga*.

1. The five-fold *upâdânakkhandhâ*, existing as the past, future, present, *ejjatta*, *bahiddha*, *olârika*, *sukhuma*, *hîna*, *panîta*, *dûra*, *santika*, of 11 kinds, is the *dhammas* of *dukkha saccâ*. The *attapaccakkha ñâna*, which can penetratively visualize this *dukkha saccâ*, is the *sammâditthi*, which has the ability to understand in the *dukkha saccâ* via the knowledge of *dukkhe ñâna*. The meditator must have acquired this *sammâditthi* before attaining the *ariya magga*. By acquiring these knowledge in this way, the factors of the *dukkha saccâ dhamma* can be visioned penetratively by virtue of *sammâditthi ñâna* called ***attapaccakkha ñâna***. Now the meditator is on the path leading to the *nibbâna*. Note that in this *dukkha saccâ* group are included the past and future five-fold *upâdânakkhandhâs*.

2. The *upâdânakkhandha*, *kilesavatta*, *upâdânakkhandhâ* and *sankhâra-kamma* called *kamma vatta upâdâbakkhandhâ*, headed by *avijjâ*, *tahnâ*, *upâdâna* and which are the causes of five-fold *paccuppan patisandhekhandhâ* etc. of five-fold *upâdânakkhandhâ*, are, in accordance with the *dhamma – atîte hetavo pañca –* etc., the *upâdânakkhandhâs* of the past period. Again, *kilesa vatta upâdânakkhandhâ*, *kammavatta upâdâdankkhandhâ* cultivated in the present life, the causes due to which there will appear resultant *upâdânakkhandhâ* termed *jâti* (*jarâmarana*) are the *idâhi hetavo pañca*, *âyatim phalapañca desanâ*, and according to which they are just the *upâdânakkhandhâ* of the future period.

The conspicuous resultant formation of five-fold *paccuppannavipâkavatta vipâka vatta upâdânakkhandhâ* due to the past *upâdânakkhandhâ* called *kilesavatta kammavatta* as the cause, and because of culture of *kilesavatta kammavatta upâdânakkhandhâ* in the present period has resulted in *vipâkavatta upâdânakkhandhâ* to come, are to be known penetratively by oneself. ***Attapaccakkha ñâna***, which penetratively visualizes these, is the *sammâditthi ñâna* which enables one to see the cause of *dukkha saccâ* in accordance with *dukkhasamudaye ñânam*. The meditator must have already acquired this *sammâditthi ñâna* view before attainment of *ariya magga*.

In such an endeavour should one employ *anvaya ñâna* which sees by speculation, or by *attapaccakkha ñâna* which sees penetratively oneself? See the following.

Aparapaccayo ñânamevassa ettha hoti (Sam.-1: 258).

Aparappaccayâti na aparappaccayena, aññassa apattiyâyevâ attapaccakkhañâna-mevassa ettha ahotîti (Sam.-Ttha.2: 32).

According to this doctrine, it is not to be tried by *anvaya ñâna* which sees by *anumâna* speculative vision. It is not the knowledge handed down from one's teacher nor that received from others. The endeavour must be made by ***attapaccakkha ñâna*** which is seen penetratively by oneself.

According to *Āhârasuttana* (Sam.-1: 253) *desana* method, the knowledge can be oriented toward the past it is possible to discern on *paticca samuppâda*, the cause-result relationship. (For a detail description see section on *Paticca Samuppâda*). (It does not necessarily mean to discern on all samsâric circus).

3. *Attapaccakkha ñâna* which can discern on the formation of resultants *vipâkavatta upâdânakkhandhâ* from causes *avijja. tahnâ, upâdâna, sankhâra, kamma* etc. is **Paccaya-to udayadassana ñâna**. Because *janaka* factors, which can directly give rise to the *upâdânakkhandha*, can be discerned penetratively by the knowledge *paccayato udayadassana ñâna*, **samudaya saccâ** becomes clear (*Visuddhi-2: 267*).

4. Because of the *arahattamagga*, the causes like *avijja. tahnâ, upâdâna, sankhâra, kamma* etc. have ceased by nature of *asesavirâga* and *anuppâdanirodha* in such a way that they are non-returnable, non-reappearable. Due to this cessation the future *khandhâs* also ceased by non-returnable dissolution after *khandhāparinibbâna* (passing away of the aggregates). The knowledge that can recognize this kind of cessation is **paccayato vāyadassana ñâna**. Combination of the *paccayato udayadassana ñâna* and *paccayato vāyadassana ñâna* is the **udayabbayadassana ñâna**.

Here too, for a meditator at worldling stage and when the *udayabbaya ñâna* is in force the time to attain *ariyamagga* and to enter *parinibbâna* will just be the future. This future may either be the future of the present existence, any one life that is to come. A meditator must attempt to acquire the knowledge that understands penetratively, by himself through *attapaccakkha ñâna*, the fact that because of the cessation of causes via *anuppâdanirodha*, the resultant aggregates cease by way of *anuppâdanirodha*. The meaning of this *anuppâdanirodha* is the **lokînirodhasaccâ dhamma**. Because of the penetrative vision of the dissolution of derived resultants due to cessation of the causes by way of the *anuppâdanirodha*, the *nirodha saccâ dhamma* becomes clear by virtue of *paccayato vāyadassana ñâna* (*Visuddhi-2: 267*).

The knowledge that can discern the formation of the cause *upâdânakkhandha* and the resultant *upâdânakkhandha* is the *khanato udayadassana ñâna*. The **dukkha saccâ** becomes clear because of penetrative vision of *jâtidukkha* (suffering of rebirth), the formation of *upâdânakkhandhas* by means of knowledge of *udayadassana ñâna*. The knowledge that can discern the dissolution of these *upâdânakkhandhas* is the *khanato vāyadassana ñâna*. As the *khanato vāyadassana ñâna* penetratively understands the *maranadukkha*, the incessant dissolution of *upâdânakkhandhas*, even the **dukkha saccâ** become clear (*Visuddhi-2: 267*). These are the knowledges that understand the formation of *dukkha* of the *upâdânakkhandhas*, called the *dukkha saccâ*. The *khanato udayadassana ñâna* and *khanato vāyadassana ñâna*, when combined, become **khanato udayabbaya dāssana ñâna**.

The above two kinds of *udayabbayadassana ñâna* vision referred to as *paccayato udayabbayadassana* and *khanato udayabbaya dāssana* are the *vipassanâditthi*. This *vipassanâditthi*—*paccayato udayabbaya* and *khanto udayabbaya*, called the two *udayabbaya* of the *sankhâra dhammas*, can momentarily eradicate the *sammoha dhammas* which hinder visualizing these two. It is, therefore, the *lokîsaccâ dhammas*. Because of the knowledge of vision by these two *udayabbaya ñâna* the **lokîmagga saccâ dhamma** becomes clear in the continuum of a meditator (*Visuddhi-2: 268*).

By *Arûpasattaka vipassanâ* method of meditation – when the past *manodvârîka vipassanâjovîthi nâma dhamma*, called pre-*citta*, can be discerned by post-*citta* called later *vipassanâ manodvârîka vipassanâjovîthi nâma dhamma*, and when *vipassanâ ñâna*,

called *ñâna* = *manodvârîka vipassanâjovîthi nâma dhamma* can be discerned again by *bhañgânupassanâ*, the *lokîmagga saccâ dhamma* becomes apparent. (For the method of meditation see section on Vipassanâ meditation).

This is how four-fold *lokîsaccâ* is acquired by means of *vipassanâditthi* during exercising the *lokîvipassanâ*. This *vipassanâditthi* called *attapaccakkha ñâna* is one of the eight-fold *lokîmaggañ dhamma*. In *Mahâsatipatthâna Suttana* the Buddha has instructed to acquire *pubbagasatipatthâna magga* prior to attaining *ariya magga*.

A meditator might have wondered if there have ever been disciples who have penetratively visioned *lokasamudaya* and *lokanirodha dhammas* by *sammâditthi ñâna*, called *paccakkha ñâna*, after exercising along the line of these instructions. If so, then go through the extracts from *Mahâtahnâsañkhaya Suttana* given below.

Extracts from *Mahâtahnâsañkhaya Suttana*

Bhûtamidanti bhikkhave passathâti. Evum bhante. Tadâhârasambhavunti bhikkhave passathâti. Evum bhante. Tadâhâranirodhâ yam bhutam, tam nirodhadhammanti bhikkhave passathâti. Evum bhante (Ma.-1: 236).

Sammappañâya passatoti idam khandhapañcatam jâtam bhûtam nibbattanti yâthâvasarasalakkhanato vipassanâpaññâya sammâ passantassa. Pañâya suditthanti vuttana-yeneva vipassanâpaññâya sutthu dittham (Ma,-Tha.-2: 207).

Bhikkhus Do you ever discern, by *vipassanâsammâditthi ñâna*, that this five-fold *khandhas* (5-fold aggregates) have appeared clearly?, asked the Buddha.

We do, my Lord, reply the bhikkhus.

Bhikkhus Do you ever discern, by *vipassnâsammâditthi ñâna*, that this 5-fold aggregate appear as a result of the causes that clearly exist?, ask the Buddha.

My Lord, we do, reply the bhikkhus.

Bhikkhus Do you ever discern that the resultant *khandha* possesses the nature of cessation by *anuppâdanirodha* because the causes cease by way of *anuppâdanirodha*? Ask the Buddha.

We do, my Lord, reply the bhikkhus (*Ma.-1: 326*).

These *bhikkhus* penetratively know the fact that *sankhâra* is formed because of *avijjâ* formation, and because of *sankhâra*, *viñâna* is formed, etc. of the processes of the *sankhâraloka* referred to as *anuloma paccayâkâra* = *anulomapaticca samuppâda*, the nature of the *lokasamudaya*, because of *arahatta magga* of *avijjâ* the nature of the *asesavirâga* = the nature of absolute and non-returnable cessation by way of the nature of *anuppâdanirodha*. (For a broader description, see (*Ma.-1: 327*).

With regard to attaining the vision of *vipassanâ sammâditthi ñâna*, the Buddha has made many questions to these bhikkhus. From among these question and answers, some which are relevent are given.

Questions and Answers

The Bhuddha ask the Bhikkhus If you have indeed acquired knowledge and sight this way “do you say the Buddha, as our teacher, is respectable, and with due respect to the Bhuddha we state this way?”

No, our Lord, we do not state this way, was the answer from the Bhikkhus.

Bhikkhus If you have indeed acquired knowledge and sight this way, do you state that “the Buddha as a *samana* has expatiated this way, and we the *samana* have said this way?”

No, our Lord, we do not state this way.

Bhikkhus If you have indeed acquired knowledge and sight this way, do you relay these to other teachers?

No, our Lord, we do not.

Bhikkhus If you have indeed acquired knowledge and sight this way, could these be, in essence, from the discipline and *kotuhala maṅgalā* of many *samana* and *byahmana* ?

No, our Lord, it could not be.

Nanu bhikkhave yadeva tuhmâkam sâmam ñâtam sâmam dittham sâmam viditam, tadeva tuhme vadethâti. Evum bhante (Ma.-1: 332).

Sâmam ñâtanti sayam ñânena ñâtam. Sâman ditthanti sayam paññâcakkhunâ dittham. Sâmam viditanti sayam vibhâvitam pâkatam katam (Ma.-Tha.-2: 209).

Sayam ñânena ñâtanti paraneyatam muncivâ attano eva ñânena yâthâvato ñânam. Evum bhûtañca sayam paccakkhanto dittham nâma hotîti âha “sayam paññâcakkhunâ dittha”nti. Sayam vibhâvitanti tehi bhikkhûhi tassa atthassa paccattam vibhûtabhâvum âpâditam (Ma.-Tĩ.-2: 227).

Bhikkhus Do you mean knowing and seeing by your self by means of *Sammâditthipaññâ cakkhu* (knowledge by eye of right understanding) called *attapaccakkha ñâna*?

Yes, our Lord, we do.

Bhikkhus ... *Sadhu* = good. Bhikkhus With this *dhamma*, which you can see by yourself, which can bring forth benefit any time, which is an ideal to demonstrate to others, which should be maintained within your body and mind, which only the learned individuals can know and appreciate, I have directed you, my sons, to the *nibbâna* (to have approached the *nibbâna*). Bhikkhus This is the *dhamma*, which you should discern; it can bring forth benefit any time; it is demonstrable to others to exercise; it should be maintained with one’s body and mind; only the learned individuals can know and appreciate. In this way I have preached to you. I preach this *dhamma* with reference to the fact that you have distinctly know by own (Ma.-1: 332).

Sampati Dittha Sankhâra, Sampati Adittha Sankhâra

After going through various explanations given above, and if the meditator understands and contended with, he will also agree with the the division of the past and future *sankhâra dhammas* into two classes as given below.

Among the characters of the *paticca samuppâda dhammas* from the *avijjâ* to *jaramarana* are included the *dhamma* groups of the past period, of the future and of the present. Similarly among the *samudaya dhamma* groups are included the past causes called *dhamma* groups of the past period, of the future and of the present. A meditator should partly acquire the knowledge of the characters of the *paticca samuppâda* and the nature of interrelationship among these characters relative to meditator's *pâramî ñâna*. This knowledge is acquired by *vipassanâ sammâditthi ñâna* called the *attapaccakkha ñâna*.

Again according to method of *saccâdesanâ* – among the *dukkha saccâdhamma* groups are included resultants of the past, future and the present referred to as *dhamma* of the past period, of the future period and of the present period. In the same way, among the *samudaya saccâ dhamma* groups are included the past cause referred to as past period *dhammas*, the present cause referred to as the present period *dhammas*, and for those who are still continuing the infinite rounds of rebirth, the future cause referred to as future period *dhammas*.

In the accounts of *lokînirodhasaccâ* are included the future *dhamma* groups for the one who is going to pass away in the present life, and later future *dhamma* for the one who is going to pass away in any one of the future lives. The *lokîmagga saccâ dhamma* is the process of *vipassanâ manodvârîka jovîthi* dictated by the practising *vipassanâ sammâditthi ñâna* and is therefore the *dhamma* groups of the present period. The *sâvakas* should have tried to discern penetratively the four-fold *lokîmagga saccâ* in part, before arriving at the *ariyamagga* with their corresponding *pâramis* via *attapaccakkha ñâna*, referred to as *vipassanâ sammâditthi ñâna*, which occur prior to *ariyamagga*.

The above mentioned past, future (and present) *sankhâra dhammas* discerned via the *attapaccakkha ñâna*, referred to as *vipassanâ sammâditthi ñâna*, are the ***sampati dittha sankhâra dhammas***. The journey through the sasâric circus is too long for a *sâvaka* to have discerned these *dhammas* completely. Those *dhammas* that have not been discerned by the *attapaccakkha ñâna*, referred to as *vipassanâ sammâditthi ñâna*, are the ***sampati adittha sankhâra dhammas***. A meditator who has completed discerning the *sampati dittha sankhâra dhammas*, can do so in a similar way for the past and future *sampati adittha sankhâra dhammas* by knowledge of *anvaya ñâna*. It must be noted that this *anvaya ñâna* is the knowledge not included in *vipassanâ sammâditthi ñâna*, called *attapaccakkha ñâna*, but a kind of ***paccakkhan ñâna*** that always follows the *vipassanâ ñâna*.

Only if the past, future and present *sankhâra dhammas* are taken to be of two classes as *sampati ditthi sankhâra* and *sampati aditthi sankhâra*, can the solution can be made. If all the past and present *sankhâra dhammas* are blindly accepted as discernible by *anumâna* only by *anvaya ñâna*, then the expations in relation to the penetrative knowledge by the *vipassanâ sammâditthi ñâna*, called *attapaccakkha ñâna* of the nature

of the relationship of the *paticca samuppâda*, and of four-fold *lokîsaccâ*, would be of no meaning. The learned may sometimes have overlooked the fact.

If the division of the past and future *sankhâras* into the past and future *sampti dittha* and *sampti adittha sankhâras* cannot be accepted, then the offlowing expressions from Patisambhidhâ Magga Pâli.

Jâtâ avijjâ paccuppannâ, sattâ nibbattilakkhanam vayo, anupassanâ ñânam. R. Jâto bhavo paccuppanno, tassa nibbattilakkhanam udayo, viparinâmalakkhanam vayo, anupassanâ ñânam (Patisam.- 52).

[Even *paramatthadhammasabhâvalakkhanâ*, called the material body formation clearly as *upâda-thî-bhañga*, is said to have attained *patiladdhattabhâva* = *attabho*.]

The *paramatthadhammasabhâvalakkhanâ* while in its formative stage, called *avijjâ* which is (one's own form) still attaining is the *paccuppanna dhamma*. The *sañkhatalakkhanâ* which should be taken arising stage of *avijjâ* is the *udaya* = arising. The *sankhatalakkhanâ* which is taken as deterioration is the perishing away = noted as the *vaya*. The *nupassanâ* knowledge of concentration on the *udaya* and *vaya* time and again is the *udayabbayânupassanâ ñâna*. R.

The *paramatthadhammasabhâvalakkhanâ* while in its formative stage, the *bhava*

(called *kammabhava* + *upapattibhava*) still attaining, is the *paccuppanna dhamma*. The *asañkhatalakkhanâ*, which can be taken as the arising stage of that *bhava* is the arising = noted as the *udaya*. The *sankhatalakkhanâ* which is taken as deterioration is the perishing away = noted as the *vaya*. The *nupassanâ* knowledge of concentration on the *udaya* and *vaya* time and again is the *udayabbayânupassanâ ñâna* (Patisam.- 52).

If a breakdown is made of the characters of the *paticca samuppâda* with the *paccuppanna bhava* in the middle, then *avijjâ*, *sañkhâra dhammas* etc. are the *dhamma* groups of the past period. *Upapattibhava* referred to as *jâti* is the *dhamma* groups that belong to the future period. The *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedanâ*, *tahnâ*, *upâdâna* and *kamma bhava* are all *dhamma* groups belonging to the preent period.

These *dhammas*, however, are *dhammas* that have arisen, arising, and still to arise as *upâda-thî-bhañga*. These *dhammas* are still included in the three *khanas* of *upâda-thî-bhañga* duration, and still staitc in these three *khanas*. And during these three periods the *paramatthadhammasabhâvalakkhanâ* referred to as the *paramattha* material body, the *attabho*, are momentarily acquired and therefore termed as the *paccuppanna dhamma*.

What it really means is this. It is true that *avijjâ* is the *dhamma* of past period. It has then existed clearly in the form of *upâda-thî-bhañga*. While existing so during that period, that *avijjâ* is referred to as the *paccuppanna dhamma*. When the meditator discerns this *avijjâ* via *udayabbayânupassanâ ñâna*, he must concentrate on, and acquire, the arising phase *upâda* and perishing phase *bhañga* of this *avijjâ*. If one can concentrate on the arising and perishing away of the *avijjâ*, then that *udayabbayânupassanâ ñâna* is referred to be concentrating on the *avijjâ* of the present period. Note that the same applies the concnetration on the characters of the *paticcasamuppâda* during remaining three periods. In connection with this *paccuppanna dhamma* the great teacher of the

doctrine opened as follows. It has been translated by Pye Sayâdaw.

*Nayadassanavasena vâ evum vuttam. Pathamahñi paccuppannadhammânam
udayabbayam disvâ atha atîtânâgate nayam neti (Mahâtî.-2: 423).*

In another way — by nayadassana it means this way. To begin with acquire the *udayabbaya* by *paccakkha*, and later the same applies for the past and future periods (Pyî.- Visuddhi Nissaya – 5: 165).

What Patīccasamuppāda Dhamma Is

This cause-result relationship = *paticca samuppāda dhamma* was not created by the Buddha himself. Whether or not the Buddhas, named *tathāgata* (one who has found the truth), have appeared in this *loka* (world), this causal relationship = *paticca samuppāda dhamma* will still exist in this world. But only when *sammāsambuddhas* (the perfectly enlightened ones), named *tathāgata*, have appeared in this world expounded the cause-result relationship = *paticca samuppāda dhamma*, the sentient beings have the chance to know it (Sam.-1: 246. See Paccaya Suttan).

Suppose the Buddha has not appeared in this world, or the Buddha has appeared but sentient beings have not the chance to listen to his teaching, or they have did have the chance but were under the influence of such extreme beliefs as *sassataditthi* and *ucchedaditthi*, then they would not be able to understand the *patīccasamuppāda dhamma*.

This cause-result relationship = *patīccasamuppāda dhamma* have deep meaning. It is hard to understand. To the Venerable Ānanda, who expressed *patīccasamuppāda* to be simple and shallow, was cautioned by the Buddha as “Māhevum Ānanda māhevum Ānanda, my young brother Ānanda do not say this way, Ānanda do not say this way.” (Dī.- Sam.- 2: 47; Sam.-1: 318).

However hard and deep it may be, the *patīccasamuppāda dhamma* will have to be clearly and analytically understood by *attapaccakkha ñāna* and *sammāditthi ñāna* etc. of the three *pariññā*. Without penetratively understanding this way escape from vicious rounds of rebirth, ageing, suffering, the death and recurrent of rebirths. Without the knowledge of the cause-result relationship = *patīccasamuppāda dhamma*, no one should be recognized as *samanabyāmana* (see Sam.- 1: 255 – 256).

The Buddhas, who have arisen, arising and going to arise know the this *paticca samuppāda dhamma* analytically, and that is the reason why they are able to have arisen, still arising and going to arise. As long as the sentient beings are ignorant of the *paticca samuppāda dhamma*, they will be under influence of the *sassataditthi* and *ucchedaditthi* and will still be bounded by miserable suffering. Therefore, those who want to escape from various *sansāravatta dukkhas* must try to penetratively understand the *paticca samuppāda* via *sammāditthi ñāna* called *attapaccakkha ñāna*. This has many times been advised in Nidānavaggasamyutta *desanas* (see Sam.-1: 257; Kiccānagutta Suttana etc.).

Tadanvaya Dhammas in Patisambhidāmagga Pāli

*Aniccatō manasikaroto adhimokkhabahulassa sandaṇḍariyam ādhipateyam hoti,
bhāvanā cattāraṇḍariyāni tadanvayā honti, sahaajātapaccayā honti, aññamaññapaccayā*

honti, nissayapaccayâ honti, sampayuttapaccayâ honti, ekarasâ hoti, ekarasatthena bhâvana, yo sammâpatipanno, so bhâveti, natthi micchâpatipannassa idariyabhâvanâ. Dukkato mansikaroto passaddhibahulassa samâdhiñdariyam âdhipateyam hoti. R. Anattato mansikaroto vedabahulassa paññidariyam âdhipateyam hoti. R. (Patisam.245-246).

Tadanvâyâ hontîti tam anugâmini tam anuvattinî honti (Patisam.-Tha.-2: 161).

The *sankhâra dhammas* taken to heart as *anicca*, and the determination as *anicca* = in individual with high *adhimocka* (*saddhârimockkha*) determination (determined faith), *saddhindriye* (faculty of faith) is his principle. In *vipassanâ* meditation the four-fold *indriyas* (controlling principles), such as effort, mindfulness, concentration, wisdom, are always associated with that principle. R.

The *sankhâra dhammas* taken to heart as *dukkha* is peacefulness = in one who is fully relaxed *sammâdhindre* (faculty of concentration) is his principle. In the *vipassanâ* meditation the the four-fold *indriyas* (faith, effort, mindfulness, wisdom), are always associated with that principle. R.

In wise individual who takes the *sankhâra dhammas* to heart as *anatta*, in him *paññindre* (faculty of wisdom) is the principle. In the *vipassanâ* meditation the the four-fold *indriyas* (faith, effort, mindfulness, concentration), are always associated with that principle. R. The are *sahajâta-paccaya* (conscience condition), *aññamañña-paccaya* (mutuality condition), *nissaya-paccaya* (dependence condition), *sampayutta-paccaya* (relation of association) and functional similarity. From sense of functional similarity, it is the *bhâvanâ* (mental culture). A meditator practises on good exercise termed *sammâpatipanna* (having the right view). The meditator is taken as practising for maturity of *indre*, referred to as *indriyabhâvana* (power of mental culture). A certain individual practises concentration on micchâpatipatta procedure. Then he cannot be taken as taken as practising for maturity of *indre*, referred to as *indriyabhâvana* (Patisam.245-246).

There are five classes of *indre*: *saddhâ* (faith), *vîriya* (effort), *sati* (mindfulness), *sammâdhi* (concentration) and *paññâ* (wisdom). Then any one who takes the *sankhâra dhammas* as *anicca* and concentrate on it, the *saddhindre* is his principle. To this are associated the the four-fold *indre*: *vîriya*, *sati*, *sammâdhi* and *paññâ*. This *saddhâ* and the four-fold *indre* arise in association with each other within a *cittakhana* (thought moment). *Saddhâ* supported these four by force of *sahajâta*, *aññamañña*, *nissaya* and *sampayutta*. Therefore, these four-fold *indre* have been expounded to be ***tadanvayadhamma*** which is associated with *sammâdhindre*.

In an individual who takes *sankhâra dhammas* as *anatta* to heart, the *paññañdre* is his principle. The *indre* such as *saddhâ*, *vîriya*, *sati*, *sammâdhi* are always associated with the *paññañdre*. This *paññañdre* supports these four via the forces of *sahajâta*, *aññamañña*, *nissaya* and *sampayuttapaccaya*. Therefore, these four-fold *indre* are always associated with the *paññañdre* and are expatiated as ***tadanvayadhamma***.

These ***tadanvayadhammas*** are the *dhammas* (mental perception of *vipassanâ*) formed in association with, and in reciprocal support of each other, by way of *sahajâta*, *aññamañña*, *nissaya* and *sampayuttapaccaya*, within a *vipassanâjo* and a *cittakhana*.

It is not the kind of *anvaya ñâna* referred to as analytic *paccavekkhana ñâna*, nor included in the *vipassanâditthi ñâna*, which always arises in association with *vipassanâsammâditthi ñâna* called the *attapaccakkha ñâna* as explained above. It is neither the kind of *anvaya ñâna*, referred to as *paccavekkha ñâna*, always formed in association with *lokuttaramagga ñâna* and *lokuttaraphala ñâna* nor is it included in *ariyamagga ñâna* and *ariyaphala ñâna*.

Anvaya Ñâna that is always associated with Ariyamagga Ñâna

In **Ñānavatthu Suttan** of Nidānavaggasamyutta Pāli the Buddha indicated (44) kinds of *sampattis* (sustained deep mental absorption) existing termed as *ñānavatthu* (mental material) knowledge. The 11 characters of the *paticcasamuppāda* from *jarāmarana* through *sankhāra* have been expatiated to be endowed with four kinds of knowledge. Altogether there will be (11 x 4 = 44) *ñānavatthu*. Here some examples will be presented.

1. *Jarāmarana ñānam* = the knowledge that understands the *jarāmarana*,
2. *Jarāmaranasamudaye ñānam* = the knowledge which understands the origin of the *jarāmarana*,
3. *Jarāmarananirodha ñānam* = the knowledge that understands the cessation of the *jarāmarana*,
4. *Jarāmarananirodhagāminiyā patipadāya ñānam* = the knowledge that understands the *nirodha saccā*, the truth of cessation of the *jarāmarana* = the knowledge that understands the practice of attainment of *nibbāna*. R.
1. *Sankhāresu ñānam* = the knowledge that understands the *sankhāras*,
2. *Sankhārasamudaye ñānam* = the knowledge that understands the origin of the *sankhāras*,
3. *Sankhāranirodha ñānam* = the knowledge that understands the *nirodha saccā*, the truth of cessation, of *sankhāras*,
4. *Sankhāranirodhagāminiyā patipadāya ñānam* = the knowledge that understands the *nirodha*, the cessation, of *sankhāras* = the knowledge that understands the practice leading to *nibbāna*.

This is how each character of *paticcasamuppāda* has the four *saccā* (truth) giving a total of (44) 11 characters.

1. *Jarāmarana* refers to the aggregates which have the nature of *jarāmarana* (ageing, decay and death). The expression that knowledge that understands the *jarāmarana* refers to the knowledge which understands *dukkha saccā* (truth of suffering) of *upādānakkhandhā* (the clinging aggregate), which have the nature of *jarāmarana*.
2. *Samudaya* which is the cause of *jarāmarana* is *jāti*. *Jāti* is the beginning of life which has the nature of *jāti* or the nature of *upāda* (arising). The knowledge that understands this *jāti* is knowledge that understands the *samudaya* (arising) of the cause of *jarāmarana*.
3. *Jarāmarananirodha dhamma* is the *nibbāna*. This *nibbāna* = the knowledge that understands the *nirodha saccā* is the knowledge that understands the *marananirodha saccā*.
4. *Jarāmarannirodhagāminipatipadā* is the eight-fold *ariyamagga* (Noble Eight-fold

Path) related to *ariyamagga* (the Noble Path). The knowledge that understands the Noble Eight-fold Path is the knowledge that understands the practice leading to the *nibbâna* where *jarâmarana* has ceased.

The origin of *jâti* is the *kamma bhava* (sensual existence); the origin of existence is the *upâdâna* (clinging to existence); the origin of *upâdâna* is *tahnâ* (craving); the origin of *tahnâ* is the *vedanâ* (feeling); the origin of *vedanâ* is *phassa* (contact); the origin of the *phassa* is the *salâyatana* (sense bases); the origin of *salâyatana* is the *nâma-rûpa* (mind and matter); the origin of *nâma-rûpa* is the *viññâna* (perception); the origin of *viññâna* is the *sankhâra*; and the origin of *sankhâra* is the *avijjâ* (ignorance). This is distinct. In this way each of the 11 characters of *paticca samuppâda* has four factors, making it (44) mental properties altogether. (See *Sam.-1*: 288 - 290 for a broader treatment).

Again in the same Suttana the Buddha has preached on the arising of *anvaya ñâna* in this way.

Yato kho bhikkhave ariyasâvako evum jarâmaranam pajânâti, evum jarâmaranasamudayam pajânâti, evum jarâmarananirodham pajânâti, evum jarâmarananirodhagâminin patipadam pajânâti. Dhamme ñânam so iminâ dhammena viditena akâlikena pattena pariyogâhlena atîtânâgate nayam neti (*Sam.-1*: 289).

Ettha ca na catusaccadhammena vâ sakkâ atîtânâgate nayam netum, catucassena pana maggañânena patividdhe parato paccavekkhañânam nâma hoti, tena nayam netîti veditabbâ (*Sam.-Tha.-2*: 62).

Bhikkhus An *ariyasâvaka* (Noble Disciple) knows the following.

1. He understands the *jarâmarana*,
2. He understands the *samudaya* as the cause of *jarâmarana*,
3. He understands the *nibbâna dhamma* as the truth of cessation of the *jarâmarana*,
4. He understands the *magga saccâ* which is the practice leading to attainment of *nirodhanibbâna* where *jarâmarana* has ceased.

This the ***dhamma ñâna*** of the *ariyasâvaka* = the *ariyamagga ñâna* (knowledge of Noble Path) which understands the *catusaccadhamma* (dhamma of Four Noble Truth). This *ariyasâvaka*, *ariyamagga ñâna cakkhu* (eye of wisdom for Noble Path) (by nature of *asammohapativedha*), that is sighted by *paccakkha*, that is to be understood by *ariyamagga paññâ*, that could result any time (= by one's own *ariyamagga* after which *ariyaphala* could result any time), attaining the Four Noble Truth by means of which the *catusaccadhamma* is acquired, by this *catusaccâdhamma* contained in it by *ariyamagga ñâna* or in other words by *ariyamagga ñâna* which penetratively understands the *catusaccadhamma*, and applicable also in past and future, i.e arrives at the *paccavekkhanâ ñâna* that understands the four-fold *saccâdhamma* of the past and the future (*Sam.-1*: 289).

Ye kho keci atîtamaddhânam samanâ vâ byâmanâ vâ jarâmaranam abhaññamsu, jarâmaranasamudayam abhaññamsu, jarâmarananirodham abhaññamsu, jarâmarananirodhagâminin patipadam abhijânissanti, abhaññamsu, sabbete evameva abhaññamsu, seyyathâpâham etarahi.

Yepi hi keci anâgatamaddhânam samanâ vâ byâmanâ vâ jarâmaranam abhijânissanti, jarâmarasamudayam abhijânissanti, jarâmaranirodham abhijânissanti, jarâmarana-nirodhagâminim patipadam abhijânissanti, sabbete evameva patipadam abhijânissanti, seyathâpâham etarahîti. Idamassa anvaye ñânam.

Yato kho bhikkhave ariyasâvakassa imâni dve ñânâni parissudhâni hanti pariyodâtâni dhamme ñânañca anvaye ñânañca. Ayam vaccati bhikkhave ariyasâvako “ditthisam-panno” itipi, “dassanasampanno” itipi, “âgato imam saddhammam” itipi, passati imam saddhammam” itipi, “sikkhena ñânena samantagato” itipi, “sikkhaya vijjâya samantagato” itipi, “dhammasotam samâpanno” itipi, “ariyo nibbedhikapañño” itipi, amatadvâram âhicca titthati” itipîti (Sam.1: 289).

In the past these *samanabyâmanas* understood the *jarâmarana*, *jarâmaranasamu-daya*, *jarâmarananirodha*, the way of practice leading to *jarâmarananirodha*. They understood these the way I do today.

In future too, these *samanabyâmanas* will understand the *jarâmarana*, *jarâmarana-samudaya*, *jarâmarananirodha*, practice leading to *jarâmarananirodha*. These *samana-byâmanas* will understand the way I do today. The same applies to the knowledge in the past and present. This the ***anvaya ñâna***, which is always associated with *ariyamagga ñâna*.

Bhikkhus An *ariyasâvaka*, at a certain time can be taken as one who possesses the *dhamma ñâna* called *ariyamagga ñâna* which understands the *ariya sacca dhammas* by virtue of *asamohapativedha*, the *anvaya ñâna* called the *paccavekkhana ñâna* which understands the association with *ariyamagga ñâna*, and these two *ñânas* are untainted and clean. Bhikkhus Then this *sâvaka* can be taken as one complete with right view, right eye of wisdom, who has acquired the *dhamma* of morally good people, who has the sight of this *dhamma*, competent with eye of wisdom and *sikkha ñâna* still practicing, competent with eye of wisdom and *vijjâ ñâna* still practicing, well attained the peaceful *dhamma*, one with *ariyapaññâ* (Noble Knowledge) which eradicates the mass of *kilesâ*, and one at the door to the *nibbâna* (Sam.1: 289).

This *anvaya ñâna* is the kind of knowledge which is always associated with *ariya-magga ñâna* or *ariyamaggañânaphalañâna*. When you have understood the 4-fold *saccâ*, then you can exercise on it as an object.

Extracts from *Vibhinpâli*

Attha katamam dhamme ñânam, catûsu maggesu catûsu phalesu paññâ dhamme ñânam, so iminâ dhammena ñâtena ditthena patta viditena pariyogâhlena atinâgate nayam neti.

Yehi keci anâgatamaddhânam samanâ vâ byâmanâ vâ dukkham abbaññamsu, dukkha-samudayam abbaññamsu, dukkhanirodham abbaññamsu, dukkhanirodhagâminim patipadâ abbaññamsu, imaññeva te dukkhasamudayam abbaññamsu, imaññeva te dukkhasamudayam abbaññamsu, imaññeva te dukkhanirodham abbaññamsu, imaññeva te dukkhanirodhagâminim patipadam abbaññamsu.

*Yehi keci anâgatamaddhânam samanâ vâ byâmanâ vâ dukkham abhijânissanti,
 dukkha-samudayam abhijânissanti, dukkhanirodham abhijânissanti,
 dukkhanirodhagâminim patipadam abhijânissanti, imaññaeva te dukkahm
 abhijânissanti, imaññaeva te dukkha-nirodhagâminim patipadam abhijânissanti yâ
 tattha paññâ pajânanâ. R. Amoho dham-
 macayo sammâditthi, imam vuccati anvaye ñânam (Abhi.-2: 241-342).*

Among these ñânas, which is the *dhmma ñâna*? The *paññâ* in four-fold *ariya-magga* and four-fold *ariyaphala* is the *dhmma ñâna*. The *ariyasâvaka*, by *ariyamagga cakkhu ñâna* referred to as *dhmma cakkhu*, that is visible and understandable via by nature of *asamohapativedha*, that give rise to result in no time, because of its existence to acquirement of the four-fold Noble Truth, that is to attain *catusaccadhamma*, that reflects *ariyamagga ñâna*, this *catusaccadhamma* = by *maggañâna dhmma* that penetratively understands *catusaccadhamma*, applicable to the past and future = acquires the *paccavekkhanâ ñâna* which understands the past and future four-fold Noble Truth.

In the past these *samana byâmanas* have penetratively understood the *dukkha*, the *dukkhasamudaya*, the *dukkhanirodha*, and the practice leading to *dukkhanirodha*. With the exception of *tahnâ*, they have understood only the *tebhûmaka dhmma* (*dhmma* belonging to three stages of being) penetratively as *dukkha*. These *samanas* have understood only the *tahnâ* penetratively as *dukkha samudaya*. All these *samanas* have understood only the *asankhata dhâtu* (the absolute element) penetratively to be peaceful element, the *nibbâna dhmma*, as the *dukkhanirodha*. They all have understood this eight-fold *magga* (Noble Path of Eight Constituents) *dhmma* penetratively as the only exercise which could lead to *dukkhanirodha*.

In future too these *samana byâmanas* will understand penetratively the *dukkha*, *dukkha samudaya*, *dukkhanirodha*, and exercise leading to *nirodha saccâ*. With the exception of *tahnâ*, they will understand only the *tebhûmaka dhmma* penetratively as *dukkha*. These *samanas* will understand only the *tahnâ* penetratively as *dukkha samudaya*. All these *samanas* will understand only the *asankhata dhâtu* penetratively to be peaceful element, the *nibbâna dhmma*, as the *dukkhanirodha*. They all will understand this eight-fold *magga dhmma* penetratively as the only exercise which could lead to *dukkhanirodha*. In this case *paññâ pajânanâ. R. Amoha dhmma vicaya sammâditthi ñâna* does appear. This knowledge should be called *anvaya ñâna* (Abhi.-2: 341-342).

*Yadetam iminâ catusaccâgpcram maggañânam adhigatam, tena ñânena kâranabhûtena
 atîtânâgate paccavekkhanâñâna sankhâtam nayam neti (Abhi.-Tha.-2: 398).*

The *ariyamagga dhmma* penetratively understands, by nature of *arammanapati-vedha*, the *nirodhasaccâ nibbâna dhmma* taking it directly as the object of meditation. By eradication of the *moha* (ignorance), which hinder understanding the four *saccâ*, remaining three *saccâ* and be understood penetratively by virtue of *asamohapativedha*. Therefore, the *ariyamagga ñâna* understands *nirodha saccâ* taking it as the object, by

kiccasaccâ understand the remainining three *saccâs*; only the *magga ñâna* can understand all the four *saccâs*. The *ariyamaggaphala ñâna* is understands only the *nirodhasaccâ* by virtue of the nature of *arammanapativédha* which is taken as the object. Referring to this kind of understanding, knowledge of *ariyamagga ñâna* and of *ariyamaggaphala ñâna* has been indicated to be the *dhamma ñâna* (*Abhi.-Tha.-2: 398*).

This meditator have acquired the *ariyamagga ñâna* which has taken the four-fold *saccâ* as its object. Because of *ariyamagga ñâna*, *anvaya ñâna*, referred to as *paccavekkhana ñâna*, appears according to method applicable to concentration on the past and future. With this *anvaya ñâna*, the meditation can be made on both the past and future (*Abhi.- Tha.-2: 398*).

This *anvaya ñâna* is just a kind of knowledge that is always associated with the *paccavekkhana ñâna*. This *anvaya ñâna* is the *paccavekkhana ñâna* which is always associated with *ariyamagga ñâna* and *ariyaphala ñâna*, but not included in *attapaccavekkha ñâna* called *ariyamagga sammâditthi*.

In this way there are two *anvaya ñâna*, one which is associated with *vipassanâ ñâna* and one associated with *lokuttara ariyamagga ñâna* and *ariyaphala ñâna*. This *anvaya ñâna*, however, is not a kind of *dhamma* which occurs in association with either *ariyamagga ñâna* nor *ariyaphala ñâna* within a *cittakhana* or a *jovîthi*. It is the kind of *paccavekkhana ñâna* which appears after arising of *vipassanâjo*, *maggajo*, *vîthijo*, with an elapse of many *jovîthis*.

The *anvaya ñâna dhammas* in the above mentioned Patisambhidâmagga Pâli are are not included in the two kinds of *anvaya ñâna*. The Buddha did not preach as *anvaya ñâna*, but as *tadanvaya dhamma*. These *tadanvaya dhamma* are forceful *indriyabhâvanâ dhammas* which are formed in association within a *vipassanâjo cittakhana*, and in support of each other of the *sahajâta*, *aññamañña*, *nissaya*, *sampayutta*, and *paccaya* forces.

Now extracts from *suttanas* such as *Aparijânanasuttana* will be described.

Sabbam bhikkhave anbhijânâṃ aparijânâṃ avirâjayam appajayam abhabbo dukkhakka-

yâya. R.

Sabbam ca kho bhikkave abhijânâṃ parijânâṃ pajaham bhabbo dukkhakkhayâya
(*Sam.-2: 249 – 250*).

Iti imassamim sutte tissopi pariññâ kathitâ honti. “abhijân”anti hi vacanena ñâta-pariññâ kathitâ, “abhijân”anti vacanena tîranapariññâ, “virâjayam pajaha”nti dvîhi

pahânapariññâtî (*Sam.-Tha.-3: 6*).

Bhikkhus If *rûpa-nâma dhamma* (the five *upâdânakkhandhâ* = 12 species of *âyatana* =) are not understood completely by means of *ñâtapariññâ*, not analytically

understood by *tīranapariññā*, and if the *tahnā*, which is clinging on to the *rūpa-nāma dhamma*, has not been eradicated completely by means of *pahānapariññā*, the *dukkha* cannot be dissolved. R.

Bhikkhus If *rūpa-nāma dhamma* (the five *upādānakkhandhā* = 12 species of *āyatana* =) are understood completely by means of *ñātapariññā*, analytically understood by *tīranapariññā*, and if the *tahnā*, which is clinging on to the *rūpa-nāma dhamma*, has been eradicated completely by means of *pahānapariññā*, then the *dukkha* can be dissolved (*Sam.-Tha.-3: 6*).

Paccakkhakaranattena ñātapariññā tīranapariññā ca gatitā hoti (Sam.-Tī.-2:65).

In accordance with this opening and *samvannanā* (praises) the *pariññā paññā* (knowledge) are the *attapaccakkhan ñānas*. These *pariññās* will further be explained. In this case too, the *pariññā* can be classed as *lokī pariññā* and *lokuttara pariññā*. Again in the *lokī pariññā* are *ñātapariññā*, *tīranapariññā* and *pahānapariññā* as three classes. In *lokuttara pariññā* also are *ñātapariññā*, *tīranapariññā* and *pahānapariññā*. First the three *lokī pariññā* will be presented.

The Lokī Ñātapariññā

Tattha “ruppanalakkhanaṃ rūpaṃ, vedayitalakkhaṇaṃ vedanā”ti evuṃ tesaṃ tesaṃ dhammānaṃ paccattalakkhanasānakkhanavasena pavattā paññā ñātapariññā nāma. R. Tattha sankhārapricchedato patthāya yāva paccayapariggahā ñātapariññāya bhūmi (Visuddhi-2: 241).

Among those three *pariññās* “*rūpa* is the *dhamma* that is subject to change, and *vedanā* is the *dhamma* which has the nature of suffering.” By having the ability to analytically understand the ultimate reality of each of the general characters of the five-fold *khandhā*, the knowledge which can analyse the mind and matter called *nāma-rūpapariccheda ñāṇa* is acquired. This knowledge plus the *paccayapariggaha ñāṇa*, which can canalyse and culture the causes and results in the past, future and present moments, are called the *ñātapariññā* (*Visuddhi-2: 241*).

So “idaṃ nāma-rūpaṃ na hetu na paccayā nibbattaṃ, sahetu sappaccayā nibbattaṃ. Ko panassa hetu, ko pana paccayo”ti upaparikkhanto “avijjāpaccayā, tahnāpaccaya, kammāpaccayā, āhārapaccayā cā”ti tassa paccayaṃ vavatthapetvā “atītepi paccayā ceva paccayasamuppannadhammā ca, anāgatepi etarahipi paccayā ceva paccaya-samuppannadhammā ca, tato uddhaṃ satto vā puggalo vā natthi, suddhasankhāra-puñño evā”ti tīsu addhāsu kaṅkhaṃ vitarahi. Ayaṃ pana vipassanāsankhārasalakkhaṇa ñātapariññā nāma (Abhi.-Tī.2: 241 – 242).

The meditator who has cultivated the five-fold *upādānakkhandhā* = 12 *āyatana* = *rūpa-nāma dhammas* analytically by means of knowledge to arrive at *paramatthadhammasabhāvalakkhaṇā*, should note that “it is not that the *nāma-rūpa* is formed as a direct result of *hetu* (the root) as a cause = *paccaya* (condition) as a cause, without distinct *janaka* (production), which could support resultant formation = arises without *upatthambhaka* (support) as a cause. In fact, *nāma-rūpa* has resulted only because there is *hetu* which is the direct cause of a result = the present of the distinct *janaka* as a cause,

the *paccaya* as a cause which is supportive = distinct *upatthambhaka* as a cause. Then what are these causes called *hetu* = *janaka*? If the supporting cause the *paccaya* = *upatthambhaka* are investigated

1. Because of the cause referred to as *avijjâ*,
2. Because of the cause referred to as *tahnâ*,
3. Because of the cause referred to as *kamma*,
4. Because of the cause referred to as *âhâra*,

the results appear, and when it is understood by penetrative knowledge, then because of *avijjâ*, *kammaja rūpa* (*rūpa* produced by *kamma*) has resulted; the *avijjâ* is the cause, the *kammaja rūpa* the result,

The causes and results are analytically recognized in this way—

1. In the past too there were causes and results.
2. In the future too there will be the causes and results.
3. In the present also there are the causes and results.

There is no creator other than the causes and consequences, nor is there any individual who has been created by a creator. The cause and result of *rūpa-nâma* = only the *sankhâra dhamma* groups are there — determination has been made via *paccakkha ñâna* for which *vicikicchâ* in the past, future and the present (doubtful state) can be overcome. This is called *ñâtapariññâ* which can analytically recognize the *sankhâra dhammas* such as

1. *Rūpa dhamma*
2. *Nâma dhamma*
3. The cause
4. The result

which are objects of concentration for the insight knowledge (*Abhi.-Ttha.2*: 241 – 242).

In accordance with the opening of the doctrines, only when the causes and results of the past, the future and the present periods can be cultivated analytically can the *ñâtapariññâ* be acquired. This fact must be obediently maintained.

Lokî Tîranapariññâ

“*Rûpam aniccam, vedanâ aniccâ*”tiâdinâ nayena tesamyeva dhammânâ sâmañña-lakkhanam âropetvâ pavattâ lakkhanârammanikavipassanâ paññâ **tîranapariññâ** nâma.

R. *Kalâpasammasanato pana patthâya yâva udayabbayânupassanâ tîranapariññâya bhûmi* (*Visuddhi-2*: 241).

The nature of the arising and dissolution of the *rûpa* and *vedanâ* is discerned by knowledge and recognized as *anicca* (impermanance).” In this way the five-fold *upâdâ-nakkhandhâ* and *rûpa-nâma dhammas* are discerned taking the three general characters such as *aniccalakkhanâ*, *dukkhalakkhanâ* and *anattalakkhanâ* are taken as the object. In discerning this way the *vipassanâ* knowledge that recognizes the *aniccalakkhanâ*, *dukkhalakkhanâ* and *anattalakkhanâ* as the object is **tîranapariññâ**. R. The *rûpa* and *nâma dhammas* are discerned by

1. Taking *rûpa* and *nâma* as individual group, taking it as two individual groups, or
2. By five *khandha* way, taking these as five individual groups, or
3. By 12 *âyatana* way, taking these as 12 individual groups, or
4. By 18 element way, taking these as 18 individual groups.

Method meditation on the three general characters of the individuals as groups is called the method of *kalâpasammasana*. From that *kalâpasammasana ñâna* to the attainment of *rûpa-nâma-cause-result* = arising and perishing away of the *sankhâra dhammas* are concentrated until *paccuppanakhanan* (momentary present) is acquired. The knowledge of meditation on the three general characters is the *udayabbayânupassanâ ñâna*. This is the common abode of the *tîranapariññâ* (*Visuddhi-2: 241*).

The Three Lokuttara Pariññâ

Yassamâ vâ ñâtatîranapariññâyopi tadatthâyeva, yassamâ ca ye dhamme pajahati, te niyamato ñâta ceva tîritâ ca honti, tassmâ pariññattayampi iminâ pariyâyena magga-ñânassa kiccanti veditabham (*Visuddhi-2: 335*).

Tassâ bhañgânupassanato patthâya yâva bhûmi (*Visuddhi-2: 335*). The *pahânapariññâ* is the field ranging from *bhañgânupassanâ ñâna* to *ariyamagga ñâna*.

Nippariyâyena pahânapariññâ nâma maggañânanti “*yâva maggañânâ bhûmî*”*ti vattam* (*Mahâtî.-2: 508*). Definitely the *pahânapariññâ* is the *ariyamagga ñâna*. That is the reason why *atthakathâ sayâtaw* has expounded the field up to the *vipassanâ* to be that of the *pahânapariññâ*.

Therefore, if stated in another way, the *ñâtapariññâ* and *tîranapariññâ* are for the *pahâna pariññâ* as a result. *Ñâtapariññâ* and *tîranapariññâ* are arising for the *ariyamagga ñâna* as a result. The *kilesâ* clinging on to the five-fold *kandhâ nâma-rûpa dhamma* are completely eradicated by *ariyamagga dhamma* via *samuccheda*. The *ariyamagga dhamma* has analytically understood these *dhammas* as the law of constancy. They have been investigated and have been determined to be *anicca*, *dukkha* and *antta*. It should be noted that all the three *pariññâs* are, taken literally, the function of the *ariyamagga ñâna* (*Visuddhi-2: 335*).

What the above book of doctrines means is this. The *ariyamagga dhammas* possess the force to completely eradicate the *kilesâs* hence definitely named *pahânapariññâ*. The *vipassanâ ñânas* possess the force to momentarily eradicate the *kilesâs*, and because of this the *ariyamagga dhammas* are definitely named *pahânapariññâ* and literally named *ñâtapariññâ* and *tîranapariññâ*. The reason for such a name is as follow.

Because the *ariyamagga dhamma* can eradicate the *kilesâs* completely, it gets the name *pahâna*. It is also named *pariññâ* as it can understand penetratively, by concentration on as object, and analytically, the *asankhata* element, *element of peacefulness the nibbâna dhamma*. That is why the *ariyamagga dhamma* is definitely the *pahânapariññâ*. As the *vipassanâ ñânas* possess the force which can eradicate the *kilesâs* momentarily, they are literally named as *pahânapariññâ*. Furthermore the *ariyamagga dhamma* is definitely named as *pahânapariññâ*, whereas definitely, and literally also as *ñâtapariññâ* and *tîranapariññâ*. It is so because of the following reasons.

The *ariyamagga dhamma* which, of necessity, eradicates the *kilesās* completely, and so is named *pahâna*. The *asañkhata* element and element of peacefulness, *nibbâna dhamma* which, of necessity should be understood, concentrated penetratively and analytically as the object for which it is named *pariññâ*. That is why the *ariyamagga dhamma* is definitely named *pahâna pariññâ*.

The *ariyamagga dhamma* can penetratively visualize the four-fold noble truth via two *pativedhas* called the *ârammanapativedha* and *asammohapativedha*. In these two, the *ârammanapativedha* refers to understanding the object of concentration penetratively. *Ariyamagga dhamma* can visualize the *nirodha saccâ dhamma*, called *asañkhata* element and the element of peacefulness, the *nibbâna dhamma*, analytically and penetratively. Because of this, the *ariyamagga dhamma* is also named as *pariññâ*. And so the *ariyamagga dhamma* is nominated as the *pahânapariññâ*.

The *ariyamagga dhamma* can penetratively understand the four noble truth by means of the two *pativedhas* called *ârammanapativedha* and *asammohapativedha*. Of these two, the *ârammanapativedha* refers to its power of penetrative discernment of the object of concentration. The *ariyamagga dhamma* can penetratively visualize the *asañkhata* element and the element of peacefulness, the *nibbâna dhamma* as the object. In this such visualization, *moha* and *avijjâ* which can hinder penetratively understanding the four noble truth, have been eradicated completely. From functional point of view, the knowledge of the four noble truth has been accomplished at the same time with this eradication. The knowledge of the four noble truth following the eradication of the *moha* and *avijjâ* is known as *asammohapativedha*.

The object, of concentration by way *asammoha pativedha*, the *vipassanâ* knowledge such as

1. The five *upâdânakkhandha* = *dukkha saccâ dhamma*, existing as 11 species such as the past, the future, the present, *ijjatta*, *bahiddha*, *olârika*, *sukhuma*, *hîna*, *dûra* and *santika*, and
2. The cause and its consequence, the causal relationship, which is the *samuppâda* called the *samudaya saccâ dhamma*

have been accomplished, and acquired simultaneously. Hence literally the *ariyamagga dhamma* is named as *ñâtapariññâ* also.

Again, the *ariyamagga dhamma* has eradicated completely the *moha* = *avijjâ* which hinder the understanding of the features of *anicca*, *dukkha* and *anatta* of the *dukkha saccâ dhamma* and *samudaya saccâ*. At the same time the attainment of the investigative and analytical knowledge of the features of *anicca*, *dukkha* and *anatta* of the *dukkha saccâ dhamma* and *samudaya saccâ* has been accomplished.

Before acquirement of the *ariyamagga dhamma*, and during practicing on the *pubbabhâgapatipadâ* prior to *ariyamagga dhamma*, a meditator has to make effort to acquire the two *pariññas* -- the *ñâtapariññâ* which analytically understands the features of *anicca*, *dukkha* and *anatta* of the *dukkha saccâ dhamma* and *samudaya saccâ dhamma*, and the *tîranapariññâ* which understands these features investigatively. These two *pariññas* are concerned only with the attainment of *ariyamagga dhammas* named the *pahânapariññâ*, for which it literally means the *ñâta pariññâ* and *tîranapariññâ*.

If the five-fold *upâdânakkhandhâ* and *rûpa-nâma dhamma* are not understood analytically by means of the three *lokîpariññâs* and the three *lokuttarapariññâs* there will be no end to suffering of the rounds of rebirth. Only if these are understood analytically will there be an end to the suffering of the rounds of rebirth., as instructed by the Buddha in the above mentioned Parijâna Suttana. Remember, with a clear conscious mind, that in such an analytical understanding are also included the five *upâdânakkhandhâs* of the past and of the future.

In continuation *Mahâvajîravipassanâ ñâna* of the *Bodhisatta* will be described as extracted from the Second volume of Mahâbuddhavañ.

The Bodhisatta exercised on sixtythree hundred millions of *Mahâvajîravipassanâ*

As stated in earlier sections, the characters of the *kilesâs* such as *lobha*, *dosa* have been eradicated by virtue of *dâna* (charity) etc. of *kusala pâramî*, the *moha kilesâ* and its associated features, which could hinder the journey to the *nibbâna*, are also eradicated. The Bodhisatta, who has accomplished all these, meditated on the *mahâvajîravipassanâ dhammas* in the early morning of the full moon of Kason, the second month of the year. The way meditation exercised is given below in brief.

At an age of authority, the three periods of humans, celestial beings, *byammâ* and sentient beings residing in each of the solar system of a hundred million universes, and essence of the *dhamma* actually existing then are discerned by the Bodhisatta. The Bodhisatta realized that, however many there are of men, celestial beings, *byammâ*, in each of the universe, *avijjâ* and *sankhâra* (the cause of the past period) as the true *paramatthasabhâva dhamma*, *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa* and *vedanâ* (the result of the present period), *tahnâ*, *upâdâna*, *kamma bhava* (the cause of the present period) together with (the *upapatti bhava* as) *jâti*, *jarâ + marana* (the results of the future period). The Bodhisatta well understood the *paramatthasabhâva dhamma* referred to as the 12 classes of *paticca samuppâda*.

When the Bodhisatta discerned on the essence of *paramatthasabhâva dhamma* existing in the three periods of men, celestial beings, *byammâ*, and sentient beings, the essence of the 12 features of *paticca samuppâda* such as *avijjâ*, *sankhâra*, *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedanâ*, *tahnâ*, *upâdâna*, *bhava jâti*, *jarâ + marana* (the objects of *vipassanâ*) are well realized. The discernment was made similarly of *paramatthasabhâva dhammas* of the three periods of men, celestial beings, *byammâ*, and sentient beings in other solar systems. When discerned in this way, Bodhisatta realized the 12 features of the *paticca samuppâda*, which are to be taken as the object of concentration, similar to those of this solar system.

When the Bodhisatta concentrated on the essence of the *paramatthasabhâva dhamma* of series of *khandhâ* of men, celestial beings, *byammâ*, and sentient beings in the three periods in this a hundred million universe called the age of authority, the Bodhisatta realized the groups of *dhamma* which are to be taken as object of *vipassanâ* concentration by virtue of His knowledge. These objects are hundreds of millions of *avijjâ*, *sankhâra*, *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedanâ*, *tahnâ*, *upâdâna*, *bhava jâti*, *jarâ + marana* (when these 12 are added), the *vipassanâcâra* (objects to be concentrated) which add up to 12 hundred million in all.

To eradicate the fifteen hundred tangling factors of *kilesâ*, the Bodhisatta entered the *ânâpâna* jânic state (= entered the fourth jânic state of *ânâpâna*) to sharpen the knowledge of Mahâvajira vipassana as a bush clearer would use his sharpened dagger to cut away the diffusedly growing brushes. After entering this jânic state the Bodhisatta analysed each and every factor, numbering 12 hundred million in all, of the *paticca samuppâda* taking one by one their feature of *anicca*, *dukkha* and *anatta* as the object.

Therefore of 12 hundred million factors of *paticca samuppâda*, each has three knowledge such as *aniccavipassanâ nana*, *dukkhavipassanâ nana*, and *anattavipassanâ nana*, and totally there will be sixtythree hundred millions in all.

(This Mahâvijaravipassanâ ñâna in brief has been describe in the opening of Uparipannâtîkâ anupada, page 275, and in that 3rd vol. Mahâkahndhaka sâriputtamogâlâna pabbjâ, page 229, of Vinisâratthadîpanîtîkâ).

Every Bodhisatta, when about to attain full enlightenment, naturally analyze the *paticca samuppâda dhamma* forward and backward. Our Bodhisatta, in a similar way to the predecessors, has analyze the *paticca samuppâda* in details. Then the whole solar system with its ten thousand *lokadhâtus* trembled.

Similar to the nature of every Buddhas = (of every Bodhisattas), the Bodhisatta, after acquiring the 36 thousand millions of *mahâvipassanâ sammasana nana* of the 12 species of *paticca samuppâda*, entered the fourth jhanic state of *ânâpâna*. (It is the act of sharpening the knowledge of *udayabbaya nana* etc. of higher knowledge of *vipassanâ nana* at the fourth jhanic state of *ânâpâna samâpatta*). After entering the fourth jhanic state of *ânâpâna* (= after sharpening the higher *vipassanâ nana*), the Bodhisatta acquired the *udayabbaya ñâna* etc. of the higher *vipassanâ ñâna* in the *dhamma* groups of the five *khandhâs* with ease.

(It must be noted that as the Bodhisatta, after being ordained and learning the three Pitakas, has exercised on *vipassanâ* to attain *udayabbaya ñâna*, *bhañga ñâna*, *bhaya ñâna*, *âdînava ñâna*, *nibbidâ ñâna*, *muccitukamayattâ ñâna*, *patisankhâ ñâna* and *sankhârûpekkhâ ñâna*, and the force of knowledge in meditation by means of 36 hundred million *mahâvijaravipassanâ sammasana ñâna* as mentioned above, have been so great, the above *vipassanâ nanas* are attained without difficulty. Ref. Jînâlâñkârâtîkâ p. 55).

This is about the Mahâvajiravipassanâ ñâna in Mahâbuddavañ vol. II, pp. 334-338.

Extracts from *Bodhikathâ*

The Bodhisatta, after conquering the *devaputtamâra* before the sunset on the fullmoon day of Kason, in the year (of Mahâsakkarâja), 103, acquired the *pubbenivâsâ-nussati abhiññâna* in the early part of that night, *dibbacakkhuabiññâna* at *majjhimayâma* and *âsavakkhaya ñâna* at *pacchimayâma* and finally attained the Buddhahood.

Then the Buddha, sitting cross-legged on the *Aparâjita* throne at the base of the bo tree, enjoyed the mental ease of *arahattaphala* and *vimutti*. On the early, middle and last parts of the night of a day after the full moon of Kason, the Buddha took to the heart

the following.

Avijjâpaccayâ sankhâra, sankhârapaccaya viññânam. R. Evametassa kevalassa dukkhakkhandhassa samudayo hoti. Avijjâyatveva asesaviraganirodhâ sankhâranirodhâ, sankhâranirodha viññânanirodho. R. Evametassa kevalassa dukkhakkhandhassa nirodho hoti (Vi.-3:1).

Because of *avijjâ*, *sankhâras* are formed; because of *sankhâra viññâna* is formed. R. In this way the nature of cause and result of this mass of *dukkha*, in no way associated with *sukha*, become apparent. Because of *arahattamagga*, *avijjâ* alone ceases utterly and so does *sankhâra*. Because of cessation of *sankhâra*, *viññâna* ceases. R. In this way, nature of cessation of this mass of *dukkha*, in no way associated with *sukha*, become clear (Vi.-3:1).

In this way by the process of *samsâra vatta dukkha* referred to as ***anuloma***, by the process of dissolution of *samsâra vatta dukkha* referred to as the ***patiloma***, the *paticca samuppâda dhamma* was taken to the heart by the Buddha.

After analyzing the *paticca samuppâda* forward and backward and after taking it to the heart proclaimed the first *udânagâthâ* during the early part of the night, and the second *udânagâthâ* during the middle and the third *udânagâthâ* during the last part of the night. In this case Vinayamahâvaggatthakathâ explained in the following way.

Bhagavâ hi visâkhapunnamâya rattiya pathamayâme pubbenivâsam anussari, majjhimayâme dibbacakkhum visodhesi, pacchimayâme paticca samuppâdam anuloma-patilomam manasi katvâ "idâni karuno uggamissatî"ti sabbanutam pâpuni. Sabbanu-tappatthisamanantaram eva ca aruno uggacchi, tato tam divasam teneva pallañkena vitinâmatvâ sampattâya pâtipadarattiya tîsu yâmesu evum mansi katvâ imâni udânâni udânesi (Vi.-Tha.-3: 237).

Buddha (= the Bodhisatta) during the first part of the night of fullmoon of Kason, in the year (of Mahâsakkarâja), 103, reviewed on the series of khandhâs of the previous life by means of *pubbenivâsânussati abhiññâna*. In the middle part of the night clearness of *dibbacakkhu abhiññâna* was accomplished. When *paticca samuppâda* was concentrated forward and backward, and taken heart during the last part of the night Full Enlightenment was acquired at a "time when the dawn was about to have arrived." After the full enlightenment was attained, the dawn has occurred. Whiling away by sitting cross-legged during, after and a day later, a day of emergence = a day after the full moon day of Kason has arrived. Then the nature of *paticca samuppâda* was taken to heart, reviewing forward and backward, and proclaimed following *udânagâthâ*.

1. *Yadâ have pâ tubhavunti dhamma, âtâpino châyato byâmanassa. Athassa kañkhâ vapayanti sabbâ, yato pajânâti sahetudhammam (Vi.-3: 2).*

Âtâpino = *samappadhâna* which possesses power to strenuously ardently the 1500 species of *kilesas*. *Châyato* = various kinds of *samatha* object such as *ânâpâna* etc., and firm and strong concentration power in discerning fixedly on the general characters of *anicca*, *dukkha* and *anatta* of the *sankhâra dhamma* to attain *jhânamagga*. Or due to forceful concentration. *Bhyâmanassa* = as all ill-deeds have been detached (condoned) in the *santâna* of the Lord Rahantâ named Visuddhibhyâmana. *Yadâ* = at

that moment. *Dhammâ* = 37 speceis of *bodhipakkhiya dhammas*. *Have* = in fact. *Pâtubhavunti* = have arisen clearly. *Yato* = as the 37 species of *bodhipakkhiya dhammas* have arisen clearly. *Sahetudhammam* = *avijjâ* etc. as the causes together with the resultant *sankhâra* etc. such as the mass of *dukkha* are. *Pajânâti* = understood analytically and penetratively by means of *vipassanâpaññâ* and *maggapaññâ*. *Atha* = when *paticcadhâtu samuppâda* is clearly and definitely visualized in this way. *Assa* = in the *santâna* of the *rahantâ*. *Sabbâ* = completely. *Kañkhâ* = because of wrong view on and ignorance of the *paticca samuppâda*, 16 species of wrong view on the *rûpa-nâma dhamma* occurring in three periods. *Vapayanti* = *viapayanti* = perished like the snow melting away in the sun.

2. *Yadâ have pâ tubhavunti dhamma, â tâpino jhâyato bhyâmanassa.*
Athassa kankhâ vapayanti sabbâ, yato khayam paccayâbam avedi (Vi.-3: 2).

Â tâpino = *samappadhâna* which possesses power to strenuously depress the 1500 species of *kilesas*. *Châyato* = various kinds of *samatha* object such as *ânâpâna* etc., and firm and strong concentration power in visualizing fixedly on the general characters of *anicca*, *dukkha* and *anatta* of the *sankhâra dhamma* to attain *jhânamagga*. Or because of forceful concentration. *Bhyâmanassa* = as all ill-deeds have been detached in the *santâna* of the Lord *Rahantâ* named *Visuddhibhyâmana*. *Yadâ* = at that moment. *Dhammâ* = 37 speceis of *bodhipakkhiya dhammas*. *Have* = in fact. *Pâtubhavunti* = have arisen clearly. *Yato* = as the 37 species of *bodhipakkhiya dhammas* have arisen clearly. *Paccayânam* = of the causes such as *avijjâ* etc. *Khayam* = *asañkkhata nibbâna dhamma* where (*avijjâ*) have ceased. *Avedi* = has come to understand clearly and penetratively. *Atha* = where those causes have been annihilated = when *asankhatadhâtu*, the element of peacefulness *nibbâna dhamma* named *paccayakkhaya* is understood clearly. *Assa* = in the *santâna* of the *rahantâ*. *Sabbâ* = completely. *Kañkhâ* = because of ignorance of the *asañkhatadhâtu* the element of peacefulness, the *nibbâna dhamma*, wrong view *dhamma* groups that would have appeared in the interior. *Vapayanti* = *viapayanti* = perished like the snow melting away in the sun.

3. *Yadâ have pâ tubhavunti dhamma, â tâpino châyato byâmanassa.*
Vidhûpayam titthati mârasenam, suriyova obhâsayamantalikkham (Vi.-3: 2).

Â tâpino = *samappadhâna* which possesses power to strenuously depress the 1500 species of *kilesas*. *Châyato* = various kinds of *samatha* object such as *ânâpâna* etc., and firm and strong concentration power in visualizing fixedly on the general characters of *anicca*, *dukkha* and *anatta* of the *sankhâra dhamma* to attain *jhânamagga*. Or because of forceful concentration. *Bhyâmanassa* = as all ill-deeds have been detached in the *santâna* of the Lord *Rahantâ* named *Visuddhibhyâmana*. *Yadâ* = at that moment. *Dhammâ* = 37 speceis of *bodhipakkhiya dhammas*. *Have* = in fact. *Pâtubhavunti* = have clearly arisen. (*Tadâ* = then, at that time) *Sûriyo* = the sun which has arisen from over the edge of Mount Yugandhora. *Antalikkham* = the *ajatâ* plane, the sky is. *Obhâsayam* = *Obhâsayato* = shining with its thousand radiations and lightening (the sky) moving the darkness away. *Titthati iva* = existing. (*So byâmano* = the noble *rahantâ*. *Tehi dham-mehi* = with those 37 species of *bodhipakkhiya dhammas*). *Mârasenam* = a force of 10 lines of *mâra* of *kâmarâga* are. *Vidhûpayam* = *Vidhûpayanto* = destroyed utterly. *Titthati* = brilliant with knowledge like the brilliantly shining sun (Vi.-3: 2).

(*Mahābuddhavaṇ-Du*: 357 – 361).

Here, it must be noted that “the Buddha, during the life of a Bodhisatta and before the attainment of the Buddhahood, the *paticca samuppāda* was analytically concentrated in a similar way.”

Extracts from Gotamakacetiya-suttan

The 500 monks, who have entered world of *sāsanā* from the life of *bhāmana* and who were experts in horology, learnt the *pariyatti dhamma* without difficulty. For this reason *māna* have appeared in their *santāna*. The Buddha realized that this *māna* is an impediment to acquirement of *arahattaphala*. So the Buddha preached *Mūlapariyāya-suttan* (*Ma*.-1: 1) and *Mūlapariyāyajāta* (*Jātaka-Ttha*.-2: 237) to these 500 monks so as to deplete them of their *māna*. When it was done with, the monks exercised on *vipassanā*, *samatha* and *bhāvanā*, the *indare* in their *santāna* become mature, and when the maturity is so attained, the Buddha expatiated this *Gotamakacetiya-suttan* at the *Gotamakacetī* in *Vesālī*.

Abhiññāyāham bhikkhave dhammam desemi no anabiññāya, sanidānāham bhikkhave dhammam desemi no anidānam, sappātihāriyāham dhammam desemi no appātihāriyam. Tassa mahsam bhikkhave abhiññāya dhammam desayato no anabiññāya sanidānam dhammam desayato no anidānam appātihāriyam dhammam desayato no appātihāriyam karanīyo ovādo karanīyā anussāsani, alaṅca pana vo bhikkhave tutthiyā alam attamanatāya alam somanassāya “sammāsambuddho bhagavā, savekkhāto dhammo, suppatipanno samgho”ti (*Am*.-1: 280).

Bhikkhave I preach only after understanding the *dhamma* penetratively by means of *paccakha ñāna*. I do not preach without understanding the *dhamma* penetratively by means of *paccakha ñāna*. I only preach the *dhamma* with *nidāna*, but not the one without *nidāna*. Bhikkhave I only preach the *dhamma* that possesses the force to dispel the one that is opposite, but not the one without this force. Now I have admonished this *ovāda dhamma* once to you, and have made repeated admonishing *anusāsani* to you all.

Bhikkhus ... you all should willing accept the fact that

1. The Buddha is endowed with *sammāsambuddha guṇa* by which the five-fold

ñeyadhamma called *sankhāra*, *vikāra*, *lakkhana*, *nibbāna* and *paññatta* are understood by *sayambhūñāna*, a knowledge acquired by himself, without the assistance of anyone, and which has the ability to visualize penetratively.

1. The Buddha is endowed with *savekkhāta guṇa* by which the 10-fold *dhamma* as *Maggaphala*, *Nibbāna*, *Dhammakkhan* are admonished, from beginning through middle to the end, apprehensively.
2. The eight noble disciples are endowed with *suppatipanna guṇa* by which the *niyānika dhamma* are obediently exercised so as to escape from the *samsāra-vatta*.

The Buddha has preached that it should be willingly accepted, should have mind to accept heartily, and should have clear *somanassa* to happily accept (*Am*.-1: 280).

Imassamim ca pana veyākaranassamim bhaññāmāne sahaṣṣī lokadhātu akampitta

(*Am.-1*: 280).

As this **Gotamakacetiya**suttan *desana* was delivered in simple language, but not in *gâthâ*, the earth in a thousand *lokadhâtu* trembled violently (*Am.-1*: 280).

Idaṇca suttam sutvâ pañcasatâ bhikkhu tassamamyevasane saha patisambhidâhi arahattam pâpunamsu (Ma.-Tha.-1: 61)

After listening to this *gotamacetiya*suttan, the 500 monks attained the *arahattaphala* together with the four-fold *patisambhidâ ñâna* there and then.

This is the *suttana* for which even the non-living earth, situated in a thousand *dhâtu*, stands in support of its truth. If you, as a living *saviññâna* complete with clever mind and knowledge, can stand in support of the truth as does the earth, then you have approached the main path of *magga* leading to *nibbâna*.

Here, in this explanation emphasis is put on the process of *sankhâra loka* called *lokasamudaya* = *anulomapaccayâkâra* = *anulomapaticca samuppâda dhamma* and the process of cessation of *sankhâra loka* = *patilomapaccayâkâra* = *patilomapaticca samuppâda dhamma*. The Buddha, as a Bodhitassa during the night when about to acquire the Buddhahood, meditated on the nature of *paticca samuppâda* via *vipassanâ ñâna* called *paccakkha ñâna* by way of *anulomapatiloma* (*Vi.-Ttha.-3*: 237). After attaining the Buddhahood too the nature of *paticca samuppâda* was meditated and analyzed forward and backward by *anulomapatiloma*. With regard to this the Buddha has noted in the *Buddhavaṇṇa* this way.

[Here it should be noticed that in knowledge of the Buddha, although all the *dhammas* have been visualized in all possible features (even as a Bodhisatta on the night when the Buddhahood was to have attained), and when the exercise was primarily on the *paticca samuppâda*, *vipassanâ* was taken to the heart. And that the *dhamma* of *paticca samuppâda* was deep, subtle and hard to visualize. Therefore, only the process of the arising and dissolution of *paticca samuppâda* was discerned to be the process of *sansârvatta dukkha*.] (*Mahâbuddhavaṇṇa*, Vol 2: 356).

Only after visualizing penetratively by himself, the Buddha admonished the *sansâravatta dukkha* = process of arising and of perishing away of *sankhâraloka* referred to as *anulomapatiloma paticca samuppâda dhamma* to his disciples. That the disciples could understand as instructed has been expatiated by the Buddha in the *suttans* of which the second *ariyasâvakasuttan* is given.

The Second Ariyasâvakasuttana

Na bhikkhave sutavato ariyasâvakassa evum hoti “kim nu kho – kissamam sati kim hoti, Kissuppâdâ kim uppjati, kissamam sati sankhârâ honti, kissamam sati viññânam hoti, kissamam sati nâma-rûpam hoti, kissamam sati salâyatanam hoti, kissamam sati phasso hoti, kissamam sati vedanâ hoti, kissamam sati tahnâ hoti, kissamam sati upâdânam hoti, kissamam sati bhavo hoti, kissamam sati jâti hoti, kissamam sati jarâmaranam hoti”ti.

Atha kho bhikkhave sutavato ariyasâvakassa aparappaccayâ ñânamevatte hoti “imasamam sati idam hoti, imassuppâdâ idam uppjati, avijjâya sati sankhârâ honti,

sankhâresu sati ñânam hoti, viññâne sati nâma-rûpam hoti, nâma-rûpe sati salâyatana hoti, salâyatane sati phasso hoti, phasse sati vedanâ hoti, vedanâya sati tahnâ hoti, salâyatane sati upâdânam hoti, upâdâne sati bhavo hoti, bhava sati jâti hoti, jâtiyâ sati jarâmaranam hoti”ti. So evum pajânâti “*evamayam loko samudayatî*”ti.

Na bhikkhave sutavato ariyasâvakassa evum hoti “kim nu kho – kissamam asati kim na hoti, kissa nirodhâ kim nirucchati, kassamam asati samkhârâ na honti, kissamam asati viññânam hoti, kissamam asati nâma-rûpam na hoti, kissamam asati salâyatana na hoti, kissamam asati phasso na hoti, kissamam asati vedanâ na hoti, kissamam asati tahnâ na hoti. R. Upâdânam, Bhavo. Jâti. Kissamam asati jarâmaranam na hoti”ti.

Atha kho bhikkhave sutavato ariyasâvakassa aparappaccayâ ñânamevatta hoti “imassamam asati idam nahot, imassa nirodhâ imam nirucchati, avijjâya asati sankhârâ na honti, sankhâresu asati viññânam na hoti, viññâne asati nâma-rûpam na hoti, nâma-rûpe asati salâyatana na hoti. R. Jâtiyâ asati jarâmaranam na hoti”ti. So evum pajânâti “*evamayam loko nirucchatî*”ti.

Yato kho bhikkhave ariyasâvako evum lokassa samudayañca attañgamañca yathâbhûtam pajânâti. Ayam vuccati bhikkhave ariyasâvako ditthisampanno itipi, dassanasampanno itipi, âgato imam saddhamam itipi, passati imam saddhamam itipi, sakkhena ñânena samannâgato itipi, sakkhâya vijjâya samannâgato itipi, dhamma sotam samâpanno itipi, ariyo nibbedhikapañño itipi, samatadvâram âhicca titthati itipîti (Sam.-1: 306-308).

Apparappaccayâti na parappaccayena, aññassa appatiyâyevâ attapaccakkhañânamevassa ettha hotîti (Sam.-Tî.-2: 32).

Na parappaaccayanâti parassa asaddahanena (Sam.-Tî.-2: 38).

Bhikkhus There are two kinds of knowledge: one acquired after being taught called *âgamsuta* and the other self-acquired through practice, called *adhigamsuta*. In the *santâna* of my noble *sâvaka* who is endowed with these two, there will not arise, in his mind, such thought as “How? Which *dhamma* would arise when a certain *dhamma* is in existence clearly? Which is the *dhamma* due to the existence of which there would arise a *dhamma*?”

What are *dhammas* that would cause the arising of the *sankhâras*? What are the *dhammas* that would cause arising of *viññâna*? What are *dhammas* that would cause the arising of the *nâma-rûpa*? What are *dhammas* that would cause the arising of the *salâyatana*? What are *dhammas* that would cause the arising of the *phassa*? What are *dhammas* that would cause the arising of the *vedanâ*? What are *dhammas* that would cause the arising of the *tahnâ*? What are *dhammas* that would cause the arising of the *upâdâna*? What are *dhammas* that would cause the arising of the *bhava*? What are *dhammas* that would cause the arising of the *jâti*? What are *dhammas* that would cause the arising of the *jarâmarana*?

No such a thought ever comes across his mind. Bhikkhus In fact, in the *santâna* of my noble disciple who is possessed of the two kinds of knowledge, one acquired after being taught called *âgamsuta* and the other self-acquired through practice, called *adhigamsuta*, there would arise only the penetratively visualizing **aparappaccaya ñâna = attapaccakkha ñâna**. This knowledge enables the *sâvaka* to understand the cause-result relationship = *anulomapaticca samuppâda dhamma* penetratively by his own

self, with respect in this case to the fact that there is no one but self to rely upon.

If this cause is really in existence, there will be a clear result. It is because of this cause that the resultant has arisen. – If there is *avijjā* as a cause, there will be *sankhāra* as a resultant. If there is *sankhāra* as a cause, there will be *viññāna* as a resultant. If there is *viññāna* as a cause, there will be *nāma-rūpa* as a resultant. If there is *nāma-rūpa* as a cause, there will be *salāyatana* as a resultant. If there is *salāyatana* as a cause, there will be *phassa* as a resultant. If there is *phassa* as a cause, there will be *vedanā* as a resultant. If there is *vedanā* as a cause, there will be *tahnā* as a resultant. If there is *tahnā* as a cause, there will be *upādāna* as a resultant. If there is *upādāna* as a cause, there will be *bhava* as a resultant. If there is *bhava* as a cause, there will be *jāti* as a resultant. If there is *jāti* as a cause, there will be *jarā + maraṇa* as a resultant.

This is the only kind of knowledge the *sāvaka* will have. That noble *sāvaka* of mine would come to differentially know as “This is way the *sankhāra loka* arises” by means of ***aparappaccaya ñāna = attapaccakkha ñāna***.

Bhikkhus In the *santāna* of my noble disciple who is endowed with two kinds of knowledge, the *āgamsuta* and *adhigamsuta*, not a single thought ever comes across his mind – “How come? ? Which *dhmma* would not arise when a certain *dhmma* is not in existence clearly? The cessation (by way of *anuppādanirodha*) which *dhmma* would cause the dissolution of corresponding resultant *dhmma*? –

Which are the *dhmmas* due to the absence which the *sankhāras* would not arise? Which are the *dhmmas* due to the absence which the *viññāna* would not arise? Which are the *dhmmas* due to the absence which the *nāma-rūpa* would not arise? Which are the *dhmmas* due to the absence which the *salāyatana* would not arise? Which are the *dhmmas* due to the absence which the *phassa* would not arise? Which are the *dhmmas* due to the absence which the *vedanā* would not arise? Which are the *dhmmas* due to the absence which the *tahnā* would not arise? Which are the *dhmmas* due to the absence which the *upādāna* would not arise? Which are the *dhmmas* due to the absence which the *bhava* would not arise? Which are the *dhmmas* due to the absence which the *jāti* would not arise? Which are the *dhmmas* due to the absence which the *jarā + maraṇa* would not arise?

This kind of thought never crosses his mind. In fact, in the *santāna* of my noble disciple who is possessed of the two kinds of knowledge, one acquired after being taught called *āgamsuta* and the other self-acquired through practice, called *adhigamsuta*, there would arise only the penetratively visualizing ***aparappaccaya ñāna = attapaccakkha ñāna***. This knowledge enables the *sāvaka* to understand the the cessation of the cause-result relationship = *patilomapatipacca samuppāda dhmma* penetratively by his own self, with respect in this case to the fact that there is no one but only self to rely upon.

If this cause has not been clearly in existence, there could not be a resultant *dhmma*; due to cessation (by *anuppādanirodha dhmma*) of this cause, the result ceases (by *anuppādanirodha dhmma*).

If there is no *avijjā* as a cause, there will be no *sankhāra* as a result. If there is no *sankhāra* as a cause, there will be no *viññāna* as a result. If there is no *viññāna* as a cause, there will be no *nāma-rūpa* as a result. If there is no *nāma-rūpa* as a cause, there will be

no *salâyatana* as a result. If there is no *salâyatana* as a cause, there will be no *phassa* as a result. If there is no *phassa* as a cause, there will be no *vedanâ* as a result. If there is no *vedanâ* as a cause, there will be no *tahnâ* as a result. If there is no *tahnâ* as a cause, there will be no *upâdâna* as a result. If there is no *upâdâna* as a cause, there will be no *bhava* as a result. If there is no *bhava* as a cause, there will be no *jâti* as a result. If there is no *jâti* as a cause, there will be no *jarâ + marana* as a result.

This is the only knowledge the *sâvaka* has in mind. That noble *sâvaka* of mine would come to differentially know as “This is way the *sankhâra loka* ceases (by way of *anuppâdanirodha dhamma*)” by means of ***aparappaccaya ñâna = attapaccakkha ñâna***.

Bhikkhus Then, in this way my noble *sâvaka* understands differentially as “this is the way of arising and of cessation of the *sankhâra loka*” via ***aparappaccaya ñâna = attapaccakkha ñâna***. Bhikkhus At that time my noble *sâvaka* unerringly understands, via ***aparappaccaya ñâna = attapaccakkha ñâna***, the true nature of the arising and cessation of the *sankhâra loka*. Bhikkhus Then this noble *sâvaka* of mine is recognized as one endowed with ***sammâditthi***, with right *dassana ñâna*, who has attained the *dhamma* of good deeds called *saddhama*, who has acquired the vision of the *dhamma* of good deeds called *saddhama*, who is endowed with still practicing *sakkha ñâna* vision, who is endowed with still practicing *vijjâ ñâna*, one who has attained the *dhamma* called *dhammasota*, one endowed with *nibbedhikapaññâ* (called *vipassanpaññâ* *maggapaññâ*) which is clean and superior and which can annihilate the mass of *kilesa*, and one who is at the door of *nibbâna* (*Sam.-1: 306-308*).

As the *nâma-rûpapariccheda ñâna* to *sammâditthi* are admonished by the Buddha himself, the *lokiyavipassanâsammâditthi* and *lokuttaramaggasammâditthi* are together expatiated as the *sammâditthi* (*Sam.-Ttha.-2: 32; Sam.-Tî.-2: 38*).

Therefore, in this Suttana from aspect of *sakkha* — ***sakkkhoti puthujjanakalayâna-kena saddham satta ariyâ tisso sikkhâ sikkhanti sikkhâ*** (*Abhi.-Ttha.-2: 315*).— In accordance with the opening of this *kalayânaputhujjana* and the seven lower *ariyâ* individuals should be called *sakkha* individuals who are still practicing the three features of *sikkhâ* called *sîla*, *samâdhi* and *paññâ*. Because of this, it should be noted, *kalayânaputhujjana* individual, endowed with *vipassanâsammâditthi ñâna* vision, is also included among the *sikkha* individuals.

In this *suttana* the Buddha himself has stated that the *kalayânaputhujjana* together with *sikkhâriyâ* individuals penetratively understand, by means of ***aparappaccaya ñâna = attapaccakkha ñâna***, the process of arising of the *sankhâraloka*, called *lokasamudaya*, and of cessation of *sankhâraloka*, called *lokanirodha*. Similarly the disciples have admitted to each other, during discussion on the *lokasamudaya* and *lokanirodha*, that they understand these processes penetratively. These are mentioned in the *pitakas* clearly. Now some extracts from *kosambisuttan* will be presented.

Extracts from *Kosambisuttan*

Once the venerable Musila, Pavittha, Nārada, Ānandā were whiling at the *Ghositā* monastery in the country of *Kosambi*. Then the venerable Pavittha put some questions to the venerable Musila. The venerable Musila duely answered the questions. The questions and answers are as follows.

Aññattareva āvuso pavittha saddhāya aññattara ruciyā aññattara anussavā aññattara ākâraparivitakkā aññattara ditthinijjhānakkhantiyā atthâyassamato musilassa paccattameva ñānam “jâtippaccayā jarāmaranan”ti.

Aññattareva āvuso musila saddhāya aññattara ruciyā aññattara anussavā aññattara ākâraparivitakkā aññattara ditthinijjhānakkhantiyā ahametam jânām ahametam passāmi “jâtippaccayā jarāmaranan”ti (Sam.-1.: 336).

Thero pana pañcapi etāni kâranāni patikkhapitvā paccakkhañānena patividdhbhāvum pucchanto aññattareva āvuso musila saddhâyâtīādomāha (Sam.-Ttha.-2: 113).

Question — My Lord Musila

1. *Saddhā* = belief in others,
2. *Ruci* = One's own confidence born out of self thinking,
3. *Anussava* = reasonable knowledge obtained from others,
4. *Ākâparivitakka* = careful considerable on the characters,
5. *Ditthinijjhānakkhanti* = devotion towards the thought acquired just by thinking.

Is there ***paccakkhañāna*** that understands the fact that because of *jāti* as the cause, except the above five, *jarāmarana* arises?

Answer — My Lord Pavittha

1. *Saddhā* = belief in others,
2. *Ruci* = One's own confidence born out of self thinking,
3. *Anussava* = reasonable knowledge obtained from others,
4. *Ākâparivitakka* = careful considerable on the characters,
5. *Ditthinijjhānakkhanti* = devotion towards the thought acquired just by thinking.

Yes I know there is ***paccakkhañāna*** that understands the fact that because of *jāti* as the cause, except the above five, *jarāmarana* arises (Sam.-1: 336-337).

Upto arising of *sankhāra dhammas* due to *avijjā* were asked similarly, and the answers were made similarly. Again the process of cessation of *sankhāra dhamma* was asked.

Aññattareva āvusso musila saddhāya aññattara ruciyā aññattara anussavā aññattara ākâraparivitakkā aññattara ditthinijjhānakkhantiyā atthâyassamato musilassa paccattameva ñānam “jâtinirodhā jarāmarananirodho”ti. Ññattareva āvusso pavittha saddhāya aññattara ruciyā aññattara anussavā aññattara ākâraparivitakkā aññattara ditthinijjhānakkhantiyā ahametam jânāmi ahametam passāmi “jâtinirodhā jarāmarananirodho”ti (Sam.1: 337).

Question — My Lord Musila

1. *Saddhā* = belief in others,
2. *Ruci* = One's own confidence born out of self thinking,

3. *Anussava* = reasonable knowledge obtained from others,
3. *Ākâparivitaṅka* = careful consideration on the characters,
4. *Ditthiniṅghânakkhanti* = devotion towards the thought acquired just by thinking

Is there ***paccakkhaññâna*** that understands the fact that because the *jâti* ceases (by way of *anuppâdanirodha dhamma*), with the exception of the above five, *jarâmarana* ceases (by way of *anuppâdanirodha dhamma*)?

Answer — My Lord Pavittha

1. *Saddhâ* = belief in others,
2. *Ruci* = One's own confidence born out of self thinking,
3. *Anussava* = reasonable knowledge obtained from others,
4. *Ākâparivitaṅka* = careful consideration on the characters,
5. *Ditthiniṅghânakkhanti* = devotion towards the thought acquired just by thinking.

Yes I know that there is ***paccakkhaññâna*** that understands the fact that because the *jâti* ceases (by way of *anuppâdanirodha dhamma*), with exception of the above five, *jarâmarana* ceases (by way of *anuppâdanirodha dhamma*). (*Sam.1: 337*).

Up to cessation of *avijjâ* and of *sankhâra dhammas* were asked similarly, and the answers were made similarly. Here explanations contained in the *atthakathâ tîkā* will be presented in continuation.

1. ***Saddhâ*** – some people believe in what others said, and would repeat what he has heard. He takes it as the truth. The he is the one who is dependent upon others, his knowledge is that of other's, and, in a way, he ends up at other's mouth. He is the kind of person without analyzing capability.

2. ***Ruci*** – the other kind of person is the one who thinks about something by himself. He would think to his liking as “this will arise by itself, not due to other factors.” He would not rely on others with regard to this and would take it to his heart's liking and as the truth.

3. ***Anussava*** – still the other kind of person would ask “How does this factor arise? Why does this arise? This factor arises in this way; this factor arises because of this cause.—He would have heard it this way from predecessors. It has been heard so since a long time ago. This is the truth. This factor is just the right one”. What he has heard from others is taken to be true. He is another kind of person who ends up at other's mouth.

4. ***Ākâparivitaṅka*** – while thinking as this factor may have arisen this way, a factor he has thought appear in his citta for every material. He is the fourth kind of person who would take into his mind as if what he has thought really exists and is the truth. This is the person without practical experience, who has come to a dead end by just thinking.

5. ***Ditthinicchânakkhanti*** – a fifth kind of person is the one who is considering on a causative factor, and a certain result occurs while doing so. He firmly believes in it, and takes to heart of the fact that there is no other result. In such a person a kind of firm and determined belief, called *abhinivesa*, occurs. In his thought, concentrated on this cause,

a kind of contentment and satisfaction appears. This person will willingly accept – “This cause really exists”, just by thought. This is the *Ditthinicchânakkhanti* (*Sam.-Ttha.-2:122; Sam.-Tī.-2: 122*).

It has been asked if the process of arising of *sankhâraloka* called *lokasamudaya* = *anulomapaticcasamuppâda dhamma* and of the dissolution of *sankhâraloka* called the *lokanirodha* = *anulomapaticcasamuppâda dhamma* are understood and visualized by means of *paccakkha ñâna*, after eradicating the the five causes such as *saddhâ*, *ruci*, *anussava*, *âkâparivitakka* and *ditthinicchânakkhanti*.

The reply was that the process of the arising and dissolution of the *sankhâraloka* has been understood and visualized by the *paccakkha ñâna* only, but not with these five causes. In accordance with the *desanâ* – *purimakammabhavassamim moho avijjâ* – admonished in the 12 characters of *paticca samuppâda*, page (50) of *Patisambhidâmagga* pâli in which the Venerable Musila has admittedly stated to have understood and visualized by means of *paccakkha ñâna*, the three periods are included as

1. *Dhamma* groups of the past period referred to as *avijjâ*, *sankhâra*,
2. The present period extending from *viññâ* to (*kamma*) *bhava*,
3. *Dhamma* groups of the future period referred to as *jâti*, *jarâmarana*.

Because of the inclusion of these three periods, you may called these characters of the *paticca samuppâda* also as the *dhammas* of past, future and present periods; or in accordance with the *desanâ* mentioned in *Patisambhidâmagga* pâli, on page (52) as – *jâta avijjâ paccuppanna* – all can be regarded as solely *paccuppanna dhamma*. Whichever way it is regarded –

1. In *vipassanâ* prior to *ariyamagga* called *pubbabhâgasatipatthânamagga*,
2. At the moment of *ariyamagga*,

A meditator must try to visualize these 12 characters of *paticca samuppâda* by the knowledge of *paccakkha ñâna* variously admonished as *anubodhañâna*, *pativedhañâna*, *ñâtapariññâ*, *tīranapariññâ*, *pahānapariññâ*, *vipassanâsammâditthi*, *maggasammâditthi*, *aparapaccayañâna*, *attapaccakkhañâna*, etc. As a man would see different *rûpa* objects via his physical eyes, so should a meditator make attempt at understanding and visualizing these 12 characters penetratively. The Buddha has admonished that only understanding and visualizing this way can one acquire *ariyamagga* where all *asâva dhammas* have been utterly eradicated (*Sam.-1: 267*). Only after penetratively understanding this way, should one discern on the past and future, which are *adittha*, in the same way.

Be Considerate and Ponder

Yam kiñci râhula rûpam atîtânâgatapaccuppannam ijhattam vâ bahiddhâ vâ olârikam vâ sukhumam vâ hīnam vâ panītam vâ yam dûre vâ santike vâ, sabbam rûpam “netam mama, nesohamassami, na meso attâ”ti evummetam yathâbhūtam sammappaññāya passati (*Sam.-1: 444; Anusayasutta*).

Sammappaññāya passatīti saha vipassanāya maggapaññāya sutthu passati (*Sam.-Ttha.-2: 197*).

In this Suttana the Buddha has instructed Rahulâ to discern the five-fold *upâdâ-nakkhandhâ*, existing as 11 species situated within the past, future and present periods, and in the two *santâna* of *ijjhata* and *bahiddha* – “*netam mama, nesohamassami, na meso attâ*” = as *anicca*, *dukkha* and *anatta* unerringly by virtue of **sammappaññâ**. Discern with **sammappaññâ**, as explained in the *atthakathâ*, means to discern by *vipassanâ paññâ* together with *ariyamagga paññâ* so as to visualize thoroughly.

With reference to this explanation note that the **sammappaññâ** = **good and true knowledge** means the *vipassanâ paññâ* and *ariyamagga paññâ*. Discern with *vipassanâ paññâ*, and also with the *ariyamagga paññâ* on the five-fold *upâdânakkhandhâ* of the past, future and present periods as *anicca*, *dukkha* and *anatta*. In this discerning are the *vipassanâ paññâ* and *ariyamagga paññâ* the *anvaya ñâna* or *paccakkha ñâna*? The *sayâdaw* has explained in the book of meaning as follows.

Samma. R. Passatîti pubbabhâge vipassanâñânena sammasanavasena, mag-gakkhane abhisamayavasena sutthu attapaccakkhena passat (Sam.-Tî.-2: 181).

In *vipassanâ* prior to *ariyamagga* the past and future five-fold *upâdânakkhandhâs* are well discerned by **attapaccakkha ñâna**, called the *sammâditthi ñâna*, which arose by the power of knowledge acquired through the discernment of these five-fold *khandhâs* as the object. During the *ariyamagga* stage, the past and future five-fold *upâdânakkhandhâs* are well discerned by **attapaccakkha ñâna**, called the *sammâditthi ñâna*, which arose by the power of knowledge acquired through concentrating on these five-fold *khandhâs* via *asamohapativedha* that annihilates the *moha* hindering the understanding of these *khandhâs*.

The *vipassanâditthi ñâna*, which can discern on the past and future five-fold *upâdânakkhandhâs* taking them as the object of concentration, is called **attapaccakkha ñâna**. In the same way *maggasammâditthi ñâna* has also been given as **attapaccakkha ñâna**. This explanation was given the Reverend Dhammapâva known by the name of Ācariya Dhammapâla.

Atha kho rūpâni viya cakkhuvīññânena rūpādīni tesam ca samudayâdike paccakkha katvâ dassanam ... (Sam.-Tî.-2: 63).

Avijjâsamudayâti avijjâya uppâdâ, atthibhâvâti attho. Nirodhavirodhî hi atthibhâvo hoti, tassamâ nirodhe asati atthibhâvo hoti, tassamâ purimabhavasiddhâya avijjâya sati imassamim bhava rūpassa samudayo rūpassa uppâdo hotîti attho. **Tahnâsamudayo kammâsamudayoti** itthâpi ese va nayo (Sam.-Tî.-2: 58).

Avijjânirodhâ rūpaniroduhoti aggamaggañânena avijjâya anuppâdanirodhato anâgatassa rūpassa anuppâdanirodho hoti paccayâbhâve abhâvato (Sam.-Tî.-2: 59; Mahâtî.-2: 421).

It was also the Reverend Dhammapâva known by the name of Ācariya Dhammapâla who has explained that as a man could see the *rûpa* objects by *cakkhuvīññânâ*, so should the following be seen penetratively by a meditator see the nature of the *samudaya* and *nirodha* = (*attanigama*) —

1. The five-fold *upâdânakkhandhâ* existing in 11 features as the past, future, present, *ijjhata*, *bahiddha*, *olârîka*, *sukhuma*, *hîna*, *panîta*, *dûra*, *santika*,

2. (a) The nature of the *samudaya* of the present five-fold *upâdânakkhandhâ* of five-fold *patibandhekhandhâ* etc. due to arising of the causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sankhâra*, *kamma* etc. of the past *bhava*, which had been cultivated during the establishment of the *kammabhava*; (b) the nature of the *samudaya* of the future five-fold *upâdânakkhandhâ* of five-fold *patibandhekhandhâ* etc. due to arising of the causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sankhâra*, *kamma* etc. of the present *bhava*, which had been cultivated during the establishment of the *kammabhava*, (c) the nature of the *samudaya*, referred to as *nibbattilakkhanâ*, of initial arising of these *upâdânakkhandhâs*
3. (a) Cessation, without reappearance once again, due to *arahatta magga* of causes such as *avijjâ*, *tahnâ*, *upâdâna*, *kamma* etc. called the nature of *anupâdanirodha* because of which when *upâdânakkhandhâs*, the future results, pass away by non-reappearable cessation, referred to as cessation by nature of *anupâdanirodha* = the nature of *nirodha* = *atthañgama*, (c) the perishing of these *upâdânakkhandhas* called *bhañga* = the nature of *nirodha* and *atthañgama*.

*Naydassanavasena vâ evum vuttam. Patthamahñi paccuppannadhammânâ
udayabbayam disvâ atha atitânâgate nayam neti (Mahâ.-Tî,-2: 423).*

In other words, it is explained as the *nayadassana* = by virtue of demonstrating the method. To begin with, of the *paccuppanna dhamma*,

1 (a) The nature of the *samudaya* of the present five-fold *upâdânakkhandhâ* of five-fold *patibandhekhandhâ* etc. due to arising of the causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sankhâra*, *kamma* etc. of the past *bhava*, which had been cultivated during the establishment of the *kammabhava*; (b) the nature of the *udaya* of the future five-fold *upâdânakkhandhâ* of five-fold *patibandhekhandhâ* etc. due to arising of the causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sankhâra*, *kamma* etc. of the present *bhava*, which had been cultivated during the establishment of the *kammabhava*, (c) because of cessation of the causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sankhâra*, *kamma* by means of *anuppâdha* due to the *ariyamagga*, the future results like *upâdânakkhandhâs* they pass away by the nature of *anupâdanirodha*. This nature of this passing away, called the nature of *vaya*, can be visualized by *paccayato udayabbayadassana*;

2. The *khanato udayabbayadassana* which can discern the momentary arising and perishing away of (the causes) the resultant *upâdânakkhandhâs*;

It has been instructed by the very Mahâtîkâ Sayâdaw the Venerable Dhammapâla that only after discerning on these two kinds of *udayabbaya* by the *paccakkha ñâna* concentrate on those of the past and future, which are *adittha*, in a similar way.

It must be remembered that the teacher of the book of meaning never has indicated to discern on the past and future factors not via *paccakkha ñâna* but by speculation. And those in search of eternal peace, the *nibbâna*, should always keep that in mind.

The Noblest Speech

*Yam Buddho bhâsate vâcam, khemam nibbânapattiyâ.
Dukkassantakariyâya, sâ ve vâcânamuttamâ (Sam.-1: 191).*

Buddho = the Buddha who has understood the Four Noble Truth penetratively, without help of teachers, but by his own knowledge called *sayambhû ñâna*, and so named because he has made the celestial beings, the worldling, the byahmâ and all the sentient beings to penetratively understand the Four Noble Truth via the *paccaknakha ñâna*. *Nibbânapattiyâ* = to take the great *asankhata* element, the element of peacefulness, the *nibbâna dhamma*, which would bring an end to the suffering of the worldly affairs, as the object and concentrate by means of *paccakkha ñâna*. *Dukkhasa* = *vattadukkha* in the three lives and three planes belonging to three stages of being (e.g. *kâma*, *rûpa*, *arûpa* existences). *Antakiriyâya* = for attaining the ending by cessation of *dukkha* via passing away of the corporeality. *Khemam* = that which is the attainment of peace and end of the multitude of sufferings. *Yam vâcam* = that *dhamma* talk, which should be taken as good *niyânika dhamma*, that helps one escape from *samsarâvatta*. *Bhâsate* = has admonished with *karunâ* and *mettâ*. *Sâ vâcâ* = that *dhamma* talk which is the *niyânika dhamma* that lead one to escape from the *samsarâvatta* is. *Vâcânâ* = of all the talks. *Uttamâ* = the most superior and noblest of all (*Sam.-1*: 191; *Sam.-Ttha.-2*: 252).

These descriptions will suffice to conclude the treatment on ***Paccakkha ñâna* and *Anvaya ñâna***. If the explanations given here is accepted without reservation, then you the noble man is expected to also accept the explanations on *Baddekarattasuttana*.

Bhaddekaratta (An Auspicious Night) Suttana – Explanation

In *Uparipaññâsapâli vibhañga*, included in *Mijjhimanikâya* of the five sections of *nikâya*, four *suttanas* come under the name of ***bhaddekaratta* = an auspicious night**. The first *bhaddekaratta suttana* is *sammâsambuddhabhâsita suttana* admonished by the Buddha, the *sabbaññu sammâsammâbuddha* himself.

The second *suttana* is one admonished by the Venerable Ānandâ himself.

The third *suttana* was admonished by the Venerable Mahâpaccé.

The fourth was *sammâsammâbuddhabhâsita suttana* which came into being in relation to the Venerable Lomasakañgiya.

The meaning of *bhaddekaratta* has been given as ***baddekaratta* = an auspicious night**, the explanation being given with reference of method of the five-fold *khandhas* in the first, second and fourth *suttanas*. In the third *suttana* it was given with reference to the method of 12 species *âyatana*.

In these *suttanas* the monks, who are exercising the *vipassanâbhâvanâkammata-thâna* day and night on the five-fold *kandhâ* and causes within the two *santânas* referred to as *ijjhata* and *bahiddha*, the three periods the past, future and present or the 12 species of *âyatana*, are expatiated to be **monks of an auspicious night**, and the **night to be of an auspicious night**. The meditation was made to attain *khanapaccuppanna* by means of

aniccânupassanâ etc. of the seven species of *nupassanâ*.

If you, as a meditator, also wanted to be **a meditating individual of an auspicious night**, you must exercise the *vipassanâbhâvanâkammattâna* on the causes of the three periods and within two *santânas* together with the five-fold *khandhâ* by means of the *aniccânupassanâ* etc. of the seven species of *nupassanâ*. In this doctrine, explanations will be made as to how to become a monk of **an auspicious night**, orientating towards understanding the five-fold *khandhâ* = 12 species of *âyatana* = *rûpanâma dhamma* penetratively understood by three *pariññâ*. To acquire this penetrative knowledge, a step by step elucidation will be made of the exercise on *vipassanâ bhâvanâ* from **ânâpâna way** to the attainment of *arahattaphala*.

Among the *Baddekaratta suttanas*, four *gâthâs* are given in brief, and their meanings are given in continuation. The four *gâthâs* are as follow.

1. *Atîtaṃ nânvâgameya, nappatikañkhe anâgataṃ.
Yadatîtaṃ pahînaṃ taṃ, appattañca anâgataṃ.*
2. *Paccuppannañca yo dhammaṃ, tattha tattha vipassati.
Asamhîraṃ asaṃ kupaṃ, taṃ vidvâ manubyûhaye.*
3. *Avijjeva kicca mâtappaṃ, ko jaññâ maranaṃ suve.
Na hi no sañgamaṃ tena, mahâsenena maccunâ.*
4. *Evuṃ vihâraṃ âtâpaṃ, ahorattamatanditaṃ.
Taṃ ve “baddekaratto”ti, santo âcakkhate muni.*

The meaning of the above *gâthâs* are as follows.

- 1 (a). As the past five-fold *khandhâ* have perished utterly, the past five-fold *khandhâs* (= the 12 *âyatana*) should not be clung to by *tahnâ-ditthi* as “I, mine”.
(b) As the future five-fold *khandhâs* have not yet attained, and so have not arisen, the future five-fold *khandhâs* should not be anticipated by *tahnâ-ditthi* as “I, mine”.
2. The man of wisdom should discern on the present five-fold *khandhâs*
 - (a) at that moment of arising
 - (b) at that *dhamma* groups
 - (c) at site of forest etc., by means of *aniccânupassanâ* etc. of the seven kinds of *nupassanâ*. The man of wisdom should be recollecting on the indestructible *vipassanâ ñâna* to which no *tahnâ-ditthi* attached as “I, mine”. In other words to enter a *janic* state of *asankhata dhâtu*, element of peacefulness, the *nibbâna* and *phalasammâpatta* by the recollecting on these which have not been destroyed and with no attached *tahnâ-ditthi* as “I, mine”.
3. For the purpose exercise by the recollecting *vipassanâ ñâna* or for exercise by recollection on the *phalasammâpatta*, which is associated with *samattâ vipassanâ* that is able to annihilate *kilesâs*, effort must be made without procrastination. For no body knows if one would be still alive tomorrow or a day after. Indeed we never have any

agreement with the king of death regarding when to die.

4. The monk, who leads his life making every effort to acquire *phalasamâpatta*, that is associated with *samatttha vipassanâ* that is can annihilate the *kilesâs*, is, in fact, **one who belongs to an auspicious night**. This was expatiated by the *Sabbaññu Sammâsambuddha Buddha* named *Buddhamuni* the Supreme of the *munis* in whom the *kilesâs* have utterly been eradicated (*Ma.-3: 226*).

Delight in the Past

In accordance with instruction given in the above *gâthâ* (1) *atîtam nânvâgameya* = the past is not to be followed. Regarding this instruction as to whether or not the past is followed, the Buddha himself has explained as follows.

Kathañca bhikkhave atîtam anvâgameni, “evum rūpo ahosi atîtamaddhâna”ti tatthanandim samanvâneti. “Evum vedano. R. Evum sañño. Evum sankhâro. Evum viññâno ahosi atîtamaddhâna”ti attha nandim samanvâneti. Evum kho bhikkhave atîtam anvâgamaneti (Ma.-3: 226).

Attha nandim samanvâdhnatîti tesu rūpâdisu tahnâ samanvâneti anupavatteti (Ma.-Tîha.-4: 171).

Bhikkhus How is the past enjoyed?

1. Delight in the past *rûpa dhamma*, the *nandî dhamma*, as – “The *rûpa dhamma* has arisen in the past” – has appeared.
2. “Such a feeling = *vedanâ dhamma* in the past,
3. Such an awareness = *saññâ dhamma*,
4. Such a dynamic groups of *cetasika sankhâra dhammas*,
5. Such a mental quality = *viññâna dhamma* has arisen.” will cause the formation of delight in the past (*vedanâ-saññâ-sankhâra*) *viññâna dhammas*. Bhikkhus The past is enjoyed in this way (*Ma. 3: 226*).

If the delight, *nandî dhammas*, in the *rûpa-vedanâ-saññâ-sankhâra-viññâna* of the past resulted as expounded above by the Buddha, then there always is enjoyment in the past. This is what it really means and which must be well noted. Again the Venerable Mahâkaccé also has explained how to have enjoyment in the past as given below.

Kathañca âvuso atîtam anvâgamenti? Iti me cakkhu ahosi atîtamaddhânâ, iti rūpâti, tattha sandarâgappatibaddham hoti viññânâ, sandarâgappatibaddhattâ viññânassa tadabhisandati, tadabhinadanto atîtam anvâgamenti (Ma.-3: 236).

My colleagues In what ways is the past always enjoyed?

The *nikanti viññâna* associated with longing for element of eye clearness and in material object, the *chandharâga*, had arisen such as in the past I have had element of eye clearness in this way, my material objects have been this way. Because of association of this conscious (*nikanti*) *viññâna dhamma* with the clinging, *râgasandha*, one is delighted in the element of eye clearness and material object. If one is delighted with the element of eye clearness and material object, then he is delighted in the past. (It has been expatiated that the same applies to the remaining *âyatanas*).

In the above sermon too the instruction is that it must be kept firmly in mind that if delight has been attached to 12 species of *âyatana*, then the past is delighted in.

How the Past is Not Enjoyed

Kathaṇca Bhikkhave atītam nānvāgameti, “evum rūpo ahosi atītamaddhānan”ti tattha nandim na samanvāneti. “Evum vedano. R. Evum sañño. Evum sankhāro. Evum viññāno ahosi atītamaddhānan”ti tattha nandim na samanvāneti. Evum kho bhikkhave atītam nāmanvāgameti (Ma.-3: 226 – 227).

Bhikkhave In what way was the past not enjoyed?

1. Delight in the past *rūpa dhamma*, the *nandī dhamma*, as – “The *rūpa dhamma* has arisen in the past” – has not appeared.
2. “Such a feeling = *vedanā dhamma* in the past,
3. Such an awareness = *saññā dhamma*,
4. Such a dynamic groups of *cetasika sankhāra dhammas*,
5. Such a mental quality = *viññāna dhamma*” will cause the formation of delight in the past (*vedanā-saññā-sankhāra*), *viññāna dhammas* has not arisen. Bhikkhus This is how the past is not enjoyed (Ma.3: 236).

The Venerable Mahākaccā has also explained how no enjoyment is sought in the past.

Kathaṇca āvusso atītam nānvāgameti. Iti me cakkhu ahosi atītamaddhānam, iti rūpāti, tattha na sandarāgappatibaddham hoti vuññānam, na sandarāgappatibaddhattā viññānassa na tadabhinandati, na tadabhinandanto atītam nānvāgameti (Ma.-3: 236).

My colleagues In what ways is the past not always followed?

The *nikanti viññāna* associated with longing for element of eye clearness and in material object, the *chandharāga*, had not arisen such as in the past I have had element of eye clearness in this way, my material objects have been this way. Because of dissociation of this conscious (*nikanti*) *viññāna dhamma* with the clinging, *chandharāga*, one is not delighted in the element of eye clearness and material object. If one is not delighted with the element of eye clearness and material object, then he is not delighted in the past (Ma.-3: 236).

The same has been instructed to apply to the remaining *âyatanas*. In this sermon, if there is enjoyment in the 12 *âyatanas*, then this means that the past is still enjoyed, and it should be remembered that if there is no enjoyment in the 12 *âyatanas* there will be no delight in the past.

The explanations given by the Buddha and the Venerable Mahākaccā are that if there has been delight, the *nadīdhamma*, in the five-fold *khandhās*, *rūpa* and *nāma dhammas* called the 12 *âyatans*, then the past will be clung to. If *nadīdhammas* have not arisen then it is clear that there is no pleasure in the past. These are the *desanās* which have

instructed with emphasizing only on the exercise to be detached from the past *khandhās* and *āyatanas*. It should be realized that these *desanās* instructed only to be detached, to be free from attachment to, the past *khandhās*, *āyatanas* or *tahnā ditthi*. These, however, do not mean that the past *khandhā-āyatana-rūpa-nāma* are not to be taken as the object of meditation.

Expectation of the Future

Kathañca bhikkhave anāgatam patikañkhati? “Evum rūpo siyam anāgatamaddhānan”ti tattha nandim samanvāneti. Evum vedano siyam. R. Evum saññā siyam. “Evum viññāno siyam anāgamaddhānan”ti tattha nandim samnvāneti. Evum kho bhikkhave anāgataṃ patikañkhati (MA.-3: 227).

Bhikkhave How is the future expected?

1. Delight in the future *rūpa dhamma*, the *nandī dhamma*, as – “The *rūpa dhamma* is anticipated to arise in the future.”
2. This kind of feeling in future = *vedanā dhamma*. R.
3. Such an awareness = *saññā dhamma*.
4. *Cetasika sankhāra dhamma* which are subject to such changes.
5. Such a consciousness = delight, *nandī dhammas*, in the future *viññāna dhamma* (*vedanā-saññā-sankhāra*) results when a wish is made for them.

Bhikkhus The longing for the future has been made in this way.

This is what the Buddha has expounded with regard to longing for the future.

Again the Venerable Mahākaccē has expatiated on the anticipation of the future in the following way.

Kathañca āvusso anāgatam patikañkhati. Iti me cakkhu siyā anāgatamaddhānam, iti rūpāti appatiladdhassa patilābhāya cittam panidahati, cetaso panidhānapaccayā tada-nadati, tadabhinandati, tadabhinandanto anāgataṃ patikañkhati (Ma.-3:237).

My colleagues In what way is the past longed for? May the element of my eye clearness be so in future; may my corporeality be so. The mind has been set in this way on the eye clearness element and corporeality which have yet to acquire. The mind set in this way is the cause due which the awareness in the eye clearness element and corporeality have resulted. If there is delight in this eye clearness element and corporeality, then will be anticipation for the future. (It has been admonished that the same applies to the remaining *āyatanas*) (Ma.-3:237).

According to the *desanā* admonished here —

If a wish has been made in mind that in the future period and future life as to be a human of good deeds, a god of good deeds, and had made wishes after performance of *kusala* actions, then this means there is delight in the five-fold *upādānakkhandhā* of the human and of the god. Note that if there is enjoyment for these, then there is anticipation for the future.

Not Anticipating the Future

Kathaṇca bhikkhave anāgatam nappatikañkhati. “Evum rūpo siyam anāgatamaddhānan”ti tattha nandim na samanvāneti. Evum vedano siyam. R. Evum sañño siyam. Evum sankhāro siyam. “Evum viññāno siyam anāgatamaddhānan”ti tattha nandim na samanvāneti. Evum kho bhikkhave anāgatam nappatikañkhati (Ma.-3:227).

Bikkhave In what way is the future not anticipated?

Enjoyment, *nandī dhamma*, in the future corporeality as “I wish to have a human good looking material body in future” does not happen to arise in one again and again.

Such an enjoyable feeling = wish to be one with *vedanā*. R.

Such an awareness = wish to be one with *saññā*.

Wish to be one with such a *cetasika* and *sankhāra dhamma* groups subject to change.

“Wish to be one with such an enjoyable consciousness = *viññāna* in future”, a delight in these future *viññāna dhamma* (*vedanā-saññā-sankhāra*) groups have not been made again and again.

Bhikkhus This how the future has not been anticipated (Ma.-3: 227).

This is the *desanā* expatiated by the Buddha, through his *mukhapâttha*, as an explanation of how the future is not anticipated. With regard to non-anticipation of the future, the Venerable Mahākaccē has given the following explanation.

Kathaṇca āvusso anāgatam nappatikañkhati. Iti me cakkhu siyā anāgatamaddhānam, iti rūpāti appatiladdhassa patilābhāya cittam nappanidahati. Cetaso appanidhānapaccayā na tadabhinadati, na tadabhinandanto anāgatam nappatikañkhati (Ma.-3: 237).

My colleagues In what way is the future not anticipated? The mind is not set on the eye clearness element not yet acquired as I wish my future eye clearness element be this way, material objects be like this. Because of the non-committed mind as the cause, there is no enjoyment in the future eye clearness element and material object. If there is no delight in the future eye clearness element and material object, then the future will not be longed for or anticipated. (A similar explanation was expatiated for the remaining five pairs of *āyatana*s). (Ma.-3: 237).

Note again that with reference to the above *desanā* expounded by the Omniscient Buddha and the explanations given by the Venerable Mahākaccē, no longing for nor delight in the future five-fold *upādānakkhandhā* and the *rūpa-nāma*, called the twelve *āyatana*s, as “Let me be it,” means no anticipation on the future.

With regard to the above explanations and instructions, teacher of the book of meaning also has the given meaning of “**do not long for future, do not anticipate the future**” as follows.

Atītanti atīte pañcakkhandhe. Nānvāgameyāti tahnādītthihi nānugaccheya. Napatikañkheti tahnādītthihi na pattheya (Ma.-Ttha.4: 170).

The past refers to the five-fold *khandhā* of the past (= 12 species of *āyatana*); do not long for the past means not to long for the past five-fold *khandhā* (= the *āyatana* 12 species) by *tahnā-dītthi* as “I – Mine = Let me be like this. Let me be like this”.

Do not anticipate for the future means not to long for the future five-fold *khandhâ* (= *âyatana* 12 species) by *tahnâ-ditthi* as “**I would like to be this. I would like to be this.**”

The Essence of the Sermon

The actual sense of this pâli book of meaning is this.

1. If attachment is made on the past five-fold *khandhâ* by *tahnâ-ditthi*, then it is longing for the past.
2. If attachment is not made on past five-fold *khandhâ* by *tahnâ-ditthi*, then means that the past is not longed for.
3. If attachment is made on the future five-fold *khandhâ* by *tahnâ-ditthi*, then it is longing for the future.
4. If attachment is not made on future five-fold *khandhâ* by *tahnâ-ditthi*, then means that the future is not longed for.

This is the basic idea of the statement.

1. Do not to long for the past means to meditate so as not be attached on the past five-fold *khandhâ* by *tahnâ-ditthi* and effort must be made not be so attached.
2. Do not to long for the future means to meditate so as not be attached on the future five-fold *khandhâ* by *tahnâ-ditthi* and effort must be made not be so attached.

It should be accepted without reservation that this is what the *desanâ* really means.

Attraction to *Tahnâ-Ditthi* in the Present

The Buddha Sabbñusammâsambuddha himself has expatiated as if there is *sakkâya ditthi* referred to as *attaditthi* = my life, my soul, my *viññâna* and my self, attached either on the present five-fold *khandhâ* or on any one of these five, and if there is attachment as I, other, male, female, individuality, sentient being, human, god, *byahmâ*, then attraction will be exerted on the five-fold *khandhâ* by *tahnâ-ditthi* (*Ma*.-3: 227).

Bhikkhus In what way is attraction made on the present by *tahnâ-ditthi*?

Bhikkhus In this world, worldlings, who are not used to seeing the *ariyas*, being incompetent in and unfamiliar with the *ariyâdhamma*, and not used to seeing the people of good deeds being incompetent in, unfamiliar with, and unheard of the good *dhamma*, are being attracted by *tahnâ-ditthi* in the following way.

1. *Rûpa* is discerned as *atta*.
2. (The remaining *khandhâs*) Are discerned as possessing *atta*,
3. Discerning as *rûpa* in *atta* and
4. *Atta* in *rûpa*.

Feeling as *vedanâ* is. R.

Awareness as *saññâ* is. R.

Cetasika sankhâra dhamma groups subject to change as. R.

1. Awareness = discern *viññâna* as *atta*.
2. (The remaining *khandhâs*) Are discerned as possessing *atta*.
3. Discerning as *rûpa* in *atta* and
4. *Atta* in *rûpa*.

Bhikkhus In this way attraction is made to the present *dhammas* by *tahnâ-ditthi* (*Ma*.-3: 227).

The Venerable Mahâkaccé too has expounded as follow.

Kathaṇca âvusso paccuppannesu dhammesu samhîrati.

Yañcâvusso cakkhu, ye ca rūpâ. Ubhayametam paccuppannam, tassamim ce paccuppanne chandarâgappatibaddham hoti viññânam, chandarâgappatibaddhattâ viññânassa tadabhinandanto paccuppannesu dhammesu samhîrati (Ma.-3: 237).

My colleagues In what way do *thanâ-ditthi* attract as “I, mine” in the present *dhammas*?

My colleagues Eye clearness element (= *cakkhupasâda*) and *rûpa* object are a pair of the present. Longing for the eye clearness element and *rûpa* object of the present = awareness connected with *chanda-râga* = *viññâna* may occur. Then that eye clearness element and *rûpa* object will be enjoyed because of the awareness = longing of the *viññâna* = the state of being connected with the *chandarâga*. If there is delight in the eye clearness element and *rûpa* object, then there is attraction by *tahnâ-ditthi* to these present *dhammas*. (The same phenomenon for the remaining five pairs of *âyatana*s have been expounded).

Distraction by *Tahnâ-Ditthi* in the Present

Bhikkhave In what way do *tahnâ-ditthi* distract in the present?

Bhikkhus In this world, *sāvaka*, the followers of the Buddha’s *desanâ*, who are used to seeing the *ariyas*, being competent in and familiar with the *ariyâdhamma*, and used to seeing the people of good deeds, being competent in, familiar with and having knowledge of the good *dhamma*, are being distracted by *tahnâ-ditthi* in the following way.

5. *Rûpa* is discerned not as *atta*.
6. (The remaining *khandhâs*) Are discerned as not possessing *atta*,
7. Not discerning as *rûpa* in *atta* nor
8. *Atta* in *rûpa*.
Feeling as *vedanâ* is. R.
Awareness as *saññâ* is. R.
Cetasika sankhâra dhamma groups subject to change as. R.
5. Awareness = discern *viññâna* not as *atta*.
6. (The remaining *khandhâs*) Are discerned as not possessing *atta*.
7. Not discerning as *rûpa* in *atta* nor
8. *Atta* in *rûpa*.

Bhikkhus In this way no attraction is made to the present *dhammas* by *tahnâ-ditthi* (Ma.-3: 227).

Kathaṇca âvusso paccuppannosu dhammesu na samhîrati.

Yañcâvusso cakkhu, ubhayametam paccuppannam, tassamim ce paccuppanne na chandarâgappatibaddham hoti viññânam. Na chandarâgappatibaddhattâ viññânassa na tadabhinandati, na tadabhinandanto paccuppannesu dhammesu na samhîrati (Ma.-3:238).

My colleagues In what way is no attraction made to the present *dhammas* by *tahnâ-ditthi*?

My colleagues The eye clearness element and the *rûpa* object are a pair of the present. Suppose the longing for present eye clearness element and *rûpa* object = awareness associated with *chanda-râga* = *viññâna* does not arise. Because of the awareness = longing of the *viññâna* = being dissociated with *chanda-râga* result in

distraction of that eye clearness element and *rûpa* object. If there is no delight in these two, then there is no attraction to the present *dhammas* by means of *tahnâ-ditthi*. (It has been expatiated that the same applies to remaining five pairs of *âyatana*s).

The Meaning of the *Desanâ*

The meaning of the *desanâ* has been given by the teacher of the book of meaning as follows.

Tattha samhîratîti vipassanâya abhâvato tahnâditthîhi âkatthiyati. Na samhîratîti vipassanâya bhâvena tahnâditthîhi âkatthiyati (Ma.-Ttha.-4: 171 - 172).

Because *vipassanâ ñâna* does not arise in the present *dhammas* = due to the *vipassanâ ñâna* being not apparent, there is an attraction exerted by *tahnâ-ditthi*. Due to arising of the *vipassanâ ñâna* in the present *dhammas*, there apparently is *vipassanâ ñâna* because of which no attraction can be exerted on the present *dhammas*. (*Ma.-Ttha.- 4: 171 - 172*).

In accordance with the explanations given in the above, if *vipassanâ ñâna* are arising on the present *dhammas*, there can be no attraction by *tahnâ-ditthi* = there can be no *tahnâ-ditthi*. If no *vipassanâ ñâna* arises on the present *dhammas*, attraction by *tahnâ-ditthi* will be exerted = the *tahnâ-ditthi* will be arising. Therefore, the Buddha himself has instructed in second *gâthâ* to be free from attraction by *tahnâ-ditthi*. So as not to be attached by *tahnâ-ditthi* on the present five-fold *khandhâ* and *rûpanâma dhammas* must be dissolved and discerned by *vipassanâ* via *aniccânupassanâ ñâna*, *dukkhânupassanâ ñâna*, *anattânupassanâ ñâna*, *nibbidânupassanâ ñâna*, *virâganupassanâ ñâna*, *nirodhânupassanâ ñâna*, *patinissaggâ ñâna*, referred to as the seven *anupassanâ ñâna*, again and again.

Paccuppannañca yo dhammam, tattha tattha vipassati.

Asamhîram asamkuppam, tam viddvâ manubayûhaye.

(The meaning of this stanza is given at the beginning of *Baddekaratta* suttana).

The explanations have also been given by *atthakathâ-tîkâ* as follows.

Attha tatthâti paccuppannampi dhammam yattha yattheva ca nam aniccânupassanâdîhi sattahi anupassanâhi yo vipassani, araññâdîsu vâ tattha tattheva vipassati (Ma.-Ttha.- 4: 170).

Yattha yatthâti yassamim yassamim khane, yassamim yassamim vâ dhammapuñje uppannam, tam sabbampi asesetvâ (a.-Tî.-3: 366).

The following is what these *atthakathâ-tîkâ* mean.

Concentration is repetitively made on the present five-fold *khandhâs* as

1. At the moment of arising,
2. In places like forest etc.,
3. Those groups of dhamma, as they are, are entirely discerned by *aniccânupassanâ* etc. of the seven *anupassanâ ñâna*. The *vipassanâ ñâna*, concentrating on the object, is never attracted by *tahnâ-ditthi* of the *kilesâs*. This *vipassanâ ñâna* is indestructible by *tahnâ-ditthi* of the *kilesâs*. Then the *vipassanâ ñâna*

is again discerned = culture that *vipassanâ ñâna*. Discernment in this way is also discerning on the five-fold *khandhâ* = *manodvârika mahâkusala jovîthi citta* led by *vipassanâ ñâna* in turn is concentrated so that the object of concentration and concentrating *ñâna* as a pair is being discerned.

If *vipassanâ ñâna* is increased by discerning this way the opposing *kilesâ* of *raga* etc. cannot destroy it. A man of wisdom must discern repeatedly on the *vipassanâ ñâna* which is indestructible by the opposing *kilesâ* of *tahnâ-ditthi* etc.

This description of indestructibility of *vipassanâ ñâna* is just a *pariyâya*. As the *vipassanâ ñâna* can only momentarily eradicate the opposing *kilesas*, it can remain indestructible only momentarily.

In fact it is the *nibbâna dhamma*, named the *asankhata dhātu*, which certainly remains indestructible by means of the opposing *kilesas*. Therefore, a man of wisdom must exercise on the *vipassanâ bhâvanâ* via *vipassanâ ñâna* to ultimately attain path knowledge and fruit knowledge. Then with the path knowledge so acquired, enter the fruit absorption (*phalsammâpatti*) state repeatedly taking the *asankhata dhātu*, the element of peacefulness, the *nibbâna* as the object. This is the meaning the second *gâtha*.

Instructions Acquired

If the above two *gâthâs* are taken in brief, the Buddha has instructed that –

1. Not to have *tahnâ-ditthi* on the past five-fold *khandhâ*,
2. Not to have *tahnâ-ditthi* on the future five-fold *khandhâ*,
3. Not to have *tahnâ-ditthi* on the present five-fold *khandhâ*.

It has also been instructed that the present five-fold *khandhâ* are repetitively concentrated, not to have *tahnâ-ditthi* on them, by means of *aniccânupassanâ* etc. of the seven *anupassanâ ñâna*.

If so a question arises as to how to practise in such a way that one has no *tahnâ-ditthi* on the five-fold *khandhâs* of the past, future and present. The answer for this is as given below.

Extracts from Patisambhidâmagga Pâli

Katham atîtânâgatapaccuppannânam dhammânam sañkhipitvâ vavatthâne paññâ sammane ñânam –

Yam kañci rūpam atîtânâgatapaccuppannam acchattam vâ bhahiddhâ vâ olârîka vâ sukhumam vâ yam dûre vâ santike vâ, sabbam rūpam aniccato vavatthapeti ekam sammasanam. Dukkhatō vavatthapeti ekam sammanam, anattato vavatthapeti ekam sammanam.

Yâ kâci vedanâ. R. Yâ kâci saññâ. Ye keci sankhârâ. Yam kañci viññânam atîtânâgatapaccuppannam ijhattam vâ bhahiddhâ vâ olârîkam vâ sukhumam vâ hînam vâ panîtam vâ yam dûre santike vâ. Sabbam viññânam aniccato vavatthapeti ekam sammasanam.

Dukkho vavatthapeti ekam sammasanam, attato vavatthapeti ekam sammasanam (Patisam.: 51).

Why is the knowledge that can analyze in brief the past, future and present *dhammas* called the *sammasana ñâna*? The past, the future, the present, *ijhatta*, *bahiddha*, *olârîka*, *sukhuma*, *hîna*, *panîta*, *dûra*, *santika* which are all *rûpas*, and individually noted as *anicca* is an analytical notion = called *sammasana*. Individually noted as *dukkha* is another analytical notion = called *sammasana*. Individually noted as *anatta* is still

another analytical notion = called *sammasana* (*Patisam.*: 51).

Tasamâ esa yam atîtam rūpam, tam yasamâ atîteyeva khînam, nayimam bhavum sampat-tanti aniccam kayatthena. Yam anâgatam rūpam anantarabhav nibbattissati, na tato param bhavum gamissatîti aniccam khayatthena. Yam paccuppannam rūpam, tampi idheva khîyati, na ito gicchatîti aniccam khayatthena (*Vi.*-2: 245; *Patisam.-Ttha.*-1: 229).

Therefore, this meditating monk discerns in this way. –

1. A certain *atîta rūpa dhamma* did exist that, however, perished away in the past and never reaching the present life. Due to this nature of perishing and dissolving away, it is discerned as *anicca*.
2. A certain *anâgata rūpa dhamma* will arise in the future that will perish away in the future, but will never continue into next future. Because of this nature of perishing and dissolving away, it is discerned as *anicca*.
3. A certain *paccuppanna rūpa dhamma* does exist that, however, perishes away in the present, but will never continue into another life. Due to this nature of perishing and dissolving away, it is discerned as *anicca* (*Vi.*-2: 245; *Patisam.-Ttha.*-1: 229).

[**Note.** It has been expatiated to discern on the *vedanâ*, *saññâ*, *sankhâra*, *viññâna* etc. of the four-fold *nâmakhandhâs*, the 12 *âyatanas*, 18 *dhâtus* and the 12 characters of *paticca samuppâda* in a way similar to that applied for the *rûpakhandhâ*. See *Patisam.*: 51-52.]

Evum sankhâra annatto passantassa ditthisamugghâtanam nâma hoti. Aniccato passantassa mânasamugghâtanam nâma hoti. Dukkato passantassa nikantipariyâdânam nâma hoti. Iti ayam vipassanâ anattano anattano tthâne yeva titthatîti (*Visuddhi*-2:264).

In this way in the *santâna* of the one who understands the *sankhâra dhammas* as the *anatta*, *ditthisamugghâtana* = distraction from *ditthi* appears. When one who understands the *sankhâra dhammas* as the *anicca*, *mânasamugghâtana* = distraction from *mâna* appears. When one who understands the *sankhâra dhammas* as the *dukkha*, *nikantipariyâdâna* = dissolution of *tahnânikanti* appears. Note that each *vipassanâ* is related to its corresponding character (*Visuddhi*-2:264).

Here explanation of Mahâtîkâsayâdaw is briefly described. (For detail see Mahâtîkâ vol. II, pp. 415 – 416; Nibbâgâminipatipadâ, vol. V, in section on Sammâsana ñâna, pp. 152 – 153).

Although *anattânupassanâ ñâna* can distract *ditthi*, it is not this *ñâna* alone which can do so. Only when supported by the force of the *aniccânupassanâ ñâna* and *dukkânupassanâ ñâna*, based on the powerful *upanissaypaccaya*, the *anattânupassanâ ñâna* becomes sharp, clean and powerful. Then it can dissociate itself from clinging to the *ditthi*.

Similarly even though *anattânupassanâ ñâna* can distract clinging to *mâna*, it is not this *ñâna* alone which can do so. Only when supported by the force of the *aniccânupassanâ ñâna* and *dukkânupassanâ ñâna*, based on the powerful *upanissaypaccaya*, the *anattânupassanâ ñâna* becomes sharp, clean and powerful. Then it can dissociate itself from the clinging to the *mâna*.

Aniccasaññā bhāvetabbā asamimānasamugghâtāya = the Buddha has instructed that for the sake of detaching from the clinging on to the *asamimāna*, meditate on the *aniccasaññā* (*Mahâtî*.-2: 416).

Again although *dukkhānupassanā ñāna* can dissolve the *nikanti*, the clinging to *tahnā*, it is not this *ñāna* alone which can do so. Only when supported by the force of the *aniccānupassanā ñāna* and *anattānupassanā ñāna*, based on the powerful *upanissayapaccaya*, the *dukkhānupassanā ñāna* becomes sharp, clean and powerful. Then it can dissociate itself from the clinging on to the *tahnā*.

Since the clinging to *tahnā* cannot be detached by *aniccānupassanā* alone nor to *māna* by *dukkhānupassanā* alone nor to *ditthi* by *anattānupassanā* alone, *vipassanā* exercise must be made on each of the three general characters taken alternately as the object. In discerning this way, priority may be given to *aniccalakkhanā* if need be. The same applies to *dukkhalakkhanā* and *anattalakkhanā*.

Because of *vipassanā* exercise by recollection, the *anattānupassanā ñāna* becomes sharper, clearer, more penetrative, effective, accumulated and powerful enough to dissolve the clinging to *atta* by support of the *aniccānupassanā ñāna* and *dukkhānupassanā ñāna*. Then this *anattānupassanā* is powerful enough to demolish the clinging to *attaditthi*.

At a corresponding time the *aniccānupassanā ñāna* becomes sharper, clearer, more penetrative, effective, accumulated and powerful enough to dissolve the clinging to *atta* by support of the *dukkhānupassanā ñāna* and *anattānupassanā*. Then this *aniccānupassanā ñāna* is powerful enough to demolish the clinging to *māna*.

At a corresponding time the *dukkhānupassanā ñāna* becomes sharper, clearer, more penetrative, effective, accumulated and powerful enough to dissolve the clinging to *atta* by support of the *aniccānupassanā ñāna* and *anattānupassanā ñāna*. Then this *dukkhānupassanā ñāna* is powerful enough to demolish the clinging to *tahnā* (see *Mahâtî*.-2: 415 – 416).

The Power of *Lokiyabhāvanā*

Lokiyabhāvanāya hi kāye pahīnam na vedanādīsu pahīnam hoti. Yadi pi na pavatteya, na ekattha pahīnam sesesupi pahīnam hotīti maggatipatthābhāvanam, lokiyabhāvanāya vā sabbattha appavattimattam sandhāya vuttam (*Ma.-Tī*.-1: 347).

The power of *lokuttarāmaggasatipatthānabhāvana* and that of *lokiyasatipatthānabhāvanā* are not similar. As mediator is exercising *vipassanā* on the *paramattha* objects such as *kāya*, *vedanā*, *ciitta*, *dhamma* etc., along with culturing their causes, he arrives at a stage about to attain the *ariyamagga*. At that instant the meditator can concentrate on any of *kāya*, *vedanā*, *ciitta*, *dhamma* in the process of *vipassanā* and still can acquire *ariyamagga*. If *ariyamagga* is attained while concentrating on the *rūpa dhamma*, named *kāya*, then it can disintegrate and annihilate not only the *tahnā* and *māna* clinging to the *rūpa dhamma*, but the *tahnā*, *māna* and *ditthi* clinging on to the *vedanā*, *citta*, and *dhamma*. Remember that the same thing happens in exercising *vipassanā* on the *vedanā*, *citta*, and *dhamma*. The *lokuttara ariyamagga dhammas* are, however, the dhammas which can arise only when supported by the force of powerful *vipassanā* nanas such as *upanissaya* and *paccayasatti* bases.

On the other hand, the *lokiyasatipatthâna bhâvanâ* is not that powerful. If *vipassanâ* exercise is made on the *rûpa dhamma*, named *kâya*, as the object, then *tahnâ*, *mâna* and *ditthi* clung to this *dhamma* can be dissolved momentarily. This *kâyânupassanâ satipatthâna bhâvanâ* cannot disintegrate *tahnâ*, *mâna* and *ditthi* clung to *vedanâ*, *citta* and *dhamma*. It must be reminded that a similar situation occurs when discerning on the *vedanâ*, *citta* and *dhamma*.

Therefore, in the case of *lokiyasatipatthâna bhâvanâ*, *vipassanâ* exercise is made on the *kâya* so as to dissolve the *tahnâ*, *mâna* and *ditthi* clung to the *kâya*. The exercise is made on the *vedanâ* so as to dissolve the *tahnâ*, *mâna* and *ditthi* clung to the *vedanâ*. The *vipassanâ* exercise is made on the *citta* so as to disintegrate the *tahnâ*, *mâna* and *ditthi* clung to the *citta*. The *vipassanâ* exercise is made on the *dhammas* so as to dissolve the *tahnâ*, *mâna* and *ditthi* clung to the *dhamma*.

As a matter of fact, *kâya*, *vedanâ*, *citta* and *dhamma* are the five-fold *upâdânakkhandhâ*. So, to annihilate the *tahnâ*, *mâna* and *ditthi* clung to the present five-fold *upâdânakkhandhâ*, meditation is made on the present *upâdânakkhandhâ* as an object. To annihilate the *tahnâ*, *mâna* and *ditthi* clung to the past five-fold *upâdânakkhandhâ*, meditation is made on the past *upâdânakkhandhâ* as an object. To annihilate the *tahnâ*, *mâna* and *ditthi* going to be clung to the future five-fold *upâdânakkhandhâ*, meditation is made on the future *upâdânakkhandhâ* as an object. This the method of practicing for eradication of the *tahnâ*, *mâna* and *ditthi* clinging to the past, future and present five-fold *upâdânakkhandhâs*.

Therefore the following instructions are achieved from the above.

1. To be free from *tahâ-ditthi* attached to present five-fold *upâdânakkhandhâ* the *vipassanâ* exercise is made on present five-fold *upâdânakkhandhâ*.
2. To be free from *tahâ-ditthi* attached to past five-fold *upâdânakkhandhâ* the *vipassanâ* exercise is made on past five-fold *upâdânakkhandhâ*.
3. To be free from *tahâ-ditthi* attached to future five-fold *upâdânakkhandhâ* the *vipassanâ* exercise is made on future five-fold *upâdânakkhandhâ*.

As explained in Section on the *Paccakkha ñâna* and *Anvaya ñâna*, as to whether *paccakkha ñâna* or *anvaya ñâna* is employed in discerning on the past and future, the Buddha has expounded it to be *nâmarûpapariccheda ñâna* to *attapaccakkha ñâna*. With reference to this –

Pubbabhâge vipassanâñânena sammasanvasena. R. Sulu attapaccakkhena ñânena passati (Sam.-Tî.-2: 181)

What it means is that in the *vipassanâ* prior to *ariyamagga* the 12 phenomena of the five-fold *upâdânakkhandhâ*, existing as the past, future and present etc., are discerned analytically, *samâsana*, taking them as the object, by the power of which they are well discerned, well understood and well realized. These are acquired via *attapaccakkha ñâna*, called *vipassanâsammâditthi*. (for discerning by *Anvaya ñâna* see section on *Vipassanâ* on pp)

If in deed *vipassanâ* exercise is made on the past and future *khandhâs* to be from the *tahnâ-ditthi* attached to these. If so, which descriptions in this *Baddekaratta* sutta instruct for *viapassanâ* meditation on the past and future? The answer is as follows.

1. *Atîtam nânvâgameya* = The past must not be followed by with *tahnâ-ditthi*,
2. *Nappatikañkhe anâgatam* = The future must not be anticipated with *tahnâ-ditthi*.

Note that these are instructions to exercise *vipassanâ* on past and future *khandhâs* so

as to be free from attachment on the past and future *khandhâs*. Only by destruction of *kilesâ* aggregates by virtue of *vipassanâ* knowledge (the Path Knowledge) referred to as *nibbedhika* knowledge, which is endowed this power, can these aggregates be eradicated. It must be noted that they cannot be disintegrated without discerning on the past and the future.

The *tahnâ-ditthi* clung on the past and future will never cease without concentrating on the past and future. Meditation is made on the present *khandhâs* to free oneself from the *tahnâ-ditthi* attached on the present *khandhâs*. Similarly meditation is made on the past and future *khandhâs* to free oneself from the *tahnâ-ditthi* attached on the past and future *khandhâs*. Read the following *suttanas* for further information.

Kâlattayaanicca (Dukkha - Annata) Suttana

Rûpam bhikkhave aniccam atîtânâgatam, ko pana vâdo paccuppanassa. Evum passam bhikkhave sutavâ ariyasâvako atîtassamin rûpassamim anapakkho hoti, anâgatam rûpam nâbhinandati, paccuppanassa rûpassa nibbidâya virâgâya nirodhâya patipanno hoti. R. nâbhinandati, paccuppanassa rûpassa nibbidâya virâgâya nirodhâya patipanno hoti. R. Rûpam bhikkhave dukkham atîtânâgatam, ko pana vâdo paccuppanassa. Evum passam bhikkhave sutavâ ariyasâvako atîtassamin rûpassamim anapakkho hoti, anâgatam rûpam nâbhinandati, paccuppanassa rûpassa nibbidâya virâgâya nirodhâya patipanno hoti. R. Rûpam bhikkhave anattam atîtânâgatam, ko pana vâdo paccuppanassa. Evum passam bhikkhave sutavâ ariyasâvako atîtassamin rûpassamim anapakkho hoti, anâgatam rûpam nâbhinandati, paccuppanassa rûpassa nibbidâya virâgâya nirodhâya patipanno hoti.

Vedanâ aniccâ. R. Dukkha. R. Anattâ. R.

Saññâ aniccâ. R. Dukkha. R. Anattâ. R.

Sankhâra aniccâ. R. Dukkha. R. Anattâ. R.

Viñam aniccam. R. Dukkha. R. Anattâ. R. (Sam.-2: 17-18).

Navame ko pana vâdo paccuppanassâti paccuppannahmi kathâva kâ anicca-meva tam. Te kira bhikkhu atîtânâgatam aniccanti sanlakkhattvâ paccuppanne kilamimsu, atha nesam ito atîtânâgatepi “paccuppannam aniccan”ti vuccamâne byjjhisantîti ajjhâsayam veditvâ sattâ puggalajjhâsayena imam desam desesi (Sam.-Ttha.-2: 242).

Dasamekâdasamâni dukkham anattâti padehi visesetvâ tathârûpeneva puggalejjâsayena kathitâni (Sam.-Ttha.-2: 242).

Yadi atîtânâgatam etarahi anattibhâvato aniccam, paccuppannampi tadâ natthîti ko pana vâdo tassa aniccâya, paccuppannahmi kathâva kâ udayabbayaparicchannattâ tassa. Vuttam hetam “nibbattâ ye ca titthanti, âragge sâsapûpamâ”ti (Sam.-Tî.2: 213).

Bhikkus *Rûpa* which is the past and future is the *anicca* (*dukkha. anatta*). And the present *rûpa* is not an exception. Bikkhus The nature of *anicca* (of *dukkha* and of *anatta*), realized by own knowledge referred to as *âgamasuta*, knowledge via practice referred to as *adhigamasuta*, are possessed by followers *sâvakas* (or *ariyasâvakas*). They do not linger on to the past *rûpa* nor have enjoyment or anticipation for the future *rûpa*. They practice on the present *rûpa* to be relieved of interest, attachment and for acquirement of, its dissolution. (Note that the same applies to *vedanâ* etc.) (*Sam.2: 17 – 18*).

These bhikkhus have already analytically understood the past and future *rûpas* (*vedanâ, saññâ, sankhâra, viññâna*) as *anicca* (as *dukkha*, as *anatta*), and on the present *rûpas* (*vedanâ, saññâ, sankhâra, viññâna*) they become tired of, and disinterested in

them. Then the bhikkhus are instructed by the Buddha that from the present to the past and future are all *anicca*. Following this admonition, as the Buddha already knows the *ijjâsayadhâtu* by which these bhikkhus could analytically realized the fact that the present *rûpa* (*vedanâ, saññâ, sankhâra, viññâna*) is the *aniica* (*dukkha, anatta*), this *desanâ* was given corresponding to the *ajjhâsaya* wish of the believers (*Sam.-Ttha.-2: 242*).

Suppose the past and future *khandhâs* are *anicca* because of the fact that do not they exist in the present, the present *khandhâs* would be more so (*anicca, dukkha* and *anatta*) as they did not and would not exist in the past and future too. This is because being present of the present *khandhâs* is divided as arising and perishing phases by means of *udayabbaya*. – “*Nibbattâ ye ca tittanti, âragge sâsapûmâ* = these *khandhâs* exist as distinct appearance of mustard seeds on the sharp edge of a chisel” (*Khu.-7: 32*) was the instruction. – Note it this way (*Sam.-Tî.-2: 213*).

To free oneself from attachment and clinging to the past and future *khandhâs*, *vipassanâ* must be exercised on these *khandhâs* of the past and future.

The Meaning of the Present in Baddekaratta Suttana

Here the meaning of the present described in Baddekaratta suttana division into the past-future-present of the five-fold *khandhâs* in the doctrines will be given. First, the opening of the Atthasâlinî atthakathâ.

Paccuppannañca nâmetam tividham khanapaccuppannam, santatipaccuppannam, addhâpaccuppannañca. Ekadvasantativârapariyâpannam santatipaccuppannam. R. Ekabhavaparicchanam pana addhâpaccuppannam nâma. Yam sandhâya baddekaratta-sutte – “*yo câ vuso mano, ye ca dhamma, ubhayametam paccuppannam, tasamim ce paccuppanne chandarâgapatibaddham hoti viññânam, chandarâgapatibaddhattâ viññâ-nassa tadabhinandanti, tadabhinandato paccuppannesu dhammesu samhîrati*” *ti vuttam. Santatipaccuppannañcatta atthakathâsu âgatam, addhâpaccuppane sutte* (*Abhi.-Ttha.-1: 445*).

The *paccuppannam* object is of three kinds as follows.

1. *Khana paccuppannam*
 2. *Santati paccuppannam*
 3. *Addhâ paccuppannam*
1. Of these three, the formative stage, corresponding to various causes, by *upâda-tthî-bhañga* = *citta-cetasikka dhamma* groups, which are at the arising-static-perishing away phases, are *khanapaccuppanna*.
 2. The processes of *rûpa* and *nâma* are called *santati*. Included in the *rûpasantati* process arising as a result of one *utu* and one *ahâra*, two *utu* and two *ahâra*, and the *citta* and *cetasika nâma dhamma* groups coincident with one and two thought processes, are *santatipaccuppanna*.
 3. The *rûpanâma* distinguished within a certain existence is the *addhâpaccuppanna*. Referring to this *addhâpaccuppanna* the Venerable Mahâkaccé has admonished in the *Mahâkaccâna – Baddekaratta suttana* as follows.

“My colleague bhikkhus A certain *citta* referred to as mental clear element does exist as do certain *dhamma* object groups. This *mana-dhamma* object as a pair is the *addhâpaccuppanna*. Suppose the *viññâna*, associated with and attached to the longing *ragachandhâ*, arises, then because of the association of this mental property *viññâna* with longing *chandarâga*, that *mana-dhamma* object will be clung to (by that individual). One who is so delighted in *mana-dhamma* object will be attracted to present

dhammas by the *tahnâ-ditthi* (Ma.-3: 237).

Among these three kinds of present, the *santatipaccuppanna* is described in the Commentary, and the *addhâpaccuppanna* in **Baddekaratta suttana** (Abhi-Ttha.-1: 445).

Relevant to the above Pâli and Commentary, note that the present (*paccuppanna*), described in the **Baddekaratta suttana** refers to all five-fold *khandhâ* (the 12 *âyatana*s) appearing throughout the existence extending from the five-fold *patisandhekhandhâ* to the five-fold *cutikhandhâ*. Therefore in these *addhâpaccuppanna dhammas* are included not only the five-fold *khandhâ* that is formed today, but also those of yesterday and of the day before yesterday etc. up to the five-fold *patisandhekhandhâ* throughout the life of an individual. In the same way, not only the five-fold *khandhâ* that will arise today, but those arising tomorrow, the day after tomorrow, coming month, year and until death also. It should be noted that the meaning of the present used here is different from that used in everyday language.

The consciousness, the *viññâna* which is the wishful clinging attached to the six object or five-fold *khandhâ* in association with *chandarâga* = it is difficult for arising of *mana* on the *khanapaccuppanna dhammas* which have attained *khanattaya*, called *upâda-tthi-bhaṅga*, in knowledge and which have acquired vision at *paramatta* level. The *tahnâ-ditthi* are most likely to occur on the *rûpa-nâma* five-fold *khandhâ dhammas*, called *addhâpaccuppanna*, designated by a certain existence. For this reason the Commentators have explained that the *paccuppanna* in *Baddekaratta suttana*s are just the five-fold *khandhâ rûpa-nâma dhammas* in a *bhava* designated by a certain existence. These explanations, however, are made only in light of **suttantapariyâyana method**, not the **abhidhammanissena method**. Therefore, the concept of the *paccuppanna* is also given in the light of *suttantapariyâyana* and *abhidhammanissena* methods.

Designation of the Past, Future and Present

Yam kañci rûpam atîtamnâgatapaccuppannam ijhattam vâ bahiddhâ vâ olârikam vâ hînam vâ panîtam vâ yam dûre santike vâ, tadekajjham abhisamyûhitvâ ayam vuccati rûpakhandho. Yâ kâci vedanâ. Yâ kâci saññâ. Ye keci sankhâra. Yam kañci viññânam atînâgatapaccuppannam. R. Abhisañkhipitvâ ayam vuccati viññânakkhandho (Abhi.-2: 1 – 10).

Idam pana atîtânâgatapaccuppannam nâma suttantapariyâyato abhidhammaniddesatoti duvidham. Tam suttantaparoyâye bhaven paricchanam. Patisandhito hi patthâya atîtabhavesu nibbattam rûpam anantarabhava vâ nibbattam hotu kappakotisatasahassamattake vâ. Sabbam anâgatameva nâma. Cutipatisandhiantare pavattarûpam paccuppannam nâma (Abhi.-Ttha.-2: 7).

Translation of the Above Pâli

There are the *rûpa dhammas* of past-future-present durations, all the *rûpa dhammas* of *ijjhantasantâna*, *bahiddhasantâna*, gross *olârîka* nature, subtle *sukhuma* nature, lower and higher levels, the distant (from consciousness) *dûrarûpa*, the near (the

consciousness) *santirûpa*. These 11 kinds of *okâsa* = indicative of the locality, that which make all the *rûpas* subject to change, the 11 kinds which are grouped in brief by way of *rupalakkhanâ*, of all the *rûpadhammans* = are all called *rûpakkhandhâ*. (N.B. The same holds true for the *nâmakhandhâs*) (*Abhi.-2: 1: 10*).

It must be noted that, according to this Pâli, all the *rûpa dhammas* existing as 11 kinds are called *rûpakkhandhâ*.

The Suttanta Pariyâya Way

Pariyâya refers to that which has changed from the *Paramatthasabhâvadhamma*. It has named as *suttanta pariyâya* way because the *suttana desanâ* is *pariyâya desanâ*. In the *abhidhammâ*, it has been expounded as “*phassa-vedanâ*” etc., and such an expatiation has been given as “*abhidhammaniddesa*.”

This past, future and present *rûpa* are of two kinds:

1. *Suttantapariyâya* which has changed from *paramatthasabhâvadhamma* = the *suttanadesanâ* way,
2. Determined in the *abhidhammâ* and expatiated as *abhidhammaniddesa* = *abhidhammadesanâ* way.

In the *suttantapariyâya* which has changed from *paramatthasabhâvadhamma* the past-future-present *rûpas* delineated by an existence. The following is how it is delineated.

1. From *patisandhe* to all the *rûpas* that have existed in the past – be it in the second life in the past, the life in the *asañkhata* period – are the *rûpas* of the past.
2. From this *cutibhava* to the *rûpas* to be formed in the future life, be it formed in the in second past existence or the life in the *asañkhata* period, are all the future *rûpas*.

3. The *rûpas*, formed during the existence spanning from this *bhava cuti* to this *bhava patisandhe*, are all *paccuppanna rûpas* (*Abhi.-Ttha.-2: 7*).

The Abhidhammaniddesa Way

Abhidhammaniddesa pana khanena paricchannam. Tayo hi rûpassa khanâ uppâdo tthiti bhañgoti. Ime tayo khane patvâ niruddham rûpam samantaraniruddham vâ hotu atîte kappakotisatasahassamatthake vâ, sabbam atîte meva nâma. Tayo khane asampattam rûpam etacittakkhanamattena vâ asampattam hotu anâgate kappakotisatasahassa mattake vâ, sabbam anâgatemeva nâma. Ime tayo khane sampattam rûpam pana paccuppannam nâma. Tattha kañcâpi idam suttantabhâjanîyam, evum santepi abhidhammaniddeseneva atîtânâgata paccuppannarûpam nidditthanti veditabbam (*Abhi.-Ttha.-2: 7*)

Abhidhammaniddesa = In *abhidhamma desanâ*, the past, future and present are divided by moment. The following is how it is divided.

The momentary moment of *rûpa dhamma* are of three kinds:

1. The arising *upâdakhana*,
2. The static *tthîkhana*, and
3. the perishing away *bhañkhana*.

These are the three *khanas*.

1. The *rûpa* which has ceased after arriving at these three *khanas* has perished, there being no other alternative (= there is no other *rûpa*), be it that which has already ceased or be it that which had ceased in the past of *asañkhata* period; and any *rûpas* that have already ceased are all that of the past.

2. The *rûpa* which has not yet arrived at the three *khanas*, be it the *rûpa* which has not arrive even at a certain *cittakhana*, be it the *rûpa* which will be formed in a future of an *asañkh ata* period, any *rûpa* which has not yet arrived at the three *khanas* still belong to the future.
3. All the *rûpas* which have, and still are, at the three *khanas* are the *paccuppanna rûpas*. It should be known this way (*Abhi.-Ttha.-2: 7*).

A Fact that Should be Understood.

Tattha kañcâpi idam suttantabhâjanîyam, evum santepi abhidhammaniddeseneva atîtânâgatapaccuppananrûpam nidditthanti veditabba, (Abhi.-Ttha.-2: 7).

Kañcâpîtiâdisu ayamadippâyo – *suttantabhâjanîyatthâ “atîtam nânvâgameyâ”tiâdisu (Ma.-3: 266). Addhâvasena atîtâdibhâvova vutto, tathâ idhâpi niddisitabbo siyâ.*

Evum santepi suttantabhâjanîyampi abhidhammadesanâyeveva suttante vuttadhammevicinitvâ vibhajanavasena pavattâti abhidhammaniddeseneva atîtâdibhâvo nidditthoti (Mûlatî-2: 6).

Baddekarattasuttâdisu viya atîtâdibhâvo atîtânâgatapaccuppanabhâvo *addhâvasena idhâpi khandhavibhañge suttantabhâjanîyatthâ niddhititabbo siyâti yojanâ (Anutî.-2:12)*

The following gives the meaning of these *atthakathâ tîkâ*.

Of these two *suttantapariyâya* and *abhidhammaniddesa* ways, *khandhâvibhañ-bhâjanîya* of this treatment is *suttantabhâjanîya* way. As the nature of the past, future and present are exhorted by designating via an existence by power of *addhâ*, so should the nature of past, future and present be designated via an existence by power of *addhâ* only. Although it should be so, the *suttantabhâjanîya dhamma*, like **Baddekarattasut-tana**, is a kind of *Abhidhamma desanâ* which appears by the power of analytical selection of individual objects of *paramattha vipassanâ ñâna*. Therefore, it must be noted that the Buddha has exhorted on the past, future and present via *Abhidhamma-niddesa* way (*Abhi.-Ttha.-2: 7; Anutî.-2:12*).

[Note. According to the explanation given by the above doctrines the five-fold *khandhâs* of the past, future and present have been instructed to be designated via an existence by the power of *addhâ*. It means that it the *suttantabhâjanîya* way. But though it is the *suttantabhâjanîya* way, it is a kind of *abhidhamâ desanâ* which analyze the *dhammas* that have been expatiated by way of analytical examination. Because of this, it must be remembered that the Buddha has instructed the five-fold *khandhâs* of the past, future and present just by *abhidhamâ desanâ* way.

Another Explanation

Aparo yano – idañhi rûpam addhâ-santati-samaya-khanavasena catudhâ atîtam nâma hoti. Tathâ anâgatapaccuppannam. Addhâvasena tâva ekassa ekassamañ bhava patisandhito pubbe atîtam, cutito uddham anâgatam, ubannamantare paccuppannam.

Santativasena sabhâgaekautusamutthânam ekâhârasamutthânañca pubbâpariya-vasena pavuttamânampi paccuppannam, tato pubbe visabhâgautuâhârasamutthânam atîtam, paccâ anâgatam. Cittajam ekavîthi-ekajavana-ekasamâpattisamutthânam paccuppannam, tato pubbe atîtam, pacchâ anâgatam. Kammasamutthânassa pâtiyak-kam santativasena atîtâdibhedo natthi, tesaññeva pana utuâhâracittasamutthânam upatthaambhakavasena tassa atîtâdibhedo (=atîtâdibhâvo) veditabbo.

Samayavasena *ekamuhuttapubbahnasâyanarattidivâdisu samayesu santânavasena pavuttamânâ tam tam samayam paccuppannam nâma, tato pubbe atîtam, pacchâ anâgatam.*

Khanavasena uppâdâdikhanattayapariyâpannam paccuppannam nâma. Tato pubbe atîtam pacchâ anâgatam.

Apica atikkantahetupaccayakiccan atîtam, nitthitahetukiccam anitthitapaccayakiccam paccuppannam, ubhayakiccam asampattam anâgatam. Sakiccakkhane vâ paccuppannam, tato pubbe atîtam, pacchâ anâgatam.

Ettha ca khanâdikathâva nipariyâyâ, sesâ sapariyâyâ. Tâsu nipariyâyakathâ idha adhippetâ (Abhi.-Ttha.-2: 7 – 8; Visuddhi-2: 103).

What the above doctrines actually mean is as follows. –

1. *Addhâ* = the period referred to as *Bhava*,
2. *Santati* = the continuity,
3. *Samaya* = time (period of time),
4. *Khana* = moment which occurs as *upâda-tthî-bhañ*, all in four by virtue of which the past is designated.

The future and present are designated in the same way.

The Period Denoted as *Addhâ* (= *Bhava*)

Of the four *addhâ-santati-samaya-khana* categories, the *addhâ-saddâ* is the time referred to as an existence designated by *cuti patisandhe*.

“*Ahosim nu kho atîtamaddhâ nam.*” (Ma.-1: 10; Sam.-1: 256).

“Had I been formed at the time of the past existence.”

In this way it can be known, by power of *suttana desanâ* way, from exhortation made in the *Nidânavaggasamyutta*, *Âhâravaga*, *Paccaya Suttana* etc. that the *addhâ saddâ* arises at a time of a certain existence delineated by *cuti patisandhe*.

In another way –

Tayome bhikkhave addhâ, katame tayo? Atîto addhâ, anâgato addhâ, paccuppanno addhâ (Khu.-1: 232; Dî.-3: 181).

Bhikkhus The three periods are these. They are the past, future and present.

In this Pâli, by virtue of *Khandhavaggasamyutta*, *Upayavaga*, *Niruttipatha* *suttana*, the meaning of *addhâ-saddâ* as given by designating moment of *upâda-tthî-bhañ* = arising-static-perishing away of *paramatta* is pertinent from view point of *paramatṭha*.

It is so because in the *Niruttapathasuttana* is given as

Yam bhikkhave rūpam jâtam pâ tubhûtam, “atthî” ti tassa sañkhâ (Sam.-2: 60).

Bhikkhus That *rûpa* is still arising, clearly appearing. Recognition of the actual existence of that *rûpa* by name arises (Sam.-2: 60).

In the *Niruttapatha* *suttana* expatiation has been made of the distinctly arising *rûpa dhamma* in the state of *upâda-tthî-bhañ* as the present *rûpa*, as past *rûpa* which has arisen long before the still existing present *rûpa*, and as the future *rûpa* going to arise after the present.

Therefore, the following two kinds of period have been given in the *suttana desanâ*.

1. An *addhâ* as a kind of period, referred to as an existence designated by the *cuti patisandhe* (= a time of existence)
2. An (*khana*) *addhâ* (= a period called *khana*) designated by the prevailing *khana* called *upâda-tthî-bhañ* = arising-static-perishing away of the *paramattas*.

Although these two *addhâ* are described in the *suttana desanâs*, the Buddha has admonished in the *suttana* and *pâli* that the past, future and present existences are designated by *cuti patisandhe* and *bhava* referred to as *addhâ* period.

Following the general exhortation the *atthakathâ sayâdaw* has explained the

designation of the past, future and present in another way.

1. **Addhâ** – at a certain time during the existence of a certain living being, all the *rûpas* from the stage of *patisandhe* of the prevailing *bhava* to the past belong to the past *rûpas*. The *rûpas* spanning from the *cuti* of this *bhava* to those of the coming existence are all the future *rûpas*. The *rûpas* midway between the the past and future are all the present ones.
2. If stated by virtue of *santati* (continuity), it will be as follows.

A certain *rûpa* which arises due to a certain relevant *utu* as the cause, and to a certain *âhâra* as a cause, might have done so by virtue of whether the long past or later, but is still the present *rûpa*. (It indicates that *sabhâgaekautusamutthânarûpa*, *sabhâga-ekaahârasamutthânarûpa* is the *paccuppana rûpa*).

The *sabhâgaekautusamutthâna*, the *visabhâgaekautusamutthânarûpa* prior to the *sabhâgaekâhârasamutthânarûpa* = irrelevant *utu* as the cause, *visabhâgaâhârasamutthânarûpa* = irrelevant *âhâra* as the cause is the *rûpa* that belongs to the past.

The *sabhâgaekautusamutthâna*, the *visabhâgaekautusamutthânarûpa* after the *sabhâgaekâhârasamutthânarûpa* = irrelevant *utu* as the cause, *visabhâgaâhârasamutthânarûpa* = irrelevant *âhâra* as the cause is the *rûpa* that belongs to the future.

Sabhâutu – Âhâra Ekautu – Âhâra

Sîtam sîtassa sabhâgo, tathâunham vâ sîtam unham unhassa. Yam pana sîtam unham vâ sarîre sannipatitam santânavasena pavattamânam anûnam anadhikam ekakâram, tam eko utûti vuccati. Sabhâgutuno anekantasabhâvato ekagahanam katam, evum âhârepi (Mûlatî.-2: 6).

Santâvasenâti pubbâparavasena. Pubbenâparassa samappamânatâya anu anadhikam, tato eva ekâkâram. Tena *visabhâgaekautunâ anantarikatam dasseti (Anuî.-2: 12).*

Sabhâgautu — the cold *sîtautu* is the *sabhâgadhamma* being relevant to *sîtautu*.

In the same way, the hot *unhautu* is the *sabhâgautu* being relevant to *unhautu*.

Ekautu — A combination of cold *sîtautu*, and hot *unhautu* affecting the body together, or if a certain *uhnautu* arises by virtue of association of the former and later *rûpas* in a continuous process, a certain phenomenon exists which is of its original nature, but no more nor less than it. That *utu* is referred to as *ekautua* = a particular kind of *utu*. (The *utu* that is exerting its effect on the material body is a continuous process of that of the former and later *rûpas*. If that *utu* would be measured by a thermometer, it would neither be less nor more, but remains constant throughout, and such an *utu* is the *ekautu* = said to be an *utu*. For example, if a cold *sîtarûpa* process occurs continuously for an hour, then the continuity of the process of physical *utu* in that duration will neither be more nor less, but constant; and so would be the hot *uhnarûpa* process). Such a natural *dhamma*, because it has the same nature, should be taken as a factor of single phenomenon. This statement as *ekakâram* = singleness of phenomenon, vindicates the non-existence of dissimilar nature of *sabhâgautu*.

Within this *sabhâgautu*, however, the *utus* (the physical changes), which are the *pramatthadhamma sabhâva*, are occurring in many ways. The *utujarûpas* are arising and dissolving. Within a *sabhâgautu* many *paramatthadhammasabhâvas* conspicuously are present, and this situation might mislead one to take *sabhâgautu* as *anekautu*. To avoid this misconception, the *atthakatthâ sayâdaw* has expatiated as *ekautusamutthânam* by inclusion of *eka-saddâ* to make one understand via process of continuity just a single *utu*.

Evum âhârepiti ittha visabhâgâhârena anantarito anekavâram anekadivasampi bhutto sabhâgekâhâram nâma. “Tato pubbe visabhâgautuâhârasamutthânam atîtaṃ, pacchâ anâgatan”ti hivuttanti. “Ekâhârasamutthânan”ti pana vuttattâ ekasseva âhârassa yojanâ yuttarûpâti pare (Anuṭṭi.-2: 12).

In this *âhârasamutthâna rūpa* also Mûlatîkâsayâdaw has instructed the idea of *ekâhâra* to be taken in a similar way to the above. The food that is consumed many times and many days, and irrelevant to *visabhâgâhâra*, is an *âhâra* of a certain kind.

Therefore, in the *atthakathâ*, it has been explained that – “the *rûpa* resulting from the *sabhâgaekautusamutthâna rūpa* and *sabhâgaekâhârasamutthâna rūpa* formed due to previous *vibâga-âhâra*, belongs to the past, and that formed later to the future.”

But, because the *atthakathâ* has indicated as *ekâhârasamutthânam a rūpa* resulting from a certain *âhâra*, the *appare sayas* have instructed that the *rûpa* resulting from a single *âhâra* within a *rûpakalâpa* is the *ekâhârasamutthâna rūpa* = only when described comparatively as the *rûpa* resulting from a certain *âhâra*, it will be relevant.

[The honorable *tîkâ sayâdaw*, named Âcariyadhammapâla, has exhorted this *vâda* of the *honorable apare sayâs* in the last part of the explanation, it should be noted in essence that it was made so because they have the will for some one to note in that way. In the present book too, when explanation was made of *rûpaghana* and *nâmaghana* in the section on *santati*, *rûpas* are described as the results of a certain *utu* and an *âhâra*. The *utuja rûpas* which have come to result step by step because of *tejo dhatu* within a *rûpa kalâpa*, which is like *cakkhudasaka kalâpa*, are the *rûpa dhammas* resulting from the a certain single *utu*. So also, like the *cakkhudasaka kâpa*, the *âhârajarûpas*, resulting step by step by support of the *ojâ* of the *ojâka âhârajarûpas*, are the *rûpa dhammas* resulting from a certain single *utu*. In cultivating and *vipassanâ* exercising on these *rûpa dhammas* as instructed this way until attainment of *khana paccuppana*, of acquiring eye of wisdom to arrive at *paramattha*, and only when the *paramattha* is so attained will the light of anatta brilliantly shine.]

This is how the *utujarûpas* and the *âhâraja rûpas* of the past, future and present times are designated by the power of *santati*. The designation of the past, future and present times of the *cittajarûpas* by virtue of *santati* is as follows.

Santati of Cittasamutthâna

The material phenomenon of consciousness produced from mind are called

1. *Rûpa* formed of a certain five door process,
2. *Rûpa* formed of a certain mind-door process,
3. *Rûpa* formed of a certain *samâpatti* = *samâpattivîthi* as the cause, are all the *paccuppana rûpa*.

The previous material phenomenon of mind formed of a certain five-door process, that formed of a certain mind-door process, and that formed of a certain *samâpatti* is the *rûpa* of the past. The material phenomenon of mind that is produced later is the *rûpa* of the future.

Santati of Kammasamutthâna

The *kamma*-produced *kamasamutthâna rūpa* by virtue of the *santati* process which are not differentiated as of the past, present and future respectively. (What it means is that because the material phenomenon formed of *kamma* is produced by the previous *kamma* there is no variation in the *santati*.) With respect to this assertion, it

should be noted that differentiation of the past, future and present by power of which

1. *Utusamutthana rūpa* (= material phenomenon formed of physical change),
2. *Āhārasamutthāna rūpa* (= material phenomenon formed of nutrition),
3. *Cittasamutthāna rūpa* (= material phenomenon formed of consciousness) can be produced.

After describing the past, future and present *rūpas* which are produced by power of *santati*, the *atthakathā* has explained the differentiation of the past, future and present *rūpas* by power of *samaya*.

Designation of the Past-Future-Present *Rūpas* by Power of *Samaya*

1. One *muhutta* (suddenly),
2. Morning time,
3. Evening time,
4. Night time,
5. Day time, etc.

The *rūpa* processes produced during these *samaya* = periods by virtue of the *santati* process all belong to present. The *rūpas* formed in a similar way previously all belong to the past, and those that will be formed later belong to the future.

Here, explanations have been given in older *atthakathās* in support of those meditators performing *vipassana kamatthana* exercise on various factors associated with *santati* and those associated with *samaya*. In this context –

1. *Samaya* = by power of *santati*, but not considering the time period –
2. Not considering the *santati*, but by power of *samaya*, the *rūpas* of the past, future and present should be analytically differentiated (*Mūlaṭī*.-2: 7; *Anuṭī*.-2: 12).

Paccupannarūpam nāma jātam khanattayapariyāpannanti attho. Tam pana ādito duppariggahanti santatipaccuppannavasena vipassanābhiniveso-kātabbo (*Mahāṭī*.-2:419)

In accordance with the explanation of this *tikā*, *rūpa* which is appearing, complete with the three minor *khanas* such as *upāda-tthi-bhaṇ*, is referred to as *rūpa* of the present from point of view of *udayabbaya nāṇa*. For a beginner, an *ādikammika* individual, recognizing this *paccuppanna rūpa* analytically is very difficult. To begin with, therefore, taking to heart via *vipassanā* by virtue of *santatipaccuppanna* must be exercised.

Tassa yadā nānam tikkham visadam hutvā pavattati, tadā rūpadhammo khane khane uppajjantā, bhijjantā ca hutvā upatthahanti (*Mahāṭī*.-2: 422).

In this way the mind of that meditator will become clear and active. Then in his knowledge will appear the recognition of the arising and perishing away of the *rūpa dhammas* and *nāma dhammas* with every passing moment (*Mahāṭī*.-2: 422).

Therefore, the *santatipaccuppanna* and *samayapaccuppanna* are very helpful to attain the *khanapaccuppanna* of the *rūpa-nāmaparamatta* through the eye of wisdom. For this reason the terms *santatikathā* and *samayakathā* have been explained by the older *atthakathā sayadaws*. In Pāli, however, direct mention has been made only of the two kinds: the *addhā* and *khana*.

Division of the Past-Future-Present by Way of *Khana*

The *rūpa* that belongs to the three minor *khanas* as *upāda-tthi-bhaṇ* is that of the present. That which was formed prior to this *rūpa* is that of the past, and all the *rūpas*

that would be formed after the present belong to the future (*Abhi-ttha*.-2: 7 - 8; *Visuddhi*.-2: 113).

Explained in Another Way

The *rûpa* of previous *hetukicca* and *paccayakicca* belongs to the past. The *rûpa* which is of accomplished *hetukicca*, but *paccayakicca* yet to accomplish, belongs to the present. When both *hetukicca* and *paccayakicca* are not yet accomplished, then the *rûpa* belongs to the future.

Or the *rûpa* still arising while at the moment of performing its *kicca* is that of the present. That which is of the time prior to the present is of the past. The *rûpa* that is formed later belongs to the future.

The *janaka* cause which can directly produce the *rûpa dhammas* is the *hetu* cause. The *upatthambhaka* cause which provides support is the *paccaya* cause.

Janaka (= *hetu*) which as a cause directly produces the *rûpa* is the *hetu* function. The provision of support by *upatthambhaka* as a cause (*paccaya* cause) is the *paccaya* function.

For example production of a sprout is the function of a fertile seed. Water-soil-*utu* (= *pathavîrasa-âporasa*-sunlight), which provide support in production of the sprout, is the function of water, soil, *utu* etc. (This is an example from mundane point of view).

Katattârûpa of *kamma* = the formation of *kamma*-produced *rûpa* and the resultant *nâma* is the function of this *kamma*. The support provided by the *âhâra* etc. in the production of the *kamma*-produced *rûpa* and the resultant *nâma* is the function of this *âhâra*. (This is an example from *sâsanâ* point of view).

Similar to the above examples, a certain *rûpakalâpa* and a certain *cittuppâda*, referred to as mind and mental concomitant = *kamma* which is a *janaka* force that can directly produce *kamma*-produced *rûpa* and the resultant *nâma*. Thus providing support by means of *paccaya* forces such as the *nânâkkanikakamma* force, *upanissaya* force and *âhâra* force. In these resultant *rûpa-nâma dhammas* too, the four-fold *nâmakhandhâs* and *paramatta dhammas* are reciprocating each other by way of *paccaya* forces such as *sahajâta* etc.. The four great elements of *bhûtarûpa* are supporting each other, as the *bhûtarûpa* is supporting the *upâdârûpa*, by way of *paccaya* forces such as *sahajâta* etc..

In this way, the *rûpa* which is arising and at the moment of performing its own function such as *hetukicca* (= *janakakicca*), *upatthambhakakicca* (= *paccayakicca*), is the present *rûpa*. The *rûpa* prior to this belongs to the past and that about to be formed to the future. (*Mulaṭī*.-2: 7; *Anuṭī*.-2: 12 – 13).

Certainty and *Pariyâya*

Ittha ca khanâdikathâva nippariyâyâ, sesâ pariyâyâ (*Abhi-Ttha*.-2: 8; *Visuddhi*.-2: 203).

.. In designation of the past, future and present, the terms *khanakathâ* and *kiccakathâ* are not *pariyâyâ* but are the terms of certainty. The remaining terms such as –

1. *Addhâkathâ* = a term related to time period of a *bhava*,
2. *Santatikathâ* = a term related to continuity,
3. *Samayakathâ* = a term related to time – are the terms accompanied by *pariyâyâ*.

Among various terms, the certainty but not the *pariyâyâ*, is what is required in this *Vibhaṇṇâli* (*Abhi-Ttha*.-2: 8).

The Designation of the Past-Future-Present in *Nâma*

Atîtâdivibhâge panattha santativasena khanâdivasena ca vedanâya atîtânâgata-paccupppannabhâvo veditabbo. Tattha santativasena ekavîthiekajavanaekasammapatti-

*pariyâpannâ ekavîthivisayasamâyogappavattâ ca paccuppannâ, tato pubbe atîtâ, pacchâ anâgatâ. **Khanâdivasena** khanattaya pariyâpannâ pubbantâparantamajjattagatâ sakiccañca kurumâna vedanâ paccuppannâ, tato pubbe atîtâ, pacchâ anâgatâ (Visuddhi-2: 104; Abhi.-Ttha.-2: 8).*

Here, in discriminating the past, future and present *santati* = by virtue of continuity and of *khana-kicca*, the state of being the past, future and present of the *vedanâ* (the four-fold *khandhâs*).

Then it could be stated from point of view of *santati* as follows.

1. *Vedanâ* related to one of five-door processes,
2. *Vedanâ* related to one of mind-door processes,
3. *Vedanâ* related to a certain *samâpatti*,
4. The unique feature of the Buddha as the only object of corporeality, the sound of recitation of *desanâ* as the only object of sense of hearing etc., the object received by the five-fold door processes, and the *vedanâ* that are included in *tadanuvattika*, mind-door processes etc. which still take them as the object, are the *paccuppanna vedanâs*. Those that were prior to these belong to the past, and those to be formed later belong to the future.

If stated in relation to *khana-kicca*, it will be as follows.

The *vedanâs* associated with the three *khanas*, such as *upâda-tthi-bhañ*, are all *paccuppanna vedanâs*. The *vedanâs* produced prior to those associated with these three *khanas* are of the past, and those arising after those associated with these three *khanas* are of the future.

The *vedanâs* produced between the front end, the *upâda*, and the hind end, the *bhañ*, i.e., *vedanâs* associated with the three *khanas*, and located midway between that prior to or after it, which are still in arising state and performing its own functions, are the *paccuppanna vedanâs*. The *vedanâs* which have arisen before these are of the past and those that are going to arise afterward are of the future (*Abhi.-Ttha.-2: 13; Visuddhi-2: 104*)

Note that it is the same in the remaining three *nâmakhandhâs* as in the case of the *vedanakkhandhâs*. This how the the past, future and present are appreciated in the five-fold *khandhâs*.

Bhûtam Bhûtato Passati

Bhûtam bhûtato passati = seeing things as they really are. With reference to this *desanâ*, some have conceived that *vipassanâ* exercise should be made with emphasis only on the *paccuppanna*. Now the explanation will be made as to what this *desanâ* really means.

Katthañca bhikkhave cakkhumanto passanti? Idha bhikkhu bhûtam bhûtato passati, bhûtam bhûtato disvâ bhûtassa nibbidâya virâgâya nirodhâya patipanno hoti. Evum kho bhikkhave cakkhumanto passati (Khu.-1: 224; Itivuttaka)

Bhûtanti khandhapañcakam. Tam hi paccaysambhûtattâ paramatthato vijjamânattâ ca bhûtanti vuccati. Tehnâ “bhûtamidañ bhikkhave samnupassathâ”ti. **Bhûtato** aviparîtasabhâvato salakkhanato samaññalakkhanato ca passati. Idam hi khandhapañcakam nâmarûpamattam. Tattha “ime pathavîdayo dhammâ rūpam, ime phassâdayo dhammâ nâmam, imâni nesam lakkhanâdîni, ime nesam avijjâdayo paccayâ”ti evum sapaccaya-

nâmarûpassanavasena ceva, “sabbepime dhammâ ahutvâ samobhanti, hutvâ pativanti, tasmâ aniccâ, aniccattâ dukkhâ, dukkhattâ anattâ”ti evum aniccânupassanâdivasena ca passatîti attho. Etavatâ tarunavipassanâpariyosânâ vipassanâbhûmi dassitâ. Nibbidâyâti bhûtasañkhâtassa tebhûmakadhammajâtassa nibbindanattâya, etena balava-vipassanam dasseti. Virâgâyâti virâgattam virajjanattham, iminâ maggam dasseti. Nirodhâyâti nirujjhanattham, iminâpi maggameva dasseti. Nirodhâyâti vâ patippassad-dhinirodhena saddhim anupâdisesanibbânam dasseti. Evum kho bhikkhave cakkhumanto passantîti evum paññâcakkhumanto sapubbâgena maggapaññâcakkhunâ catusaccadhammam passanti (Itivuttakatthakathâ: 170 – 171).

Bhutanti khandhapañcakam. Tahñi yathâsakam paccayeti jâtattâ, paramatthato vijjamâ-tattâ ca bhûmanti vuccati. Bhutatoti yathâbhûtasabhâvato salakkhanato, ca sâmañña-lakkhanato ca (Mahâfî.-2: 364).

Bhikkhus How do those who could rightly understand = those endowed with eye of wisdom, called *yathâbhûtañânadassana*, could visualize the phenomena in their true nature?

Bhikkhus In this *sâsanâ*, a meditating monk could visualize the five-fold *khandhâs* in their true nature, each resulting from its own respective cause, and each distinct by way of *paramattha* = via respective specific character, via general character referred to as the properties of impermanence, of suffering and of unreality, which are concerned with all elements of *paramattha*, the five-fold *khandhâs* are visualized by eye of wisdom (called *vipassanâditthi* and *maggasammâditthi*). He practices for the purpose of freeing himself from, attachment and clinging to the five-fold *khandhâs* with specific and general characters by discerning on their true nature. Bhikkhus Those who are endowed with the eye of wisdom, called *yathâbhûtañânadassana*, never falter but see things in their true nature (*Khu.-1: 224; Itivuttaka-Ditthigata Suttan*).

All these five-fold *khandhâs* are just the *nâma-rûpa*. In these five, “the *dhammas*, such as the *pathvî* etc., are *rûpa*; the *dhammas*, like *phassa* etc., are *nâma*. These are the *lakkhana-rasa-paccupatthâna-padatthâna* (property, taste, manifestation, and proximate cause) of the *rûpa-nâma*. These are the *dhammas* of *avijjâ, tahnâ, upâdâna, sañkhâra, kamma* etc., of the *rûpa-nâma*. By visualizing the *rûpa-nâma* and their causes in this way. And

“These *rûpa-nâmadhamma* and *sañkhâra dhammas* all just made their appearances all of a sudden now, and are non-existent before; persist away suddenly and are, therefore impermanence. Because of being impermanent, they are sufferings, and so they are unrealities.” In this way, by virtue of *aniccânupassanâ* etc., the visualization of the *rûpa-nâma* and their causes are acquired. This is what really is meant by *bhûtañ bhûtato passati* = seeing things as they truly are. This much description would suffice to indicate the location of *vipassanâbhûmi* = plane of the insight knowledge which culminates in the *tarunavipassanâ* (*Itivuttakatthakathâ: 170 – 171*).

[N.B. *Tarunavipassanâ* = *vipassanâ* in early stage is the name of four *ñânas*: *sañkhârapricchedañâna* (*ñâmarûpaparicchedañâna*), *kañkhâvikaranañâna* (*paccaya-pariggahanâna*), *sammasanâna*, *maggâmaggañâna* (= *udayabbayañâna*). *Sam.-Tîtha.-2: 50.*]

Nibbidâya = to be tedious with worldly life means to become weary of worldly affairs such as the *dhammas* of the three stages of being within the three planes of life. By this *nibbidâya*, a forceful *vipassanâ* referred to as *balavavipassanâ* is indicated by the

stanza (*Itivuttakatthakathâ*: 171).

[N.B. **Balavavipassanâ** is the name of four *ñânas* such as *bhayatûpatthânañâna*, *âdînavânupassanâñâna*, *muncitukamayatâñâna* and *sañkhârupakkhâñâna*. *Sam.-Ṭṭha*.-2: 50.]

Virâgâya = A practice leading to detachment from desire and craving. The *Ariyamagga* is indicated by the *virâga*. **Nirodhâya** = A practice leading to cessation of *râga* like desire and craving. By this *nirodhâya* too *Ariyamagga* is indicated. Put in another way, it is indicated that **nirodhâya** also can the extinguish fire of *kilesâ*, and is assisted to completely extinguish by *ariyamaggaphala* named *patipassaddhinirodha* and *khandha-parinibbana* named *anupâdisesanibbâna* (*Itivuttakatthaka*.-Ṭṭhâ: 171).

Evum kho bhikkhave cakkhumanto passanti = Bhikkhu ... The assertion that the noble ones who are endowed with the eye of wisdom, called *yathâbhûtañânadassana*, never falter but see things in their true nature means those who are so endowed could visualize the four truth, called the *dhamma* of the four noble truth, by means of *vipassanâcakkhu* together with *maggapaññâcakkhu* referred to as *pubbhâgasatipat-thânamagga* which occurs prior to *maggariyamagga* (*Itivuttakatthaka*.-Ṭṭhâ: 171).

In accordance with this opening of the *atthalathâ* – **bhûtam bhûtato passati** = **realizing things as they truly are** – note that it visualizing the four truth, called the *dhamma* of the four noble truth, by means of *vipassanâpaññâcakkhu* and *ariyamaggapaññâcakkhu*. In explaining this way, the *atthakathâ sayâdaw* has referred to excerpts – *bhûtamidam bhikkhave samanupassattha* etc. – from *Mûlapannâsapâli Mahâtahnâsañkhaya suttana* Therefore, these will be described here.

Extracts from *Mahâtahnâsañkhayasuttanna*

Bhûtamidanti bhikkhave passathâti. Evum bhante. Tadâhârasambhavunti bhikkhave passathâti. Evum bhante. Tadâhâranirodhâ yam bhûtam, tam nirodhadhammanti bhikkhave passathâti. Evum bhante (Ma.-1: 326).

Bhûtamidanti idam khandhañcakam jâtam bhûtam nibbattam, tuhmepe bhûtamidanti bhikkhave passathâti. **Tadâhârasambhavunti** tam panetam khandhañcakam âhârasambhavum paccayasambhavum, sati paccaye uppajjati evum passathâti pucchati. **Tadhâhâranirodhâti** tassa paccayassa nirodhâ (*Ma.-Ṭṭha*.-2: 207).

Hetupaccayehi jâtam nibbattam “bhûta”nti idhâdhippetam, tam atthato pañcakkhandhâ tabbinimuttassa sappaccayassa abhâvato, yañca khandhapañcakam attano tesañca bhikkhunam, tam “bhûtamida”nti bhagavâ avocâti âha “idam khandhapañcaka”nti. Attano phalam âharatîti âhâro, paccayo. Sambhavati etasamâti sambhavo, âhâro sambhavo etassâti aâhârasambhavum. Tenâha “paccayasambhava”nti. Tassa paccayassa anuppâdanirodhâ. Khananirodhâ pana kârananirapakkho (Ma.-Ṭṭi.-2:225).

Bhikkhus Do you realize as these five-fold *khandhâs* distinctly appear?

Our Lord We do.

Bhikkhus Do you visualize as these five-fold *Khandhâs* make their appearance because of the presence of causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sañkhâra* and *kamma*?

Our Lord We do.

Bhikkhus Do you realize that the five-fold *khandhâs* cease, at the time of *parinibbâna*, by means of non-reappearable cessation, called the nature of *anuppâdanirodha*, because of the dissolution of the causes like *avijjâ*, *tahnâ*, *upâdâna*, *sañkhâra* and *kamma* by means of non-reappearable cessation, called *anuppâdanirodha*, by virtue

of *arahattamagga*.

Our Lord We do. (*Ma*.-1: 326).

In this *suttana* the Buddha, in continuation, has expatiated *anulomapaccayakâra*, referred to as the process of formation of *sansarâ* called the *anulomapaticca samuppâda desanâ*, and the *patilomapaccayakâra*, referred to as the process of dissolution of the *sansarâ* called *patilomapaticca samuppâda desanâ*.

In concord with these *desanâs* – *bhûtam bhûtato passati* – realizing things as they really are is explained as follows.

1. The truth of suffering of the five-fold *khandhâs* with past, future, present, internal, external, gross, delicate, inferior, superior, remote, near etc. as 11 characters which the *âsava dhamma* take as object and at which attachment by *tahnâ-ditthi* is made as I-Mine, are realized by insight knowledge referred to as *attapaccakkhañâna*. And are also realized by *asammohapativedha* (discriminative insight of the object) and *ariyamaggapaññâ* which can visualize penetratively.
2. The *avijjâ*, *tahnâ*, *upâdâna*, *sañkhâra* and *kamma* named the truth of arising of the sufferings of the past cultivated when the previous existence was established,
2. the distinct formation as the resultant these causes of the present five-fold rebirth *khandhâs* as the truth of arising of the sufferings, and because of these causes the future five-fold rebirth *khandhâs* as the truth of arising of the sufferings, are realized by insight knowledge known as *attapaccakkhañâna*. And are also realized by *asammohapativedha* and *ariyamaggapaññâ* which can visualize penetratively. (It is the *paccayato udayadassana*. See *Visuddhi*-2: 267).
3. When vipassanâ exercise is made on the truth of arising of the sufferings as the causative factor and the truth of sufferings as the resultant, the meditator sees the arising and perishing away of the truth of sufferings, the truth of arising of the sufferings, the nature of impermanence, suffering and non-self of these *sañkhâra dhammas*, by insight knowledge called *attapaccakkhañâna*. They are also realized by *asammohapativedha* and *ariyamaggapaññâ* which can visualize penetratively. (It is vision of truth of sufferings due to penetrative knowledge of *jâtidukkha* and *maranadukkha*. *Visuddhi*-2: 267).
4. When the causes, the truth of the origin of sufferings, get extinguished because of *arahattamagga* by way of non-reappearable cessation called *anuppâdanirodha*, the resultant *upâdânakkhandhâs* enter *khandhaparinibbana* and get dissolved by way of non-reappearable cessation. This is realized by insight knowledge referred to as *attapaccakkhañâna*. It is also realized by the penetrative sight of *ariyamaggapaññâ* by virtue of nature *asammohapativedha*. (It is the *paccayato veyadassanañâna*. *Visuddhi*-2: 267).
5. When one is able to exercise vipassanâ on the *vipassanâñâna* which can concentrate, referred to as *pativipassanâ*, then *sammâditthi* (= insight knowledge), *sammâsañkappa* (= *vitakka*), *sammâsati*, *sammâsamâdhi* (= *ekaggatâ*) which are the *lokîmaggasaccâ dhammas* initiated by *vipassanâñâna* associated in the absorption of the *vipassanâ* discerning at that moment, are also realized by insight knowledge referred to as *attapaccakkhañâna*. It is also realized by the penetrative sight of *ariyamaggapaññâ* by virtue of nature *asammohapativedha*. (It is nominated as *maggasaccâ* because these *lokîmaggañ dhammas* can detach, for a moment, the delusion which hinders the understanding of nature of arising and

passing away of *sañkhâra* phenomena. It is the *lokîmaggasaccâ*. *Visuddhi-2*: 267-268).

6. At the end of insight knowledge and when *ariyamaggañâna* appears distinctly, the noble *dhamma* called the truth of cessation of suffering referred to as the *asañkhataadhâtu* and the element of peacefulness, the *nibbâna*, will also be visualized. (It is the *lokuttara nirodhasaccâ*, and the *arammanapativedha*).
7. The noble eightfold path associated with *ariyamagga* is the *maggasaccâ*.

The *ariyamagga* also can discern the *maggasaccâ dhamma* by way of *asammohapativedha*. (It is the *lokuttarâ maggasaccâdhamma*. It is the *asammohapativedha*).

In this way, those who are possessed of the insight knowledge referred to as *attapaccakkhañâna* and eye of wisdom, called *ariyamaggapaññâ*, can see the four-fold truth *dhamma* (*catusaccadhamma*) of the *lokî* and *lokuttarâ* by the eye of insight knowledge before, and by the eye of *ariyamaggapaññâ*, during the *ariyamaggakhana*. The realization in this way has been designated as – *bhûtaṃ bhûtato passati* – seeing things as they really are.

In accordance with these explanations, from aspect of *bhûta* – the causes of the present *upâdânakkhandha*, when the *kamma bhava* was being cultivated, initiated by *avijjâ*, *tahnâ*, *upâdâna*, the *kilesavatta* and *upâdânakkhandhâ*, the *kammavatta* and *upâdânakkhandhâ* called the *sañkhâra* and *kamma*, and root of these *kilesâ vatta* called the *vipâkavatta* and *upâdânakkhandhâs* of the previous *bhava* are also included. The present *vipâkavatta upâdânakkhandhâ* resultants, due to these past causes, are also included here.

Therefore, the cause *upâdânakkhandhâ* and the resultant *upâdânakkhandhâ*, within the three periods of the past, future and present, are discerned until their specific characters are attained. The realization of the specific characters, together with *rasa*, *paccuppatthâna* and *padatthâna*, of each of *paramatthadhâtu* associated with these five-fold *khandhâs* by means of *vipassanâpaññâcakkhu* and *ariyamaggapaññâcakkhu* can also be taken to see things as they really are.

Again, realization, by *vipassanâpaññâcakkhu* and *ariyamaggapaññâcakkhu*, of distinct arising of the resultant *upâdânakkhandhâ* because of the existence of causes *upâdânakkhandhâ* referred to as *kilesâvatta*, *kammavatta*, and because of the dissolution of the causes *upâdânakkhandhâ* by the nature of *anuppâda-nirodha* due to *arahattamagga*, the resultants *upâdânakkhandhâ* cease when they enter *parinibbâna* by means of *anuppâdanirodha*, can also be taken to see things as they really are.

Again, the understanding the impermanent, the suffering and non-self phenomena of the cause *upâdânakkhandhâ* and the resultant *upâdânakkhandhâ* by virtue of the *vipassanâpaññâcakkhu* and *ariyamaggapaññâcakkhu* is also seeing things as they really are.

The realization of *vipassanâmanodvârikajovîthi* groups of mental processes, called the *vipassanâñâna* which can concentrate, and their *anicca*, *dukkha* and *anatta* phenomena, by way of *vipassanâpaññâcakkhu* and *ariyamaggapaññâcakkhu* is also seeing the things as they really are.

Once again realization of *Nibbâna dhamma*, which is the *lokuttarâ nirodhasaccâ*, by way of *ârammanapativedha* and *ariyamaggapaññâcakkhu* is called seeing things as they really are.

Therefore, the *desanâ – bhûtam bhûtato passati* = seeing things as they really are, is not one that instruct to meditate on just the present, ignoring the attainment of the cause *upâdânakkhandha* and resultant *upâdânakkhandhâ* in any convenient way without treating *paññatti* and *paramatta* separately nor distinguishing the two. It must be noted that this *desanâ* instructs to concentrate, on the cause *upâdânakkhandha* and resultant *upâdânakkhandhâ* to arrive at their specific and general characters and until the truth of the cessation of sufferings the *nibbâna* is attained, by the *vipassanâpaññâcakkhu* and *ariyamaggapaññâcakkhu*.

The Pillars of Sâsanâ

Suppose you, as a meditator, wish to see, arrive at, know, penetrate by knowledge of yours, and oriented toward the *mahâasañkhatadhâtu nibbâna dhamma*, which is the abode of Bhuddhas and the Noble Ones. Then, to acquire it you must practice the Noble Eight Path exercise, without deviation in the direction, which is forceful enough to attain *nibbâna* straight away. While you are on the right path there are (Four Vinaya) Four Rules of Bhuddhist Order that you must abide by to keep you from straying away from the right direction. The four rules are:

1. *Sutta*,
2. *Suttanuloma*,
3. *Ācariyavâda* and
4. *Attanomati*.

1. *Sutta*

Suttam *nâma tisso sangîtiyo âruhlâni tîni pitakâni. (Dî.-Ttha.-2: 158).*

Sutta – The first *pancasatikasangâyanâ* was held by (500) *rahantâ* supervised by the Reverend Ashinmahâkassapa, the second Council *sattasatikasangâyanâ* by (700) *rahantâ* supervised by the Reverend Ashinmahâyasa and the third *sahassikasangâyanâ* by (1000) *rahantâ* headed by the Reverend Ashinmahâmoggaliputtatissa, and the *Sutta-Vinaya-Abhidhammâ*, together called The Triad of *Pitaka* presented and passed by these three *sangâyanâ* are the ***Sutta***. Why it was so named is as follows.

In the triad of *pitaka*, including *suttan pitaka*, the Buddha has set forth various kinds of practice and working processes for acquiring one's own and others' triad of benefit as man-god-*nibbâna*, the everlasting peace. For those god, man, *byahmâ*, *veneyya* and sentient beings who are to be relieved of the worldly affairs, exhortations have been made in different ways relevant to their *icchâsayadhâtu*, their habit and conditions. Because the triad of *pitaka* can expose the sentient beings to various sorts of benefit, it has been named ***sutta***.

As paddy plant would bear fruits, so would triad of *pitaka*, bless peace on human, god, *byahmâ* and peace of *nibbâna*, and because the triad yields various kinds of peace, it is name ***sutta***.

As a cow would let the milk down, so would the Buddha's instructions, called the triad of *pitaka*, bless different kinds of benefit as peace on human, god, *byahmâ* and peace of *nibbâna*, and because of this, it is named ***sutta***.

Because the Buddha's speeches, referred to as the triad of *pitaka* will look after the well-being of the human, *byahmâ* and *nibbâna*, and care of the various kinds of good practice for acquiring these benefits, it is again named ***sutta***.

A measuring tape, used by a carpenter in choosing the right measure of a piece of wood, and sawing up a measured dimension, is the *sutta*. A line marking the measured dimension is the amount needed, because if the wood is sawed up long the measured line, it would give the dimension required. Similarly the triad of *pitaka* direct – this is the way to *nibbâna* – one to *nibbâna*. And since these *desanâs* are directing one to *nibbâna* as the measured line of demarkation enables the carpenter to cut the right dimension, it is called *sutta*. If a controversy ever arises with regard to the right or wrong way to the *nibbâna*, then it is the triad of *pitaka*, named *sutta*, on which the wise would rely to decide which is the right way and which is not.

As wind cannot disperse the flowers held by a thread in garland, so will the benefits such as the peacefulness of human, *byahmâ* and *nibbâna*, held together by the force of practice and working processes provided by the triad. Because of this property, the triad of *pitaka* is nominated as *sutta* (*Dî.-Ttha.-1: 18*).

Those Who Are Rejecting the Buddha

Tattha suttam appatibâhiyam, tam patibâhantena buddhova patibâhito hoti (Dî.-Ttha.-2: 158).

The meaning of this *atthakathâ* is this. If someone presented a statement of the four *vinaya*, *sutta* etc. inclusive, and if it is the *sutta* called the triad of *pitaka*, which has been presented to and passed by the three *sangâyanâs*, then it should not be rejected. If the statement = the *pitaka* is rejected or ignored, then it is no other than rejecting or ignoring the *sammâsambuddha* (the perfectly enlightened ones). This is what the *atthakathâ* really means.

This statement in the *atthakathâ suttamahâvâ*, opening as the explanation of the meaning of Mahâparinibbânasuttana, is for a meditator, who is going along the path leading to *nibbâna*, to follow and be kept firmly in mind. A meditator is reminded that, when searching for the right path to *nibbâna*, and when following this road, the Buddha is the best guide referred to as *maggakkhâyî* (one who tells the right way) and must not be ignored.

What Utterings of Sammâambuddhas Are

Yañca bhikkhave rattimtathâgato anuttaram sammâsambhodhim abhisambucchati, yañca rattim anupâdisesâya nibbânadhâtuyâ parinibbâyati, yañ etassamim antare bhâsati lapati niddisati, sabbam tam tatheva hoti no aññathâ. Tassamâ "tathâgato"ti vuccati. (Am.-1: 332 – Lokasuttan).

Bikkhus I, as one who has found the truth and your teacher, can penetratively discern the knowledge of the perfectly enlightened, called the uncomparable highest stage of the path knowledge and knowledge of omniscience, in the night. In the night I entered the stage of *parinibbâna* by way of *anupâdisesanibbânadhâtu* called dissolution of the five-fold *khandhâs* in a non-reappearable cessation. During the span of those two nights, I speak, expatiate and instruct the *dhamma*. These complete *dhamma* speeches are true as they are spoken, extorted and advised. There never is the other any thing that is untrue in itself. Therefore, you all should recognize me as your teacher the *tathâgata* (*Am.-1: 332*).

With reference to the above *Pâli*, starting from the night of attainment of perfectly enlightened stage until the night *parinibbâna* (demise), a duration of (45) years of his life, all the *dhamma* speech that the Buddha has given are nothing but the truth. There is none

that is other than the truth. Suppose a meditator would like to reject these true speeches. Then he should have, in his *santâna*, a knowledge comparable to or superior to the analytically preached *dhmma* and the completely self-enlightened knowledge acquired through practice of the (30) species of the 10-fold perfection for four *sankkheyya* and a lakh of universes. Only then he can establish a *sâsanâ* parallel to the knowledge of omniscience.

The Buddha himself, however, has already exhorted to the famous upaka that there is there is no such as thing as knowledge comparable to superior to the knowledge of omniscience.

*Na me âcariyo atthi, sadiso me na vijjati.
Sadevakassamim lokassamim, natthi me patipuggalo.
Aham hi arahâ loke,, aham satthâ anussaro.*

Ekohm sammâsambuddho, sîtibhûtosami nibbuto (Ma.-1: 227).

Upaka There is no one who as a teacher has advised me to acquire the knowledge of omniscience, I am uncomparred. There is no one among the *devas* nor in the whole *loka* who can compete with me.

In this *loka* the I am the *Rahantâ*, non-imitable, leader of the *devas* and humans. I am the only God who rightly self-understands the whole *dhmma*. I am peaceful as all moral defilements have been extinguished (Ma.-1: 227).

Read following again.

*Advacchavacanâ buddha, amoghavacanâ jinâ.
Vitatham natthi buddhânam, dhuvum buddho bhavâmaham.
Yathâ khittam nabhe littu, dhuvum patati bhûmiyam.
Tatheva buddhasitthânam, vacanam dhuvasassatam.
Yathâpi sabbasattânam, maranam dhuvasassatam.
Tatheva buddhasitthânam, vacanam dhuvasassatam.
Yathâ rattikkhaye patte, sûriyuggamanam dhuvum.
Tatheva buddhasitthânam, vacanam dhuvasassatam.
Yathâ nikkhantasayanassa, sîhassa nadam dhuvum.
Tatheva buddhasitthânam, vacanam dhuvasassatam.
Yathâ âpannasattânam, bhâramâropanam dhuvum.
Tatheva buddhasitthânam, vacanam dhuvasassatam
(Buddhavumsa- 306, etc.)*

The *buddhas* are not used to speak double entente. The *buddhas*, who have destroyed the five-fold evil, do not speak nonsensical words. Their speeches are never erroneous. Therefore, I should definitely be the Buddha.

As stone thrown upwards will definitely come down, so are the speeches of *buddhas* are always right.

The words of the *buddhas* are always true as the universal truth that all living things must succumb to death.

It is true that the sun always rises when the night comes to its end, similarly true always are the speeches of the *buddhas*. It is true that a lion will always roar as he comes out of his den after sleep, and so it is also true that the *buddhas* always speak truth.

It is true that a pregnant woman would give birth to her child after carrying it full term, and in the same way it is true that the *buddhas*' speeches are always true.

These are the words of the Buddha that come in the section on Niyatabyâdita of the hermit Sumedhâ.

3. *Suttânuloma*

Suttânulomam nâma nulomakappiyam (*Dî.-Ttha.-2*: 158).

Suttanuloma is the four-fold *vinaya mahâpadesa* in the *Vinayadesanâ* and the four-fold *suttanamahâpadesa* in the *Suttanadesanâ*. The four-fold *vinayamahâpadesa* is given in *Vinayamahâvâpâli Bhesajjkkhandhaka* (348 – 349). The four-fold *suttana-mahâpadesa* is given in *Suttamahâvâ Mahâparinibbânasuttana* (*Dî.-2*: 202 – 204).

The Four-Fold *Vinayamahâpadesadhamma*

1. Bhikkhus I should not advice you to reject a certain thing as “this thing is not suitable”. It should be investigated with reference to *vinayadesanâ*, and if it is more towards the irrelevance than the relevance, then my sons, it is not suitable for you.
2. Bhikkhus I should not advice you to reject a certain thing as “this thing is not suitable”. It should be investigated with reference to *vinayadesanâ*, and if it is more towards the relevance than the irrelevance, then my sons, it is suitable for you.
3. Bhikkhus I should not permit you to accept a certain thing as “it is suitable.” That which is not permissible, when investigated referring to the *vianayadesanâ*, and if it is more towards the irrelevance than the relevance, then my sons, it is not suitable for you.
4. Bhikkhus I should not permit you to accept a certain thing as “it is suitable.” That which is not permissible, when investigated referring to the *vianayadesanâ*, and if it is more towards the relevance than the irrelevance, then my sons, it is suitable for you (*Vi.-3*: 348 – 349).

These are the four main rules named as *mahâpadesa* exhorted in the *vinayadesanâ*. “This is the affair suitable for the monks, and this not.” If an affair is to be decided whther it is suitable or not, then the decision has to be made in consultation with the four-fold *vinaya* rules, called *vinayamahâpadesa* given in the above *vinayadesanâ*. When compared with the four-fold *vinaya* rules, any affair in favor of the suitability should be decided as “this affair is suitable.” If not in favor, then ti should be decided as “this an unsuitable affair.”

Here for the purpose of a better understanding, the decision made with reference to the four-fold *vinayamahâpadesa* by Saṅgâyana Thera, named Dhammasangâha Thera, have been extracted below.

Anujânâmi bhikkhave sabbam phalarasam tthapetvâ dhaññaphalarasam (*Vi.-3*: 344).

Bhikkhus ... Except the paddy juice (a cordial made from paddy juice), I permit you to have all kinds of fruit juice (a sweet drink made from the fruits).

In the above *pâli* stanza, the Buddha has prohibited the *bhikkhus* from drinking the juice made from seven kinds of paddy in the afternoon.

Palm fruit, coconut, domestic and mountain jackfruit, gourd, pumpkin and three varieties of cucumber and various peas and beans are treated similar to the paddy. Although the juice made from these nine kinds of fruit are not directly prohibited from drinking by the *bhikkhus* in the *vinayapâli*, but are associated with the paddy the juice of which is unsuitable to drink in the afternoon. Therefore, the juice made from these nine kinds of fruits and peas and beans are not suitable for the *bhikkhus* to consume in the

afternoon (*Vi.-Ttha.*-3: 384 – 385).

Anujânâmi bhikkhave attha pâñâni ambapânam cocapânam mocapânam madhûkapânam muddikapânam sâlûkapânam phârusakapânam (*Vi.*-3: 344).

Bhikkhûs I permit you to consume (if there is evident indication of hunger among you in the afternoon) eight kinds of juice: mango juice, black plum juice, domestic and wild banana juice, thitmecî juice, grape juice, lotus fruit juice, phet-thet-tayaw fruit juice (*Vi.*-3: 344).

These eight kinds of juice are what the Lord has directly permitted the *bhikkhûs* to consume. With exception of the nine kinds of fruits, the seven kinds of paddy, various kinds of peas and beans, rattan fruit juice, lemon juice, stone apple juice, and various other small fruit juices are similar to the eight kinds of fruit juices permitted. Even though the small fruit juices are not permitted directly by the Buddha, but are associated with the eight kinds permitted. Therefore, if there is a strong evidence of thirst among the *bikkhûs* in the afternoon, these juices can be consumed (*Vi.-Ttha.*-3: 385).

These are some instances of decisions as to whether suitable or not in case of *vinaya*, called **suttanuloma**, made by Sangâyanâ Mahâthera with reference to the four Mahâpadesadhamma.

The Four-Fold Suttanamahâpadesâ

The Buddha, *sammâsambuddha*, who proclaimed himself to be omniscient, penetratively knows all there is to know through *sayamabhûñâna* without other's help. In the year when He was to succumb to the inexorable law of change the *prinibbâna*, the Buddha was at the *Câpâla cetî* in Vesâli State. On the fullmoon day of the month of Tapotwe (February) He determined, via *satisampazañ ñâna*, to get absorbed in the *arahattaphala phalasamâpatti*, by the three names of *âyusañkhâ*, *âyupâlaka* and *jîvitasañkhâra*, so as to lengthen His life until the fullmoon day of Kasun (May). Determination this way is getting relieved of the *âyusañkhâra*. From that State the Buddha continued the journey until the City of Bhoga is arrived at. Here at the *Ãnadâ Cetî*, the Buddha preached the **Four-Fold Suttanamahâpadesa dhamma** to the *bhikkhus*.

The First Mahâpadesadhamma

1. In the domain of this *sâsanâ*, if any monk claims as “this is *dhamma* I have heard and received right from the Lord's mouth. This is the Doctrine; this is the *Vinaya*; and this is the discourse”.

Bhikkhus That claim must not be accepted nor rejected right away. Before accepting or rejecting the claim, it must be consulted word by word with the *vinaya* and *suttana*.

When consulted this way, if the words do not agree with the *vinaya* nor *suttana*, then it is false claim, and must be decided as “it is not the true utterings of the Buddha, this monk must have learnt erroneously from some others.” After that decision, the claim must be disregarded and ignored.

On the other hand, if the claim agrees with the *vinaya* and *suttana* when consulted, then it must be taken as “what the monk said is truly the utterings of the Lord, he has learnt rightly.” Bhikkhus Note and remember the *mahâpadesa* in the first place.

The Second Mahâpadesadhamma

Again, Bhikkhus If any monk claims as follows.

“At a certain monastery, *Sanghâs* headed by a *Thera* are residing. This is what I have listened to and heard right from that *sanghâ*. This is the *dhamma*; this is the *vinaya* and this is the *suttana*. It is what the Buddha has admonished.”

Bhikkhus What the monk has said must not be accepted nor rejected at once. Before accepting or rejecting the claim, it must be consulted word for word with the *vinaya* and *suttana*.

In doing so, if what the monk claims does not agree word for word with the *vinaya* and *suttana*, then decide as “what this monk has claimed is not the true utterings of the Buddha; he must have erroneously learnt it. Bhikkhus If the decision has been made that way, then condone the whole affair.

On the other hand, if the claim agrees with the *vinaya* and *suttana* when consulted, then it must be taken as “what the monk said is truly the utterings of the Lord, he has learnt rightly.” Bhikkhus Note and remember this second *mahâpadesa*.

The Third *Mahâpadesadhamma*

Once again, Bhikkhus In the domain of this *desanâ*, a certain monk may claim as follows.

“In a certain monastery, many a monks *Thera* are staying. They include *âgamasuta* = those who learn from listening, *adhigamasuta* = those who learn from practice, wise and well-versed, those who got *Pâli*, *suttaabhidhammâ*, *vinaya* and *mâtikâ*, by heart. I have listened to and heard right from these *Theras*. This is the *dhamma*, this is the *vinaya* and this is the Lord’s discourse.”

Bhikkhus Do not accept or reject the claim easily. It should not be rejected nor accepted as yet. Note carefully what the monk said and consult with the *vinaya* and *suttana* word for word.

In doing so, if what the monk claims is not agreement word for word with the *vinaya* and *suttana*, then decide as “what this monk has claimed is not the true utterings of the Buddha; he must have erroneously learnt it. Bhikkhus If the decision has been made that way, then forget the whole affair.

On the other hand, if the claim agrees with the *vinaya* and *suttana* when consulted, then it must be taken as “what the monk said is truly the utterings of the Lord, he has learnt rightly.” Bhikkhus Note and remember this third *mahâpadesa*.

In doing so, if what the monk claims does not agree word for word with the *vinaya* and *suttana*, then decide as “what this monk has claimed is not the true utterings of the Buddha; he must have erroneously learnt it. Bhikkhus If the decision has been made that way, then condone the whole affair.

On the other hand, if the claim agrees with the *vinaya* and *suttana* when consulted, then it must be taken as “what the monk said is truly the utterings of the Lord, he has learnt rightly.” Bhikkhus Note and remember this second *mahâpadesa*.

The Fourth *Mahâpadesadhamma*

Furthermore, Bhikkhus In the domain of this *desanâ*, a certain monk may claim as follows.

“In a certain monastery, a *Thera* is staying. He *âgamasuta* = he who learns from listening, *adhigamasuta* = he who learns from practice, the wise and well-versed, who got *Pâli*, *suttaabhidhammâ*, *vinaya* and *mâtikâ*, by heart. I have listened to and heard right

from this *Thera*. This is the *dhamma*, this is the *vinaya* and this is the Lord's discourse."

Bhikkhus Do not accept or reject the claim easily. It should not be rejected nor accepted as yet. Note carefully what the *Thera* said and consult with the *vinaya* and *suttana* word for word.

If what the *Thera* claims is not agreement word for word with the *vinaya* and *suttana*, then decide as "what this *Thera* has claimed is not the true utterings of the Buddha; he must have erroneously learnt it. Bhikkhus If the decision has been made that way, then forget the whole affair.

On the other hand, if the claim agrees with the *vinaya* and *suttana* when consulted, then it must be taken as "what the *Thera* said is truly the utterings of the Lord. The *Thera* has learnt rightly." Bhikkhus Note and remember this fourth *mahâpadesa*. The Buddha exhorted as Bhikkhus Note these four-fold *mahâpadesa*.

These are the four Great Upadesa named *Suttanamahâpadesa* as given in the *Mahâparinibbânasuttana* (Dî.-2: 201 – 204).

Anulomakappiya = Suttânuloma

Anulomakappiyam pana suttena samintemeva gahetabbam, na itaram (Dî.-Ttha.-2: 158).

If a certain monk claims as "This is the *dhamma*, this is the *vinaya*, and this the Buddha's discourses" referring to

1. The Buddha,
2. The *Sanghâ*,
3. A *Thera*, or
4. The *Theras*, then you are confronted with making decision on whether it is *dhamma-vinaya* or not. This decision has to be made with reference to the four-fold *mahâpadesa* as to whether the claim is valid or not. Any claim in concord with the four-fold *mahâpadesa* is to be taken as the truth. That which is irrelevant with the four-fold

mahâpadas is not true however much the monk insists that it is.

If any talk from the other side is, after referring to the four-fold *mahâpadesa*, *suttânuloma*, it has to be accepted only if it is consistent with the *Pitakapâli*, called *sutta*, if not it is not accepted.

Once again, if the *Pâli* presented by the other side, and even it has been claimed as "to have made with reference *Saṅgâyanâ pâli*", it has to be presented to and passed by the previous three *saṅgâyanâs*. If it not presented to and passed in this way, then it cannot be taken as true (Dî.-Ttha.- 2: 157).

3. *Ācariyavâda*

Ācariyavâdo nâma atthakathâ (Dî.-Ttha.- 2: 158).

Ydipi tattha tattha bhagavatâ pavattitapakinnakadesanâva atthakathâ, sâ pana dhamma-saṅgâhakehi patthamam tîni patikâni saṅgâyitvâ tassa attthaovannânupeneva vâcanâ-maggam âropitattâ "âcariyavâdoti vuccati, âcariyâ vadanti samvanninti pâli etenâti. Tenâha – âcariyavâdo nâma atthakathâ"ti. Tisso saṅgîtiyo ârunhlo eva ca buddhavacana-sa atthasamvannanâbhûto katthâmaggo mahinadattherena tambapannidîpam âbhto pacchâ tambapanniyehi mahâtherehi sîhalabhâsâya tthapito nikâyantaraladdhisaṅkara-pariharanattam. (Dî.- Tî.-2: 168 – 169).

At the time when the Buddha was still alive various *desanâ* = *pâli* admonished by the Lord himself at various occasions, called *Pakaṇṇa desanâ*, is *Ācariyavâda*. The

learned ones have explained it in the light of *pālipitaka* and named it as *atthakathā*. Then that it is presented by the Noble *Theras* and consulted with the *atthakathā* at the *saṅgāyanā*, and with reference to the meaning given by that *atthakathā* is proceeded to prescribed teaching = *vācanāmagga*. This *atthakathā pakinnadesanā* is referred to as *ācariyavāda* as its *pālipitaka* has all along been explained by *saṅgāyanā Thera* teachers. The Reverend Mahāmahinda *Thera* has brought that speech, triply-nominated as *ācariyavāda*, *atthakathā* and *pakinnadesanā*, to Sri Lanka. Lest there might be confusion with the *vāda* of other sects, the Sri Lankan *Theras* have translated it into Sinhalese language.

The Reverend Mahābuddhaghosa *Thera* condenses the repetitive explanations of *mahāatthakathā* = original *pakinnakadesanā*, written in Sinhalese, based on the main theme of work. Proper *pitaka* in relevant places are put and *sanvannetabbapāli* opening *savannā atthakathā* are selectively combined. In some cases are inserted the relevant *pitakas* extracted from *Kurnudiaṭṭhakathā*, *Mahāpaccariyaatthakathā* etc., prevailing at that time in Sri Lanka. In some cases still, decisions by the Great *Theras* like *Mahāpaduma Thera*, *Mahāsiva Thera* etc. which are *attanomati*, called *Theravāda* mentioned and translate the Ceylon *atthakathā* into *māgadhi* language = *pāli* language and write a new *atthakathā* under the title of *Saṅghaṭṭhakathā*. Of the four-fold *vinaya*, the third one called *Ācariyavāda*, is no other than the *atthakathās* of the present days.

Ācariyavādopi suttēna samaññoyeva gahetabbo, na itaro (Dī.-Ttha.-2: 169).

Pamādapāṭṭhavesena ācariyavādassa kadāci pāliya asansandanāpi siyā, so na gahetabboti dassaṇto āha “ācariyavādopi suttēna samaññoyeva gahetabbo”ti (Dī.-Tī.-2: 169).

It may sometimes happen that this *ācariyavāda* (= *pakinnadesanā* = *atthakathā*) *pamādapāṭṭha* (recitation negligently of the traditionally brought along *atthakathā*, by the *Theras*), *pamādalekha* (= writing and copying negligently) is not consulted with the *pitakaatthakathā*. Therefore, the *ācariyavāda* is taken as true to be only when it is consistent with the *pitakaatthakathā*, called *sutta*, and is not to be taken true when it is inconsistent with the *pitakaatthakathā*.

4. *Attanomati*

Attanomati nāma nayaggāhena anubuddhiyā attano patibhānam (Dī.-Ttha.-2: 158).

Attanomti nāma theravādo. Nayaagāhenāti suttādito labbhamānanayaggahanena.

Anubuddhiyāti suttādīniyeva anugatabuddhiyā. Attano patibhānanti attano eva tassa atthassa vuttanayena upatthānam, yathā upatthitā atthā eva tathā vuttā (Dī.-Tī.-2: 169).

Attanomati means the *theravādas* which are the essence of knowledge acquired by means of own analytical way following the three early methods called the *sutta*, *suttānnuloma* and *ācariyavāda*. Especially the exhortations, described in the *atthakathā* by the great famous *Theras*, *Mahāpadumatheravāda*, *Mahāsumatheravāda*, *Mahāsivatheravāda* etc. are associated with this fourth *vinaya* called *attanomati*.

Attanomati pana sabbadubbala, sāpi suttēna samantāyeva gahetabbā, na ittarā (Dī.-Ttha.-2: 158).

Sabbadubbala puggalassa sayam patibhānabhāvato. Tathā ca sāpi gahetabbā, kīdisi? suttēna samantāyevāti yojanā (Dī.-Tī.-2: 169).

Thinking of the various *Theras*, the *vādas*, called the *attanomati*, are few and far from complete. Therefore, the *attanomati* also consulted with *pitakapāli*, referred to as the *sutta*, and is taken to be true only when consistent with it and rejected if it is inconsistent.

Because it has the essence of knowledge acquired by means of own analytical way following the three early methods called the *sutta*, *suttâ-nnuloma* and *âcariyavâda*, the *theravâda*, called *attanomati*, is taken to be far from being complete. However incomplete it may be, if *attanomati* is consistent with *pitakapâli*, referred to as *sutta*, it must be accepted.

This all there is to it with respect to the **four pillars of *sâsanâ***, named the four-fold *vinaya*, which the people of good intension willing to attain *nibbâna* must respectfully be aware of.

Those Who are Deviating from the *Sâsanâ*

Duppatipanno hi sâsanam bhidanto satthudhammasarîre pahâram deti nâma (Udâna-atthakathâ- 87).

An individual who is exercising on the practice inconsistent with the four-fold *vinaya*, referred to as the four pillars of *sâsanâ*, is said to be a *duppatipanna*. Put in another way, a person is called a *duppatipanna* when he does not practice the right way by not following the instructions by the Buddha called *sâsanadhamma* that is consistent with *pitakapâli* referred to as *sutta* the basic causes for the purpose of escaping from the suffering of the *sansâric* circle. He is the one who is destroying the Buddha's *sâsanâ*, and is said to be insulting the main body of the Buddha's *sâsanâ*, besides causing damage to it. This is the real easence of the above *atthakathâ*.

Sammâsambuddha Bhâsita Dhamma

The *duppatipanna*, who is wrongly practicing by taking *adhamma* as *dhamma*, and vice versa, has been indicated by the above *udânaatthakathâ* to be causing damage to the *sâsanâ*. If a meditator is not satisfied with this exultation, then go through the exhortations given by the *sabbaññusammâsambhuddha* given below.

Ye te bhikkhave bhikkhu adhammam "dhammo"ti dîpinti. Te bhikkhave bhikkhu bahujanaahitâya patipannâ bahujanaasukhâya bahuno janassa anattâya ahittâya dukkhâya devamanussânâ. Bahuñca te bhikkhave bhikkhu apuññam pasavunti, te cimam saddhammam antaradhâpinti (Am.-1: 18).

Ye te bhikkhave bhikkhu dhammam "adhammo"ti dîpinti. Te bhikkhave bhikkhu bahujanaahitâya patipannâ bahujanaasukhâya bahuno janassa anattâya ahittâya dukkhâya devamanussânâ. Bahuñca te bhikkhave bhikkhu apuññam pasavunti, te cimam saddhammam antaradhâpinti (Am.-1: 19).

Bhikkhus Certain bhikkhus have explicitly indicated the *adhamma* to be the *dhamma*. Bhikkhus Then they are said to practice for the purpose of poverty, lack of peace and of disadvantages of man and *devâs*. Bhikkhus They commit many a *kusala* and will bring about the dissolution of the *sâsanâ* (Am.-1: 18).

Bhikkhus Certain bhikkhus have explicitly indicated the *dhamma* to be the *adhamma*. Bhikkhus Then they are said to practice for the purpose of poverty, lack of peace and of disadvantages of man and *devâs*. Bhikkhus They commit many a *akusala* and will bring about the dissolution of the *sâsanâ* (Am.-1: 19).

Dhamma – Adhamma

According to *suttana*, the 10 classes of *kusalakammappathadhammas* are literally all *dhamma*, and *akusalakammadhammas* are all *adhamma*. Similarly the following are all *dhammas*:

1. The Four-Fold *Satipatthâna*,
2. The Four-Fold *Sammappadhâna*,

3. The Four-Fold *Iddhipâda*,
4. The Four-Fold *Indriya*,
5. The Five-Fold *Bala* (Five-Fold Force)
6. The Seven-Fold *Bhojjhaṅga*,
7. The Eight-Fold Magga (The Noble Eight-Fold Path).

These (37) classes of *Bodhipakkhiyadhammas* are all *dhammas*.

The following are all *adhammas*.

1. The Three-Fold *Satipatthâna*,
2. The Three-Fold *Sammappatthâna*,
3. The Three-Fold *Iddhipâda*,
4. The Six-Fold *Indriya*,
8. The Six-Fold *Bala*,
9. The Eight-Fold *Bhojjhaṅga*,
5. The Nine-Fold Magga.

The four-fold *upâdana*, the five-fold *nîvarana*, the seven-fold *anussayadhâtu*, and the eight-fold *micchattadhamma* are all *adhammas* ((*Am.-Ttha.*-1: 65 – 66).

Analyse

The meditator clinging for attainment of *nibbâna* should again analyze the above opening of the *atthakathâ*. A further explanation is given below.

In the four-fold *satipatthâna*, the Lord has exhorted to make effort in exercise by *vipassana*, *bhâvanâ*, *kammattthâna*, step by step by cultivating the *samâdhi* such as *ânâpâ-nassatisamâdhi*, on *rûpa dhamma* and *nâma dhamma*, referred to as the *kâya-vedanâ-citta-dhamma*, until *arahattaphala* is acquired. (A broader step-wise explanation on this will be made later). This instruction is the *dhamma*.

Suppose the meditator feels that the disciples cannot attain 28 classes of *rûpa*, mind and mental concomitants, and *nâma dhamma* as expatiated by the Buddha. Then it is nothing but indicating the *dhamma* of the Lord as the *adhamma*.

The *rûpas* naturally arises in the form of *kalâpa* called *rûpakalâpa* particles. Only when these *rûpakalâpa* particles can be analyzed will the knowledge attain the ultimate reality of the *rûpa*. It was the belief that the disciples cannot discern these *rûpa dhammas*.

Further, *nâma dhammas* naturally are formed by way of *cittaniyâma* called the realms of life and thought process. The *nâma dhammas* formed along the natural course, the *cittaniyâma* at each and every moment the mind and mental concomitants naturally appear in association with each other. Within a period of wink, a flash of lightning *citta-khanas* arise and perish away billions of times. It is believed that disciples cannot discern this rapid formation and dissolution of the thought processes, together with the life-continuum *citta*.

The words of teacher of such belief are as given below.

“Although they do not said the Lord has admonished the *rûpanâma dhammas* the disciples cannot discern”, but what they said implies so. They do not preach that way, but what they preach implies that they do. This is kind indicating the *dhamma* to be the *adhamma*.

Again, the other side accepted the fact that the disciples cannot discern the *rûpa-nâmas* the Buddha has instructed, and instead a replacement was given as “discern the *rûpa-dhamma* this way”, which are not from the Lord. These instructions are an attempt

to make the *adhamma* the *dhamma*.

The Buddha once again exhorted the above 37 classes of *bodhipakkhiyadhammas* in which are included the practice of the eight-fold path factors. Among the eight-fold path factors is included the Path of Right Concentration. These exhortations are the *dhammas*.

If the meditator happens to have said that there is no need to cultivate concentration, then what he said is making the *dhamma* and *adhamma*.

In the *Mahâsatipatthânasuttana*, the Buddha has expatiated that the First, the Second, the Third and Fourth *Jhâna Samâdhis* are called the *Sammâsamâdhi*. (For *sensu lato*, section on Why the Concentration has to be Cultivated).

Also in the *Visuddhimagga atthakathâ – Cittavisuddhi nâma saupacârâ attha samâpattiyo* (*Visuddhi-2*: 222) = The Buddha has explained that the eight-fold *samâpatti* together with *upacârasamâdhi* are all *cittavisuddhi* and it also is the *dhamma*. If the meditator said that there is no need to cultivate concentration, then what he said is making the *dhamma* and the *adhamma*.

In *Mahâsatipatthâna Suttana* (*Dî-2*: 250 – 251), the Lord has said that the *First, Second, Third and Fourth Jhâna Samâdhis* are called the Right Concentration. (see section on Cultivation of *Samâdhi* is a Necessity for broader descriptions).

Also in *Visuddhimaggaatthakathâ – Cittavisuddhi nâma saupacârâ attha sammâpattiyo* (*Visuddhi-2*: 222), it has been expounded that the eight-fold *samâpatti* together with *upacârasamâdhi* are the *cittavisuddhi* (the purity of mind). These exhortations and instructions are the *dhamma*. Suppose a meditator is of the idea that it is not necessary to cultivate concentration, then it is indicating the *dhamma* as the *adhamma*.

Again in *Mahâsatipatthâna Suttana* (*Dî-2*: 239), the Buddha expounded, for the attainment of *Arahattaphala*, to concentrate on the *rûpa-nâma-cause-result-sankhâra dhamma* groups of the five-fold aggregate named *Khandhapabba* in section on *Dhammânupassanâsatipatthâna*. Here too, it is the *dhamma* involved in four-fold *satipatthâna*. The Buddha has analytically exhorted these five-fold *kandhâ dhammas* after acquiring the Knowledge of Omniscience following the four *asankheyyas* and a million of universe and fulfilling the 30 species of the 10 *pâramîs*. If a meditator has said that the disciples cannot discern on these five-fold *dhammas* (= *rûpa-nâma*), and made a remark as “These are the descriptive *dhammas*”. The what he said is no other than turning the *dhamma* into *adhamma*.

If a meditator makes a remark as “These are the descriptive *dhammas*, and in practice in the meditation centres, concentration is made this way,” then it also is a kind of making the *dhamma* an *adhamma*. Because it has been expatiated by the Omniscient *sammâsambuddha* himself in *Aparijânana Suttana* (*Sam.-2*: 249 – 250) that if the five-fold clinging aggregate = *rûpa-nâma dhammas* are not known analytically by three *pariññâ paññâ*, then there is no end to the suffering of the *sansâric* circus.

Again in *Anattalakkhana Suttana* etc. of various *teparivutta dhamma desanâs*, the Buddha has instructed to meditate on the past five-fold *kandhâs* and the future five-fold *kandhâs*. Throughout the *Kandhavaggasamyutta pâli* and in various *nikâya* too, such exhortations have been made, wherever pertinent, for hundreds of times. It also is the *dhamma*. If a meditator, for instance, has said that the *vipassanâ* exercise must not and should not be made on the past and future factors, then it is a clear indication of the *dhamma* to be an *adhamma*.

Indeed, *vipassanā* is the meditation work on the three general characters, taking each in turn as the object, of the five-fold clinging aggregates = *rûpa* and *nâma dhammas* of the past, future and present located in the *santâna* within and without. The meditation is made as below –

So kâlena ijjhattam sammati, kâlena bahiddhâ (*Abhi.-Ttha.-1: 270*).

So kâlena rûpam sammati, kâlena arûpam (*Abhi.-Ttha.-1: 271*).

1. At times on the internal five-fold aggregates,
2. At times on the external five-fold aggregates,
3. At times on the *rûpa dhamma*,
4. At times on the *nâma dhamma*. It is not work one can do as one wishes by discerning on the *paññatti* grossly without differentiating and without understanding the *paññatti* and *paramatha* separately.

In *Mahânidâna Suttana* (Dî.-2: 47 – 60), the Lord has again expounded that without penetrative realization, by *anubodha ñâna* and *pativedha ñâna*, of the *paticca-samuppâda*, the causal relationship, one cannot overcome the suffering of the sansâric circus.

Openings in the great *atthakathâ* too (*Visuddhi-2: 221; Abhi.-Ttha.-1: 189*), have definitely given as “the cycle of life (arising and perishing away of life), referred to as the causal-relationship the *paticcasamuppâda*, is continually torturing the sentient beings like thunderbolt. No one has ever dreamed of the fact that unless it is eradicated by a knife-like *ñâna* sharpened on a whet stone-like *samâdhi* can anyone be relieved from the sansâric circus of sufferings. These exhortations and instructions are all the *dhamma*.

Furthermore, the distinct arising of the resultant present five-fold *khandhâs* such as *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedanâ* because of the past causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sañkhâra* and *kamma* cultivated during the previous existence. Because of the present causes such as *avijjâ*, *tahnâ*, *upâdâna*, *sañkhâra* and *kamma* cultivated during the present existence, the future resultant five-fold *khandhâs* such as *viññâna*, *nâma-rûpa*, *salâyatana*, *phassa*, *vedanâ* would clearly arise. Only when these are realized penetratively in their true nature by the *anubodhaññâna* and *pativedhaññâna*, will the causal relationship, the *paticcasamuppâda* factors be understood.

In this case, the assertion the past five-fold *khandhâs* refers to just a part of the five-fold *khandhâs*. In the same way the present five-fold *khandhâs* and the future five-fold *khandhâs* refer to just a portion of the five-fold *khandhâs* respectively. Therefore, the nature of causal relationship, the *paticcasamuppâda*, cannot be dissociated with the five-fold *khandhâs* of the past and future. It is not a phenomenon that can be discerned separately from the past-future five-fold *khandhâs*.

Therefore, if a meditator accepts the fact that the past-future phenomena should not be discerned, then the penetrative discerning of the *paticcasamuppâda* by one’s own self would be nonsense for him in practical works. If the meditator agrees with this assertion, then he is indicating the *dhamma* as an *adhamma*.

If a meditator stated that “the past-future five-fold *khandhâs* cannot be realized penetratively by one self via *paccakkhañâna*, can be known speculatively only via the *anumânañâna*,” then he is indicating the *dhamma* as an *adhamma*. It is because the Noble Ones penetratively realized the causal relationship by both the *anumânañâna* and the *pativedhañâna*.

Sotâpannânañca nâma paccayâkâro uttânakova hutvâ upatthâti (Dî.-Ttha.-2: 83).

In accordance with the Buddha's exhortation in *Aṅguttorapâli* (*Am.*-1: 18 – 19), the act of asserting the *dhamma* to an *adhamma* means causing suffering and disturbance of peace among the sentient beings and perishing away of the Buddha's *sâsanâ*. If the meditator does not wish to be one causing the perishing of the *sâsana*, all he has to do is to indicate the *dhamma* as the true *dhamma*, and to practice in accordance with the true *dhamma*.

The meditator should remember the case of the monk Kapila, during the period of the Lord *Kassapa*, who has taken the *dhamma* as *adhamma* and the *adhamma* as the *dhamma*. The meditator should carefully examine the *patipatti* practice he is exercising and explaining (to others) if they are relevant to the four-fold *vinaya*, especially to the *pitaka* named *sutta*. If the meditator recognizes definitely that the *patipatti* practice he is exercising is inconsistent with the Buddha's *pitaka*, then he must be bold enough to easily discard the practice. If not, the meditator will be one of those who are damaging the right way of practice of the *sâsanâ*.

Bikkhusuttana

Tassamâ tiha tvum bhikkhu âdimeva visovehi kusalesu dhammesu. Ko câdi kusalânam dhammânam, sîlañca siviluddham ditthi ca ujukâ. Yato kho te bhikkhu sîlañca suvisuddham bhvissati, ditthi ca ujukâ. Tato tvum bhikkhu sîlam nissâya sîle patitthâya cattâro satipatthâne tividhena bhâveyyâsi (*Sam.*-3: 124).

Ditthîti *kammassakatâditthi* (*Sam.-Ttha.*-3: 234).

My son bhikkhu So in the framework of this *sâsanâ*, purify the *kusala dhamma* to begin with. The where is the beginning of the *kusala dhammas*? They are the pure morality and *kammassakatâ*, the right understanding, called the straightforward view which understands the *kamma* and its consequences.

My son bhikkhu At times in your *santâna* may arise good and pure morality and *samassakata*, the right understanding, referred to as straightforward view. Then, on the basis of, and grasping firmly on, the morality cultivate the four-fold *satipatthâna* by way the three phenomena –

1. Internal,
2. External,
3. Internal-external (*Sam.*-3: 124).

Relevant to these *desanâs*, the first and foremost prerequisite for **a monk of an auspicious night** is the (*sîla*) morality. The second prerequisite is the *samâdhi* (concentration). The third is the knowledge acquired through practice on the basis of any one of the four-fold *satipatthâna*, of the *ânâpânassatisamâdhi* etc., following the instructions given by the Buddha. For a meditator competent with morality, practice must be made so as to be competent with *samâdhi*, but before going on to it, explanation will be made first as to **why concentration has to be cultivated**.

PAGE-186**SECTION 2. THE CONCENTRATION SHOULD BE DEVELOPED****2.1 Develop concentration**

Every gentleman who wants to cease the suffering of rounds of rebirth (*samsāra*), must endeavour to know and see penetratively the Four Noble Truths because the suffering of rounds of rebirth can be ceased after knowing and seeing the Four Noble Truths penetratively. There is a question how to practise previously, in order to know and see the Four Noble Truths by insight knowledge. It should be accepted seven stages of purification (*visuddhi*) as an essential practice for everyone. Only when accept like this, can a such *meditator* be agreeable answers for this question.

1. Purify the virtue (*sīla*)
2. Develop concentration (*samādhi*)
3. Then, try to know the Four Noble Truths.

These are answers for above question.

Pāli Quotation (Mahāparinibbāna Sutta -D-2-77)

According to *Mahā parinibbāna Sutta D-2-77*, it is shown that ‘this is the virtue, this is the concentration, this is the wisdom; the concentration soaked in the virtue, improves great benefits, provides great results; the wisdom soaked in the concentration, improves great benefits, provides great results; the mind soaked in the wisdom, can escape well from cankers (*āsava*).

Which kinds of cankers! These are the canker of sensual desire, (*kāmāsava*), of existence (*bhavāsava*) and of ignorance (*avijjāsava*). (*S-2-77*).

If one escapes from cankers, he is able to escape from the suffering of rounds of rebirth. In order to ceases the suffering of rounds of rebirth, any one therefore, should ____

1. develop the concentration soaked in the virtue,
2. meditate the wisdom soaked in the concentration.

Then the mind soaked in the wisdom, can escape well from cankers. In order to attain powerful mind, it should be soaked in the virtue, concentration and wisdom. When the virtue, concentration and wisdom become standard efficacy, the mind soaked in those virtue, concentration and wisdom become sharper and sharper than the thunderbolt of the king of *deva* (*sakka*).

PAGE-187

It can be appeared the ability to eradicate all defilements. If every one wants to attain the most powerful mind, he has to fulfil three trainings, i.e., virtue, concentration and wisdom respectfully. After purifying the virtue, the second training, the concentration must be fulfilled, at least up to access concentration.

2.2. Expounds on the concentration (*Samadhi Suttas*)

Samyutta-3-363 (Pāli) 2 paragraph:

= **Bhikkhus!** Develop concentration, the **bhikkhu** with sufficient concentration, knows correctly and distinguishes really. Which **dhamma** would be known correctly and distinguished really? it can be known correctly and distinguished really the fact that “this is the Noble Truth of Suffering”. It can be known correctly and distinguished really the fact that “this is the Noble Truth of the Cause of Suffering”. It can be known correctly and distinguished really the fact that “this is the Noble Truth of the Cessation of suffering”. It can be known correctly and distinguished really the fact that “this is the Noble Truth of the Practice Leading to the Cessation of Suffering”.

Bhikkhus! Develop concentration, the **bhikkhu** with sufficient concentration, know correctly and distinguish really.

Bhikkhu, you should, therefore, endeavour to know the facts “this is the Noble Truth of Suffering”, “this is the Noble Truth of the Cause of Suffering”, “this is the Noble Truth of the Cessation of Suffering”, and “this is the Noble Truth of the Practice Leading to the Cessation of Suffering”. (**Samyutta-3-363**).

Again read the following passage instructed by the Buddha in the **Samādhi Sutta, Khanda vagga Sam yutta**.

Pāli Quotation (Sam-2-12, Samādhi Sutta)

PAGE-188

= **Bhikkhus!** Develop concentration, the **bhikkhu** with sufficient concentration, know correctly and distinguish really. Which **dhamma** would be known correctly and distinguished really?

1. both the nature of causal and resultant **dhammas** of corporeality and the nature of causal and resultant cessation of corporeality, (**rūpa**),
2. both the nature of causal and resultant **dhamma** of feeling (**vedanā**), and the nature of causal and resultant cessation of feeling (**vedanā**),
3. both the nature of causal and resultant **dhamma** of perception (**saññā**), and the nature of causal and resultant cessation of perception (**saññā**),
4. both the nature of causal and resultant **dhamma** of **kamma**-formation (**saṅkhāra**), and the nature of causal and resultant cessation of **kamma**-formation (**saṅkhāra**),
5. both the nature of causal and resultant **dhamma** of consciousness (**viññāṇa**), and the nature of causal and resultant cessation of consciousness (**viññāṇa**), would be known correctly and distinguished really. (**Sam-2-12**)

In both two **Samādhi Suttas**, mentioned above, the Buddha strongly urged to develop concentration in order to know the Four Noble Truths really. Then the following **dhamma** belong to the Four Noble Truths,

1. both the clinging five aggregates (**upādānakkhandā**);
2. the nature of the arising of clinging five aggregates, caused by the ignorance (**avijjā**), the craving (**taṇhā**), the clinging (**upādāna**), the **kamma**-formation (**saṅkhāra**) and the action (**kamma**);
3. the cessation of the resultant five aggregates, which is not able to reappear in future because of the cessation of the causal **dhamma**, i.e, the ignorance, the craving, the clinging, the **kamma**-formation and the action, after the fourth Path-Knowledge (**arahatta magga ñāṇa**) appeared; and
4. the arising and passing away of both causes and results, should be distinguished really. For this purposes, the Buddha instructed to develop concentration.

These instructions, indeed, are vital important to follow for every **meditator** who wants to attain **nibbāna** really. This is because the fact that the corporeality, the mentality, the

causes, the results and the general characters of impermanence (*anicca*), suffering (*dukkha*), non-self (*anatta*), of *sañkhāra dhamma* (corporeality, mentality, causes and results), preached by the Buddha, can be distinguished only in the presence of sufficient concentration, indeed.

2.3. The Corporeality (*rūpa*)

The corporeality, preached by the Buddha, indeed, occurs as corporeal unit (*rūpa kalāpa*), but not ability to occur uniquely. The corporeal unit is the smallest system in the physical universe. These units are *pramā* minute particles, about sub-atomic particles in size. In this case, ‘about’ means only estimate of it’s size, not exactly the same as the size of sub-atomic particle, known by modern physicists. The corporeal unit consists of, at least, 8-factors of corporeality, i.e, the earth-element (*pathavī*), the water-element (*āpo*), the fire-element (*tejo*), the air-element (*vāyo*), colour (*vaṇṇa*), smell (*gandha*), taste (*rasa*) and nutriment (*ojā*).

PAGE-189

Some corporeal units consist of 9 factors of corporeality while 10 factors in some kinds. Those factors are the ultimate reality of the corporeality (*paramatṭha rūpa*) to which the *meditator* must be able to discern and distinguish by insight knowledge. In order to distinguish like this, the *meditator* must,

1. discern on the corporeal unit firstly,
2. be able to analyze the character of each factor, consisting in 8 or 9 or 10 factors of corporeal units by insight knowledge, second.

Only when each kind of corporeal unit can be analyzed up to the ultimate reality, 28 kinds of corporeality can be known thoroughly.

2.4. The Doctrine found in *Mahāgopālaka Sutta*

In *Mahāgopālaka Sutta*, *Mūla paṇṇāsa*, (M-1-281-286), the Buddha preached that “it can be said, the corporeality had not been known yet unless the four primary elements (*mahābhūta*) and the secondary or derived corporeality (*upādā rūpa*) which occurred depending on those four great elements, have not been distinguished yet. As a cowherd who does not know how many cows he tends totally or how many white colour, how many red colour... etc, of each kind, should not tend those cows, a *bhikkhu* who does not know all corporealities of primary ones and secondary ones of which,

- (1) both quantitatively and
- (2) the producing cause of corporeality, can not improve the Noble Path-Knowledge (*ariya magga ñāṇa*) and the Fruit-Knowledge (*phala ñāṇa*) in the Buddha’s *sāsanā*.

Pāli Quotation (M-A-2-163)

In the commentary of *Mahagopālaka Sutta*, it is mentioned that “unless the meditating *bhikkhu* is knowing,

- (1) both quantitatively and
 - (2) the producing cause (*samuṭṭhāna*) of the corporeality, he will be unable to reach up to the peak of the Path-Knowledge and Fruit-Knowledge by means of
1. discerning on the corporeality,
 2. discerning on the mentality,

PAGE-190

3. discerning on corporeality and mentality,
4. distinguishing and taking into heart the causal relations and
5. generalization of three characters i.e, *anicca*, *dukkha*, *anatta*, of *saṅkhāra dhamma* (corporeality, mentality, cause and result) successively.

If any *meditator* has strongly desire to feel the taste of the Path-Knowledge, the Fruit-Knowledge and *nibbāna*, he must follow respectfully on these admonishments of the Buddha.

In order to know correctly the corporeality by means of

- (1) both 28 kinds as quantitatively and
- (2) (a) which kinds are produced by the action (*kamma samuṭṭhāna*),
(b) which kinds are produced by mind (*citta samuṭṭhāna*),
(c) which kinds are produced by temperature (*utu samuṭṭhāna*),
(d) which kinds are produced by nutriment (*āhāra samuṭṭhāna*),
(e) which kinds will not be produced by any cause, etc... the analytical knowledge plays vital important role in discriminating each specific character of the ultimate reality, consisting in various kinds of corporeal units, such as eight, nine, or ten factors of corporeal unit, etc ... If such *meditator* is neither able to see the corporeal units nor able to analyze the specific characters of the ultimate corporeality, consisting in various corporeal units (although he is able to see corporeal units as a general), it is impossible to distinguish really the corporeality by means of _____
(a) which kinds are produced by action, (*kamma*),
(b) which kinds are produced by mind,
(c) which kinds are produced by temperature,
(d) which kinds are produced by nutriment,
(e) which kinds will not be produced by any cause etc.

Unless it is able to analyze the corporeal unit to distinguish the nature of ultimate corporeality, the insight knowledge will not penetrate upto the field of ultimate reality of corporeality. The concentration, therefore, plays the most important role in the way of practice that leads to the field of the ultimate reality through seeing the corporeal units and analyzing on those units.

Then the mentality would be also taken into heart as a door-wise system (six sense bases) according to *Visuddhi Magga*, 2-223 and *Sammoha-vinodanī*, (*Abhi-A-2-241*). In the Sub Commentary, *Mahāṭīkā-2-352*, it is explained that the commentators decided the fact that there is no confusion in discerning on the mentality by means of door-wise system (*āyatana dvāra*).

PAGE-191

According to the Buddha's philosophical doctrine (*Abhidhamma*) there are two kinds of doors (*dvāra*) in terminology. Three kinds of doors, i.e, bodily action (*kāya dvāra*), verbal action (*vacī dvāra*) and mental action (*mano dvāra*) are called action of doors (*kamma dvāra*). Six kinds of doors, i.e., eye-door (*cakkhu dvāra*), ear-door (*sota dvāra*), nose-door (*ghāna dvāra*), tongue-door (*jihvā dvāra*), body-door (*kāya dvāra*) and *bhavaṅga* mind clearness (*mano dvāra*) are called sense bases of doors (*āyatana dvāra*) (*Mahaṭī-2-410*).

During taking into heart the mentality, it should be discerned successive door-wise system one by one, i.e., eye-door thought process (*cakkhu dvāra vīthi*), ear-door thought

process (*sota dvāra vīthi*), nose-door thought process (*ghāna dvāra vīthi*), tongue-door thought process (*jihvā dvāra vīthi*), body-door thought process (*kāya dvāra vīthi*) and mind-door thought process (*mano dvāra vīthi*) which are known as six sense bases of doors (*āyatana dvāra*). This is because the consciousness always occurs in accordance with the fixed law of mind (*citta niyama*) called successive thought process (*vīthi*) one by one.

Each consciousness of thought process always occurs according to the fixed law of mind, but never out of this fixed law. The mentality, therefore, should be discerned by means of successive sense bases depending on the nature of its route one by one. Then the consciousness usually occurs as a mental unit consisting at least 7 mental concomitants (*cetasika*), but never occurs single alone in each thought moment (*cittakkhaṇa*).

The smallest mental unit (*nāma kalāpa*) can be occurred at least 8 mind and mental concomitants, i.e., consciousness (*citta*), contact (*phassa*), feeling (*vedanā*), perception (*saññā*), volition (*cetanā*), one-pointedness (*ekaggatā*), life-faculty (*jīvitā*), intention (*manasīkāra*). The insight knowledge will be able to reach up to the ultimate mentality only after attaining the ability to discern the specific character of each mentality, consisting in every mental unit of successive thought moments which always occurs in accordance with the fixed law of mind. The concentration, therefore, plays the most important role in the way of practice that leads to the field of the ultimate mentality through seeing the mental units and analyzing on those units.

[Notes: In this case it does not mean on the consciousness out of cognitive process (*vīthi muttha citta*) but all consciousness belong to thought process would only be emphasized and expressed like this.]

Then only when the sufficient concentration had been developed, the insight knowledge which is able to distinguish the causal relations of those corporeality and mentality, can be appeared in every *meditator*. Indeed, only the gentleman with powerful concentration, is capable of practising up to the peak of the Path-Knowledge and Fruit-Knowledge through real *vipassanā* insight of the three kinds of generalization on the corporeality and mentality, associated with their causal relations, systematically.

2.5. From the purification of consciousness to the purification of view

Pāli Quotation (Visuddhi-2-222) (Abhidhammattha sanghaha)

The ability of knowing and seeing the ultimate corporeality and mentality and the discriminative knowledge of the corporeality and mentality by means of characteristic (*lakkhaṇa*), function (*rasa*), manifestation (*piccupatthāna*), proximate cause (*padatthāna*), can be called the purification of view (*diṭṭhi visuddhi*). The *meditator* who wants to fulfil that kind of purification, should like to endeavour to fulfil the purification of consciousness (*citta visuddhi*) previously.

PAGE-192

Citta visuddhi nāma saupacārā aṭṭha samāpattiyo. (Visuddhi-2-222)

= Eight mundane absorption, including the neighbourhood concentration (*upacāra samādhī*) are called the purification of consciousness.

In order to fulfil the purification of consciousness, it should, therefore, be endeavour to acquire either neighbourhood concentration, any one kind of full concentration (*appanā sanādhī*), or all eight kinds of absorption (*aṭṭha samāpatti*).

These explanations would be quoted for the fact that ‘the concentration should be developed’ according to the Buddha’s preaching and decisions found in commentaries.

2.6. The momentary concentration (*khaṇika samādhī*)

Some teachers, learned in scriptures, suggested that the *meditator* without full concentration (*suddha vipassanā yānika*) is able to attain *vipassanā* insight and it is not necessary to develop concentration any more. They referred to the explanation of the sub-commentary of *Visuddhi Magga*. It would, therefore, be explained continuously about three momentary concentration, as follows:

- (1) the momentary concentration according to the sub-commentator of *Visuddhi Magga*
- (2) the momentary concentration of *Suddha Vipassanā Yānika (SVY)* and
- (3) the momentary concentration occurring during *Vipassanā* practice being taken place.

2.2(1). The momentary concentration according to the sub-commentator of *Vissudhi Magga*

samathayānikassa hi upacārappanāppabedam samādhin, itarassa khaṇika samādhin, ubayesampi vimokkha mukhattayam vinā na kadāci pi lokkuttarādhigamo sambavati .. (Mahāṭṭi-1-15).

The meaning of this *pāli* passage is as follows:

1. *Samatha yānika* person (a *meditator* with full concentration) will never attain the Supra-mundane *dhamma*, without attaining two kinds of concentration, known as neighbourhood (*upacāra*) and full (*appanā*) concentration.
2. *Suddha vipassanā yānika* person (a *meditator* with neighbourhood concentration) will never attain the supra-mundane *dhamma*, without attaining momentary concentration (*khaṇika samādhī*).
3. Both two persons, mentioned above, will never attain the Supra-mundane *dhamma*, without attaining three kinds of insight knowledge (*anupassanā ñāṇa*), insight knowledge of impermanence (*aniccānupassanā ñāṇa*), the insight knowledge of suffering (*dukkhā nupassanā ñāṇa*), the insight knowledge of non-self (*anattā ñāṇa nupassanā ñāṇa*), called *vimokkha-mukha*, the cause of escape from the suffering of rounds rebirth (*samsāra*).

Those are the meaning of above *Pāli quotation*.

PAGE-193

Mahāṭṭikā Sayadaw, the sub-commentator explained this quotation in order to explain the verse “*sīle patitṭhāya naro sapañño*”, which is the back-bone of the commentary called *Visuddhi Magga*. It will be clear understood after comprehend relations between the meaning of this verse and the explanation of sub-commentator. The meaning of this verse is as follows.

1. A *meditator* who has the seed of knowledge, associated with the birth consciousness, called *tīhetuka*, three roots, should like to
2. stand on the ground of virtue and
3. endeavour to develop concentration called *citta*,
4. improve the wisdom (*paññā*) called *vipassanā* knowledge.
5. That person, associating with the strenuous effort (*sammappadhāna viriya*) which is able to burn defilements (*kilesa*);

6. associating with the mindfulness(*sati*) which is able to discern *sañkhāra dhamma*; who has fulfilled matured knowledge of *nipaka*, called discriminative knowledge, will be capable of removing the shrub of craving (*taṇhā*).

This is the meaning of the verse.

Any person with above six factors will be able to eradicate all craving totally for good during the moment of the Noble Path-Knowledge. In order to eradicate all craving, it should be standing up on the ground of virtue, developing concentration call *citta*, and *vipassanā* insight called *paññā* (wisdom). There is a question on the fact that “whether, *citta* and *paññā* are mundane or supra-mundane.” *Mahāṭīkā Sayadaw* answered this question as follows:

Pāli Quotation (Mahāṭī-1-15) one paragraph;

It should be recognized that “it should be developed the supra-mundane *citta* (concentration) and the supra-mundane *paññā* (wisdom) in accordance with the *ukkaṭṭhaniddesa naya*, which is the method showing the best meaning. Indeed, if it would be improved the Supra-mundane *citta* (concentration) and the Supra-mundane *paññā* (wisdom), the network of craving would be eradicated totally for good, known as *samuccheda pahāna* during the knowledge of the Path-moment. But the mundane *citta* (concentration) and the mundane *paññā* (wisdom) are incapable of eradicating to the network of craving totally for good. Due to this reason, it does not mean the mundane *citta* and *paññā* in this verse.

In this case, however, the supra-mundane *citta* and *paññā* can not be occurred without the mundane *citta* and *paññā*, with the result that it can be recognized that the latter (mundane) to be also its meaning by means of *nānantarika naya* which is the method of unavoidable condition.

PAGE-194

It is all right! In the absence of two kinds of concentration, neighbourhood-and-full-concentration for *samatha yānika* person; in the absence of momentary concentration for *suddha vipassanā yānika* person; in the absence of three kinds of *vipassanā* insight, *aniccā nupassana ñāṇa*, *dukkhā nupassanā ñāṇa*, *anattā nupassanā ñāṇa*, for both *samatha* and *suddha vipassanā yānika* persons, the supra-mundane *citta* and *paññā* can not be appeared by chance, indeed.

The commentator Sayadaw, therefore, explained that “it should be developed the concentration as well as the *vipassanā* insight..” (*Mahāṭī-1-15*).

According to the suggestion of the sub-commentator Sayadaw, it can be assumed that the momentary concentration of *suddha vipassanā yānika* person refers to *samatha* stage (i.e., duration of developing concentration to see the ultimate corporeality, the ultimate mentality and their causal relations before performing *vipassanā* practice for all *meditators*). It should be clear understood difference between the momentary concentration, appeared in *samatha* stage and that appeared in *vipassanā* stage. However, if the way of *samatha yānika* person would be clear understood, it may be easy to understand the way of *suddha vipassanā yānika* person and then the way of discerning on to the stage of the purification of view (*diṭṭhi visuddhi*) from the purification of consciousness (*citta visuddhi*) which depends on both neighbourhood and full-concentration, would like to presented.

2.7. The way of *samatha yānika*

Pāli Quotation (Visuddhi-2-222) two paragraph:

- The *samatha yānika* person who wants to fulfil the purification of view, must enter into any kind of absorption of world of form (*rupāvacara*) or that of formless world (*arūpavacara*) except the absorption of neither-perception-nor-non-perception (*neva-saññā-nā-saññāyatana jhāna*) and emerge from that absorption after which take into heart either the absorption factors, i.e., initial application (*vitakka*), sustain application (*vicāra*), pleasurable interest (*pīti*) etc... or the consciousness and mental concomitants associating with that absorption by means of the characteristic, function, manifestation and proximate causes. After keeping in mind those ultimate mental *dhamma*, the latter should be take into heart as *nāma* (mentality) because it means ‘the ability to approach to the object of sign of full concentration (*paṭibhāga nimitta*)’.

As a simile, when a man find a snake in the house, he follows it and see the resting site of snake, the *meditator* also discerns the mentality *dhamma* and then the investigates “how does this mentality *dhamma* arises depending on which *dhamma*”.

PAGE-195

As a result he sees the heart base corporeality (*hadaya vathu*) of mind, including four primary elements and derived corporeality (*upādārūpa*) excluding the heart base corporeality, and then take into heart those corporeal *dhammas*. That *meditator* distinguishes and keeps in mind those corporeal *dhammas* as the *rūpa* (corporeality) which means ‘the character of collapse or dissociation (*ruppana lakkaṇa*)’. Then he keeps in mind the *dhamma* which has the ability to approach to the object, is the mentality while the *dhamma* which has the character of collapse or dissociation is the corporeality in brief. (*Visuddhi-2-222*).

[In this case, the primary and secondary corporeality, found in the heart, are total of 54 kinds qualitatively.

The primary and secondary corporealities found in 6 doors or 42 bodily parts (*koṭṭhāsa*) would be presented in the section of meditation on corporeality (*rūpa kammaṭṭhāna*). The mind and mental concomitants are usually 34 in number for the first absorption (*jhāna*) generally. There are 35 mind and mental concomitants in the first absorption of compassion (*karuṇā*), and that of appreciative joy (*muditā*). Those mind and mental concomitants, found in the first absorption and remaining ones would be presented in the section of meditation on mentality (*nāma kammaṭṭhāna*, volume 2.)

After taking into heart mind and mental concomitants of each absorption, including it’s dependent corporeality, primary ones and secondary ones of the corporeality, the remaining corporeality and mentality called miscellaneous *saṅkhāra* would be also discerned and kept in mind, by means of characteristic, function, manifestation and proximate cause, similarly. It is due to the Buddha, himself, preached the fact that the suffering could not be ceased, unless the all corporealities and mentalities have been distinguished by three kinds of full understanding (*ti-pariññā*), i.e., the full understanding on objects (*ñāta pariññā*), the full understanding on propagation of the knowledge (*āraṇa pariññā*) and the full understanding on abandonment (*pahāna pariññā*). (*Samyutta-2-249, 250*). This reason would be explained in detail in Section 3, The Recollection of the Mindfulness of Breathing (*ānāpānassatī*).

If *samatha yānika* person prefers to discern the meditation subject of corporeality (*rūpa kammaṭṭhāna*) but not that of mentality previously, he can discern the former firstly, as well as *suddha vipassanā yānika* person’s way. This way would be presented as follows.

2.8. The way of Suddha vipassanā yānika

Pāli Quotation (Visuddhi-2-222) one paragraph:

If any person, either *suddha-vipassanāyānika* person or *samatha-yānika* person, wants to fulfil the purification of view (*diṭṭhivisuddhi*), he must discern any way of meditation on four elements (*catu dhātu vavatthāna*), in brief account or detail account of that meditation subject, shown in *Catudhātuvavatthāna kammaṭṭhāna*. (*Visuddhi-2-222*).

PAGE-196

According to instruction of *Visuddhi Magga Aṭṭhakathā*, either *suddha vipassanā yānika* person who prefers to discern *vipassanā* practice directly, without depending on *samatha* practice, or *samatha yānika* person who prefers to discern corporeality previously, through which he wants to attain the purification of view, must practise the four elements meditation by any way of the followings:

- (1) in brief account
- (2) in detail account
- (3) both in brief and detail accounts of that meditation subject previously.

2.8.a. General statement**Pāli Quotation (M-ṭī-1-369)**

= It should, generally, be preferable to take into to heart the mentality first as the object of *vipassanā* practice for *samathā yānika* person only. (*M-ṭī-1-369*)

According to this instruction of sub commentator, *Ṭīkā Sayadaw*, it can be decided that discerning on the mentality previously, during taking into heart *sañkhāra dhamma* called the Noble Truth of suffering and the Noble Truth of cause of suffering, is for only *samatha yānika* person as a general. With an exception, a few *suddha vipassanā yānikia* persons may be able to discern the mental *dhammas* previously. Similarly, the way of discerning on the corporeal *dhammas* previously, is also instructed for only *suddhavipassanā yānika* person as a general. *Samatha yānika* person, however, if he prefers to discern the corporeality *dhamma* previously, is capable of the way as he likes.

Both persons of *suddha vipassanā yānika* and *samatha yānika* should practise the four elements meditation previously because of the following reasons.

2.8.b. Reasons of why the meditation on corporeality previously for both two persons

There are 40 meditation subjects to develop concentration in *samatha* stage but only two meditation subjects, i.e, meditation on the corporeality (*rūpa kammaṭṭhāna*) and meditation on the mentality (*nāma kammaṭṭhāna*), in *vipassanā* stage, according to the commentaries of various ones.

Pāli Quotation (M-A-1-280, Abhi-A-2-252) Duvidhañhi kamaṭṭhānam . . . kathesi.

There are only two kinds of meditation subjects in *vipassanā* stage, meditation on the corporeality and meditation on the mentality. It is also known as the discriminative knowledge of the corporeality (*rūpa pariggaha*) and the discriminative knowledge of the mentality (*arūpa pariggaha*). When the Buddha preached the way how to practise the

meditation of the corporeality, the usual way is only the four elements meditation by means of in brief account or in detail account on it.

(M-A-1-280, Abhi-A-2-252)

PAGE-197

According to this instructions found in commentaries, due to the Buddha preached only two ways of meditation on the corporeality, a brief account and a detailed account, both *samatha yānika* person who prefers to practise meditation of the corporeality, and *suddha vipassanā yānika* who does not depend on *samatha* practice, must discern on the four elements meditation previously. It is the best way for every *meditator* by following respectfully with the Buddha's admonishments which are the fruits of the knowledge of Omniscience (*sabbaññuta ñāṇa*). A person discerns the corporeality, but not begins with the four elements meditation, with the result that it will be quite far to reach the field of the ultimate reality, preached by the Buddha, just like between the sky and the earth.

According to *Visuddhi Maga*, it is decided that the four elements meditation called *Catudhātu vavatthāna*, belongs to some kinds of meditation subjects which give rise to neighbourhood concentration. (*Visuddhi-1-107*). This kind of meditation subject is known as *upacāra kammattāna*, by which only neighbourhood concentration would be developed. Therefore this meditation subject includes in the *samatha* stage during developing concentration by taking the object of four elements. Then *suddha vipassanā yānika* person and *samatha yānika* person, who want to the stage of the purification of view, must begin by practising on the four elements meditation. It, therefore, is essential for both *samatha* stage and *vipassanā* stage. It is necessary to explain the fact that what kind of concentration developed by the four elements meditation is.

In the *Mahāsatipatthāna Sutta* the Buddha preached how to practise the four elements meditation as follows.

Pāli Quotation (M-1-73) one paragraph.

= *Bhikkhus!* In the next way, the *bhikkhu* is discerning and taking into heart the characteristic of each element (*dhātu*), one by one (but not person, beings, *jīva*, self) so as to see a such condition that "it is merely the earth-element, the water-element, the fire-element, the air-element, by the eye of wisdom on to this body situating with present position. (M-1-73).

PAGE-198

Then it is instructed again in the *Visuddhi Magga*, the fact that "the earth-element, the water-element, the fire-element, the air-element by which consisting between bones, sinews, flesh, skins would be discerned by piercing the hand of analytical knowledge so many times repeatedly". (*Visuddhi-1-347*)

* *tassevan vāyamamānassa nacireneva dhātuppabedāvabhāsa paññā pariggahito sabhāvadhammāramattā appanam appatto upacāramatto samādhi uppajjati.*
(*Visuddhi-1-347*)

= The *meditator* who strenuously practices in that way, will attain only neighbourhood concentration (it is the same degree of true neighbourhood concentration which always appears just before the full concentration) which is unable to reach the full concentration

really, because the object of the four elements meditation is the specific character of the four elements, so-called the nature of the ultimate corporeality. (*Visuddhi-1-347*).

It should be recognized the fact that the commentator of *Visuddhi Magga* used the term “the neighbourhood concentration” (*upacāra samādhi*) while the sub-commentator of *Mahāṭṭkā* used the term “the momentary concentration (*khaṇika concentration*)” for the nomenclature of concentration type produced by the four elements meditation.

2.8.C. The important notes

Suddha vipassanā yānika person who wants to fulfil the purification of view must begin with the four elements meditation. The concentration of sensuous world (*kāmāvacara samādhi*) which becomes to the highest degree of concentration, through the object of the four great elements, is called “the neighbourhood concentration” in the sub commentary, while “the momentary concentration” in the sub-commentary as a synonym. Then the sub-commentator explained why the term “neighbourhood concentration” had been used in the commentary as follows:

PAGE-199

* *Upacāra samādhīti ca runhīti vasena veditabbam, appanam hiupicca cārī samādhi upacāra samādhi, appanā cettha natthi. Tādisassa pana samādhissa samānalakkhaṇatāya evam vuttam. (Mahāṭṭ-1-436)*

= The concentration of the sensuous world, duced by taking the object of the four great elements, is termed “the neighbourhood concentration” by commentator and then this term is not direct usage but as a metaphor. Indeed, only the peak concentration of the sensuous world which usually occurs just before the full concentration (*appanā samādhi*), can be called the true neighbourhood concentration. There is no ability to produce the full concentration in the four elements meditation. However, the commentator used the term “ the neighbourhood concentration for type of concentration produced by this meditation subject due to the nature of the same degree of concentration which is true neighbourhood concentration, by means of *sadisupacāra*, i.e, metaphor for same condition. (*Mahāṭṭ-1-436*).

According to above explanation of *Mahāṭṭkā Sayadaw*, the concentration of sensuous world, which is occurring previously just before any kind of full concentration, can be called the neighbourhood concentration directly. The concentration of *suddha vipassanā- yānika*, which is reaching to the highest degree, by means of taking the object of the four great elements, can be called the neighbourhood concentration indirectly, due to the same degree of concentration. That kind of concentration is termed “momentary concentration, directly by *Mahāṭṭkā* Sayadaw. The reason why this term used is as follows.

2.9. The momentary concentration in *Samatha* stage

Pāli Quotation (Visuddhi-1-140, Abhi-A-1-160)

The meaning of above *Pāli* quotation is as follows.

There are five kinds of the pleasurable interest (*pīti*), including in factors of absorption (*Jhanaṅga*).

1. *Khuddikā pīti* = this kind of “pleasurable interest” is capable of having goose-flesh only less powerful kind.

PAGE-200

2. **Khaṇikā pīti** = It appears as a flash of lightning at each moment.
3. **Okkantikā pīti** = It appears as tidal wave.
4. **Ubbegā pīti** = this kind of pleasurable interest is capable of raising the body into sky, and very powerful kind.
5. **Phraṇā pīti** = It spreads into the whole body similar to leather bag, filled with air or a valley flowing with vast water. (It means that the corporeal units produced by mind with pleasurable interest spread out the whole body.)

Those five kinds of pleasurable interest (**pīti**) becomes the pregnancy called situation of tranquillity of mind and mental concomitants (**citta passaddi & kāya passaddi**).

When the pregnancy matured, it can fulfil tranquillity of mind and mental concomitants. Then tranquillity of mind and mental concomitants become the pregnancy called situation of happiness (**sukha**). When the pregnancy matured, it can fulfil three kinds of concentration, i.e, momentary concentration, neighbourhood concentration and full concentration.

(**Visuddhi-1-140; Abhi-A-1-160**).

There are three kinds of concentration, i.e., preliminary concentration (**parikamma samādhi**), neighbourhood concentration and full concentration in **samatha stage**. Then the “preliminary” concentration, which is occurring previously just before neighbourhood concentration is called “the momentary concentration” in accordance with commentary. This usage is applied in the **samatha** stage for momentary concentration.

By referring this usage of commentary, **Mahāṭīkā Sayadaw** termed “momentary concentration” for the concentration of sensuous world, which reaches to the highest degree, by taking the object of four great elements, directly. In the commentary, this kind of concentration is termed the neighbourhood concentration as in above mentioned. Therefore the usage of the commentary is a metaphor of same condition while that of sub-commentary (**Mahāṭīkā**), directly. These two usages are not contrary to each other. This is the explanation for the usage of synonyms for the highest degree of concentration of **suddha vipassanā yānika** person who takes the object of four elements.

Similarly, the highest concentration of sensuous world, which is attained by some meditation subjects, like the recollection on the Noble Qualities of the Buddha (**Buddhānussati**), etc ... can also be called by two terms, i.e., the momentary and neighbourhood concentration. Then the momentary concentration in **Vipassanā** stage would be presented as follows.

PAGE-201

2.10. The momentary concentration in *vipassanā* stage

There are five kinds of discriminative knowledge (*pariggaha*) as follows.

1. the discriminative knowledge on the corporeality (*rūpa pariggaha*),
2. the discriminative knowledge on the mentality (*arūpa pariggaha*),
3. the discriminative knowledge on the both corporeality and mentality (*rūpā-rūpa pariggaha*)
4. the discriminative knowledge on the causes and results of present period (*paccaya pariggaha*),
5. the discriminative knowledge on the causes and results of past and future (*addhāna pariggaha*)

The term, *pariggaha* means the ability to discriminate and keep in mind by knowledge, on any kind of object. It is instructed that only a such *meditator* who had fulfilled five kinds of discriminative knowledge thoroughly, should like to endeavour to fulfil *vipassanā* knowledge, such as *sammasana ñāṇa*, according to *Visuddhi-2-244*. *aniccādivasena vividehi ākārehi dhamme passatūti vipassanā. (Abhi-A-1-175).*

The ultimate corporeality and mentality, the causes and results belong to past, future, present, internal and external etc ... are the objects of *vipassanā* insight. These objects are also called *saṅkhāra dhamma* because these *dhamma* can be appeared by respective causes which become co-operative factors. These *saṅkhāra dhamma* are also the Noble Truth of Cause of Suffering, according to preaching way of Four Noble Truths (*sacca desanā naya*).

The “*vipassanā* knowledge” which is able to discern those *sankhara dhammas*,

1. as *anicca* (impermanence) by seeing the arising and passing away of those *dhammas*,
2. as *dukkha* (suffering) by seeing the process of being oppressed continuously,
3. as *anatta* (non-self) by seeing the nature of non-self which is not indestructible essence of ‘self’, can be called the real *vipassanā* knowledge.

The *meditator* who wants to fulfil the purification of knowledge of what is path and not path (*magā magga ñāṇa dassana visuddhi*), must be completed with,

1. the purification of view called “the discriminative knowledge on the corporeality & mentality” (*nāmarūpa pariccheda ñāṇa*)
2. the purification by overcoming doubt (*kankhā-vitarāṇavisuddhi*) called the discriminative knowledge on the cause & results of present period.

Because the object of *vipassanā* insight is the corporeality the mentality, the causes and the results belong to those two kinds of purification, which are essential to fulfil before *vipassanā* stage.

PAGE-202

During *vipassanā* practice has being take place, the object must be ..

1. internal five aggregates sometime,
2. external five aggregates sometime,
3. the corporeal *dhamma* sometime,
4. the mental *dhamma* sometime, alternately. (*Abhi-Com-1-270, 271. Visuddhi-2-300*).

It should be discerned for the past *dhamma* and future *dhamma* similarly. Then factors of Dependent Origination (*paticca samuppada aṅga*) should be discerned by *vipassanā* insight in order to attain *sammasana ñāṇa and udayabaya ñāṇa. (Visuddhi-2-244 and 265).*

Therefore the process of *vipassanā* practice had been taken place alternately, on the object of the causal corporeality or mentality and the resultant corporeality or mentality, those *dhamma* belong to three periods, two continuums (*santāna*) and then, the generalization method also alternately, by means of *anicca*, or *dukkha* or *anatta*, with the result that the concentration associated with this process of *vipassanā* practice can not be situated on one object, and it is called “the momentary concentration” (*khaṇika samādhī*).

The systematic method of *vipassanā* practice can be achieved by only the *meditator* who fulfilled the neighbourhood concentration of the sensuous world or the full concentration of the world of form (*rūpāvacara*) and the formless world (*arūpāvacara*), but not by any one who lacks any kind of concentration. ...

Then it can be achieved by the *meditator* who fulfilled the discriminative knowledge on the corporeality, mentality, causes and results by means of characteristic (*lakkhaṇa*), function (*rasa*), manifestation (*paccupaṭṭhāna*) and proximate cause (*padaṭṭhāna*), but not by any one who lacks five kinds of discriminative knowledge, systematically.

It can, therefore, be called the momentary concentration (*khaṇika samādhī*) in *vipassanā* stage for a *meditator* who is able to take place generalization as *anicca*, *dukkha*, *anatta*, on the ultimate reality of *saṅkhāra dhamma*. On the other hand, it can not be decided the fact that whether so-called momentary concentration of a person who is unable to analyze the corporeal units and mental units up to the field of ultimate reality and so-called momentary concentration of a person who is unable to discern successive causal relationship and unable to generalize by *vipassanā* knowledge systematically, is true or not.

The following explanations found in *Pāli* text, commentary and sub-commentary will be favourable for any one who dissatisfy on the interpretation of momentary concentration, mentioned above.

PAGE-203

2.11. The momentary concentration with one-pointedness of mind (*Khaṇika cittakaggata samādhī*)

samādaham cittam assasissāmīti sikkhati, samādaham cittam passasissāmīti sikkhati. (*Samyutta-3-279, Vinaya-1-88, M-3-125*)

Pāli Quotation (Visuddhi-1-261) one paragraph (Mahāṭṭikā-1-342) one paragraph

The meanings of above *Pāli*, commentary and sub commentary are as follows.

The Buddha preached ‘the mindfulness of breathing by means of four tetrad-instructions (*catukka*) including 16 ways in *ānāpānassati sutta*, *Uparipaṇṇāsa pāli*, for the purpose to attain *Arahatt magga ñāṇa*. In that *Sutta*,

1. the first tetrad had been preached by means of *Kāyānupassanā* (discernment on the corporeality).

Then for the *meditator* who had attained absorption of mindfulness of breathing,

2. the second tetrad had been preached by means of *Vedanānupassanā* (discernment on the feeling),
3. the third tetrad had been preached by means of *Cittānupassanā* (discernment on the consciousness),
4. the fourth tetrad had been preached by means of *Dhammānupassanā* (discernment on the *saṅkhāra dhamma*) respectively. (*Visuddhi-1-269*)

(Detailed explanation would be presented in later this volume.)

The first quotation of this heading can be found in the third instruction of the third tetrad instruction and it's meaning is as follows:

It should be practised for the inbreath with “the balanced mind on the object.”

It should be practised for the outbreath with “the balanced mind on the object.”

In above instruction, the commentator explained how the balanced mind on the object by two means.,

(1) the balanced mind on the object by means of concentration and

(2) the balanced mind on the object by means of *vipassanā* insight. (*Visuddhi-1-281*)

PAGE-204

(1) by means of concentration

By taking the object of mindfulness of breathing, the clear and brilliant sign of concentration (*patibhāga nimitta*), if any one who attained the first absorption, the second absorption, the third absorption and the fourth absorption, is able to develop the concentration of each absorption successively, it can be called “the balanced mind on the object by means of concentration in the *samatha* stage.

(2) by means of *vipassanā* insight

(a) Any one enters into the first absorption by taking the object of sign of concentration of mindfulness of breathing. After emerge from the first absorption, he take place *vipassanā* practice by seeing the nature of arising and passing away of the mind and mental concomitants of the *jhānic* state. [It is 34 mind & mental concomitants in the first absorption]

(b) Similarly, any one enters into the second absorption by taking the object of sign of concentration of mindfulness of breathing. After emerging from the second absorption, he takes place *vipassanā* practice by seeing the nature of arising and passing away of the mind and mental concomitants of the *jhānic* state. [It is 32 mind & mental concomitants in the second absorption.]

(c) Any one enters into the third absorption by taking the object of sign of concentration of mindfulness of breathing. After emerging from the third absorption, he takes place *vipassanā* practice by seeing the nature of arising and passing away of the *jhānic* state. [It is 31 mind & mental concomitants in the third absorption.]

(d) Any one enters into the fourth absorption by taking the object of sign of concentration of mindfulness of breathing. After emerging from the fourth absorption, he takes place *vipassanā* practice by seeing the nature of arising and passing away of the mind and mental concomitants of the *jhānic* state. [It is also 31 mind & mental concomitants in the fourth absorption, but the happiness (*sukha*) found in the third absorption had been replaced by the neutrality (*upekkhā*) in the fourth absorption.]

[Notes: Number of 34, 32, 31, 31 of mind and mental concomitants would be presented in detailed in later, volume 2, the section of discernment on the mentality (*nāma kammaṭṭhāna*).]

PAGE-205

The *meditator* who is practising *vipassanā* meditation by taking the character of impermanence (*anicca lakkaṇa*), suffering (*dukkha*), and non-self (*anatta*) of *saṅkhāra dhamma*, appears the momentary concentration of the sensuous world, called “*khaṇika cīttekaggatā*” (= the momentary concentration with one-pointedness of mind), which is able to situate only just moment on the unstable object of the mental *dhamma* of absorption. In

this way, it can be said that “the *bhikkhu* is practising the in-and out-breath with the balanced mind by means of *vipassanā* insight.

The term, *Khaṇika cittakaggate*, indeed, is called the concentration of sensuous world, which is able to situate only just moment with one-pointedness of mind of *vipassanā* insight.

sabbopi panesa pabedo manodvārikajava-neyeva labbhati. (Abhi-A-2-308)

According to *Sammoha vinodanī*, commentary, the *vipassanā* knowledge occurring in worldlyling (*puthu jana*) and *sekkha* persons (lower three kinds of Noble Ones who had attained the first, the second, or the third Path-Knowledge) is the continuous thought process of great wholesome *dhamma* of sensuous world and then the concentration associating with those *vipassanā* knowledge is also a kind of the sensuous world (*kāmāvacara samādhi*). That kind of concentration is also continuously situated on the object of *saṅkhāra dhamma* by means of any one of the character of *anicca*, or the character of *dukkha*, or the character of *anatta*, with the result that the opposite *dhamma* of hindrances (*nīvaraṇa*) are unable to cover on his mind and the consciousness of *vipassanā* insight would be fixed to the object of the general character of *anicca*, *dukkha* and *anatta* without shaking any more. Therefore, this kind of concentration is called *khaṇika cittakaggatā samādhi* or momentary concentration (*khaṇika samādhi*).

This is the meaning of *Pāli*, Commentary and Sub commentary mentioned above.

The full concentration (*appanā samādhi*) can be called its name only during the consciousness of full absorption appear in any *meditator*. Then the concentration approaching to the full concentration can be called ‘the neighbourhood concentration, certainly. On the other hand, during discerning on the mental *dhamma* of absorption by *vipassanā* insight after emerging from each absorption, the object is not previous sign of concentration of mindfulness of breathing. Because of this reason it can not be termed the full concentration (*appanā samādhi*) and the neighbourhood concentration (*upacāra samādhi*), but momentary concentration only.

In the fourth tetrad instructions of mindfulness of breathing, the Buddha preached as follows.

Aniccā nupassī assasissāmīti sikkhati, aniccānupassī passasissāmīti sikkhati. (Sam-3-279, Vi-1-88, M-3-125).

It should be discerned to know the in- and out-breath as “impermanence” (*anicca*) repeatedly.

Then the *dhamma* on which discerned as “impermanence” are explained as follows. “*aniccanti pancakkhandā*” (*Visuddhi-1-281, Abhi-A-2-47*).

Pāli Quotation Maḥaṭṭi-1-343 (one paragraph)

The “impermanence” (*anicca*) is five clinging aggregates (*upādānakkhandā*) belong to three kinds of worlds, the sensuous world, (*kāma*) the world of form (*rūpa*) and the formless world (*arūpa*). Therefore, during discerning on all *saṅkhāra dhamma* belong to three kinds of world, called the miscellaneous *saṅkhāra* (*pakiṇṇaka saṅkhāra*) by *vipassanā* insight, the concentration which situates well on the general character of those *dhamma* (*anicca*, *dukkha*, *anatta*) can be called the momentary concentration (*Khaṇika samādhi*), but not full concentration or neighbourhood concentration, certainly.

Pāli Auotation (Mulaṭī-1-116)

The miscellaneous (*pakiṇṇaka*) *saṅkhāra* is called all *saṅkhāra dhammas*, except mentality of *jhānic* state which is the fundamental of *vipassanā* insight. It show that it can not be called ‘the neighbourhood concentration’ on the concentration which is occurring during *vipassanā* insight had being taken place on *saṅkhāra dhamma* of the *jhānic* state. (Mulaṭī-1-116)

Similarly, the highest degree of concentration of sensuous world, which is called the neighbourhood concentration, by means of either certainly (directly) or metaphor of same condition (*sadisūpacāra*), can be called the purification of consciousness (*citta visuddhi*) in accordance with *Visuddhi-2-222*. If that kind of concentration would be developed in order to discern on the *saṅkhāra dhamma* by means of three general characters, the concentration, associating with the *vipassanā* insight, can also be called *Khaṇikacittakaggata samādhi* (= the momentary concentration with one-pointedness of mind). These are explanations on what the momentary concentration is.

2.12. The important notes

1. In *samatha* stage, the highest degree of concentration of sensuous world, which is appeared by taking the object of four great elements for *Suddha vipassanā yānika* person, is called the “momentary concentration” (*Khaṇika samādhi*) by means of direct usage, however, it is called “the neighbourhood concentration” by means of metaphor of same condition. (*Visuddhi-1-140*)

Similarly, the highest degree of concentration of sensuous world, which is appeared by taking the object, like the noble qualities of the Buddha, of *dhamma*, etc., can be called as above mentioned.

2. In *vipassanā* stage, the concentration associating with the *vipassanā* knowledge of *suddha vipassanāyānika* person, which can be called the neighbourhood concentration as metaphor of same condition (*sadisūpacāra*), must be recognized the “momentary concentration”, indeed.
3. In *samatha* stage, the matured preliminary concentration, adjacent to the neighbourhood concentration of *samatha yānika* person, can also be called the “momentary concentration”.
4. In *vipassanā* stage, the concentration associating with the *vipassanā* knowledge which is discerning on the general characters of *saṅkhāra dhamma*, which may be either full concentration or neighbourhood concentration of *samatha yānika* person who apply these concentration as the basic object of *vipassanā* insight, must also be called the “momentary concentration”.

PAGE-207

According to above explanations, any *bhikkhu* as a *meditator* who is

1. without attaining / developing any kind of concentration, such as neighbourhood, full concentration by means of metaphor of same condition or by means of certainly,
2. incapable of seeing the corporeal and mental units or incapable of analyzing on those units upto the field of ultimate reality, although he is able to see those units merely,
3. incapable of discerning on the causal relationship between three periods called past, future and present, by insight knowledge; should like to accept the fact that “the

concentration appeared in him as soon as his practice begins” can not be “true momentary concentration”, actually.

This is because “the momentary concentration can only be occurred either after practising any meditation subject which can produce the momentary concentration in *samatha* stage or during practising *vipassanā* on the object of *sañkhāra dhamma* which would be broken down the compactness (*ghana*) in order to see the field of ultimate reality in *vipassanā* stage. If any *meditator* is unwilling to develop the concentration as a *samatha* practice, he should like to read the followings.

2.13. The three general characters

Pāli Quotation : Visuddhi-2-301 (2 paragraph)

PAGE-208

A *meditator* discerns as *anicca* by seeing either the nature of arising and passing away (*udaya vaya*) of *sañkhāra dhamma* or the nature of dissolution and perishing away (*khaya vaya*) of *sañkhāra dhamma* at the beginning of *vipassanā* practice. However, the Noble Path-Knowledge (*ariya magga ñāṇa*) called *vuṭṭhāna gāmini vipassanā* (= the mundane *vipassanā* knowledge which is able to emerge from the object of *sañkhāra dhamma* and lead to the object of *nibbāna* consequently) can not be appeared by merely discerning as “*anicca*”. Then that *meditator* discerns as “*dukkha*” by seeing either the nature of being oppressed by arising and passing away of *sañkhāra dhamma* or the fearful nature of dissolution and perishing away of *sañkhāra dhamma*. He discerns as “*anatta*” by seeing the nature of non-self which is not indestructable essence of the “self” (*atta*) of *sañkhāra dhamma*. During practising by means of *aniccā nupassanā*, if *vuṭṭhānagāminī vipassanā* or the Noble Path-Knowledge would be appeared, this *meditator* can be said that he emerges from the *sañkhāra dhamma* by means of “*anicca*” which is the beginning process of *vipassanā* insight.

The next one, however, during practising by means of *dukkhā nupassanā*, if *vuṭṭhānagāminī vipassanā* or the Noble Path-Knowledge would be appeared, he can be said that he emerges from the *sañkhāra dhamma* by means of “*dukkha*”. Similarly, it should be recognized that the remaining kinds of emerging from *sañkhāra dhamma* and beginning ways of practice, such as *dukkha* or *anatta*. (*Visuddhi-2-301*)

According to above mentioned, the Noble Path-Knowledge could not be appeared by only a single discernment as *anicca* or *dukkha* or *anatta* but by alternate discernment of all three characters. This explanation follows the Buddha’s instructions found in *Anatta lakkaṇa Sutta* etc.. in which *teparivutṭa dhamma*, called three rounds of *anicca*, *dukkha* and *anatta* alternately had been preached, like the mixture of Ganga water and Jumna water. The Buddha always preaches to discern by all three characters (as seen in *Anatta lakkaṇa Sutta*). The decisions found in commentaries is also the same fact that “it can not be reached to the Noble Path-Knowledge by means of a single character”. These decisions were made so as to ensure the Buddha’s instructions which is able to lead the eternal peace.

Pāli Quotation: (Visuddhi-2-264)

PAGE-209

The meaning of this quotation ...

1. *Aniccānupassanā* knowledge is able to remove the obsession of conceit (*māna*)
2. *Dukkhānupassanā* knowledge is able to remove the obsession of attachment (*tanhā*)
3. *Anattānupassanā* knowledge is able to remove the obsession of view on self (*atta*)

In order to remove like this, one kind of *anupassanā* knowledge becomes powerful and sharp only after getting the supporting factor of efficiency of relation of determinative dependence (*upanissaya satti*) of the remaining two kinds of *anupassanā* knowledge reciprocally. The sharp, purify, bright, powerful and accelerated *anupassanā* knowledge of each kind will be able to break down respective obsession of defilements well. (*Mahāti-2-415-416*)

However, each *anupassanā* knowledge can only break down and remove respective obsession of defilements temporarily. The Noble Path-Knowledge is able to break down and remove obsession of defilements without any remains. But all kinds of Noble Path-Knowledge could be appeared as a consequence of successive *anupassanā* knowledges which are full of efficiency of relation of determinative dependence (*upanissaya satti*). The Buddha, therefore, preached in *Susima Sutta* as follows.

Pubbe kho susima dhammaṭṭhitiñānam, pacchā nibbāne ñāṇam. (Samyutta-1-344)

= *Susima*! The *vipassanā* knowledge, called *dhammaṭṭhiti* which situated on the nature of *anicca*, *dukkha*, *anatta* of *saṅkhāra dhamma* well, occurs previously. The Noble Path-Knowledge which takes the object of *nibbāna*, occurs later. (*samyutta-1-344*).

Susima who ordained as a *bhikkhu* from other ascetic person, asked the Buddha that whether the Noble Path-Knowledge is the consequence of Super-psychic knowledge (*abhiññāṇa*) or not. The Buddha answered the fact that the Noble Path-Knowledge is only the consequence of *vipassanā* knowledge called *dhammaṭṭhiti* but not consequence of Super-psychic knowledge.

Therefore, any *meditator* who wants to attain the Noble Path-Knowledge, must endeavour strenuously in order to become sharp, bright, powerful, purify *aniccānupassanā*, *dukkhānupassanā* and *anattānupassanā* knowledge, successively.

2.14. The light of *anatta* (non-self)

Among three kinds of general characters, the character of non-self can be known by the time only the Buddhas appear in the world, indeed. When the Buddha who knows all *dhammas* by the Knowledge of Omniscience without any teacher, wants to enlighten the character of non-self (*anatta*), it would be enlightened

PAGE-210

1. by means of the character of impermanence (*anicca lakkhaṇa*)
2. by means of the character of suffering (*dukkha lakkhaṇa*)
3. by means of characters of both impermanence and suffering, apparently.

The way of preaching by means of the character of impermanence to enlighten the character of non-self is as follows.

Pāli-Quotation. (M-3-329 Chachakka Sutta)

= If any person says that the eye clear sensitivity (*cakkhu pasāda*) (= the eye door (*cakkhu dvāra*) is self (*atta*), it should not be said like that.

Both the process of arising and that of passing away of the eye clear sensitivity (*cakkhu pasāda*) (= eye door) is apparent. A such *dhmma* possesses both the process of arising and that of passing away apparently. If any person said that “that *dhmma* is self (*atta*)”, it is the same as the fact that “the self (*atta*) of mine is both the process of arising and that of passing away”. Therefore if any person says that “the eye clear sensitivity (= the eye door) is self”, it should not be said like that. The eye clear sensitivity, therefore, is non-self (*anatta*), indeed. (M-3-329)

In *Chachakka Sutta*, mentioned above, the character of non-self had been enlightened by means of the character of impermanence.

Pāli Quotation (Sam-2-55) (Vi-3-18)

= *Bhikkhus*... the corporeality is not ‘self’ (*atta*), but non-self (*anatta*). *Bhikkhus*!, if the corporeality is self, it should not be painful in this corporeality. It can be controlled in the corporeality ...

in such way that “may my corporeality be in this way, may my corporeality not be in this way”. *Bhikkhus*! Because the corporeality is not “self” (*atta*), it is only to be painful. It can not be controlled in such way that “may my corporeality be in this way, may my corporeality not be in this way”. (Samyutta-2-55) (Vi-3-18).

In *Anattalakkhaṇa Sutta*, above mentioned, the character of non-self had been enlightened by means of the character of suffering.

Pāli Quotation (Samyutta-2-19)

= *Bhikkhus*! the corporeality is impermanence (*anicca*). That impermanent corporeality is suffering (*dukkha*). That suffering corporeality is non-self (*anatta*). It should be discerned on the corporeality which is non-self by the light of *vipassanā* insight, which is able to break down the compactness of corporeal and mental units. (samyutta-2-19).

In *Yadanicca Sutta*, mentioned above, the character of non-self had been enlightened by mean of the characters of both impermanence and suffering.

PAGE-211

It is because of the fact that the characters of both impermanence and suffering is apparent in the world.

It is usually said by worldlings in such way that ‘Oh! It is *anicca* (impermanence)’, when a dish is broken down, accidentally. In this way, the character of impermanence is apparent in the world. It is usually said by worldlings in such way that ‘Oh! it is *dukkha* (suffering), when some kinds of injuries or wounds appeared in the bodies of themselves. In this way, the character of suffering (*dukkha*) is also apparent in the world.

On the other hand, the character of the non-self is not apparent. It is darkened by bulk of darkness for any person without eye of wisdom. It is uneasy to enlighten this character. It is very difficult to know and see. It is abstruse and very profound character in order to preach in conventional world.

Pāli Quotation : (Abhi-A-2-46)

Two characters, impermanence and suffering, are apparent in the world whether the Buddha appeared or not, but the character of non-self is not apparent in the absence of appearance of the Buddha. It is apparent only when the Buddha appeared in the world.

(*Abhi-A-2-46*)

By the time disappearance of the Buddha's admonishments (*sāsanā*), even powerful hermits, such as ... *Sarabhangā*, who was bhodhisatta of Gotama Buddha, were able to preach the characters of both impermanence and suffering as a concept but not the character of non-self. If those hermits were able to preach the character of non-self to disciples who approached them, the latter would be able to know and see *nibbāna* by insight knowledge. (*Abhi-A-2-46*)

Anattalakkaṇa paññā panañhi aññassa kassaci avisayo, sabbaññubuddhānameva visayo. (*Abhi-A-2-46*).

= But the way of preaching of the character of non-self to disciples is to no avail for any person. It is available for only the Buddha who possesses the knowledge of omniscience (*sabbaññutañña*). (*Abhi-A-2-46*).

In this way, the character of non-self is unapparent one, very profound and uneasy to enlighten. Therefore, when the Buddha preached the character of non-self, he achieved the way of preaching

1. by means of the character of impermanence,
2. by means of the character of suffering,
3. by means of characters of both impermanence and suffering, apparently.

(*Abhi-A-46-47*)

PAGE-212

The reason why character of *anatta* (non-self) is not-apparent and apparent had been explained as follows.

Pāli-Quotation (Abhi-A-2-47, Visudhi-2-276)

The character of non-self is not apparent in the knowledge of *meditator* who is unable to analyze each corporeality *dharmā* and mentality *dhammā* up to each specific character of the ultimate reality of those *dhammā*, because that of the ultimate reality is concealed by the compactness of corporeality and the compactness of mentality, respectively.

When a *meditator* is able to analyze each corporeal *dharmā* and mental *dhammā* up to the specific character of the ultimate reality of those *dhammā*s, by means of characteristic, function, manifestation and proximate cause, the character of non-self would be enlightened in the knowledge of that *meditator* as really they are.

This is the meaning of above quotations found in commentaries.

2.15. The reason why the character is not apparent

Indeed, the corporeality and mentality usually occur as a group called corporeal unit (*rūpa kalāpa*) and mental unit (*nāma kalāpa*). They are not able to occur singly. (According to *Mahāṭṭi-2-235*, the term “mental unit” is used for mind and mental concomitants which occurring in a thought moment.) Those corporeal units and mental units are the smallest systems in the conventional truth, which are composed of specific character of corporeality or that of mentality respectively. Only when the specific character of the ultimate corporeality and mentality could be discerned and kept in mind, by means of character, function, manifestation, proximate cause, the compactness (*ghana*) of corporeality and the compactness of mentality would be broken down. Only when the compactness of corporeality and the compactness of mentality had been broken down, the insight knowledge can reach up

to field of ultimate reality. Only after the insight knowledge reached up to the field of ultimate reality, the character of non-self could be apparent in the knowledge of *meditator*, as really they are.

If the corporeality and mentality, which are consisting in corporeal unit and mental unit respectively, can be discerned up to the ultimate reality, three kinds of moment (*khaṇattaya*), i.e, arising (*uppāda*) phase, static (*thiti*) phase, perishing (*bhaṅga*) phase, of each character of ultimate reality, can be seen by insight knowledge. The *meditator* can see the nature of corporeality and mentality, which are present just only very short moment between two kinds of voidness, before the arising phase and after the static phase.

PAGE-213

ekaccharakkhaṇe koṭṭisatasahassa sankhā uppajjittva nirujjati. (Sam-A-2-255)

The process of arising and passing away of thought moments (*cittakkhaṇa*) / mental units always occurs about 10×10^{11} times within one second continuously. This means the fact that the speed of arising and passing away of the mental *dhamma* is beyond compared rate. The duration of a thought moment / mental unit, therefore, can occur million millionth second only.

Then the duration of consisting in each corporeal unit have one seventeen times of mental unit. The duration of both corporeal and mental units is so short that the *meditator* is not able to see indestructible essence of self (*atta*) by eye of wisdom. There are only the corporeal *dhamma* and the mental *dhamma* within 31 realms, but not others. By the time a *meditator* see the ultimate corporeality and mentality, the light of non-self (*anatta*) will be appeared marvelously in him.

The *meditator* should like to decide that he must discern on the corporeal and mental units by means of analytical knowledge in order to occur the knowledge of non-self. The fundamental requirements of the ability to discern corporeal and mental units in order to break down their compactness is the neighbourhood and full concentration called the purification of consciousness (*citta visuddhi*), indeed. Actually the Buddha had preached in *Samādhi Sutta* that the ultimate corporeal and mental *dhammas* can be known and seen only in the presence of sufficient concentration.

Then an account on the compactness (*ghana*) would be presented here.

2.16. Three kinds of compactness of corporeality

ghanavinibbhoganti santatisamūhakkiccaghanānam vinibbhujanam vievecanam. (M-ṭī-1-365, Dī-ṭī-2-308, Mahāṭī-1-428)

= The break down of compactness of corporeality by insight knowledge means that analyzing on the compactness of continuity (*santatighana*), compactness of form (*samūhaghana*) and compactness of function (*kicca ghana*) of each corporeal unit by discriminative knowledge. (*M-ṭī-1-365*)

PAGE-214

According to *ṭīkā Sayadaw* (sub-commentator), there are three kinds of compactness, i.e, compactness of continuity, of form, and function in the corporeal *dhamma*. No compactness of object (*ārammaṇaghana*) can be found in the corporeal *dhamma*. The reason is as follows.

The Buddha preached on two kinds of ultimate reality, *sārammaṇa* and *anārammaṇa*, in *Dhamma sangani Pāli*.

***Pāli Quotation (Abhi-1-238)**

The Buddha preached that four kinds of mental aggregates, i.e, feeling-group (*vedanakkhandā*), perception-group (*saññakkhandā*), formation-group (*saṅkhārakkhandā*), consciousness-group (*viññāṇakkhandā*), are called *sārammaṇa dhamma*. Which are able to take the object (*ārammaṇa*). Then it is continued that all corporeal *dhamma* and *nibbāna* which is *asaṅkhata dhamma*, are called *anārammaṇa dhamma*, which are not able to take the object. The compactness of object (*ārammaṇa ghana*) can be occurred only in four mental groups called *sārammaṇa dhamma*.

*** Pāli Quotation (Mahāṭṭi-2-437)**

Although different processes to take the object by *sārammaṇa dhamma*, are present, if it is recognized as single process to take the object, it is called the compactness of object (*ārammaṇa ghana*). (*Mahāṭṭi-2-437*)

Therefore “The compactness of object can be occurred only in the mental *dhammas* which are capable of taking the object. On the other hand, the corporeal *dhammas* are incapable of taking the object, and then called *anārammaṇa*. For this reason, *Mūlapaṇṇāsaṭṭikā* explained that there are only three kinds of compactness in corporeal *dhamma*.

[* *sārammaṇāti hi vacanam citta cetasikānam ārammaṇena vinā appavattiññeva dīpeti. (Mūlaṭṭi-1-181)*]

= The term *sārammaṇa* means that “the nature of mind and mental concomitants never occur avoiding with object.” Therefore, the term *sārammaṇa* refers to only the mental *dhamma* and no compactness of object occurs in the corporeal *dhamma* which is not *sārammaṇa*.

2.16.1 The compactness of continuity of corporeality (*santati ghana*)

Every corporeal unit, produced by respective cause i.e., *kamma*, mind, temperature and nutriment, consists of the fire-element (*tejo*) which is also known as the temperature (*utu*). That fire-element is capable of producing new corporeal units, called *utuja-ojaṭṭhamaka*. It consists of 8-factors in which the nutriment (*oja*) is eighth factor. For example, the eye deced corporeal unit (*cakkhu dasaka kalāpa*) can be analyzed and it consists of 10 factors, i.e, the earth-element, the water-element, the fire-element, the air-element. colour, smell, taste, nutriment, life-faculty and eye-clear-sensitivity (*cakkhupasāda*). The fire-element, consisting in those factors, is capable of producing *utuja-ojaṭṭhamaka* which consists of 8 factors. This new corporeal unit is new generation produced by temperature.

Then those *utuja-ojaṭṭhamaka* also consist of the fire-element and it cause new generation of *utuja-ojaṭṭhamaka* again. These corporeal units, *utuja-ojaṭṭhamaka*, are second generation of the fire-element of eye decad.

In this way, when the corporeality of each unit reaches to static phase (*thiti*), the fire-element, consisting in each eye decad, produces four to five generations of corporeal units successively. It will be explained in detail later.

The fire-element, consisting in some corporeal units are capable of producing 3 to 4 or 4 to 6 generations of corporeal units successively. If the fire-element is a factor of corporeal unit, produced by mind, which is occurring in *samatha* and *vipassanā* practice, that fire-element is capable of producing many new generations of corporeal units both internally and externally. Those kinds of corporeality are called the corporeality produced by same temperature (*sabhā-ga-eka-utu samuṭṭhana rūpa*).

The nourishment, indeed, is a group of corporeal units produced by temperature, before eating, or inside stomach before digestion occurs. It is a kind of 32 bodily parts (*koṭṭhāsa*). If a *meditator* discerns the nourishment, inside the stomach by means of four element meditation, he can see a group of corporeal units produced by temperature (*utuja ojaṭṭhamaka*). Then the *meditator* will see proliferation of corporeal units successively because of the presence of temperature inside those corporeal units. The nutriment (*oja*) is also included in those corporeal units called *utujaojaṭṭhamaka* respectively and it is the nutriment produced by temperature (*utujaoja*). When the nutriment, produced by temperature is converted by the fire-element of vital nonad (*jhivī'anavaka kalāpa*), it become the corporeal unit produced by nutriment and distributed into the whole body. These distributing corporeal units are called *āhāra-ojaṭṭhamaka* because they are converted from the nutriment of *utujaojaṭṭhamaka*. Indeed, they are first generation of the nutriment, inside the *utujaojaṭṭhamaka kalāpa*. The nutriment, which is composed in *āhāra-ojaṭṭhamaka*, is called *āhāraoja*.

PAGE-216

The nutriment is also consisted in corporeal units produced by *kamma*, mind and temperature respectively. The term of nutriment varies, i.e, *kammaja-ojā*, *cittaja-oja*, *utuja-oja*, depend on what kind of corporeal unit it consisted. Those various kinds of nutriment, in turn, can be converted into *ojaṭṭhamaka kalāpa* up to 4 or 5 generations when the supporting factor of *āhāraja-ojā* is present. If the nutriment, consisting in the previous *āhāraja-ojaṭṭhamaka kalāpa*, is supported by the nutriment, consisting in the successive *āhāraja-ojaṭṭhamaka kalāpa*, and 10-12 generations of *oja-ṭṭhamaka kalāpa* will be occurred depending on ability of ingested nourishment. In this way, the nourishment, ingested only once, is able to assimilate up to seven days in the body. (*Visuddhi-2-249-252*)

This process of proliferation of corporeal units are called 'the corporeality produced by the same nutriment (*sabhāga eka oja samuṭṭhāna rūpa*).

When the *meditator* is able to discern each corporeal unit, which is produced by the same temperature or nutriment, one by one, the compactness of continuity within successive occurrence of different corporeal units has been broken down by insight knowledge. If the *meditator* see corporeal units as a single string continuously or as a firework, it can be said that the compactness of continuity covers on it. If the compactness of continuity covers on the real nature of corporeal units, the *meditator* will be far from ability to distinguish each specific character, consisting in different corporeal units, one by one. If the *meditator* is unable to reach the field of ultimate reality, it is very far from achievement of the knowledge of non-self, indeed.

2.16.2 The compactness of form of corporeality (*samūha ghana*)

If the *meditator* is able to analyze and discern the specific character of the ultimate corporeality, which is consisting in various corporeal units, such as 8 kinds, 9 kinds, 10 kinds of factors, etc... the compactness of form (*samūha ghana*) has been broken down. In this case, the term ‘analyze’ means the ability to discern up to the field of ultimate corporeality within a such corporeal unit, one by one. If one can not analyze the specific character of each corporeality within various corporeal units of which 8 factors, 9 factors, 10 factors ... etc., it can be said that the light of non-self will not be appeared in him.

PAGE-217

2.16.3 The compactness of function of corporeality (*kicca ghana*)

The ultimate reality of corporealities, which are consisting in different corporeal units, such as octad, nonad, decad, etc.. have specific function, respectively. For example, the function of the earth-element is standing up for remaining corporealities of the same corporeal unit (*patitṭhāna rasa*). The function of the water-element is proliferation of corporeality (*byuhana rasa*), while that of the fire-element, maturation (*paripācana rasa*) and that of air-element, pushing (*samudīraṇa rasa*), respectively. If it is able to distinguish the specific function of each ultimate corporeality by analytical knowledge, the compactness of function of corporeality will be broken down. Without knowing and seeing the specific function of each corporeality, but unique function for all, the compactness of function can not be broken down with the result that the light of non-self can not be appeared.

2.16.4 Responsibility

The *meditator* must be able to discern the specific character of each ultimate corporeality of various corporeal units, octad, nonad, decad etc... by means of character, function, manifestation, proximate cause, in order to break down three kinds of compactness. The concentration called neighbourhood concentration or full concentration, plays vital important role in attainment of analytical knowledge by which each ultimate corporeality within different corporeal units could be discerned. It is because these *dhammas* can be known by only in the presence of concentration, indeed.

2.17. Four kinds of compactness of mentality

There are four kinds of compactness in the mental *dhamma*.

1. The compactness of continuity (*santati ghana*)
2. The compactness of form (*samūha ghana*)
3. The compactness of function (*kicca ghana*)
4. The compactness of object (*ārammaṇa ghana*)

Pāli Quotation (Mūlatī-1-60) one paragraph

PAGE-218

Above quotation found in *Mūlaṭṭikā* interpret the meaning of compactness of mentally as follows.

2.17.1. The compactness of continuity of mentality

The mental *dhamma* consists of two kinds of minds, i.e the consciousness of thought process (*vūhi citta*) and the consciousness excluded in thought process (*vūhimutta citta*). The second kind, *vūhimutta citta*, in turn, varies three kinds, i.e, the birth consciousness, which is the first thought moment of a life, the death consciousness, which is the last one of a life and the life-continuum (*bhavanga*) which occurs between thought processes in order to continuation of life process of mind. The *bhavaṅga* mind clearness occurs along with the whole life although the birth consciousness and the death consciousness occur once only in a life respectively. If it is not able to see those kinds of mind, one by one, but a single mind, it can be said that the compactness of continuity covers on it. If each kind of mind can be seen by analytical knowledge, the compactness of continuity had been broken down.

Then all consciousness of thought processes always occur in accordance with the fixed law of mind (*citta niyama*). They never occur out of the fixed law of mind. For instance, the consciousness of the eye door thought process (*cakkhu dvāra vūhi citta*) includes successive thought moments, i.e, the advertence (*pañca dvarā vijjana*), seeing-consciousness (*cakkhuvīññāṇa*), the receiving (*sampaṭicchana*), the investigating (*santīraṇa*), the receiving (*sampaṭicchana*), the investigating (*santīraṇa*), the determining (*vuṭṭhāna*), seven times of impulsions (*javana*), two times of registering (*tad-ārammaṇa*), called successive thought moments of fixed law (*citta niyama*). The continuation of thought moments occurring in one kind of thought process is called *vūhi*. If one can not distinguish each thought moment occurring in various *vūhi*, eye-door, ear-door, nose-door, tongue-door, body-door and mind-door, one by one, it can be said that the compactness of continuity covers on it. If one is able to discern like that, “this is the advertence”, “this is the seeing consciousness”, “this is the receiving” ... etc., the compactness of continuity had been broken down by analytical knowledge.

2.17.2 The compactness of form of mentality (*samūha ghana*)

The mental *dhamma* are unable to occur as a single. The consciousness and mental concomitants always occur as an associating *dhamma* of each other in every thought moment. The birth consciousness, life-continuum (*bhavanga*), the death-consciousness, called *vūhimutta citta*, and the consciousness of every thought process, always occur as a group of mind and mental concomitants, at least 8-mental factors. For instance, if the *meditator* with three roots (*tīhetuka*, i.e, non-attachment, hatelessness, non-delusion) takes place the birth consciousness, associated with joyful feeling (*somanassa*), the mind and mental concomitants of the birth consciousness will be ...

PAGE-129

1. *citta* = birth consciousness, 1,
2. *aññasamāna* = dual associatable mental concomitants, 13
3. *sobhaṇa sādāraṇa* = wholesome mental concomitants, 19
4. *paññindriya* = knowledge, 1,

34 mind & mental concomitants in total. If the birth consciousness consists of 34 mental factors, the life-continuum and the death consciousness of that *meditator* also consists of 34 mental factors respectively.

Then the eye-door thought process, above mentioned, consists of

1. 11 mental factors in advertence,
2. 8 mental factors in seeing consciousness

3. 11 mental factors in receiving
4. 12 mental factors in investigating (if associated with joyful feeling)
5. 12 mental factors in determining
6. 34 mental factors in each impulsion (if the great wholesome impulsion associated with knowledge and pleasurable interest (*pīti*))
7. 34 mental factors in each registering, (two *tadārammana*), respectively.

Detail account can be seen in Meditation on mentality (*nāma kammaṭṭhāna*), Volume-2.

In this way, the mental *dhamma* usually occurs as a group associating with respective mental concomitants of the specific character according to fixed law of mentality. Without distinguishing the specific character of each mental factor like that “this is contact (*phassa*)”, “this is feeling (*vedana*)”, “this is perception (*saññā*)”, “this is volition (*cetanā*)”, “this is consciousness (*viññāṇa*)” etc and if one see the mentality as a single in each thought moment, it can be said that the compactness of form (*samūha ghana*) cover on it.

If the *meditator* is able to distinguish each associated *dhamma* of a thought moment, such as, ‘this is contact’, ‘this is feeling’, ‘this is perception’, ‘this is volition’, “this is consciousness”, etc ..., and “this thought moment consists of 8 mental factors”, “this thought moment consists of 11 mental factors”, ‘this thought moment consists of 34 mental factors’ etc ... exactly, the compactness of form had been broken down in him by insight knowledge.

2.17.3 The compactness of function of mentality (*kicca ghana*)

A group of mental factors associating in one thought moment is called ‘mental unit’ (*nāma kalāpa*). The ultimate mentality within a mental unit has specific function, respectively. For instance, the consciousness (*citta*) has the specific function that leading to take object (*pubbangamarassa*). The function of contact is joining the consciousness and object (*sangghasanarasa*), while that of feeling, awaring by the sense of object (*anubhavana rasa*); that of perception, making sign of the object to recognize again (*punasanjānana nimitta-karaṇa rasa*); the volition, endeavouring to direct the mind into the object (*āyūhana rasa*) etc... Each mental factor within a thought moment has the specific function.

PAGE-220

If the *meditator* is unable to distinguish the specific function of each mental factor, one by one, it can be said that ‘the compactness of function covers on it’. If the *meditator* is able to see the specific function of mental factors like that ‘this is the function of contact’, ‘this is the function of feeling’ etc... it can be said that the compactness of function had been broken down by insight knowledge.

2.17.4 The compactness of object (*ārammana-ghana*)

All mental *dhamma* are *sārammaṇa dhamma* (capable of taking object). However, there are two kinds of mental *dhamma*, i.e., the observed mental *dhamma* and the observing mental *dhamma* in the field of *Vipassanā*. (*Visuddhi-2-262*). In the method of *arūpasattaka* (mental septet), it is instructed that the previous discerning *vipassanā* mind should be discerned by the later *vipassanā* mind. Then in the *Bhaṅgānupassanā ñāṇa* (the knowledge of dissolution), it is instructed that ... *ñātañca ñāṇañca ubhopi vipassati*. (*Visuddhi-2-278*)

= it should be discerned on both *saṅkhāra dhamma* (*dukkha sacca and samudaya sacca*) called *ñāta* (the observed *dhamma*) and the observing thought process of *vipassanā* insight (it is predominant by knowledge) called *ñāṇa* (*vipassanā* knowledge).

In the aspect of observed mental *dhamma* (*ñāta*), there are three kinds of compactness, i.e., compactness of continuity, form & function. In the aspect of observing mental *dhamma* (*ñāṇa*), there are also three kinds of compactness, similarly. It should be discerned on the observing mental *dhamma* (*ñāṇa*), in order to break down three kinds of compactness by successive *vipassanā* knowledge. Indeed, those observing mental *dhammas* are *sārammaṇa dhamma* (capable of taking object) in the field of *vipassanā* insight. The thought process of *vipassanā* knowledge (*mano dvārika vūthi*) should be discerned by means of the following methods.

- (1) It must be discerned like that “this is the advertence”.., “this is the first impulsion”.., ‘this is the second impulsion’.. etc.. in order to break down the compactness of continuity. Without seeing the continuous thought moment one by one, the compactness of continuity covers on it. When one can see each thought moment one by one, it can be said that the compactness of continuity had been broken down by insight knowledge.

PAGE-221

- (2) Then, if one can see the thought moment as a single only, it can be said that the compactness of form covers on it. If one can see those mental *dhamma* within each thought moment like that “this is contact”.., ‘this is feeling’, ‘this is perception’... ‘this is volition’, ‘this is consciousness’ etc.. it can be said that the compactness of form had been broken down.
- (3) Then, if one is unable to discern the specific function of each mental *dhamma* within every thought moment respectively, it can be said that ‘the compactness of function covers on it. If one is able to distinguish the specific function of each mental *dhamma* like that ‘this is the function of contact’, ‘this is the function of feeling’, .. ‘this is the function of perception’, .. ‘this is the function of volition’, ‘this is the function of consciousness’.. etc .., it can be said that the compactness of function had been broken down.

Those three kinds of compactness i.e., compactness of continuity, form, and function, occurring in observing mental *dhamma* (*ñāṇa* = previous discerning *vipassanā* knowledge) are called the compactness of object (*ārammaṇa ghaṇa*). In the field of *vipassanā*, *sārammaṇa dhamma* which is capable of taking object especially, is *vipassanā* knowledge or impulses of thought process of *vipassanā* insight, indeed. In the aspect of observed mental *dhamma*, there are three kinds of compactness, i.e., compactness of continuity, form, and function, while in the aspect of observing *vipassanā* knowledge, it is only one compactness, the compactness of object (*ārammaṇa ghaṇa*). Only when one distinguished like this the meaning of four kinds of compactness of mentality would be understood.

In this way, only when one can discern on the object of *vipassanā* knowledge, which is called *ñāta* and the *vipassanā* knowledge, called *ñāṇa*, in order to break down the compactness of both corporeality and mentality by means of analytical knowledge, can he see those *saṅkhāra dhamma* to which no creative *atta* (self); the nature of non-self and the nature of dissolution of those *saṅkhāra dhamma*, continuously. When he see like that .. he will see and understand the nature of the absence of *atta*, which is any kind of creator by way of the following three conditions:

1. it may not be reached to the static phase (*thitikāla*) of *saṅkhāra dhamma*,
2. the *saṅkhāra dhamma*, reaching at the static phase, may not be decay (*jaratā*),

3. the *sañkhāra dhamma*, reaching at the decaying phase, may not be perishing away (*bhanga*).

PAGE-222

There are wanting any condition which can be created by the wish of person, being, self, in those *sañkhāra dhamma*. Therefore, the *sañkhāra dhamma* can be called ...,

1. non-self (*anatta*) because of the nature of nothingness (*soññata*) in which lacking self (*atta*),
2. non-self (*anatta*) because of the absence of owner of those *sañkhāra dhamma*,
3. non-self (*anatta*) because of the absence of wish of self by which one can be created,
4. non-self (*anatta*) because of contradiction to the opinion of heretics, i.e, there is a creator (*parama atta*), and there is created self (*jīva atta*). (*Abhi-A-2-45*)

In order to appear the knowledge of the non-self it should be discerned on the corporeality and mentality by means of analytical knowledge which is capable of break down the compactness of those *sañkhāra dhamma*, one by one. Only when one is able to discern like that, can he decide himself the fact that all *sañkhāra dhamma* are present only beyond compare short moment temporarily, between two phases of lacking, before and after, it occurrence as the nature of *anicca*, *dukkha*, *anatta*. Then the light of non-self would be appeared marvellously in the insight of *meditator*, indeed.

But some teachers were unable to accept above explanations found in scriptures, and suggested the following opinions, referring to the commentary of *Mūla paṇṇāsa*.

1. *Nibbāna* can be attained by *vipassanā* practice on only one kind of corporeal *dhamma*.
2. *Nibbāna* can be attained by *vipassanā* practice on only one kind of mental *dhamma*.
3. *Nibbāna* can be attained by *vipassanā* practice on only one kind of corporeality and mentality each.

If a person accept any kind of above opinions, all explanations on the compactness of corporeality and mentality, mentioned above, would be void of meaning. In order to criticize above opinions, about three kinds of *vipassanā* fields (*sammasanacāra*) and ‘partial concept’ (*ekadesa*) would be presented as follows.

PAGE-223

2.18 Three kinds of *vipassanā* fields (*sammasanacāra*)

Sañkhāra dhamma, i.e, the corporeality and mentality, which are the fields of *vipassanā* practice, are called *sammasanacāra* or *vipassanā bhūmi*. There are three kinds of *vipassanā* fields, i.e., the *vipassanā* field

- (1) of *Bodhisatta*
- (2) of *Piccekabodhisatta*
- (3) of *Sāvaka-bodhisatta*.

These three kinds of *vipassanā* fields are explained in the Sub commentary of *Anupada Sutta* as follows.

Pāli Quotation (M-tī-3-275)

The meaning of *Pāli* quotation is as follows.

2.18.1 The *vipassanā* field of *Bodhisatta*

All the *Bodhisattas* always take place *vipassanā* practice on the objects of all *saṅkhāra dhamma* (corporeality and mentality) occurring in the continuum of beings of ten thousands universes and *saṅkhāra dhamma* of non-living (*anindariyabadda*) by means of three characteristics, *anicca*, *dukkha*, *anatta*, according to noble teachers.

However, the *apare* noble teachers (the elder teachers of *theravāda*) suggested that all the *Sammāsambuddha-bodhisattas* always take place *vipassanā* practice on the objects of all *samkhāra dhamma* (corporeality and mentality) occurring in the continuum of beings of 1000 billions universes and *saṅkhāra dhamma* of non-living by means of three characteristics, *anicca*, *dukkha*, *anatta*.

Therefore, 36×10^{12} – folds *vipassanā* knowledge had had been appeared in the continuum of *Bodhisattas* by means of three periods, past, future and present and those kinds of *vipassanā* knowledge are called *Mahā vajira vipassanā ñāṇa* (*vipassanā* knowledge of great thunderbolt). Although there are infinite beings in one universe, the *Bodhisattas* are able to discern on 12 factors of dependent origination, occurring in the continuum of all beings of those universes, by means of three general characteristics, *anicca*, *dukkha*, *anatta*, with the result that 36×10^{12} – folds *vipassanā* knowledge, called *Mahāvajra vipassanā ñāṇa*, would be appeared.

PAGE-224

2.18.2 The *vipassanā* field of *Piccekabodhisatta*

All the *Picceka-bodhisattas* always take place *vipassanā* practice on the objects of all *saṅkhāra dhamma* (corporeality and mentality), occurring in the continuum of themselves, *saṅkhāra dhamma* occurring in the continuum of beings of the middle land, and *saṅkhāra dhamma* of non-living (*anindariyabadda*) by means of three general characteristics, *anicca*, *dukkha*, *anatta*.

2.18.3 The *vipassanā* field of *Sāvakabodhisatta*

All the *Sāvaka-bodhisattas*, i.e., *Aggasāvaka*-, *Mahāsāvaka*-, *pakatisāvaka-bodhisattas*, however, always take place *vipassanā* practice on the objects of all *saṅkhāra dhamma* (corporeality and mentality), occurring in the continuum of themselves, *saṅkhāra dhamma* of external beings without discriminating each other, such as, male, female, person, animal etc.. but as a general and *saṅkhāra dhamma* of non-living (*anindariyabadda*) by means of three general characteristics, *anicca*, *dukkha*, *anatta*.

These are three kinds of *vipassanā* fields (*sammasanacāra*), found in the sub commentary. (*M-tī-3-275*).

2.19 The concept of ‘partial’ (*ekadesa*)

Among three kinds of *vipassanā* fields mentioned above, the third one determined the *vipassanā* field of *sāvaka-bodhisatta* (this kind of person will attain *nibbāna* as a disciple). Although there are different in three kinds of disciples (*sāvaka*), *aggasāvaka*, *mahā sāvaka*, *pakatisāvaka*, the *vipassanā* field which is the object of *vipassanā* practice is the same among those persons.

Some teachers misinterpreted on the word ‘partial’ (*ekadesa*) which is found in the commentary of *Mūla paṇṇāsa*, with the result that the opinions mentioned in page 91 appeared in them. Brief account on the concept of ‘partial’ (*ekadesa*), therefore, would be presented as follows.

* *mānabhañjanattham sabbadhammamūla-pariyāyanti desanam ārabhi (M-A-I-18).*

Five hundreds young brahmas who were very proficient in three kinds of astrology (*Vedas*), ordained under the admonishment (*sāsanā*) of Buddha, in order to search the essence of *sāsanā*. They were very sharp wisdom due to final existence of their lives. When they studied the Buddha's teachings they learned easily and became less obedience to even the Buddha because of pride at their great learning in scriptures. They were impressed by themselves and looked down upon the *dhamma* preached by the Buddha.

PAGE-225

The Buddha who know and see the cause of destruction of their Fruit-Knowledge which had previous supporting perfections, preached on the *Mūlapariyāya Sutta* for those 500 *bhikkhus*, in order to suppress their pride. (If should be noticed that the Buddha preached not the objects of *vipassanā* practice.)

When the Buddha preached that *Sutta*, the portion of objectivity in which the four great elements had been known.

- (1) by worldlings (*putthujana*) with three kinds of ob'sessions, i.e, obsession of craving, obsession of conceit, ob'session of wrong view,
- (2) by *sekkha* persons (lower three kinds of Noble Ones) with two kinds of ob'sessions, ob'session of craving, ob'session of conceit, partially,
- (3) by *asekkha* persons (*arahants*) without any kinds of ob'session
- (4) by *tathāgata* (the Buddha) without any kinds of ob'session,

was preached by means of four parts which are analyzed respectively. Then the Buddha changed the way of preaching from the portion of objectivity to subjectivity. (Detailed account can be seen in the *Mūla priyāya sutta*, *Mūlapaṇṇāsa*, *Majjhimanikāya*.)

As the Buddha preached like that, there is a question that whether above four persons performed different means of knowing about on four great elements only or on both four great elements and the remaining *sañkhāra dhamma*, similarly. In order to solve that problem, the commentator explained by means of the method of *lakkhaṇāhāra netti* which is found in *Netti Pāli* text, i.e, way of preaching in which the Buddha preached as a common due to presence of same characters. (*M-Com-1-32*)

According to above explanation, if it is interpreted on four great elements, it should also be interpreted on 24 secondary ones which are of same characters to four great elements, i.e, *ruppāna lakkhaṇa* = the character of change for the worse. Then, if it is interpreted on the corporeal group (*rūpa kkhandā*), it should be interpreted on remaining 4 mental groups (*nāmakkhanda*) which are of same character to corporeal group, i.e., *vadhakalakkhaṇa* = the character of killer.

evam rūpamukhena sañkhāravatthukam maññanam vatvā (M-A-I-33)

According to above quotation, four kinds of above persons had different means of knowing about on all *sañkhāra dhammas* as about four great elements. Therefore it can be interpreted as follows.

- (1) Worldlings (*putthujana*) know all *sañkhāra dhammas* by means of three ob'sessions, obsession of craving, obsession of conceit, obsession of wrong view.
- (2) *Sekkhā* persons know all *sañkhāra dhammas* by means of two ob'sessions, ob'session of craving and obsession of conceit.
- (3) *Asekkha* persons know all *sañkhāra dhammas* without any ob'session.

(4) *Tathāgata* (the Buddha) knows all *saṅkhāra dhammas* without any ob'session.

In this way, there are different means of knowing in four kinds of persons. If should be recognized that although the Buddha preached the four great elements directly, all *saṅkhāra dhammas* are also interpreted according to the method of same character (*lakkhaṇā hāra netti naya*).

PAGE-226

2.20 Difference between fields of full understanding (*pariññā*)

Asekkha persons (*arahants*) know all *saṅkhāra dhamma* without any kind of obsessions, as *Tathāgata* (the Buddha) knows all *saṅkhāra dhamma*. However, there are difference between fields of full understanding (*pariññā*) of both two kinds of Noble Ones. This is explained in the commentary as follows.

Pāli Quotation (M-A-1-54)

“*Tathāgata* (the Buddha) knows thoroughly all *pariññeya dhamma* which should be full understood”. In this phrase, “knows thoroughly” (*pariññā tanta*) means “knows beyond compare way” by which there is no remains to know for the Buddha. Actually, the way of eradication of each defilement (*kilesa*) by respective Path-Knowledge of the Buddha is the same as that of eradication of each defilement by respective Path-Knowledge of the disciples (*sāvaka*). There is no significance between ways of eradication of two kinds of Noble Ones. However, there are differences between fields of full understanding between them. Disciples attained *nibbāna* by discerning on the “partial of four great elements”. However, all the Buddhas had attained *nibbāna* by discerning on the all *saṅkhāra dhamma* with no trace of the latter which has not been discerned by *vipassnā* knowledge.

This is the meaning of above quotation. In this case, some teachers misinterpreted on the word “partial” which is found in the sentence, “Disciples attained *nibbāna* by discerning on the “partial” of four great elements”.

Indeed, those teachers misinterpreted on the *Pāli* words “*ekadesa*”, and they translated it into “one element” because *eka* means “one” while *desa* means “element” as direct translation. But when the word *eka* is followed by *desa*, it become compound noun “*ekadesa*”, which is not interpreted as “one element”, but “partial”, indeed. There is very different meaning between “one element” and “partial”.

For example, let us suppose, there are about hundred coconuts in such place. Then imagine two usages as follows.

PAGE-227

(1) Please take “one coconut”,

(2) Please take “partial coconuts” ..

There is very different meaning between “one coconut” and “partial coconuts”. Similarly, the interpretations of “*ekadesa*”, i.e, “one element” and “partial elements”, have quite different from each other. It should be unforgot the method of same character (*lakkhaṇāhāra netti naya*) mentioned above. In the *Pāli* of *Mūlapariyāya Sutta*, the Buddha preached directly only on the four great elements as objectivity. According to “the method of same character”, the Buddha preached on all *Saṅkhāra dhamma* as a common. The commentator of those *Pāli*, with regard to the usage of *Pāli*, explained that “Disciples attained *nibbāna* by discerning on the “partial” (*ekadesa*) of four great elements”. According

to the method of same character, this explanation can also be interpreted as disciples attained *nibbāna* by

1. discerning on the “partial” of four great elements.
2. discerning on the partial of secondary corporeality which have same character of change to worse, (*ruppāna lakkhaṇa*)
3. discerning on the partial of four mental groups which have same character of killer (*vadaka lakkhaṇa*).

Therefore, the real meaning is the fact that “disciples attained *nibbāna* by discerning on the partial of *sankhara dhamma* i.e corporeality, mentality, causes and results.

[Notes: It will be explained in detail the fact that “the way of eradication of each defilement (*kilesa*) by respective Path-Knowledge of the Buddha is the same as that of eradication of each defilement by respective Path-Knowledge of the disciples and there is no significance between way of eradication of two kinds of Noble-Ones”. The Path-Knowledge of the Buddha eradicates defilements with hobbies. However, the Path-Knowledge of disciples is unable to remove hobbies. That kind of significance would not be rejected in the commentary. That kind of significance occurs between ways of eradication of two kinds of Noble-Ones. The meaning of the commentator is the fact that the First Path-Knowledge of the Buddha eradicates wrong view on personality (*sakkāya diṭṭhi*) and skeptical doubt (*vicikiccā*); the First Path-Knowledge of the disciples also eradicates wrong view on personality and skeptical doubt etc., then, there is no difference between kinds and numbers of defilements eradicated by respective Path-Knowledge”.]

2.21 Explanations of the Sub commentary (*ṭīkā*)

As mentioned above, if *ekadesa* is interpreted as “partial”, but not “one element”, and the meaning as “partial of the all *saṅkhāra dhamma*”, it would be corresponded with the following explanations found in sub-commentary.

PAGE-228

Pāli Quotation : (M-ṭī-1-111)

= The word “only partial” (*ekadesameva*) means the fact that “only the *dhamma* occurring in the continuum of himself (qualitatively). Indeed, the meditation for the purpose of knowing the Four Noble Truths can be achieved by knowing with three kinds of full understanding (*pariññā*) on the *saṅkhāra dhamma*, occurring in the continuum of himself. The Buddha, therefore, preached in *Rohitassa Sutta*, *Smyutta-1-61*, *Anguttara-1-357*, the fact that “I designate the fact that the Noble Truth of Suffering” (*dukkha sacca*) called “world” (*loka*) is only inside the body which is about one metre in height. I designate the fact that “the Noble Truth of Cause of Suffering (*samudaya sacca*) called world (*loka*) is only inside the body which is about one metre in height”, etc ... (M-ṭī-1-111).

According to explanation of above sub commentary, the meaning of “*ekadesa*” must be interpreted the all qualitative *dhamma* which is occurring in the continuum of himself. Those *dhammas*, occurring in the continuum of himself are not only four great elements but also five aggregates (*pañca kkhanda*). The term “*ekadesa*” must be interpreted “those five aggregates and their causes”.

But it should not be misinterpreted on the explanation of sub commentary mentioned above, as those *dhammas* occurring in the continuum of himself only, without external five aggregates. Indeed, it explained only in the continuum of himself by means of majority, (*padhāna naya*) as a result those *dhammas*, occurring in the continuum of external ones are

also included. If the *meditator* is lacking any kind of absorption (*jhāna*), it can be said that there is no *jhānic dhamma* in the continuum of himself. Thus *jhānic dhamma* which is not occurring in the continuum of himself, would not be able to discern for him. Then, although those persons, who attained any kind of absorption (*jhāna*), such as some human beings, devas, brahmas, are present externally, the *meditator* without any kind of absorption is unable to discern those *dhamma* occurring externally, and he can know Four Noble Truths. But it does not mean the fact that “the Four Noble Truths can be known without discerning on external five aggregates”. In order to know real meaning of *ekadesa*, it should be read the following sub commentary of *Anupada Sutta*.

Pali-Quotation (M-ṭī-3-275)

PAGE-229

= *ekadesameva* (only partial) means the fact that “because inability to discern all *saṅkhāra dhammas* without any remains, and inability to take place *vipassanā* practice on all *saṅkhāra dhammas* by means of three characters, the discernment had been taken place “only on the partial” of *saṅkhāra dhamma* depending on the previous perfections (*abhinīhāra*) of himself; (to be continued).

[*abhinīhāra* means the fact that both “many previous perfections”, called the seed of knowledge (*vijjā*) and the seed of practice (*caranā*), which are leading factors to the Path-and Fruit-Knowledge, and “present nobility of mind”, called faith, effort, mindfulness, concentration, wisdom etc, which are associating with *vipassanā* knowledge in recent life, are known as “*abhinīhāra*”. Those successive *abhinīhāra dhamma* supports to occur the great wholesome impulses of thought processes (*mahā kusala javana vūthi*) associated with *vipassanā* knowledge by means of supporting cause (*paccaya satti*) for worldlings and *asekkha* persons. If it is associated with knowledge (*paññā*) and pleasurable interest (*pīti*), every consciousness of those impulses of thought process includes 34 mind and mental concomitants respectively. Depending on ability of *vipassanā* knowledge associated by union of mental *dhamma* within one thought moment, amounts of *sankhāra dhamma*, which can be discerned, varies in different conditions. The powerful *vipassanā* knowledge usually depends on *abhinīhāra dhamma*, the greater *abhinīhāra dhamma*, the higher *vipassanā* knowledge. If the ability of *vipassanā* knowledge is very high, large amounts of “partial” of *sankhāra dhamma* would be discerned. If the ability of *vipassanā* knowledge is low, less amount of “partial” of *sankhāra dhamma* would be discerned, respectively. These are the meaning of above quotation.]

Interrogation : There is a question that whether every gentleman and lady should be known all corporeal and mental *dhamma* by means of three kinds of full understanding (*tipariññā*) or not, because the Buddha preached in the *Aparijānana Sutta (samyutta-2-249-250)*, the fact that “it is unable to cease suffering unless one is knowing by full understanding of object (*ñātapariññā*), unless one is distinguishing by full understanding of propagation of knowledge (*tīraṇa pariññā*) on all *sankhāra dhamma*, and unless one is unable to give up the attachment on the five aggregates by means of knowledge of abandonment (*pahānapariññā paññā*)”. The answer is as follows.

The fact that all kinds of corporeal and mental *dhammas* must be known by three kinds of full-understanding (*ti-pariññā*) is all right. However, the Buddha preached that fact by means of *sammasanupaga dhamma* in which “all kinds of the ultimate reality included qualitatively..”, indeed.

PAGE-230

Therefore the fields of *vipassanā* practice of disciples are both

1. all corporeal *dharmā* and mental *dharmā* occurring in the continuum of himself and –
2. all corporeal *dharmā* and mental *dharmā* occurring in the continuum of external ones as a general without discriminating, such as male, female, person etc., and discerning on those *dharmā* by means of three general characters, can be called *sammasanacāra* of disciples. (This is the meaning of above quotation found in sub commentary of *Anupada sutta*.)

According to explanation of above sub-commentary, all corporeal and mental *dharmā* occurring in the continuum of himself and external ones can be called *ekadesa* (partial).

2.22 Determination on the meaning of “*ekadesa*”

There is a question that why *ekadesa* would be said, instead “the objects of *vipassanā* practice of disciple are both internal and external five aggregates”. The answer is as follows.

Both two ‘usages’ have been explained in commentaries. In two commentaries, *Aṭṭhasālinī* and *Visuddhi Magga*, various kinds of *Vuṭṭhānagāminī vipassanā* (the *vipassanā* knowledge just before releasing from *sankhāra dhamma*). Here some explanations, related to this portion, would be presented from excerpt of *Aṭṭhasālinī aṭṭhakathā*.

Pāli-Quotation (Abhi-A-1-270) (Abhi-A-1-271)

= In this *sāsanā* (admonishment), some *meditators* begin *samatha* practice on the internal five aggregates which are the objects of *vipassanā* insight. After discerned, kept in mind and distinguished on those objects they take place *vipassanā* practice by means of three general characters. Because *vuṭṭhānagāminī vipassanā* is unable to appear merely practising on the internal five aggregates, the external five aggregates must also be discerned by *vipassanā* insight. Therefore, both five aggregates occurring in the continuum of external ones and non-living *sankkhāra dhamma* have been discerned by means of three general characters alternately. Sometime that *meditator* discerned on the internal five aggregates by means of three general characters alternately. Sometime he discerned on the external five aggregates by means of three general characters alternately. (*Abhi-A-1-270*).

PAGE-231

Other *meditator* begins *samatha* practice on the corporeal *dharmā* of both internal and external-ones. After discerned, kept in mind, distinguished on those objects, he take place *vipassanā* practice by means of three general characters. Because *vuṭṭhānagāminī vipassanā* is unable to appear merely practising on the corporeal *dharmā*, the mental *dharmā* must also be discerned by *vipassanā* insight. Therefore, the feeling (*vedanā*), the perception (*saññā*), the formation (*sankhāra*), the consciousness (*viññāṇa*), which are occurred by taking the object of corporeal *dharmā*, must also be discerned by means of three general characters alternately. Sometime that *meditator* discerned on the corporeal *dharmā* by means of three general characters alternatively. Sometime, he discerned on the mental *dharmā* by means of three general characters alternately. (*Abhi-A-1-271*).

In the *Visuddhi Magga Aṭṭhakathā 2-300-301*, the similar explanation can be found. According to decision of those commentaries, the Noble Path-Knowledge can not arise by merely discerning on the internal five aggregates. It cannot arise by merely discerning on the

external five aggregates with non-living *sankhāra dhamma* similarly. Therefore, *vipassanā* practice must be taken place, sometime, on the internal five aggregates, sometime, on the external five aggregates alternately.

During practising on both internally and externally, the Noble Path-Knowledge can not arise by merely discerning on the corporeal *dhamma*. It can not arise by merely discerning on the mental *dhamma*, similarly. The discernment must, therefore be taken place on the corporeal *dhamma* sometime, on the mental *dhamma* sometime. Whenever the knowledge on the corporeal *dhamma* are intended to be clear, the primaries (*bhūta rūpa*) and the secondaries (*upādārūpa*) must be distinguished by analytical insight. Whenever the knowledge on the mental *dhamma* are intended to be clear, four mental aggregates which are occurring by taking the object of corporeal *dhamma*, must also be distinguished by analytical insight. (Detail account can be seen in *Abhi-A-1-270,271*; *Visuddhi-2-300-301*).

Those explanations, mentioned above are agreeing with the following facts preached in *Mahāsatipaṭṭhāna Sutta*.

Pāli Quotation (Dī-2-232) (Dī-2-237)

PAGE-232

(Dī-2-232) (Dī-2-237)

In the noble preaching of the Buddha, *Mahā satipaṭṭhāna Sutta*, it is instructed directly the fact that *vipassanā* practice must be taken place on both internal and external five aggregates, called *kāya* (on the body), *vedanā* (on the feeling) *citta* (on the consciousness), *dhamma* (the formation-group).

The Buddha, himself, instructed that both the internal and the external five aggregates must be discerned by *vipassanā* practice. The explanations, found in the commentaries, also decided that the Noble Path-Knowledge can not be achieved by either merely practising on the internal five aggregates or merely practising on the external five aggregates. The decision in the commentaries, therefore, strictly follows the instruction of the Buddha as a proverb, “fixed condition to be tighten by iron plate”, “fastened condition to be driven in a wedge to tighten up”.

As a disciple is able to discern only partial of both internal and external five aggregates by means of three general characters, the commentator explained on the *ekadesa* (partial). These instruction means on “the all qualitative numbers of ultimate reality” but not on quantitative numbers. There are many quantitative numbers in a kind of the ultimate reality. Those quantitative numbers of the ultimate reality can not be discerned thoroughly for a disciple. Therefore, the fact, “partial of quantitative numbers (*ekadesa*) of the ultimate reality should be discerned”, had been explained in the commentary.

2.23 Measured amount is about one litre (*doṇamattā*)

Those explanations, mentioned above, would be elucidated again in order to avoid misunderstood. In the *Visuddhi Magga-1-361*, it is explained that if the measurement had been taken place by imagination with knowledge, the whole body consists of about one litre of enormous corporeal units, which are arising and passing away simultaneously within beyond compare short duration of corporeality (*rūpa khaṇattaya*). Each corporeal unit consists of the four great elements (*mahābhūta*). If a person questions that whether the four great elements, composed in every corporeal unit, can be discerned or not, the “partial” of some corporeal units can be discerned. If the *vipassanā* knowledge is very powerful the large

amount of “partial” of corporeal units can be discerned, while the less power in the former, the little amount of the latter.

The secondary ones which occurs depending on the four great elements could be discerned in a similar amount of “partial” (*dkadesa*).

2.24 The field of mentality

ekiccharakkhaṇe koṭisatasahassasankhā uppajjittvā nirujjhati. (Samyutta-A-2-295)

= Within a very short moment, the mental *dhamma* arise and pass away about billion billion times per second. Those every mind moment consists of the contact, ‘the feeling’, ‘the perception’, ‘the volition’, ‘the consciousness’ called *phassapañcamaka dhamma*, which leads the remaining mentality, and discerned mental *dhamma* are some partial only. Non-discerned mental *dhamma* which are led by *phassapañcamaka dhamma*, are also some partial. It should be noted for the external mental *dhamma* in similar way.

PAGE-233

Therefore, both internal and external five aggregates in all qualitative numbers must be discerned in order to attain *nibbāna*. Because of this reason the Buddha instructed to discern all corporeal and mental *dhammas* by means of three kinds of the full understanding (*tipariññā*).

When discerning on those corporeal and mental *dhamma*, there are enormous numbers in quantitatively for every ultimate reality. Because disciples are unable to discern all corporeal and mental *dhamma* quantitatively, (only the Buddha is able to discern all corporeal and mental *dhamma* within billion billion universes.), it had been explained that *nibbāna* can be attained by discerning on “partial” (*ekadesa*) of those *dhammas* quantitatively.

In this way, it can be understood the fact that what, how many, and which kind of *dhamma* should be discerned in order to attain *nibbāna* for a disciple. However, the next reasonable suggestion would be presented as follows.

2.25 The next reasonable suggestion

Those explanations on “*ekadesa*” can be found in the commentary of *Mūlapariyāya Sutta* which is the first *sutta* of *Mūlapaṇṇāsa*. The thirty third *sutta* of *Mūlapaṇṇāsa* is called *Mahāgopālaka Sutta*.

In the commentary of *Mahāgopālaka Sutta*, it is explained that if one is unable to know by means of either

- (1) 28 kinds of corporeality quantitatively, or
 - (2) the cause of occurrence of corporeality,
- he is unable to reach the peak of *vipassanā* knowledge called the Path- and Fruit-Knowledge through the following processes successively, as follows,
- (1) discerning on the corporeality,
 - (2) discerned and kept in mind the mentality,
 - (3) kept in mind both corporeality and mentality
 - (4) distinguishing and kept in mind the causal relationship of corporeal and mental *dhammas*
 - (5) discerning on the corporeality, the mentality, the causes and the results by means of three general characters alternately. (*M-A-2-163*).

The *meditator*, he himself, should like to suggest the fact that a single commentator, very precise *sayādaw*, will not explain contradictory points of the term “*ekadesa*” in a single book.

PAGE-234

2.26 Whether noble eight-fold path to be fulfilled or not?

The *meditator* who wants to attain *nibbāna*, should like to take place reasonable suggestion on the fact, “the way of practice leading to *nibbāna* which is cessation of suffering” called *dukkha nirodhagāminīpatipadā*. It is also known as *Maggaariya sacca* in which Noble eight-fold path consists, such as right view, (*sammā diṭṭhi*), ... right thought (*sammā sankappa*), etc ... The Buddha preached on the Noble eight-fold path in *Dhamma cakka pavuttana Sutta (Samyutta-3-369)* and *Mahā satipaṭṭhāna Sutta (M-1-88)*. Only when the Noble eight-fold path is fulfilled, can it be attained *nibbāna* which is the cessation of suffering. The right concentration (*sammā samādhi*) which is also one factor of Noble eight-fold path, had been explained in *Mahā satipaṭṭhāna Sutta*, as follows.

Pāli Quotation (D-2-250-251) 1 to 4

= *Bhikkhus!* Which is the right concentration?

1. *Bhikkhus!* in this *sāsanā*, the *bhikkhu* enters in to the first absorption, in which no sensual desires is present, it is lacking of unwholesome *dhamma*; with which the initial application call *vitakka*, the sustained application called *vicāra*, the pleasurable interest called *pīti*, appeared in the absence of hindrances (*nīvaraṇa*); and the happiness called *sukha*, are present.
2. The *bhikkhu* enters into the second absorption in which no initial application called *vitakka* no sustained application called *vicāra* are present; with which the pleasurable interest called *pīti* which is occurred by the full concentration, and the happiness called *sukha*, are present.

PAGE-235

3. He enters into the third absorption in which no pleasurable interest (*pīti*) is present; with which the mindfulness called *sati* which is able to take the object with neutrality (*upekkhā*) and the clear comprehension called *sampajāna*, are also present; He feels in happiness (*sukha*) both mentally and physically. The Buddha and the noble persons praise such kind of person as “the person who observes the object with neutrality; who fulfilled the mindfulness which is able to keep in mind the object; who always stays happily ..” etc.
4. He enters into the fourth absorption in which thoroughly purified mindfulness (*sati*) is present; it is produced by neutrality called *upekkhā* which is free from both mentally agreeable (*somanassa*) and mentally disagreeable (*domanassa*) because of the facts that both bodily agreeable (*kāyika sukha*) and bodily disagreeable (*kāyika dukkha*) had been removed; and mentally disagreeable (*domanassa*) had been ceased in him.

Bhikkhus! this kind of concentration should be called the right concentration. (*sammāsamādhi*). (Dī-2-250-251).

The Buddha explained in *Mahā satipaṭṭhāna Sutta*, the fact that the concentration of the first absorption (*jhāna*), the concentration of the second absorption, the concentration of

the third absorption, and the concentration of the fourth absorption are called the right concentration (*sammāsamādhi*). Among all kinds of concentration which are the fundamental of *vipassanā* knowledge, the best kind of concentration had been shown by means of *ukkaṭṭhā niddesa* method (a kind of preaching method showing the best things or samples). In other words, there are three kinds of concentration, i.e., the neighbourhood concentration which is the peak of concentration of sensuous world, the concentration of world of form (*rūpāvacara samāhi*) and the concentration of the formless world (*arūpāvacara samādhi*), among which the middle one had been preached as a sample by means of *mijjhedīpaka* method (a kind of preaching method showing the middle things or samples).

Therefore, in the *Visuddhi Magga*, it is explained as follows.

Cittavisuddhi nāma saupacāra aṭṭha samāpattiyo. (Vs-2-222)

Eight kinds of absorptions (*samāpatti*) with the neighbourhood concentration, are called the purification of consciousness (*citta visuddhi*). In the practice of seven stages of purification, eight kinds of absorptions with the neighbourhood concentration are called *citta visuddhi*, while in the Noble eight-fold path method, the latter are called *sammā samādhi*. These two usages are only synonyms.

There is a question that when does the practice begin in order to fulfil the right concentration (*sammā samādhi*) called the purification of consciousness (*citta visuddhi*) for such *meditator*. In the *Mahā satipaṭṭhāna Sutta*, it is decided that the Buddha preached the conclusion of that *sutta* with the intention by which the right concentration should be fulfilled before the Path-Knowledge appears by means of *pubbabhāgasatipaṭṭhāna magga*. The evidence of this decision can be found in the conclusion of *Mahā satipaṭṭhāna Sutta*, in which the Buddha declared the fact that if the practice of *satipaṭṭhāna* has been taken place as the Buddha preached exactly, within either seven days or seven years, the Third Fruit-Knowledge or the Fourth Fruit-Knowledge can be attained.

In the commentary of *sammohavinodanī*, it is explained as follows.

PAGE-236

Pāli Quotation (Abhi-A-2-113)

= The phrase “this is called the right concentration”, means the facts that there is a mental concomitant called the “one-pointedness (*ekaggatā*), which is an associating mental factor in four kinds of absorptions, i.e., the first, the second, the third and the fourth absorption, respectively. This “one-pointedness” is called the mundane right concentration at the stage of mundane *satipaṭṭhāna*, while it is called the Supra-mundane right concentration at the moment of the Noble Path-Knowledge. In this way, the Buddha preached “*Magga sacca*” in the *Sacca vibhanga*, *Abhidhamma Vibhanga Pāli*. (*Abhi-A-2-113*).

In *Mahāsatipaṭṭhāna Sutta*, the Buddha emphasized on only the mundane right concentration. However, in *sacca vibhanga*, the Buddha emphasized both on the mundane and the Supra-mundane right concentration.

Therefore at the previous stage of the Noble Path-Knowledge, a factor of *magga* called the right concentration must be fulfilled. If a such person has strong attachment on the opinion that “it is not essential to develop concentration”, only Noble 7-fold path will be occurred in him. If the Noble Path-Knowledge appears during discerning on the mind and mental concomitants of the second absorption, third absorption, etc.. the Noble 7-fold path will be occurred sometime because of lack of the right thought (*sammā sankappa*). In the

Buddha's *sāsanā*, the evidence in which *nibbāna* can be attained without the right thought, is present apparently but no evidence of attainment of *nibbāna* without the right concentration. Therefore the *meditator* should be decided the fact that whether *nibbāna* can be attained without right concentration or not. In the *Mahāsatipatṭhāna Sutta*, the Buddha preached the fact that the Noble 8-fold path is essential at the previous stage of Noble-Path-Knowledge although the Noble 7-fold path can be occurred during the Path-moment.

2.27 Whether the concentration is essence or not?

Some usually question on the fact that whether the concentration is essence or not, referring to *Assaji Sutta (samyutta-2-101-102)*.

Venerable *Assaji* was unable to enter the fourth absorption due to seriously fever in the *Kassapakārāma* monastery which was donated by *Kassapa*, a rich devotee. During previous sick he was able to enter the fourth absorption of *Anāpanassati* frequently, but he was not able to enter it for last time, and he asked the Buddha about that condition. At that time the Buddha elucidated as follows.

PAGE-237

Pāli Quotation (Sam-2-102) (Sam-A-2-289)

= *Bhikkhu Assaji ..!* such *bhikkhus* and *brahmas* called *samaṇa* and *brahmas* suggested that only the concentration (*samādhi*) is the essence and only the concentration is the occurrence of *bhikkhu*. Those *bhikkhus* and *brahmas* usually appeared in mind the fact that “Aren't we disimproving in the *sāsanā*?”.. said by the Buddha.

“However, under the admonishment of mine (the Buddha), this concentration is not the “essence”. Only *vipassanā* knowledge, the Path-and the Fruit-Knowledge are the essence of *sāsanā*. You (*Assaji*) disimproved in the fourth absorption of *Anāpanassati*, merely now, why did you suggest that “I had disimproved in the *sāsanā* ..?” consoled by the Buddha. After the Buddha consoled Venerable *Assaji* and preached “*tiparivutṭa dhamma*” (a kind of preaching way in which both questions and answers are taken place by three rounds) in order to set up the fourth Fruit-Knowledge for him with the beginning of ‘*tam kin mañṇasi*’ etc.. (*Samyutta-A-2-289*).

2.28 The preaching way of “*tiparivutṭa dhamma*”

Three rounds of questions and answers such as, *anicca* one round, *dukkha* one round, *anatta* one round, had been taken place by means of ...

1. Is it *nicca* or *anicca*?
2. Is it *sukkha* or *dukkha*?
3. Is it *atta* or *anatta*?

Then clinging five aggregates (*upādānakkhandā*) which are of 11 kinds of situations as follows,

- (1) past (*atīta*)
- (2) future (*anāgata*)
- (3) present (*paccupanna*)
- (4) internal (continuum of himself) (*ajjatta*)
- (5) external (continuum of others) (*bahiddha*)
- (6) gross (*oḷārika*)

- (7) subtle (*sukhuma*)
- (8) inferior (*hīna*)

PAGE-238

- (9) superior (*pañña*)
- (10) far (*dura*)
- (11) near (*santika*) ..

must be discerned by means of three general characters alternately. That kind of instruction on *vipassanā* practice is called the preaching way of “*tiparivatta dhamma*”. The Buddha continued “*tiparivutta dhamma*” for Venerable *Assaji*, accordingly. When Venerable *Assaji* followed and practised in accordance with the Buddha’s preaching called ‘*tiparivatta dhamma*’ and at the end of *dhamma* talk, he reached at the Fourth Fruit-Knowledge. (*Samyutta-A-2-289*)

“The concentration is not the essence of noble *sāsanā* and then it is not essential to develop concentration”.. etc. said by some persons, depending on the biography of Venerable *Assaji*.

Present work has no intention to say the fact that ‘the concentration is the essence of *sāsanā*. The writer also accepts the fact that only *vipassanā* knowledge, the Path- and Fruit-Knowledge are the essence of *sāsanā*, actually.

However, every person who wants to attain the Path- and Fruit-Knowledge and *nibbāna*, must practise the Noble eight-fold path in order to attain the *vipassanā* knowledge, the Path-Knowledge and the Fruit-Knowledge. Among those Noble eight-fold path, the right concentration is also an associated path accordingly. Only when the ultimate reality of *sankhāra dhamma*, called *dukkha sacca* and *samudaya sacca*, had been discerned by means of three general characters, alternately, can the *vipassanā* knowledge be appeared consequently. When the *vipassanā* knowledge become powerful supporting and depended factor (*upanissaya paccaya satti*), the Noble Path- and Fruit-Knowledge will be appeared at the end of *vipassanā* knowledge. The fundamental *dhamma*, in order to know the ultimate reality of *dukkha sacca* and *samudaya sacca*; and in order to attain *vipassanā* knowledge; is the right concentration, indeed.

The Buddha preached the Noble eight-fold path in various *suttas* such as *Dhamma cakka pavattana Sutta* and it is the way of ..

1. *Majjhima paṭipadā* (the middle way which is free from two extremes, i.e *attakilamathānuyoga* and *kāmasukhanlikānuyoga*)
2. *dukkhanirodhagāminīpaṭipadā* = way of practice leading to *nibbāna* which is the cessation of suffering.

In this way, the Buddha preached frequently on the Noble eight-fold path. Therefore every person who wants to attain *nibbāna*, must practise the Noble eight-fold path, indeed.

PAGE-239

2.29 The concentration is not ‘true *dhamma*’ in the *sāsanā*

Some teachers said that ‘the concentration is not ‘true *dhamma*’ in the *sāsanā*, but out of *sāsanā*. “The concentration, therefore, is not essential to develop for *vipassanā* practice”.. said by those teachers.

It is true the fact that there were many ascetic hermits who attained eight kinds of absorptions and Super-psychic knowledge (*abhiññāṇa*) at the time of the Buddha disappeared. It should not be accused on the ‘concentration’ as out of *sāsanā*, whether those

kinds of absorptions and Super-psychic knowledge could be occurred by the time out of *sāsanā* or not.

By the time the Buddha disappeared, there were many gentlemen who fulfilled five precepts. Because of this reason, it should not be accused like that ‘the training of virtue is out of *sāsanā*’.

Pāli Quotation (Samyutta-3-124)

In the *Bhikkhu Sutta, Samyutta Nikāya*, The Buddha instructed to fulfil the following responsibilities of the wholesome *dhamma* as

1. the virtue (*sīla*)
2. the right view of the strong beliefs on the action (*kamma*) and results of the action (*kamma*) (*kammassakatā sammādiṭṭhi*), under the admonishment of the Buddha, previously.

If a such *meditator* can accept the fact that “the Noble eight-fold path is the real *dhamma* of *sāsanā*”, why doesn’t he want to accept the fact that “the right concentration is a real *dhamma* of *sāsanā*?”

Every gentlemen should not accuse on the Buddha and his doctrine (*dhamma*) by means of misinterpretation.

If a such gentlemen dissatisfies to develop concentration any more and grasps on the ideology that “it is not essential to develop concentration” like a snake swallows frog firmly, he should like to question himself that “Can I discern on the clinging five aggregates of 11 kinds of situations; past, future, present, internal, external, etc.. as Venerable Assaji had taken place *vipassanā* practice by means of three general characters, alternately?” If he can answer that “I can not discern like that..” he should like to respect the Buddha’s instruction that it must be practiced previously *pubbabhāga satipaṭṭhāna*, including the noble eight-fold path, before the Path-Knowledge appeared.

[Notes: *Pāli Quotation (Paṭisam-181) (Mahāṭṭī-1-320)*

According to these *Pāli* Text and explanation of *Mahāṭṭīkā*, the term, *kāya*, is translated as *assāsapassāsakāya* (= physical constituents of in-breath and out-breath), *rūpakāya* (=physical constituents), *nāmakāya* (=mental constituents) from this place as beginning.]

4. *iti* = In this way *viharati* = he stays *kāyānupassī* = through repeated discerning as “*kāya*”, *ajjhātam vā kāye* = on whatsoever internal physical constituents or internal physical constituents of in-breath-out-breath, physical constituents, mental constituents; *viharati* = he stays *kāyānupassī* = through repeated discerning as “*kāya*”, *bahiddhā vā kāye* = on whatsoever external physical constituents or external physical constituents of in-breath-out-breath, physical constituents, mental constituents; *viharati* = he stays *kāya-nupassī* = through repeated discerning as “*kāya*” *ajjhātabahiddhā vā kāye* = on whatsoever internal external physical constituents or internal external physical constituents of in-breath-out-breath, physical constituents, mental constituents.

In this way he stays through repeated discerning as *kāya*, on whatsoever internal physical constituents or internal physical constituents of in-breath-out-breath, physical constituents, mental constituents; he stays through repeated discerning *kāya* as on whatsoever external physical constituents or external physical constituents of in-breath-out-breath, physical constituents, mental constituents; he stays through repeated discerning as *kāya* on whatsoever internal external physical constituents or internal external physical constituents of in-breath-out-breath, physical constituents, mental constituents.

5. *viḥavati* = He stays *samudayadhammānupassī vā* = through repeated discerning on phenomenon of origin of arising and phenomenon of arising *kāyasamim* = of body or physical constituents of in-breath-out-breath, physical constituents, mental constituents. *viḥavati* = He stays *vayadhammānupassī vā* = through repeated discerning on phenomenon of origin of cessation and phenomenon of cessation *kāyasamim* = of body or physical constituents of in-breath-out-breath, physical constituents, mental constituents.

viḥavati = He stays *samudayavayadhammānupassī vā* = through repeated discerning on phenomenon of origin of arising and phenomenon of arising, phenomenon of origin of cessation and phenomenon of cessation *kāyasamim* = of body or physical constituents of in-breath-out-breath, physical constituents, mental constituents

He stays through repeated discerning on phenomenon of origin of arising and phenomenon of arising of body or physical constituents of in-breath-out-breath, physical constituents, mental constituents. He stays through repeated discerning on phenomenon of origin of cessation and phenomenon of cessation of body or physical constituents of in-breath-out-breath, physical constituents, mental constituents. He stays through repeated discerning on phenomenon of origin of arising and phenomenon of arising, phenomenon of origin of cessation and phenomenon of cessation of body or physical constituents of in-breath-out-breath, physical constituents, mental constituents.

6. *pana* = Furthermore, *atthi* = there are *kāyova* = only body or only physical constituents of in-breath-out-breath, physical constituents, mental constituents. *iti* = In this way *paccupaṭṭhitā* = the manifestation of *sati* = mindfulness *hoti* = occurs *assa* = in the continuum of that practicing *bhikkhu*. *sā sati* = That mindfulness *hoti* = is *yāvadeva*

ñāṇamattāya = solely for advancement of *vipassanā* knowledge, *yāvadeva paṭissatimattāya* = solely for advancement of *vipassanā* mindfulness. *Viharati* = The practicing *bhikkhu* stays *anissito ca* = without attaching through craving, wrong view; *na upādiyati* = he never obsess as “I, mine” *kiñci* = on any thing *loke* = in the world called five clinging aggregates. *evampi kho* = In this way also, *bhikkhave* = *bhikkhus*.... *bhikkhu* = the practicing *bhikkhu*

viharati = stays *kāyānupassī* = through repeated discerning as “*kāya*” *kāye* = on the body. (M-1-70,71)

Furthermore, there are only body or only physical constituents of in-breath-out-breath, physical constituents, mental constituents. In this way the manifestation of mindfulness occurs in the continuum of that practicing *bhikkhu*. That mindfulness is solely for advancement of *vipassanā* knowledge, solely for advancement of *vipassanā* mindfulness. The practicing *bhikkhu* stays without attaching through craving, wrong view he never obsess as “I, mine” on any thing in the world called five clinging aggregates. In this way also, *bhikkhus*.... the practicing *bhikkhu* stays through repeated discerning as “*kāya*” on the body. (M-1-70, 71)

PAGE-243

In accordance with above preachings of the Supreme Buddha in this work called *nibbānagāminipadā* (=The Way of Practice Leading to *nibbāna*) the way of practice of mindfulness of breathing will be presented in successive stages as follows

1. Section of *ānāpānassatisamādhi*,
2. Section of *rūpakammaṭṭhāna*,
3. Section of *nāmakammaṭṭhāna*,
4. Section of *paticcasamuppāda*,
5. Section of *lakkhaṇādicatukka*,
6. Section of *vipassanā* practice.

PAGE-244

3.3 Practice of mindfulness of breathing

Among (40) subjects of *samatha* practices the righteous *meditator* has to develop concentration through any kind of *samatha* practice so as to be completed with right concentration called *Samādhi magganga* which is inclusive in the Noble Eightfold Path. In this work it will be presented how concentration can be developed through the mindfulness of breathing called *ānāpānassati* previously.

Pāli Quotation (Vs-1-276)

This practice of mindfulness of breathing is a difficult way of practice which is the sphere attended by only great gentlemen called (1) the Blessed One, (2) the Lesser Blessed One, (3) the Blessed One's sons called disciples. It is not inferior practice through which inferior persons can not develop concentration successfully. It is taken into heart through such and such modes; it is not only calm but also subtle through that and that modes. Therefore both very powerful mindfulness and wisdom play essential role in the development of practice of mindfulness of breathing. (Vs-1-276)

In above words of the commentary according to the word, *mahāpurisānamyeva*, it refers to only great gentlemen and this paper also agrees the fact the practice of mindfulness

of breathing is not suitable for every practicing person. Even though only *bodhisatta* is designated as *mahāpurisa* (great gentleman) in some conditions, in this section of practice of mindfulness of breathing the term, *mahāpurisa*, refers to (1) the Blessed One, (2) the Lesser Blessed One, (3) the Blessed One's sons called disciples and then the righteous *meditator* might be inclusive in the list of third one. Therefore this practice of mindfulness of breathing should be performed practically. (Unless anybody is concerned with the third list, the Blessed One's sons called disciples, it will be opportunity of himself only.) If anyone is unsuccessful to develop concentration through practice of mindfulness of breathing, he should like to change any other appropriate meditation subjects among (40) subjects as shown in section of *samatha* practice, volume V.

PAGE-245

3.4 Advantage of practice of mindfulness of breathing

Pāli Quotation (Sam-3-279)

Bhikkhus..... if this concentration of mindfulness of breathing is developed over and over again, it is not only calm but also superior one; it is not essential to be added again but abiding with full of bliss; it can disappear and tranquilize every unwholesome *dhamma* whenever it arises within a short time.

Bhikkhus..... as unseasonal torrential rain can disappear and tranquilize fogs which are floating upward in last month of summer within a short time, similarly if this concentration of mindfulness of breathing is developed over and over again, it is not only calm but also superior one; it is not essential to be added again but abiding with full of bliss; it can disappear and tranquilize every unwholesome *dhamma* whenever it arises within a short time. (*Sam-3-279,280*)

These are words delivered by the Exalted One showing how the practice of mindfulness of breathing is calm, superior and great advantageous one in order to urge *bhikkhus* for willingness in practice of mindfulness of breathing.

santa-panita (how it is calm and superior one)

The absorption of practice of foulness nature with the object of a corpse is called *paṭivedha* (insightfulness). It occurs through penetrative knowing and seeing on the object of foulness nature of corpse of oneself and it is therefore, called *paṭivedha*. That absorption of practice of foulness nature called *paṭivedha* is calm and superior through only efficiency of absorption which has got powerful one-pointedness of the mind on the object of corpse. However it is not calm and superior one by means of object, due to occurrence of presence of both gross object called foul corpse and loathsome object called foul corpse.

This concentration of practice of mindfulness of breathing is, actually, not similar to that absorption of practice of foulness nature. It never occur distraction and inferiority through any kind of indirect aspect. Actually it is very calm and tranquil, due to occurrence of calmness of both object called brilliant sign of full concentration of mindfulness of breathing and factors of absorption called *paṭivedha*. Due to occurrence of superiority of both object called brilliant sign of full concentration of mindfulness of breathing and factors of absorption which face with the object of sign of full concentration of mindfulness of breathing, this concentration of mindfulness of breathing is superior and capable of making discontented. The Blessed One, therefore, praised on this concentration of practice of mindfulness of breathing as calm and superior one. (*Vs-1-259*)

PAGE-246

3.5 asecanaka-sukhavihara

The practicing *meditator* who wants to attain absorption of *kasiṇa*-object has to make various circular *kasiṇa*-objects, earth-*kasiṇa* object etc. That making of *kasiṇa*-object is called a kind of preliminary work (*parikamma*). This practice of mindfulness of breathing is, actually, called *asecanaka*, due to lack of any factor, making preliminary work which can accomplish calmness and superiority, as making of *kasiṇa*-object etc. This practice of mindfulness of breathing is a specific kind which never concern with other factor, making preliminary work etc., which is the cause of calmness. It is calm without depending on access concentration. Other *samatha* practices have got calmness through two factors, i.e., removing of hindrance *dhammas* and arising of factors of absorption during access concentration. Actually this practice of mindfulness of breathing, on the other hand, is not only calm but also superior one at the beginning of taking into heart in-breath and out-breath through its specific nature.

Those *Mahā Theras* who dwelt in northern monastery called *Abhayagirivāsī* said that “it was no need to add fat nourishment into this concentration of mindfulness of breathing again but it was originally full of fat nourishment; and it was flavourful practice naturally”.

As mentioned above, it should be recognized it is abiding with full of bliss and the blissful place because it is lacking other factor, making preliminary work etc., and it is available for two kinds of happiness called bodily agreeable feeling and mentally agreeable feeling. (*Vs-1-259, 260*)

In this case corporealities produced by mind called *cittajarūpa*; which are arising by taking the object of sign of full concentration of mindfulness of breathing; which are produced by mind of absorption called first absorption, second absorption, third absorption, fourth absorption, are superior ones. Those corporealities produced by mind arise throughout body of practicing person. Those are pure octads with nutriment as eighth factor called *ojaṭṭhamaka rūpa*. At that time the practicing *meditator* who has got the whole body which is touched by those superior *cittajarūpa* attains bodily agreeable feeling;

PAGE-247

It should, therefore, be recognized those minds of absorption bring forth bodily agreeable feeling by means of presence of the whole body which is touched by superior *cittajarūpa* which are produced by minds of absorption of mindfulness of breathing. It should be recognized the fact bodily agreeable feeling is available at only the period emerging from absorption because the practicing person feels only mentally agreeable feeling during entering into absorption. It is true that during entering into the first, second and third absorption mentally agreeable feeling is available, due to associating with that feeling in those absorptions. However there is a reasonable question that how mentally agreeable feeling is available during entering into the fourth absorption, due to associating with neutrality feeling during the fourth absorption. It should be recognized mentally agreeable feeling is available during entering into that fourth absorption too, due to presence of calmness nature in the neutrality feeling too, similar to mentally agreeable feeling (referring to the phrase, *upekkhāya vā santabhāvena sukhagatikattā*). (*Mahāṭṭ-1-313*)

Furthermore, the concentration of mindfulness of breathing can remove every unwholesome *dhamma* whenever it arises in continuity of corporeality-mentality of oneself depending on ignorance; which has not been removed by absorption yet, within a simultaneous period arising of mind of absorption itself. It can extinguish well through long lasting period abandonment (*vikkhambhana pahāna*). In other words, due to occurrence of

presence of efficacy to know and see penetratively on four Noble Truths after breaking through the bulk of defilements, selfish desire, anger, delusion etc., if one reaches into advancement called the Noble Path-Knowledge through cascade of practicing for attainment of successive *vipassanā* knowledge after making foundation of *vipassanā* practice as the concentration of fourth absorption of mindfulness of breathing, bulk of defilements can be eradicated totally through the Noble Path-Knowledge. Every fire of defilement can be extinguished through the Noble Fruit-Knowledge.

This is the essence of above *Pāli* Text. (*Vs-1-259, 260*)

3.6 The foundation stage of practice of mindfulness of breathing

Pāli Quotation (Sam-3-280, M-1-70, Vi-1-88)

Under this Noble Admonishment, *bhikkhus*.... the practicing *bhikkhu* having gone to the forest or to the foot of a tree or to an empty, secluded place sits down cross-legged, keeping upper part of body uprightly, and setting up mindfulness, towards the object of practice. That practicing *bhikkhu* brings forth the in-breath with outshining mindfulness only, and brings forth the out-breath with outshining mindfulness only. (*Sam-3-280, M-1-70, Vs-1-88*)

PAGE-248

These words, “having gone to the forest or to the foot of a tree or to an empty, secluded place”, are instructions for the *bhikkhu* who wants to perform practice of mindfulness of breathing in order to find favourable place for the development of concentration through mindfulness of breathing. This *bhikkhu*’s mind which has long been dissipated among various kinds of objects, visible objects, auditory objects etc., does not want to mount the object of concentration-through-mindfulness-of-breathing; it runs off the track like a chariot harnessed to a wild ox.

Now suppose a cowherd wanted to tame a wild calf that had been reared on a wild cow’s milk, he would take it away from the cow and tie it up apart with a rope to a stout post dug into the ground; then the calf might dash to and fro, but being unable to get away, it would eventually sit down or lie down by the post, so too, when a *bhikkhu* wants to tame his own mind which has long been spoilt by being reared on various kinds of objects, visible-objects etc., as object for its food and drink, he should take it away from various objects, visible object etc., and having gone into the forest or to the foot of a tree or to an empty, secluded place and tie his mind up to the post of in-breaths and out-breaths with the rope of mindfulness. And so his mind may then dash to and fro when it no longer gets the objects which was formerly used to, but being unable to break the rope of mindfulness and get away, it sits down, lies down, by that object under the influence of access and full absorptions. Hence the Ancients said:

Pāli Quotation (Vs-1-261, Vi-A-2-12, Dī-A-2-353, M-A-1-252)

“Just as a man who tames a stupid calf would tie it to a post, so here “should his wandering mind by mindfulness be firmly to the object tied.”

PAGE-249

3.7 In other words

In other words, this practice of mindfulness of breathing is foremost among various kinds of meditation subjects. It is proximate cause for attainment of the supra-mundane *dhammas* called the Noble Path-Knowledge and Fruit-Knowledge of all the Perfectly Self-enlightened Ones, some Lesser Buddhas and some disciples of the Perfectly Self-enlightened One. For those Noble Ones who have got the supra-mundane *dhammas* called the Noble Path-Knowledge and Fruit-Knowledge through performing *vipassanā* practice after making any kind of meditation subjects other than practice of mindfulness of breathing as foundation of *vipassanā* practice, this practice of mindfulness of breathing is a basis for attaining distinction and abiding in bliss here and now. It is not easy to develop without leaving the neighbourhood of villages, which resound with the noises of women, men, elephants, horses, etc. It is because noise being a thorn to absorption (*saddakaṇṭakattā jhānassa*).

Actually in the forest away from any village a practicing *bhikkhu* can keep in mind this practice of mindfulness of breathing and brings forth the fourth absorption with the object of in-breaths and out-breaths; and then he can reach the Fruit-Knowledge of Arahant, the highest fruit through discerning as three general characters on conditioned things occurring in three realms. That is why the Blessed One said “gone to the forest” etc., in pointing out a favourable bode for practicing *bhikkhu*. (*Vs-1-261*)

It is right._____ The Blessed One is like a master of the art of building sites. As the master of the art of building sites surveys the proposed site for a town, thoroughly examines it, and then gives his directions ‘Build the town here’, and when the town is safely finished, he receives great honour from the royal family, so the Blessed One examines an abode as to its suitability for practicing *bhikkhu*, and he directed “Develop yourself for the advancement of practice in this forest etc.” Afterwards when the practicing *bhikkhu* reached into the Noble Fruit-Knowledge of Arahant through cascade of three noble teachings called virtue-concentration-wisdom he gives homage respectfully to the Blessed One with saying that “The Blessed One is, indeed, Perfectly Self-enlightened One who knows and sees every Noble Truth *dhamma* penetratively, as it really is”. Thus the Blessed One received great honour. (*Vs-1-261*)

PAGE-250

3.8 The noblest worship

At the night of fullmoon day of Kason, 148 Buddhist Era, the Blessed One laid down on his right side, nobly like a lion), placing the left foot on and a little beyond the right one, with mindfulness and deliberation, on the couch laid out northward for the head between the pair of Sal trees inside Sal Grove of the Malla princes at the road-bend leading to *Kusinārā* town.

At that time, the twin Sal trees blossomed forth all over, though it was out of season. Furthermore, all kinds of trees not only inside Sal Grove of the Malla princes but all tree which were flowering ones within ten thousands cosmological systems existing in infinite numbers in the universes also rained blossoms; every tree which was fructiferous one brought forth fruits; Blossoms of the sacred lotus were brought forth on the stems, branches of all trees; on creepers; in the sky; on the ground respectively; all great oceans were covered with (5) coloured blossoms of the sacred lotus; the mountain range of Himalaya which is broad about (3) thousands *yojana* (= one *yojana* equals to about 12.72 miles.) was very delightful place as bundle of peacock tail feathers which were tied up tightly; as clumps of bushes with

flowers which were adjacent to each other without any space; as festoons which were bundled tightly; as a round bamboo tray with full of flowers.

Those twin Sal trees with foliages shaken by dryads rained blossoms; scattered, strewn, spread blossoms all over the body of the Blessed One so as to worship to the Blessed One. Celestial *mandārava* flowers fell from the air above, being scattered, strewn and spread all over the body of the Blessed One, in reverence to him. And in reverence to the Blessed One, celestial sandalwood powder fell from the air above, being scattered, strewn and spread all over the body of the Blessed One. And in reverence to the Blessed One, celestial music sounded in the air above. And in reverence to the Blessed One, celestial songs which were produced by taking object of wisdom of the Blessed One arose in the air above.

At that time the Exalted One said to the Venerable *Ānanda* as follows:

PAGE-251

"namo tassabhagavato arahato sammāsambuddhassa"

NIBBĀNA GĀMINIPATIPADĀ

**THE CONCENTRATION
SHOULOD BE DEVELOPED**

PAGE-251

“*Ānanda*... the twin Sal trees have blossomed forth all over, though out of season. Those twin Sal trees with foliages shaken by dryads rained blossoms; scattered, strewn, spread blossoms all over the body of the Blessed One so as to worship to the Blessed One. Celestial *mandāra* flowers fell from the air above, being scattered, strewn and spread all over the body of the Blessed One, in reverence to him. And in reverence to the Blessed One, celestial sandalwood powder fell from the air above, being scattered, strewn and spread all over the body of the Blessed One. And in reverence to the Blessed One, celestial music sounded in the air above. And in reverence to the Blessed One, celestial songs which were produced by taking object of wisdom of the Blessed One arose in the air above. Afterwards the Exalted One went on as follows:

Pāli Quotation (Di-2-114)

Ānanda.... Mere acts of reverence of this kind cannot be deemed to honour, esteem, venerate, revere, and worship the Blessed One rightly.

Ānanda.... Whosoever *bhikkhu*, or *bhikkhunī*, or the layman-disciple, or the laywoman-disciple if he or she lives through practicing obligations which are adaptable to the nine kinds of Supra-mundane *dhammas*, which are worth fulfilling previous to the Noble Path and are called *pubbabhāga paṭipadā*; if he or she lives through practicing obligations called *sāmīci*, due to conformity with nine kinds of supra-mundane *dhammas*, with respectfulness; if he or she lives through complete practicing those obligations which are adaptable to the nine kinds of supra-mundane *dhammas*, that kind of person can be deemed to honour, esteem, venerate, revere and worship the Blessed One in the highest degree. *Ānanda*... therefore in this noble admonishment, you should like to practice in this way that “we are going to live through practicing obligations which are adaptable to the nine kinds of supra-mundane *dhammas*, which are worth fulfilling previous to the Noble Path and are called *pubbabhāga paṭipadā*; we are going to live through practicing obligations called *sāmīci*, due to conformity with the nine kinds of supra-mundane *dhammas*, with respectfulness; we are going to live through complete practicing those obligations which are adaptable to the nine kinds of supra-mundane *dhammas*”... said by the Exalted One. (*Dī-2-113, 114, Dī-A-2-165, 168*)

PAGE-252**3.9 The essence of above explanation and the reason**

Because the Blessed One saw the action of endeavouring called the great worship with manifold flowers, manifold aromatic substances, manifold musical instruments, manifold classical songs regarding to the glory of the Exalted One, made by heavenly beings who were assembling in the space from the earth until the margin of universe, from the margin of universe until the *brahma*'s realm during lying between twin Sal trees which were grown in row orderly, he said the Venerable *Ānanda* above words.

After saying the great worship this much the Exalted One went on about that much acts reverence cannot be deemed to honour, esteem him rightly. The essence of those saying are as follows:

“*Ānanda*... I never wish to become the buddhahood with the inclination of the mind towards the Knowledge of Omniscience so as to accept the great worship with flowers, aromatic substances, music, classical songs after fulfilling eight kinds of qualifications which

were factors for attainment of preordainment of events made by the supreme Buddha called *Dīpankarā*, being as real human, being as real man etc., lying in front of that Supreme Buddha; I never fulfill various previous perfections called *pāramita* so as to attain these flowers, aromatic substances, music, classical songs; therefore mere acts of reverence of this kind cannot be deemed to honour, esteem, venerate, revere and worship the Blessed One rightly”. This is the essence of the Exalted one’s saying.

There is a reasonable question why the Exalted One rejected the great worship this much in this *Mahāparinibbāna Sutta* even though he has praised wholesome resultant *dhammas* made by worship to the noble quality of the Supreme Buddha through offering even a flax flower, as invaluable advantageous results evaluated by the knowledge of omniscience of the supreme Buddha in other *Pāli* Texts.

The answer is as follows: _____

Pāli Quotation (Di-A-2-169)

1. Due to presence of desire to praise surrounding beings and
2. due to presence of desire to exist in perpetuity of his admonishments,
The Supreme Buddha rejected the great worship this much in this *Mahāparinibbāna Sutta*.

PAGE-253

Unless the Exalted One reject in this way, no one will fulfil the training morality at any place where the training of morality is intended to be fulfilled in future; no one will fulfil the training of concentration at any place where the training of concentration is intended to be fulfilled in future; no one will bear the pregnancy of *vipassanā* at any place where the training of *vipassanā* practice is intended to be fulfilled in future. Those *bhikkhus* will stay by urging their donors who offers four requisiteness so as to perform only function of worshipping. Furthermore, this kind of worship through offering with four requisiteness called *āmisā pūjā* is unable to bear the Supreme Buddha’s noble admonishment which is worth counting in brief as three noble trainings called morality, concentration, wisdom in order to be existed even either one day or the period a gulp of rice soup.

It will be explicit. --- Offering of either thousand monasteries like *Mahāvihāra* or thousand stupas like *Mahāceṭī* is unable to bear maintenance of the Noble Admonishment; a such person performs wholesome deeds, building and offering monastery, stupa etc.; it will be advantageous results for that donor only. The right obligation of practice (*Sam-māpaṭipatti*) called fulfilling perfectly on three noble trainings called morality, concentration, wisdom is, indeed, the most appropriate worship to the Exalted One. It is right. _____ That right obligation of practice is not only worth desiring by the Exalted One but also able to bear long lasting existence of the Noble Admonishment. The Exalted One, therefore, said the person who lives through complete practicing obligations which are adaptable to the nine kinds of supra-mundane *dhammas* can be deemed to honour and worship the Blessed One in the highest degree. (*Dī-2-169*)

Among all kinds of worship through *dhamma* called *dhammapūjā*, the worship through the Fruit-Knowledge of Arahant is the supreme most worship to the Exalted One. Therefore a disciple reaches into the Fruit-Knowledge of Arahant successively through cascade of practices at any place, in a forest etc., in accordance with the Exalted One’s instructions and then if he worship with that Fruit-Knowledge of Arahant to the Exalted One, it can be said the Exalted One has got the supreme most honour from his disciple, explained in above commentary called *Visuddhi Magga*.

3.10 The person who is similar to the leopard, king of forest

In other words, it can be said this practicing *bhikkhu* is a person who is similar to the leopard, king of forest. He is similar to the leopard, king of forest, due to accomplishment of the Fruit-Knowledge of Arahant which is the most desirable result through eradicating opposite defilements after practicing obligation of *bhikkhu* as solitary dwelling in the forest.

PAGE-254

As the leopard, king of forest catches preys, wild buffalo, wild ox, pig etc., depending on jumbling grass, jumbling forest or jumbling mountains, similarly the practicing *bhikkhu* who practices both *samatha* and *vipassanā* over and over again in the forest can attain both the Path-Knowledge of Upstream-enterer, the Path-Knowledge of Once-returner, the Path-Knowledge of Non-returner, the Path-Knowledge of Arahant and the Noble Fruit-Knowledge through practicing in sequence. Therefore the Exalted One who wanted to show forest monastery called *arañña senāsana* which is favorable place for efficiency of energy of practicing *bhikkhu* said that _____

Under this Noble Admonishment, *bhikkhus*.... the practicing *bhikkhu* having gone to the forest or to the foot of a tree or to an empty, secluded place sits down cross-legged, keeping upper part of body uprightly, and setting up mindfulness, towards the object of practice. That practicing *bhikkhu* brings forth the in-breath with outshining mindfulness only, and brings forth the out-breath with outshining mindfulness only. (*Vs-1-261. 262*)

3.11 *arañña-rukhamūla-suññāgāra*

In the aspect of preaching methodology of *abhidhamma*, ‘having gone out beyond the boundary post, all that is forest (*arañña*). (*Abhi-2-260*) In the aspect of preaching methodology of *suttanta*, any place which lies at least five hundred bow lengths distance from the entrance of outermost house of nearest village is called forest dwelling. (*Vs-1-377*) Among those forest dwellings with characteristics preached in this way, any place which can bring forth noble silence and happiness is designated as *arañña* (forest dwelling). The Exalted One instructed previously to develop this practice of mindfulness of breathing which has the apex goal of the Fruit-Knowledge of Arahant by approaching into the forest dwelling called *arañña*.

At noon the shade of tree lies by spreading ten directions around it and when wind does not blow foliage fall in such range; that range can be said as the foot of tree (*rukhamūla*). Second the Exalted One instructed to develop practice of mindfulness of breathing by approaching the foot of tree.

Any of the remaining seven kinds of abode called a rock, a hill cleft, a mountain cave, a charnel ground, a jungle thicket, an open space, a heap of straw, excluding forest dwelling and foot of tree, are called on “empty place (*suññāgāra*).” Third, the Exalted One instructed to develop practice of mindfulness of breathing by approaching the empty place which can bring forth noble silence and happiness.

In the hot season the forest dwelling is favourable, in the cold season the foot of a tree, in the rainy season an empty place respectively for development of mindfulness of breathing.

Furthermore, for one of phlegmatic humour, phlegmatic by nature, the forest dwelling is favourable, for one of bilious humour the foot of a tree, for one of windy humour an empty place respectively for development of mindfulness of breathing.

Furthermore, for one of deluded temperament the forest dwelling is favourable, for one of hating temperament the foot of a tree, for one of greedy temperament an empty place respectively for development of mindfulness of breathing. (*Mahāṭṭ-1-315, 316*)

3.12 Selection of favourable deportment

Afterwards the Exalted One who wanted to show favourable deportment which is peaceful and it can bring forth the mind so as not to stop short, draw back and wander instructed to develop by sitting deportment. Reclining deportment can bring forth laziness (*kosajja*), resulting in stopping short and drawing the mind back from practice of mindfulness of breathing. Standing and walking deportment can bring forth the wandering mind, resulting in restlessness from objects of the in-breath and out-breaths. Sitting deportment, indeed, can avoid laziness, stopping short, drawing back, and wandering of mind of meditation and the Exalted One instructed to practice by sitting deportment. (*Mahāṭṭ-1-316*)

Furthermore, the Exalted One who wanted to show firmness in the sitting position, easy occurrence of the in-breaths and out-breaths, and the means for discerning the object of practice of mindfulness of breathing, i.e., the in-breaths and out-breaths instructed that “sits down cross-legged, keeping upper part of body uprightly and setting up mindfulness towards the object of practice”.

If he sits down by keeping upper part of body uprightly it can be said he sits uprightly with the eighteen backbones resting end to end.

PAGE-256

In the continuum of *bhikkhu* who is sitting in that way his skin, flesh and sinews are not twisted, and so the feelings that would arise moment by moment, if they were twisted, do not arise. That being so, his mind becomes unified, and the meditation subject, instead of collapsing, attains to growth and increase upto the Path-Knowledge, Fruit-Knowledge, *nibbāna*. The Exalted One, therefore, instructed to develop practice of mindfulness of breathing by sitting cross-legged, keeping upper part of body uprightly. (*Vs-1-262*)

During practicing in that way he must set up mindfulness towards only the object of practice through prohibiting wandering of the mind to various objects other than in-breaths and out-breaths.

3.13 so satova assāsati, satova passāsati

Thus after sitting cross-legged, keeping upper part of body uprightly and setting up mindfulness towards the object of practice, that practicing *bhikkhu* brings forth the in-breath with outshining mindfulness only and brings forth the out-breaths with outshining mindfulness only. It means there are no in-breaths and out-breaths without mindfulness in the continuum of that practicing *bhikkhu*.

In-breaths and out-breaths are brought forth with mindfulness in such modes, in order to show those modes, the Exalted One instructed way of developing mindfulness of breathing through (16) modes dividing as four tetrads. Now it will be presented on those four tetrads previously.

A. First tetrad (*pathama catukka*)

Pāli Quotation (M-2-88)

PAGE-257

1. Breathing in long, he knows “I breathe in long”. Breathing out long, he knows “I breathe out long”.
2. Breathing in short, he knows “I breathe in short.” Breathing out short, he knows “I breathe out short.”
3. He trains thus “I shall breathe in discriminating on beginning, middle, end of the whole in-breath apparently. He trains thus “I shall breathe out discriminating on beginning, middle, end of the whole out-breath apparently.
4. He trains thus “I shall breathe in tranquillizing *kāyasañkhāra* which is called the in-breath.” He trains thus “I shall breathe out tranquillizing *kāyasañkhāra* which is called the out-breath.”

B. Second tetrad (*dutiya catukka*)***Pāli Quotation (M-2-88)***

1. He trains thus “I shall breathe in discriminating pleasurable interest (*pīti*) which associates with the first and second absorptions.” He trains thus “I shall breathe out discriminating pleasurable interest (*pīti*) which associates with the first and second absorptions.”
2. He trains thus “I shall breathe in discriminating bliss (*sukha*) which associates with the first, second and third absorptions.” He trains thus “I shall breathe out discriminating bliss (*sukha*) which associates with the first, second and third absorptions.”
3. He trains thus “I shall breathe in discriminating *cittasañkhāra* called feeling, perception which associate with the first, second, third, and fourth absorptions.” He trains thus “I shall breathe out discriminating *cittasañkhāra* called feeling, perception which associate with the first, second, third, and fourth absorptions.”

PAGE-258

4. He trains thus “I shall breathe in tranquillizing *cittasañkhāra* called feeling, perception which are gross and associating with the first, second, third and fourth absorptions.” He trains thus “I shall breathe out tranquillizing *cittasañkhāra* called feeling, perception which are gross and associating with the first, second, third and fourth absorptions.”

C. Third tetrad (*tatiya catukka*)***Pāli Quotation (M-2-88)***

1. He trains thus “I shall breathe in discriminating the consciousness which are associating with the first, second, third and fourth absorptions.” He trains thus “I shall breathe out discriminating the consciousness which are associating with the first, second, third and fourth absorptions.”
2. He trains thus “I shall breathe in well gladdening those consciousness of the first absorption and the second absorption which associate with pleasurable interest (*pīti*). He trains thus “I shall breathe out well gladdening those consciousness of the first absorption and the second absorption which associate with pleasurable interest (*pīti*).

3. He trains thus “I shall breathe in well applying those consciousness of the first, second, third and fourth absorptions on the object.” He trains thus “I shall breathe out well applying those consciousness of the first, second, third and fourth absorptions on the object.”
4. He trains thus “I shall breathe in liberating those consciousness of the first, second, third, and fourth absorptions from opposite *dhammas*, hindrances, defilements etc.” He trains thus “I shall breathe out liberating those consciousness of the first, second, third, and fourth absorptions from opposite *dhammas*, hindrances, defilements etc.”

PAGE-259

D. Fourth tetrad (*catuttha catukka*)

Pāli Quotation (M-2-89)

1. He trains thus “I shall breathe in discerning as *anicca* over and over.” He trains thus “I shall breathe out discerning as *anicca* over and over.”
2. He trains thus “I shall breathe in discerning on perishing phase of conditioned things and *nibbāna* which is void of lust over and over.” He trains thus “I shall breathe out discerning on perishing phase of conditioned things and *nibbāna* which is void of lust over and over.”
3. He trains thus “I shall breathe in discerning on momentary cessation of conditioned things and *nibbāna* which is cessation of lust over and over.” He trains thus “I shall breathe out discerning on momentary cessation of conditioned things and *nibbāna* which is cessation of lust over and over.”
4. He trains thus “I shall breathe in discerning on *vipassanā* knowledge which can relinquish defilements temporarily, *nibbāna* which abandon defilements absolutely and the Noble Path-Knowledge which is capable of abandoning defilements over and over.” He trains thus “I shall breathe out discerning on *vipassanā* knowledge which can relinquish defilements temporarily, *nibbāna* which abandon defilements absolutely and the Noble Path-Knowledge which is capable of abandoning defilements over and over.” (*Sam-3-279, Vi-1-88, M-2-89*)

In above four tetrads the Exalted One preached on (16) modes in the in-breaths and (16) modes in out-breaths, totally in (32) modes. The person who always develops the mindfulness on the object of in-breaths and out-breaths through those (32) modes is designated as *satokārī puggala* (=the person with outshining mindfulness). He is also designated as “*satova assāsati* = the person who brings forth the in-breath with outshining mindfulness only, *satova passāsati* = the person who brings forth the out-breath with outshining mindfulness only. (*Paṭisam-174, Vs-1-263*)

PAGE-260

3.14 Noticeable facts

The righteous *meditator* who wants to develop this famous practice of mindfulness of breathing has to recognize the following noticeable facts previously.

- (a) How four kinds of mindfulness foundations are divided

Pāli Quotation (Vs-1-269)

According to explanation of *Visuddhi Magga*, the first tetrad is set forth as a meditation subject for a beginner; but the remaining three tetrads are set forth

1. as the contemplation of feeling,
2. as the contemplation of consciousness,
3. as the contemplation of *dhammas* (=mental object), respectively, for one who has already attained four kinds of absorptions of fine-material sphere through the first tetrad of mindfulness of breathing. It should be recognized the first tetrad was preached by means of the contemplation of body because the Exalted One preached this tetrad in the section of contemplation of body of mindfulness foundation.

(b) It is only absorption route

Pāli Quotation (M-A-1-305)

According to above explanation of commentary it should be recognized in *Mahāsatipaṭṭhāna Sutta*, the Exalted One preached *ānāpāna pabba* (= section on Breathing) as the practice which can bring forth full absorption (*appanā kammaṭṭhāna*). The term, *appanā kammaṭṭhāna*, means only when access concentration called access absorption or full concentration called full absorption has been attained previously by taking object of brilliant sign of full concentration of breathing called *ānāpāna Paṭibhāganimitta* the righteous *meditator* must change to *vipassanā* practice by making that access concentration or full absorption as foundation of *vipassanā* practice. It should be recognized beforehand the fact according to this explanation, before transferring *vipassanā* practice or stage of purification of view the righteous *meditator* who wants to develop practice of mindfulness of breathing has to accomplish either access concentration absorption or full concentration absorption previously.

PAGE-261

(c) Two kinds of *assāsa-passāsa*

With relating to way of discerning on breathing called the in-breaths-out-breaths, the Exalted One preached in dividing two ways, i.e. the way of discerning through four elements meditation and way of discerning through full absorption route.

There are ways of discerning through four elements meditation in detail in *Mahāhatthipadopama Sutta (M-1-242, 249)*, *Mahārāhulovāda Sutta (M-2-83, 89)*, *Dhātuvibhanga Sutta (M-3-281, 290)*, *Abhidhammā, Dhātu vibhanga Pāli Text (Abhi-2-84, 86)*. Among (42) bodily parts preached in those ways of discerning through four elements meditation in detail, (6) kinds of bodily parts of wind are included in those and the in-breath-out-breath are also included in those (6) bodily parts of wind.

In *Visuddhi Magga* it is explained that bodily part of wind called in-breath-out-breath is only collectiveness of corporealities produced by mind or corporeal units produced by mind.

cittaje assāsapassāsakoṭṭhasepi ojaṭṭhamakañceva saddo cāti nava. (Vs-2-223)

According to that explanation, the in-breaths and out-breaths means only collectiveness of corporeal units produced by mind. In the aspect of Ultimate reality each corporeal unit produced by mind consists of (9) kinds of nature of corporeality, i.e., earth-element, water-element, fire-element, air-element, colour, smell, taste, nutriment, sound. Those ultimate nature of corporealities must be distinguished by eye of wisdom. If one scrutinizes four great elements consisting in those in-breaths and out-breaths, only corporeal units can be seen easily (for the practicing *meditator* who can keep in mind corporeal

dhammas occurring in (6) doors upto the ultimate nature with the help of penetrative knowledge). If one can analyze those nine kinds of corporealities consisting in each corporeal unit, he will reach upto the field of ultimate nature with insight. (Ways of discerning can be seen in section of four elements meditation in this volume.)

This way of discerning is the practice of four elements route because both corporeal units, each specific nature of four great elements within each corporeal unit and each derived corporealities which arise depending on four great elements are discriminated and discerned by penetrative knowledge respectively. It is because only when four great elements are discerned as beginning can the righteous *meditator* discern upto the field of ultimate nature in that way.

Furthermore, these instructions,

1. the long
2. the short
3. the beginning, middle and end of the whole breath must be known;
4. he has to train in order to tranquilize in-breaths and out-breaths, are, indeed, instruction for attaining absorption.

PAGE-262

It is the cascade of practice by taking objects of three signs called *nimitta*, i.e., *parikammanimitta* (sign of preliminary work) called the in-breath, out-breath at the touching place of those in-breath-out-breath, the tip of nose or upper lip; *uggahanimitta* (sign of access concentration). *Paṭibhāganimitta* (sign of full concentration). It is the absorption route because it is the way of practice for attaining absorption. Thus the righteous *meditator* must recognize previously the fact there are two routes, four elements meditation route and absorption route in those in-breaths and out-breaths.

(d) Colour and character must not be taken into heart

Pāli Quotation (Vs-1-278) (Mahāṭṭi-1-337)

According to above explanations of commentary and sub-commentary, the righteous *meditator* who wants to develop mindfulness of breathing through absorption route should not take into heart colour of sign of concentration of mindfulness of breathing at the stage of developing concentration, if any sign of concentration like cotton lump, star etc., appears in him.

If he takes into heart it as colour, it leads to colour *kaṣiṇa* but not practice of breathing.

Furthermore, he should not take into heart the specific characters, i.e.,

1. nature of hardness and roughness of the earth-element.
2. nature of flowing, cohesion of the water-element,
3. nature of hotness and coldness of the fire-element,
4. nature of supporting of air-element which are occurring in the in-breaths and out-breaths. If he takes into heart each specific character of four great elements, it will become four elements meditation but not practice of mindfulness of breathing.

Therefore if the righteous *meditator* wants to develop colour-*kaṣiṇa*, he has to follow the rules of practice of colour-*kaṣiṇa* respectfully.

If he wants to develop four elements meditation, he has to follow the rules of four elements *meditation* respectfully.

If he wants to develop practice of mindfulness of breathing through absorption route, he has to follow only rules of practice of mindfulness of breathing respectfully and then all beneficial results which are earnestly desired by himself will be accomplished.

If anyone performs practice of mindfulness of breathing through making as four elements meditation, it will be no effective result for him.

PAGE-263

The reason why one has to follow rules

With relating to long and short breaths found in the first tetrad it is explicit in commentary and sub-commentary as follows:

Pāli Quotation (Vs-1-263, 264) (Mahāṭṭī-1-318)

According to explanations of above *Visuddhi Magga* and *Mahāṭṭīkā*, the length and shortness of in-breath-out-breath means the breaths that travel over a long extent in entering in and going out are to be understood as long duration (*dīgha*); and the breaths that travel over a little extent in entering in and going out, as short duration (*rassa*). It is the essence of preaching by the Exalted One.

If one practices the way shown in section of breathing through making four elements meditation route, he must accept the fact the ultimate air-element or four great elements have also got nature of length and shortness. There are two kinds of extent, i.e., *kāladdhāna* (= length and shortness of time) and *okāsaddhāna* (=length and shortness of space or thing). It is desirable meaning and one has to accept the fact there are two kinds of ultimate air-element, i.e.,

1. the ultimate air-element which takes long lasting duration and
2. the ultimate air-element which takes short duration.

Similarly if four great elements are said as a whole, one has to accept the fact there are two kinds of four great elements, i.e., a kind of four great elements which take long lasting duration and the other which take short duration. However there is no length or shortness in the aspect of ultimate reality.

PAGE-269

There is no length or shortness in the aspect of ultimate reality

tāni pana sattarasa cittakkhaṇāni rūpadhāmanamāyū. (Abhidhammattha, section of Cognitive Process)

According to above explanation found in *Abhidhammattha Sangaha* and explanations found in *Sammohavinodanī*, PP 26; *Pañcapakaraṇa*, PP 316; *Visuddhi Magga*, 2, PP249; the life-span of (22) kinds of corporeal *dhammas*, excluding (2) expression corporealities and (4) characteristic corporealities, is (17) mind moments as fixed law. There is no corporeal *dhamma* with longer or shorter than that duration of (17) mind moments. Therefore there is no length or shortness in the aspect of ultimate reality.

If anyone practice in order to know length or shortness of ultimate air-element or four great elements, the way of discerning of himself might be swerving from the right course.

Furthermore, according to number (4) instruction of the first tetrad, the righteous *meditator* has to train for tranquillizing of the in-breaths and out-breaths. During practicing in that way ---- it is explained in *Visuddhi Magga*, as follows:_____

catutthajjhāne atisukhamo appavattimeva pāpuṇāti. (Vs-1-267)

When the fourth absorption is reached the in-breaths and out-breaths are so subtle that reaching into absence nature of in-breaths-out-breaths.

In the commentary called *Visuddhi Magga*, 1. PP 275, it shows list of persons with cessation of in-breath and out-breath and it includes those persons who are entering into the fourth absorption.

Therefore, if anyone who practices this first tetrad of mindfulness of breathing through making four elements meditation has got cessation of in-breath and out-breaths, how he perform *vipassanā* practice through discerning on which *dhamma*. While in-breaths and out-breaths are ceasing how he keeps in mind corporeal *dhammas* consisting in the in-breaths and out-breaths?

These facts ought to be emphatically thought over for righteous *meditators*.

Though commentary and sub-commentary instruct the *meditator* who develops mindfulness of breathing so as not to take into heart both specific and general characters of sign of concentration when that sign of concentration appears only, he must follow that rule beginning of the practice before appearance of sign of concentration. If he takes into heart specific characters of four great elements before appearance of sign of concentration, it will become four elements meditation route only as mentioned above.

Therefore it is essential rule for righteous *meditator* in order to follow rules of practice of mindfulness of breathing which was preached as absorption route, resulting in occurrence of true disciple who practices properly in accordance with the Exalted One's desire. It will be presented on way of practice through absorption route later. Now it will be presented on the rule that general characters ought not to be taken into heart continuously.

PAGE-265

3.15 General characters should not be taken into heart

Commentary and sub-commentary instruct that when sign of breathing appears one should not take into heart general characters of those in-breaths and out-breaths. General character means nature of impermanence, suffering, non-self, which concern with all conditioned things called corporeality, mentality, cause and result. That instruction, general character should not be taken into heart, means that sign of breathing must not be discerned as *anicca, dukkha, anatta*. Although ordinary in-breaths and out-breaths are collectiveness of sound nonads produced by mind (*cittaja saddanavaka kalāpa*) before appearance of that sign of breathing, unless one can reach into the field of ultimate nature of corporeality through breaking down three kinds of compactness of corporeality with the help of penetrative knowledge, it is still in the field of concept (*paññatti*) only.

saññajañhi etam saññānidānam saññāpabhavam. (Vs.1-277)

Furthermore, the sign of breathing is also the *dhamma* produced by perception (*saññaja dhamma*) and it is still in the field of concept only. Concept is not worth discerning as object of *vipassanā* practice, due to non-occurrence of object of *vipassanā* practice. The

righteous **meditator** who begins to practice mindfulness of breathing should not take into heart

1. as in-breath-out-breath arising-perishing away_____ **anicca** or
 2. as in-breath_____ arising, out-breath-perishing away_____ **anicca**,
- by taking object of ordinary in-breaths and out-breaths which are lump of concept with compactness intact. The reason is as follows:_____

3.16 The reason why general characters are not discerned

Pāli Quotation (Vs-1-281,282)

The essence of above explanation of commentary is as follows:_____

1. **anicca** _____ The term, **anicca** (impermanence), means five aggregates. Why? Due to obvious occurrence of these three kinds of nature, viz.,
 - (a) nature of arising
 - (b) nature of perishing away
 - (c) nature of static phase called significant state of affair (=ageing, from the beginning of arising, five aggregate are called **anicca**.

PAGE-266

[Notes – The righteous **meditator** should like to recognize this fact – These three kinds of nature

- (a) **uppāda** – nature of arising,
- (b) **vaya** = nature of perishing away,
- (c) **aññatatha** = nature of static phase called ageing- are present apparently in five aggregates only.]
2. **aniccatā** _____ The term, **aniccatā**, means the three-time-phases called **uppāda-ṭhiti-bhanga** of those five aggregates. In other words—the nature of sudden perishing away (absence) just after arising which comes from nature of absence previously, is called **aniccatā**. The nature of momentary perishing away of five aggregates whenever they arise without existing as beginning phenomenon intact is called **aniccatā**. This is the meaning of **aniccatā**.
3. **aniccānupassanā** – Repeated discerning on five aggregates over and over by means of **aniccatā** called incessant phenomena of perishing away is called **aniccānupassanā**. [It means the way of discerning as **anicca**, **anicca** over and over through seeing both phenomena of arising and perishing away and pure phenomenon of perishing away of five aggregates with the help of penetrative eye of **vipassanā** knowledge is called **aniccānupassanā**.]
4. **aniccānupassī** _____ The term, **aniccānupassī**, means the person who has completed with the Knowledge of Contemplation of impermanence called **aniccānupassanā ñāṇa** mentioned above.

Thus both the person who brings forth the in-breaths through discerning on five aggregates as **anicca** over and over again and the person who brings forth the out-breaths through discerning on five aggregates as **anicca** over and over again should be designated as the person who trains thus “I shall breath in discerning **anicca**, I shall breath out discerning **anicca** over and over again. This is the essence of explanation of **Visuddhi Magga. (Vs-1-281, 282)**

According to above explanation of commentary, it should be recognized only the person who can keep in mind and discern five aggregates systematically upto the field of ultimate reality can take into heart general characters called **anicca**, **dukkha**, **anatta**.

However five aggregates are the *dharmas* which can be kept in mind and discerned by extraordinary practicing persons who can analyze each ultimate nature of corporealities within each corporeal unit, after seeing on various kinds of corporeal units by insight. Those are not *dharmas* which can be realized by both the person who never sees corporeal units, mental units and the person who cannot analyze upto the ultimate nature of corporealities, even though he can see corporeal and mental units.

Therefore it should be recognized the person

- (1) who does not know what corporeality means;
- (2) who does not know what mentality means;
- (3) who does not know what five aggregates means; who enters into the meditation

hall with various nescience; who is discerning as *anicca, dukkha, anatta* on the in-breaths and out-breaths which are still in the field of concept only, is the person who is sitting opposite to the Exalted One's preaching. This fact must also be followed respectfully by every righteous person who has heartfelt desire to attain *nibbāna*.

PAGE-267

3.17 What are five aggregates?

Pāli Quotation (M-A-1-254)

In above commentary it is mentioned two ways of discerning during transferring from absorption route of breathing to *vipassanā* practice, i.e.,

1. the way of discerning beginning as *rūpakammaṭṭhāna*, and
2. the way of discerning beginning as *nāmakammaṭṭhāna*, upto reaching the stage of the Fruit-Knowledge of Arahant in brief account.

In those two ways it should be recognized the person who takes into heart corporeal *dharmas* as priority and then *vipassanā* practice is performed, is designated as *assāsapassāsakammika puggala* (= the person who takes into heart corporeal *dharmas* of the in-breaths and out-breaths) and the person who takes into heart mental *dharmas* called factors of absorption as priority and then *vipassanā* practice is performed, is designated as *jhānakammikapuggala* (= the person who takes into heart mental *dharmas* absorption of mindfulness of breathing). The essence of those two ways of discerning is as follows: _____

IN the continuum of practicing *meditator* who practices mindfulness of breathing in cascade of ways of discerning through

1. trying to know length of the in-breaths and out-breaths,
2. trying to know shortness of the in-breaths and out-breaths,

PAGE-268

3. trying to know the beginning, middle and end of the whole in-breath and out-breath,
4. trying to tranquil in-breaths and out-breaths exceedingly,

four kinds of absorptions called the first absorption, second absorption, third absorption fourth absorption arise successively by taking object of brilliant sign of full concentration of mindfulness of breathing.

That practicing *meditator* keeps in mind and distinguishes either

1. corporeal *dharmas* occurring in the in-breath and out-breath, or
2. mental *dharmas* called factors of absorption, with the help of penetrative knowledge.

3.18.A *assāsa (in-breath)- passāsa (out-breath)*

cuṇṇavicuṇṇāpi assāsapassāsā. (Vs-1-263)

cuṇṇavicuṇṇāpi anekakalāpabhavena. (Mahāṭṭ-1-318)

The term, *assāsapassāsā* (in-breath-out-breath), means collectiveness of sound nonads produced by mind (*cittaja saddanavakakalāpa*), which have got the sound as ninth factor in each corporeal unit. If the *meditator* scrutinizes four great elements occurring in those in-breaths and out-breaths, he will see only corporeal units. Then if he analyzes each corporeal unit by insight, he will see nine kinds of corporealities within each corporeal unit with sound corporeality as ninth factor. Each corporeal unit is produced by mind and collectiveness of large amount of those sound nonads are called *assāsa-passāsā* (in-breath-out-breath) in the aspect of conventional reality. It should be recognized the person who keeps in mind those corporeal *dhammas* consisting in sound nonads after analyzing ultimate nature of sound nonads is called the person who keeps in mind the in-breaths and out-breaths (= *assāsa-passāsā kammika puggala*). If that kind of *meditator* wants to reach the goal of the Fruition-Knowledge of Arahant, the way of practice in brief will be as follows: _____

3.18. B *assāsa-passāsā kammika puggala*

In those two kinds of persons called *assāsapassāsakammika* and *jhānakammika*, the former person, when he scrutinizes which *dhamma* is the dependence of the in-breath and out-breath, knows distinctively that the base-corporeality is the dependence. The base is, indeed, *karajakāya*. [Due to occurrence of dependence of consciousness and mental concomitants, *karajakāya* is designated as base (*vatthu*). (*M-ṭṭ-1-349*)] The term, *karajakāya*, means four great elements and (24) kinds of derived corporealities which arise depending upon those four great elements. Thus he keeps in mind and distinguishes corporeal *dhammas*. Afterwards, consciousness and mental concomitants, which are led by *dhammas* with the contact as fifth factor (*phassapañcamaka dhamma*) are kept in mind and distinguished as mental *dhammas*.

PAGE-269

After keeping in mind and distinguishing mentality-corporeality in this way, when causal *dhammas* of those mentality-corporeality are scrutinized the principle of dependent-origination, ignorance etc., is known and seen, resulting in removing skeptical doubts occurring in three periods called past, future, present in a way that “ these mentality-corporeality are only causal and resultant *dhammas*; there is neither being nor person other than causal and resultant *dhammas*; (=these mentality-corporeality are pure ultimate nature which never arise not only without obvious occurrence of causal *dhammas* but also improper causal *dhammas*, such as creator etc.; actually those are only natural *dhammas*, due to presence of causal *dhammas*, ignorance etc.). After overcoming a skeptical doubts within three periods, if he can perform the improvement of *vipassanā* knowledge step by step successively by means of discerning on mentality-corporeality together with causal *dhammas* [= on corporeal and mental *dhammas* call five clinging aggregates which are occurring in (11) modes of situations called past, future, present, internal, external, gross, subtle, inferior, superior, far, near] as three general characters on the whole, i.e., *kalāpa sammāsana naya*, he will reach into the Fruit-Knowledge of Arahant through four successive Path-Knowledge in sequence.

This is the course of practice which is the factor of deliverance of suffering of rounds of rebirth, upto the Fruit-Knowledge of Arahant for the first kind of practicing virtuous person. (*M-A-1-254*)

[Notes:_____ The way of discerning on five clinging aggregates which are occurring in (11) modes of situations as a whole by dividing two groups, twofold corporeality-mentality method; five groups, fivefold aggregates method; twelve groups, twelve fold bases method; eighteen groups, eighteen fold elements method etc., is called *kalāpasammasana* method. The way of discerning on five clinging aggregates through alternate generalizing as three characters of each specific kind of ultimate *dhamma*, the earth-element, contact etc., one by one is called *anupāda dhamma vipassanā*. In the stage of Knowledge of Comprehension (*sammasana ñāṇa*) of *Visuddhi Magga*, it is instructed to perform through *kalāpasammasana* method for the beginner of *vipassanā* practice. It should, therefore, be recognized *kalāpasammasana* method is explained as beginning in above explanation of commentary.] (See *Mūlaṭṭī-1-109*)

3.19 *jhānakammika puggala*

The latter person called *jhānakammika*, when he scrutinizes which *dhamma* is the dependence of the factors of absorption, also knows distinctively that the base-corporeality is the dependence; the base is, indeed, *karajakāya*. Thus he distinguishes mentality-corporeality in a way that ‘these factors of absorption are mental *dhammas*; *karajakāya* are corporeal *dhammas*. After keeping in mind and distinguishing mentality-corporeality in this way, when causal *dhammas* of those mentality-corporeality are scrutinized the principle of dependent-origination, ignorance etc., is known and seen, resulting in removing skeptical doubts occurring in three periods called past, future, present in a way that “these mentality-corporeality are only causal and resultant *dhammas*; there is neither being nor person other than causal and resultant *dhammas*; After overcoming on skeptical doubts within three periods, if he can perform the improvement of *vipassanā* knowledge step by step successively by means of discerning on mentality-corporeality together with causal *dhammas*, as three general characters on the whole, i.e. *kalāpasammasananaya*, he will reach into the Fruit-Knowledge of Arahant through four successive Path-Knowledge in sequence. (M-A-1-254)

PAGE-270

With regarding to above explanations commentary, if the practicing person who develops mindfulness of breathing transfers to *vipassanā* practice through making anyone of two kinds of concentration, the access and full absorption concentration, those objects of *vipassanā* practice must be conditioned things which are pure ultimate *dhammas* called causal and resultant *dhammas* but not concept and then he must endeavour previously in order to know

1. both groups of corporeal *dhammas* called *assāsapassāsakāya*,
2. four great primaries and derived corporealities called *karajakāya* which are dependence of those *assāsapassāsakāya* and
3. groups of mental *dhammas* which are arising by taking objects of those corporeal *dhammas*. He has to keep in mind and distinguish those *dhammas* beforehand.

Because corporeal *dhammas* are unable to arise individually but not collectively in group wise called *kalāpa* (=unit) as natural fixed law the righteous *meditator* has to discern in order to see corporeal units previously with the help of sufficient concentration. Afterwards, each ultimate nature of corporeal *dhammas* within each corporeal unit, such as, earth-element, water-element, fire-element, air-element, colour, smell, taste, nutriment etc., must be scrutinized upto the field of ultimate nature. In this paper that way of discerning is called analyzing the element as

terminology usage. Only when one can analyze specific nature of each element in that way can be know and see real four great primaries and derived corporealities within each corporeal unit as beginning. Those four great primaries and real derived corporealities only are the real objects *vipassanā* practice through discerning as three general characters.

Then the commentator Sayadaw explains *phassapañcamaka dhamma* (= *dhammas* with the contact as fifth factor) significantly for mental *dhammas* which arise by taking object of corporeal *dhamma*. Among those *dhammas* with the contact as fifth factor, because the commentator explains on the contact and volition directly it is explained all formation *dhammas* are also inclusive so as to discern in the list of formation aggregate as follows:

Pāli Quotation (M-ṭī-1-370)

PAGE-271

= The reason why commentator Sayadaw explains *phassapañcamaka dhamma* with the contact as the fifth factor, i.e., contact-feeling-perception-volition-consciousness, is those *dhammas* associate with all arising mind moments. Among those *dhammas*, explaining on contact the volition directly brings off the function to take all mental concomitant *dhammas* which are inclusive in the formation aggregate simultaneously. It is because the volition is the most significant *dhamma* in those mental *dhammas* which are inclusive in the list of formation aggregate (= there are 50 kinds of mental concomitants in formation aggregate.). In *Suttantabhājanīya* method, *saṅkhārakkhandhā Vibhanga*, when the Exalted One preached formation aggregate discriminately, such as “*cakkhusamphassajā cetana*” etc., it is obvious evidence of olden day example for preaching on only volition as significant factor. Remaining aggregates, corporeal aggregate, feeling aggregate, perception aggregate, consciousness aggregate are, however, counted and preached differentially. (M-ṭī-1-370)

3.20 An authoritative saying found in *Mahāṭṭkā*

Pāli Quotation (Mahāṭṭ-1-320)

The essence of this explanation of *Mahāṭṭkā* is as follows: _____

The Exalted One preached this practice of mindfulness of breathing in the Section of *kāyanupassanāsatiṭṭhāna*. In the word, *kāyanupassanā*, the term, *anupassanāññāṇa*, means the knowledge which discerns sign of breathing over and over in the stage of *samatha*. In the stage of *vipassanā*, the knowledge which discerns

1. ultimate nature of corporeal *dhammas* which are consisting in sound nonads produced by mind called *assāsapassāsakāya*,
2. four primaries and derived corporealities, which are produced by four origins called *kamma*, *citta*, *utu*, *āhāra*, which are occurring throughout body called *karajakāya* and are dependence of those *assāsapassāsakāya*, and
3. consciousness and associating mental concomitant *dhammas* over and over is called *kāyanupassanāññāṇa*. It is penetrative knowing and seeing on those mentality-corporeality by experiential knowledge, as they really are. (Mahāṭṭ-1-320)

These are explanations relating to how the practicing *meditator* can be designated as the person who develops *kāyanupassanā satiṭṭhāna* through discerning on which kinds of *dhammas* in both stages of *samatha* and *vipassanā*.

PAGE-272

It should, therefore, be recognized and followed the explanations of *Pāli* Text, commentary, sub-commentary respectfully which explain the fact *vipassanā* practice is ought to be performed through discerning as three general characters of corporeality-mentality together with causal *dhammas* only when the righteous *meditator* has known and seen on

1. *assāsapassāsakāya*,
2. four great primaries and derived corporealities occurring throughout body, which are called *karajakāya* and are dependence of those *assāsapassāsakāya*,
3. mental *dhammas* which arise by taking objects of those corporeal *dhammas*, with the help of experiential knowledge, after making any kind of access and full absorption concentration as fundamental of *vipassanā* practice. [It will be presented on account of ways of discerning on corporeality-mentality in the section of *rūpakammaṭṭhāna*, Volume I and Section of *nāmakammaṭṭhāna*, Volume II, in detail.]

These explanations are significant facts relating to

1. one should not take into heart colour,
2. one should not take into heart specific characters, hardness etc.,
3. one should not take into heart general characters called *anicca*, *dukkha*, *anatta*, for every practicing person who develops mindfulness of breathing when any sign of access concentration or full concentration of mindfulness of breathing.

The beginners of practice of mindfulness of breathing also should not take into heart both specific and general characters of in-breaths and out-breaths before appearance of sign of breathing. If he takes into heart specific characters, hardness etc., it might not be said as practice of mindfulness of breathing but four elements meditation.

Furthermore, if anyone discerns the in-breaths and out-breaths as *anicca*, *dukkha*, *anatta* without ability to see corporeal units within those in-breaths-out-breaths, or without ability to analyze each specific character of corporealities within corporeal units occurring in those in-breath and out-breath, even though corporeal units can be seen, it will be said he performs *vipassanā* practice through discerning on concept only.

Pāli Quotation (Vs-1-109)

According to above explanation of *Visuddhi Magga*, the practice of mindfulness of breathing is, indeed, a kind of practice which takes the object of sign called *nimitta*.

sesāni mahaggatacittāni sabbānipi paññattārammaṇāni. (Abhidhammattha Sangaha, Ārāmmaṇa Sangaha)

PAGE-273

According to this explanation of *Abhidhammattha Sangaha* (Compendium of Sublime *Dhammas*), this practice of mindfulness of breathing is inclusive in the kind of lofty consciousness which takes object of concept. In this case, lumps of in-breaths and out-breaths are also called concept, due to inability to discern upto the field of ultimate nature through breaking down bulk of corporeality called compactness of continuity, compactness of form, compactness of function of in-breaths-out-breaths. The sign of access concentration of mindfulness of breathing which is the cloud-like white coloured and the sign of full concentration of mindfulness of breathing which is brilliant like star, etc., are also called concept, due to lack of ability to break down bulk called compactness of corporeality. It should, therefore, be recognized the object of concentration of mindfulness of breathing is

concept. Every concept is not worth discerning as object of *vipassanā* practice. Only ultimate nature is, indeed, worth discerning as object of *vipassanā* practice.

3.21 Concept-ultimate nature

Now it will be presented explanations of commentary and sub-commentary in order to remove some doubts relating to opinion of concept-ultimate nature of the in-breaths and out-breaths.

Pāli Quotation (Vs-1-265)(Mahāṭṭi-1-321)

According to above explanations of commentary and sub-commentary, the in-breaths and out-breaths means collectiveness of numerous spreading corporeal units. Unless one sees corporeal units occurring in the in-breaths and out-breaths or unless one analyze ultimate nature of corporealities called earth-element, water-element, fire-element, air-element, colour, smell, taste, nutriment, sound which are consisting in sound nonad produced by mind, those collectiveness of corporeal units are present in the field of concept, due to presence of concepts of continuity and form. Those bulk of in-breaths and out-breaths with concepts of continuity and form, which are still present in the field of concept, are not objects of *vipassanā* knowledge. Nine kinds of ultimate nature of corporealities occurring in each sound nonad of in-breath-out-breath are, indeed, objects of *vipassanā* knowledge. It can, therefore, be said that concepts are not worth discerning as objects of *vipassanā* practice but various ultimate nature only are worth discerning as objects of *vipassanā* practice.

However if anybody wants to attain either access absorption concentration or full absorption concentration through the mindfulness of breathing route, he has to develop concentration through taking object of concept of in-breath and out-breath but not taking objects of nine kinds of ultimate nature of corporealities.

Therefore the essence to be recognized:

1. If one wants to attain absorption of mindfulness of breathing, concept of the in-breaths and out-breaths called *nimitta* must be taken as object of *samatha* practice.

PAGE-274

2. If one wants to attain *vipassanā* knowledge, ultimate nature must be taken as object of *vipassanā* practice. Those ultimate *dhammas* are (a) *assāsapassāsakāya* (b) *karajakāya* called physical constituents of body (c) *nāmakāya*.

3.22 Three kinds of *nimitta* (signs)

Now it will be presented continuously on three kinds of signs of mindfulness of breathing. There are three kinds of signs, i.e.,

- (1) *parikammanimitta* = sign of preliminary work,
- (2) *uggahanimitta* = sign of access concentration,
- (3) *Paṭibhāga nimitta* = sign of full concentration in practice of mindfulness of breathing.

Among those three kinds, the first one will be presented in this place, remaining two kinds will be explicit later.

Parikammanimitta _____

Pāli Quotation (Vs-1-275)

= These in-breaths and out-breaths arise through touching nose tip for the person with long nose while those arise through touching tip of upper lip for the person with short nose. This practicing *meditator* should, therefore, put the sign in a way that these in-breaths and out-breaths touch this place called *nimitta* (sign). (*Vs-1-275*)

Now it will be presented on explanations found in *Paṭisambhidā Magga* so as to be clear on the opinion relating to sign called *nimitta*.

Pāli Quotation (Paṭisam-A-2-73)

In above explanations, the words shown in number (1) mentions what the *nimitta* (sign) means and those words shown in number (2) mention factors of impurities of concentration of mindfulness of breathing.

1. The essence of the words shown in number (1) is as follows:

The term, *nimitta*, means touching place of the in-breath and out-breath. It is right. These in-breaths and out-breaths arise through touching nose tip for the person with long nose while those arise through touching tip of upper lip for the person with short nose. (*Paṭisam-2-73*)

PAGE-275

According to above explanations of commentary, it should be recognized the touching place of the in-breath-out-breath is called *nimitta*.

There is a reasonable question that if the beginner of practice of mindfulness of breathing has got long nose, does he discern nose tip? And if he has got short nose, does he discern tip of the upper lip? The answer can be found in partial of those words shown in number (2).

3. The essence of words shown in number (2) is as follows: _____

If the practicing person bears in mind only touching place (*nimitta*) called nose tip or tip of upper lip one-sidedly, his mind of meditation is shaking at the in-breath, resulting in unstability on object of in-breath. Due to lack of stability of mind, concentration of mind on the object of in-breath, it can prohibit concentration and it is a danger of concentration.

If the *meditator* bears in mind only the in-breath one-sidedly, that *meditator*'s mind is capable of performing restlessness by means of entering into interior (= it means mind of meditation follows the in-breath continuously, resulting in unstability and shaking of the mind on object of touching place called nose tip or tip of upper lip. Thus remaining words should be paralleled the meaning. (*Paṭisam-A-2-73*). It should, therefore, be understood the out-breath also in similar way.

3.23 (18) kinds of factors of impurities (*upakkilesa*) of concentration of mindfulness of breathing

(a) First hexad -(6) kinds of factors of impurities

Which are (18) kinds of factors of impurities of concentration of mindfulness of breathing?

1. The mind that wanders toward interior of the body of person who follows the beginning, middle, end of the in-breath with mindfulness is disturbance of concentration.

2. The mind that wanders toward exterior of the body of person who follows the beginning, middle, end of the out-breath with mindfulness is disturbance of concentration.

PAGE-276

3. Arising of heartfelt desire on the in-breath is disturbance of concentration.
4. Arising of heartfelt desire on the out-breath which occurred previously to the in-breath is disturbance of concentration.
5. For the person who is oppressed by the in-breath, heartfelt desire on availability of the out-breath is disturbance of concentration.
6. For the person who is oppressed by the out-breath, heartfelt desire on availability of the in-breath is disturbance of concentration. (*Paṭisam-163, 164*)

Opinion of *assāsa-passāsa*

Pāli Quotation (Vs-1-263)

According to commentary of *Vinaya* (Monastic Codes), the term, *assāsa*, means the out-breath and the term, *passāsa*, means the in-breath. The newly born infant breathes out previously and then he breathes in. The commentary of *Vinaya* explains the meaning of *assāsa passāsa* with regarding to this process of breathing. In those commentaries of *Suttanta*, on the other hand, it is explained that_____

The term, *assāsa*, means the in-breath and the term, *passāsa*, the out-breath with regarding to process of practice. The following explanations found in commentary of *Paṭisambhidā Magga* should be read.

Pāli Quotation (Paṭisam-A-2-72)

= The beginning, middle, end of the in-breath means touching place of inhaling, nose tip or tip of upper lip is the beginning while the heart, middle and the navel, end. The mind wanders towards interior through continuous following the in-breath which is inhaled from nose tip or tip of upper lip until navel with mindfulness. Due to lack of stability on single object, that mind wandering towards interior of the body is disturbance of concentration.

PAGE-277

= The beginning, middle, end of the out-breath means touching place of inhaling, navel is the beginning while the heart, middle and the nose tip or tip of upper lip or external space, end. The mind wanders towards exterior through continuous following the out-breath which is exhaled from navel until nose tip or tip of upper lip or external space with mindfulness. Due to lack of stability on single object, that mind wandering towards exterior of the body is disturbance of concentration. (*Paṭisam-A-2-72*)

According to above explanations of commentary of *Paṭisambhida Magga*, it should be recognized

1. The term, *assāsa*, means the in-breath and
2. the term, *passāsa*, means the out-breath respectively.

During developing concentration the practicing person who practices mindfulness of breathing have to keep awareness not to follow both the in-breath from nose tip or tip of

upper lip until navel and the out-breath from navel until nose tip or tip of upper lip and external space continuously.

(b) Second hexad- (6) kinds of factors of impurities

1. The mind of person who bears in mind touching place called *nimitta* one-sidedly is shaking at the in-breath, resulting in prohibition of concentration.
2. The mind of person who bears in mind in-breath one-sidedly is shaking at the touching place called *nimitta*, resulting in prohibition of concentration.
3. The mind of person who bears in mind touching place called *nimitta* one-sidedly is shaking at the out-breath, resulting in prohibition of concentration.
4. The mind of person who bears in mind out-breath one-sidedly is shaking at the touching place called *nimitta*, resulting in prohibition of concentration.
5. The mind of person who bears in mind in-breath one-sidedly is shaking at the out-breath, resulting in prohibition of concentration.
6. The mind of person who bears in mind out-breath one-sidedly is shaking at the in-breath, resulting in prohibition of concentration.

PAGE-278

Therefore these (6) kinds of factors, viz,

1. The wandering mind on the in-breath of the person who bears in mind *nimitta*,
 2. The wandering mind on the *nimitta* of the person who bears in mind in-breath,
 3. The wandering mind on the out-breath of the person who bears in mind *nimitta*,
 4. The wandering mind on the *nimitta* of the person who bears in mind out-breath,
 5. The wandering mind on the out-breath of the person who bears in mind in-breath,
 6. The wandering mind on the in-breath of the person who bears in mind out-breath,
- are, indeed, factors of impurities (*upakkilesa dhamma*) of concentration of mindfulness of breathing. (*Paṭisam-164*)

(c) Third hexad_____ (6) kinds of factors of impurities

1. The mind which follows the in-breath-out-breath continuously beyond touching place is disturbance of concentration, due to following to wandering.
2. The mind which has a longing for the in-breath and out-breath which are not reaching at touching place yet, is disturbance of concentration through shaking.
3. The mind which stops short and draws back from the function of practice, resulting from diminished in effort, is disturbance of concentration, due to following to laziness continuously.
4. The mind which is so active with strenuous effort is disturbance of concentration, due to following to wandering continuously.
5. The mind which inclines extremely towards pleasurable bases is disturbance of concentration, due to following to lust continuously.

[Notes:_____ In this case, it means continuous following of lust to either pleasurable interest and agreeable feeling which arise in the continuum of practicing person who is taking into heart the sign of breathing, or bases which have been experienced with mockeries in the past. (*Paṭisam-A-2-73*)]

6. The mind without inclination towards pleasurable bases is disturbance of concentration, due to following to ill will continuously.

[In this case, it means continuous following of ill will (-hatred) through either disagreeable feeling which arises in the continuum of practicing person with the mind of meditation,

which is lacking pleasurable interest, during taking into heart sign of breathing, or hatred, bases of hatred which have been experienced in the past. (*Paṭisam-A-2-73*)]

These are (18) kinds of factors of impurities (*upakkilesa dhamma*) of concentration of mindfulness of breathing.

PAGE-279

3.23 The fact which must be tried to be understood well

The essence of above explanations are as follows:_____

1. The righteous *meditator* should not keep awareness on pure the in-breath and out-breath one-sidedly through continuous following from nose tip or tip of upper lip until navel, and from the navel until nose tip or tip of upper lip.
2. The righteous *meditator* should not keep awareness on pure touching place called *nimitta* one-sidedly.

These two facts must be recognized carefully. There is a question how he must practice. The answer is as follows:_____

Pāli Quotation (Vs-1-271)

= The practice of concentration of mindfulness of breathing can be accomplished only for the practicing person who keeps awareness on only touching place of the in-breaths-out-breaths.

According to explanation of commentary the mind of meditation must be put at the touching place of the in-breaths-out-breaths.

There is a question during practicing in that way which thing must be conscious and must he know only touching place or only process of touching?

dīgham vā assassanto dīgham assassāmiti pajānāti. (M-1-70)

As the Exalted One preached in a way that “Breathing in long, he knows I breath in long etc.,” he must discern in order to distinguish only the in-breaths and out-breaths at the touching place but not only touching place or process of touching. However he ought not follow in-breath-out-breath continuously through leaving touching place.

Now some noticeable facts have been presented for righteous persons who want to develop practice of mindfulness of breathing. It will be continued to present way of practice of mindfulness of breathing as follows:-

PAGE-280

3.24 Two ways of approaching to the practice of mindfulness of breathing

There are, generally, two kinds of persons who develop practice of mindfulness of breathing. Firstly some righteous persons develop concentration through any kind of meditation subject, four element meditation, *kasiṇa*-object etc., and they transfer to *vipassanā* practice by making that concentration as fundamental of *vipassanā*. When they satisfy in the stage of *vipassanā* they continue to practice various meditation subjects again, such as, (10) kinds of *kasiṇa*-objects, (8) kinds of attainments, mindfulness of breathing, four sublime states of mind etc.

If a practicing *meditator* with sufficient concentration for fundamental of *vipassanā* practice transfers practice of mindfulness of breathing, he can usually develop practice of mindfulness of breathing successfully within a short period.

Similarly any *meditator* begins four elements meditation and then he transfers to practice of (32) bodily parts, practice on bone, white *kaṣiṇa* successively. After developing fourth absorption of white-*kaṣiṇa*, if he transfers to practice of mindfulness of breathing before transferring to *vipassanā* practice, he will be successful practice of mindfulness of breathing very easily within short period. This is the first kind of persons who transfers practice of mindfulness of breathing from other meditation subjects.

Second, some practicing persons develop concentration through mindfulness of breathing directly as beginning. Among those two kinds of persons, it will be presented on brief account of way of practice of mindfulness of breathing of the first kind previously.

The practicing person who has transferred to *vipassanā* practice successfully after developing concentration through either brief method of four elements meditation or detailed method of four elements meditation, must develop concentration again by taking object of four great elements, until the lights of concentration becomes brilliant, if he wants to transfer practice of mindfulness of breathing after attaining satisfaction in such stage of *vipassanā* practice.

[Notes:_____ See explanations relating to the fact all minds of meditation called *adhicitta*, of both *samatha* and *vipassanā* practice have got brilliant lights, in page 528 etc., of this volume.]

When the efficiency of lights becomes powerful through four elements meditation in that way, if he wants to transfer practice of mindfulness of breathing, he can transfer easily. If anybody wants to transfer practice of mindfulness of breathing before transferring to *vipassanā* practice, he can transfer in similar way.

PAGE-281

If he wants to transfer practice of *kaṣiṇa*-objects but not practice of mindfulness of breathing in that way, he can do as he likes. Way of transferring in brief is as follows:_____

When the light of concentration becomes brilliant through developing concentration by taking objects of four great elements he must scrutinize (32) bodily parts within his body, resulting in appearance of those parts gradually. After discerning on (32) bodily parts of both internal and external continuums masterfully he has to practice foulness nature of bone of either internal or external continuum. Then he has to develop concentration by taking objects of foulness nature of both internal and external continuums alternately. He must practice in order to see objects of bones at whatsoever (10) directions. If he is successful, he has to take into heart as “white, white”... by taking object of whitest part of external bone. When white *kaṣiṇa*-object only remains after disappearance of object of bone he has to develop concentration by taking object of circular white *kaṣiṇa*-object continuously. If white *kaṣiṇa*-object becomes brilliant, it will reach into the sign of full concentration called *Paṭibhāganimitta*. He has to develop concentration by taking object of that sign of full concentration continuously. When the concentration becomes stable and powerful he has to spread object of circular white *kaṣiṇa*-object upto (10) directions, gradually. That spreading object can bring forth long lasting stability of concentration, resulting in ability to reach (8) kinds of attainments called *aṭṭhasamāpatti* easily. He has to develop concentration until either fourth absorption or all eight kinds of attainments as he likes.

In *Mahāparinibbāna Sutta* etc., the Exalted One preached on ways of discerning of four colour-objects by taking objects of those (32) bodily parts under the designation as *abhibhāyatanaḥhāna*

Pāli Quotation (Ang-3-125)

= A practicing *meditator* discerns colours of internal continuum of himself (= 32 bodily parts of himself) and he discerns both good and bad coloured small (*kaṣiṇa*) corporealities of external continuum too. He has got a kind of perception as “I know, I see” by overcoming on those corporealities. This is the first *abhibhāyatana jhāna*. (Ang-3-125)

[Way of discerning in detail can be seen in the commentary of *Mahā Vagga, Dīghanikāya (Dī-A-2-151, 153)*, commentary called *sammohavinodanī (Abhi-A-2-212,248)*. Way of developing concentration by taking object of the four great elements can be seen in this volume, section of *rūpakammaṭṭhāna*. Way of transferring to *kaṣiṇa*-object in detail can be seen in Volume V, Section of *samathakammaṭṭhāna*.]

PAGE-282

After developing concentration by taking object of the white *kaṣiṇa*-object upto any kind of degree of concentration, access concentration or anyone of (8) kinds of attainment or all eight kinds of attainments he can transfer to *vipassanā* practice. When he has got satisfaction in any stage of *vipassanā* practice he can transfer to practice of mindfulness of breathing, if he wants to transfer to that practice. If he wants to transfer to practice of mindfulness of breathing after developing concentration through any kind of *kaṣiṇa*-objects, white *kaṣiṇa* etc., without transferring to *vipassanā* practice, he can perform as he likes.

When the righteous *meditator* wants to transfer practice of mindfulness of breathing he has to develop concentration again through experienced meditation subject upto light of concentration becomes brilliant. Then he must put mind of meditation at the touching place of the in-breath-out-breath,

1. nose tip or
2. tip of upper lip which is apparent object to be conscious as touching process by leading mindfulness towards object of practice called the in-breaths and out-breath fixedly. Both the in-breaths and out-breaths must be discerned emphatically by watching at the touching place only.

During discerning in that way the righteous *meditator* should not transfer touching place from nose tip to tip of upper lip and vice versa frequently.

3.25 Facts to be questioned

Why the *meditator* who wants to develop practice of mindfulness of breathing develops concentration through four great elements meditation as beginning and white *kaṣiṇa*-object etc., step by step? There is also a reasonable question that can the practice of mindfulness of breathing be performed only when sufficient concentration has been developed in that way.

It should not be considered in this way. Everyone can develop concentration through practice of mindfulness of breathing as beginning in accordance with instructions of way of practice. Because degree of concentration which is intended to be attained for oneself can be accomplished easily when succeeding concentration is supported by preceding concentration, it is instructed to develop acquired concentration again. Developing acquired concentration again might be very easy, due to occurrence of experienced route for everyone. Furthermore it can be found the evidence that if anyone develops concentration basing on acquired concentration of any kind of meditation subjects, it will be easier than pure practice of unexperienced one as beginning, in most practicing *meditators*.

PAGE-283

If he is the *meditator* who has no experience to practice any kind of *kasiṇa*-objects, white *kasiṇa*, light *kasiṇa* etc., he has to develop practice of mindfulness of breathing in accordance with its rules step by step.

If the righteous *meditator* with sharp wisdom has got enough concentration through any kind of *kasiṇa* objects, when he practices mindfulness of breathing he can attain the concentration upto the fourth absorption within one or two sitting periods (= about 3 hours) while the righteous *meditator* with moderate wisdom can attain the concentration upto the fourth absorption within two or three days. Acquired concentration should be developed again before practicing mindfulness of breathing because it is worth accepting the efficiency of preceding concentration which can give rise to great efficacy of relation of determinative dependence for advancement of succeeding concentration.

3.26 Can one practice in that way?

There is a question that can one practice in that way? The answer is that everyone can practice in that way.

In *Mahārāhulovāda Sutta, Majjhimapaṇṇāsa (M-2-83)*, the Exalted One preached *Ven. Rāhulā* the way of four elements meditation in detail so as to remove selfish desire on corporeal *dhammas*. Then way of developing on mindfulness of breathing upto the Fruit-Knowledge of Arahant was also preached continuously with regarding to the previous question of *Ven. Rāhulā*. The righteous *meditator* can, therefore, develop practice of mindfulness of breathing after four elements meditation, if he wants to practice one after another. If it is so, those *meditators* who have experience to practice remaining kinds of meditation subjects can perform practice of mindfulness of breathing. However those meditation subjects should not be mixed together and the *meditator* must keep awareness to practice specific kind of meditation subject in specific period one by one without mingling each other.

At the time the Supreme Buddha was alive very famous disciples, *Ven. Sāriputta Mahā Thero* and *Ven. Moggallāna Mahā Thero* who had got various super psychic knowledge were very skillful in various kinds of meditation subjects, (10) kinds of *kasiṇa*-objects etc. It is because super psychic knowledge is available depending upon *kasiṇa*-objects. Those *Mahā Theras* also practiced mindfulness of breathing. In *Mahārāhulovāda Sutta* it can be found the fact *Ven. Sāriputta Mahā Thero* instructed *Ven. Rāhulā* in order to perform practice of mindfulness of breathing after seeing sitting deportment of *Ven. Rāhulā* and knowing that kind of deportment was favourable for practice of mindfulness of breathing.

PAGE-284

Furthermore, the Most Venerable *Sāriputta Mahā Thero* preached detailed account of way of practice of mindfulness of breathing in the *Pāli* Text called *Paṭisambhidā Magga*. Those preachings are reliable evidence showing the *Venerable Sāriputta* was mastery in all kinds of meditation subjects thoroughly.

The righteous *meditator* must, therefore, recognize respectfully the fact developing succeeding concentration through taking supporting of preceding acquired concentration is great advantageous way.

3.27 The fact to be questioned again

With regarding to the words, “after developing concentration upto the fourth absorption through four elements meditation as beginning, white *kasīṇa*-object, light *kasīṇa*-object etc., and after emerging from that concentration, the in-breath and out-breath must be discerned at the touching place of those in-breaths-out-breaths with mindfulness”, there is a question that shall he need to practice counting method because commentary (*Vs-1-270*) instructs to begin with counting method.

Pāli Quotation (Vs-1-271, Paṭisam-A-2-95)

How long does he count these in-breaths and out-breaths? He must count until the condition that mindfulness is stable on the object of in-breath-out-breath without counting. This is because the counting method is applied in order to attain only advantage of stability of mindfulness on the object of the in-breath-out-breath after removing initial application of the wandering mind towards external objects other than object of the in-breath-out-breath. The righteous *meditator* must, therefore, count until the condition that mindfulness is stable on the object of in-breath-out-breath. (*Vs-1-271, Paṭisam-A-2-95*)

According to above explanation of commentaries, it should be recognized the counting method won't be needed to perform when the mindfulness is stable on the object of in-breath-out-breath.

When the righteous *meditator* who has developed concentration upto the fourth absorption through white *kasīṇa*, light *kasīṇa*, etc., keeps awareness on object of the in-breath-out-breath at touching place his mindfulness is usually stable on the object of in-breath-out-breath without any difficulty. If he is sharp wisdom person, sign of access concentration or sign of full concentration usually appears within one sitting period. It will be presented about signs in later again. In this case, it is intended to be said the mindfulness is easily stable on the object of in-breath-out-breath. It will be presented the fact relating to factor of stability of mindfulness again.

PAGE-285

3.28 *samāpatti* (attainments) and *vipassanā*

Pāli Quotation (M-A-1-387, 388)

= In the continuum of such practicing person both the concentration and *vipassanā* knowledge are immatured. That practicing person who is sitting for long period through occurring *vipassanā* knowledge becomes tired physically with excess heat inside his body like fire; sweating from arm-pit; radiated heat releases from top of the head; mentally is also weary, worn-out and shaking.

That practicing person enters into the attainment called *samāpatti* again. Through relieving both physical and mental weariness *vipassanā* knowledge is brought forth again. In the continuum of that practicing person who is sitting next time for long duration again both physical and mental weariness appear in similar way. That practicing person enters into the attainment in order to extinguish both physical and mental weariness again in similar to previous way and *vipassanā* knowledge is brought forth. Thus the attainment called *samāpatti* is great advantageous for advancement of *vipassanā* knowledge... pa... (*M-A-1-387*)

Worldly simile_____ Wooden fort is great beneficial for warrior. That warrior has entered into the battle field depending on that wooden fort. When warriors are fighting

against enemies in the battle field sometimes ammunition are used up, sometimes they are hungry. When any reason, such as this kind etc., occurs the warrior steps back into the forth and brings weapons; takes rest; eats food; drinks juice; wears body armour again; after doing various functions which are deserving to do urgently the warrior enters into the battle field again. When any reason, burden of defecation and urination etc., occurs during fighting he retreats into the fort again. After making supporting and stability himself inside the fort he enters into the battle field again. As wooden fort is great beneficial for a warrior, similarly attainment called *samāpatti* is great beneficial for *vipassanā* practice. (M-A-1-387, 388)

PAGE-286

Furthermore the benefit of *vipassanā* for attainment is greater than that of wooden fort for the warrior who swims and overcomes the battle field. Actually it is true that *vipassanā* knowledge is brought forth depending on attainment. However *vipassanā* knowledge which becomes strong efficiency completely not only protects attainment but also makes to arise full of efficiency of the latter. (M-A-1-387, 388)

Worldly simile_____ If both boat and properties on the boat are wanted to be transported from one place to another on land, those can be carried by bullock cart. Then in the water, if both bullock cart and properties on the cart are wanted to be transported from one place to another, those can be carried by boat. The boat transports burden to harbour through riverine route without any hitch.

As this simile, even though *vipassanā* knowledge is brought forth depending on attainment, *vipassanā* knowledge which becomes strong efficiency completely not only protects attainment but also makes to arise full of efficiency of the latter. It should be recognized the attainment as bullock cart on land while *vipassanā* as the boat in water respectively. (M-A-1-388)

According to above explanations of commentary, *vipassanā* and absorption-attainment are mutually benefittable *dhammas* so as to be strong and stable each other. Therefore if anyone transfers to *vipassanā* through making any attainment of *kaṣiṇa*-objects, white *kaṣiṇa*-object etc., as fundamental of *vipassanā* practice, *vipassanā* knowledge becomes strong efficiency completely depending on that attainment, resulting in arising of complete efficiency until penetrative knowing and seeing on the Path-Knowledge, Fruit-Knowledge, *nibbāna*. Furthermore, that *vipassanā* knowledge with strong efficiency can protect stability of attainments of *kaṣiṇa*-objects, white *kaṣiṇa*-object etc. Those kinds of attainments never fall back easily, due to presence of stability which is benefited by the efficiency of relation of determinative dependence of *vipassanā* knowledge.

Furthermore, if anyone transfers any kind of concentration, such as practice of mindfulness of breathing etc., by taking supporting factor of any kind of attainments of *kaṣiṇa*-objects, white *kaṣiṇa*-object etc., which is available to develop concentration easily at every time, the concentration of practice of mindfulness of breathing can become very strong efficiency within short period, due to presence of supporting factor of efficiency of relation of determinative dependence of preceding concentration. The mindfulness associating with that concentration of mindfulness of breathing can exist fixedly on the object of the in-breath and out-breath.

PAGE-287

If the mindfulness can exist fixedly on the object of in-breath-out-breath in that way, the foundation of practice of mindfulness of breathing, i.e.,

“so satova assāsati, satova passāsati. (M-1-70)”,

“that practicing *bhikkhu* brings forth the in-breath with outshining mindfulness only and brings forth the out-breath with outshining mindfulness only”, has also been accomplished well. According to the instruction of commentary, the function of counting method has been already finished. It is because if the mindfulness can exist fixedly on the object of in-breath-out-breath, the function of counting method has also been finished. (See *Vs-1-272*)

In this case it means only foundation of practice of mindfulness of breathing has been accomplished but not he becomes a person called *satokārī*. It should be recognized only when any person has fulfilled to discern completely on (32) kinds of modes, i.e., (16) modes in the in-breath and (16) modes in the out-breath occurring in four tetrads as mentioned above, can he become the person of *satokārī*. (See *Paṭisam-174*)

The person who is always mindful of both in-breath and out-breath in that way can begin the practice shown in the first tetrad. It will be present in detail, in later. Now it will be continued to present how the mindfulness can be stable for beginner who has no experience to develop concentration through other meditation subjects.

3.29 Try to practise

If the *meditator*, who has not got sufficient concentration through other meditation subjects and *vipassanā* knowledge with strong efficiency, wants to practice mindfulness of breathing, he must discern only objects of the in-breath and out-breath at touching place, i.e., nose tip or tip of upper lip, with mindfulness. He has to try in order to be mindful on the objects of in-breath and out-breath previously. If he has got great perfection called *paramita* of previous lives, his mind of meditation will exist fixedly on the objects of in-breath-out-breath within one or two sitting periods. When mind of meditation is stable on the objects of in-breath and out-breath about half or one hour etc., he has to practice following instructions shown in the first tetrad step by step. It is because counting method can be applied for only beginners who are unable to be mindful on the objects of in-breath-out-breath anymore. If any person tries to practice so as to be mindful on the objects of in-breath and out-breath in that way and the mind of meditation is unable to be stable fixedly, even though he takes for two or three days, he must begin with counting method.

PAGE-288

3.30 Five stages (*pancasandhika*)

The Exalted One preached this first tetrad of mindfulness of breathing by means of *kāyānupassanā satipaṭṭhāna* and *samatha* practice for beginner. Remaining three kinds of tetrads were preached by means of *vedananupassanā*, *cittānupassanā*, *dhammānupassanā* respectively for those practicing persons who have got absorption through the first tetrad. Therefore those gentlemen and ladies who want to reach the Fruit-Knowledge of Arahant together with four kinds of Knowledge of Discrimination (*paṭisambhidā ñāṇa*) through *vipassanā* knowledge which has proximate cause, the fourth absorption of mindfulness of breathing, should like to perform basic functions, purifying morality etc., and they have to learn five stages of way of practice of mindfulness of breathing. (*Vs-1-269*)

1. Learning (*uggaha*)_____ Learning of the meditation subject in *Pāli* is called *uggaha*.

In the next method, learning of the meditation subject both in *Pāli* and meaning is called *uggaha*.

2. Questioning (*paripucchā*)_____ Questioning on the meaning of meditation subject is called *paripucchā*. In the next method, scrutinizing and questioning on some facts which are doubtful whether or not avoiding in meditation subject is called *paripucchā*.
3. Recognizing (*upaṭṭhāna*)_____ Recognizing on mode of appearance of signs in a way that “in this case, this kind of sign can appear in the continuum of person who develops practice of mindfulness of breathing in this way “etc., is called *upaṭṭhāna*.
4. Full absorption (*appanā*)_____ Recognizing on mode of arising of full absorption in a way that “ this kind of absorption falls; it will be reached into full absorption in the continuum of person who develops practice of mindfulness of breathing in this way” etc., is called *appanā*.
5. Characteristic (*lakkaṇā*)_____ Recognizing on characteristics of practice of mindfulness of breathing, such as, (a) the characteristic of completion with full absorption called *thapanā* which is resulting from capable of putting the mind of *meditation* on the object of sign of full concentration which arises depending on object of the in-breath-out-breath, in order to be stable and fixedly for long time when practice of mindfulness of breathing is performed through counting method, connexion method, touching method; and (b) the characteristic of way of reaching into the pinnacle called the Fruit-Knowledge of Arahant, which arises through *vipassanā* knowledge which is called *sallakkhaṇā*, due to capable of distinguishing and discerning on nature of *anicca*, *dukkha*, *anatta* of conditioned things called *assāsapassāsakāya* (=physical constituents of in-breath-out-breath), *rūpakāya* (physical constituents of the whole body), *nāmakāya* (mental constituents), together with causal *dhammas* when *vipassanā* practice is transferred by making that absorption of mindfulness of breathing as fundamental of *vipassanā* etc., is called *sallakkhaṇā*.

PAGE-289

These are five stages called *pañcasandhika* which are worth learning previously for practicing persons who want to develop mindfulness of breathing. (*Vs-1-270, Mahāṭṭ-1-327*)

Learning the practice of mindfulness of breathing with these five stages mentioned above, he neither tires himself nor worries the teacher.

Therefore in giving this meditation subject consisting in mindfulness of breathing attention he can live either with the teacher or elsewhere in an abode of any kind

- (1) in the forest,
- (2) at the foot of tree
- (3) at the empty place,

learning the practice of mindfulness of breathing with the five stages thus, getting a little expounded at a time and taking a long time over reciting it. He should sever the minor impediments. After finishing the work connected with the meal and getting rid of any dizziness due to the meal he should seat himself comfortably. Then, making sure he is not confused about even a single word of what he has learned from the teacher, he should take into heart this practice of mindfulness of breathing through cheering his mind by recollecting the special qualities of the Triple Gems. (*Vs-1-270*)

3.31 Sequence of way of taking into heart

Pāli Quotation (Vs-1-270)

1. *gaṇanā*_____ Counting the in-breath-out-breath is called *gaṇanā*.

2. **anubandhanā** _____ Carrying on the mindfulness through continuous following to in-breaths and out-breaths after watching from touching place, resulting in connexion of mindfulness without interruption, is called **anubandhanā**.
3. **phusanā** _____ Touching of the in-breath-out-breath on touching place called nose tip or tip of upper lip is called **phusanā**.
4. **thapanā** _____ Falling and fixing into the full absorption is called **thapanā**. The full absorption is called **thapanā**, due to capable of putting mind of meditation fixedly on the object of sign of full concentration.
5. **sallakkhaṇā** _____ **Vipassanā** knowledge is called **sallakkhaṇā**, due to capable of distinguishing and keeping in mind the nature of **anicca-dukkha-anatta** of conditioned things called **assāsapassāsakāya**, **kārajakāya**, **nāmakāya** together with causal **dhammas**.

PAGE-290

6. **vivuttaṇā** _____ Noble Path **dhamma** enters into the Unconditioned Element, Eternal Peace called **nibbāna** in a sudden burst of speed through emerging from both **upādinnaka pavatta** called apparent arising of resultant **dhammas**, due to obvious occurrence of causal **dhammas** and conditioned things. During entering in that way, the Noble Path-Knowledge eradicates respective causal **dhammas** ignorance, craving, clinging etc., successively. When the Path-Knowledge of Arahant is reached causal **dhammas** cease through absolute cessation called **anuppādanirodha** in which they never arise again. Due to absolute cessation of causal **dhammas**, resultant **dhammas** also cease absolutely after final death of Arahant called **parinibbānacutī**. The Noble Path **dhamma** is, therefore, called **vivuttaṇā**, due to capable of sinking continuity of corporeality-mentality from **upādinnakapavatta** and **saṅkhāra nimitta** (=emblem of conditioned things) and due to capable of ceasing cycling of rounds of rebirth.
7. **pārisuddhi** _____ Noble Fruit-Knowledge is called **pārisuddhi** (thorough purification), due to presence of nature of extinguishing of all kinds of impurities called defilements.
8. **paṭipassanā** _____ Each kind of Receiving Knowledge which is capable of reviewing on the Path-Knowledge, Fruit-Knowledge, **nibbāna**, defilements which has been eradicated and defilements which has not been eradicated yet, is called **paṭipassanā**. These are sequence of way of taking into heart for the person who performs practice of mindfulness of breathing.

3.32 Counting method (**gaṇanā**)

Among those (8) kinds of functions, the clansman and clanswoman who are beginners should take into heart this practice of mindfulness of breathing by counting.

Pāli Quotation (Vs-1-270)

And when counting, the practicing person should not stop short of five or go beyond ten or make any break in the series, such as one, three, five etc. In other words, the practicing **meditator** has to try so as to be stable mindfulness on the object of in-breath and out-breath without using counting method within two or three days. If the mindfulness becomes stable on the object of in-breath and out-breath within two or three days, he has to practice in accordance with the first tetrad of practice of mindfulness of breathing, trying to know length or shortness of breathing etc., without counting. Unless the mindfulness becomes stable on

the object of in-breath and out-breath within two or three days, he has to apply counting method again. During counting, he should not make any break in the series.

PAGE-291

By stopping short of five his thoughts get excited in the cramped space, like a herd of cattle shut in a cramped pen. Furthermore, by going beyond ten his thoughts take the number [rather than the breaths] for their support. By making a break in the series he trembles, if the practice has reached completion or not. So he should do his counting without those faults called stopping short of five, going beyond ten, making any break in the series. (*Vs-1-270*)

(a) Counting method of grain measurer

When he begins with counting method he should at first do it slowly as a grain measurer does. For a measurer having filled his measure, says ‘One’, and empties it, and then refilling it, he goes on saying ‘One, One’ during removing any rubbish he may have noticed. And the same with ‘Two, Two’, and so on. So, taking the in-breath or the out-breath, whichever appears, he should begin with ‘One, One’ and count up to “Ten, Ten, noting each as it occurs, i.e.,

1. if the in-breath is obvious, noting the in-breath,
2. if the out-breath is obvious, noting the out-breath,
3. if both kinds of the in-breath and out-breath are obvious, noting both kinds.

As he does his counting in this way the in-breaths and out-breaths become obvious to him as they enter in and issue out. (*Vs-1-270*)

The essence of above explanation of commentary is as follows:

In both kinds of the in-breath and out-breath, the practising person with obvious in-breath should take the in-breath while the person with obvious out-breath should take the out-breath, the person with obvious both kinds, both kinds, and then he must count ‘One, One’, etc., before second in-breath or second out-breath or second both kinds of in-breath-out-breath. It should be recognized similarly on counting as ‘Two, Two’ etc.

PAGE-292

Now it will be presented an example of way of counting of a person with obvious both kinds.

1. the in-breath-out-breath – one-one-one....
2. the in-breath-out-breath – two-two-two....
3. the in-breath-out-breath – three-three-three....
4. the in-breath-out-breath – four-four-four....
5. the in-breath-out-breath – five-five-five....
6. the in-breath-out-breath – six-six-six....
7. the in-breath-out-breath – seven-seven-seven....
8. the in-breath-out-breath – eight-eight-eight....

When counting reaches to number “eight”, he has to start from ‘One’ again. If he wants to count up to ‘Ten’, he can count as he likes. But he must count without any break in the series.

This kind of counting method is not similar to quick reciting mantra which is done by parents when children fall down on the ground but as working the bellows which is done by silversmith. It is designated as slow counting method of grain measurer (*dandhagaṇanā dhaññamāpakagaṇanā*) because the practicing *bhikkhu* counts slowly through considering

on the in-breath as beginning but not the out-breath which is the beginning process for newly born babies.

Pāli Quotation (Mahāṭṭ-1-328)

Those words, “in both kinds of the in-breath and out-breath obvious one should be taken and counting must be performed”, are said by commentary with referring to the practicing person who has got any kind of obvious one previously. If both kinds of the in-breath and out-breath are obvious for such practicing person, that person should take both kinds of in-breath-out-breath and then he has to count one pair after another. Because the term, *yo upaṭṭhati* (obvious breath), is said by commentary, in two kinds of out-breath which go out through two nostrils, the out-breath which goes out through such nostril becomes very obvious, such out-breath should be taken for counting. It should be recognized that term, *yo upaṭṭhati* (=obvious breath), means practice of mindfulness of breathing should be performed through taking that kind of breath which is more obvious than the other for simultaneous occurring in two nostrils.

PAGE-293

Though any kind of in-breath and out-breath becomes obvious in the continuum of *meditator* who counts as mentioned above, both kinds become obvious gradually, due to lack of wandering of mind towards various external objects other than object of the in-breath-out-breath through counting method. (*Mahāṭṭ-1-328*)

b. Counting method of cowherd

At the beginning of practice of mindfulness of breathing the in-breath and out-breath are not obvious in the continuum of *meditator*, due to lack of purification of mind. When impurities of mind called hindrances (*nīvaraṇa*) become clear in later the in-breaths and out-breaths are obvious and then the righteous *meditator* should count quickly as a cowherd does after leaving off counting method of a grain measurer.

For a skilled cowherd takes pebbles in his pocket and goes to the cow pen in the morning, whip in hand; sitting on the bar of the gate, prodding the cows in the back, he counts each one as it reaches the gate, saying ‘One, two,’ dropping a pebble for each. And the cows of the herd, which have been spending the three watches of the night uncomfortably in the cramped space, come out quickly in parties, jostling, each other as they escape. So he counts quickly ‘three, four, five’ and so up to ten.

Similarly the righteous *meditator* should count the in-breaths and out-breaths quickly. For the practicing *bhikkhu* who counts the in-breaths and out-breaths through slow counting method of grain measurer of quick counting method of cowherd the in-breaths and out-breaths become obvious and arise quickly over and over. Afterwards, this practicing *bhikkhu* must count quickly as one, two, three, four, five, six, or one, two, three, four, five., six, seven or one, two, three, four, five., six, seven, eight or one, two, three, four, five., six, seven, eight, nine, ten etc., by taking object of every pair of in-breath-out-breath which just reach at nostril but not interior or exterior of nose tip or tip of upper lip.

PAGE-294

It is right._____ In the practice of mindfulness of breathing which is concerning with counting the mind of meditation becomes concentrated through efficiency of counting only. It should be recognized it is similar to the fact the boat can be stopped in water flowing which flows very swiftly through the efficiency of supporting factor of punting pole. (*Vs-1-271*)

c. How the practice can be fulfilled

Thus the practice of mindfulness of breathing called the in-breaths and out-breaths become apparent to that practicing person who counts quickly as an uninterrupted process.

[Notes:_____ In this case, the usage, “ as an uninterrupted process”, but not “uninterruptedly”, is said because uninterrupted process can occur within full absorption cognitive process called *thapanā* only. During performing counting method minds of meditation which discern the in-breath-out-breath are only continuity of great wholesome impulses of mind-door cognitive processes in sensual sphere for worldling and fulfilling persons (*sekkha*). In this case, that cognitive process consists of one advertent consciousness and (7) times of impulses, due to taking object of concept called the in-breath and out-breath. Those mind-door cognitive processes are separated by life-continuums which takes any kind of three objects, action-emblem of action-emblem of destination (*kamma-kammanimitta-gatinimitta*) which were objects of impulses adjacent to death of previous life. Therefore, the usage, “as an uninterrupted process” is applied without saying uninterrupted process, due to occurrence of objects taken by life-continuum is not the in-breath-out-breath. It refers only most occurrence of cognitive processes and less occurrence of life-continuums.]

Then, knowing that it is proceeding uninterruptedly, he can count quickly (early in the way just described, not discerning the wind either inside or outside the nostril). For by bringing his consciousness inside along with the inhaling breath it seems as if it were buffeted by the wind inside or filled with fat. By taking his consciousness outside along with the exhaling breath it gets distracted by the multiplicity of external objects. However, his practice of mindfulness of breathing can be fulfilled when he fixes his mindfulness on the place touched by the breaths. That is why it was said above ‘He can count quickly (early in the way just described, not discerning the wind either inside or outside the nostril). (*Vs-1-271*)

PAGE-295

d. How much does it take to count?

The period how much it takes to count is that_____ the mindfulness is stable on the object of the in-breath and out-breath without counting throughout such period, he has to count throughout that period. It is because the counting method is performed with intended to attain advantage of the stability of mindfulness on the objects of the in-breaths and out-breaths through severing initial applications on various external objects, other than the in-breath-out-breath. (*Vs-1-271*)

When the mindfulness becomes stable on object of the in-breath-out-breath through counting method the practicing person has to endeavour the way of practice that knowing the length and shortness of breathing which is found in the first tetrad of *Pāli* Text.

3.3 1. The length 2. The shortness

This way of discerning that concerned with the length and the shortness of breaths can be found in page 175, paragraph 166, *Pāli* Text called *Paṭisambhidā Magga*.
Pāli Quotation (Paṭisam-175)

PAGE-296

How, breathing in long, does he know:
 “I breathe in long”?

How, breathing out long, does he know:
 “I breathe out long”?

1. He breathes in a long in –breath reckoned as an extent.
2. He breathes out a long in –breath reckoned as an extent.
3. He breathes in and breathes out long in-breaths and out-breaths reckoned as an extent.
4. As he breathes in and breathes out long in-breaths and out-breaths reckoned as an extent, zeal arises. (= Additional zeal, which is profitable and has the characteristic of desire to act, arises due to the satisfaction obtained when the meditation has brought progressive improvement.) Through zeal he breathes in a long in-breath more subtle than before reckoned as an extent.
5. Through zeal he breathes out a long out-breath more subtle than before reckoned as an extent.
6. Through zeal he breathes in and breathes out long in-breaths and out-breaths more subtle than before reckoned as an extent.
7. As, through zeal, he breathes in and breathes out long in-breaths and out-breaths more subtle than before reckoned as an extent, pleasurable interest arises (due to fulfillment of the practice). Through pleasurable interest he breathes in a long in-breath more subtle than before reckoned as an extent.
8. Through pleasurable interest he breathes out a long out-breath more subtle than before reckoned as an extent.
9. Through pleasurable interest he breathes in and breathes out long in-breaths and out-breaths more subtle than before reckoned as an extent.

As, through pleasurable interest, he breathes in and breathes out long in-breaths and out-breaths more subtle than before reckoned as an extent his mind turns away from the long in-breaths and out-breaths (when brilliant sign of full concentration arises depending on long in-breaths and out-breaths), and equanimity (*tatramajjhastupekkhā*) is established.

PAGE-297

Long in-breaths and out-breaths in these nine ways are designated as *kāya* (bodily constituents). The mindfulness is designated as *upaṭṭhāna* (the establishment or foundation) due to capable of establishing towards objects of those in-breath-out-breath. The wisdom which can discern over and over is designated as *ñāṇa* (knowledge).

Bodily constituents (*kāya*) can be designated as *upaṭṭhāna* (due to occurrence of establishment (foundation) of mindfulness, but not *sati* (mindfulness). The mindfulness can be designated as both *upaṭṭhāna* (due to capable of establishing towards object) and *sati* (due to capable of remembering). By means of that mindfulness and that knowledge those three kinds of *kāya* (= bodily and mentally constituents), i.e.,

1. *assāsapassāsakāya* (bodily constituents of in-breath-out-breath),
2. *rūpakāya* called *karajakāya* (all kinds of bodily constituents) which are dependence of that *assāsapassāsakāya*,

3. *nāmakāya* (mentally constituents) which arise by taking object of those *rūpakāya*, are discerned over and over. It is, therefore, designated as *kāye kāyanupassanā saatipatṭhāna bhāvanā*.] (*Paṭisam-175, Mahāṭṭ-1-320*)

Furthermore, in paragraph number 169, *Paṭisambhidā Magga*, the ways of discerning that concerned with the shortness are preached as follows;_____

How, breathing in short, does he know:

“I breathe in short”?

How, breathing out short, does he know:

“I breathe out short”?

1. He breathes in a short in-breath reckoned as a little.
2. He breathes out a short in-breath reckoned as a little.
3. He breathes in and breathes out short in-breaths and out-breaths reckoned as a little.
4. As he breathes in and breathes out short in-breaths and out-breaths reckoned as a little, zeal arises. (= Additional zeal, which is profitable and has the characteristic of desire to act, arises due to the satisfaction obtained when the meditation has brought progressive improvement.) Through zeal he breathes in a short in-breath more subtle than before reckoned as a little.
5. Through zeal he breathes out a short out-breath more subtle than before reckoned as a little.
6. Through zeal he breathes in and breathes out short in-breaths and out-breaths more subtle than before reckoned as a little.
7. As, through zeal, he breathes in and breathes out short in-breaths and out-breaths more subtle than before reckoned as a little, pleasurable interest arises (due to fulfillment of the practice). Through pleasurable interest he breathes in a short in-breath more subtle than before reckoned as a little.

PAGE-298

8. Through pleasurable interest he breathes out a short out-breath more subtle than before reckoned as a little.
9. Through pleasurable interest he breathes in and breathes out short in-breaths and out-breaths more subtle than before reckoned as a little.

As, through pleasurable interest, he breathes in and breathes out short in-breaths and out-breaths more subtle than before reckoned as a little his mind turns away from the short in-breaths and out-breaths (when brilliant sign of full concentration arises depending on short in-breaths and out-breaths), and equanimity (*tatramajjhastupekkhā*) is established.

Short in-breaths and out-breaths in these nine ways are designated as *kāya* (bodily constituents). The mindfulness is designated as *upatṭhāna* (the establishment or foundation) due to capable of establishing towards objects of those in-breath-out-breath. The wisdom which can discern over and over is designated as *ñāṇa* (knowledge).

Bodily constituents (*kāya*) can be designated as *upatṭhāna* (due to occurrence of establishment (foundation) of mindfulness, but not *sati* (mindfulness)). The mindfulness can be designated as both *upatṭhāna* (due to capable of establishing towards object) and *sati* (due to capable of remembering). By means of that mindfulness and that knowledge those three kinds of *kāya* (= bodily and mentally constituents), i.e.,

1. *assāsapassāsakāya* (bodily constituents of in-breath-out-breath),
2. *rūpakāya* called *karajakāya* (all kinds of bodily constituents) which are dependence of that *assāsapassāsakāya*,

3. *nāmakāya* (mentally constituents) which arise by taking object of those *rūpakāya*, are discerned over and over. It is, therefore, designated as *kāye kāyanupassanā saatipaṭṭhāna bhāvanā*. (*Paṭisam-180, paragraph number 169*)

3.34 How mind of meditation backs out from original in-breath-out-breath

Pāli Quotation (Paṭisam-A-2-107) (Mahāṭṭ-1-319)

When the in-breaths and out-breaths become very subtle condition through efficiency of concentration of mindfulness of breathing the sign of full concentration of mindfulness of breathing arises depending on original in-breath-out-breath with the result that the mind of meditation backs out from the object of original in-breath-out-breath. It means the mind of meditation is taking object of brilliant sign of full concentration of mindfulness of breathing. (*Paṭisam-A-2-107) (Mahāṭṭ-1-319)*

PAGE-299

3.35 Way of arising and establishment of equanimity

Pāli Quotation (Paṭisam-A-2-107) (Mahāṭṭ-1-319)

The words, “equanimity is established”, means when concentration which is varied as two kinds, access concentration and full concentration arises by taking object of that brilliant sign of full concentration of mindfulness of breathing the equanimity called *tatramajjhataṭṭā* which is capable of balancing mind of meditation on the object of sign of full concentration of mindfulness of breathing so as not to reach either stopping short or enthusiasm is established well, due to lack of anxiety for well establishment of mind of meditation on object of sign of full concentration of mindfulness of breathing. (*Paṭisam-A-2-107) (Mahāṭṭ-1-319)*

According to above explanations of *Pāli* Text, commentary and sub-commentary, it should be recognized the facts in the stage of ways of discerning long and short breaths which are inclusive in the first tetrad of mindfulness of breathing those signs of access and full concentration can appear, resulting in availability to arise access absorption, full absorption called access concentration, full concentration by taking objects of those signs respectively.

3.36 Long (short) in-breath-out-breath bodily constituents

There is a question that which are *kāya* found in those words, “long in-breath-out-breath are designated as *kāya*; short in-breath-out-breath are designated as *kāya*”,?

Pāli Quotation (Paṭisam-A-2-107) (Mahāṭṭ-1-319)

In those words, “long (short) in-breath-out-breath are designated as *kāya*”, the term, *kāya*, means as follows:_____

1. Even though in-breaths and out-breaths which arise as long (short) occurrence are only spreading particles of corporeal units they have got the meaning called collectiveness of numerous corporeal units, resulting in designating as *kāya*.

PAGE-300

2. In this case, depending upon the in-breath-out-breath, sign of access concentration and sign of full concentration arise due to efficiency of concentration of mindfulness of breathing. Those signs of access and full concentration, which arise depending on those original in-breath-out-breath, have also got designation as *assāsapassāsa* (= in-breath-out-breath). (*Paṭisam-A-2-107, Mahāṭṭ-1-319*)

According to above explanations of commentary and sub-commentary, when sign of access concentration and sign of full concentration arise in the continuum of practising person who develops practice of mindfulness of breathing it can be said he is still practising mindfulness of breathing although the mind of meditation backs out from original in-breath-out-breath without taking object of those in-breath-out-breath. This is because those sign of access concentration and sign of full concentration, which arise depending on original in-breath and out-breath, have also got designation as *assāsapassāsa* (= in-breath-out-breath).

The righteous *meditator* should like to recognize this fact carefully.

PAGE 300

*Namo tassabhagavato arahato sammāsambuddhassa*3.2.18. *upatthānam sati* = fixed situation of the mindfulness*upatthānam satīti taṃ ārammaṇaṃ upecca tiṭṭhatīti sati upatthānam nāma.* (*Paṭisam-Com-2-107*)*upatthānam satīti ārammaṇaṃ upagantvā tiṭṭhatīti sati upatthānam nāma.*(*Mahāṭī-1-319*)

The meaning of ***upatthānam sati*** (the mindfulness is called *upatthāna*) is that — “due to ability to fix on that object called sign of full concentration (sign of neighbourhood concentration), the mindfulness (*sati*) is called *upatthānam*”. It can be said that the mindfulness is fixedly situated on the object.

[**Notes:** Explanation on sign of neighbourhood concentration will be presented later.]

3.2.19. *anupassanāñāṇaṃ* = repeated discerning is known as knowledge*kāyoti dve kāyā nāmakāyo ca rūpakāyo ca.* (*Paṭisam-181*)*anupassanā ñāṇanti samathavasena nimittakāyānupassanā, vipassanāvasena nāmakāyarūpakāyānupassanā ñāṇanti attho.* (*Paṭisam-Com-2-107*)*anupassanā ñāṇanti samathavasena nimittassa anupassanā, vipassanāvasena assāsapassāse, tannissayaṇca kāyaṃ “rūpa”nti, cittaṃ taṃsāmpayuttadhamme ca “arūpa”nti vavatthapettvā nāmarūpassa anupassanā ca ñāṇaṃ, tattha yathābhūtāvabodho.* (*Mahāṭī-1-320*)

The meaning of ***anupassanāñāṇa*** is that - in the aspect of *samatha* stage, repeated discerning on sign of full-concentration is known as *anupassanāñāṇa*. In the aspect of *vipassanā* stage, the knowledge by which repeated discerning and taking into heart these corporeal and mental *dhamma*,

1. *assāsapassāsakāya* which is called all kinds of corporealities consisting in a group of sound nonads produced by mind (*cittajanavaka kalāpas*) which are occurring in the whole in-breath and out-breath,

PAGE 301

2. *karajakāya* which is called all kinds of corporealities including primary (underived) and secondary (derived) corporealities on which *assāsapassāsakāya* is dependent,

3. *nāmakāya* which is called all kinds of mentalities including mind and mental concomitants which are occurring by taking the object of *rūpakāya* including those *assāsapassāsakāya* and *karajakāya*, is called *anupassanāñāṇa*. It is penetrative knowledge on those corporeal and mental *dhamma* correctly indeed. (*Paṭisam-Com-2-107, Mahāṭī-1-320*)

According to explanations found in these Pāli, commentary and sub-commentary, although the foundation stage of the practice consists of *assāsapassāsakāya* only, three kinds of *kāya*, i.e., *assāsapassāsakāya*, *rūpakāya*, *nāmakāya*, can be found in later stages of both *samatha* and *vipassanā* . It should, therefore, be recognized the fact that the *kāya* found in *kāyānupassanā satipaṭṭhāna* means all kinds of corporeal and mental *dhamma*. It should be read the following explanations.

3.2.20. *kāya* is called *upaṭṭhāna* but not *sati*

kāyo upaṭṭhānanti so kāyo ārammanakaraṇavasena upagantvā sati ettha tiṭṭhatīti upaṭṭhānam nāma. ettha ca “kāyupaṭṭhāna”nti iminā itarakāyassāpi saṅgaho hoti yathāvuttasammasanasārassāpi idha icchitattā. no satīti so kāyo sati nāma na hoti. (Mahāṭī-1-320)

= *rūpakāya* includes *assāsapassāsakāya* and it's dependence corporealities called *karajakāya* which are un-derived and derived corporealities. Those mental *dhammas* which occur by taking the objects of that *rūpakāya* are called *nāmakāya*. Due to fixability of the mindfulness on these *rūpakāya* and *nāmakāya* by means of taking the object of the latter, those *rūpakāya* and *nāmakāya*, the situation of the mindfulness, are known as *upaṭṭhāna*. In this case, with regarding to the Pāli Text, the word *kāyupaṭṭhānam* should not be interpreted on *rūpakāya* only but on both *rūpa*- and *nāmakāya* collectively. It is because the field of three general characters, i.e., *rūpakāya* and *nāmakāya*, which is all known as *sammasanacāra dhamma*, is intended to be essential in this case. However, it should be recognized the fact that those *kāya* is called *kāya* due to the situation of the mindfulness only and they, themselves, are not fixability on the like the mindfulness resulting it can not be called *sati*. (Mahāṭī-1-320)

sati upaṭṭhānañceva sati ca saraṇatthena upatitṭhanatthena ca. (Mahāṭī-1-320)

Due to fixability of the mindfulness on the object of sign of concentration in the aspect of *samatha* stage, that of the mindfulness on the object of *rūpa*- and *nāmakāya* in the aspect of *vipassanā* stage, and due to occurrence of previous mindfulness which is the fixable situation of the succeeding mindfulness, the mindfulness is called not only *upaṭṭhāna* but also *sati*. (Mahāṭī-1-320)

PAGE 302

3.2.21. *taṃ kāyaṃ anupassati*

In the words, “that *kāya* is discerned by that mindfulness and knowledge”, there are questionable for a wise that “which is that *kāya*?” “how that *kāya* be discerned?” etc. It is explained in the commentary of *Paṭisambhidā Magga* as follows.

taṃ kāyaṃ anupassatīti samathavipassanāvasena yathāvuttam kāyaṃ anugantvā jhānasampayuttañāṇena vā vipassanāñāṇena vā passati. (Paṭisam-Com-2-108)

In the aspect of *samatha* stage, the practicing **meditator** discerns repeatedly on very bright sign of full concentration which is representative of in- and out-breath and touching place so-called *assāsapassāsa nimitta kāya*, by means of the knowledge associating with the absorption (*jhāna*).

[In the tetrad method, there are 34 mind and mental concomitants in the first absorption of *ānāpānassati* (mindfulness of breathing), while 32,31,31 mind and mental concomitants in the second, third and fourth absorption, respectively. Those mind and mental concomitants occur simultaneously within one mind moment (*cittakkhaṇa*). Among those mind and mental concomitants, the knowledge called *paññindare* is also included. That kind of mental concomitant is the knowledge associating with absorption, which is called the right view of the absorption (*jhāna-sammādiṭṭhi*). It should be recognized the fact that in the *samatha* stage, repeated discerning on the sign of full concentration of *ānāpānassati* by that knowledge is known as *kāyānupassanā satipaṭṭhānabhāvanā*. It can be seen in tables shown in Section 5, *nāmakammaṭṭhāna*.

In the aspect of *vipassanā* stage, the practicing **meditator** discerns repeatedly on *rūpakāya*, i.e., in-breath, out-breath and *karajakāya*, and all kinds of mentalities called *nāmakāya* associating with their causes, by means of three general characters alternatively, i.e., impermanence (*anicca*), suffering (*dukkha*), non-self (*anatta*) which are called *vipassanā* knowledge. It should be recognized the fact that in the *vipassanā* stage, repeated discerning on those *rūpakāya* and *nāmakāya* associating with their causes by *vipassanā* knowledge is known as ***kāyānupassanā satipatṭhānabhāvanā***.

3.2.22. An important assumption

Some noble teachers assume that ‘repeated discerning on the corporeal *dhamma* only is called *kāyānupassanāsatipatṭhāna*’. They misunderstand on *kāyānupassanāsatipatṭhāna* by which only corporeal *dhamma* would be discerned. They have no desire to accept explanation of the word, found in commentaries, i.e., *mukhena* (beforehand) which can be seen in *Mijjhima-Com-1-245* as follows,

1. *kāyānupassanāmukhena*
2. *vedanānupassanāmukhena*
3. *cittānupassanāmukhena*
4. *dhammānupassanāmukhena* (*M-Com-1-245*).

It would be presented on the explanations relating to this fact in accordance with the commentary of *Paṭisambhidā Magga*. In order to understand clearly – it would be presented previously Pāli text found in *Paṭisambhidā Magga* which explains on original words (*samvannetabbapada*).

PAGE 303

tāya satiyā tena ñāṇena taṃ kāyaṃ anupassati, tena vuccati kāye kāyānupassanā satipatṭhānabhāvanāti. (*Paṭisam-175*)

English translation of this Pāli has been presented previously. However, it will be presented again in order to remember interpretation as follows.

That *kāya* is discerned repeatedly by that mindfulness and knowledge. It, therefore, is called *kāyānupassanā satipatṭhānabhāvanā*.

In above Pāli quotation the meaning of “*taṃ kāyaṃ* (that *kāya*)” has been explained previously (See section 3.2.21, PAGE 302). In the commentary of *Paṭisambhidā Magga*, it is explained in detail the fact that “it must be understood on the word *kāya* as both *rūpa* and *nāmakāya*”, as follows.

taṃ kāyanti *anidditṭhepi nāmarūpakāye kāyasaddena tassāpi saṅgahitattā nidditṭhaṃ viya katvā vuttaṃ. aniccānupassanādayo hi nāmarūpakāye eva labbhanti, na nimittakāye.* (*Paṭisam-Com-2-108*)

[The meaning of above Pāli quotation is as follows.]

In the Pāli Text of *Paṭisambhidā Magga*, it is preached that —

anupassatīti kathaṃ taṃ kāyaṃ anupassati, aniccato anupassati, no niccato ... (*Paṭisam-175,176*)

=In the word ***anupassati*** (repeatedly discern), how that *kāya* would be discerned repeatedly? It would be discerned repeatedly by means of *anicca*(impermanence) but not by

means of *nicca*(permanence),preached in *Paṭisambhidā Magga* like this only. It is not explained in detail on the *kāya* which must be discerned by three general characters. Although it is not explained on the word *kāya*, it had been preached on the grammatical usage of *kāya* which is well understand to interpret both *rūpakāya* and *nāmakāya* commonly. It is right — discerning of three general , such as, *aniccānupassanā*, etc. can be performed on the object of *rūpakāya* and *nāmakāya* only, but not on the sign of full concentration(*patibhāganimitta*) which is called *ānāpānanimittakāya*.

This is the meaning of above explanation found in the commentary of *Paṭisambhidā Magga*. This explanation is the same as Pāli Text of *Paṭisambhidā Magga* which will be expressed continuously.

PAGE 304

According to this instruction found in commentary, the **meditator** who is practicing mindfulness of breathing must discern three kinds of signs, i.e., sign of preliminary-concentration(*parikamma nimitta*), sign of neighbourhood -concentration (*uggaha nimitta*), sign of full concentration (*patibhāga nimitta*), which are called *assāsapassāsa nimitta kāya* in the *samatha* stage. In the *vipassanā* stage, however, *rūpakāya* and *nāmakāya* must be discerned by means of three general characters alternatively. If he discerns like that it must be recognized that he is well practicing on *kāyānupassanā satipaṭṭhāna bhāvanā*. It, therefore, should be recognized the fact that *kāyānupassanā satipaṭṭhāna* is not a practice to discern corporeal *dhmma* only, but a way of practice to discern corporeal *dhmma* beforehand and then all *saṅkhāra dhmma* must be discerned systematically. If the practicing **meditator** is not satisfied to accept this explanation yet, it should be continued to read the preaching found in *Paṭisambhidā Magga* as follows.

3.2.23. The preaching found in *Paṭisambhidā Magga*

kāyoti dve kāyā nāmakāyo ca rūpakāyo ca. katamo nāmakāyo vedanā saññā cetanā phasso manasikāro. nāmañca nāmakāyo ca, ye ca vuccanti cittasaṅkhārā, ayam nāmakāyo. katamo rūpakāyo, cattāro ca mahābhūtā catunnañca mahābhūtānam upādūyarūpaṃ assāso ca passāso ca nimittañca upanibandhanā ye ca vuccanti kāyasaṅkhārā, ayam rūpakāyo. (Paṭisam-181)

cetanādīhi saṅkhārakkhandho vutto. evaṃ tīsu khandhesu vuttesu taṃnissayo viññāṇakkhandho vuttova hoti. (Paṭisam-Com-2-112)

aniccanti kiṃ aniccaṃ. Pañcakkhandhā aniccā. (Paṭisam-191)

Above Pāli quotations express interpretation of the word, **kāya**, which is containing in the phrase, ‘*sabbakāyapaṭsaṃvedī*’, the third instruction of the first tetrad instructions of mindfulness of breathing. the meaning of those quotations are as follows.

In the section of *kāyānupassanā satipaṭṭhāna* the *kāya* means two kinds of *kāya*, i.e.,

1. *nāmakāya* = all kinds of mental *dhmma*,
2. *rūpakāya* = all kinds of corporeal *dhmma*, indeed.

Which is *nāmakāya*?

Those *dhmma*, the contact (*phassa*), the feeling (*vedanā*), the perception(*saññā*), the volition (*cetanā*), the attention (*manasikāra*), etc. or all mental *dhmma* called *nāma*, the feeling, the perception called *cittasaṅkhāra*, are determined as *nāmakāya*.

[With regarding to this explanation, it means that four mental aggregates, i.e., feeling-group, perception-group, formation-group, and consciousness-group are known as *nāmakāya*. Which is *rūpakāya*?

PAGE 305

These *saṅkhāra dhamma*,

1. the four great elements
2. twenty four kinds of derived corporealities which are occurring depending on the four great elements (see *Paṭṣam-Com-2-112*)
3. in-breath and out-breath
4. sign of full-concentration (*patibhāga nimitta*),(including sign of preliminary and neighbourhood concentration) which is associated with in-breath and out-breath, which are called *kāyasaṅkhāra*,are determined as *rūpakāya*.(*Paṭṣam-181*)

Then in the Pāli Text of *Paṭisambhidā Magga*, it is preached the fact that ‘five aggregates are impermanent’(*pañcakkhandhā aniccā*) and it shows the object of *vipassanā* practice by means of *anicca* with regarding to the word, *aniccānupassī*, which is including in the fourth tetrad instructions of mindfulness of breathing.

Therefore those practising *meditators* who want to attain *nibbāna* should be recognized strongly the fact that above explanations of commentary and sub-commentary, that

1. *asāsapassāsa kāya*,
2. *rūpa kāya*,
3. *nāmakāya*, are known as *kāya* in the section of *kāyānupassanā satipatṭhāna*, correspond to the Pāli of *Paṭisambhidā Magga*, like a mixture of water and milk in a cup, indeed.

3.2.24. The way of practice to be continued

I would be presented the way of practice of mindfulness of breathing. When the mindfulness fixed with the in-breath and out-breath, it should be tried to know length of in- and out-breath continuously.

yā pana tesam dīgharassatā, sā addhānavasena veditabbā (Visuddhi-1-263)

addhānavasenāti kāladdhānavasena (Mahāṭṭi-1-318)

According above commentary and sub-commentary, the length of in- and out-breath means duration of in- and out-breath, i.e., long breath means long duration while short breath means short duration respectively.

It must be tried continuously in order to know long or short duration of both in- and out-breath accordingly. But it should not be tried to become long or short duration of each breath intentionally. It must be breathed normally and endeavoured not to wander out of the touching place of in- and out-breath.

PAGE 306

If the mind of meditation fixes on the object of long or short in- and out-breath continuously, signs of concentration (*nimitta*) will be appeared as mentioned in *Paṭisambhidā Magga*. If the sign of concentration appeared at the touching place of in- and out-breath, the mind of meditation must be fixed together with that sign continuously. At that time it must be

tried to know the whole in-breath and out-breath, i.e., from beginning to end of in- and out-breath, as the instruction in the Pāli Text that *sabbakāya paṭisamvedī*.

If the sign of concentration is unstable or the mind of meditation is unstable to fix with sign of concentration, it must be tried to know the beginning, middle and end of both in-breath and out-breath normally.

Although the mind of meditation is able to fix the object of long or short breath continuously, if the sign of neighbourhood concentration has not been appeared yet, it must be tried continuously in order to know apparently the beginning, middle and end of both in- and out-breath. If it is possible to know like this, it is called the method of *anubandhanā*, explained in olden commentaries.

3.2.25. *sabbakāya paṭisamvedī*

sabbakāyapaṭisamvedī assasissāmīti sikkhati.
sabbakāyapaṭisamvedī passasissāmīti sikkhati.

=It would be practised in order to occur the in-breath of which the beginning, middle and end must be known thoroughly.

It would be practised in order to occur the out-breath of which the beginning, middle and end must be known thoroughly.

Thus the in-breath must be occurred by insight associating with the knowledge which is able to know thoroughly it's beginning, middle and end. Similarly the out-breath must also be occurred. The Supreme Buddha and noble ones always praise the *bikkhu* who is practising to know thoroughly beginning, middle and end of both in- and out-breath.

In this case it will be continued to present preachings of *Paṭisambhidā Magga* in order to clarify on *sabbakāya paṭisamvedī*.

PAGE 307

3.2.26. The preaching of *Paṭisambhidā Magga*

katham sabbakāyapaṭisamvetī assasissāmīti sikkhati, sabbakāyapaṭisamvetī passasissāmīti sikkhati, —

kāyoti dve kāyā nāmakāyo ca rūpakāyo ca. katamo nāmakāyo vedanā saññā cetanā phasso manasikāro. nāmañca nāmakāyo ca, ye ca vuccanti cittasañkhārā, ayam nāmakāyo.

katamo rūpakāyo, cattāro ca mahābhūtā catunnañca mahābhūtānam upādāyarūpam assāso ca passāso ca nimittañca upanibandhanā ye ca vuccanti kāyasañkhārā, ayam rūpakāyo.

katham te kāyā paṭivīditā honti, dīgham assāsavasena cittassa ekaggatam avikkhepam pajānato sati upaṭṭhitā hoti, tāya satiyā tena nānena te kāyā paṭivīditā honti.

dīgham passāsavasena cittassa ekaggatam avikkhepam pajānato sati upaṭṭhitā hoti, tāya satiyā tena nānena te kāyā paṭivīditā honti. (Paṭisam-181)

(It is similar to *rassa* = short in-breath and out-breath also.)

How would it be practised in order to occur the in-breath of which the beginning, middle and end must be known thoroughly? How would it be practised in order to occur the out-breath of which the beginning, middle and end must be known thoroughly?

With regarding to the term *kāya*, it means two kinds of *kāya*, i.e., *nāmakāya* and *rūpakāya*. Which is *nāmakāya*? The contact, the feeling, the perception, the volition, the attention, which are called *cittasaṅkhāra*, or all mental *dhmma* called *nāma* are known as *nāmakāya*.

Which is *rūpakāya*? These *saṅkhāradhamma*, the four great elements, twenty four kinds of derived corporealities which are occurring depending on the four great elements, in-breath and out-breath, sign of the touching place of in- and out-breath where the mindfulness fixed together (signs of preliminary, neighbourhood, full-concentration), which are called *kāyasaṅkhāra* are determined as *rūpakāya*.

How those *kāya* are apparent? The person who knows the concentration and non-wandering of meditating mind, appears mindfulness by means of long duration of in-breath. Those *kāya* become apparent by means of that mindfulness and that knowledge. Those *kāya* are known thoroughly by that mindfulness and that knowledge.

The person who knows the concentration and non-wandering of meditating mind, appears mindfulness by means of long duration of out-breath. Those *kāya* become apparent by means of that mindfulness and that knowledge. Those *kāya* are known thoroughly by that mindfulness and that knowledge. (It should be recognized similarly in short in-breath and out-breath.)

Derived corporealities which occur depending upon the four great elements are shown in commentary of *Paṭisambhidā Magga* as follows.

PAGE 308

taṃ pana cakkhu sotam ghānam jivhā kāyo rūpaṃ saddo gandho raso itthindriyaṃ purisindriyaṃ jīvitindriyaṃ hadayaavatthu oja kāyaviññatti vacīviññatti ākāśadhātu rūpassa-lahutā rūpassa-mudutā rūpassa-kammaññatā upacayo santati jaratā aniccatāti catuvīsatividhiṃ. (Paṭisam-Com-2-112)

Those derived corporealities are 24 kinds, i.e., eye-clear-sensitivity, ear-clear-sensitivity, nose-clear-sensitivity, tongue-clear-sensitivity, body-clear-sensitivity, colour, sound, smell, taste, controlling faculty of femininity, controlling faculty of virility, controlling faculty of life, physical base of mind (heart base of mind), nutriment, bodily expression corporeality, verbal expression corporeality, space-element, physical agility, physical elasticity, physical adaptability, *upacaya*, continuity, decaying and dissolution. (*Paṭisam-Com-2-112*) (Explanations of those corporeal *dhmma* can be seen in Section 4, *rūpakammattāhāna*.)

The four great elements plus those 24 kinds of derived corporealities with the result 28 kinds of corporealities to which the **meditator** must try to know thoroughly according to the phrase, *sabbakāya paṭisaṃvedī*. It should be recognized the fact that all kinds of consciousness and mental concomitants are known as *nāmakāya* to which the **meditator** must try to know thoroughly according to the phrase, all kinds of mentalities are known as *nāmakāya*.

Those corporeal and mental *dhmma* are unable to occur uniquely, but are able to occur as a group called corporeal unit (*rūpa kalāpa*), mental unit (*nāma kalāpa*). It is their fixed natural law of corporeal and mental *dhmma* indeed. Only when the **meditator**, therefore, is able to see and analyze each ultimate nature of corporeal and mental *dhmma* within respective unit systematically, can he know the ultimate corporeality and mentality by insight

It should be recognized the fact that when the **meditator** performs *vipassanā* practice after the concentration had been developed through mindfulness of breathing he must

continue to know these corporeal and mental *dhamma* thoroughly. It should be recognized surely the fact that the way of practice by which all kinds mental and corporeal *dhamma* called *nāmakāya*, *rūpakāya* are discerned by means of three general characters, is called *kayānupassanā satipaṭṭhāna bhāvanā*, indeed.

3.2.27. Grammatical analysis of the phrase “*sabbakāya paṭisamvedī*”

sabbakāyapaṭisamvedī assasissāmi. pa. passasissāmīti sikkhatīti sakalassa assāsakāyassa ādimajjhapariyosānaṃ veditaṃ karonto pākaṭaṃ karonto assasissāmīti sikkhati. sakalassa passāsakāyassa ādimajjhapariyosānaṃ veditaṃ karonto pākaṭaṃ karonto passasissāmīti ca. tasmā “assasissāmi passasissāmī”ti sikkhatīti vuccati. (Visuddi-1-265)

PAGE 309

The phrase, *sabbakāya paṭisamvedī*, consists of five words, i.e., *sabba*, *kāya*, *paṭi*, *saṃ* and *vedī*. The meaning of each word is as follows.

1. The word, **sabba**, means “all”.
2. The word, **kāya**, means “in-breath and out-breath”.
3. Combination of two words, **sabbakāya**, directs “ the beginning, middle and end of in-breath and out- breath”.
4. The word, **paṭi**, means ‘each’, ‘respective’, according to *Pāḷi* dictionary, ‘*paṭi paṭi piccekam*’. The prefix, *paṭi*, is added and preached by the Buddha in order to instruct the way of practice by which all kinds of *assāsapassāsa kāya* consisting a group of sound nonads produced by mind of in-breath and out-breath must be known.
5. The word, **saṃ**, means *sammā* (= thoroughly). The Buddha preached by adding the word, *saṃ*, in order to instruct the way of practice called mindfulness of breathing must be carried out thoroughly.
6. The word, **vedī**, derived from *vida* which means ‘knowing’. Thus the word, *vedī*, has three kinds of meanings, i.e., *tassīla*, *atthiattha*, and *suddha kattu*. (*Mahātī*-1-321)

Therefore the meanings of the whole sentence, ‘*sabbakāyapaṭisamvedī....(s) passasissāmīti sikkhati.*’ are as follows.

1. It would be practised with the intention that the in-breath will be inhaled by **usual knowing** thoroughly it's beginning, middle, and end respectively with the help of mind of meditation associated by knowledge. It would be practised with the intention that the out-breath will be exhaled by usual knowing thoroughly it's beginning, middle and end respectively with the help of mind of meditation associated by knowledge.
(*tassīla attha*)
2. It would be practised with the intention that the in-breath will be inhaled in the **presence of knowing** thoroughly it's beginning, middle, and end respectively with the help of mind of meditation associated by knowledge. It would be practised with the intention that the out-breath will be exhaled in the presence of knowing thoroughly it's beginning, middle and end respectively with the help of mind of meditation associated by knowledge.
(*atthiattha* = ‘presence’ meaning)
3. It would be practised with the intention that the in-breath will be inhaled by means of **capability of knowing** thoroughly it's beginning, middle, and end respectively with the help of mind of meditation associated by knowledge. It would be practised with the intention that the out-breath will be exhaled by means capability of knowing thoroughly it's beginning, middle and end respectively with the help of mind of meditation associated by knowledge.
(*suddhakattu* = ‘a pure subject’ meaning)

These are meanings of above commentary.

PAGE 310

It is right — There are usually differences between each individual *meditator* who practises the mindfulness of breathing. A such meditating *bikkhu* usually has apparent beginning of in-breath and out-breath but not middle and end due to consisting of numerous corporeal units in the whole breath. That *bhikkhu* is able to keep in mind the beginning only but tired to discern the middle and end of the whole breath.

A such *bikkhu* usually has apparent middle of in- and out-breath but not the beginning and end with the result that that *bikkhu* is able to keep in mind the middle only but tired to discern the beginning and end of the whole breath.

A such *bikkhu* usually has apparent end of in- and out-breath but not the beginning and middle with the result that that *bikkhu* is able to keep in mind the end only but tired to discern the beginning and middle.

A such *bikkhu* usually has apparent the whole of both in- and out-breath resulting that *bikkhu* is able to keep in mind the beginning, middle and end of both in- and out-breath thoroughly without tiredness.

The Buddha preached that ‘*sabbakāyapaṭisamvedī assasissāmīti... (s) passasissāmīti sikkhati*,’ in order to instruct the disciple who should be occurred the mind of meditation associated by mindfulness and knowledge which are leading to the object of the whole breath like this fourth *bikkhu*, indeed. (*Visuddhi*-1-265)

3.2.28. The reason of preaching that ‘*sikkhati*’ is added

Relating to way of preaching of the Buddha in above *Pāḷi* quotation (in [3.2.25, page 306](#)), that ‘*sikkhati* (= it would be practised or it must be practised),’ is explained in the commentary called *Visuddhi Magga*, as follows.

The word , ‘*sikkhati*,’ means it would be tried hard (it must be **tried hard**) by means of capability of knowing thoroughly in order to know the whole breath, i.e., the beginning, middle and end of both in- and out-breath respectively with the help of mind of meditation associated by knowledge.

PAGE 311

In other words – in the continuum of practising *meditator* who is endeavouring to know thoroughly the whole in- and out-breath with the help of mind of meditation associated by knowledge, the mindfulness which protects the object of the whole breath (*satisamvara*) and the effort which protects that object (*viriyasamvara*) are called *adhisīla sikkhā* (the supreme training of virtue), while the concentration which put the mind in one-pointedness of the object of the breath, is called *adhisamādhi sikkhā* (the supreme training of concentration) and the knowledge which knows thoroughly the whole in- and out-breath respectively, *adhipaññā sikkhā* (the supreme training of wisdom).

It should be recognized the meaning of *sikkhati* as the fact that “it must be practised, carried out, developed, done frequently on these three trainings by taking **the object of breaths** with the help of mindfulness”. (*Visuddhi*-1-266)

3.2.29. The reason of preaching with future tense as “*assasissāmi, passasissāmi*”

Among four tetrad instructions of mindfulness of breathing – in the first tetrad instructions including first instruction by which long breath must be known and second instruction by which short breath must be known, there is no special specification but inhaling and exhaling merely must be known. The third instruction, however, includes special specifications that the effort plays vital important role in the occurrence of knowledge on the object of the whole breath, in gradual cessation of in- and out-breath called *kāyasaṇi khāra*, in knowing on pleasurable interest (*pīti*) by knowledge. In previous two instructions, therefore, the preaching methodology in Pāli is achieved by means of the present tense as “*assasāmīti pajānāti, passasāmīti pajānāti*”, etc. It should be recognized the fact that the preaching methodology in Pāli is achieved by means of the future tense, as ‘*assasissāmīti sikkhati*’... etc for the third instruction in order to instruct special specifications by which the knowledge must be occurred, *kāyasaṇi khāra* must be ceased, the pleasurable interest (*pīti*) must be known apparently by mind of meditation associated with knowledge, etc. (*Visuddhi*-1-266)

The occurrence of knowledge can be achieved by means of previous two methods, long and short methods, but if is not so difficult due to merely taking the object of long or short breaths as it's normal occurrence.

PAGE 312

Those previous two methods, therefore, had been done by yoking with the present tense. The third method, on the other hand, is very difficult to achieve like a man walks on the razor or on the path, which is full of razors. In the third method, therefore, there are many special specifications beforehand. In order to clarify strategy of the third method, it had been done by yoking with the future tense, The commentator explained above instructions in order to show clearly this meaning, indeed. (*Mahāṭṭi*-1-322)

In the olden commentaries, a such method by which the beginning, middle and end of in-breath and out-breath must be known thoroughly is termed as *anubandhanānaya*.

3.2.30. *anubandhanānaya*

anubandhanā nāma gaṇanam paṭisaṃharittvā satiyā niraṇṭaram assāsapassāsānam anugamanam. taṇca kho na ādhiṃmajjapariyosānā nugamanavasena. bahi nikkhamanavātassa hi nābhi ādhi, hadayaṃ majjham, nāsikaggam pariyaṇānam. abbhantaram pavisanavātassa nāsikaggam ādi, hadayaṃ majjham nābhi pariyaṇānam. taṇcassa anugacchato vikkhepagatam cittaṃ sāraddhāya ceva hoti iñjanāya ca. yaghāha —

“*assāsādimajjhapariyosānam satiyā anugacchato ajjhatam vikkhepagatena cittaṃ kāyopi cittampi sāraddhā ca honti iñjitā ca phanditā ca. passāsādimajjhapariyosānam satiyā anugacchato bahiddhā vikkhepagatena cittaṃ kāyopi cittampi sāraddhā ca honti iñjitā ca phanditā cā*”ti. (*Paṭisam*-165, *Visuddhi*-1-272)

The meaning of the above Pāli Text and commentary is as follows.

When the *meditator* has fixed mindfulness on the object of breaths by counting method (*gaṇanānaya*) etc, the latter should be taken into heart by *anubandhanānaya*. When the mindfulness becomes strong, it must be tried to know the long or short in-breath and out-breath as mentioned above. In this stage, the sign of concentration can be appeared sometimes. Whether the sign of concentration appears or not, if the mindfulness fixes together with the object of long or short in-breath and out-breath, it must be endeavoured to know thoroughly the whole in- and out-breath from the beginning to end respectively. That

kind of endeavouring is called *anubandhanānaya* by which the object of in-breath and out-breath is taken into heart.

PAGE 313

The way of practice by which every in-breath and out-breath is followed continuously without interruption from the beginning to end by mindfulness is called *anubandhanānaya*.

The process of taking into heart the in-breath and out-breath at its **touching** (*phuttha*) place is called continuously follows along with in- and out-breath respectively. In other words, the continuous occurrence of mindfulness on every in-breath and out-breath by means of taking as object of the latter is called *anubandhanānaya* or *anugamana* (= **continuous follows** to the in-breath and out-breath). (*Mahāṭī*-1-329, Translation of Pyi Sayadaw-2-242)

Although the mindfulness follows along with the in-breath and out-breath, it must not follow such place where the in-breath and out-breath reaches as its beginning, middle and end. The exhaled air begins from umbilical region, the middle is the heart and it ends in the nostrils.

The inhaled begins from the nostril, the middle is the heart and it ends in umbilical region.

The meditating mind of that *meditator* who always follows the beginning, middle and end called those places, from nostril to umbilical region and vice versa, becomes either worry or wandering of taking into heart the object of breathing. It is preached in the *Pāḷi* Text of *Paṭisambhidā Magga* as follows.

In the continuum of *meditator* who follows along with the in-breath, i.e., the beginning, middle and end called nostril, heart and umbilical region respectively by means of mindfulness, becomes worry both physically and mentally and it is shaken to take into heart the object of in-breath due to wandering of mind internally. In the continuum of *meditator* who follows along with the out-breath, i.e., the beginning, middle and end called umbilical region, heart and nostril respectively by means of mindfulness, becomes worry both physically and mentally and it is shaken to take into heart the object of out-breath due to wandering of mind externally. (*Paṭsam*-165)

Therefore, the *meditator* who practises the mindfulness of breathing by means of *anubandhanānaya* must not follows along with the in- and out-breath, i.e., the beginning middle and end called nostril, heart umbilical region and umbilical region, heart, nostril respectively by means of mindfulness. Actually he must take to heart the mindfulness of breathing by means of *phusanānaya* or *thapanānaya*.

There are no separate ways of practice of mindfulness of breathing by means of *phusanānaya* and *thapanānaya* as *gaṇanānaya* (counting method) and *anubandhanānaya* which have separate ways of practice in order to take into heart the mindfulness of breathing. In other words, there is neither pure *phusanānaya* nor *thapanānaya* free from counting method and *anubandhanānaya* in the way of practice of mindfulness of breathing.

PAGE 314

As if it is so like that, there is a question that “aren’t counting method present free from *phusanānaya* in the way of practice of mindfulness of breathing like there is no way of practice of the mindfulness of breathing free from either *phusanā* or *thapanānaya*?”. Yes, it is! However, as the counting method is designated as the most fundamental method of the mindfulness of breathing, *anubandhanānaya* is also designated as a specific way of practice by means of significant method (*padhānānaya*) due to occurrence of the most fundamental cause of *thapanānaya* which is called the full absorption (*appanā jhāna*). This is because in

the absence of that *anubandhanāyā* (= discerning by following along with the breaths), the *ṭhapanā* called the ‘full absorption’ is unable to occur, indeed.

The commentator Sayadaw explained that – ‘there are no separate ways of practice of mindfulness of breathing by means of mindfulness *phusanā naya* and *ṭhapanā naya* as *gaṇanā naya* (counting method) and *anubandhanā naya* which have separate ways of practice in order to take into heart the mindfulness of breathing,’ in order to show the fact that *phusanā naya* and *ṭhapanā naya* are non-significant methods free from the counting method and *anubandhanā naya* which are the fundamental cause and significant methods in the practice of mindfulness of breathing with which *phusanā naya* (= the method that takes into heart the breath at the touching place) always associates. (*Visuddhi* –1-272, *Mahāṭṭi*-1-329, 330)

With regarding to the words, ‘there are no separate ways of practice of mindfulness of breathing by means of *phusanā naya* and *ṭhapanā naya*’, - the commentator Sayadaw Who want to instruct the fact that as the counting method which is carried out at the touching place of the breath is apparently present, pure *ṭhapanā naya* and pure *phusanā naya* are not apparently present from *anubandhanā naya*, explained the meaning that if a such period of practice during which the full absorption (*appanā jhāna*) has not appeared yet after the counting method had been omitted, that period of practice during which either *anubandhanā naya* (= discerning by following along with the breaths) or *phusanā naya* (= discerning by taking the object of in- and out-breath at touching place) must be carried out continuously and of the full absorption occurs apparently, it can be said that the mindfulness of breathing is achieved by means of either *anubandhanā naya* or *ṭhapanā naya*.

PAGE 315

There is a question that — ‘why those methods called *phusanā* and *ṭhapanā* are separately designated in brief account of the way of practice of mindfulness of breathing although those methods are not present separately in the latter?’ The commentator answered as follows.

(1) *gaṇanā – phusanā*

phutṭhaphutṭhatṭhāneyeva pana gaṇento gaṇanāya ca phusanāya ca manasi karoti. tattheva gaṇanam paṭisaṃharittvā te satiā anubandhanto appanāvasena ca cittam ṭhapento anubandhanāya ca phusanāya ca ṭhapanāya ca manasi karotīti vuccati. (Visuddhi-1-272)

= Indeed, if the counting is carried out at the touching place of in-breath and out-breath or the *meditator* who counts like this, it is called either *gaṇanā naya* or *phusanā naya* by which the mindfulness of breathing is performed.

(2) *anubandhanā – phusanā - ṭhapanā*

If either the mindfulness always follows along with those in-breath and out-breath continuously at the touching place after the counting method has been omitted or the mind of meditation is able to fix with the object of brilliant white sign of concentration (*patibhāga nimitta*) which usually appears as a consequence of full absorption, the way of practice by which the mindfulness of breathing is performed can be designated as any of *anubandhanā naya* or *phusanā naya* or *ṭhapanā naya*. (*Visuddhi*-1-272, *Mahāṭṭi* –1-330)

According to above instructions – it should be recognized the most important fact that the way of practice must be performed by the mindfulness which always follows along with the whole in-breath and out-breath from the beginning to the end which is occurring at the touching place.

However, when the mindfulness becomes strong at the touching place of in-breath and out-breath, it must be tried to put the mindfulness on the object of long or short in- and out-breath respectively. In this stage, the sign of concentration can be appeared sometimes. Whether the sign of concentration appears or not, if the mindfulness fixes together with the object of long or short in-breath and out-breath, it must be endeavoured by means of *anubandhanā naya* in order to know thoroughly the whole in- and out-breath from the beginning to end respectively. In order to clarify the way of practice commentaries explained with the help of similes as follows.

3.2.31. *pingulopamā* = the simile of dumb person

The dumb person sees both two edges and middle of wooden cradle, which regularly comes and goes from side to side during he is sitting at the base of supporting column of that cradle which is rocked by mother

PAGE 316

who is happy to see her son enjoying in the cradle. However, there is no anxiety in him in order to see both two edges and middle of the cradle. Similarly, the meditating *bikkhu* fixes the mindfulness at the hitching post called the nostril or upper lip (which is similar to the hitching –post of a calf that always desires to suck milk through nipples of the mother cow) and rocks the cradle called the in-breath and out-breath. He discerns both the whole in-breath and out-breath which is similar to rocked cradle by means of fixed mindfulness which is capable of fixed mindfulness which is capable of following along with and knowing thoroughly the beginning, middle and end of in- and out-breath at the hitching post called touching place, i.e., nostril or upper lip. However there is no anxiety in that *bikkhu* in order to see the beginning, middle and end of those in- and out-breath. This is the simile of dumb person. (*Visuddhi*-1-272)

3.2.32. *dovārikūpamā* = the simile of gate keeper

The gate keeper never investigate either in the city or outside the city, such as ‘what is your name?, where did you come from?, what is inside your hand?’ etc. It is right. – It is not responsibility of that gatekeeper to check weapons and wealth carrying by those wanderers of inside or outside of the city. Actually, as every person who is just reaching at the entrance is checked, it is no responsibility to discern either inhaled breath (= from nostril to umbilical region) or exhaled breath which leaves out of nostril for that meditating *bikkhu* similarly. It should be recognized that it is his responsibility to discern the in-breath or out-breath only which is just reaching at the entrance called nostril or upper lip. This is the simile of gatekeeper.

3.2.33. *kakacūpamā* = the simile of saw

nimittam asāsapassāsā, anārammaṇmekacitassa.

ajānatoca tayo dhamme, bhāvanānupalabbhati.

nimittam asāsapassāsā, anārammaṇmekacitassa.

jānatoca tayo dhamme, bhāvanā upalabbhatīti. (Visuddhi-1-273)

PAGE 317

nimittanti upnibandhananimittam nāsikaggam mukhanimittamvā. ārammaṇamekacittassāti assāsapassāsānaṃ ekakkhaṇe appavattanato ekassa cittassa tayopi ārammaṇam na honti, nimittena saha assāso passāso vāti dveveva ekakkhaṇe ārammaṇam hontīti attho. ajānato ca tayo chammeti nimittam assāso passāsoti ime tayo dhamme ārammaṇakaraṇvasena avindantassa. (Vimati-1-216, 217)

= These three *dhammas*, (1) *nimitta* called nostril or upper lip at which discerning mind of meditation is fixed (2) the in-breath (3) the out-breath, are not the objects of one consciousness simultaneously. Although it is not like that any **meditator** who does not know those three *dhammas* by taking as object is unable to develop the concentration of mindfulness of breathing.

[Notes: Three kinds of *dhamma* called *nimitta* (touching place), the in-breath and out-breath are not the object of one consciousness simultaneously due to inability to occur both in-breath and out-breath within one mind-moment (*cittakkhaṇa*) simultaneously. Single consciousness is unable to know three kinds of *dhammas* simultaneously. Either *nimitta* together with the in-breath or *nimitta* together with the out-breath can be occurred the object of single consciousness. It, therefore, means that those three kinds of *dhamma* can be occurred objects of different mind moments (*nānācittakkhaṇa*) but not objects of single mind moment. It should be recognized the fact that these phrases are intended to be said referring the time before sign of full-concentration (*paṭibhāga nimitta*) has not attained yet. See page 346,347; section 3.2.56, 3.2.57]

These three *dhammas*, (1) *nimitta* called nostril or upper lip at which discerning mind of meditation is fixed, (2) the in- breath, (3) the out-breath, are not the objects of one consciousness simultaneously. Although it is not like that any **meditator** who knows those three *dhammas* by taking as object is able to develop the concentration of mindfulness of breathing. (*Paṭisam*-169)

Then the way of practice of mindfulness of breathing is continued to explain by means of question and answer in the Pāli Text of *Paṭisambhidā Magga* as follows.

- (1) How aren't these three *dhammas* objects of single consciousness?
- (2) How doesn't the knowledge of **meditator** appear that these three *dhammas* are not apparent?
- (3) How doesn't mind of meditation wander?
- (4) How is the effort which carries out the practice of mindfulness of breathing apparent?
- (5) How does the absorption (*jhāna*) which is able to remove hindrances of mind (*nīvaraṇa*) also achieve?
- (6) How does the Path-Knowledge (*magga ñāṇa*) which is able to eradicate fetters (*samyojana*)

PAGE 318

For instance, a log is put on even surface of the ground. A man cuts that log by saw. The mindfulness appears in him by means of the saw touching on the log. He takes into heart neither teeth of saw coming forward him nor that of saw going far away. But he knows thoroughly both teeth of saw coming forward and going far away, indeed. The effort which is cutting the log is apparent. Diligence of cutting the log would be finished at all.

1. It should be recognized *nimitta*, i.e., nostril or upper lip at which the in-breath and out-breath are touching and the mindfulness is fixed together, as a log which is put on even surface of the ground.

2. It should be recognized the in-breath and out-breath as teeth of saw. (It means the in-breath and out-breath are similar to teeth of saw.)
3. (a) As the mindfulness of the man appears by means of teeth of saw touching on the log,
- (b) as neither teeth of saw coming forward nor teeth of saw going far away is taken into heart,
- (c) as neither teeth of saw coming forward nor teeth of saw going far away does not appear in the knowledge of that man,
- (d) as the effort which cuts the log is apparent,
- (e) as diligence of cutting the log would be finished,

similarly,

- (a)the practising *bhikkhu* is sitting by means of mindfulness leading to either nostril or upper lip,
- (b)neither the in-breath nor the out-breath is taken into heart,
- (c)neither the in-breath nor the out-breath does not appear in the knowledge of that *bhikkhu*, both the breaths appear apparently,
- (d)the effort is apparent,
- (e)the full absorption (*jhāna*) would be finished,
- (f)the Path-Knowledge which is able to eradicate fetters is also attained,
- (g)the effort called *padhāna* would be occurred.

Which is '*padhāna*'? Both physical and mental situations of such person with full of diligence are compatible with the practice of mindfulness of breathing in order to develop concentration. This situation is called '*padhāna*'.

PAGE 319

Which is '*payoga*'? The person with full of diligence removes hindrances and defilements which are blocking the full absorption and Path-Knowledge up, and initial application called *vitakka* would be ceased. This situation is called '*payoga*'.

Which is '*visesa*'? For the person with full of diligence, fetters (*samyojana*) would be disappeared and underlying tendencies (*anusaya*) would be free from him. This situation is called '*visesa*'.

Thus, these three kinds of *dhammas*, i.e., *nimitta*, the in-breath, the out-breath, are not objects of one consciousness simultaneously. Although it is not objects of one consciousness, those three *dhammas* appear in the knowledge of *meditator*, indeed.

Unless those three *dhammas* appear, wandering mind will be occurred; the effort which is able to finish the practice of mindfulness of breathing will not be appeared; the practising person is unable to finish *payoga* which is able to remove hindrances and to develop concentration. But it is not like that. Due to appearance of these three *dhammas*, i.e., *nimitta*, the in-breath and the out-breath in the knowledge of *meditator*, the mind concentrates well; the effort which is able to finish the practice of mindfulness of breathing would be appeared; the practising person is able to finish *payoga* which is able to remove hindrances and to develop concentration; those benefits of mundane and supra-mundane which are able to eradicate fetters would be attained successively. (*Paṭisam-*169-170)

ānāpānassati yassa, paripunnā subhāvitā.

anupubbam paricita, yathā buddhena desitā.

so imam lokam pabhāseti, abbhā muttova candimā. (*Paṭisam-*170)

As the Buddha preached systematically, it should be performed and developed thoroughly the practice of mindfulness of breathing by means of (16) cascade of practice,

such as, the long, the short, etc. The *bhikkhu* who fulfils those (16) cascade of practice, is able to adorn this world of *saṅkhāra dhamma*, i.e., corporeal and mental *dhamma*, five-aggregates, by means of the light of wisdom as the moon escapes from various dirt, i.e., snows, fogs, smokes etc. (*Paṭisambhaya*-170)

3.2.34. *passambhayaṃ* = way of practice in order to cease the breath

It would be presented the fourth instruction of the first tetrad instructions, way of practice in order to cease the breath as follows.

passambhayaṃ kāyasaṅkhāraṃ assasissāmīti sikkhati.

passambhayaṃ kāyasaṅkhāraṃ passasissāmīti sikkhati.

PAGE 320

= It would be practised in order to occur cessation of *kāyasaṅkhāra* called the in-breath.

= It would be practised in order to occur cessation of *kāyasaṅkhāra* called the out-breath.

kāyasaṅkhāraṇti assaṅsapassāsam. so hi cittasamuṭṭhānopi samāno karajakāyappaṭibaddha-vuttitāya tena saṅkharīyatīti kāyasaṅkhāroti vuccati. yo pana “kāyasaṅkhāro vacīsaṅkhāro” ti evamāgato kāyasaṅkhāro cetanālakkhaṇo satipi dvārantarupattiyā yebhuyyavuttiyā tabbahulavuttiyā ca kāyadvārena lakkhito, so idha nādhippeto. (Mahaṭṭi-1-322)

Kāyasaṅkhāra means the in-breath and out-breath. It is right. – Although those in-breath and out-breath are corporealities produced by mind, those are called *kāyasaṅkhāra* due to occurrence of those *dhamma* related with underived and derived corporealities called *karajakāya*.

In this case it does not mean *kāyasaṅkhāra* that is preached in some Pāli Text as ‘*kāyasaṅkhāro vacīsaṅkhāro*’, etc. It must be interpreted mind and mental concomitants among which the volition (*cetanā*) is significant for *kāyasaṅkhāra* due to frequent occurrence of those *dhamma* in body-door (*kāyadvāra*) although those *dhammas* can be occurred infrequently in verbal-door (*vacīdvāra*) and mind-door (*manodvāra*). That kind of *cetanākāyasaṅkhāra* is not meant in this case. (*Mahaṭṭi*-1-322)

Successive cessation of the in-breath and out-breath had been explained in the commentary called *Visuddhi Magga* as follows.

The meaning of – ‘it would be practised in order to occur cessation of *kāyasaṅkhāra* called the in breath which is slightly gross’, and ‘it would be practised in order to occur cessation of *kāyasaṅkhāra* called the out-breath which is slightly gross,’ is the fact that ‘it would be practised with the intention that slight gross in-breath and out-breath called *kāyasaṅkhāra* must be ceased again and again.’

3.2.35. *olārika-sukhuma-passaddhi*

In those words— the occurrence of gross (*olārika*), subtle (*sukhuma*), tranquillity (*passaddhi*) in-breath and out-breath should be known as follows.

In the continuum of this practicing *bhikkhu* both all kinds of corporeal *dhamma* called *karajakāya* and mind are stressful and gross before mindfulness of breathing has not been practiced yet.

PAGE 321

Unless both physical and mental situations are subtle and tranquil especially, the in-breath and out-breath become strong and gross resulting the nostril is full of breaths and it is adjusted by inhaling and exhaling through buccal cavity.

On the other hand — For a such time, both all kinds of corporeal *dharmas* called *karaja-kāya* and mental *dharmas* are kept in mind thoroughly (= distinguished by knowledge) in the continuum of that practicing *bhikkhu*. At that time, both physical and mental situations become tranquil. The more tranquil the physical and mental situations, the less apparent in-breath and out-breath. Finally it would be occurred as it is seem to be investigated that whether in-breath and out-breath are present or not. (*Visuddhi*-1-266)

[The meaning of above quotation of commentary is as follows: —

Before the practice of mindfulness of breathing has not been performed it can be said that the **meditator** has not finished to keep in mind corporeal and mental *dharmas*.

With regarding to the words, ‘*nisīdati pallaṅkam ābhujaṭṭvā ujum kāyaṃ paṇidhāy*’ (= ‘it is sitting cross-legged by upright position of the upper part of the body’), the Buddha preached that how to keep in mind corporeal *dharmas* of the **meditator**.

With regarding to the words, ‘*parimukham satim upatthapetvā*’ (= ‘after the mindfulness would be leading to the object of practice of mindfulness of breathing’), the Buddha preached that how to keep in mind mental *dharmas*.

When the practising **meditator** is sitting cross-legged by upright position of the upper part of body and he is developing the concentration by means of the mindfulness leading to the object of practice of mindfulness of breathing, both physical and mental situations become tranquil gradually.

In the word, ‘**become tranquil**’, it means that previously, due to lack of wandering mind to various external objects and due to presence of unique object called in-breath or out-breath, the mind of **meditator** becomes tranquil and quiescent. Due to tranquillity and quiescence of mind of meditation, numerous corporeal *dharmas* produced by that mind of meditation become agile, elastic and it is adaptable to perform the practice of mindfulness of breathing. Due to compatibility of remaining corporealities, i.e., corporealities produced by *kamma*, corporealities produced by temperature, corporealities produced by nutriment to corporealities produced by mind of meditation, the former becomes agile, elastic and it is adaptable to perform the practice of mindfulness of breathing. Thus when both mind and all kinds of corporeal *dharmas* produced by four causes, which are commonly known as *rūpakāya*, become tranquil and quiescent, the in-breath and out-breath which occur depending upon those mind and *karajakāya* (= *rūpakāya* excluding in-breath and out-breath), become subtle and subtle. (*Mahāṭī*-1-323)]

PAGE 322

As a simile — a such man who is standing just after marathon is finished or a such man who is standing just after heavy burden is put down above from the head or a such man who is standing just after go down from high mountain, is full of very strong and gross breaths in the nostril with the result that it is adjusted by inhaling and exhaling through buccal cavity.

As a next simile — For a such time, after that exhaustion had been removed by either taking bath or drinking water, this man is lying down under the cold shade of a tree and he is taking rest by putting a wet towel on his chest. At that time those in-breaths and out-breaths of that man become subtle and subtle. Finally, it would be occurred as it is seem to be investigated that whether both in-breath and out-breath are present or not.

In the same way — before the mindfulness of breathing has not been practiced yet, both physical and mental situations are stressful and gross. Unless both physical and mental situations are subtle and tranquil especially, the in-breath and out-breath become strong and gross resulting the nostril is full of breaths and it is adjusted by inhaling and exhaling through buccal cavity.

In the next way — for a such time, both all kinds of corporeal *dhamma* and mental *dhamma* are kept in mind thoroughly, (= distinguished by knowledge) in the continuum of that practicing *bhikkhu*. At that time, both physical and mental situations become tranquil. The more tranquil physical and mental situations, the less apparent in-breath and out-breath. Finally, it would be occurred as it is seem to be investigated that whether in-breath and out-breath are present or not. (*Visuddhi Magga* -1-266-267)

3.2.36. The reasoning

It would be the causes of the following reasons —

Before the practice of mindfulness of breathing has been taken place, these four factors,

- (1) Previous premeditation, *ābhoga*, by which the gross *kāyasaṅkhāra* must be subtle,
- (2) ability to take heed well in order to cease the in-breath and out-breath = *samannāhāra*

PAGE 323

- (3) the attention by which the cessation of in-breath and out-breath must be occurred = *manasikāra*,

- (4) the reflection by which the cessation of in-breath and out-breath must be occurred = *paccavekkhanā*,

would not be occurred apparently. However, during practice of the mindfulness of breathing has being taken place those four factors would be occurred apparently in the continuum of *meditator*. The in-breath and out-breath called *kāyasaṅkhāra*, therefore, would be more and more quiescent in later stages of practice successively. (*Visuddhi Magga* –1-267)

When both in-breath and out-breath become subtle it must be balanced between inhaling and exhaling. If inhaling is stronger than exhaling, upper part of body usually turns backward. If exhaling is stronger than inhaling, upper part of body usually bends forward. Be careful!

3.2.37. *oḷārika-sukhuma* (gross-subtle)

Then in the commentary called *Visuddhi Magga*, various degrees of gross and subtle situations in successive stages of *samatha* and *vipassanā* as follows.

(3.2.37.a) Assumptions of *dīghabhāṇaka-samyuttabhāṇaka*

1. By the time, long and short, the whole breath from beginning to end, is discerned and kept in mind thoroughly, it is still gross. By the moment, the neighbourhood concentration of the first absorption is achieved, it is subtle.
2. By the moment, the neighbourhood concentration of the first absorption is achieved, it is also gross. By the moment, the first absorption occurs, it is subtler than it's neighbourhood

3. By the moments, both the first absorption and neighbourhood concentration of the second absorption occur, there are still gross. By the moment, the second absorption occurs, it is subtler than previous moments.
4. By the moments, both the second absorption and neighbourhood concentration of the third absorption occur, there are still gross. By the moment, the third absorption occurs, it is subtler than previous moments.
5. By the moments, both third absorption and neighbourhood concentration of the fourth absorption occur, there are still gross. By the moment, the fourth absorption occurs, it is so subtle that the breaths would be ceased totally.

catutthajjhāne atisukhumo appavattimeva pāpuṇāṭīti (*Visuddhi Magga-1-267*)

These are assumptions of *dhīghabhāṇaka theras* (= those noble *bhikkhus* who memorized the Long Discourses) and *samyuttabhāṇaka theras* (= those noble *bhikkhus* who memorized the Connected Discourses).

PAGE 324

(3.2.37.b) Assumptions of *majjhimabhāṇaka*

Majjhimabhāṇaka theras (= those noble *bhikkhus* who memorized the Middle Discourses), however, preferred the assumption that by the moment, the neighbourhood concentration of the upper absorption occurs, it is subtler than the moment at which the lower absorption occurs, such as, ‘ at the moment of the first absorption, it is gross in-breath and out-breath, but the moment of the neighbourhood concentration of the second absorption is subtler than the former,’ etc ...

(3.2.37.c) The assumptions agreed with all noble Theras

However, according to the assumptions agreed with all noble Theras, i.e., *dhīghabhāṇaka*, *samyuttabhāṇaka*, *majjhimabhāṇaka*, ‘those *kāyasaṅkhāra* called the in-breath and out-breath which occurred before it is kept in mind by knowledge cease after it is kept in mind by knowledge. Those *kāyasaṅkhāras* which occurred after it is kept in mind by knowledge cease at the moment of neighbourhood concentration of the first absorption.

Those *kāyasaṅkhāras* which occurred at the moment of neighbourhood concentration of the first absorption cease at the moment of the first absorption.

Those *kāyasaṅkhāras* which occurred at the moment of the first absorption cease at the moment of the neighbourhood concentration of the second absorption.

Those *kāyasaṅkhāras* which occurred at the moment of neighbourhood concentration of the second absorption cease at the moment of the second absorption.

Those *kāyasaṅkhāras* which occurred at the moment of the second absorption cease at the moment of the neighbourhood concentration of the third absorption.

Those *kāyasaṅkhāras* which occurred at the moment of neighbourhood concentration of the third absorption cease at the moment of the third absorption.

Those *kāyasaṅkhāras* which occurred at the moment of the third absorption cease at the moment of the neighbourhood concentration of the fourth absorption.

Those *kāyasaṅkhāras* which occurred at the moment of neighbourhood concentration of the fourth absorption cease at the moment of the fourth absorption respectively. These are successive cessation of *kāyasaṅkhāra* called in-breath and out-breath in *samatha* stage previously. (*Visuddhi Magga-1-267*)

(3.2.37.d) Successive cessation in *vipassanā* stage

Then it is continued to explain in *Visuddhi Magga* how the in-breath and out-breath become successively. This explanation shows how to change from *samatha* to *vipassanā* by means of the practice of mindfulness of breathing.

PAGE 325

1. By the time, those *kāyasaṅkhāras* which occur before the four great elements are distinguished and kept in mind by knowledge, it is gross for the practicing **meditator** who prefers to discern corporeal *dhamma* consisting in the breaths beforehand. Those *kāyasaṅkhāras* which are occurring during the four great elements are distinguished and kept in mind by knowledge are subtle.

[*catudhātumukhena vipassanābhīnivesaṃ sandhāya vuttam*. (Mahāṭī-1-324)]

The commentator explained that ‘those *kāyasaṅkhāras* which are occurring during the four great elements are distinguished and kept in mind by knowledge are subtle’ with the intention that *saṅkhāra dhammas* which are the object of *vipassanā* practice are taken in heart by means of discerning on the four great elements beforehand. (Mahāṭī-1-324)]

2. Those *kāyasaṅkhāras* which occurred during the four great elements are kept in mind are also still gross, while those occurring during derived corporealities are kept in mind are subtle.
3. Those *kāyasaṅkhāras* are also still gross, while those occurring during all kinds of corporeal *dhamma* are kept in mind commonly, are subtler than the former. [*bhāvanāya uparūpari paññābhāvato* = it is due to supremacy of successive levels of practice. (Mahāṭī-1-324)]
4. Those *kāyasaṅkhāras* are also still gross, while those occurring during mental *dhamma* is kept in mind are subtler than the former.
5. Those *kāyasaṅkhāras* are also still gross, while those occurring during both corporeal and mental *dhammas* are kept in mind, are subtler than the former.
6. Those *kāyasaṅkhāras* are also still gross, while those occurring during causal *dhammas* of corporeality and mentality are kept in mind, are subtler than the former.
7. Those *kāyasaṅkhāras* are also still gross, while those occurring during both corporeal and mental *dhammas* together with their causes are distinguished and kept in mind, are subtler than the former.
8. Those *kāyasaṅkhāras* are also still gross, while those occurring during *vipassanā* knowledge has been developed by means of discerning on three general characters, i.e., *anicca* (impermanence), *dukkha* (suffering), *anatta* (non-self) of corporealities and mentalities together with their causes alternatively, are subtler than the former. (It refers to the stage called *kalāpasammasana ñāṇa* during which five-aggregates occurring as 11 situations, i.e., past, future, present, internal, external, gross, subtle, inferior, superior, far, near, are generalized commonly by means of three general characters alternatively.)
9. Those *kāyasaṅkhāras* are also still gross, while those occurring during **immature vipassanā practice** (*dubbala vipassanā*), i.e., *udayabbaya ñāṇa* (the knowledge of arising and perishing away), *bhaṅga ñāṇa* (the knowledge of dissolution), *baya ñāṇa* (the knowledge of fears), *ādīnava ñāṇa* (the knowledge of faults), are subtler than the former.

PAGE 326

10. Those *kāyasañkhāras* are also still gross, while those occurring during **matured vipassanā practice** (*balava vipassanā*), i.e., upper *vipassanā* knowledges, *nibbidānupassanā ñāṇa* (the knowledge of boredom), etc, are subtler than the former.

It should be recognized that those *kāyasañkhāras* occurring in succeeding *vipassanā* stages are subtler than those occurring in preceding ones successively, similar to mentioned in *samatha* stages.

Thus it should be recognized on the occurrence of gross (*olārika*), subtle (*sukhuma*), tranquil situations of *kāyasañkhāra* in *samatha* and *vipassanā* stages respectively. (*Visuddhi Magga*-1-266, 268; *Mahāṭī*-1-323, 324)

3.2.38. Explanation found in *Paṭisambhidā Magga*

In the Pāli Text of *Paṭisambhidā Magga*, occurrence of tranquil *kāyasañkhāra* had been explained by questions and answers as follows. (*Paṭsam*-183)

How would it be practiced that the in-breath would be inhaled so as a means of cessation of gross *kāyasañkhāra*? How would it be practiced that the out-breath would be inhaled so as a means of cessation of gross *kāyasañkhāra*?

Which are *kāyasañkhāras*?

1. Long in-breaths occur depending upon the body.

[*kāyikāti rūpakāye bhavā*. (*Paṭisam*-Com-2-113, *Mahāṭī*-1-324)

= It means that those in-breaths (out-breaths) occur depending upon all kinds of corporeal *dhmma* called *karajakāya*, i.e., un-derived and derived corporealities.]

Due to occurrence of those *dhmmas* (in-breaths) relating with the body (= all kinds of corporeal *dhmma* called *karajakāya*) and due to preparation of those *karajakāya*, those are called *kāyasañkhāra*. It would be practiced so as a means of cessation of gross *kāyasañkhāras* successively.

2. Long out-breaths occur depending upon the body (= all kinds of corporeal *dhmma* called *karajakāya*). Due to occurrence of those *dhmmas* (out-breaths) relating with the body (= all kinds of corporeal *dhmma* called *karajakāya*) and due to preparation of those *karajakāya*, those are called *kāyasañkhāra*. It would be practiced so as a means of cessation of gross *kāyasañkhāras* successively.
3. Short in-breaths occur depending upon the body (= all kinds of corporeal *dhmma* called *karajakāya*). Due to occurrence of those *dhmmas* (in-breaths) relating with the body (= all kinds of corporeal *dhmma* called *karajakāya*) and due to preparation of those *karajakāya*, those are called *kāyasañkhāra*. It would be practiced so as a means of cessation of gross *kāyasañkhāras* successively.
4. Short out-breaths occur depending upon the body (= all kinds of corporeal *dhmma* called *karajakāya*). Due to occurrence of those *dhmmas* (out-breaths) relating with the body (= all kinds of corporeal *dhmma* called *karajakāya*) and due to preparation of those *karajakāya*, those are called *kāyasañkhāra*. It would be practiced so as a means of cessation of gross *kāyasañkhāras* successively.
5. Those in-breaths of which beginning, middle and end would be known thoroughly, occur depending upon the body (= all kinds of corporeal *dhmma* called *karajakāya*). Due to occurrence of those *dhmmas* (in-breaths) relating with the body (= all kinds

of corporeal *dhamma* called *karajakāya*) and due to preparation of those *karajakāya*, those are called *kāyasaṅkhāra*. It would be practiced so as a means of cessation of gross *kāyasaṅkhāras* successively.

6. Those out-breaths of which beginning, middle and end would be known thoroughly, occur depending upon the body (= all kinds of corporeal *dhamma* called *karajakāya*).

PAGE 327

Due to occurrence of those *dhammas* (out-breaths of which beginning, middle and end would be known thoroughly) relating with the body (= all kinds of corporeal *dhamma* called *karajakāya*) and due to preparation of those *karajakāya*, those are called *kāyasaṅkhāra*. It would be practiced so as a means of cessation of gross *kāyasaṅkhāras* successively.

The body (*rūpakāya*) which has such natures of gross *kāyasaṅkhāras* as follows—

1. *ānamanā* = such bending forward from backward,
2. *vinamanā* = such bending side to side,
3. *sannamanā* = such bending toward around all directions extremely,
4. *paṇamanā* = such bending backward from forward,
5. *iñjanā* = such shivering forward,
6. *phandanā* = such shivering side to side,
7. *calanā* = such shivering toward around all directions
8. *pakampanā* = such shivering backward,

is present. It would be tried and practiced with the intention to inhale so as a means of cessation of *kāyasaṅkhāras* which have those gross natures. It would be tried and practised with the intention to exhale so as a means of cessation of *kāyasaṅkhāras* which have those gross natures.

The body (*rūpakāya*) which has such natures of *kāyasaṅkhāras* as follows —

1. such unbending forward from backward,
2. such unbending side to side,
3. such unbending toward around all directions,
4. such unbending backward from forward,
5. such non-shivering forward,
6. such non-shivering side to side,
7. such non-shivering toward around all directions,
8. such non-shivering backward,

is present. It would be tried and practiced with the intention to inhale so as a means of cessation of *kāyasaṅkhāras* which have those quiescent and subtle natures. It would be tried and practised with the intention to exhale so as a means of cessation of *kāyasaṅkhāras* which have those quiescent and subtle natures.

If it is tried and practiced with the intention to inhale and exhale by means of various ways mentioned above, these complaints will be occurred as follows.

PAGE 328

1. It is **unable to occur** and develop mind of meditation which knows the in-breath and out-breath by taking as fixed objects.
2. It is **unable to occur** and develop subtle in-breath and out-breath due to cessation of subtle in-breath and out-breath as a result of efficiency of the practice.
3. It is **unable to occur** and develop the mindfulness of breathing which is associating with the mind of those in-breath and out-breath due to absence of those objects.

4. It is **unable to occur** and develop the concentration of the mindfulness of breathing, which is associating with the mindfulness of breathing due to non-occurrence of mindfulness of breathing which has the objects called in-breath and out-breath like that.
5. It is **unable to enter** that kind of absorption which has the objects called in-breath and out-breath for wise and noble ones.
6. It is **unable to emerge** from the absorption which has the objects of those in-breath and out-breath due to inability to enter like that.

If it is tried and practiced with the intention to inhale and exhale so as a means of cessation of *kāyasañkhāras* which have those quiescent and subtle natures mentioned above. If those gross and gross *kāyasañkhāras* will be tranquil and subtle,

1. it is **able to occur** and develop mind of meditation which knows the in-breath and out-breath by taking as fixed objects.
2. it is **able to occur** and develop in-breath and out-breath although subtle in-breath and out-breath had been ceased as a result of efficiency of the practice.
3. it is **able to occur** and develop the mindfulness of breathing which is associating with the mind of those in-breath and out-breath.
4. it is **able to occur** and develop the concentration of the mindfulness of breathing, which is associating with the mindfulness of breathing, which is associating with the mindfulness of breathing, that has the objects called in-breath and out-breath.
5. Due to above reasons it is **able to enter** that kind of absorption which has the objects called in-breath and out-breath for wise and noble ones.
6. Due to capable of entering into the absorption like that it is **able to emerge** from the absorption which has the objects of those in-breath and out-breath.

PAGE 329

It would be recognized how the way of practice by which very subtle and subtle *kāyasañkhāras* are developed by ceasing gross and gross *kāyasañkhāras* successively can be achieved as follows—

A simile to be paralleled —

When a bronze gong is hit with a hammer, gross and loud sounds appear previously. Although gross and loud sounds disappear, then subtle and fine sounds appear due to taking into heart the object of sign of gross and loud sounds well and it has been memorized in mind well.

As the mind which has the object of sign of subtle and fine sounds would be occurred, although subtle and fine sounds disappear successively, due to taking into heart and memorized well the object of sign of subtle and fine sounds in the mind, —

Similarly, gross and rough in-breaths and out-breaths occur previously. Although gross and rough in-breaths and out-breaths cease, then subtle and calm in-breaths and out-breaths occur due to taking into heart the object of sign of gross and rough in-breaths and out-breaths well and it has been memorized in mind well.

The mind of meditation which has the objects of subtle and calm in-breaths and out-breaths would be occurred and it does not wander although subtle and calm in-breaths and out-breaths cease successively due to taking into heart and memorized will the object of sign of subtle and calm in-breath and out-breaths in the mind.

When it is occurred in this way, —

1. It **would be occurred** and developed mind of meditation which knows the in-breath and out-breath by taking as fixed objects.

2. It **would be occurred** and developed in-breath and out-breath although subtle in-breath and out-breath had been ceased as a result of efficiency of the practice.
3. It **would be occurred** and developed the mindfulness of breathing which is associating with the mind of those in-breath and out-breath.
4. It **would be occurred** and developed the concentration of the mindfulness of breathing, which is associating with the mindfulness of breathing, which is associating with the mindfulness of breathing, that has the objects called in-breath and out-breath.
5. Due to above reasons, it **would be entered** that kind of absorption which has the objects called in-breath and out-breath for wise and noble ones.
6. Due to capable of entering into the absorption like that it **would be emerged** from the absorption which has the objects of those in-breath and out-breath.

PAGE 330

In the words, *passambayam kāyasaṅkhāram* = by ceasing of *kāyasaṅkhāra*, etc, preached on the Pāli Text, —

The in-breath and out-breath (= *assāsapassāsakāya*, *rūpakāya*, *nāmakāya*) are called *kāya*. The mindfulness, due to capable of adhering to the object called those in-breath and out-breath (*rūpakāya*, *nāmakāya*), is called *upatthāna*. The wisdom (*paññā*) which is able to discern repeatedly on those *kāya* is called the knowledge (*ñāṇa*).

Kāya, due to occurrence of adhered site of mindfulness, is called *upatthāna* but not *sati*. The mindfulness, on the other hand, is called not only *upatthāna*, due to capable of adhering to objects (which are three kinds of *kāya*), but also *sati*, due to capable of remembering the object. Those three kinds of *kāya* is discerned repeatedly by that mindfulness and that knowledge. It, therefore, is designated as *kāya kāyānupassanā satipatthāna bhāvanā* (= the practice of mindfulness by which the body is repeatedly discerned). (*Paṭisam*-183-184)

3.2.39. Further explanations

bhāvanāvisuddhiyā kāyasaṅkhāre passambhamānepi olārikam kāyasaṅkhāram passambhemīti yogino ābhoge sati tenādarena ativiya passambhati. anupatthahantampi sukhumam suānayam hoti. (*Paṭisam*-Com-2-115)

According to the teaching of the Buddha, if the practice of mindfulness of breathing is performed,

1. in order to know the ‘long’,
2. in order to know the ‘short’,
3. in order to know the ‘the whole breath’, i.e., beginning, middle, end,
4. in order to cease the breaths, successively, *kāyasaṅkhāra* become very calm due to regarding to cease gross and rough *kāyasaṅkhāra* and due to purity of practice. Although gross *kāyasaṅkhāra* is not appeared in the knowledge, very subtle and fine *kāyasaṅkhāra* can be carried out well. (*Paṭisam*-Com-2-115)

3.2.40. The occurrence of practice

pabhāvanā hotīti yadipi olārikā kāyasaṅkhārā patippassambhanti, sukhumā pana atthevāti anukkamena paramasukhuma bhāva pattassa vasena nimittupattiyā ānāpānassatiyā ānāpānassatisamādhissa ca pabhāvanā ijjhatevāti adhippāyo. (Mahāṭṭī-1-326)

assāsapassāse nissāya uppannanimittampettha assāsapassāsasamaññameva vuttam. (Mahāṭṭī-1-319)

When the in-breath and out-breath cease totally, how the practice of mindfulness of breathing can be occurred is that — Those *kāyasaṅkhāras* called gross, rough in-breath and out-breath cease,

PAGE 331

however, very subtle, fine *kāyasaṅkhāras* are still present. Therefore, the practice of mindfulness of breathing which develops the concentration associated with mindfulness is accomplished by taking the object of sign of full concentration (*paṭibhāga nimitta*) which is brilliant like a star after the mind of meditation omit to take the object of very subtle and fine in-breath and out-breath which is able to change sign of full-concentration. (Mahāṭṭī-1-326)

According to the explanation of sub-commentary, — it should be recognized that the practice of the mindfulness of breathing is present continuously although the object of in-breath and out-breath become very subtle and finally ceased. This is because by the time the breaths are very fine and calm, the sign of (neighbourhood) full-concentration usually appears. At that time, the mind of meditation leads to the object of sign of concentration but not on that of breaths. If the concentration would be developed by taking the object of sign of full concentration continuously, the first absorption, the second absorption, the third absorption, and the fourth absorption can be occurred successively resulting in total cessation of breaths in the last absorption one. It should be recognized that the practice of mindfulness of breathing is accomplished due to presence of sign of full-absorption on which the mind of meditation takes as object continuously. Therefore, the commentary of *Paṭisambhidā Magga* explained that although usual object of the in-breath and out-breaths are unapparent in the knowledge of *meditator*, very subtle and fine breaths is possible to be performed well and continuously the practice of mindfulness of breathing because the sign of full-concentration which occurs depending upon usual object of in-breath and out-breath, can be called *assāsapassāsa*. (*Paṭisambhidā Magga*-Com-2-115)

3.2.41. It must be followed respectfully on the instructions

If the *meditator* wants to change *vipassanā* through the concentration of fourth absorption of the mindfulness of breathing as a fundamental object of *vipassanā*, he must develop concentration of the fourth absorption of mindfulness of breathing beforehand. During developing concentration it should be followed respectfully on above instructions found in the Pāli Text, commentary and sub-commentary. According to these instructions, it must be firmly recognized the fact that the *meditator* must be able to practise in order to occur subtle in-breath and out-breath but not gross ones especially.

PAGE 332

3.2.42. Cascade of practices

In the continuum of *bhikkhu* who practices the practice of mindfulness of breathing as the Buddha's teaching in order to —

1. know long in-breath and out-breath ,
2. know short in-breath and out-breath ,
3. know the whole breath from the beginning to end (= in order to fix the mindfulness on the whole breaths),
4. become subtle and subtle condition of breaths successively, the sign of (neighbourhood) full-concentration usually appears within not so long lasting time. The concentration called *appanā jhāna* (full-absorption which is adorned by factors of absorption, i.e., initial application (*vitakka*), sustained application (*vicāra*), pleasurable interest (*pīti*), mentally agreeable (*sukha*), one-pointedness of mind (*ekaggatā*) is also accomplished in him.

In some *meditators* after the in-breath and out-breath are taken into heart by means of counting method previously and when gross in-breath and out-breath become subtler and subtler it is resulting in tranquillity of both physical and mental *dhamma* successively. It usually becomes agility of the whole body that seems to be raised in the sky.

As a simile — when such person who is very tired bodily sits on either bed or chair the lower parts of bed, chair etc. usually flex downward. Then it usually crackles noisily at the adjacent parts of those bed, chair etc. The bed cover which is come on contact with body, hip, elbow, etc., usually shrinks as a result.

When such person who is not tired sits on either bed or chair etc., the lower parts of bed, chair never flex downward, no noise is produced and the bed-cover which is come in contact with body, hip, elbow, etc., never shrink resulting in the appearance of those bed, chair seem to be filled with cotton. This is because the fresh body is agile and seems to be filled with cotton.

Similarly, after the in-breath and out-breath are taken into heart by means of counting method previously and when gross in-breath and out-breath become subtler and subtler it is resulting in tranquillity of both physical and mental *dhamma* successively. It usually becomes agility of the whole body that seems to be raised in the sky. (*Visuddhi Magga* –1-247)

PAGE 333

3.2.43. One noticeable fact

Some *meditators* who reach to this stage become wandering due to agility of the whole body that seem to be raised in the sky. That wandering mind is a kind of restlessness (*uddhacca*) which back out of the object of meditation resulting in a danger of concentration. The possessed concentration usually becomes fall dawn. In some *meditators*, it is full of pleasurable interest (*pīti*) like rocking in cradle. At that time, a factor of enlightenment, the pleasurable interest called *pītisambojjhaṅga* is predominant and it must be developed opposite factors of enlightenment, i.e., tranquillity, concentration and neutrality. It must be tried to occur stability of mind of meditation on the object of in-breath and out-breath only. In order to develop opposite factors of enlightenment,

1. it must be emphasized on the object of in-breath and out-breath calmly, then tranquillity of factor of enlightenment becomes strong.
2. it must be fixed the mind of meditation with the object of in-breath and out-breath as a slab is put under water, then concentration of factor of enlightenment becomes strong.

3. At that time, due to decrease in the degree of pleasurable interest, it is lack of extreme effort to fix the object of in-breath and out-breath, with the result that neutrality of factor of enlightenment called *tatramajjhattupekkhā* become strong.

In this stage it must be very careful not to be afraid of situation of the body that seems to be raised in the sky. The frightened mind is a kind of anger called feedback of anger, which is a disturbance of concentration. It is essential to be careful not to detach from usual object of in-breath and out-breath continuously.

3.2.44. A simile of bronze gong hit with a hammer

When the mind of *meditator* becomes strongly fixed on the object of breaths, the *meditator* must perform

1. in order to know the long, if it is long,
2. in order to know the short, if it is short,
3. in order to know the whole breath, i.e., beginning, middle, end, successively.

Be notice — during practicing in order to know the whole breath,

1. it should not be memorized on the ‘long’ as ‘this is long’,
2. it should not be memorized on the ‘short’ as ‘this is short’,

PAGE 334

3. it should not be memorized on the ‘beginning, middle and end’, as ‘this is the beginning’, ‘this is the middle’, ‘this is the end’ etc.

If it is memorized like that way, the development of concentration can be retarded. It is essential to notice the while breath carefully as if it is any of long, short, the while breath respectively. If it is unable to practise without memorizing, it should be recognized on ‘**the in-breath**’, ‘**the out-breath**’ only.

During practicing in this way, the *meditator* should discern continuously in order to know apparently on long, short, from beginning to end of the whole breath. It should not be tried intentionally in order to become long or short but taken into heart the breath as it’s natural condition. It should be tried to know long or short condition of the breaths as they really are. It should be tried in order to occur subtler and subtler breaths successively. If it is practiced like that way gross and rough breaths will become subtler and subtler with the result that the whole breath will be ceased and both physical and mental situations will become agile.

When gross in-breath and out-breath cease in the continuum of that *meditator* the mind of meditation which has the object of sign of subtle in-breath and out-breath would be appeared. When those minds of meditation which have object of subtle in-breath and out-breath cease, successive minds of meditation which have objects of subtler and subtler in-breath and out-breath would be appeared. How it would be appeared —,

A man hits bronze gong with iron rod resulting in arising of noisily sounds. The mind which has the object of gross sound appears in him previously. When gross sounds disappear the mind which has object of sign of subtle sounds would be occurred. As those minds which have objects of signs of subtler and subtler sounds occur successively after preceding ones disappeared, similarly, minds of meditation which have objects of subtler and subtler in-breath and out-breath also appear in the *meditator*. It should be understood in this way. (*Visuddhi Magga* –1-275)

PAGE 335

3.2.45. Differences of *ānāpānassati* from other meditation subjects

Differences of the mindfulness of breathing from other meditation subjects are as follows:

Other meditation subjects, out of the practice of mindfulness of breathing, have more and more apparent objects as if maturation of the practices becomes higher and higher. However, the practice of the mindfulness of breathing is quite different from those meditation subjects. Actually, the objects of this meditation subject gradually subtle and subtle in the insight of *meditator* who is practicing by following strictly instructions of the Buddha. The object of in-breath and out-breath becomes unapparent in the insight of *meditator*. It should not be given up the practice and should not stand up from sitting deportment in order to either discuss this problem with meditation teacher or take into heart that “now is it fallen back my practice”. The fault is as follows.

iriyāpatham vikopettvā gacchato hi kammaṭṭhānam navaṇavameva hoti, tasmā yathānisinneneva desato āharitabbam. (*Visuddhi Magga* –1-275)

In the continuum of *bhikkhu* who always stands up from sitting position of practice, usual practice of mindfulness of breathing always becomes newly one only. It should, therefore, be carried out the practice continuously by means of previous memorized touching place of the in-breath and out-breath in usual sitting position. (*Visuddhi Magga* -1-275)

In regarding to commentator's words, “in the continuum of *bhikkhu* who always stands up from sitting position of practice, usual practice of mindfulness of breathing always becomes newly ones only”, some noble teachers assumed that usual deportment should not be changed during meditation is carrying out continuously. Indeed, this word refer to only such person who has unapparent object of in-breath and out-breath must not to stand up from sitting deportment, but not for every persons who practise various meditation subjects commonly. It should be read the followings not to be misunderstood on the fact “whether deportment can be changed or not”.

3.2.46. Whether deportment can be changed or not

samiñjite pasāriteti pabbānam samiñjanapasārane. tattha cittavaseneva samiñjanapasāranam akattvā hatthapādānam samiñjanapasāraṇapaccayā atthānattham pariggahettvā atthapariggahanam sātthakasampajaññaṃ. tattha hatthapāde aticiram samiñjettvā pasārettvā eva vā thitassa khane khane vedanā uppajjanti, cittaṃ ekkaggam na labhati, kammaṭṭhānam paripatati, visesam nādhigacchati. kāle samiñjentassa kāle pasārentassa pana tā vedanā na uppajjanti, cittaṃ ekkaggam hoti, kammaṭṭhānam phātim gacchati, visesamadhigacchatīti evam atthānattha pariggahanam veditabbam. (*M-Com-1-268; Dī-Com-1-176; Sam-Com-3-228; Abhi-Com-2-342*)

PAGE 336

“*Samiñjite pasārite*” means “when digits are bend or stretched”. When digits are bent or stretched it should not be done those actions with regarding to inner desire and the knowledge which is able to discriminate benefit or harm due to cause of bending and stretching digits is called *sātthakasampajañña*.

In the continuum of either such *bhikkhu* who situates a deportment with bending digits for a long time or such *bhikkhu* who situates a deportment with stretching digits out for a long time various sufferings with disagreeable feeling would be occurred in every moments.

The concentration of mind of meditation cannot be achieved, and the practice usually be fallen back resulting in inability to attain successive noble *dhamma* of both mundane and supra-mundane (*lokuttara dhamma*). In the continuum of such *meditator* who bends digits at the time when it is suitable to bend and stretches digits at the time when it is suitable to stretch properly, those kinds of suffering cannot be occurred. The concentration of mind of meditation can be achieved and the practice would be improved resulting in ability to attain successive noble *dhamma* of both mundane and supra-mundane. Thus it should be understood the meaning of “discriminate ability of knowledge”. (*M-Com-1-268; D-Com-1-176; Sam-Com-3-228; Abhi-Com-2-342*)

According to explanations found in above commentaries, bending and stretching of digits in proper time is a cause of improvement of practice, and therefore the *meditator* who wants to attain *nibbāna* should not practise irrespective of those explanations.

3.2.47. Occurrence of newly ones

If the *meditator* stands up from usual practice in sitting deportment due to disappearance of the object of in-breath and out-breath in the insight, it will be occurred in newly process of practice again and again due to the following reasons. —

If he practise the practice of mindfulness of breathing again, the in-breath and out-breath will become unapparent in his insight again similar to previous processes. If he stands up and give up the practice again and again whenever the object becomes unapparent ones, then it will be occurred unapparently again and again. Thus it can be said that the practice will become newly ones again and again.

3.2.48. The reason why the breath is unapparent

When the breaths are unapparent in the insight of *meditator*, previous sign of touching place of in-breath and out-breath should be taken into heart by reasoning as follows:

PAGE 337

The *bhikkhu*, when in-breath and out-breath are unapparent in insight, should reason frequently in this way. —

Where are in-breath and out-breath present? Where are not those present? In whose continuum do those breaths occur? In whose continuum do not those breaths occur? Etc..

3.2.49. Persons without in-breath and out-breath

These persons are lack of in-breath and out-breath,

1. foetus in the womb,
2. person who is submerged,

[These two persons lack breaths due to inability to occur breaths in those places.]

3. person who is in coma, or mindless being,
4. person who was dead (corpse),
5. non-returnee (*anāgāmi*) and arahant (*arahat*), who are entering into cessation absorption (*nirodha samāpatti*),

[These three persons lack breaths due to absence of mind during entering into cessation absorption.]

6. the person who is entering into the fourth absorption (*catuttha jhāna samāpatti*),
7. brahmas of the world of form and formless world,

[These two persons lack breaths due to fixed nature of beings.]

It should be complained himself that he himself is excluded from those list. Then it should be reasoned again that ...

“there are no places without occurring breaths except those seven places and the in-breath and out-breath are present surely in your continuum, indeed; although these are present, it is unable to keep in mind the breaths due to the knowledge is weak and retarded” ...

Then the *meditator* should try to occur mind of meditation is fixed together with the touching place of usual in-breath and out-breath which is present before disappeared. These in-breath and out-breath usually occur by touching the tip of nose for such person with long nose, while they occur by touching the upper lip for such person with short nose. Therefore, the *bhikkhu* who has unapparent

PAGE 338

breaths, should try to occur fixed sign of perception of the practice (*bhāvanā saññā*) at the touching place of in-breath and out-breath but should not to occur the breaths roughly. It is right. — The Buddha, therefore, preached as follows respective of this reason.

nāham bhikkhave mutṭhasatissa asampajānassa ānāpānasatibhāvanam vadāmi. (M-3-127; Sam-3-294)

= *Bhikkhus!* I never preach the practice of mindfulness of breathing for a person who lacks clear comprehension which is able to distinguish in-breath and out-breath ; who has perishable mindfulness. (*M-3-127; Sam-3-294; Visuddhi Magga-1-275*)

Every practice of *samatha* and *vipassanā* can be fulfilled by the only person who has mindfulness and clear comprehension, indeed. However, in the continuum of *meditator* who is practicing any other meditation subject excluding mindfulness of breathing, the object of the practice always becomes apparent. This practice of mindfulness of breathing is very difficult. It is the field of Noble Gentlemen called the Supreme Buddha, *pacceka buddha* and disciples of the Buddha (*buddha putta*) only. This kind of practice is not a little piece indeed. Then it is not a kind of practice which can be performed by inferior ones. The practice of mindfulness of breathing should be taken into heart by means of such modes. It will becomes subtle and calm by that that means. Therefore, both very strong mindfulness and knowledge are essential to the way of practice called the mindfulness of breathing.

As very fine and minute needle is essential when very fine lower dressing is sewing and as finer needle which can be applied to make minute needle is also essential, very strong mindfulness which is similar to fine needle and knowledge which is similar to finer needle to make fine needle are essential during the practice of mindfulness of breathing which is similar to very fine lower dressing is developing similarly. Then the *bhikkhu* who has fulfilled with those mindfulness and knowledge, should not find those in-breath and out-breath at any other places out of touching place.

As a simile — The peasant takes rest under shade of a tree after the field had been ploughed. At that time two bullocks enter rapidly into the forest. If the clever peasant wants to plough again by yoking with those bullocks, he never seek the latter by following footprint of them in the forest.

PAGE 339

Actually, he is handling with rope and driving stick and going to stream where those bullocks usually come and drink water every day. He is waiting for his bullocks by either sitting or reclining near the stream. When he see his bullocks that returned from the stream

where they had taken bath or drinking after they grazed in the forest the whole day he ties them up with a rope and brings back to the field. Then he performs his usual work, ploughing, again. Similarly the meditating *bhikkhu* should not find in-breath and out-breath at any other place excluding touching place.

As a simile — It should be taken into heart the in-breath and out-breath by fixing the mind of meditation with the touching place, i.e., the tip of the nose or upper lip after handling a rope called mindfulness and a driving stick called knowledge. The result is that — the *bhikkhu* who practices in this way can take the object of in-breath and out-breath as the bullocks reach at the bank of stream where they usual take bath. Then that *bhikkhu* should practise repeatedly by tying bullocks of in-breath and out-breath with the rope of mindfulness at the tying rod of touching place after it is driven by driving stick of knowledge associated with the attention (*manasikāra*) which is the nature of control to direct the mind and its concomitants towards the objects of in-breath and out-breath.

3.2.50. Sign of neighbourhood concentration (*uggaha nimitta*) and sign of full concentration (*paṭibhāga nimitta*)

In the continuum of *meditator* who is strenuous practicing in this way the sign of neighbourhood or full concentration would be occurred apparently not soon later. That sign is not identical among all *meditators*. Actually, it is appeared as the shape of any of

1. cotton wool,
2. spinning cotton, or
3. a jet of air, said by famous elder teachers. (*Visuddhi Magga*-1-276)

The followings are **decrees of the shape of various signs in accordance with commentaries.**

In some *meditators*, the sign is appeared as

4. brilliant light of star
5. ruby
6. pearl.

PAGE 340

Due to presence of rough impression, in some *meditators*, it appears as

7. bamboo rod or
8. wooden spit

In some *meditators*, it appears as any of

9. long thread,
10. garland with various flowers, or
11. cloud.

In some *meditators*, it appears as any of

12. spider's web,
13. stratified cloud,
14. lotus,
15. wheel of stage-coach,
16. the sun, or
17. the moon. (*Visuddhi Magga* –1-277)

nimittanti uggahanimittam, paṭibhāganimittam vā, ubhayampi hi idha ekkajjham vuttam. tathā hi tūlapicuādiupamatayam uggāhe yujjati, sesam ubhayattha. pa. maṇigūḷikādiupamā paṭibhāge vaṭṭanti. (Mahāṭṭī-1-335)

According to explanation of the sub-commentator, those three kinds of signs of concentration which appear as cotton wool, spinning cotton or a jet of air, are called *uggaha nimitta* (sign of neighbourhood concentration). Those two kinds of signs of concentration which appear as ruby or pearl are called *paṭibhāga nimitta*. The remaining signs of concentration may be occurred both signs of neighbourhood and full concentration. The sign of neighbourhood concentration is not brilliant but that of full concentration (*paṭibhāga nimitta*), very brilliant in colour. Thus, it should be recognized on difference between two kinds of signs of concentration. (*Mahāṭī-1-335*)

3.2.51. Variation in perception of practice

One day, many *bhikkhus* are sitting and reciting one discourse (*suttanta*) containing in Pāli Text. During sitting one of those *bhikkhus* asks “How do you appear this discourse in your knowledge?”

One *bhikkhu* answers “It appears as the big river flowing from the mountain.”

Another *bhikkhu* answers “It appears as a forest.”

The third one answers “It appears as a big tree, which has burden of forage and fruits resulting in the presence of cold shade.”

PAGE 341

The reason why various signs appear is that — there are various perceptions of a single discourse among the continuum of those *bhikkhus*, indeed.

evam ekameva kammaṭṭhānam saññānānatāya nānato upatthāti. saññajāñhi etam saññānidānam saññāpabhavam. tasmā saññānānatāya nānato upatthātīti veditabbam. (*Visuddhi Magga-1-277*)

saññānānatāyāti nimittupatthānato pubbeva pavattasaññānam nānāvidhabhāvato. (*Mahāṭī-1-335*)

A single practice of mindfulness of breathing can give rise to various shape of sign of concentration due to presence of various perceptions of practice which occur previously in the continuum of *meditator*. It is right. — The sign of neighbourhood concentration, sign of full concentration which are the objects of the mindfulness of breathing are caused by perception of practice (*bhāvanā saññā*). It's fundamental factor is the perception of practice only. It is originated from perception of practice. It should be recognized the fact that various shapes of sign of concentration would be appeared in *meditators* due to variation in perception of practice of those *meditators*. (*Visuddhi Magga-1-277, Mahāṭī-1-335*)

It means that when the efficiency of concentration association with perception of practice become sharp and strong, if such kind of perception of practice, i.e., “may it become white, or red or pearl or glass ball etc.”, will be made, various shapes of signs of concentration of those kinds will be occurred accordingly. However, it can be occurred only when the concentration matured successfully.

It should be recognized that those signs of neighbourhood and full concentration are “conceptual *dhmma*” only due to occurrence of those signs free from original object of in-breath and out-breath according to *Abhidhammattha saṅgaha*. It should be continued to read the following explanations of commentary and sub-commentary.

3.2.52. navattabba dhammārammaṇa

tattha dasavidhampi kasinajjhānam kasinapaṇṇattim ārabba pavattattā, brahmavihāracatuttham sattapaṇṇattim ārabba pavattattā, ānāpānacatuttham nimittam

ārabbha pavattattā parittādivasena navattabbhadhammārammaṇato navattabbārammaṇaṃ nāma hoti. (Abhi-Com-1-440)

Among those fourth absorptions, both the *kaṣiṇa* absorptions which are occurred by taking 10 kinds of *kaṣiṇa*-objects; the fourth absorption of four boundless states (*appamaññā*), which is occurred by taking the object of concept of beings; and the fourth absorption of mindfulness of breathing which is occurred by taking the object of

PAGE 342

brilliant star-like sign of full concentration, are not deserving to designate as

1. sensual *dhamma* (*paritta dhamma*)
2. supreme *dhamma* (*mahaggata dhamma*)
3. supra-mundane *dhamma* (*appamāṇa dhamma*), but as *navattabbārammaṇa* due to presence of the object of conceptual *dhamma* (*paññatti dhamma*). (*Abhi-1-440*)

All kinds of objects which are not deserving to designate as above three *dhammas* are also conceptual *dhamma* only.

navattabbārammaṇāti idam pana vacanam yathāgahitākārassa saññāvisayassa navattabbatam sandhāya navattabbam ārammaṇam etesanti navattabbārammaṇā, cittuppādāti aññapadattha samāsam kattvā atthakathāyam vuttam. (Mūlaṭī-1-191)

The meaning of above quotation is as follows.

The corporeality is present apparently, such as the nature of earth-element, etc.. But it is not present apparently by means of impression on the object (*phusana*), etc.. (It is because corporeal *dhamma* is *anārammaṇa dhamma* which is incapable of taking the object, indeed.) Thus, as a single the ultimate *dhamma* can be known as two ways, i.e., “it is not present apparently”, “it is present apparently”, (*avijjamāna-vijjamāna*), above mentioned concepts of *kaṣiṇa* and sign of full concentration of mindfulness of breathing are not only *avijjamāna*, due to absence in the aspect of ultimate reality, but also *vijjamāna*, due to presence in the aspect of conventional truth (*samuti sacca*). Those kinds of concepts, therefore, can be designated as “*navattabbārammaṇa*” and then those arising of mind and mental concomitants of absorption which take the object of that concept is called the *dhamma* which has the object of “*navattabbārammaṇa*”.

Although those objects called *navattabba* are not present obviously in the ultimate sense, it can be designated as concept (*paññatti*) due to occurrence of the basis of the meaning of speech in the aspect of conventional truth (*vohāra sacca*). It is right. — That conventional truth consists of two kinds of concepts which are able to be known and the commentator explained on that kind of concept as *avijjamāna paññatti* (= it is not present obviously in ultimate sense).

It is unable to say on that object as “this so-called *dhamma* is the object of sensual *dhamma*” because it is not present obviously in the ultimate sense while such concept, the eye-clear-sensitivity etc., which is present apparently in the ultimate sense, is able to say in that way. Usual in-breath and out-breath are a group of corporeal units called sound nonads produced by mind (*cittajasaddanavaka*

PAGE 343

kalāpa). Those corporeal *dhammas* are sensual *dhamma* called *paritta*, indeed. Although the perception of practice is occurred by taken into heart as the sensual *dhamma* for a **meditator** in the beginning stage, when the sign of full concentration occurs in the insight that perception of practice face with that object of sign of full concentration. Because of this reason, the commentator Sayadaw explained that that perception of the practice or the fourth

absorption of the mindfulness of absorption ...etc., are the *dhamma* which take the object of concept of *navattabba dhamma*. (See *Mūlaṭṭikā*-1-191 in detailed)

3.2.53. Three *dhammas* that should be fulfilled

ettha ca aññameva assāsārammaṇaṃ cittaṃ, aññaṃ passāsārammaṇaṃ, aññaṃ nimittārammaṇaṃ. yassa hi ime tayo dhammā natthi, tassa kammaṭṭhānaṃ neva appanāṃ na upacaram pāpuṇāti. yassa pana ime tayo dhammā atthi, tasseva kammaṭṭhānaṃ upacāraṇa appanaṇa pāpuṇāti. (Visuddhi Magga –1-277)

Among these three *dhammas*, in-breath, out-breath and sign of full concentration (*nimitta*),

1. the mind of meditation, which has the object of in-breath, is a specific one,
2. the mind of meditation, which has the object of out-breath, is a specific one,
3. the mind of meditation, which has the object of full concentration, is a specific one.

In the continuum of such *meditator* these three *dhammas*, in-breath, out-breath and sign of full concentration, are not present, that person is unable to reach the full absorption by the practice of mindfulness of breathing. As a right saying is that — in the continuum of such *meditator*, these three *dhammas* are present, with the result that the practice of mindfulness of breathing is available to be attained the full absorption (= full concentration) for that person only. It is also available to be attained the neighbourhood concentration and absorption. Thus it should be recognized well. (*Visuddhi Magga* –1-277)

3.2.54. the admonishment of *dīghabhāṇaka thera* and *majjhimbhāṇaka thera*

Those noble teachers who memorized the Long Discourses of the Buddha (*dīghabhāṇaka thera*) admonished as follows:

When very brilliant sign of full concentration appeared in him, that *bhikkhu* went to his teacher and said ‘*bhante*...this kind of sign of concentration appeared in the insight of me.’ The teacher should reply neither supporting as a real sign of full concentration nor against as non-real sign of full concentration. However, he should say ‘*Āvuso*...the *meditator* who is practising the mindfulness of breathing can be appeared by means of this way’ and should urge him to take into heart that way of practice frequently. It is right. — If he decides as the sign of full concentration of mindfulness of breathing, it will be reached into relinquishing the practice of him. The mind of meditation can be fallen back from the achievement of practice. On the other hand, if he says that it is not real sign of full concentration, the *meditator* will be reached into wither and disgusted the practice on which his

PAGE 344

desire to practice can be lost. Therefore those *mahāthera* admonished not to reply whether the sign is real or not, but to urge farther practice frequently.

However, those noble teachers who memorized the Middle Discourses of the Buddha (*majjhima bhāṇaka thera*), admonished that the teacher should like to say, ‘*āvuso*...this kind of appearance in the insight can be called the sign of full concentration of mindfulness of breathing. You are doing well...You should like to develop this practice frequently’. (*Visuddhi Magga* –1-277)

“*imāya paṭipadāya jarāmaranato muccissāmīti paṭipannassa nimitta*”nti vutte katham saṅkocāpatti, bhiyyoso mattāya ussāhameva kareyyāti — “*nimittamidam. pa. vattabbo*”ti *majjhimbhāṇakā āhu. (Mahāṭṭikā-1-336)*

= Why will it be reached into relinquishing the practice of him and why can the mind of meditation be fallen back in the continuum of *meditator* as if even the teacher says... ‘it is the sign of concentration of mindfulness of breathing’. ‘The *meditator* will endeavour strenuously the practice of mindfulness of breathing’, assumed by *majjhima bhāṇaka therā* and then they admonished as mentioned above. (*Mahāṭṭikā* –1-336)

3.2.55. It would be reached “fixed condition” (*thapanā*)

athānena nimittēva cittaṃ thapetabbam. evamassāyaṃ ito pabhūti thapanāvasena bhāvanā hoti. vuttañhetam porāṇehi —

“nimitta thapayam cittaṃ, nānākāram vibhāvayam.

dhīro assāsapassāse, sakam cittaṃ nibandhatī”ti. (Visuddhi Magga –1-277,278)

Then the practicing *bhikkhu* must try to fix mind of meditation with the object of sign of concentration. If it is possible to fix in this way, in the continuum of this *bhikkhu*, the concentration by practice of mindfulness of breathing becomes apparently by means of ability of *thapanā*. It is right. — The elder commentator Sayadaw said as follows:

“If the practicing *bhikkhu* who had fulfilled strenuous effort called *sammāvāyāma maggaṅga*, is able to fix mind of meditation with the sign of full concentration, which is originated from usual object of in-breath and out-breath, after four modes of appearance of those breaths, i.e.,

PAGE 345

1. long in-breath,
2. long out-breath,
3. short in-breath,
4. short out-breath, had been disappeared, it can be called his mind of meditation would be fixed with the object of sign of full concentration up to the full absorption.” (It should be recognized that such situation at which mind of meditation would be fixed with the object of sign of full concentration is called “*thapanā*”. (*Visuddhi Magga* –1-277,278)

pubbe yaṃ vuttam “anubandhanāya ca phusanāya ca thapanāya ca manasi karotī”ti. tattha anubandhanam, phusanaṇca vissajjētvā thapanāvasena bhāvanā hotīti thapanāvaseneva bhāvetabbanti attho. (Mahāṭṭikā 1-336)

The *Visuddhi Magga* commentator Sayadaw explained in *Visuddhi Magga* 1-272 that if either the mindfulness always follows along with those in-breath and out-breath continuously at the touching place after the counting method has been omitted or the mind of meditation is able to fix with the object of brilliant white sign of full concentration (*paṭibhāga nimitta*) which usually appears as a consequence of full absorption, the way of practice by which the mindfulness of breathing to be performed, can be designated as any of *anubhandhanā naya* or *phusanā naya* or *thapanā naya*. With regarding to this explanation, it means that when the sign of full concentration is stable in the knowledge, it must be relinquished *anubhandhanā naya* and *phusanā naya* and faced with the object of the sign of full concentration and then mind of meditation must be fixed with that object in order to occur full absorption (*appanā jhāna*). (*Mahāṭṭikā*-1-336)

If the mind of meditation is able to be fixed on the object of sign of full concentration up to the full absorption, these three *dhammas*

PAGE 346

1. the in-breath,
2. the out-breath,
3. the sign of full concentration,

become a single object of the mind of meditation due to capable of relinquishing the usual objects of in-breath and out-breath. It is not impossible to appear in a single mind of meditation but possible indeed. (Pyi Sayadaw's translation-2-248, 249)

3.2.56. Possibility of the object of single mind of meditation

nimittam assāsapassāsā, anārammaṇamekacittassa.

ajānato tayo dhamme, bhāvanānupalabbhati.

nimittam assāsapassāsā, anārammaṇamekacittassa.

jānato tayo dhamme, bhāvanā upalabbhati. (Visuddhi Magga-1-277)(Vimatiṭṭkā-1-216,217)

=These three *dhammas*, (1) *nimitta* called nostril or upper lip at which discerning mind of meditation is fixed, (2) the in-breath, (3) the out-breath, are not the objects of one consciousness simultaneously. Although it is not in that way any **meditator** who does not know those three *dhammas* by taking as object is unable to develop the concentration of mindfulness of breathing. (*Visuddhi Magga*-1-277)

Three kinds of *dhammas* called *nimitta* (touching place), the in-breath and out-breath are not the objects of one consciousness simultaneously due to inability to occur both usual in-breath and out-breath within one thought process. It means that either *nimitta* and in-breath or *nimitta* and out-breath are able to occur the objects of a single thought process within one thought process simultaneously. (*Vimatiṭṭkā*-1-216,217)

This explanation is intended to be explained tip of nostril or upper lip called *nimitta*, the in-breath and out-breath before the sign of neighbourhood concentration or the sign of full concentration appear.

After the concentration of the practice has been matured and when signs of full concentration appear, it can be said that

1. *nimitta* means the sign of full concentration,
2. the in-breath means the sign of full concentration,
3. the out-breath means the sign of full concentration.

PAGE 347

assāsapassāse nissāya uppannanimittampettha assāsapassāsasamaññameva vuttam.
(*Mahāṭṭkā*-1-319)

= It is because the fact that it can be said the sign of neighbourhood or full concentration, which occurs depending upon in-breath and out-breath, as the in-breath and out-breath, indeed.

Thus when the mind of meditation is being able to fix with object of brilliant sign of full concentration, these three *dhammas* called *nimitta*, the in-breath and out-breath become a single object of mind of meditation. It should be recognized that the practice of mindfulness of breathing would be fulfilled up to the full absorption due to capable of taking those three *dhammas* as single object by single mind-door thought process.

3.2.57. Difficulties to be encountered

It can be found that some **meditators** encounter with difficulties in this stage. In some persons the light usually appears beforehand when the concentration is well developed, while

the sign of concentration appears beforehand in some persons. If the light appears beforehand, it should be emphasized on that light but on usual objects of in-breath and out-breath. If the touching place is neglected and mind of meditation follows the light, the way of practice becomes leading to be wrong. It should, therefore, be fixed the mind with in-breath and out-breath only at the touching place. Not soon later, the sign of concentration usually appears as opaque grey colour. Only when the efficiency of the practice becomes mature and strong, can the sign be clear white as a cotton plug or cloud. In most *meditators* the sign of concentration which is similar to fluorescent light usually appears.

However, those kinds of signs of concentration are not stable and it appear discontinuously in most *meditators* of beginners. At that time it is essential to be fixed the mind of meditation with the objects of in-breath and out-breath. When the mind of meditation fixed with the objects of in-breath and out-breath for a long time, that sign of concentration becomes stable in the insight resulting unique object of both in-breath and out-breath and sign of concentration. If it is so, the way of practice leads to right one.

When the breaths and sign of full concentration become oneness, mind of meditation usually fixes with the sign of full concentration. If it is so, it should be tried continuously in order to fix mind of meditation with that sign.

PAGE 348

If the mind of meditation is unable to fix with sign of concentration although the latter is stable, it must be tried again and again. It must be performed in order to develop the concentration continuously.

However, in some *meditators*, if mind of meditation is shifted on the sign of concentration after the objects of in-breath and out-breath has been relinquished, that sign of concentration usually disappears not soon later. At that time the mind of meditation must be shifted on the objects of in-breath and out-breath again. When the sign of concentration reappears and become stable object, the mind of meditation must be fixed on it. In this way, it must be practiced appreciatively in order to fix the mind of meditation with the sign of concentration for a long time. It must be noticed that during trying to fix mind of meditation with sign of concentration, it should not be shifted on the breaths frequently. Alternative discerning on usual breaths and the sign of concentration can cause falling back and stability of concentration resulting in wandering between two kinds of objects.

3.2.58. If the sign appears in distance

In some *meditators* the sign of concentration usually appears in distance from touching place as moon-shaped, etc...while the sign of concentration is similar to a covering of white light over the whole face in some *meditators*. The mind of meditation is able to fix with distant sign of concentration sometimes and it is unable to fix sometimes.

If it is able to fix with distant sign of concentration, that concentration must be developed continuously in order to attain stability for long time. However it is quite distant from touching place the concentration cannot be stable for long time and it is difficult to develop efficiently.

If it is unable to fix with distant sign of concentration, the mind of meditation must be put on usual objects of in-breath and out-breath again. Then it must be tried appreciatively in order to know the

PAGE 349

whole breaths from beginning to end. When the efficiency of concentration becomes powerful the sign of concentration usually appears close to the touching place again. When that sign of concentration becomes stable and the breaths and the sign becomes oneness it must be tried appreciatively in order to fix mind of meditation with that sign continuously.

Newly emerged sign of concentration usually appears as unstable one. If the mind of meditation is intended to be shifted of unstable sign of concentration, the former becomes unstable one. It should, therefore, be fulfilled in order to fix mind of meditation on the sign of concentration only when the latter becomes stable one.

When the mind of meditation fixes with the sign of concentration, the latter gradually changes to clear white from greyish white. The sign of concentration which is clear white in colour can be designated as the sign of neighbourhood concentration (*uggaha nimitta*). When the efficiency of concentration becomes powerful the sign of concentration becomes brilliant in colour. The brilliant star-like sign of concentration is designated as sign of full concentration (*paṭibhāga nimitta*). However, different colours of signs of concentration can also appear sometimes.

3.2.59. It should not be emphasized on colour and character of sign of concentration

tassevaṃ nimittupaṭṭhānato pabhūti nīvaraṇāti vikkhambhitāneva honti, kilesā sannisināva. sati upaṭṭhitāyeva. cittaṃ upacārasamādhinā samāhitameva. athānena taṃ nimittaṃ neva vaṇṇato manasikātabbhaṃ, na lakkaṇato paccavakkhitabbhaṃ. apica kho khattiyamahesiyā cakkavattigabbho viya kassakena sāliyavagabbho viya ca āvāsādīni satta asappāyāni vajjetvā tāneva satta sappāyāni sevantena sādhuṃ rakkhitaṃ. atha naṃ evaṃ rakkhivā punappunam manasikārasena vuddhiṃ virūḷhiṃ gamayitvā dasa vidhiṃ appanākosallam sampādetabbhaṃ, vīriyasamatā yojetabbā. tassevaṃ ghaṭentassa pathavīkasiṇe vuttānukkameva tasmim nimitta catukkapañcakajjhānāni nibbattanti. (Visuddhi Magga-1-278)

vaṇṇatoti picupinḍatārakarūpādīsū viya upaṭṭhitavaṇṇato. lakkaṇatoti kharabhāvādisabhāvato, aniccādilakkaṇato vā. rakkhitaṃ taṃ nimittanti sambandho. nimittassa rakkaṇam nāma tattha paṭiladdhassa upacārajhānassa rakkaṇeneva hotīti āha “punappunam manasikārasena vuddhiṃ virūḷhiṃ gamayitvā”ti. (Mahāṭīkā-1-337)

Thus that **meditator** is able to remove hindrances (*nīvaraṇa*) as soon as the sign of full concentration appears in him. Those various defilements (*kilesā*) are also deposited for a while. The mindfulness (*sati*) leading to and situating on the object of sign of full concentration. The mind of meditation is stable on that object by means of the neighbourhood concentration (*upacāra samādhi*).

PAGE 350

The **meditator** must emphasize on neither the colour, such as cotton wool, star etc...nor the specific character, such as roughness, hardness, etc...of the sign of full concentration. It should not be also emphasized on general characters, such as impermanence (*anicca*), suffering (*dukkha*), etc...of that sign.

Actually, that object of sign of concentration should be protected respectfully by means of approaching to seven kinds of favourable conditions (*sappāya*) but avoiding to seven kinds of unfavourable conditions (*asappāya*) similar to the chief queen of *khattiya* king protects the foetus of *cakkavatti* who will become the supreme king of universe, that is visible as putting in the glass casket,...or similar to the farmer protects buds of *sāliyava* rice.

[As if the neighbourhood absorption called the neighbourhood concentration which is attained by taking the object of sign of full concentration (*paṭibhāga nimitta*), can be well protected, the protection of that sign of full concentration will be fulfilled mutually. The **meditator**, therefore, should discern repeatedly on that object of sign of full concentration in order to develop the powerful concentration of practice successively. Strenuous practicing in that way can be called protecting of the object of sign of full concentration not to disappear.]

Then it should be fulfilled on ten kinds of *appanākosalla dhammas* (mastery of the full absorption) by means of repeated discerning on that sign. It should be balanced between effort (*virīya*) and concentration (*samādhi*) appreciatively.

In the continuum of the **meditator** who is performing in this way, the fourth absorption and fifth absorption can be appeared by taking the object of sign of full concentration similar to explanation of the earth-*kaṣiṇa* (*pathavīkaṣiṇa*) mentioned previously. (*Visuddhi Magga*-1-278)

The **meditator** must mastery of the following conditions in order to maintain the concentration of practice and the object of sign of full concentration simultaneously. Those are:

1. seven kinds of unfavourable conditions (*asappāya*) which must be abstained
2. seven kinds of favourable conditions (*sappāya*) which must be performed
3. ten kinds of mastery of full absorption (*appanākosalla*)
4. how to balance the effort and concentration.

Therefore it would be continued to explain those four conditions.

"namo tassabhagavato arahato sammāsambuddhassa"

PAGE 351

3.3 Seven kinds of favourable and unfavourable conditions (*sappāya, asappāya*)

*āvāso gocaro bhassam, puggalo bhojanam utu.
 iriyāpathoti sattete, asappāye vivajjaye.
 sappāye satta sevetha, evañhi paṭipajjato.
 nacireneva kālena, hoti kassaci appanā.* (*Visuddhi Magga* –1-123)

3.3.1 The shelter (*āvāsa*)

For the **meditator** who stays in such shelter, the inexperienced sign never appears; experienced one also disappears; undeveloped mindfulness never develops; un-concentrated mind usually becomes un-concentrated one; that kind of shelter is unfavourable condition for him. [It means that the shelter where five kinds of controlling faculties, i.e., faith (*saddhā*), effort (*virīya*), mindfulness (*sati*), concentration (*samādhi*) and wisdom (*paññā*), cannot be occurred and then acquired controlling faculties are also unable to mature and improve is unfavourable one.]

For the **meditator** who stays in such shelter, the un-experienced sign usually appears; experienced one is also stable; the mindfulness always leads to and fix with that sign; the mind usually well concentrates; that kind of shelter is favourable condition similar to *nāga pabbata* monastery where the most Venerable *Padhāniyatissa Thera* could achieve all factors successfully.

If a such monastery is composed of many buildings; if the mind of that *bhikkhu* becomes concentrating in such building where he stays tentatively three days; it should be stayed in that building. The advantages are as follows: —

Five hundreds *bhikkhus* could attained the Fourth Fruit-Knowledge (*phala ñāṇa*) due to learning and practicing in the cave ‘*cūlanāga*’ in Sri Lanka where is the most favourable condition for those *bhikkhus*. There were enormous Noble-Ones who reached to upstream-enterers, once-returnees, non-returnees in that cave. The numbers of arahants who attained the Fourth Fruit-Knowledge in that cave after they had attained three lower Fruit-Knowledges in another one, are also infinite. Similarly, in ‘*cittala-pabbata vihara*’ (Cittala Mountain Forest Monastery), there were also infinite numbers of *bhikkhus* who had reached the realms of Noble-Ones from the Upstream-enterer (*sotapanna*) to the Arahant (*arahatta*). (*Visuddhi Magga*-1-123,124)

PAGE 352

3.3.2 *gocaragāma* (Alms round settlement)

Those kinds of settlements, presenting in south or north of monastery, resulting in avoiding to face with the sun during going or returning back, which is not so far but within one and half *kosa* (about 2,000 yards) and very easy to attain alms round foods, are very favourable settlements. It should be recognized unfavourable ones reversibly. (*Visuddhi Magga*-1-124)

3.3.3 *bhassa* (Speech)

Those kinds of speeches called *tiracchānakathā* which are opposite of wholesome realms, Noble Path, Fruition and *nibbāna*, are designate as unfavourable speeches for

meditators. Those are of 32 kinds by which an acquired sign of that **meditator** can be fallen off.

It would be presented *Tiracchānakathā Sutta, Mahāvagga Samyutta*, in order to be understood it and the intention of the Buddha which are very respectable instructions for every **meditator**.

***Tiracchānakathā Sutta* (relating to speeches of animal beings)**

Bhikkhus ...it should not be spoken various kinds of speeches, *tiracchānakathā*, which are opposite of the absorption, the Path, the Fruition and **nibbāna**. Which are those kinds of speeches? —

- | | | |
|-----|-----------------------|--|
| 1. | <i>rājakathā</i> | = speeches relating to king |
| 2. | <i>corakathā</i> | = speeches relating to rebel |
| 3. | <i>mahāmattakathā</i> | = speeches relating to minister (prime minister) |
| 4. | <i>senākathā</i> | = speeches relating to military |
| 5. | <i>bhayakathā</i> | = speeches relating to fear |
| 6. | <i>yuddhakathā</i> | = speeches relating to battle |
| 7. | <i>annakathā</i> | = speeches relating to foods |
| 8. | <i>pānakathā</i> | = speeches relating to drinks |
| 9. | <i>vatthakathā</i> | = speeches relating to clothes |
| 10. | <i>sayanakathā</i> | = speeches relating to shelter |
| 11. | <i>mālākathā</i> | = speeches relating to flowers |
| 12. | <i>gandhakathā</i> | = speeches relating to perfume |
| 13. | <i>ñātikathā</i> | = speeches relating to relatives |
| 14. | <i>yānakathā</i> | = speeches relating to vehicles |
| 15. | <i>gāmakathā</i> | = speeches relating to small settlement |

PAGE 353

- | | | |
|-----|-----------------------------|---|
| 16. | <i>nigamakathā</i> | = speeches relating to county |
| 17. | <i>nagarakathā</i> | = speeches relating to royal city |
| 18. | <i>janapadakathā</i> | = speeches relating to countryside |
| 19. | <i>itthikathā</i> | = speeches relating to woman |
| 20. | <i>sūrakathā</i> | = speeches relating to hero |
| 21. | <i>visikhākathā</i> | = speeches relating to road |
| 22. | <i>kumbhaṭṭhānakathā</i> | = speeches relating to bathing bank of river |
| 23. | <i>pubbapetakathā</i> | = speeches relating to dead person |
| 24. | <i>nānattakathā</i> | = speeches relating to miscellaneous fields |
| 25. | <i>lokakkhāyikakathā</i> | = speeches relating to outlook on world |
| 26. | <i>samuddakkhāyikakathā</i> | = speeches relating to ocean |
| 27. | <i>itibhavābhavakathā</i> | = speeches relating to progression and regression |
| 28. | <i>purisakathā</i> | = speeches relating to man |
| 29. | <i>araññakathā</i> | = speeches relating to forest |
| 30. | <i>pabbatakathā</i> | = speeches relating to mountain |
| 31. | <i>nadīkathā</i> | = speeches relating to river |
| 32. | <i>dīpakathā</i> | = speeches relating to island — |

these kinds of speeches belong to *tiracchānakathā*. Why should it not be spoken on those speeches?

Bhikkhus ...this kind of speech is not connected with benefit, it is not beginning of the Noble Practice; it is unable to disgust the suffering of rounds of rebirth, to avoid lust, to cease lust, to tranquil from all kinds of defilements (*kilesā*), to know penetratively the Four Noble

Truths, to know and see the Noble Path- Knowledge (*ariyamaggañāṇa*) by insight of oneself, to deliver from craving (*tahṇā*).

Bhikkhus ...if you want to speak —

1. it would be spoken the fact that ‘this is the Noble Truth of suffering (*dukkha ariya sacca*)’;

PAGE 354

2. it would be spoken the fact that ‘this is the Noble Truth of Cause of Suffering (*samudaya ariya sacca*)’;
3. it would be spoken the fact that ‘this is the Noble Truth of Cessation of Suffering (*nirodha ariya sacca*)’;
4. it would be spoken the fact that ‘this is the Noble Truth of the Course Leading to Cessation of Suffering (*magga ariya sacca*)’.

The reasons why it should be spoken are the facts that —

Bhikkhus ...this kind of speech is connected with benefit; it is beginning of the Noble Practice; it is able to disgust the suffering of rounds of rebirth, to avoid lust, to cease lust, to tranquil from all kinds of defilements (*kilesā*), to know penetratively the Four Noble Truths, to know and see the Noble Path-Knowledge (*ariya magga ñāṇa*) by insight of oneself, to deliver from craving (*tahṇā*).

Bhikkhus ...you must, therefore, endeavour in order to know...

1. this is the Noble Truth of Suffering,
2. this is the Noble Truth of Cause of Suffering,
3. this is the Noble Truth of Cessation of Suffering,
4. this is the Noble Truth of the Course Leading to Cessation of Suffering,

preached by the Buddha. (*Sam*-3-368)

[**Notes:** Among those 32 kinds of speeches, serial number 28, *purisakathā* is shown in some Pāli Text but not shown in some. Then serial numbers 29,30,31 and 32 which are relating to forest, mountain, river and island, are not directly shown in Pāli Text, however, it is commonly shown and counted by means of *iti* which is the last phrase of the 27 kinds of speeches, *iti bhavakatham iti vā*, shown in Pāli Text directly. — *tā hi pāliyam sarūpato anāgatāpi arañña-pabbata-nadī-dīpakathā iti-saddena saṅgahetvā saggamokkhānam tiracchānabhāvato “dvattimsa tiracchānakathā”ti vuttā.* (*Mahāṭṭhaka*-1-148)]

dasakathāvatthunissitam sappāyam, tampi mattāya bhāsitabbam. (*Visuddhi Magga*-1-124)

Those kinds of speeches relating to 10 kinds of *kathāvatthu* are favourable ones for the **meditator**. However it must also be spoken in proper range. Ten kinds of *kathāvatthu* are as follow:

1. *appicchakathā* = speech relating to greedless ness
2. *santuṭṭhikathā* = speech relating to contentment
3. *pavivekakathā* = speech relating to three kinds of seclusions (*viveka*),

[Three kinds of seclusions are...

- (a) *kāyaviveka* = physical seclusion by which such person is in a quiet place away from other people,
 - (b) *cittaviveka* = mental seclusion by which such person is avoiding from impurity of defilement after neighbourhood or full concentration had been developed,
 - (c) *upadhiviveka* = seclusion from clinging by which such person is avoiding from four kinds of clinging (*upadhi*) by taking the object of **nibbāna**.]
4. *asamsaggakathā* = speech relating to solitary
 5. *vīriyārambhakathā* = speech relating to effort

6. *sīlakathā* = speech relating to virtue
7. *samādhikathā* = speech relating to concentration
8. *paññākathā* = speech relating to wisdom
9. *vimuttikathā* = speech relating to the Fourth Fruition of Deliverance which are delivered from defilements
10. *vimuttiñāṇadassanakathā* = speech relating to reflecting knowledge which reflects the Fourth Fruition of Deliverance (*vimutti arahatta phala*).

Those kinds of speeches depending on ten kinds of *kathāvatthu* are favourable for **meditator**, in proper range. Every **meditator** who wants to attain **nibbāna** must, therefore, follow respectfully to the Buddha's admonishment by means of abstaining from 32 kinds of *tiracchānakathā* but by fulfilling to speak 10 kinds of *kathāvatthu* in proper range.

PAGE 355

3.3.4 Favourable Person – Unfavourable Person

Such person never spoke 32 kinds of *tiracchānakathā* but usually speaks in accordance with *dhamma* and only such kind of speech relating to practice; he had fulfilled with qualities of virtue, concentration and wisdom; by means of depending upon that person, unconcentrated mind becomes concentrated, concentrated mind also becomes stable; that kind of person can be designated as favourable person to whom association should be performed.

Such person is possession of practice of concentration and has reached in mastery of *samatha* practice. That kind of person, indeed, is favourable for association of every **meditator**.

Such person usually prefers to feed himself in order to become well physical appearance; speaks 32 kinds of *tiracchānakathā* which are opposite speeches of the Path and Fruition; endeavours to fulfil bodily agreeable feeling by means of bliss of reclining, sleeping, snoring after eaten a lot of foods as he likes, that kind of person is unfavourable one to whom none of **meditator** should associate.

As the muddy water is able to be opaque the clean water, that kind of person cause impurity of mind of **meditator**. As a young *bhikkhu* who stayed in *koṭapabbatavihāra* (Koṭa mountain monastery), lost acquired absorption due to depending on that kind of person, acquired absorption of **meditator** can be disappeared. The sign of full concentration is very easy to disappear indeed. (*Visuddhi Magga*-1-124, *Mahāṭṭkā*-1-149)

3.3.5 Nourishment (*bhojana*)

3.3.6 Season (*utu*)

Those nourishment with sweet taste are favourable for some **meditators**, while those with sour taste are favourable for some **meditators**. (The commentator explained only two kinds of tastes because it

PAGE 356

can be seen that these two kinds of tastes benefit the most animals. The remaining tastes, such as bitter, hot etc..., are able to suit those sweet and sour tastes with the result that the commentator omit to explain the latter. In other words, it should be recognized that it is a methodology of *upalakkhaṇa* or *nidassana* by which the significant character would be explained.)

Cold season is favourable for some *meditators*, while hot season is favourable for others.

Therefore such nutriment and such season depending on which the *meditator* becomes agreeable feeling; un-concentrated mind becomes concentrated (= inexperienced concentration becomes apparent); concentrated mind becomes stable (= experienced concentration becomes especially stable). Those kinds of nourishments and seasons are favourable for the *meditator*. Other kinds of nourishments and seasons in reverse can be called unfavourable nourishments and seasons. (*Visuddhi Magga*-1-124, *Mahāṭīkā*-1-149)

3.3.7 Deportment (*iriyāpatha*)

Among various kinds of deportments, walking deportment is favourable for some *meditators* while, any one of deportments, reclining, standing, sitting, is favourable for some. Therefore a such deportment during which the *meditator* practices for three days tentatively and un-concentrated mind becomes concentrated (= inexperienced concentration occurs); concentrated mind becomes stable; such kind of deportment is favourable one but others are not for him. (*Visuddhi Magga*-1-124)

iti imam satta vidham asappāyam vajjetvā sappāyam sevitabbam. evam paṭipannassa hi nimittāsevanabahulassa nacireneva kālena hoti kassaci apanā. (*Visuddhi Magga*-1-125)

Thus the *meditator* should fulfil seven kinds of favourable conditions and abstain from seven kinds of unfavourable ones. In some practicing *meditators* who always fulfil the stability of the sign of full concentration, which is the pasture of the object of mind of meditation, the full absorption would be occurred not soon later. (*Visuddhi Magga*-1-125)

PAGE 357

3.4 Ten kinds of mastery of full absorption (*appanākosalla*)

Although it is practiced well in this way, if the full absorption does not occur, that *meditator* should fulfil the knowledge of 10 kinds of mastery of full absorption, as follow:

1. *vatthuvisadakiriya* = keeping clean circumstances of both internally and externally
2. *indriyasamattapaṭipādanā* = balancing of controlling faculties
3. *nimittakosalla* = mastery of the sign of concentration
4. enhancing the mind in proper time
5. suppressing on mind in proper time
6. cause to be happy in proper time
7. neutralizing on mind in proper time
8. avoiding from any person without concentration
9. associating with such person with concentration
10. presence of the mind with inclination toward full absorption

3.4.1 Cleansing all circumstances

Keeping clean circumstances of both internally and externally is called ‘*vatthuvisadakiriya*’. Sometimes hairs, nails and claws, beards, moustache, etc. of such **meditator** become long, the entire body is covered with sweat and dusts, at that time it can be said that internal circumstance is unclean. Sometimes dressing or robe of that **meditator** is decayed and dirty with bad odour; the campus and buildings are full of rubbish; at that time it can be said that external circumstance is unclean. If both internal and external circumstances are full of impurities, the knowledge associated with mind and mental concomitants which take the object of unclean circumstances, become unclean. It should be recognized as unclean light which occurs depending upon unclean lamp, oil etc.. For the **meditator** who observes *saṅkhāra dhammas* by unclean knowledge, those *saṅkhāra dhammas* usually become unapparent.

For the **meditator** who develops *samatha* practices as the mindfulness of breathing, those practices would never be

1. improved the factors of absorption apparently,
2. advanced by proficiently practicing and
3. accomplished by advancement of mastery.

On the other hand, if both internal and external circumstances are thoroughly purified, the knowledge also becomes purified due to occurrence of mind and mental concomitants depending on cleaned circumstances. It should be recognized as purified light which occurs depending upon

PAGE 358

cleaned lamp, oil, etc.. For the **meditator** who observes *saṅkhāra dhammas* by purified knowledge, those *saṅkhāra dhammas* usually become apparently.

For the **meditator** who develops *samatha* practices as the mindfulness of breathing, those practices will also be

1. improved the factors of absorption apparently,
2. advanced by proficiently practicing and
3. accomplished by advancement of mastery. (*Visuddhi Magga*-1-125)

3.4.2 Balancing between controlling faculties

Balancing between functions of controlling factors of respective couples is called *indriya samattapaṭipādana* (= achievement of balanced controlling faculties).

saddhā (Faith) = The nature of faith with self-confidence on –

1. the nobility of the Buddha
2. the nobility of the Noble Doctrine (*Dhamma*)
3. the nobility of the Community of *bhikkhus*
4. the nobility of the three trainings, i.e., virtue, concentration, and wisdom
5. the outlook of relationship of Dependence-Origination (*paṭiccasamuppāda*)
6. the past five aggregates called anterior extremity of rounds of rebirth (*samsāra*)
7. the future five aggregates called posterior extremity of rounds of rebirth
8. both past and future five aggregates called anterior and posterior extremities of rounds of rebirth, is called the faith (*saddhā*).

virīya (Effort) = Strenuous effort by which inexperienced unwholesome *dhamma* would be impossible to occur, experienced wholesome *dhamma* would be abandoned, inexperienced wholesome *dhamma* would be possible to occur, experienced wholesome

dhamma would be improved, is called *sammappadhāna vīriya*. During fulfilling that kind of strenuous effort, the **meditator** must endeavour by means of four factors of effort, i.e.,

- ‘1. as if only bone remains,
2. as if only skin remains,
3. as if only vessels remains,
4. as if flesh and blood will be dried out, it would be never given up without reaching to any achievement where could be performed by means of strenuous effort of mankind.’

sati (Mindfulness) = It is the nature of stability of mind on the object of the sign in *samatha* stage, fixability of mind of either the object of *vipassanā* practice (*sañkhāra dhamma*) or the object of

PAGE 359

general characters of those *sañkhāra dhammas*. As a slab submerge in stable condition, the nature of stability of mind on the objects of *samatha* and *vipassanā* is called the mindfulness (*sati*).

ayam pana yasmā satiyā ārammaṇam pariggahetvā paññāya anupassati, na hi sativirahitassa anupassanā nāma atthi. tenevāha “satim ca khvāham bhikkhave sabbatthikam vadāmi”ti. (M-Com-1-248)

By means of the mindfulness the objects of *samatha* and *vipassanā* are kept in mind, then those objects must be discerned repeatedly by means of knowledge. There is no *anupassanā ñāṇa* (the knowledge of repeated discerning) in the continuum of such person lacking in mindfulness. The Buddha, therefore, preached the fact that ‘the mindfulness is essential for every time’ (for every function of mind by which praise or suppression can be performed).

The mindfulness is very essential in the practice of mindfulness of breathing for beginners. The mindfulness keep in mind on the object of sign of full concentration while the knowledge know and see penetratively that object.

samādhi (Concentration) = It is the nature of non-dispersion of associating mind and mental concomitants from the object of *samatha* or *vipassanā*. It is the nature of one-pointedness of the mind on discerned object of *samatha* or *vipassanā*. It is an ability to concentrate firmly associating mind and mental concomitants on a single object. When the concentration becomes powerful, mind of meditation become strongly proficient resulting in sharpening of the knowledge which associated with mind of meditation. The sword of knowledge which is sharpened on the slab of concentration is capable of penetrating the compactness of corporeality and mentality. It is able to break through the cycle of rounds of rebirth of Dependence-Origination (*paṭiccasamuppāda*). Those kinds of capabilities which can know and see penetratively the general characters of corporealities, mentalities, causes and results up to other bank of *nibbāna*, would be deposited.

paññindare (Controlling faculty of knowledge) = It is the nature of knowing penetratively on the object of respective meditation subject in *samatha* stage, while that of knowing and seeing penetratively on *sañkhāra dhamma* up to the field of ultimate reality and on general characters of those *sañkhāra dhamma* up to reach the other bank of *nibbāna*, in *vipassanā* stage. During the Path (-moment), it is the nature of facing with *nibbāna*, called *ārammaṇa paṭiveda* and that of rejecting delusion (*moha*) which conceals remaining three Noble Truths not to know and see, called *asammoha paṭiveda*. During the Fruit (-moment) it is the nature of penetrative knowing and seeing on *nibbāna*. Thus the nature of penetrative knowing and seeing on the object of sign of *samatha* and

PAGE 360

every ultimate *dhamma* is called *paññindare*.

Those five *dhammas* called faith, effort, mindfulness, concentration and knowledge, are five controlling factors which are capable of maintaining on mind of meditation not to mislead from the paths of *samatha* and *vipassanā*. In other words, those five kinds are powerful factors which is able to lead mind of meditation of *meditator* to the Noble Eightfold Path up to *nibbāna* without misleading to extremes. Only when the *meditator* who is practicing *samatha* and *vipassanā*, is able to balance those five controlling faculties, can the required performance be fulfilled.

3.4.2.a If the faith is predominant

If in the continuum of that *meditator* the controlling faculty of faith is extremely strong due to decrease in effort, instability of mindfulness, not long lasting situation of concentration resulting from the function of *saddhādhimokkha* which is able to decide confidently of the nobility of the Buddha, etc...is predominant, the controlling faculty of effort is unable to reinforce mind and mental concomitants not to be fallen back from the object of *samatha* and *vipassanā*.

The controlling faculty of mindfulness (*satindriya*) is also unable to perform the function of firmly fix on the object (*upaṭṭhāna kicca*). The controlling faculty of concentration (*samādhindriya*) is unable to perform the function of non-dispersion from object (*avikkhepa kicca*), while that of knowledge (*paññindare*) is unable to form the function of seeing real nature of the objects of *samatha* and *vipassanā* (*dassana kicca*), due to predominance of controlling factor of faith.

Required performance can be fulfilled by means of harmonious functions of controlling faculties called faith, effort, mindfulness, concentration and knowledge, which are compatible *dhammas* occurring within one mind moment simultaneously. If harmony will be absence it is unable to occur fulfilment of required performance consequently. Therefore it must be performed on order to diminish controlling faculty of faith by means of either thorough scrutinizing and reflecting on real nature of the ultimate *dhamma* called the specific character (*sabhāva lakkhaṇā*), the general character (*sāmañña lakkhaṇā*), or avoiding from practicing in order to be powerful the faith

PAGE 361

accordingly. The story of the most Venerable Vakkali Thera is a good evidence in this case. (*Visuddhi Magga*-1-125,126)

Reflecting on the nature of *dhamma* (*dhamma sabhāva paccavekkhaṇā*) — It means that when the controlling faculty of faith is extremely strong in the continuum of *meditator* who is taking into heart the nobility of the Buddha etc., it must be diminished the controlling faculty of faith by means of discrimination on causal *dhamma* and resultant *dhamma*, and of scrutinizing on the real natures of the ultimate *dhammas* as they really are.

Especially it must be scrutinized and discerned on the causes of occurrence of faith and the resultant *dhamma* called mind and mental concomitants which are occurring associated with faith. Thus if the knowledge is able to discriminate the occurrence of resultant *dhamma* in accordance with the causal *dhamma*, up to reach the specific characters

of those *dhamma* by means of *evamdhammatā* way, there is no opportunity to occur extremely strong faith. It is because the arising of strong knowledge which thoroughly knows and distinguish the fact that ‘this kind of faith is only the nature of the ultimate *dhamma* which are due to this kind of causal *dhamma*, indeed’, etc. Those two kinds of *dhammas*, the faith and knowledge, are two obligatory *dhamma* (*dura*) which must be harmoniously performed in the practice of *samatha* and *vipassanā*. Between these two kinds when the faith is predominant the knowledge becomes weak and vice versa. The commentary, therefore, explained that ‘it must be diminished the faith by means of reflecting on the nature of ultimate *dhamma*’. (*Mahāṭṭhā-kā-1-151*) [*Evamdhammatā* way can be seen in detail in section 6, Dependence-Origin, Volume III]

3.4.2.b It should not be taken into heart in order to occur increase of faith

Secondly, it must not be taken into heart the practice in order to occur increase of faith. In this case, two kinds of factors may increase the controlling faculty of faith. Due to predominant function of determining on the object which is deserving to be faithful, resulting from respective conditions which benefit the occurrence of faith and due to diminished function of effort, mindfulness, concentration and knowledge, the controlling faculty of faith becomes strong extremely. For those two conditions how to diminish controlling faculty of faith, the first mode has already been presented as mentioned above.

PAGE 362

For second factor, it should not be taken into heart in order to occur increase controlling factor of faith but it must be taken into heart the practice by means of intention with the effort, mindfulness, concentration, knowledge would be improved. Thus the controlling faculty of faith must be diminished by balancing functions of effort, mindfulness, concentration and knowledge in order to occur harmonious functions among those controlling faculties. (*Mahāṭṭhā-kā-1-151*)

3.4.2.c If the effort is predominant

If the controlling faculty of effort is extremely predominant, at that time the controlling faculty of faith is unable to perform the function of determining on objects deserving to be faithful (*saddheya vatthu*), while the controlling faculty of mindfulness is unable to perform the function of firmly fix on the object, that of concentration is unable to perform the function of non-dispersion from object, that of knowledge is unable to perform the function of seeing real nature of the objects of *samatha* and *vipassanā*. Therefore it must be diminished the controlling faculty of effort by means of thorough developing of three factors of enlightenments (*bojjhaṅga*) called tranquillity (*passadhi*), concentration and equanimity (*upekkhā*). The story of the most Venerable Soṇa Thera is a good evidence in this case. (*Visuddhi Magga-1-126*)

As the predominant controlling faculty of faith diminished by means of thorough scrutinizing and reflecting on real nature of the ultimate *dhamma* called specific character and general character, the predominant controlling faculty of effort also diminished by means of developing factors of enlightenment called tranquillity, concentration, and equanimity. Those factors of enlightenments are compatible factors of the concentration of the practice. (It means that when those three factors of enlightenment are fulfilled, the concentration will be occurred resulting in balancing between the effort and concentration.)

It is right. — As the predominant controlling faculty of concentration would be diminished by means of developing factors of enlightenment called effort, wisdom, zest (*pīti*), which are able to protect the practice not to fall into laziness, the predominant controlling faculty of effort would be diminished by means of developing factors of enlightenment called tranquillity, concentration, and equanimity, which are able to protect the practice not to fall into unrest (*uddhacca*). The commentator, therefore, explained that it must be performed, in order to diminish effort, by means of developing three kinds of factors of enlightenment called, tranquillity, etc. (*Mahāṭīkā*-1-152)

PAGE 363

3.4.2.d The most Venerable *Vakkali* Thera

The most Venerable *Vakkali* Thera was a noble one who had well deposited seed of practice (*carāṇa*) and seed of wisdom (*vijjā*) at the time of *Padumuttara* Buddha appeared in the world in order to attain “Master of Faith”, a title given by the such Buddha, and he became a noble one with that kind of title in the time of *Gotama* Buddha.

When the so-called Venerable *Vakkali* who had fulfilled with great wholesome deeds for the “Master of Faith”, wasted the time to see physical appearance of the Buddha without any practice, the Buddha admonished that _____

“*kim te Vakkali iminā pūtikāyena diṭṭhena, yo kho Vakkali dhammam passati, so mam passati*” (*Sam*-2-98)

“*Vakkali...* how it would be any benefit by seeing this decaying body for ! Such a person sees nine kinds of the supra-mundane dhamma by penetrating knowledge, that person sees me (the Buddha) by wisdom-eye.” (*Sam*-2-98)

Although the Buddha urged Venerable *Vakkali* to practise, he neglected the admonishment with the result that the Buddha compelled him to get out. When the Buddha compelled him to get out Venerable *Vakkali* climb up the chasm in order to commit suicide. At that time the Buddha, by the way in sitting deportment, released royal brilliant lights to show his marvellous physical appearance and preached him as,

“*pāmojjabahulo bhikkhu, pasanno buddhasāsane.*

adhigicche padam santam, saṅkhārūpasamam sukham. (*Khu*-1-68)

“The *bhikkhu* who always predominated with zest due to great respect on the Buddha’s admonishment, can attain the eternal peace of *nibbāna*, which is the most quiescent; is free from *saṅkhāradhamma*; which would be attained by the Path-Knowledge and Fruit-Knowledge.”

After preached in this way, the Buddha said that “come on *Vakkali*”...*Vakkali*, due to presence of pleasurable interest with the Buddha’s speech, developed *vipassanā* knowledge meanwhile. However, owing to extreme predominated faith, it was unable to fall on right path of *vipassanā* practice. The Buddha, then, adjusted his way of practice in order to balance five controlling faculties harmoniously. Meanwhile *Vakkali* Thera performed *vipassanā* practice in accordance with the Buddha’s teaching and reached the Fourth Fruition-Knowledge successively. (*Mahāṭī*-1- 151,152)

PAGE 364

3.4.2.e The most Venerable *Soṇa* Thera

The most Venerable *Soṇa Thera*, who was very subtle physical appearance with fine bodily hairs under soles of his foots, after learned the way of practice under the Buddha, stayed in the forest monastery called *sītavana*, and endeavoured *vipassanā* practice appreciatively. During practicing in That way, he suggested that —

“mama sarīram sukhumālam, na ca sakkā sukheva sukham adhigantum, kāyam kilametvāpi samaṇadhammo kātabbo” (*Mahāṭṭi-1-152*) —

“my physical situation is very subtle; it is impossible to occur agreeable ones by means of agreeable ones; it would be deserved to fulfil bhikkhu’s *dhamma* by means of strenuous effort of the body only.”

Then he made a strong determination with only two kinds of deportments, standing and walking, and practiced strenuously resulting in occurrence of rounded blisters under soles of his foots. When he strenuously practiced his obligation irrespective of physical suffering, it is unable to appear the Supra-mundane *dhamma* called the Path-Knowledge and Fruit-Knowledge due to extreme effort. Meanwhile the Buddha went to the place where Venerable *Soṇa* was practising and instructed to balance the effort and concentration by means of showing a simile of harp which has adjusted strings to pluck with fingers. Then the Buddha returned back to *Gijjhakūṭa* mountain. The most Venerable *Soṇa Thera* fulfilled his obligation by balancing between the effort and concentration with the result that he reached to the Fourth-Knowledge successively. (*Mahāṭṭi-1-152*)

3.4.2.f Voice of the praise of virtuous ones

Similarly, it should be recognized that among the remaining controlling faculties, i.e., mindfulness, concentration and knowledge, it is impossible to achieve respective function of weaker controlling faculty due to occurrence of extremely predominated ones.

Especially, the Noble teachers usually praise the harmonious occurrence between either the faith and knowledge of the concentration and effort respectively. (*Visuddhi-1-126*)

During fulfilling the practices of both *samatha* and *vipassanā*, it plays essential role in balancing between the obligatory faith (*saddhādhura*) and the obligatory knowledge (*paññādhura*) which are capable of performing respective function. As if

PAGE 365

those faith and knowledge have harmonious functions, the full absorption can be fulfilled, similarly, if those controlling factors, the concentration which can fall on laziness (*kosajja*) and the effort which can fall on unrest (*uddhacca*) have harmonious functions, the full absorption can be fulfilled well due to lack of possibility of mind and mental concomitants to fall any kind of extremity. (*Mahāṭṭi-1-153*)

3.4.2.g Predominant faith with weak knowledge- Predominant knowledge with weak faith

balavasaddho hi mandapañño muddhappasanno hoti, avatthusmim pasīdati. balavapañño mandasaddho kerāṭṭikapakkham bhajati, bhesajjasamuṭṭhito viya rogo atekiccho hoti. ubhinnam samatāya vatthusmimyeva pasīdati. (Visuddhi-1-126; M-Com-1-295)

A such person fulfilled very strong firm faith but retarded and weak knowledge. That kind of person usually pays respect vain person who lacks essence of the wholesome *dhamma*, similar to disciples of *tiṭṭhiya*, out of the Buddha’s *sāsanā*, and pays respect on vain objects, similar to a blind elephant wanders in the forest; it is incapable of paying respect on

the right objects, such as triple gems, the *kamma* and the results of *kamma* etc., which are deserving to be strongly believed with penetrative knowledge but on wrong objects, which are not fertile fields sown with the seeds of wholesome deeds.

On the other hand, a such person with predominant knowledge but weak faith, usually inclines toward wicked extremity; due to lack of faith but extreme knowledge, that kind of person with wrong reasons, usually assumes that “the wholesome deed of charity can be occurred by only intention of mind without any offering” etc. That kind of person with dried volition (*cetanā*) associated with mind which is destroyed by imagination, never follows the admonishment of noble wise teachers; although noble wise teachers advise him well it cannot be reached to the stage of being understood. As a such disease caused by medicine is very difficult to cure, that kind of person with predominant knowledge but weak faith is very difficult to become admonishable one. Only when those two kinds of *dhammas* called the faith and knowledge are harmonious in functions can he pay respect *saddheyavatthu* the real Buddha, Dhamma, Sangha etc., which are fertile fields sown with the seeds of wholesome deeds.

Among these five controlling faculties, if disharmonious functions of the faith and knowledge are present, ineffectiveness of the *samatha* and *vipassanā* practices will be occurred, disharmonious functions of the concentration and effort usually give rise to

PAGE 366

dispersion of the mind (*vikkhepa*) from the object but not non-dispersion of the mind (*a-vikkhepa*) called the concentration (*samādhi*). (*Visuddhi*-1-126, *Mahāṭī*-1-153)

3.4.2.h The concentration and effort

balavasamādhim pana mandavīriyam samādhissa kosajjapakkhattā kosajjam abhibhavati. balavavīriyam mandasamādhim vīriyassa uddhaccapakkhattā uddhaccam abhibhavati. samādhi pana vīriyena samyojito kosajje patitum na labhati. vīriyam samādhinā samyojitam uddhacce patitum na labhati, tasmā tadubhayam samam kātabbam. ubhayasamatāya hi appanā hoti. (*Visuddhi*-1-126, *M-Com*-1-295,296)

The person with predominant concentration but not effort can usually be suppressed by laziness (*kosajja*) due to presence of laziness to which the concentration is bent. The person with predominant effort but not concentration can usually suppressed by unrest (*uddhacca*) due to presence of unrest to which the effort is bent.

Actually, the concentration which is yoked with balanced effort harmoniously is impossible to fall into laziness. Meanwhile the effort which is yoked with balanced concentration harmoniously is impossible to fall into unrest. The *meditator*, therefore, should perform in order to attain harmonious functions of two pairs of controlling faculties, the faith and knowledge, the effort and concentration. The effectiveness is that — the harmonious functions between faith and knowledge, those between effort and concentration, cause the resultant full absorption consequently. (*Visuddhi*-1-126, *M-Com*-1-295-296)

According to various quotations shown in above scriptures, those elder teachers of olden days usually admonish that “the stronger effort, the higher unrest; the stronger concentration, the greater laziness”, respectively. This is a noble rule to which any *meditator* who wants to attain *nibbāna* should follow respectfully.

3.4.2.i. *samādhikammika and vipassanākamika*

apica samādhikammikassa balavatīpi saddhā vaṭṭati. evam saddahanto okappento appanam pāpuṇissati. samādhipaṇṇāsu pana samādhikammikassa ekaggatā balavatī vaṭṭati. evañhi so appanam pāpuṇāti. vipassanākamikassa paṇṇā balavatī vaṭṭati. evañhi so lakkhaṇapaṭivedham pāpuṇāti. ubhinnaṃ pana samatāyapi appanā hotiyeva. (Visuddhi-1-126; M-Com-1-296; Sam-Com-3-194,195)

saddahantoti “pathavī-pathavī”ti manasikaraṇamattena katham jhānuppattīti acintetvā “addhā sammāsambuddhena vuttavidhi ijjhissatī”ti saddahanto saddham janento. (Mahāṭī-1-153)

PAGE 367

There are a few exceptions that — for *samādhikammika* person who is developing concentration through any kind of *samatha* practice, it is favourable situation that the faith is a little predominated. If he never reason the facts that “how the *jhānic dhamma* could be occurred by merely taking into heart as ‘earth’, ‘earth’, and how the *jhānic dhamma* could be occurred by merely taking into heart as ‘the in-breath, the out-breath’ through the object of sign of neighbourhood or full concentration, which is depending upon in-breath and out-breath’, etc., and if he has firm faith on the preaching of the Buddha and on the object profoundly, it will be reached into the full absorption certainly.

The next kind — for *samādhikammika* person who is developing concentration through any kind of *samatha* practice, it is favourable situation that the concentration which is stable on the one-pointedness of the object (*pathavī kasiṇa* or in-breath and out-breath) is a little predominated. Due to presence of significant role of concentration in the full absorption, *samādhikammika* person will reached into full absorption certainly. This is the advantages of predominant concentration. (“*samādhipadhānattā jhānassa*”, *Mahāṭī-1-153*)

On the other hand, for *vipassanākamika* person who is generalizing on *saṅkhārādhammas* by means of three general characters alternatively, it is favourable situation that the knowledge is moderately predominated. The advantage is that — if the knowledge is powerful in this way, it is capable of knowing and seeing penetratively on general characters called the natures of *anicca*, *dukkha*, *anatta* for that *meditator*. (*Visuddhi-1-126, M-Com-1-296, Sam. Com-3-194-195*)

ubhinnaṃ pana samatāyapi appanā hotiyeva. (Visuddhi-1-126; M-Com-1-296)

ubhinnaṃti samādhipaṇṇānam, samādhikammikassa samādhino adhimattatāpi icchitabbāti āha “samatāyapi”ti, samabhāvenāpīti attho. appanāti idhādhippetaappanā. tathā hi “hotiyevā”ti sāsaṅkam vadati. lokuttarappanā pana tesam samabhāveneva icchitā. yathāha “samathavipassanam yuganaddham bhāveti”ti. (Mahāṭī-1-153)

Actually, for *samādhikammika* person with balanced concentration and knowledge, the mundane full absorption can be occurred well, such as the absorption of the mindfulness of breathing. It means that “as the full absorption can be occurred for *samādhikammika* person with predominant concentration, that can also be occurred for that kind of person with balanced controlling faculties of concentration and knowledge. Thus the commentator explained the fact with exceptional doubt that “*hotiyeva* = can also be occurred.” However, the Path-Knowledge and Fruit-Knowledge called *lokuttarā appanā*, is essential to be occurred by means of occurrence of those harmonious concentration and knowledge, indeed.

PAGE 368

samathavipassanam yuganaddham bhāveti. (Aṅg-1-475; Paṭisam-283-288)

It is because of the fact that the Buddha preached that “it should be performed two *dharmas* called *samatha* and *vipassanā* or the concentration and knowledge, as two bullocks are yoked together in balanced condition.” (*Mahāṭṭi*-1-153, *Sam-ṭi*-2-435)

[Notes: Explanation on *yuganaddha naya* (=the way of yoking) will be presented in section 9, *vipassanā* stage, Volume V]

3.4.2.j. The mindfulness (*sati*)

sati pana sabbattha balavatī vaṭṭati. sati hi cittaṃ uddhaccapakkhikānaṃ saddhāvīriyapaññānaṃ vasena uddhaccapātato kosajjapakkhena ca samādhinā kosajjapātato rakkhati, tasmā sā loṇadhūnaṃ viya sabbabyañjanesu, sabbakammikaamacco viya ca sabbarājakicesu sabbattha icchitabbā. tenāha “sati ca pana sabbatthikā vuttā bhagavatā. kim kāraṇā, cittaṇhi satipaṭisaraṇaṃ, āraṃhapaccupaṭṭhānā ca sati, na vinā satiā cittaṃ paggahaniggaho hotī”ti. (*Visuddhi*-1-126; *Sam-Com*-3-195)

=Among those five controlling faculties, if the harmonious functions of faith and knowledge, those of concentration and effort, are essential, how the mindfulness involves among them and the commentator explained above words. The meaning of those words are as follow:

Especially, in all practices of *samatha* and *vipassanā*, if the mindfulness between two extremities i.e., *līnapakkha* which is retarded mind of meditation and *uddhaccapakkha* which is wandering mind of meditation, is predominant, it is favourable situation, indeed. The reasons are that _____ if those *dharmas*, faith, effort, and knowledge, are predominant, it is one extremity of unrest situation. Meanwhile very powerful mindfulness can protect the mind of meditation not to fall into extremity of wandering from objects of *samatha* and *vipassanā*. It can also protect the mind of meditation not to fall into extremity of laziness which is the resultant *dhamma* of predominant concentration. That mindfulness, therefore, is essential between one extremity of laziness and one extremity of unrest for all kinds of practices of *samatha* and *vipassanā*. Therefore, among five controlling faculties, only the mindfulness yokes with

PAGE 369

all kinds of practices of *samatha* and *vipassanā*. As both the adding of salt or salt and flavourings is essential for all kinds of curries answer the appropriate minister who can achieve various administrations of the king, is essential for all kinds of those functions, the mindfulness is essential between two kinds of extremities for all practices of *samatha* and *vipassanā*. Therefore, among five controlling faculties, faith, effort, mindfulness, concentration, wisdom only the mindfulness yokes with all kinds of practices of *samatha* and *vipassanā*. The Buddha preached that the mindfulness is essential for all kinds of practices of either during developing those factors of enlightenment, tranquillity, concentration and equanimity, which are one extremity of laziness, or during developing those factors of enlightenment, wisdom, effort and zest, which are one extremity of unrest, actually. The reason why it is preached that _____

Every wholesome consciousness, especially every mind of meditation always depends upon refuge of the mindfulness. The mindfulness is manifested as “the nature which controls both the mind and object not to misleading from right way of the practice” in the insight of *meditator*. Unless the mindfulness is fulfilled those functions of both enhancing (*paggaha*) and suppressing (*niggaha*) of the mind of meditation are unable to performed. The Buddha,

therefore, preached that “the mindfulness is essential for all kinds of functions of *samatha* and *vipassanā* practices. (*Visuddhi*-1-126, *M-Com*-1-296, *Sam-Com*-3-195)

All these explanations are related with how to balance controlling faculties, which is the second factor of ten kinds of mastery of full absorption (*appanākosalla*).

Now the *meditator* who is developing concentration through the mindfulness of breathing must fulfil in order to attain harmonious functions between either the faith and knowledge or the effort and concentration. If the concentration is little predominated, it is favourable situation due to reason that it is developing period of the concentration.

The nature of penetrative knowing and seeing brilliant sign of full concentration is called the knowledge (*paññā*). Owing to that knowledge is capable of controlling the mind of meditation not to fall into wrong way from the object of sign of full concentration, it is also designated as *paññindare* (=controlling faculty of knowledge).

The nature of firmly fixed stability of the mind of meditation on the object of sign of *samatha* practice is called the concentration (*samādhi*). Owing to that concentration is capable of

PAGE 370

controlling the mind of meditation not to fall into wrong way from the object of sign of full concentration, it is designated as *samādhindare* (=the controlling faculty of concentration).

In this stage of *samatha*, the concentration and knowledge must be practiced in order to balance by means of *yuganaddha* method (= the method of yoked together). Meanwhile it is very essential to supporting factor of the faith for the knowledge, that of the effort for concentration.

Owing to the faith is also capable of controlling the mind of meditation not to fall into wrong way from the object of sign of full concentration, it is designated as *saddhindare* (= the controlling faculty of faith). For a *meditator* who is capable of taking the object of sign of full concentration, the firm faith on the noble training of concentration, taught by the Buddha, would be appeared certainly. The controlling faculty of the knowledge, which is supported by firm faith, will become powerful.

Similarly, the controlling faculty of concentration, if it is supported by controlling faculty of effort, will become powerful and greater in stability. Owing to presence of the function of enhancing of the effort, the controlling faculty of concentration can perform the function through which the mind of meditation can fix with the object of the practice for long time , one hour, two hours, etc.

It must be balanced between those pairs, the faith and knowledge; the concentration and effort by means of controlling faculty of mind fullness, *satindare*. Now it should be recognized well the fact that the object which is put by the mindfulness is the sign of full concentration. The nature of remembrance and un-forgetting on brilliant sign of full concentration is designated as the controlling faculty of mindfulness, *satindare*. It is a kind of capability by which the mind of meditation never fall into wrong way of the object of sign of full concentration. The mindfulness which leads to the sign of full concentration must balance carefully in order to attain harmonious functions of the faith and knowledge, the effort and concentration, which are also leading to the same object

PAGE 371

simultaneously. The Buddha, therefore, preached that the mindfulness is essential for all kinds of meditation subjects forever. It can be well understood how to balance seven kinds of associating factors of enlightenment.

3.4.3 *nimittakosalla* = mastery of the sign of concentration

nimittakosallam nāma pathavīkasiṇādikassa cittekaggatānimittassa akatassa karaṇakosallam, katassa ca bhāvanākosallam, bhāvanāya laddhassa rakkhaṇakosallañca, tam idha adhippetam. (Visuddhi-1-126)

cittekaggatānimittassāti cittekaggatāya nimittassa, cittekaggatāsaṅkhātassa ca nimitassa. citassa hi samāhitākāram sallakkhetvā samathanimittam rakkhantoyeva kasiṇanimittam rakkhati. tasmā pathavākasiṇādikassāti ādi-saddena nakevalam paṭibhāganimittasveva, atha kho samathanimittassāpi gahaṇam daṭṭhabbam. tanti rakkhaṇakosallam. idha appanākosallakathāyam “nimittakosalla”nti adhippetam. karaṇabhāvanā kosallānam pageva siddhattāti adhippāyo. (Mahāṭṭi-1-154)

The meaning of above quotations of commentary and sub-commentary is as follows:

There are three kinds of mastery, i.e., *karaṇa kosalla*, *bhāvanā kosalla*, *rakkhaṇa kosalla* in the portion of *nimitta kosalla*. Then there are two kinds of *cittekaggatā nimitta*.

3.4.3.a. Two kinds of *cittekaggatā nimitta*

1. Very brilliant sign of full concentration, which is the object of mind of *samatha* practices, conditions the mind of meditation by means of supporting condition of the object (*ārammaṇa paccaya*) in order to occur one-pointedness of mind on it. The sign of full concentration, therefore, can be designated as *cittekaggatā nimitta* due to occurrence of cause of one-pointedness of the mind on the object.
2. Preceding concentration which is one-pointedness of the mind on the object of sign of full concentration, is designated as the sign of practice (*samatha nimitta*) due to occurrence of cause of succeeding concentration. It is right. — Only when the person protects well on *samatha nimitta* called one-pointedness nature of concentration, can he be designated as the person who protects the sign of *kasiṇa* (or the sign of full concentration of mindfulness of breathing). The *meditator* who wants to protect concentration not to fall back, must take into heart that sign of full concentration frequently because the preceding concentration is also leading to the sign of full

PAGE 372

concentration continuously. Wise attention (*yonisomanasikāra*) must be carried out frequently. Thus protection on *samatha nimitta* called preceding concentration is capable of protecting on the object of *kasiṇa* and sign of full concentration simultaneously. Thus, in this case, with regarding to the term *cittekaggatā nimitta*, it must be designated as both two kinds, sign of full concentration and sign of practice (*samatha nimitta*) called the preceding concentration.

3.4.3.b. Three kinds of mastery (*kosalla*)

1. *karaṇakosalla* — Mastery in making preliminary sign of *kasiṇa*, such as earth-*kasiṇa*, etc., which is newly one on which one-pointedness of the mind of meditation fixes firmly, is called *karaṇakosalla*.
2. *bhāvanākosalla* — Mastery in developing of the sign of preliminary concentration (*parikamma nimitta*) that of neighbourhood concentration (*uggaha nimitta*), that of full concentration (*paṭibhāga nimitta*) which are fulfilled, is called *bhāvanākosalla*. The ability to

spreading out the fulfilled sign of *kasiṇa*, such as, earth-*kasiṇa* etc., ten directions up to infinite universes, is also called *bhāvanā kosalla*. If the signs of *kasiṇa*-objects are put through in order to spread out infinitely, the mind of meditation will be improved up to the full absorption. [But, it must not be spread out the sign of full concentration of mindfulness of breathing. It will be explained in detail later section.]

Mastery in developing sign of *samatha* practice (*samatha nimitta*) called preceding *cittakaggatā*, is also designated as *bhāvanā kosalla*.

3. ***rakkhaṇakosalla*** — Mastery in protecting sign of full concentration (*paṭibhāga nimitta*) and sign of *samatha* practice, is designated as *rakkhaṇakosalla*. That *rakkhaṇakosalla* refers to *nimitta kosalla* for this section of *appanākosalla*, because *karaṇakosalla* and *bhāvanā kosalla* had been fulfilled previously, indeed.

With regarding to above commentary and sub-commentary, the *meditator* who is developing concentration by taking the object of sign of full concentration, must be able to protect both the sign of full concentration and sign of *samatha* practice in order to occur for long time not to be disappeared. It is a question that how to practice in order to attain mastery of protecting those signs. Practicing by means of balanced controlling faculties and practicing by means of balanced association factors of enlightenment are essential for maintenance of those signs of full concentration and *samatha* practice. The way how to practice in order to attain balanced controlling faculties has been explained above and then it will be continued how to practice in order to attain balanced associating factors of enlightenment (*bodhipakkhiya dhamma*).

PAGE 373

3.4.4 It should be enhance the mind in proper time

kathaṇca yasmim samaye cittam paggaḥetabbam. tasmim samaye cittam paggaṇhāti? yadāssa atisithilavīriyatādīhi līnam cittam hoti, tadā passaddhisambojjhaṅgādayo tayo abhāvetvā dhammavicayasambojjhaṅgādayo bhāveti. (Visuddhi-1-127)

How it could be enhanced the mind in proper time? — There may be divided into two groups: Those associating factors of enlightenment, wisdom, *vīriya* and zest are one group, while those factors of enlightenment, tranquillity, concentration and equanimity are one group.

In such time the mind of meditation of *meditator*, due to these reasons:

1. presence of extremely diminished effort
2. diminished in zest to practice willingly
3. very diminished in knowledge of fear (*samvega ñāṇa*),

would be retarded to take the object of practice, and falls into laziness. When the mind of meditation occurs suffering from depression, it must be developed three kinds of associating factors of enlightenment, wisdom, effort and zest but not tranquillity, concentration and equanimity. (*Visuddhi-1-127*)

(3.4.4.A) An excerpt of *Aggi Sutta* (first section)

Bhikkhus ... as a worldling simile to be paralleled is that — a such man wants to blaze the trace of fire; that man puts fresh grass into that trace of fire; wet cow-dung would also be put; succulent fire-wood would also be put; the air mixed with water would be blown; soil dust would be spread over it; *bhikkhus*... will it be deserved to blaze a trace of fire for that man?, asked by the Buddha.

Those *bhikkhus* replied that “Supreme Buddha... it will not be deserved to blaze a trace of fire in this way.”

Bhikkhus ... similarly, in such time the mind of meditation of that *bhikkhu* would be retarded to take the object of practice, at that time, it is not proper time to develop

1. factor of enlightenment of tranquillity (*passaddhisambojjhaṅga*)
2. factor of enlightenment of concentration (*samādhisambojjhaṅga*).
3. factor of enlightenment of equanimity (*upekkhāsambhojjaṅga*)

PAGE 374

The reason why it is not proper time to develop those factors is that *bhikkhus* the mind of meditation is retarded to take the object of practice and falls into laziness. It is incapable of emerging on retarding and depressing mind by those factors of enlightenment, tranquillity, concentration, equanimity.

Bhikkhus ... actually, at such time the mind of meditation would be retarded to take the object of practice, and falls into laziness: at that time, it is proper time to develop

1. factor of enlightenment of wisdom (*dhammavicayasambojjhaṅga*)
2. factor of enlightenment of effort (*vīriyasambojjhaṅga*)
3. factor of enlightenment of zest (*pīṭhisambojjhaṅga*), indeed.

The reason why it is proper time to develop those factors is that — *bhikkhus* ... the mind of meditation is retarded to take the object of practice and falls into laziness (*kosajja*). It is capable of emerging on retarding and depressing mind by those factors of enlightenment, wisdom, effort, zest.

Bhikkhus ... as a worldling simile to be paralleled is that — a such man wants to blaze the trace of fire, that man puts dried grass into that trace of fire; dry cow-dung would be put; dry fire-wood would be put; the air without water would be blown by mouth; soil dust would not be spread over it; *bhikkhus* ... will it be deserved to blaze a trace of fire for that man? Asked by the Buddha.

Those *bhikkhus* replied that “Supreme Buddha... it will be deserved to blaze a trace of fire this way.” (*Sam-3-99 Aggi Sutta*)

(3.4.4.B) An excerpt of *Āhāra Sutta*

In order to occur proper factors of enlightenment, it must be developed the depended object and respective causal *dhamma* of those factors of enlightenment. Therefore, it will be continued to present an excerpt of *Āhāra Sutta* as follows;

atthi bhikkhave satisambojjhaṅgaṭṭhānīyā dhammā, tattha yoniso manasikārabahulīkāro, ayamāhāro anupannassa vā satisambojjhaṅgassa uppādāya uppannassa vā satisambojjhaṅgassa bhāvanāya pāripūriyā. (Sam-3-60-91)

atthi bhikkhave kusalākusalā dhammā sāvajjānavajjā dhammā hīnappaṇītā dhammā kaṇhasukkasappaṭibhāgā dhammā. tattha yoniso manasikārabahulīkāro, ayamāhāro anuppannassa vā dhammavicayasambojjhaṅgassa uppādāya uppannassa vā dhammavicayasambojjhaṅgassa bhāvanāya pāripūriyā. (Sam-3-60-91)

PAGE 375

atthi bhikkhave ārambhadhātu nikkamadhātu parakkamadhātu. tattha yoniso manasikārabahulīkāro, ayamāhāro anuppannassa vā vīriyasambojjhaṅgassa uppādāya uppannassa vā vīriyasambojjhaṅgassa bhāvanāya pāripūriyā. (Sam-3-60-92)

The meaning of above Pāl□i Text, commentary and sub-commentary is as follows:

Bhikkhus ... which is the causal *dhamma* by which inexperienced factor of enlightenment of mindfulness is to be occurred, experienced factor of enlightenment of mindfulness is to be developed thoroughly? _____

Bhikkhus ... there are 37 kinds of associating factors of enlightenment and nine kinds of Supra-mundane *dhamma* which are depended objects of factor of enlightenment of mindfulness. Wise attention (*yonisomanasikāra*) must be performed frequently on those *dhamma*, indeed. This is the causal *dhamma* by which inexperienced factor of enlightenment of mindfulness is to be occurred, experienced factor of enlightenment of mindfulness is to be developed thoroughly.

Bhikkhus ... there are various kinds of *dhammas*, which are wholesome and unwholesome *dhammas*; faulty and non-faulty *dhammas*, inferior and superior *dhammas*, black and white *dhammas* which have respective result. Wise attention must be performed frequently on those *dhammas*. This is the causal *dhamma* by which inexperienced factor of enlightenment of wisdom (*dhammavicayasambojjhaṅga*), experienced factor of enlightenment of wisdom is to be developed thoroughly.

PAGE 376

Bhikkhus ... there are various kinds of efforts, which are trying of the beginning stage called *ārambhadhātu*, endeavouring of deliverance from laziness called *nikkamadhātu*, strenuous diligence which is capable of improving higher and higher, called *parakkamadhātu*. Wise attention must be performed frequently on those three elements (*dhātu*), indeed. This is the causal *dhamma* by which inexperienced factor of enlightenment of effort is to be developed thoroughly.

Bhikkhus ... there are various kinds of *dhammas*, which are depended objects of the factor of enlightenment of zest (*pītisambojjhaṅga*). Wise attention must be performed frequently on those *dhamma*, indeed. This is the causal *dhamma* by which inexperienced factor of enlightenment of zest is to be occurred, experienced factor of enlightenment of zest is to be developed thoroughly.

(3.4.4.C) *satisambojjhaṅga* (factor of enlightenment of mindfulness)

According to instruction of the Buddha, when the mind is depressing in practice it must be developed three factors of enlightenments, wisdom, effort and zest. It is essential the help of mindfulness in order to develop those factors of enlightenment. In *Samyutta*, Commentary, 3-178, it is explained that the depended objects of mindfulness are 37 kinds of associating factors of enlightenment and nine kinds of Supra-mundane *dhmma*.

Now this section is explained with regarding to *appanā kosalla dhmma* (= mastery of full absorption) with the result that it should be omitted Supra-mundane *dhmma* from the list of depended objects of mindfulness temporary. In *Ānāpānassati sutta*, M-3-127, it is expounded that only when four kinds of *satipaṭṭhāna* (depended situations of mindfulness) would be developed thoroughly, can 37 kinds of associating factors of enlightenment be fulfilled. Therefore, it would be explained as regarding to four kinds of depended situations of mindfulness.

Among four kinds of depended situations of mindfulness, the depended objects of mindfulness varies into four kinds: *kāya*, *vedanā*, *citta*, and *dhmma*. The practice of mindfulness of breathing is preached as a meditation subject which is depended object of the mindfulness. Now, it is only in *samatha* stage and then explanations how to develop concentration would be selected and presented.

In the way of mindfulness of breathing,

1. usual in-breath and out-breath are the developed objects of factor of enlightenment of mindfulness,
2. sign of neighbourhood concentration, which is as white as cotton wool, occurred by efficiency of practice depending upon usual in-breath and out-breath, is also depended object of factor of enlightenment of mindfulness,

PAGE 377

3. sign of full concentration, which is brilliant clear white, changed from sign of neighbourhood concentration, occurred by efficiency of practice depending upon usual in-breath and out-breath, is also depended object of factor of enlightenment of mindfulness.

[Notes: Those ultimate *dhmma*; *rūpa*, *vedanā*, *citta*, *dhmma*, are also depended objects of the factor of enlightenment of mindfulness. But those *dhmma* are concerned with *vipassanā* stage.]

In this stage, the nature of remembrance and not forgetting on the object of the sign of full concentration is called *satisambojjhaṅga*. Wise attention on the depended object of mindfulness is performed frequently, indeed.

(3.4.4.D) *dhmmavicaya sambojjhaṅga*= factor of enlightenment of wisdom

1. Those consciousnesses of impulses of great wholesome mind door cognitive process including the advertence of worldlings (*puthujana*) and fulfilling Noble ones (*sekkha*), which are occurring by means of discerning on the various specific characters such as the character, faultlessness with good result (*anavajja sukhavipāka*, of wholesome *dhmma*, the character, fault with bad result (*sāvajja dhukkavipāka*, the character of mentally impression of the object of *phassa* (*phusanalakkhaṇā*), the character of hardness of the earth-element (*kakkhalā lakkhaṇā*) etc., and consciousnesses of impulses of independent mind door cognitive process including the advertence of Arahants, are called the wise attention (*yonisomanasikāra*).

2. Those characters, the nature of change to worse (*ruppana*) which are successive occurrence of succeeding continuity of all corporeal *dhamma* that are different from preceding ones, the nature of bending to respective object (*namana*) of all mental *dhamma*, are called general characters (*sāmañña lakkhaṇā*) due to with all corporeal and mental *dhammas*.

Then owing to causal ultimate *dhamma*, i.e., ignorance, craving, clinging, kamma-formation and *kamma*, are impermanent, suffering, non-self, the resultant ultimate *dhammas* are also impermanent, suffering, non-self. Those three characters, impermanence, suffering and non-self called impermanent nature, suffering nature, non-self nature of all ultimate *dhammas* are also designated as general characters due to concerning with all *saṅkhāra dhammas*, i.e., causes, results, corporealities, mentalities. Consciousnesses of great wholesome (great independent) mind door cognitive process including the advertence which are occurring by means of penetrative knowing and seeing on those general characters are also known as “wise attention” (*yonisomanasikāra*).

Those kinds of wise attentions which are taking into heart specific character and general character of ultimate *dhammas* are related with the *vipassanā* stage especially. In this case, the reason why “especially” is intended to be said is that some *samatha* practices, such as practice of four great elements called *catudhātuvavatthāna*, are also

PAGE 378

taking the objects of ultimate *dhamma* in order to develop concentration. Now in this stage of mindfulness of breathing, step by step taking into heart these three signs,

1. *ānāpānanimitta* called usual in-breath and out-breath
2. (*parikammanimitta*) *uggahanimitta* called sign of neighbourhood concentration that occurred depending upon those in-breath and out-breath
3. *paṭibhāga nimitta* called sign of full concentration which is improved from the sign of neighbourhood concentration, is called “wise attention”.

Especially, the continuum of consciousnesses of impulses of great wholesome (great independent) mind door cognitive processes including advertence, which are discerning on the object of sign of full concentration by means of penetrative knowing and seeing on it, is wise attention in this *samatha* stage. Those frequent fulfilling on wise attentions is the purpose of occurrence of inexperienced factor of enlightenment of wisdom, improvement of experienced factors of enlightenment of wisdom.

[Notes: Only consciousnesses of impulses which are penetrative knowing and seeing the specific and general character of ultimate *dhamma* are real wise attention. However, the advertence, adjacent to those impulses previously, also takes the object taken by impulses and then it is similar to the latter with the result that it is also designated as “wise attention”.]

(3.4.4.E) *vīriyasambojhaṅga*=factor of enlightenment of effort

The nature of trying of the beginning stage, in order to know and see penetratively the specific and general character of ultimate *dhamma* called *kāya*, *vedanā*, *citta*, *dhamma* that are depended objects of factors of enlightenment of mindfulness and wisdom, is designated as *ārambhadhātu*. The nature of endeavouring which is stronger than *ārambhadhātu*, due to occurrence of deliverance from laziness, is designated as *nikkama dhātu*. The supreme kind of diligence, which is capable of removing extremely powerful opposite *dhamma*, becomes sharper and sharper resulting stronger than *nikkama dhātu*, due to capable of reaching to its goal by successive overcoming on various kind of opposite *dhamma*. That kind of supreme

diligence is designated as *parakkama dhātu*. The nature of taking into heart which is occurring by means of occurrence of those three kinds of efforts, *ārambhadhātu*, *nikkamadhātu*, *parakkamadhātu*, is designated as wise attention on those elements.

Above explanation, indeed refers to *vipassanā* stage only. Now in *samatha* stage,

- (a) *ānāpāna nimitta* called usual in-breath and out-breath
- (b) (*parikkamma nimitta*) *uggahanimitta* called sign of neighbourhood concentration,
- (c) *paṭibhāga nimitta* called sign of full concentration, to which

PAGE 379

1. is intended to be known by trying of beginning stage, is *ārambhadhātu*.
2. The nature of endeavouring, which is overcoming on laziness, is *nikkamadhātu*.
3. Step-wise diligence for the purpose of penetrative knowing and seeing on usual *ānāpāna nimitta*, *uggahanimitta* and *paṭibhāga nimitta* successively, is *parakkama dhātu*. In order to occur those three kinds of elements (*dhātu*), frequent taking into heart usual *ānāpāna nimitta*, *uggahanimitta*, and *paṭibhāganimitta*, is called “wise attention”. If that kind of wise attention would be performed frequently, inexperienced factor of enlightenment of effort will be occurred, experienced factor of enlightenment of effort will be accomplished with the knowledge of practice thoroughly. (See *Visuddhi*-1-128, *Mahāṭī*-1-156)

(3.4.4.F) *pītisambojjhaṅga* = factor of enlightenment of zest

In the *meditator* who is trying by taking depended objects of mindfulness in order to occur apparently the factors of enlightenment called mindfulness, wisdom and effort, the pleasurable interest or zest called *nirāmisā* which is free from defilement of *āmisā*, appears apparently. That zest occurs associating with mindfulness called *satisambojjhaṅga*, wisdom called *dhammavicayasambojjhaṅga*, effort called *viriyasambojjhaṅga* etc.. within the same mind movement.

Those *dhammas*,

1. both that preceding zest and
2. associating mind and mental concomitants, such as mindfulness, wisdom, effort etc., of that zest, are causal *dhamma* of the occurrence of succeeding factor of enlightenment of zest and those are known as *pītisambojjhaṅgaṭṭhānīya dhamma*. Thus preceding factor of enlightenment of zest is a significant cause of succeeding factor of enlightenment of zest. Taking into heart either that zest or associating *dhamma* with zest, is called wise attention. “Taking into heart” means that for a *meditator* who discerns the objects of practice called *kāya*, *vedanā*, *citta*, *dhamma* by means of such mode, inexperienced factor of enlightenment of zest occurs, experienced factor of enlightenment of zest, is improved; taking into heart by that mode, indeed, is called *uppādaka manasikāra* (= wise attention for the purpose of occurrence of zest or associating *dhamma* with zest). Then that *uppādaka manasikāra* is designated as wise attention. (*Visuddhi*-1-128, *Mahāṭī*-1-156, *Pyi*-1-344,345)

Especially, in this stage, owing to the reason that the *meditator* is now fulfilling factors of enlightenment called, mindfulness, wisdom, effort by taking the object of sign of full concentration, it must be careful how the factor of

PAGE 380

enlightenment could be appeared. Then, it must be continued to take into the heart the object of sign of full concentration by means of such mode which is capable of occurring that factor of enlightenment of zest. That kind of taking into heart is called wise attention in order to occur inexperienced factor of enlightenment of zest, in order to improve experienced factor of enlightenment of zest.

That kind of wise attention must be performed frequently. Frequently developed wise attention of that kind is the cause of occurrence of inexperienced factor of enlightenment of zest; improvement of experienced factor of enlightenment of zest and fulfilment of knowledge are related with how to enhance depressing mind due to diminished effort, weak zest and retarded knowledge of fear. However, it is impossible to occur those three factors of enlightenment without mindfulness with the result that it is explained as those including with factor of enlightenment of mindfulness. This way of developing of factors of enlightenment is in accordance with Pālī Text only. Those ways are explained by other teaching methodologies in commentaries as follows.

(3.4.4.G) Four causes of occurrence of factor of enlightenment of mindfulness

apica cattāro dhammā satisambojjhaṅgassa uppādāya samvattanti satisampajaññaṃ muṭṭhassatipuggalaparivajjanatā upaṭṭhitassatipuggalasevanatā tadadhimuttatāti. (M-Com-1-294; Dī-Com-2-376; Sam-Com-3-193)

These four factors,

- (i) accomplishment with mindfulness and knowledge of clear comprehension (*sampajañña*)
- (ii) avoiding from those persons without mindfulness
- (iii) associating with those persons who always rely on mindfulness
- (iv) presence of inclination to be fulfilled with that mindfulness, are causes of the occurrence of factor of enlightenment of mindfulness.

(3.4.4.G.i.a) Accomplishment with mindfulness and knowledge of clear comprehension

According to preaching by the Buddha in section of *Sampajañña*, *Mahāsatiṭṭhāna sutta*, (M-1-72), it must be developed on mindfulness and clear comprehension,

- a. walking forward and backward
- b. looking straight and side glance
- c. bending and stretching
- d. handling double robe, bowl, robe etc..
- e. eating, drinking, chewing, lapping
- f. excreting , urinating

PAGE 381

- g. subtle action of walking, standing, sitting, sleeping, waking, speaking, muting.

It means that it must be able to discern step by step on discernment of clear comprehension systematically.

(3.4.4.G.i.b) Four kinds of clear comprehension

There are four kinds of clear comprehensions, *sāttthakasampajañña*, *sappāyasampajañña*, *gocara sampajañña* and *asammoha sampajañña*. (M-Com-1-258)

1. *sāttthakasampajañña*

During making such movement related with various discernment of clear comprehension, walking forward etc., the knowledge which is capable of distinguishing whether or not that kind of movement is beneficial but not make indulgently, is called *sāttthakasampajañña*. (M-Com-1-258)

2. *sappāya sampajañña*

During making such movement, walking forward etc., with beneficial result, however, if it is possible to occur defilements (*kilesa*) such as, lust, anger, delusion etc; if it is in the danger of life or of three noble trainings, *sīla*, *samādhi*, *paññā*, it is unfavourable (*asappāya*), while those possibility and dangers are absent, it is favourable (*sappāya*). The knowledge which is capable of distinguishing whether it is favourable or not, is called *sappāyasampajañña*.

3. *gocara sampajañña*

evam pariggahitasāttthasappāyassa pana aṭṭhatimsāya kammaṭṭhānesu attano cittarucitakammaṭṭhānasaṅkhātā gocarā uggahetvā bhikkhācārāgocare tam gahetvā gamanam gocarā sampajaññaṃ nāma. (M-Com-1-259)

Thus the *meditator* who had fulfilled with *sāttthaka sampajañña*, *sappāya sampajañña*, learned the most preferable kind of meditation subject out of 38 kinds. Then going to alms-round village by means of taking into heart the object of that practice is called *gocara sampajañña*. (M-Com-1-259)

It is explained 38 kinds of meditation subjects resulting from adding *ālokakasiṇa* and *odātakasiṇa*, *ākāsakasiṇa* and *ākāsānañcāyatanajhāna*. According to this explanation, it must be recognized that if the most preferable practice out of 40 ways is selected and developed in every movement, *gocara sampajañña* will be occurred continuously. In this stage of *appanākosalla*, such movement, walking forward and backward, has been done by taking the object of sign of full -concentration of in-breath and out-breath, it can be said that *gocara sampajañña* has been thoroughly fulfilled. If the *meditator* reaches to *vīpassanā* stage, he must put through in order to fulfil *a-sammoha sampajañña*.

PAGE 382

4. *a-sammoha sampajañña*

paramatthato hi dhātūnamyeva gamanam, dhātūnam ṭhānam, dhātūnam nisajjanam, dhātūnam sayanam, tasmim tasmīñhi koṭṭhāse saddhim rūpena —

aññaṃ uppajjate cittaṃ, aññaṃ cittaṃ nirujjhati.

avīcimanusambandho, nadīsotova vattatīti.

evam abhikkamādīsu asammuyhanam asammohasampajaññaṃ nāmāti. (M-Com-1-265)

It can be said in the aspect of ultimate reality that it is walking by corporeal element and mental element only. It is standing by corporeal element and mental element only. It is sitting by corporeal element and mental element only. It is reclining by corporeal element and mental element only. Within various bodily parts occurring walking, standing, sitting, reclining, the corporeal *dhamma* together with other mind moment cease. Another mind moment arises again. Thus the clear comprehension on continuous occurrence of corporeal and mental *dhamma* without interruption of every deportment, as a water current in river is called *a-sammoha sampajañña*. (M-Com-1-265)

According to these commentaries, it must be recognized that — if five aggregates that occurring in various bodily parts, walking forward etc., can be known as they really are; if respective causal *dhamma* of those five aggregates can be known as they really are; if the nature of impermanence, the nature of suffering, the nature of non-self of those five aggregates together with causal *dhamma* can be known as they really are, *a-sammoha sampajañña* is being occurred well indeed. This is the first cause of occurrence of factor of enlightenment of mindfulness. (M-1-72)

(3.4.4.G.ii) Avoiding from those persons without mindfulness

The crow usually looks both food and enemy. However, when eyes of the crow attach on the food, it cannot be careful enemy behind. This is a kind of behaviour without mindfulness. The *meditator* who wants to fulfil factor of enlightenment of mindfulness must avoid from crow-like those persons without mindfulness.

(3.4.4.G.iii) Associating with those persons who always rely on mindfulness

It is a cause of occurrence of factor of enlightenment of mindfulness by means of associating with those persons who always rely on mindfulness, like *Tissadatta Thera*, *Abhaya Thera* who always present strong mindfulness.

(3.4.4.G.iv) Presence of inclination to be fulfilled with mindfulness

It must be present the inclination to be filled with mindfulness in order to occur factor of enlightenment of mindfulness in various departments called walking, standing, sitting, reclining. It means that it must be frequently discerned on depended object of mindfulness by means of inclination to be fulfilled with mindfulness. In this stage of *appanākosalla*, the *meditator* must take into heart only the object of sign of full concentration of in-breath and out-breath for four kinds of deportments, in order to

PAGE 383

1. occur inexperienced mindfulness,
2. improve experienced mindfulness,
3. fulfil knowledge of practice accordingly.

These are four causes of the occurrence of factor of enlightenment of mindfulness.

(3.4.4.H) Seven causes of occurrence of factor of enlightenment of wisdom

apica satta dhammā dhammavicayasambojjhaṅgassa uppādāya samvattanti paripucchakatā, vatthuvisadakiriyā, indriyasamattapaṭipādanā, duppaññapuggalaparivajjanā, paññavantapuggalasevanā, gambhīraññācariyapaccavekkhaṇā, tadadhimuttatāti. (Vsuddhi-1-128; M-Com-1-294; Dī-Com-2-376; Sam-Com-3-193)

These four factors,

- (i) *paripucchakatā* = ability to question penetratively on aggregates (*khandā*) etc..
- (ii) *vatthuvisadakiriyā* = keeping clean circumstances of both internally and externally
- (iii) *indriyasamattapaṭipādanā* = balancing of controlling faculties.
- (iv) *duppaññapuggalaparivajjanā* = avoiding from those persons without wisdom
- (v) *paññavantapuggalasevanā* = associating with wise persons
- (vi) *gambhīraññācariyapaccavekkhaṇā* = reflecting on various kinds of knowledges occurring on profound aggregates
- (vii) *tadadhimuttatā* = presence of the mind with inclination toward factor of enlightenment of wisdom, are causes of occurrence of *dhamma vicayasambojjhaṅga*

(3.4.4.H.i) *paripucchakatā*

The curiosity on the profound meaning of aggregates, bases, elements, controlling faculty, strength, factor of enlightenment, path factor, factor of absorption, *samatha*, *vipassanā* etc.. is called *paripucchakatā*. Factor of enlightenment of wisdom, indeed, is the knowledge which is capable of analysing on the ultimate *dhamma*, aggregates, etc. It is the controlling faculty of knowledge (*paññindare*) called non-delusion (*a-moha*).

That knowledge (*dhammavicaya*) is capable of analysing on

- a. the specific character of the ultimate *dhamma*, aggregates, etc.,
- b. relationship between dependence-origination of those ultimate *dhamma*,
- c. Modes of impermanence, suffering, and non-self of those ultimate *dhamma* together with causal *dhamma*,
- d. The Pat-Knowledge, Fruit Knowledge and *nibbāna*.

Therefore, curious questioning on profound meaning of ultimate *dhamma*, *khandā*, *āyatana*, *dhātu*, etc. is the cause of improvement of factor of enlightenment of wisdom. In this stage, if the *meditator* is not skilful in developing of concentration, balancing controlling faculties etc, he must approach to skilful teachers and question on it thoroughly.

PAGE 384

(3.4.4.H.ii) *vatthuvisadakiriya*

(3.4.4.H.iii) *indriyasamattapaṭipādanā*

These two kinds are the same as first and second *appanākosalla dhamma* mentioned previously.

Concentration and knowledge

vatthusadakiriya indriyasamattapaṭipādanā sañkhepato, vitthārato ca pakāsītā eva. tattha pana samādhisamvattaniyabhāvena āgatā, idha paññāsamvattaniyabhāvena. yadaggena hi samādhisamvattanikā, tadaggena paññāsamvattanikā samādhissa ñāṇapaccupaṭṭhānato. “samāhito yathābhūtam pajānāti”ti vuttam. (Mahāṭī-1-156)

Keeping clean circumstances of both internally and externally, and balancing of controlling faculties are explained by means of brief account and detailed account. A slight difference is that in previous mentioned section it shows cause of occurrence of concentration. However in this section it shows cause of occurrence of knowledge. It is right . —Those two kinds of *dhamma* (keeping clean and balancing of controlling faculties) can cause concentration by means of such way, while those can cause knowledge by means of that way. The reason is that — “it is due to presence of capable of occurring the knowledge of concentration (*phalappaccupaṭṭhāna*)” indeed. The Buddha preached that “the person with concentration distinguishes really”, etc. (*Mahāṭī*□1-156)

(3.4.4.H.iv) *duppaññapuggalaparivajjanā*

duppaññapuggalaparivajjanā nāma khandhādibhede anogāl□hapaññānam dummedhapuggalānam ārakāva parivajjanam. (M-Com-1-296; Dī-Com-2-378; Sam-Com-3-195)

duppaññapuggalaparivajjanā nāma dupaññānam mandabuddhīnam bhattanikkhittakāka-mamsanikkhittasunakhasadisānam momūhapuggalānam dūrato pariccajanā. (Mahāṭī-1-156)

The crow that puts its eye on food, the dog that puts its eye on meat, usually see food only but it cannot be careful on the enemy behind . It is greatly attached by the food only. This situation can be said “delusion due to invisible to reality”. Similarly, the *meditator* who wants to develop factor of enlightenment of wisdom, must avoid those persons with delusion, who lack knowledge which is capable of distinguishing on aggregates, bases, elements, truths, nature of dependence- origination; who are similar to the crow that puts its eye on food, the dog that puts its eye on meat.

(3.4.4.H.v) *paññāvanatapuggalasevanā*

paññāvanatapuggalasevanā nāma samapaññāsalakkhaṇapariggāhikāya udayabbayapaññāya samannāgatapuggalasevanā. (M-Com-1-296; Dī-Com-2-378; Sam-Com-3-195)

PAGE 385

taruṇavipassanāsamaṅgīpi bhāvanāmayañāṇe ṭhitattā ekamsato paññavā eva nāma hotīti āha “samapaññāsa. pa. puggalasevanā”ti. (M-ṭī-1-385-386)

*paññavantapuggalasevanā nāma paññāya katādhikārānam
saccapaṭiccasamuppādādīsū kusalānam ariyānam, vipassanākammikānam vā
mahāpaññānam kālena kālam upasaṅkamanam. (Mahāṭṭi-1-156)*

In the Pāli Text of *Paṭisambhidā Magga*, pp-54, commentary called *Visuddhi Magga*-2-266, 267, it is explained detail on discerning of *udayabbayañāṇa*. There are 25 kinds of knowledge of arising (*udayañāṇa*), totally in 50 kinds. (See in detail in *Vipassanā* Section-Volume V). The *meditator* who fulfilled with those 50 kinds of knowledges is designated as the person with immature *vipassanā* knowledge (*taruṇa vipassanāñāṇa*). That kind of person with immature *vipassanā* knowledge, can be designated as wise, indeed. Therefore, it must be associated with those persons, i.e., Noble Ones of wisdom and seeds of practice, who are mastery of Four Noble Truths, Doctrine of Dependence-Origination, and wise men with wholesome deeds who fulfilled the knowledge of arising and perishing away (*udayabbayañāṇa*). This explanation refers to the stage of *vipassanā* especially.

In this stage, it must be associated with those persons, Noble-Ones who are mastery of developing in concentration of mindfulness of breathing, and *samathakammika* persons (fulfilling *samatha* practice) who are complete with *āgamasuta* (knowledge through learning), *adhigamasuta* (knowledge through practicing), related with practice of mindfulness of breathing and *vipassanākammika* persons (fulfilling *vipassanā* practice), for proper time. It is also essential to fulfil factor of enlightenment of wisdom indeed.

An excerpt of *Kalayāṇamitta Sutta* (Sam-1-88-89)

It is during the Buddha was staying in one settlement called *nagaraka*, *sakka* Division where is dwelling of *sākīya* race. At that time, the most Venerable Ānandā asked the Buddha, that..

“Supreme Buddha... the situation of a person with good friend, that of a person with good fellowship, that of a person who has mind of inclination toward wise and Noble Ones, can achieve an half of the noble practice of the Path, called *brahmacariya*”. The Buddha replied that _____

PAGE 386

“Ānandā, it should not said like this, Ānandā, it should not said like this, the situation of a person with good friend, that of a person with good fellowship, that of a person who has mind of inclination toward wise and Noble Ones, can achieve thoroughly the noble practice of the Path, called *brahmacariya*. Ānandā.., it must be perspective the fact that .. the person who has good friend, who has good fellowship, who has mind of inclination toward wise and Noble Ones will achieve these results that the circumstantially purified practice of Noble Eight-Fold Path would be frequently performed.”

Ānandā, how the *bhikkhu* who has good friend, who has good fellowship, who has mind of inclination toward wise and Noble Ones, develops and frequently performs circumstantially purified practice of Noble Eight-fold Path?

Ānandā, in this *sāsanā*, the *bhikkhu* develops,

1. right view (*sammā diṭṭhi*)
2. right thought (*sammā saṅkappa*)
3. right speech (*sammāvācā*)
4. right bodily action (*sammā kammanta*)
5. right livelihood (*sammā ājīva*)
6. right endeavour (*sammā vāyāma*)

7. right mindfulness (*sammāsaṭi*),
8. right concentration (*sammā samādhi*),
which is depending upon seclusion (*viveka*), void of lust, cessation of lust, which incline to **nibbāna** which abandon defilement permanently.

“*Ānandā*, thus the *bhikkhu* who has good friend, who has good fellowship, who has mind of inclination toward wise and Noble Ones develops circumstantially purified practice of Noble Eight-fold Path, frequently performs thoroughly purified practice of Noble Eight-fold path. *Ānandā* it should be known by this reason on those words that “the situation of a person with good friend, that of a person with good fellowship, that of person who has mind of inclination toward wise and Noble Ones, can achieve thoroughly the Noble Practice of the Path called *brahmacariya*.”

Ānandā, it is right. — owing to attain dependence of me, those beings with the nature of rebirth (*jāti*) would escaped from the nature of rebirth; those beings with the nature of old age (*jarā*) would escaped from the nature of old age; those beings with the nature of decaying (*byādhī*) would escaped from the nature of decaying ; those beings

PAGE 387

with the nature of death (*maraṇa*) would escaped from the nature of death; those persons with worries (*soka*), those persons with the nature of woes (*parideva*) would escaped from the nature of woes, those persons with bodily disagreeable; those person with the nature grief (*soka*), woes (*parideva*), bodily disagreeable, (*dukkha*), mentally disagreeable(*domanassa*), lamentation (*upāyāsa*), would escaped from the nature of grief, woes, bodily disagreeable, mentally disagreeable, lamentation.

Ānandā,... It should be known by this reason on those words that “the situation of a person with good friend, that of a person with good friendship, that of person who has mind of inclination toward wise and Noble Ones can achieve thoroughly the Noble Practice of the Path called *brahmacariya*. (*Sam*-1-88-89)

nāham bhikkhave aññam ekadhammampi samanupassāmi, yena anuppannā vā kusalā dhammā uppajjanti, uppannā vā akusalā dhammā parihāyanti, yathayidam bhikkhave kalyāṇamittatā. kalyāṇamittassa bhikkhave anuppannā ceva kusalā dhammā uppajjanti, uppannā ca akusalā dhammā parihāyanti. (Aṅg-1-12)

Bhikkhus ... as a situation of a person with good friend , owing to such factor, inexperienced wholesome *dhamma* would be occurred, experienced unwholesome *dhamma* would be diminished, I have never seen any factor rather that factor as situation of a person with good friend. *Bhikkhus*.. for a person with good friend, inexperienced wholesome *dhamma* would be occurred, experienced unwholesome *dhamma* would be diminished. (*Aṅg*-1-12)

The *meditator* who wants to develop factor of enlightenment of wisdom, therefore, must associates with good friends called wise and Noble Ones.

(3.4.4.H.vi) *gambhīraññācariyapaccavakkhaṇā*

gambhīraññācariyapaccavakkhaṇā nāma gambhīresu khandhādīsu pavattāya gambhīrapaññāya pabhedapaccavekkhaṇā. (M-Com-1-296; Dī-Com-2-378; Sam-Com-3-195)
ñeyyadhammassa gambhīrabhāvasena tapparicchedakaññāssa gambhīrabhāvaggahaṇanti āha “gambhīresu khandhādīsu pavattāya gambhīrapaññāyā”ti. tam hi ñeyyam tādīsāya paññāya caritabbato gambhīraññācariyam, tassā vā paññāya tattha pabhedato pavatti gambhīraññācariyā, tassā paccavekkhaṇāti āha “gambhīrapaññāya pabhedapaccavekkhaṇā”ti. (M-ṭi-1-386)

*gambhīraññācariyapaccavakkhaṇāti gambhīraññehi caritabbānam
khandhāyatanaadhātādīnam saccapaccayākārādidīpanānam vā suññatāpaṭisamyuttānam
paccavekkhaṇā. (Mahāṭī-1-156)*

PAGE 388

Those dhamma, aggregates (*khandhā*), bases (*āyatana*), element (*dhātu*), truths (*saccā*), doctrine of dependence-origination (*paṭiccasamuppāda*), are very profound *ñeyya dhamma* to which the *meditator* must know by penetrative knowledge. Due to profound essence of those *ñeyyadhamma*, the penetrative knowledge which is capable of discriminating on those dhamma, is also very profound one. Only profound knowledge is deserving to reach and know those profound *dhamma* accordingly. Knowing and seeing the specific characters and general characters of various profound *ñeyyadhamma* by penetrative knowledge is called *gambhīraññācariya*. In the continuum of *meditator* who reflects on various kinds of profound knowledge which are occurred by means of knowing and seeing specific characters and general characters of those profound *dhamma*, *khandhā*, *āyatana*, *dhātu*, *saccā*, *paṭiccasamuppāda*, etc., the factor of enlightenment of wisdom can usually be occurred accordingly. (*M-Com-1-296*-, *M-ṭī-1-386*)

It must be reflected on both those philosophical doctrines, *khandhā*, *āyatana*, *dhātu*, *saccā*, *paṭiccasamuppāda* etc., which are pasture of object of profound knowledge, or persons with very profound knowledge and discourses (*sutta*) which are connected with four Noble Truths, doctrine of dependence-origination, nature of nothingness which is void of person, beings, *jīva*, self. If it is reflecting in that way, inexperienced factor of enlightenment will be occurred, experienced factor of enlightenment will be improved better and better. (*Mahāṭī-1-156*)

These explanations, especially, refers to the stage of *vipassanā* only, however in this stage, reflecting on both sign of full concentration and the knowledge which is knowing on that sign are essential indeed.

(3.4.4.H.vii) *tadadhimuttatā*

tadadhimuttatā nāma ṭhānanisajjādīsū dhammavicayasambojjhaṅga-samuṭṭhāpanattham ninnapoṇapabbhāracittatā. (M-Com-1-296; Dī-Com-2-378; Sam-Com-3-195)

tadadhimuttatāti paññādhimuttatā, paññāya ninnapoṇapabbhāratāti attho. (Mahāṭī-1-156)

It must be present the inclination toward the occurrence of factor of enlightenment of wisdom called *paññā*, for every kind of deportment, reclining, sitting, standing and walking. In this stage, it must be present the inclination toward occurrence of factor of enlightenment of wisdom which is penetrative knowing and seeing on sign of full concentration. That kind of knowledge is called *jhāna sammādiṭṭhi* (right view on the absorption)

PAGE 389

(3.4.4.I) Eleven causes of occurrence of factor of enlightenment of effort

These 11 factors,

- i. to be a person who always reasons danger of woeful existence.. etc.,
- ii. to be a person who always sees perspective of advantages of effort,
- iii. to be a person who always reasons the path which should be leading to,

- vi. to be a person who always reflects how to show indebtedness of alms-food
- v. to be a person who always reasons noble quality of heritage of wholesome person,
- vi. to be a person who always reasons noble qualities of the Buddha,
- vii. to be a person who always reasons nobility of caste,
- viii. to be a person who always reasons nobility of *samghā* fellowship,
- ix. to be a person who always avoids from lazy person,
- x. to be a person who always associates with those persons who have strenuous diligence
- xi. to be a person who always possesses inclination toward factor of enlightenment of effort, are causes of occurrence of factor of enlightenment of effort. (*M-Com-1-297, Dī-Com-2-378, Sam-Com-3-195*)

[Notes: In the *Visuddhi Magga*, number vii and viii are omitted but explained on removing of sloth and torpor and reflecting on benefits of strenuous effort (*sammappadhāna*). Thus it should be recognized on 13 causes of occurrence of factor of enlightenment of effort.]

(3.4.4.I.i) To be a person who always reasons danger of woeful existence.. etc.,

In the continuum of a person who reasons danger of useful existence , as , “it is incapable of trying to occur factor of enlightenment of effort for any kind of period, during it is very suffering by for true including five kinds of bondages in hell, or during capturing by other beings as occurring in animal life, during burdening as occurring in animal life which is beaten up by cane stick, hooking stick etc., during it is very suffering by hunger as occurring in *peta* (hungry ghost) life for enormous. Thousands years or *asañkhyeya kappa*, very long period between appearing of two Buddhas, or during it is very suffering by sunburn and heat of air as occurring in *asurakāyabhūmi* (non-radiant ones) which have only skeleton and skin on the body with 90-120 feet long”; ... “Bhikkhu ... actually during This period as a *bhikkhu* life only, it is only proper time to try in order to occur factor of enlightenment of effort for yourself” etc., the factor of enlightenment of effort would be occurred. (*M-Com-1-297; Dī-Com-2-379; Sam-Com-3-195*)

PAGE 390

In the continuum of a person who reasons these various kinds of sufferings — the suffering of rebirth, old age, decaying, death and suffering of woeful existence, which have the cause of suffering of previous rounds of rebirth; the suffering of rebirth, old age, decaying, death and suffering of useful existence, which have the cause of suffering of pervious rounds of rebirth; the suffering of rebirth, old age, decaying, death and suffering of woeful existence, which have the cause of suffering of future rounds of rebirth; those kinds of sufferings which have the cause of searching foods for present life, etc. the factor of enlightenment of effort would be occurred. (*Mahāṭṭi-1-157*)

(3.4.4.I.ii) To be a person who always sees perspective of advantages of effort

For a person with laziness and dillydallying mind, it is incapable of attaining either absorptions of mundane *dhmma* (*lokiyajhānasamāpatti*) or nine kinds of noble supra-mundane *dhmma*. Only the person with great diligence is capable of attaining both absorption of mundane *dhmma* and nine kinds of noble supra-mundane *dhmma*. Thus in the continuum of *meditator* who always sees perspective of advantages of effort, that “the attainment of absorptions of mundane *dhmma* and nine kinds of supra-mundane *dhmma* are

the advantages of effort etc., the factor of enlightenment of effort would be occurred. (*Visuddhi*-1-128, *M-Com*-1-297, *Mahāṭī* - 1-157)

(3.4.4.I.iii) To be a person who always reasons the path which should be leading to

Various kinds of *samatha* and *vipassanā* practices from the five precepts which are binding on all Buddhist laymen to the cessation of mundane (*gottrabhu*) are called *pubbabhāgapatipadā*, previous practice before Noble Path. Owing to occurrence of inevitable path for those *bhikkhus* who strongly desire to escape from suffering of rounds of rebirth both that so-called *pubbabhāgapatipadā* and Noble Eight-fold path which is capable of leading to reach *nibbāna* are called *gamanavīthi* (= the path which must be walked). That path called *gamanavīthi*, indeed, is an obligatory path through which all enlightened Buddhas, all *Pacceka Buddha* and all great disciples (*mahāsāvaka*) went to *nibbāna*.

In the continuum of person who reasons the path which should be leading to, such as “*bhikkhu* ... you should walk the path through which all enlightened Buddhas, all *Pacceka Buddhas* and all great disciples who were elder brothers of you, had been walked; it is incapable of walking that kind of path for lazy person with dilly-dallying mind” etc, the factor of enlightenment of effort would be occurred. (*Visuddhi*-1-128, *M-Com*-1-297, *M-ṭī*-1-386)

(3.4.4.I.iv) To be a person who always reflects how to show indebtedness of alms-food.

“Such devotees support you various kinds of offerings, alms-foods etc, these devotees are neither your relatives, nor slaves and also none of your workers; they have not offered such superior offerings, robes etc, with the intention that they would be

PAGE 391

earned depending upon you; actually they offered with the perspectives of great effectiveness of their wholesome deeds; the Buddha never allowed with the perspectives the ... “this my son called *bhikkhu* can stay in easy life with good physical appearance only by taking these offerings; actually the Buddha allowed with the perspectives that ... this my son called *bhikkhu* will escape from suffering of rounds of rebirth by means of two obligations; *ganthadura*, a duty involving learning, preaching and writing, and *vipassanādura*, the obligation of *samatha* and *vipassanā* practices after taking these offerings; if you, now, are lazy with dilly-dallying mind, it is unable to return back the indebtedness of alms-food or four requisites offered by them; indeed, great diligent person only can return back the indebtedness of alms food” etc, reflecting in this way, in the continuum of *meditator* like *Ayyamitta Thera*, the factor of enlightenment of effort would be occurred. (*M-Com*-1-297)

The *bhikkhu* takes foods offering by peoples in the country, called *raṭṭhapiṇḍa*. Those great effectiveness of return back of indebtedness of their offerings can be occurred by *samatha* and *vipassanā* practices of the *bhikkhu* only. That kind of return back of indebtedness is called *piṇḍa apātāpacāyana*. (*M-ṭī*-1-386)

According to those explanations, if the *bhikkhu* wants to show great indebtedness of the offerings of all donors with regarding to occur great effectiveness of their wholesome deeds, he must fulfilled right way of practice called *sammāpaṭipatti* including three noble trainings, virtue, concentration and wisdom.

The most venerable Ayyamitta Thera

Venerable *Ayyamitta* therā dwelled in a cave called *kassaka*. One laywoman devotee also lived in a village adjacent to that cave and supported for requites for venerable *Ayamitta* Thera as her beloved son for long time. One day, just before left for the farm, laywoman devotee ordered about her daughter that “beloved daughter ... well-keeping rice are stored in that place, butter is put in that place, molasses is put in that place, when venerable *Ayamitta* Thera arrived you must offer cooked rice, milk, butter and molasses. Then you also take that food remains. I have finished to take breakfast

PAGE 392

which is last right remains mixed with anchovy paste made by bean”.. etc.

When her daughter replied that “which do you take lunch?” she told that “beloved daughter ... boil the soup of broken rice mixed with vegetables for me”.

At that time venerable *Ayamitta* therā was standing up near at the entrance of a small leave-roofed building called *paññasāla*, was handling his bowl from inside the bowl-bag in order to alms-round to the village. Venerable *Ayamitta* Thera, indeed, had acquired five kinds of super-psychic-knowledge (*lokiya abhiññāṇa*) and during entering into super-psychic-knowledge of ear (divine ear or *dibbasota*), he heard speeches with the result that he admonished himself as follows. (*M-Com-1-298, M-ṭī-1-386*)

[Notes: one explanation found in *Anuṭṭikā pabbatapadesavanagahanantaritopi gāmo na dūre, pabbatam parikkhipitvā gantabbatāya āvāso araññalakkhaṇūpeto, tasmā mamsasoteneva assosīti vadanti. (Anuṭṭī-2-160)*

Another kind of assumption (*vadantivāda*) is also shown in *Anuṭṭikā* that – “although shrubs and trees separate between monastery and alms-round village, it is not so far from monastery. Although it is not so far from alms-round village, *kassaka* cave monastery is available as forest monastery due to presence of many curves in the road. Venerable *Ayamitta* Thera, Therefore, could hear speeches of mother and daughter by means of natural ear only.

Assumption of *Mahāgandhārammaṇa* Sayadaw _____

The most venerable *Mahāgandhārammaṇa* Sayadaw presented his suggestion in *Sammohavinodanī ṭīkā* (Myanmar) volume 2-page-806, as follows: _____

I suggest that “the monastery is also traditionally, forest monastery, the reason why he could hear speeches of mother and daughter is the fact that he reached neighbourhood of the village, indeed”. This is because those *bhikkhus* dwelled in forest usually prepare in full-robe just neighbourhood of the village, indeed. Therefore the commentary explained, in order to clear the evidence of reaching neighbourhood of village, the fact that “*thero cīvaram pārūpittvā pattam nīharantova tam shddam suttvā*”

“during handling his bowl from inside the bowl-bag, after prepared in full-robe, venerable *Ayyamitta* therā heard speeches of mother and daughter”.]

Way of admonish himself

“It is really that — laywoman devotee had finished breakfast which is last night remains mixed with anchovy paste; she will take her lunch with boiled soup of broken rice mixed with vegetables; she ordered about to offer stored rice etc ... for you, this

PAGE 393

devotee wishes neither rice field nor farm, she wishes neither food nor clothes, actually she offers with regarding to three kinds of happiness, existences of human being, heavenly being, *nibbāna*, depending upon you. Whether do you capable of giving those three kinds of happiness for her or not”, etc. reasoned and questioned by himself.

Then again he admonished himself that “this alms-food is not deserving to accept for you as a person with lust, hate, and delusion”.

After admonished by himself, bowl was put into bowl-bag, fastening-bead of the upper robe was detached, returned back from entrance of leaf-roofed building called *pannasāladvāra* to *kassaka* cave, the bowl was put under bed, upper robe was stretched on bamboo pole, and venerable *Ayamitta* practiced by means of strong determination that “*arahattam apāpuṇitvā na nikkhamissāmi*” “It will never go out *kassaka* cave without reaching to arahatta fruit knowledge”. When the *bhikkhu* who always takes into heart *vipassanā* practice by means of non-forgetting (*appamāda*) for long time, improved the *vipassanā* knowledge, he reached to the fourth Fruit-Knowledge before lunch time, and became an arahant called *mahākkhīṇāsava* who is void of defilements (*kilesā*) like a blooming lotus in the morning. He sat down with great happiness after the end of reflecting impulsions that “I have easily over come suffering of rounds of rebirth without any discomfort”.

At that time a kind of heavenly being dwelling on the tree adjacent to *kassaka* cave asked as follow:_____

***namo te purisājañña, namo te purisuttama.
yassa te āsavā khīnā, dakkhiṇeyyosi mārīsa.***

The most Venerable *bhante*! You are the Supreme Arahant without suffering, in the such continuum of yourself various kinds of cankers (*āsava*) had been eradicated that kind of *bhante* (Your Majesty) is real *dakkhiṇeyya* person who is deserving to every offerings with regarding to *kamma* and *kamma* result of donors.

PAGE 394

The real patriot *bhante* ... I would like to worship you.

The real gentleman *bhante* ... I would like to worship you.

After asked gladly paeon, that heavenly being continued to ask that —

“That most Venerable *bhante* ... those elder laywomen devotees will be free from various kinds of sufferings of rounds of rebirth due to offering alms-food for Arahant who usually enters into village as you, actually”.

Venerable *Ayamitta Thera*, then stood up and look at the time for alms round and then he know that it is just in time with the result that he entered into village for alms-food.

After prepared for alms food, the maiden also waiting for venerable *Ayyamitta Thera* and thinking that “now it is just in time of my brother’s coming”, then she was sitting by looking at the entrance.

When *Mahā Thera* arrived at the entrance of house, the maiden brought the bowl and filled with cooked rice which is mixed with butter, molasses, and offered respectfully to *Mahā Thera*. The *Mahā Thera* addressed *dhamma* talk gladly that “*sukham hotu*” ‘may you be happy’, and left for the forest monastery. The maiden stood up by looking respectfully at the complexion of venerable *Ayyamitta Thera*. The reason why she is very respectfully is that —

Meanwhile that most venerable *Ayyamitta Thera* had very well complexion; the controlling faculty of eye etc, is also very clear and bright, the face of *Mahā Thera* was marvellous graceful, it looked like ripe palm fruit, just after detached from petiole.

When laywoman devotee arrived from the form and asked her daughter that “beloved daughter ... did your brother come for-alms food? Then the maiden said all mater about *Mahā Thera*. Owing to knowing the fact that today her son had been finished his obligation of *bhikkhu*, laywoman devotee replied that “beloved daughter, your elder brother is well satisfied in the Buddha’s admonishment, he never be disappointed in the Buddha’s admonishment really”.

This is the biography of most venerable *Ayyamitta Thera* who returned back well indebtedness of alms food. (*M-Com-1-298, 299; M-ṭī-1-386,387; Dī-Com-2-379,381; Sam-Com-3-196,197; Abhi-Com-2-266,268*)

Owing to presence of return back the indebtedness of alms food, factor of enlightenment of alms-food, the factor of enlightenment of effort become powerful and obligation of *bhikkhu* had been reached to peak of performance, resulting the respectable olden sample would be occurred. Therefore every mediator should try to fulfil factor of enlightenment of effort by means of showing great indebtedness of alms-food of the public respectfully.

PAGE 395

(3.4.4.I.v) To be a person who always reasons noble quality of heritage of wholesome person.

These are seven kinds of heritage of wholesome person,

- (i) faith (*saddhā*) = firm faith on the triple gems, *kamma* and *kamma* results, etc...
- (ii) virtue (*sīla*) = stability of moral conduct.
- (iii) moral shame (*hiri*) = being ashamed of performing unwholesome and wrong conducts,
- (iv) moral dread (*ottappa*) = being dreaded of performing unwholesome and wrong conducts.
- (v) general knowledge (*bāhussacca*) = presence of both theoretical and practical knowledge on the Four Noble Truths
- (vi) charity (*cāga*) = donation of wealth
- (vii) wisdom (*paññā*) = penetrative knowledge called *udayabbayañāṇa* on *saṅkhāra dhamma* or right view on the Four Noble Truths.

These seven kinds of heritage of Noble Ones are given by the Buddha who is the most Supreme and Enlightened One in order to well acceptance of all disciples. The lazy one is incapable of accepting those seven kinds of heritage of Noble Ones. In worldling custom the parents usually abandon their decadent sons legally by announcing that “he is not our son, now”. As that son cannot get heritage of his parents when they die, the lazy *bhikkhu*, if he is unable to practice Noble Eight-fold Path, is incapable of accepting seven kinds of heritage of Noble Ones which is deserving to accept from the father called the Supreme Buddha. Only when he always reasons noble quality of heritage of wholesome person in this way, can the factor of enlightenment of effort be appeared in him. (*M-Com-1-299; Sam-Com-3-197; M-ṭī-1-387*)

(3.4.4.I.vi) To be a person who always reasons noble qualities of the Buddha

“The Supreme Buddha, indeed, is full of noble qualities of virtue, concentration and wisdom which are beyond comparable for all beings, ten thousands solar systems were shaken by those infinite noble qualities of the Buddha frequently, during taking rebirth process in the womb of mother of *bodhi sutta*, during renouncing for the forest life, during penetrative knowing and seeing the Four Noble Truths by himself under *bodhi* tree without depending upon others, during preaching *Dhammacakkapavattana Sutta* in the forest called *Migadāya*, during showing Super-psychic-knowledge *abhiññāṇa* of pairs of fire and water, during returning back from the heavenly plane called *Tāvātimsā* after preaching *Abhidhamma*, during abandoning of preparation for controlling faculty of life (*āyusañkhāra*) by means of associating with mindfulness and clear comprehension at *Cāpāla Cetiya* in *Vesālī*, during entering into the great eternal peace (*mahāparinibbāna cuti*). Although you are reaching under the noble admonishment of the supreme Buddha

PAGE 396

present time, why do you become lazy one? Is it reasonable? etc” ... thus in the continuum of person who reasons noble qualities of the Supreme Buddha, the factor of enlightenment of effort will be appeared. (*M-Com 1-299 Sam-3-198*)

(3.4.4.I.vii) To be a person who always reasons nobility of caste

As soon as whatever caste of person, among four kinds of castes, caste of king, caste of brahma, caste of merchant, caste of poverty, has been ordained, he is reborn as a son of *Gotama Buddha*, indeed. “In the aspect of castle, just after ordained you are not decadent caste but the younger brother of the most Venerable *Rāhulā* There who was grand-son of Great king *Suddhodhana* and chief queen *Mahāmāyādevī*, who were descendant of king *Ukkāka*, a descendant of *Mahāsammata* Dynasty, a specific race called *khattiya* who never occur hybridisation with other races. Although you are really the son of the Supreme Buddha, if you are a lazy person without practicing anymore, it is not suitable to live under the admonishment of the Buddha as a *bhikkhu* etc”. Thus in the continuum of person who reasons nobility of caste, the factor of enlightenment of effort can be appeared apparently. (*M-Com-1-299, Sam-Com-3-198, M-ṭī-1-387*)

(3.4.4.I.viii) To be a person who always reasons nobility of *samghā* fellowship

The most Venerable *Sāriputta*, Venerable *Mahāmoggallāna* etc... associating with 80 great disciples (*Mahāsāvaka*) , had been known and seen the Supra-mundane *dhamma* by means of the mind associating with rock-like stability of concentration and strenuous effort only. In the continuum of person, who reasons that, “whether do you want to walk the path leading to *nibbāna* where these Noble Ones of *samghā* fellowship, had been already walked or not, the factor of enlightenment of effort can be occurred apparently. (*M-Com-1-299, Sam-Com- 3-198*)

(3.4.4.I.ix) To be a person who always avoids from lazy person

In the continuum of person who always avoids from those persons who are similar to python with fully ingested stomach who abandon both physical and mental diligence who never understand even terminology of *samatha* and *vipassanā* practices who always dilly-

dally for physical appearance only who always prepare frequently for eating and sleeping easily, who always chat 32 kinds of speeches of animal beings called *tiracchānakathā* which are opposite of *nibbāna*, such as about food, clothes, villages, dwellings etc, who are very far from any kind of practice but full of great laziness, the factor of enlightenment of effort can be occurred apparently. (*M-Com-1-299; Sam-3-198; Sam-ṭī-2-436*)

PAGE 397

(3.4.4.I.x) To be a person who always associates with those persons who have strenuous diligence

Those persons who apply the time by walking and sitting for daytime, by walking and sitting for early-night, by sleeping a few hours for midnight, by walking and sitting for early morning, by fulfilling the responsibility of pagoda and *bodhi* tree after breakfast, by fulfilling *gatapaccāgata vatta* by which he always takes into heart the object of *samatha* and *vipassanā* practice during both sides of going and return back from alms-round village, are really wholesome ones with strenuous diligence. In the continuum of mediator who associates those kinds of wholesome persons, who have strenuous effort without falling through their intention so as to remain bones and skins only, who have *parakkama dhātu* (step by step diligence which is capable of reaching up to the Path, Fruit Knowledge and *nibbāna* successively) who always send their mind to the goal of *nibbāna*, who always presents mind of meditation which leads toward the object of practice for proper time the factor of enlightenment of effort can be appeared apparently. (*M-Com-1-299; Sam-Com-3-198; Sam-ṭī-2-436, 437*)

(3.4.4.I.xi) To be a person who always presents inclination toward factor of enlightenment of effort

In the continuum of *meditator* who has inclination toward occurrence of continuous diligence in all kinds of deportments, walking, standing, sitting, reclining, the factor of enlightenment of effort can be appeared apparently.

Owing to practising in this way, when it is reached to the fourth Path-knowledge (*arahatta magga ñāṇa*), the factor of enlightenment of effort can be designated as fulfilling *dhamma* of practice. (*M-Com-1-299, Sam-Com-3-198*)

(3.4.4.I.xii) *thinamiddhavinodanatā*

In the continuum of *meditator* who has mode of removing sloth and torpor of mind and mental concomitants (*thinamiddhavinodanatā*), such as taking into heart the perception of light (*āloka saññā*), alternative changing proper deportment, dwelling in a bare plain etc, the factor of enlightenment of effort can be occurred. (*Visuddhi-1-129*)

(3.4.4.I.xiii) *sammappadhānapaccavekkhaṇatā*

In the continuum of person who always reflects the advantages of strenuous effort (*sammappadhānapaccavekkhaṇatā*) on these four kinds of diligence,

1. trying in order to remove experienced unwholesome dhamma,
2. trying in order to avoid inexperienced unwholesome dhamma,

PAGE 398

3. trying in order to occur inexperienced wholesome dhamma,
4. trying in order to improve successively experienced wholesome dhamma, the factor of enlightenment of effort can be appeared apparently. (*Visuddhi*-1-129, *Mahāṭṭi*-1-157)

An explanation of *Samyutta ṭīkā*

Those facts related with causes of occurrence of factor of enlightenment of effort are same in commentaries of *Mūlapaṇṇāsa* and *Samyutta*, however 2 facts are different in *Visuddhi Magga*. In the *Samyutta ṭīkā* it is explained on the fact related with difference as follows:

Serial number xiii, to be a person who always reflects the advantages of strenuous effort (*sammappadhānapaccavekkhaṇatā*) would be counted in serial number ii, to be a person who always sees perspective of advantages of effort (*ānīsamsadassāvītā*) found in commentaries of *Mūlapaṇṇāsa* and *Samyutta*. It is because it can be seen easily relationship between attainment of both mundane and supra-mundane *dhamma* and strenuous diligence, indeed.

Then, the mode of removing sloth and torpor of mind and mental concomitants (*thinamiddhavinodanātā*) should be counted in serial number xi, to be a person who always presents inclination toward factor of enlightenment of effort (*tadavimuttatā*). It is finished to say the meaning of function of removing sloth and torpor in the continuum of *meditator* who always associates with great diligence. (*Sam-ṭi*-2-418)

A comment of *Mahāṭṭi*

“Among these factors of occurrence of *viriyasambojjhaṅga*, the following four factors,

1. removing sloth and torpor (*thina middha*)
2. avoiding from lazy persons
3. associating with diligent persons

4. presence of inclination toward the occurrence of *vīriyasambojjhaṅga*, are causes of occurrence of *vīriyasambojjhaṅga* by means of leading to the **function** which is capable of removing opposite *dhamma* of *vīriyasambojjhaṅga*”, thus it should be recognized on it. It must be recognized on remaining factors, such as reasoning on danger of woeful existence,

etc., that these factors are causes of occurrence of *vīriyasambojjhaṅga* by means of **enhancing** and **sharpening** the mind of meditation respectively. (*Mahāṭī*-1-157)

PAGE 399

(3.4.4.J) Eleven causes of occurrence of factor of enlightenment of zest

These eleven factors,

- (i) ***Buddhānussati*** called recollection of the Buddha by which the noble qualities of the Buddha are frequently remembered and developed.
- (ii) ***Dhammānussati*** called recollection of the Doctrine of the Buddha by which the noble qualities of the Doctrine of the Buddha are frequently remembered and developed.
- (iii) ***Samghānussati*** called recollection of the community of noble Disciples by which the noble qualities of the community of Noble Disciples are frequently remembered and developed.
- (iv) ***Silānussati*** called recollection of Morality by which the nobility of virtue of himself, non-breaking etc., is frequently remembered and developed.
- (v) ***Cāgānussati*** called recollection of liberality by which the mobility of generosity of himself is frequently remembered and developed.
- (vi) ***Devatānussati*** called recollection of heavenly beings by which paralleling between faith of himself and faith of heavenly beings is performed and frequently remembered on it and developed.
- (vii) ***Upasamānussati*** called recollection of peace by which the noble qualities of *nibbāna* are frequently remembered and developed.
- (viii) To be a person who always avoids from gross-minded person.
- (ix) To be a person who always associates with soft-minded person
- (x) To be a person who always reflects admirable discourses (*Suttanta*) of the Buddha
- (xi) To be a person who has inclination toward the occurrence of *pītisambojjhaṅga*, are causes of occurrence of factor of enlightenment of zest. (*Visuddhi*-1-129, *Dī-Com*-2-382, *M-Com*-1-300, *Sam-Com*-3-198)

(3.4.4.J.i) *buddhānussati* (recollection of the Buddha)

In the continuum of *meditator* who frequently remembered the noble qualities of the Buddha, if he practices up to neighbourhood concentration, factor of enlightenment of zest can be appeared apparently. (*Dī-Com*-2-382, *M-Com*-1-300, *Sam-Com*-3-198)

The meaning is as follows: — Owing to occurrence of impulsions of wholesome mind-door cognitive processes by taking the object of noble qualities of the Buddha, those

superior and subtle corporealities are produced by those minds and are spreading throughout body continuously. Every mind of meditation called consciousness of impulsion of great wholesome mind-door cognitive process includes zest (*pīti*). That mental concomitant called zest (*pīti*) also takes the object of noble quality of the Buddha. Due to conditioning of supporting factor of object (*ārammaṇa paccaya*) of noble qualities of the Buddha, *buddhānussati* is a cause of occurrence of factor of enlightenment of zest. It should be recognized the fact that commentaries explained continuous occurrence of superior and subtle corporeality produced by mind of meditation associating with zest (*pīti*) throughout body as the fact that *pītisambojjhaṅga* occurs throughout body. This is because both that mind of meditation and zest associating with that mind can be occurred depending upon heart basis (*hadayavatthu rūpa*) only.

[It should be recognized the fact that commentaries explained as *yāva upacārā* (= up to neighbourhood concentration), due to incapable of concentration, due to incapable

PAGE 400

of attaining full absorption through *buddhānussati* etc.]

sakalasarīram phara mānoti pītisamuṭṭhānehi pañītarūpehi sakalasarīram pharamāno. (M-ṭī-1-388)

In the continuum of *meditator* who always practices by means of any way —

(3.4.4.J.i) *dhammānussati*

by which the noble qualities of the doctrine of the Buddha, i.e. four kinds of the path-knowledge, four kinds of the Fruit-Knowledge, *nibbāna* and scriptures, totally ten kinds of noble *Dhamma*, are frequently remembered and developed, or

(3.4.4.J.iii) *samghānussati*

by which the noble qualities of the community of Noble Disciples, i.e., *suppaṭippanna*, well practising by leading straight toward *nibbāna* without curve in his path, etc., are frequently remembered and developed, or

(3.4.4.J.iv) *sīlānussati*

by which the noble qualities of the four circumstantially purified moral codes (*catupārisuddhi sīla*), i.e.,

(a) restraint with regard to monk's Disciplinary Code (*pāṭimokkha samvarasīla*)

- (b) restraint of senses (*indriya samvara sīla*)
- (c) purification of livelihood (*ājīvapārisuddhisīla*)
- (d) morality with regard to the four requisites (of the monk) (*paccaya sannissita sīla*), are frequently remembered and developed; if the *meditator* is layman devotee, the ten precepts or five precepts, which must be restrained without breaking, are frequently remembered and developed, or

(3.4.4.J.v) *cāgānussati*

by which the mobility of generosity of himself, such as, after offered superior food to *samghā* fellowship during occurring disaster of severe food scarcity, reflects that “Thus superior food had been offered” etc.,

if the *meditator* is layman devotee, he reflects on generosity which had been fulfilled during occurring disaster of severe food scarcity for wholesome persons with purified virtue, and frequently remembered and developed it, or

(3.4.4.J.vi) *devatānussati*

by which paralleling between himself and heavenly beings, such as, “those heavenly beings who fulfilled with such nobility of wealth of wholesome person i.e., faith, virtue, general knowledge, liberality, wisdom, etc., had been become existences of heavenly

PAGE 401

beings, similarly he himself also possesses that nobility of wealth of wholesome person, called faith, virtue, general knowledge, liberality, wisdom, etc.." are performed and frequently reflected and developed, or

(3.4.4.J.vii) *upasamānussati*

by which the noble qualities of *nibbāna*, i.e., "as those kinds of defilements which are removed by even full absorption (*jhānasamāpatti*), cannot be appeared for 60 to 70 years, those defilements are always freeing in eternal peace of present time (*sa-upādisesa nibbāna*)" etc., are frequently reasoned and developed, the factor of enlightenment of zest can be appeared apparently.

As a worldling usage, "*samuddo mayā dittho* = I see the ocean", in which partial of the ocean seen by eye is metaphorical usage on total ocean which cannot be seen, is present, similarly, partial *sañkhāra dhamma*, defilements which are removed for a long time by full absorption, can be used as metaphorically for all *sañkhāra dhamma* which are totally ceased in eternal peace, by taking the object of that kind of tranquillity, *upasamānussati* must be practiced systematically, explained in commentary. Owing to presence of ability to remove defilements for a long time, the intention (*manasikāra*) of practice of *upasamānussati*, which is produced by knowledge that is knowing for long time tranquillity of partial *sañkhāra dhamma*, can also achieve the neighbourhood concentration. Owing to fulfilling the zest by functioning neighbourhood concentration, it is a cause of occurrence of factor of enlightenment of zest. (*M-ṭī*-1-388)

(3.4.4.J.viii) *lūkhapuggalaparivajjanatū* = to be a person who always avoids from gross-minded person

In the continuum of *meditator* who always avoids gross-minded person who is similar to chaff by showing apparently on his streak which lacks obedience to see pagoda, bodhi tree and senior *Mahā Theras* who are leaders of the community of *samghā*; who lacks any trace of faith (*saddhā*), similar to dusts attaching on the back of donkey, due to absence of paying respect to triple gems, the factor of enlightenment of zest can be appeared apparently. (*M-Com*-1-300)

(3.4.4.J.ix) *siniddhapuggalasevanatū* = to be a person who always associates with soft-minded person

In the continuum of *meditator* who always associates with soft-minded persons who have great respect on *saddheyyavatthu* which are deserving to pay respect, the Buddha etc., who have gentleness with full of faith, the factor of enlightenment of zest can be appeared.

(3.4.4.J.x) *pasādanīyasuttanta paccavekkhaṇatā*

Both in the continuum of a person who always reflects admirable discourses (*suttanta*) of the Buddha and ...

PAGE 402

(3.4.4.J.xi) *tadadhimuttatā*

in the continuum of a person who has inclination toward the occurrence of *pītisambojjhaṅga*

— the factor of enlightenment of zest can be appeared apparently (*M-Com-1-300, Sam-Com-3-198, 199*)

Thus it must be enhanced depressing mind by means of developing factors of enlightenment, wisdom, effort and zest, when the mind falls back in practice. This is the fourth kind of *appanākosalla*.

3.4.5. Suppress on mind properly

For such period the mind of meditation of *meditator* become wandering and unrest due to some factors such as presence of predominant effort, predominance in knowledge of fear and zest etc. At that time, if it is well developed on factors of enlightenment, tranquillity, concentration, equanimity, but not on factors of enlightenment, wisdom, effort, zest, it can be said the unrest mind is suppressed properly. (*Visuddhi-1-129*)

(3.4.5.A) An excerpt of *Aggi Sutta* (second section)

Excerpt of *Aggi sutta* on page 373

Bhikkhus ... as a worldling simile to be paralleled is that _____ a such man wants to extinguish fire; that man puts dry grass in to that fire; dry cow-dung would also be put; dry fire-wood would also be put; the air will in buccal cavity would be blown; soil dust would not be spread over it; *bhikkhus*... will it be deserved to extinguish fire for that man?, asked by the Buddha.

Those *bhikkhus* replied that “Supreme Buddha... it will not be deserved to extinguish fire in this way”.

Bhikkhus... similarly, in such time the mind of meditation of that *bhikkhu* would be active and wandering to take the object of practice at that time, it is not proper time to develop

1. factor of enlightenment of wisdom (*dhammavicayasambojjhaṅga*)
2. factor of enlightenment of effort (*vīriyasambojjhaṅga*)
3. factor of enlightenment of zest (*pītisambojjhaṅga*)

The reason why, it is not proper time to develop those factors is that *bhikkhus* the mind of meditation is active and wandering to take the object of practice and falls into

laziness. It is incapable of extinguishing on active and wandering mind by those three kinds of factors.

Bhikkhus... actually, at such time the mind of meditation would active and wandering to take the object of practice, at that time, it is proper time to develop

1. factor of enlightenment of tranquillity (*passaddhisambojjhaṅga*)
2. factor of enlightenment of concentration (*samādhisambojjhaṅga*)
3. factor of enlightenment of equanimity (*upekkhāsambojjhaṅga*)

The reason why, it is not proper time to develop those factors is that ___ *bhikkhus*... the mind of meditation is active and wandering to take the object of practice. It is capable of extinguishing on active and wandering mind by those three kinds of factors of enlightenment.

PAGE 403

Bhikkhus... as a worldly simile to be paralleled is that ___ a such man wants to extinguish fire, that man put fresh grass into that trace of fire; wet cow-dung would be put succulent fire-wood would be put; air mixed with water would be blown; soil dust would be spread over it; *bhikkhus*... will it be deserved to extinguish fire for that man? Asked by the Buddha.

Those *bhikkhus* replied that “Supreme Buddha... it will be deserved to extinguish fire in this way”

Similarly... *bhikkhus*... at such time the mind of meditation would active and wandering to take the object of practice, at that time, it is proper time to develop

1. factor of enlightenment of tranquillity (*passaddhisambojjhaṅga*)
2. factor of enlightenment of concentration (*samādhisambojjhaṅga*)
3. factor of enlightenment of equanimity (*upekkhāsambojjhaṅga*)

The reason why, it is not proper time to develop those factors is that ___ *bhikkhus*... the mind of meditation is active and wandering to take the object of practice. It is capable of extinguishing on active and wandering mind by those three kinds of factors of enlightenment.

satim ca khvāham bhikkhave sabbatthikam vadāmi. (Sam-3-100)

Bhikkhus I would like to preach that the mindfulness, indeed, is essential for all time when depression or unrest of the mind occurs.

In this case, there is specific cause for occurrence of *passaddhisambojjhaṅga* etc., and it must be recognized that way of developing those factors of enlightenment, *passaddhisambojjhaṅga* etc., by means of fulfilling occurrence of that respective causes. Here it would be presented previously on the way found in Pāli Text.

(3.4.5.B) The cause of occurrence of *passaddhisambojjhaṅga*

atthi bhikkhave kāyapassaddhi cittapassaddhi, tattha yoniso manasikārabahulīkāro, ayamāhāro anuppannassa vā passaddhisambojjhaṅgassa uppādāya uppannassa vā passaddhisambojjhaṅgassa bhiyyobhāvāya vepullāya bhāvanāya pāripūriyā, (Sam-3-92; Visuddhi-1-130)

= *Bhikkhus* — There are tranquillity of mental concomitants called *kāyapassaddhi*, tranquillity of consciousness called *cittapassaddhi*; those kinds of tranquillity on which wise attention must be performed frequently. This is cause of occurrence of inexperienced *passaddhisambojjhaṅga* and cause of improvement of experienced *passaddhi-sambojjhaṅga* thoroughly.

(3.4.5.C) The cause of occurrence of *samādhisambojjhaṅga*

atthi bhikkhave samathanimittam abyagganimittam. tattha yoniso manasikārabahulīkāro, ayamāhāro anuppannassa vā samādhisambojjhaṅgassa uppādāya uppannassa vā samādhisambojjhaṅgassa bhiyyobhāvāya vepullāya bhāvanāya pāripūriyā. (Sam-3-92; Visuddhi-1-130)

= *Bhikkhus* ... there are objects of *samatha*, which are factors of cessation of defilements and objects of *samādhi*, which are non-dispersing ones; those kinds of objects on which wise attention must be performed frequently. This is cause of occurrence of inexperienced *samādhisambojjhaṅga* and cause of improvement of experienced *samādhisambojjhaṅga* thoroughly. (Sam-3-92)

(Sam-ṭi-2-419)

PAGE 405

Explanations found in above commentaries and sub-commentaries will be further explained as follow:

yonisomanasikāra = Wise attention

In those words found in Pāli Text, in the continuum of that *meditator*, factors of enlightenment, tranquillity, concentration and equanimity were well appeared previously by means of such modes. Taking into heart those objects (sign of full concentration ... etc.) which occurred by means of occurrence of those factors of enlightenment, tranquillity, concentration, equanimity, after well recognized on that mode, is called *yonisomanasikāra* (wise attention) for above three words relating to those three factors of enlightenment, tranquillity, concentration, equanimity.

In the phrase, “**after well recognized on that mode**”, it means that fact that previously in the continuum of that *meditator*, if the practice has been fulfilled by means of such mode, three factors of enlightenment, tranquillity, concentration, equanimity, were appeared in that time accordingly and those three modes, i.e., mode of experiencing of on tranquillity, mode of experiencing on concentration, mode of experiencing on equanimity, of mental concomitants associating with that that consciousness, “**must be well recognized**” and then it must be taken into heart that object (as sign of full concentration etc.) frequently in order to occur apparently those factors of enlightenment, tranquillity, concentration, equanimity. (This explanation refers to only mindfulness of breathing for this section. If should be recognized on remaining practices of *samatha* and *vipassanā* similarly.)

The meaning of sign of *samatha*

The preceding concentration which is acquired by recognizing well on mode of occurrence of concentration by taking the object of sign of full concentration is designated as **sign of *samatha*** (*samatha nimitta*) due to occurrence of cause of succeeding concentration of the former. Those signs of full concentration (*paṭibhāganimitta*), which are objects of that *samatha* (= concentration) , as *ānāpāna paṭibhāganimitta*, are also designated as **sign of *samatha***.

The wandering of mind (*vikkhepa*) which has various objects, called unrest (*uddhacca*) is designated as *byagga*. It is right. — It is explained that the unrest (*uddhacca*) has the function (*rasa*) instability of the mind on “unique object” and it has the manifestation (*paccupaṭṭhāna*) that the nature of shaking and instability of mind on unique object, appears in the insight of *meditator*.

Due to neighbourhood concentration and full absorption, called *samatha*, fix together with stable unique sign of full concentration (as in *ānāpāna paṭibhāganimitta*), but not wandering on various objects, that concentration (*samādhi*) is called *abyagga*. That concentration called *abyagga*, indeed, is called *abyagga nimitta*, due to real cause of occurrence of succeeding concentration. Therefore it should be recognized as “indirect

PAGE 406

way of preaching methodology” (*pariyāya*) with regard to the phrase, *samatha nimittam abyaggaṇimittam*. (*Sam-Com-3-199*; *Sam-ṭī-2-418*; *Mahāṭī-1-158*)

Depended *dhamma* of *upekkhāsambojjhaṅga*

Depended *dhamma* of *upekkhāsambojjhaṅga* are object *dhamma* of equanimity (*tatramajjhattupekkhā*) which is capable of neutralizing on various objects. As a real meaning, it must be recognized that the equanimity called *tatramajjhattatā* which is capable of neutralizing the mind of meditation on either object of *samatha* or *saṅkhāra nimitta* which is the object of *vipassanā*, is depended *dhamma* of *upekkhāsambojjhaṅga*. (*Sam-Com-3-179*)

majjhattākāra = Mode of neutrality

There are two kinds of modes of neutrality,

1. *majjhattākāra* which is a kind of mode of neutrality by which the object of *samatha* or the object of *vipassanā* is taken, without taken by mode of desirable one or non-desirable one,
2. *majjhattākāra* which is a kind of mode of neutrality by which mind of meditation can be neutralized on succeeding object of *samatha* or object of *vipassanā* called *saṅkhāra nimitta*, which is occurred by means of preceding efficiency of practice of *upekkhāsambojjhaṅga*. Those two kinds are essential to be known as depended objects of *upekkhāsambojjhaṅga*. (*Sam - ṭī-2-419*)

Special Notice

The Buddha preached on

1. The cause of occurrence of *satisambojjhaṅga* as depended object of mindfulness,
2. The cause of occurrence of *dhammavicaya sambojjhaṅga* as depended object of wisdom,
3. The cause of occurrence of *upekkhāsambojjhaṅga* as depended object of equanimity, respectively, by means of regarding as object on these three factors of enlightenment. It is preached as objects in that way due to significant conditioning of supporting of object (*ārammaṇa paccaya*) of respective object for those three factors of enlightenment.

On the other hand, the remaining factors of enlightenment, effort, zest, tranquillity, concentration, are conditioned by respective cause by means of “supporting as object” (*ārammaṇa paccaya*) and “supporting as dependence” (*upanissaya paccaya*). Especially, supporting as dependence is extremely essential to be conditioned for those factors of enlightenment. Therefore the Buddha preached those factors of enlightenment, effort, zest, tranquillity, concentration by means of either object condition or

PAGE 407

dependence condition, and this is special notice to be understood, indeed.

Short point to be recognized

Owing to developing concentration by taking the object of sign of full concentration which is very bright in stage, the *meditator* must take into heart by means of ...

1. mode of experiencing on tranquillity of mind and mental concomitants,
2. mode of experiencing on concentration on that sign of full concentration of mindfulness of breathing,
3. mode of experiencing on neutrality of meditation on that sign of full concentration without falling on two extremities, retardation of mind on that sign and wandering mind, in order

to occur apparently three factors enlightenment, tranquillity, concentration, equanimity. It must be recognized that taking into heart in that way is called wise attention (*yoniso manasikāra*). This is the way of suppressing the mind in accordance with the Pāli Text. Then it would be presented the way of suppressing the mind in accordance with commentary.

(3.4.5.E) Seven factors of occurrence of *passadhi sambojjhaṅga*

api ca satta dhammā passaddhisambojjhaṅgassa uppādāya samvattanti paṇītabhojanasevanatā, utusukhasevanatā, iriyāpathasukhasevanatā, majjhataṭṭhapayogatā, sāraddhakāyapuggalaparivajjanatā, passakkhakāyapuggalasevanatā, tadadhimuttatāti. (Visuddhi Magga-1-130; Dī-2-382; M-Com-1-300,301; Sam-Com-3-199)

These seven factors,...

1. to be a person who always takes superior food
2. to be a person who has favourable climate
3. to be a person who has favourable deportment
4. to be a person who has diligence which situates on the neutrality
5. to be a person who always avoids from those persons with stress
6. to be a person who always associates with those persons with tranquillity
7. to be a person who has inclination toward the occurrence of *passaddhisambojjhaṅga*, are causes of *passaddhisambojjhaṅga* apparently.

PAGE 408

1. *paṇītabhojanasevanatā* = to be a person who always takes superior food

Owing to agility, elasticity, and adaptability of physical condition by taking favourable and superior foods with high nourishment moderately, after knowing on present situation of body of *meditator*, can be occurred, it is a cause of occurrence of *passaddhisambojjhaṅga*. (Mahāṭṭkā-1-158)

2. *utusukhasevanatā* = to be a person who has favourable climate

In the continuum of *meditator* who has favourable climate, agility, elasticity, adaptability of both physical and mental condition can be occurred by that favourable climate among low temperature (*sīta utu*) and high temperature (*uhṇa utu*). That temperature benefits the *meditator* by means of great dependence condition (*upanissaya*). Thus, *passaddhisambojjhaṅga* would be appeared apparently in the *meditator* who has favourable climate. (M-Com-1-301, Mahāṭṭkā-1-158)

3. *iriyāpathasukhasevanatā* = to be a person who has favourable deportment

Owing to occurrence of agility, elasticity, adaptability of both physical and mental condition in the continuum of *meditator* who has favourable deportment, among four types of deportments, reclining, sitting, standing and walking, that favourable deportment is cause of occurrence of *passadhi sambojjhaṅga*. (Mahāṭṭkā-1-158)

Such person called great gentleman (*mahā purisa*) is quite resistant to all climate conditions. It is not intended to say 'these favourable climate, favourable deportment' for that kind of person called great gentleman. There are two kinds of factors, favourable climate (*sabhāga utu*), favourable deportment (*sabhāga iriyāpatha*) and unfavourable climate (*visabhāga utu*), unfavourable deportment (*visabhāga iriyāpatha*) for a such *meditator*. If that kind of *meditator* avoids unfavourable ones and has favourable ones, in the continuum of that *meditator*, *passaddhisambojjhaṅga* can be occurred apparently. (Dī-Com-2-383; M-Com-1-301; Sam-Com-3-199)

Owing to capable of fulfilling the adaptability of mind of meditation by means of finishing to fulfil adaptability of physical condition resulting from taking favourable nourishment (*bojana sappāya*), favourable climate (*utu sappāya*) and favourable deportment (*iriyāpatha sappāya*), these factors are causes of two kinds of tranquillity, tranquillity of mental concomitants (*kāyapassaddhi*), tranquillity of consciousness (*citta passaddhi*). (*Sam-ṭī-437,438*)

PAGE 409

4. *majjattapayogatā* = to be a person who has diligence which situates on the neutrality

The way of reasoning that ‘both himself and others have only *kamma* as their properties’, can be called *majjhatta payoga* (= a kind of diligence which situates on the neutrality). One kind of reasoning that ‘various kinds of happiness and suffering have no dependence’ (*ahetuka*) is an extremity. One kind of reasoning that ‘all the occurrences are created by the creator (*issara*), great brahma, etc... ‘which rely on abnormal dependence is also an extremity. These are called inferior *dhamma*. Without approaching to these two extremities, the way reasoning called right view (*sammādiṭṭhi*) that ‘various kinds of happiness and suffering would be occurred in accordance with their properties, *kamma* accordingly’ is called middle way of practice (*majjhima paṭipadā*). Therefore the person with *payoga* (diligence) which is a belief on *kamma* and *kamma* result can be designated as the person with *majjhatta payoga*.

[Notes: *payoga* means diligence by which a way of reasoning called right view, firm faith in *kamma* and *kamma* result, intended to be occurred in himself.]

It is right. — This kind of faith called *majjhatta payoga*, due to occurrence of cause of tranquil body which is called the body had finished to remove worries, is capable of carrying out both two kinds of tranquillity, tranquillity of mental concomitants and tranquillity of consciousness. (*Dī-Com-2-383*; *Sam-Com-3-199*; *Sam-ṭī-2-438*)

If it is able to take into heart that he feels mentally agreeable feeling due to presence of wholesome *kamma*, whenever it is seen him with mentally agreeable feeling, or he feels mentally disagreeable feeling due to presence of unwholesome *kamma*, whenever it is seen him with mentally disagreeable feeling; that kind of taking into heart (reasoning) is called wise attention (*yoniso manasikāra*) and it is also called *majjhatta payoga* (middle way of diligence). It can be observed practically on whether tranquillity of mind and mental concomitants occur in the continuum of a person with wise attention and middle way of diligence or not. In the continuum of a person with middle way of diligence, therefore, factor of enlightenment of tranquillity can be occurred apparently.

Thus it should be recognized that the commentary explained on ‘avoiding from those persons with stress and associating with those persons with tranquillity’, as the factors of occurrence of *passadhi sambojjhaṅga* due to the reason that *majjhatta payoga* is capable of functioning tranquillity of mind and mental concomitants for the *meditator*. (*Sam- ṭī-2-438*)

5. *sāraddha puggala parivajjanatā* = to be a person who always avoids from those persons with stress —

Such person usually wanders by torturing others with weapons, sticks, stone etc. In the continuum of a *meditator* who always avoids from that kind of person with both physical and mental stress, ...

PAGE 410

6. *passaddha kāya puggala sevanatā* = to be a person who always associates with those persons with tranquillity

in the continuum of *meditator* who always associates with a person who has restrained controlling faculties and tranquil mind and body, ... and

7. *tadadhimuttatā* = to be a person who has inclination toward the occurrence of *passadhi sambojjhaṅga*

in the continuum of *meditator* who has inclination toward and firm faith in order to occur tranquillity of mind and mental concomitants of every deportments, reclining, sitting, standing and walking, ...

The factors of enlightenment of tranquillity (*passaddhisambojjhaṅga*) can be occurred apparently.

(3.4.5.F) Eleven factors of the occurrence of *samādhisambojjhaṅga*

ekādassa dhammā samādhisambojjhaṅgassa uppādāya samvattanti vatthuvisadatā, nimittakusalatā, indriyasamattapaṭipādanatā, samaye cittassa niggahaṇatā, nirassādassa cittassa saddhā-samvegavasena sampahamsanatā, sammāpavattassa ajjhupekkhanatā, asamāhitapuggalaparivajjanatā, samāhitapuggalasevanatā, jhānavimokkha-paccavekkhanatā, tadadhimuttatāti. (Visuddhi Magga-1-131)

These eleven factors,

1. to be a person who keeps clean both internally and externally,
 2. to be a person who has fulfilment to balance five controlling faculties
 3. to be a person who is mastery of sign (*nimitta*)
 4. to be a person who suppress his mind in proper time
 5. to be a person who enhance his mind in proper time
 6. to be a person who can satisfy his mind lacking happiness by means of faith and knowledge of fear
 7. to be a person who can neutralize mind of meditation which is harmonious on the object
 8. to be a person who avoids from those persons without concentration
 9. to be a person who associates with those persons with concentration
 10. to be a person who always reflects absorption (*jhāna*), etc., called *vimokka dhamma*
 11. to be a person who has inclination toward the occurrence of *samādhisambojjhaṅga*,
- are causes of the occurrence of *samādhisambojjhaṅga*. (*Visuddhi Magga-1-131*)

[Notes: —

PAGE 411

It should be recognized on factor 1 and 2 as mentioned in *dhammavicayasambojjhaṅga* previously. These two factors are able to occur wisdom as well as concentration. This is because the fact in (*Abhidhamma-Com-1-162*), that *samāhi to yathābhūtam jānāti passatīti vacanato samādhi tassa padaṭṭhānam* . = Owing to the Buddha preached that ‘the person with concentration knows and sees actually and really, and the concentration is the proximate cause of wisdom, only when the concentration has been fulfilled can the wisdom be fulfilled. (*Sam- 1-2-438*)]

3. *nimitta kusalatā* = to be a person who is mastery of the sign

It means to be a person who is mastery of learning to sign (*nimitta*). (*Dī-Com-2-383; Sam-Com-3-199*)

Due to unavoidable condition of mastery of making sign of *kasiṇa* and mastery of practicing on *kasiṇa* and then mastery of protecting sign of *kasiṇa*, also depends on mastery of practicing on *kasiṇa*, the commentator explained that ‘*nimitta kusalatā*’ means to be a person who is mastery of learning to sign (*nimitta*). (*Sam- ṭī-2-438*)

It should be recognized as *nidassana naya* —

kasiṇanimittassāti ca nidassanamattam daṭṭhabbam. asubhanimittassāpi hi yassa kassaci jhānuppattinimittassa uggahaṇakosallam nimittakusalatā evāti. (Dī-ṭī-2-332)

In this case, it should be recognized on the phrase, ‘to be a person who is mastery of the sign’, which is intended to show an example, as *nidassana* method (= a kind of writing or preaching methodology in which significant sample is shown to be easily understood). It is because the fact that for a such *meditator* who had attained any kind of sign which can produce neighbourhood or full absorption, such as sign of repulsiveness (*asubha nimitta*) etc., mastery of learning, developing, protecting of the sign is also called *nimitta kusalatā*. (*Dī-ṭī-2-332; Mahāṭīkā-1-154*)

Special Notice —

This is only the stage of developing concentration by taking the object of sign of full concentration of mindfulness of breathing. Therefore that brilliant sign of full concentration belongs to various signs of *samatha*. It should be recognized that if the *meditator* is mastery of learning, developing and protecting in that sign of *samatha*, he is mastery of sign (*nimitta kusalatā*). Therefore the *meditator* must fulfil in order to become mastery of learning, developing, protecting in sign of full concentration successively.

PAGE 412

4. *samaye cittassa niggahṇanatā* = to be a person who suppress his mind in proper time

The mind of meditation becomes wandering and unrest as dispersing ashes when a stone falls on heap of ashes due to these reasons —

- to be a person with extreme diligence,
- to be a person with strong wisdom
- zest is extremely apparent.

After that time, unrest mind must be suppressed by developing,

- factor of enlightenment of tranquillity
- factor of enlightenment of concentration
- factor of enlightenment of equanimity. (*Dī-Com-2-383; Sam-Com-3-200; Sam- ṭī-2-439*)

5. *samaye cittassa paggaṇṇanatā* = to be a person who enhance his mind in proper time

The mind of meditation becomes retarded and fall back from taking the object of *samatha* or *vipassanā* due to these reasons —

- to be a person with very diminished diligence,
- to be a person with weak wisdom
- presence of deficiency of mindfulness called *appamāda* which is unforgetting the object of *samatha* or *vipassanā*.

At that time, retarded mind must be enhanced and sped up by developing,

- factor of enlightenment of wisdom,
- factor of enlightenment of effort,
- factor of enlightenment of zest. (*Dī-Com-2-383; Sam-Com-3-200; Sam- ṭī-2-438*)

6. *samaye sampahamsanatā* = to be a person who can satisfy his mind lacking happiness by means of faith and knowledge of fear

Owing to either the weakness of the wisdom which is able to know and see penetratively the real nature of the objects of *samatha* and *vipassanā*, or the absence of attainment of tranquillity from heat of defilements, the mind of meditation lacks pleasurable interest in practice resulting in lacking taste of practice. At that time the mind must be dreaded by reasoning on eight kinds of dreaded-bases (*samvega vatthu*). (*Dī-Com-2-383,384*; *Sam-Com-3-200*; *Visuddhi Magga-1-131*)

PAGE 413

It is right. — ‘Donation (*dāna*) is signified by greedlessness (*alobha*), while the virtue is signified by hatelessness (*adosa*), the practice, by non-delusion (*amoha*) called wisdom (*paññā*) which is knowing and seeing the real nature of objects of *samatha* and *vipassanā*. Among those three *dharmas*, for such time the non-delusion is weak, at that time the *samatha* practice is incapable of functioning to attain neighbourhood or full concentration for both preceding and succeeding practices successively. If the practice is *vipassanā*, it is incapable of functioning to attain the Supra-mundane *dharma* called the Path-Knowledge and Fruit-Knowledge for both preceding and succeeding *vipassanā* practices successively. As a kind of nourishment which is not prepared with special flavours in order to become delicacy, is not satisfied by a man, the practice which is not so strong in wisdom, is unable to be favoured by a *meditator*. Therefore any kind of practice which is unfavourable in that way, lacks taste of pleasurable interest for that *meditator*. Owing to lack of right way of usual practice without taste of pleasurable interest, it cannot be attained tranquillity from heat of defilements called *upasamasukha* for any period, momentarily (*tadaṅga*), for long time (*vikkhambhana*), or for permanently without remains (*samuccheda*). At that time, the mind must be dreaded by reasoning on eight kinds of dreaded-bases. That kind of reasoning is a kind of psychiatry. (*Sam- 1-2-439*)

It is right. — If the usual practices of *samatha* and *vipassanā* occurs by cascade function of preceding and succeeding concentration, that of preceding and succeeding *vipassanā* knowledge successively, the succeeding concentration and *vipassanā* knowledge become powerful in order to perform significant absorption *dharma* called neighbourhood and full concentration and the Supra-mundane *dharma* called the Path-Knowledge and Fruit-Knowledge due to presence of conditioning of preceding concentration and *vipassanā* knowledge by means of repetition (*āsevana*) and dependence (*upanissaya*) conditions. When it appears in that way, the mind of meditation is capable of functioning pleasurable interest and tranquillity from heat of defilement called *upasamasukha*. If it is incapable of functioning in that way, the mind lacks taste of the practice. At that time the mind of meditation must be enhanced by means of

1. **faith** (*saddhā*) and
2. **great fear** (*samvega*). (*Visuddhi Magga-1-131*; *Mahāṭīkā-1-158*)

PAGE 414

Efficiency of Faith

ratanattayaguṇānussaraṇena ca pasādam janati, ayam vuccati “samaye sampahamsanatā”ti. (*Sam-Com-3-200*; *Dī-Com-2-384*)

The purification of mind must be occurred by recollection of noble qualities of triple gems. According to this explanation, these three kinds of practices,

1. recollection of the Buddha
2. recollection of the Doctrine of the Buddha
3. recollection of the Community of Noble Disciples,

must be fulfilled in proper time in order to occur purification of mind and faith.

In this way, by means of occurring the knowledge of fear and purification of mind and faith, making pleasurable interest of mind of meditation is called 'to be a person who can satisfy his mind lacking happiness by various means in proper time' (= *samaya sampahamsanatā*). (*Sam-Com-3-200*; *Sam- ĩ-2-440*)

[Notes: — In this stage, if the knowledge which is knowing and seeing brilliant sign of full concentration, is not so powerful, that concentration of practice is incapable of functioning in order to occur full absorption. Without knowing real object of sign of full concentration by penetrative knowledge, if the practice of mindfulness of breathing is endeavoured, it will be lacked with pleasurable interest for the *meditator*. If a *meditator* endeavours practice of mindfulness of breathing without knowing and seeing the sign of in-breath and out-breath called *ānāpāna nimitta* and brilliant sign of full concentration which occurs depending upon in-breath and out-breath, the way of practice falls into wrong path. The reason is that only when three kinds of signs, sign of *ānāpāna* (in-breath and out-breath) and sign of full concentration (*paṭibhāga nimitta*) are thoroughly known and seen by penetrative knowledge, can it be said true practice of mindfulness of breathing. If the way of practice is wrong, tranquillity of mind from heat of defilements cannot be occurred successively. At that time, the mind of meditation must be happy by means of faith and knowledge of fear.]

Eight kinds of dreaded-bases (*samvega vatthu*)

1. *jāti dukkha* = the suffering of rebirth
2. *jarā dukkha* = the suffering of old age

PAGE 415

3. *byādhī dukkha* = the suffering of decaying
4. *marāṇa dukkha* = the suffering of death

[These four kinds can be found in both two kinds of sensuous worlds, happy existence (*sugati bhava*) and woeful existence (*duggati bhava*)]

5. *apāya dukkha* = the suffering of woeful existence
 - (a) the suffering of hell, five kinds of bondages etc.
 - (b) the suffering of hungry ghost, scarcity of food etc.
 - (c) the suffering of animal world, torturing of each others,

[These five kinds are counted commonly for sufferings depending on present existences of various beings]

6. *atīte vaṭṭa mūlaka dukkha* = the suffering of cyclic results which were experienced in previous time, caused by previous cyclic *dhamma* of defilements and *kamma*,

7. *anāgate vaṭṭa mūlaka dukkha* = the suffering of cyclic results which will be experienced in future, caused by present cyclic *dhamma* of defilements and *kamma*,

8. *paccuppanne āhārapariyeṭṭhi mūlaka dukkha* = the suffering of searching for food in present life. (*Visuddhi Magga-1-131*; *Dī-Com-2-384*)

[Notes: — Among those beings who exist depending upon nourishment, it is explained so as to refer human beings who exist depending upon actively acquired results (*uṭṭhānaphalūpa jīvino*). That kind of suffering of those beings is specific one which is not concerned with those beings, beings in the hell, heavenly beings etc., who exist depending upon passively acquired result (*kamma phalūpa jīvi*). Thus it is designated as eight kinds of dreaded-bases, it should be recognized in that way.] (*Sam- ĩ-2-440*; *Mahāṭikā-1-159*)

Pālī Text and Commentary (*aṭṭhakathā*)

In the Pālī Text of *Dhammasaṅgaṇī*, it is explained that ‘*samvejaniyam ṭhānanti jāti jarā byādhi maraṇam* (Abhi-1-264) = there are four dreaded-bases, rebirth, old age, decaying and death’.

cattārimāni bhikkhave bhayāni, katamāni cattāri, jātibhayam jarābhayam byādhibhayam maraṇabhayam, imāni kho bhikkhave cattāri bhayāni. (Aṅg-1-436)

It is explained four kinds of disasters, disaster of birth, disaster of old age, disaster of decaying and disaster of death, in *Catukka Nipāta*, *Aṅguttara Nikāya*, 1-436.

Due to occurrence of depending upon **present life**, these five kinds, birth, old age, decaying, death found in Pālī Text and suffering of woeful existence, explained by commentators as fifth kind, are designated as *paccuppanna vaṭṭa mūlaka dukkha* = suffering of cyclic results which are experiencing in recent time, cause by previous cyclic *dhamma* defilements and *kamma*.

Atīte vaṭṭa mūlaka dukkha means those sufferings of birth, old age, decaying, death and woeful existence which will be occurred depending upon **past life**.

Anāgate vaṭṭa mūlaka dukkha means those sufferings of birth, old age, decaying, death and woeful existence which will be occurred depending upon **future life**.

PAGE 416

In the continuum of *meditator* who reflects those sufferings, birth, old age, decaying, death and woeful existence, of previous and future existences, by means of knowing and seeing by the knowledge on previous existences (*jātissara ñāṇa*) or listening from others, the knowledge of fear (*samvega ñāṇa*) can be developed. The prince of Temiya, a previous life of Bodhisatta, after knowing and seeing both suffering of woeful existence of previous and future one if he has misconducts of king’s authority, the knowledge of great fears had been occurred. That knowledge of great fears encouraged significantly him to renounce the worldly life. Then numerous devotees who listening about venerable Kapila Thera who destroyed the Noble Doctrine of the Kassapa Buddha, reasoned sufferings of woeful existences of past, present and future existences of Kapila Thera, resulting in developing knowledge of great fears. *mahājano samviggo hoti lomahaṭṭhajāto* (*Dhammapada*-Com-2-330)

Thus when it is lacking taste of pleasurable interest in the practice due to either presence of weak knowledge which is able to know and see penetratively real nature of objects of *samatha* and *vipassanā*, or absence of tranquillity of mind and mental concomitants from heat of defilements, called *upasamasukha*, the mind of meditation must be dreaded by reasoning these eight kinds of dreaded-bases (*samvega vatthu*). Then the mind will be enhanced in the practice appreciatively. Then the mind of meditation must be purified by recollecting noble qualities of Triple Gems. If the *meditator* fulfils in this way, he can be said as a person who can satisfy his mind lacking happiness by means of faith and knowledge of great fear.

7. *sammāpavattassa ajjhupekkhanatā* = to be a person who can neutralize mind of meditation which is harmonious on the object ____

For such time, due to lack of retardation and wandering of mind, the way of practice which takes the object of sign of full concentration, is right and called *sammā paṭipatti*. By means depending upon that right way of practice, the mind of meditation ____

- a. lacks retardation to take the object of practice due to lack of extremity of three kinds of factors of enlightenment, *passaddhi*, *samādhi*, *upekkhā* which are associating *dhamma* of laziness

- b. lacks wandering due to lack of extremity of three kinds of factors of enlightenment, *dhammavicaya*, *vīriya*, *pīti*, which are associating *dhamma* of unrest (*uddhacca*)
- c. does not lack of pleasurable interest due to presence of fulfilment of wisdom which is knowing and seeing penetratively by object of *ānāpāna paṭighāga nimitta*, and attainment of tranquillity from heat of defilements called *upasamasukha*, and

PAGE 417

- d. it is no need to enhance the mind of meditation due to lack of retardation of practice of mindfulness of breathing.

Due to lack of wandering of mind of meditation from the object of practice, it is no need to suppress object of practice, it is no need to suppress the mind. Due to presence of pleasurable interest in the practice, it is no need to perform the function of satisfying the mind. Due to these reasons the mind of meditation leads to the right way of the practice called full concentration.

In other words, due to presence of mind of meditation which is able to neutralize on the object of *ānāpāna paṭibhāga nimitta*, it is neither retardation nor wandering mind but leading to right way of practice with happiness. At that time, as a stage-coach driver has no special preparation to drive well-trained-horses which are harmonious running along the road, the *meditator* has no need to perform three kinds of functions, enhancing, suppressing and enjoying the mind of meditation alternatively. At that time the *meditator* who has no preparations of above three kinds, can be said a person who can neutralize mind of meditation which is harmonious on the object. (*Visuddhi Magga*-1-131; *Dī-Com*-2-384; *Sam-Com*-3-200; *Mahāṭṭkā*-1-159; *Sam- tī*-2-440)

8. *asamāhita puggala parivajjanatā* = to be a person who avoids from those persons without concentration

Avoiding from those persons who have never experienced to walk the path of practice which is the cause of absorption, called *nekkhamma paṭipadā*; who lack any kind of concentration, neighbourhood and full concentration; who always endeavouring various functions which are

PAGE 418

incapable of reaching to any kind of concentration, neighbourhood and full concentration; who have dispersing minds which are thrown on various kinds of objects, is called *asamāhita puggala parivajjanatā*. (*Visuddhi Magga*-1-131, *Dī-Com*-2-384; *Sam-Com*-3-200; *Mahāṭṭkā*-1-159)

9. *samāhita puggala sevanatā* = to be a person who associates with those persons with concentration

Approaching and associating with those persons who have well experience to walk the path of practice which is the cause of absorption, called *nekkhamma paṭipadā*, who have concentration which is well concentrated mind putting upon the object of practice of neighbourhood and full absorption, such as sign of full concentration of mindfulness of breathing, is called *samāhita puggala sevanatā*. (*Visuddhi Magga*-1-131; *Dī-Com*-2-384; *Sam-Com*-3-200)

10. *jhāna vimokkha paccavekkhanatā* = to be a person who always reflects *vimokkha dhamma*, the first absorption, etc ...

Due to those *jhānic dhamma*, the first absorption, etc. are well delivered from opposite *dhamma*, those *jhānic dhamma* are also called *vimokkha*.

The modes of reflecting of those *vimokkha dhamma*, such as,

1. it would be developed in this way,
2. it would be entered in this way,
3. it would be put strong determination in this way,
4. it would be emerge from absorption in this way,
5. it would be unpurified in this way,
6. it would be purified in this way, etc...

are called *jhāna vimokkha paccavekkhaṇatā*. (*Mahāṭīkā*-1-158)

11. *tadadhimuttatā* = to be a person who has inclination toward the occurrence of *samādhisambojjhaṅga*

The occurrence of a person who has the mind which intends to occur the concentration, four kinds of deportments, reclining, sitting, standing, walking, must be put through with regard to concentration; with inclination toward concentration; with intention to bend concentration; with willingly bend concentration; is called *tadadhimuttatā*. It can be said that the full absorption has been fulfilled continuously. In the continuum of *meditator* who practices in accordance with eleven factors occurrence of *samādhisambojjhaṅga*, this *samādhisambojjhaṅga* will be appeared apparently.

When the Path-Knowledge called *arahatta magga ñāṇa* has attained *samādhisambojjhaṅga* would be improved the climax stage with the result that the *arahatta magga* becomes factor of fulfilment of the practice. (*Visuddhi Magga*-1-132; *Dī-Com*-2-384; *Sam-Com*-3-200)

PAGE 419

Important point to be noticed well

In the Pālī Text, *Samyutta*-3-92, it is preached that if wise attention is frequently performed on *samatha nimitta*, *abyagga nimitta*, such as *ānāpāna paṭibhāga nimitta*, *samādhisambojjhaṅga* can be occurred apparently.

As mentioned above, the causes of occurrence of *samādhisambojjhaṅga* are explained in detail in commentaries. According to those Pālī Texts and commentaries, if the *meditator* wants to attain *nibbāna*, it must be fulfilled *samādhisambojjhaṅga* appreciatively. Only when seven kinds of factors of enlightenment are completely fulfilled, and only when eight kinds of noble Eight-fold Path are completely fulfilled, can the *meditator* face with *nibbāna* indeed. If the *meditator* is unwilling to develop concentration and accepts the fact that it is not essential to develop concentration, it cannot be completed seven kinds of factors of enlightenment, eight kinds of noble Eight-fold Path thoroughly. It must be reasonably assumed whether or not the Supra-mundane *dhamma* called *nibbāna* can be reached by those sex kinds of factors enlightenment, seven kinds of Noble Eightfold Path lacking the concentration (*samādhi*). It is the most important point to be noticed well not to reject the Buddha and the Noble Doctrine of the Buddha actually.

(3.4.5.G) Five factors of occurrence of *upekkhāsambojjhaṅga*

pañca dhammā upekkhāsambojjhaṅgassa uppādāya samvattanti sattamajjhhattatā, saṅkhāramajjhhattatā, sattasaṅkhāra kelāyanapuggalaparivajjanatā, sattasaṅkhāramajjhatta-puggalasevanatā, tadadhimuttatāti. (*Visuddhi Magga*-1-131; *Dī-Com*-2-384; *M-Com*-1-302; *Sam-Com*-3-200)

These five factors, ...

1. to be a person who can neutralize on beings
2. to be a person who can neutralize on *saṅkhāra dhamma*

3. to be a person who always avoids those persons with attachment on beings and *saṅkhāra dhamma*
4. to be a person who associates with those persons who can neutralize on being and *saṅkhāra dhamma*
5. to be a person who has inclination toward occurrence of *upekkhāsambojjhaṅga*, are causes of occurrence of *upekkhāsambojjhaṅga*.

1. *sattamajjhataṭṭā* = to be a person who can neutralize on beings

By means of these two factors,

PAGE 420

(a) *kammassakatā paccavekkhaṇa* = reasoning on proper wealth of oneself as *kamma* —

You have reached this existence of human being because of *kamma* and then you will be going to the future existence because of *kamma*. This person have also reached this existence of human being because of *kamma* of himself, and then he himself will also be going to the future existence because of *kamma*. Whom do you attach well?’ etc., by means of reasoning in this way, or

(b) *nissatta paccavekkhaṇa* = reasoning as occurrence of non-being —

‘In the aspect of ultimate sense, there is no being. (It means that there are only corporeality, mentality, causes and results or heap of *saṅkhāra dhamma* only.) Whom do you attach well?’ etc. by means of reasoning in this way, it can become a person who can neutralize on beings. (*Dī-Com-2-384; M-Com-1-302,303*)

2. *saṅkhāra majjhataṭṭā* = to be a person who can neutralize on *saṅkhāra dhamma*

By means of these two factors,

(a) *asāmika bhāva paccavekkhaṇa* = reasoning as the occurrence of not-owner —

“this robe will be occurred as either change and alteration the colour gradually by the time it is dressing well, or finally it will be deserving to abandon by throwing away with a walking stick after decaying as doormat. If the owner of this robe is present, it should not be allowed to damage that robe in this way”, thus by means of reasoning, or

(b) *tāvākālikatā paccavekkhaṇa* = reasoning as the nature of occurrence of temporary moment —

“this robe is not sturdy, but it has the nature of occurrence of temporary moment during using as dress” etc., thus, by means of reasoning, it can become a person who can neutralize on *saṅkhāra dhamma*. [It should be recognized on other requisites, bowl, etc. Similarly and those various kinds of requisites are designated as *saṅkhāra*.] (*Dī-Com-2-385; M-Com-1-303; Sam-Com-3-200,201*)

Especially, the lust (*rāga*) is opposite to the equanimity (*upekkhā*). The equanimity, therefore, can be designated as the “path of purification of lust” for persons with heavy lust. (*Sam-ṭī-2-440*)

3. *satta saṅkhāra kelāyana puggala parivajjanatā* = to be a person who always avoids those persons with attachment on beings and *saṅkhāra dhamma*

(a) *satta kelāyama* = The person who attach on beings —

The *meditator*, if he or she is layman or laywoman devotee, attaches strongly his or her children, as

PAGE 421

my son, my daughter. If he is *bhikkhu*, he attaches strongly his disciple or friend who is the same ordination teacher, as my disciple, my friend etc. He himself makes those functions of that disciple or friend, such as shaving, washing, dying, baking the bowl etc. When they are out of his view a moment, he always looks for them that “where is this *sāmaṇera*? Where is this *bhikkhu*?” etc., as a shaking deer. If other person requests to come that *sāmaṇera* or that

bhikkhu, he never allow them to go and complains that ‘I, myself never urge him to do even my work due to afraid of he tired, do you want to take that *sāmaṇera* or that *bhikkhu* in order to be tired of him?’ etc. This kind of person is called *satta kelāyana* (the person who attaches on beings).

(b) *sañkhāra kelāyana* = the person who attaches on *sañkhāra* —

A person attaches strongly on various requisites, robe, bowl, cup, walking stick, etc., as ‘mine’, ‘mine’. It is not allowed to others even touching on those requisites. Although it is borrowed for just temporary moment only, he always replies that ‘even I myself never use willingly this good due to strong attachment on it, why it can be borrowed you’. This kind of person is called *sañkhāra kelāyana* (= the person who attaches on requisites).

In the continuum of *meditator* who avoids from those persons who strongly attaches on beings or requisites, the factor of enlightenment of equanimity can be occurred apparently. (*Dī-Com-2-385; Sam-Com-3-210*)

4. *satta sañkhāra majjhata puggala sevanatā* = to be a person who associates with those persons who can neutralize on beings and *sañkhāra*

A person has the nature of neutrality on those beings and *sañkhāra* which are two kinds of desirable-bases for others. This kind of person is called a person who can neutralize on beings and *sañkhāra*. In the continuum of *meditator* who associates with that kind of person who can neutralize on beings and *sañkhāra*, *upekkhāsambojjhaṅga* can be occurred apparently. (*Dī-Com-2-385; Sam-Com-3-201*)

5. *tadadhimuttatā* = to be a person who has inclination toward occurrence of *upekkhāsambojjhaṅga*

In the continuum of a person who has inclination toward the occurrence of that *upekkhāsambojjhaṅga* for every deportment, reclining, sitting, standing, walking, the factor of enlightenment of equanimity can be appeared apparently. When the Fourth Path-Knowledge called *arahatta magga ñāṇa* has attained *upekkhāsambojjhaṅga* would be improved the climax stage with the result that the *arahatta magga* becomes factor of fulfilment of the practice. (*Dī-Com-2-385; Sam-Com-3-201*)

The *meditator* who is capable of occurring these *passaddhisambojjhaṅga*, *samādhisambojjhaṅga*, *upekkhāsambojjhaṅga* apparently by means of fulfilling these factors mentioned above, it can be said he develops three kinds of factors of enlightenment, tranquillity, concentration, equanimity. By means of occurring and developing these three factors enlightenment thoroughly as mentioned

PAGE 422

above, the mind must be suppressed in proper time. (*Visuddhi-1-131*)

These explanations are related to ten kinds of *appanā kosalla dhamma* of which **serial number 5**, how to suppress the mind proper time has been explained in detail. Then remaining kinds of *appanā kosalla dhamma* would be continued.

3.4.6. *yasmim samaye cittam sampahamsitabbam, tasmim samaye cittam sampahamseti* = the mind must be joyful when it is time to be joyful

It should be recognized on this sixth kind of *appanā kosalla* as the sixth cause of occurrence of *samādhisambojjhaṅga*, ‘*samaye sampahamsanatā*’ (= to be a person who can satisfy his mind lacking happiness by means of faith and knowledge of fear), mentioned above.

3.4.7. *yasmim samaye cittam ajjhupekkhitabbam, tasmim samaye cittam ajjhupekkhati* = the mind must be neutralized when it is time to be neutralized

It should be recognized on this seventh kind of *appanā kosalla* as the seventh cause of occurrence of *samādhisambojjhaṅga*, ‘*sammāpavattassa ajjhupekkhanatā* (= to be a person who can neutralize mind of meditation which is harmonious on the object), mentioned above.

It should be recognized on these three kinds of *appanā kosalla*,

3.4.8. *asamāhita puggala parivajjanatā* = to be a person who avoids from those persons without concentration,

3.4.9. *samāhita puggala sevanatā* = to be a person who associates with those persons with concentration,

3.4.10. *tadadhimuttatā* = to be a person who has inclination toward the occurrence of *samādhisambojjhaṅga*,

as mentioned in **serial numbers 8, 9, 11** of eleven causes the occurrence of *samādhisambojjhaṅga*. The *meditator* should, therefore, fulfil these 10 kinds of *appanā kosalla dhamma* as explained in detail above.

3.4.11 Benefits of 10 kinds of *appanā kosalla*

If the *meditator* is capable of fulfilling these 10 kinds of *appanā kosalla* by taking the object of sign of full concentration of mindfulness of breathing, the full absorption (*appanā jhāna*) will be appeared certainly in the continuum of that *meditator*.

Unless that full absorption occurred in the *meditator* who practices in this way, he should not give up his diligence but continue to practice appreciatively so as to become wise and wholesome person.

There is none of person who has attained the Supra-mundane *dhamma* after abandoning of right

PAGE 423

effort called *sammāvāyāma*.

After reflecting on the occurrence of mind of meditation, i.e., retarding to take the object of practice and wandering from the object of practice etc., the wise *meditator* must therefore yoke frequently harmonious functions of effort and concentration.

The mind of meditation which reaches to a situation with slightly retardation must be enhanced in order to balance controlling faculties, factors of enlightenment. By means of prohibiting not to occur mind with predominant effort, harmonious functions of effort and concentration must be occurred.

In accordance with the olden commentaries in which explained five kinds of similes, i.e., mode of some insects, honey bee etc., on the pollen; or on the surface of lotus leaf or in the spider's web or in the boat, by means of escaping the mind of meditation from two extremities, retardation and wandering then yoking after balanced effort and concentration, the mind of meditation should be driven and fulfilled to lead the sign of full concentration of mindfulness of breathing. (*Visuddhi*-1-132)

3.4.12 *nimittābhimukhapaṭipādana* = Drive leading to *ānāpānapaṭibhāga nimitta*

It should be driven the mind of meditation leading to sign of full concentration of mindfulness of breathing.

In above passage of explanation, the following similes can give rise to clear interpretation.

When an **un-clever bee** that is incapable of determining by knowledge, knows the blooming time of a tree and flies swiftly to there, due to reaching beyond that blooming tree and returns back again, it reaches after pollens are finished at all.

When other un-clever bee that is incapable of determining by knowledge, also knows the blooming time of a tree and flies very slowly to there, it also reaches after pollens are finished at all.

When a clever bee that is capable of determining by knowledge, knows the blooming time of a tree and flies by steady speed to there, due to reaching just in time well, it brings pollens and makes honey well with the result that the bee can feel taste of honey.

PAGE 424

When those disciples of a surgeon practise to dissect lotus leaf inside the water, for an **un-clever disciple** who is incapable of determining by knowledge, due to putting the knife on the leaf very rapidly, either the leaf would be divided into two parts or the knife would be sunk in the water.

When other disciple who is incapable of determining by knowledge, practices to dissect in that way, due to afraid of dividing into two parts and sinking down the knife after passed through the leaf, it is not dared to even touch the lotus leaf.

The clever one who is capable of determining by knowledge; shows precise dissection on lotus leaf by a steady hand, due to presence of mastery of surgery and get a lot of wealth.

When the king announces that if a such person can bring spider's thread which is about 8 yards long, that person must win £400 in prize money, an **un-clever man** who is incapable of determining by knowledge spins rapidly spider's thread resulting in breaking up of thread in some places.

The other un-clever man who is incapable of determining by knowledge, does not dare touch the spider's thread due to afraid of breaking up the thread.

When the clever one who is capable of determining by knowledge spins steadily the spider's thread by a stick, he wins the prize well.

When an **un-clever captain** who is incapable of determining by knowledge, sails the boat to undesired place due to lack of controlling ability to sail in the heavy storm.

The other un-clever captain who is incapable of determining by knowledge, anchors the boat at the present place without sailing any more although the steady wind blows.

When the steady wind blows a clever captain who is capable of determining by knowledge, sails with the help of all sails and when the storm is coming, he sails with the help of an half of sails, he is able to reach desired place.

PAGE 425

When the teacher claims that 'if a such person is capable of pouring the oil into a bottle with narrow opening without flowing the oil out of the bottle, he will win the prize', for an **un-clever disciple** who is incapable of determining by knowledge, due to pouring the oils rapidly, oils are flowed outside the bottle.

For other un-clever disciple who is incapable of determining by knowledge, due to afraid of flowing oils outside bottle, does not dare to pour into the opening of the bottle.

A clever disciple who is capable of determining by knowledge, pours the oil into the opening of bottle by means of steady effort, and wins the prize.

Similarly, when the brilliant sign of concentration appear, if a **such bhikkhu** tries hard strenuously in order to reach the full absorption rapidly, the mind of meditation will usually be fallen into one extremity of unrest (*uddhacca*); due to predominant effort.

Other *bhikkhu*, on the other hand, due to knowing disadvantage of strenuous effort, reasons that ‘which benefit will be occurred by the full absorption’, after the sign of full concentration appeared, and diminishes the effort to reach the full absorption. Due to falling the mind of meditation on other extremity of laziness (*kosajja*), that *bhikkhu* is also unable to reach the full absorption.

Such practising *bhikkhu* is capable of driving the mind of meditation leading to the sign of full concentration with the help of harmonious functions of effort and concentration after escaping the mind of meditation from two extremities, retardation of the mind to take the object and wandering of the mind. That *bhikkhu* is able to reach the full absorption certainly. It should be occurred for every *meditator* as that *bhikkhu* who has efficiency to reach the full absorption. (*Visuddhi Magga*-1-133,134)

PAGE 426

3.4.13 Whether or not it should be changed and enlarged sign of full concentration

imesu cattālīsāya kammaṭṭhānesu dasa kasiṇāneva vadādetabbāni. (Visuddhi Magga-1-108)

According to above explanation, it should be recognized that among 40 kinds of meditation subjects, ten kinds of *kasiṇa* only are deserving to enlarge due to attainment of advantages of super-psychic knowledge (*abhiññāṇa*). It is mentioned in relation with mindfulness of breathing as follows.

tesu hi ānāpānanimittam tāva vadādetabbāni hayato vātarāsiyeva vadādetabbāni, okāseṇa ca paricchinnaṃ. iti sādānavattā okāseṇa ca paricchinnaṃ na vadādetabbāni. (Visuddhi-1-109)

piccupiṇḍādivasena upaṭṭhahantampi nimittam vātasahghātasannissayanti katvā vuttam “vātarāsiyeva vadādetabbāni”ti. okāseṇa paricchinnaṃ nāsikaggamukhanimittādi okāseṇa saparicchedam. vāyosikasiṇavadādetabbāni hane viya na ettha koci guṇo, kevalam vātavadādetabbāni hamevāti āha “sādānavattā”ti. (Mahāṭṭkā-1-131)

The meaning of above quotation of commentary and sub-commentary is as follows —

For a *bhikkhu* who enlarges the sign of concentration of mindfulness of breathing which is not deserving to enlarge, only a group of air can be enlarged because of the fact that the sign of concentration which is similar to cotton wool, brilliant star etc., has the dependence of a group of air. It must be put the mind of meditation on tip of nostril or upper lip. It is limited to put the mind on only the touching place, tip of nostril or upper lip but not follow interior or exterior part of the sign. There is no significant advantage in enlarging the sign of full concentration of mindfulness of breathing as enlarging that of full concentration of wind-*kasiṇa*. Due to presence of disadvantages of enlarging a group of air and limiting of the mind of meditation to be put on touching place only, it should not be enlarged the sign of full concentration of mindfulness of breathing. (*Visuddhi*-1-109; *Mahāṭṭkā*-1-131)

phuṭṭhaphuṭṭhokāse pana satim ṭhapetvā bhāventasseva bhāvanā sampajjati. (Visuddhi-1-271)

= Only in the continuum of *meditator* who puts the mindfulness on the objects of in-breath and out-breath touching at the tip of nostril or upper lip, the practice of mindfulness of breathing can be fulfilled thoroughly. (*Visuddhi*-1-271)

PAGE 427

3.5 *Pathamajjhānakathā* = Explanations relating to the First Absorption

It would be continued to present way of practice relating to the first absorption etc., explained in the commentary called *Visuddhi Magga*.

For that *meditator* who drives the mind of meditation leading to sign of full concentration of mindfulness of breathing by means of harmonious functions of effort and concentration, by the time it is deserving to say impulses of the full absorption, the consciousnesses of life-continuum (*bhavaṅga*) cease and the adverting of mind-door (*manodvāravajjana*) arises taking the object of sign of full concentration of mindfulness of breathing which appears by means of developing concentration on in-breath and out-breath. After one mind moment called adverting, the fourth or five impulses arise consecutively. Among those four or five impulses, the last one impulse is called impulse of fine-material world (*rūpāvacara javana*). (*Visuddhi*-1-134)

The first experienced thought process of the first absorption of little wise person

L “Sh C A Pr N S G F” L
...

L = life-continuum (*bhavaṅga*) or *bhavaṅga* mind clearness which benefits as a dependence of life not to occur discontinuous process of mind

Sh = shaking of life-continuum (*bhavaṅgacālana*)= the life-continuum which is shaken by arising of the sign of full concentration on it

C = cessation of life-continuum (*bhavaṅgupeccheda*), which arises after shaking of life-continuum in order to occur the first experienced thought process of absorption

A = advertence of mind-door (*manodvāravajjana*) which reflects the sign of full concentration that arises on life-continuum

Pr = preliminary object (*parikamma*), an impulse of sensuous sphere which is adaptable to become impulse of full-absorption (*appanājhāna javana*)

N = neighbourhood impulse of the *jhānic* state (*upacāra*), it is also an impulse of sensuous sphere (*kāmāvacara javana*)

S = successive (*anuloma*), an impulse of sensuous sphere, which has compatibility to both previous impulses of neighbourhood absorption and later impulse of full absorption

G = *gotrabhu* = it is an impulse of sensuous sphere which is capable of surpassing sensuous sphere and is capable of developing the upper sphere (*mahaggata*)

F = impulse of Fine-material sphere (*rūpāvacara javana*)

PAGE 428

The first experienced thought process of the first absorption of great wise person

L “Sh C A N S G F” L
...

The way of the first experienced thought process of the first absorption is as follows.

— After frequent discerning on the sign of full concentration (*paṭibhāga nimitta*), if it is quite close to enter the absorption (*jhāna*), the object of the sign of full concentration would

be appeared in the life-continuum (= mind-door clearness) with the result that the shaking of life-continuum (*bhavaṅgacalana*), the cessation of life-continuum (*bhavaṅgupeccheda*) and the advertence (*manodvārāvajjana*) arise successively. Then 4 times of impulses of neighbourhood concentration (*upacāra samādhi javana*), i.e., the preliminary object (*parikamma*), the neighbourhood impulse of the *jhānic* state (*upacāra*), the successive (*anuloma*) and the cessation of the Sensuous Sphere called trans-lineage (*gottrabhu*), arise in the little wise person (*mandapaññavā*), while only 3 times of impulses of neighbourhood concentration, i.e., the same as impulses shown in little wise person, except excluding the preliminary object (*parikamma*), arise in the great wise person (*tikkhapaññavā*). After those impulses of neighbourhood concentration, only once impulse of full concentration (*appanā samādhi javana*) arises and then breaking down of the mind-door thought process occurs by dropping into the life-continuum.

3.5.1 Impulsion of neighbourhood concentration

In this cognitive process of absorption, those impulses called preliminary object (*parikamma*), neighbourhood impulse of the *jhānic* state (*upacāra*), successive (*anuloma*) and *gottrabhu* are called impulses of neighbourhood concentration (*upacāra samādhi javana*). It means that impulses usually occur the neighbourhood of the absorption, the Path-Knowledge and the Fruit-Knowledge. It is also called impulses of neighbourhood absorption (*upacāra samādhi javana*). The fourth or fifth impulse is called impulse of the full absorption (*appanā jhāna javana*).

According to the explanation of the most Venerable Ledī Sayadaw, ‘**penetratively and firmly fixed discerning mind is termed absorption (*jhāna*)**’, due to capable of discerning penetratively and firmly fixed on the object, such as sign of full concentration of mindfulness of breathing, those impulses of neighbourhood and full absorption are also called ‘*ārammaṇūpanijjhāna jhāna*’. Among those consciousnesses of newly occurred cognitive process of absorption, the adverting of mind-door consists of 12 mind and mental concomitants while each impulse consists of 34 mind and mental concomitants respectively. Way of discerning on those mind and mental concomitants will be presented in Section 5, *nāmakammaṭṭhāna*. It should be recognized that among those 34 mind and mental concomitants five factors of absorption (*jhānaṅga*); initial application (*vitakka*), sustained application (*vicāra*), pleasurable interest (*pīti*), mentally agreeable (*sukha*) and one-pointedness (*ekaggatā*) are also included. It should be recognized that each mental concomitant called *vitakka*, *vicāra*, etc., is termed **factor of absorption (*jhānaṅga*)**, and those five factors of absorption commonly is termed as the ‘**absorption (*jhāna*)**’. It will be clear understood the following explanations of *Visuddhi Magga* after understanding on this basic terminological explanation.

[**Notes:** In the *Visuddhi Magga*, it is explained on absorptions of the earth-*kasiṇa* as typical one. It should be recognized in this paper that the absorptions which have the objects of the sign of full concentration of mindfulness of breathing as type sample.]

3.5.2 Nomenclature of the impulses of full absorption

Among those four or five impulses, the last one is impulse of absorption of the fine-material sphere. The remaining three or four impulses are impulses of sensuous world neighbourhood absorption.

1. Those impulses of sensuous world neighbourhood absorption are designated as the preliminary (*parikamma*) due to ability to prepare impulsion of full absorption,
2. those are designated as the neighbourhood (*upacāra*) due to neighbourhood situation of the full absorption as adjacent to a village or town is called neighbourhood of village or town etc.,
3. Those are designated as the successive (*anuloma*) due to adaptability to both previous impulses, preliminaries which are taking the object of the sign of full concentration, and the later impulsion of the full absorption, respectively.

After these mind moments called, *parikamma*, *upacāra*, *anuloma*, there is such third or fourth mind moment. That mind moment is designated as the trans-lineage (*gottrabhu*) due to surpassing the sensuous sphere and capable of developing fine-material sphere.

Those remaining impulses of three or four mind moment within the newly occurred cognitive process of full absorption except the last one have more powerful *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*, than normal consciousness of the sensuous sphere.

In these 3 or 4 kinds of mind moments for little wise person, by means of one kind of preaching methodology,

1. the first consciousness of impulsion is called the preliminary (*parikamma*),
2. the second consciousness of impulsion is called the neighbourhood (*upacāra*),
3. the third consciousness of impulsion is called the successive (*anuloma*),
4. the fourth consciousness of impulsion is called trans-lineage, due to the cessation of sensuous sphere (*gottrabhu*),
5. the fifth consciousness of impulsion is called the full absorption (*jhānic state*).

In other words — (for great wise person),

1. the first consciousness of impulsion is called the neighbourhood (*upacāra*),
2. the second consciousness of impulsion is called the successive (*anuloma*),
3. the third consciousness of impulsion is called trans-lineage, due to the cessation of sensuous sphere (*gottrabhu*),
4. the fourth consciousness of impulsion occurs by means of the full absorption (*jhānic state*).

It should be recognized on those fourth or fifth impulsion of the full absorption for the great wise person who has rapid understanding (*khippābhiññā*) and the little wise person who has retarded understanding (*dandhābhiññā*), by means of flexible nature of occurrence of the full absorption (*aniyamasabhāva*).

After the fifth impulsion occurred, the sixth and the third impulses fall back due to absence of

PAGE 430

efficiency with the result that none impulsion occurs and the life-continuum arises again. (*Visuddhi*-1-134)

3.5.3 Only once mind moment

That impulsion of full absorption is **only once mind moment**. (It means that it is only once impulsion of mind moment in the first experienced cognitive process of full absorption.) It is right. —

In these seven kinds of situations,

1. the first experienced superior impulsion of full absorption,

2. those impulses of mundane super-psychic knowledge (*abhiññāṇa*),
3. four kinds of the Path-Knowledges,
4. four kinds of the Fruit-Knowledges which occur just after the Path-Knowledges,
5. the life-continuum of world of form and formless world,
6. the impulse of full absorption of neither-perception-nor-non-perception, which is able to benefit the cessation-absorption (*nirodha samāpatti*) and
7. the fruition-absorption of the non-returnee and arahant who emerge from the cessation-absorption (*nirodha samāpatti*), there is no measurable time.

Among these seven situations, the Fruit-Knowledge which occur just after the Path-Knowledge, never occur more than **three times** (less than two times) as a fixed law.

The impulses of full absorption of neither-perception-nor-non-perception, which is able to benefit the cessation-absorption never occur more than **two times** as a fixed law.

In the world of form and formless world duration of the life-continuum is **no measurable time**.

In those remaining four situations, the first experienced impulse of full absorption, the mundane super-psychic knowledge, the Four Noble Path-Knowledges, the fruition-absorption of the non-returnee and arahant who emerge from the cessation-absorption, there is only one mind moment.

Thus the first experienced impulse of full absorption is only **one mind moment**, and then it falls into the life-continuum, one mind moment of advertence occurs in order to reflect the absorption. Then impulses which reflect the absorption arise successively. (*Visuddhi*-1-135)

3.5.4 The concentration of first absorption

ettavatā ca panesa vivicceva kāmehi vivicca akusalehi dhammehi savitakkam savicāram vivekajam pītisukham paṭhamam jhānam upasampajja viharati. (*Abhi*-1-44; *Dī*-1-69)

PAGE 431

evamanena pañcaṅgavippahīnam pañcaṅgasamannāgatam tividhakalyāṇam dasalakkhaṇasampannam paṭhamam jhānam adhigatam hoti (ānāpānapaṭibhāga-nimittārammaṇam). (*Visuddhi*-1-135)

As mentioned way of practice, this *meditator*, separated from the object of sensual desire (*vatthu kāma*) and defilement of sensual desire = sensitivity of sensual desire (*kilesākāma*), avoiding from unwholesome *dhamma*, reaches into the first absorption associating with initial application (*vitakka*), sustained application (*vicāra*), pleasurable interest (*pīti*), mentally agreeable (*sukha*), which are occurred by lack of hindrances (*nīvaraṇa*). This *meditator* who has fulfilled with the first absorption had been attained the first absorption with the sign of full concentration of mindfulness of breathing; which has five rejected factors which has five fulfilled factors, three kinds of good nobilities, 10 kinds of characteristics (*Visuddhi*-1-135)

Those objects of the sensual desire, colour, sound, smell, taste, touching, which are desirable and strongly attached, are called sensual desired objects (*vatthu kāma*) due to depended factor. The lust and attachment which desire that sensual desired object is called defilement of sensual desire (*kilesākāma*). The Buddha expounded the words ‘*vivicceva kāmehi*’ = ‘separated from the object of sensual desire’, in order to show the fact that during the concentration of first absorption, although those object of sensual desire and defilement of

sensual desire and all unwholesome *dhamma* do not occurred apparently in the continuum of the *meditator* by means of three sub-moments, the arising (*uppāda*), static (*ṭhiti*), perishing away (*bhaṅga*), those sensual desires are the opposite *dhamma* of the first absorption and the latter can be attained by avoiding from the former. As is the bulk of darkness is present, the light of oil lamp is not occurred, similarly, if those sensual desires are present obviously, this *jhānic*-state can not be occurred. Those kinds of sensual desires are the opposite *dhamma* of the absorption, indeed. As if this bank is left, that bank can be reached, only when those sensual desires are abandoned (momentarily and for long time), can the attainment of that absorption be occurred. (*Visuddhi*-1-135,136)

With regarding to the phrase, ‘*viviceva kāmehi*’, it must be referred to both object of sensual desire (*vatthu kāma*) and defilement of sensual desire (*kilesākāma*).

With regarding to the phrase, ‘*vivicca akusalehi dhammehi*’, it must be referred to five kinds of hindrances, hindrance of sensual desire (*kāmacchanda nīvaraṇa*) etc. including defilement of sensual desire (*kilesākāma*). (*Visuddhi*-1-135,136)

3.5.5 Five kinds of hindrances (*nīvaraṇa*)

Those *dhamma* which are capable of hindering the wholesome *dhamma*, the absorption, the Path-Knowledge etc., are designated as **hindrances** (*nīvaraṇa*). Those are five kinds as follows.

1. ***kāmacchanda*** = [*kāma* + *chanda*] desire and strong attachment to sensual objects. It must be interpreted on greed (*lobha*) as direct meaning.
2. ***byāpāda*** = [*vi* + *āpāda*] = change to worse the mind, the cause of anger (hate). It must be interpreted on hatred (*dosa*) by which death of other would be wished, in unwholesome deeds (*akusala kamma*), however, in this case, it must be interpreted on all kinds of ill-will.

PAGE 432

3. ***thina* + *middha*** = the nature of sloth and torpor of the mind and mental concomitants. It must be interpreted on the mental concomitants, sloth (*thina*) and torpor (*middha*) respectively.
4. ***uddhacca* + *kukkucca*** = the nature of unrest and worries. It must be interpreted on the mental concomitants, the unrest (*uddhacca*), worries (*kukkucca*) respectively.
5. ***vicikicchā*** = the nature of sceptic on three noble triple gems, *kamma* and results of *kamma*, three noble trainings etc. It must be interpreted on the mental concomitant, sceptic (*vicikicchā*).

3.5.6 Special notes

For those hindrances, *thina-middha* and *uddhacca-kukkucca*, it is counted as one kind of hindrance although two different interpretations are present because of the following reasons. —

Those hindrances, *thina* and *middha* have the same

1. functions, retardation to take the object,
2. causes, the laziness to take the object, and
3. occurrence which is the opposite of effort.

Those hindrances, *uddhacca* and *kukkucca* have the same

1. functions, wandering of the mind on the object,
2. causes which is hatred to destroy relatives,

3. occurrence which is the opposite of *samatha*.

Thus, due to presence of same **function**, **cause**, and **opposite occurrence**, the Buddha preached as commonly on those hindrances. (*abhidhammatthavibhāvinī*)

3.5.7 Five kinds of factors of absorption (*jhānaṅga*)

1. **vitakka** = the nature of initial application to the object of sign of full concentration of mindfulness of breathing,

2. **vicāra** = the nature of sustained application to the object of sign of full concentration of mindfulness of breathing,

3. **pīti** = the nature of pleasurable interest to the object of sign of full concentration of mindfulness of breathing,

4. **sukha** = the nature of mentally agreeable feeling to the object of sign of full concentration of mindfulness of breathing,

5. **ekaggatā** = the nature of one-pointedness of mind on the object of sign of full concentration of mindfulness of breathing.

The opposite conditions of five kinds of hindrances and five kinds of these five kinds of factors of absorption are explained in *Visuddhi Magga* as follows: —

aññesampi ca dhammānam akusalabhāve vijjamāne “tattha katame akusalā dhammā, kāmacchando” tiādinā nayena vibhaṅge upari jhānaṅgānam paccanīka paṭipakkhabhāvadassanato nīvaraṇāneva vuttāni. nīvaraṇāni hi jhānaṅgapaccanīkāni, tesam jhānaṅgāneva paṭipakkhāni viddhamsakāni vighātakānīti vuttam hoti. tatthā hi samādhi kāmacchandhassa paṭipakkho, pīti byāpādassa, vitakka thinamiddhassa, sukham uddhaccakukkuccassa, vicāro vicikicchāyāti peṭake vuttam. (*Visuddhi*-1-137)

PAGE 433

samādhi kāmacchandhassa paṭipakkho rāgappaṇidhiyā ujuvipaccanīkabhāvato, nānārampaṇehi palobhitassa paribbhamantassa cittassa samādhānato ca. pīti byāpādassa paṭipakkhā pāmojjena samānayogakkhemattā. vitakka thinamiddhassa paṭipakkho yonisosaṅkappanavasena savipphārapavattito. sukham avūpasamānutāpasabhāvassa uddhaccakukkuccassa paṭipakkham vūpasantasītalasabhāvattā. vicāro vicikicchāyā paṭipakkho ārammaṇe anumajjanavasena paññāpaṭirūpasabhāvattā. (*Mahāṭīkā*-1-165)

Although the occurrence of unwholesome *dhamma*, wrong view (*diṭṭhi*), conceit (*māna*), shamelessness (*ahirika*), fearlessness (*anottappa*), except hindrances, *kāmacchandanivaraṇa* etc., are obviously present, in the *Vibhaṅga Pālī* (266), if it is preached that ‘*tattha katame akusalā dhammā, kāmacchando*’ etc. in order to show the fact that opposite occurrence of factors of absorption is those kinds of hindrances as unwholesome *dhamma* only. It is right. — Those hindrances are capable of prohibiting not to occur factors absorption with the result that those are opposite *dhamma* of the latter. ‘Only factors of absorption are capable of rejecting, destroying the hindrances and these are actually opposite *dhamma* of the latter,’ thus it means in those explanation. That is right. —

1. Due to occurrence of opposite *dhamma* of lust and capable of concentrating the mind which is wandering on various objects after attracted by those objects, the concentration (*samādhi*) is opposite of desire to sensual objects (*kāmacchanda*). It means that due to capable of rejecting to desire to sensual objects, the concentration is opposite of desire to sensual objects.

2. During the pleasurable interest is occurring obviously as three momentary phases, *uppāda*, *ṭhiti*, *bhaṅga*, the anger is absent as three momentary present and vice versa. By the time the pleasurable interest occurs obviously by taking the object of sign of full concentration of mindfulness of breathing, it is no ability to occur the anger in the same mind moment. Because the pleasurable interest (*pīti*) is opposite *dhamma* which is capable of rejecting the ill-will (*byāpāda*).

3 Due to presence of activating efficiency by means of wise attention leading to the object of sign of full concentration of mindfulness of breathing, the initial application (*vitakka*) is opposite *dhamma* which is capable of rejecting hindrance called sloth-torpor (*thina-middha*).

4. Due to presence of the nature of tranquillity and peace, the agreeable feeling (*sukha*) is opposite *dhamma* which is capable of rejecting the hindrance called unrest-worries (*uddhacca-kukkucca*) which have the nature of restlessness and remorse.

PAGE 434

5. Due to presence of the same nature of wisdom by means of repeatedly discerning on the object of sign of full concentration of mindfulness of breathing, the sustained application (*vicāra*) is opposite *dhamma* of sceptic and is capable of rejecting the latter thoroughly. (*Visuddhi*-1-137; *Mahāṭīkā*-1-165)

Both two kinds of concentration, the neighbourhood - and full-concentration takes the object of sign of full concentration of mindfulness of breathing. Hindrances are rejected in the field of the neighbourhood concentration. However the significant differences between these two kinds are explained in *Visuddhi Magga*, as follows: —

3.5.8 Significant differences of two kinds of concentrations

duvidho hi samādhi upacārasamādhi ca appanāsamādhi ca. dvīhākārehi cittaṃ samādhīyati upacārabhūmiyaṃ vā paṭilābhabhūmiyaṃ vā. tattha upacārabhūmiyaṃ nīvaraṇappahīnena cittaṃ samāhitam hoti. paṭilābhabhūmiyaṃ aṅgapātubhāvena.

dvinnam pana samādhīnam idam nānākāraṇam, upacāre aṅgāni na thāmajātāni honti, aṅgānam athāmajātattā, yathā nāma daharo kumārako ukkhipitvā ṭhapiyamāno punappunam bhūmiyaṃ patati, evameva upacāre uppanne cittaṃ kālena nimittamārammanam karoti, kālena bhavaṅgamotarati. appanāyaṃ pana aṅgāni thāmajātāni honti, tesam thāmajātattā, yathānāma balavāpuriso āsanā vuṭṭhāya divasampi tiṭṭheyya, evameva appanāsamādhimhi uppanne cittaṃ sakim bhavaṅgavāram chinditvā kevalampi rattim kevalampi divasam tiṭṭhati, kusala javanapaṭipāṭivaseneva pavattatīti. (Visuddhi-1-123)

At the beginning of arising of brilliant sign of full concentration, those hindrances are rejected. Those defilements which have the same depended factor of hindrances are also deposited well. The mind of meditation is put well on the object of sign of full concentration by neighbourhood concentration.

It is right. — There are two kinds of concentration, the neighbourhood (*upacāra*) and full concentration (*appanā samādhi*).

Due to these two reasons —

1. occurrence of far from opposite hindering *dhamma* of *jhānic* state, and
2. reaching to the stable occurrence of *jhānic* state, during occurring both neighbourhood and full concentration, the mind of meditation would be put well on the

object of sign of full concentration of mindfulness of breathing. During occurring neighbourhood concentration, mind of meditation is put on the sign of full concentration thoroughly by removing opposite hindrances. During occurring the full concentration mind of meditation is put on the sign of full concentration and purified well by arising factors of absorption apparently.

The significance which makes difference between two kinds of concentration is as follows: —

PAGE 435

By the time the neighbourhood concentration occurs, factors of absorption have not full efficiency yet. As if a baby who is starting to stand up is raised, he always fall down on the ground, similarly, when the neighbourhood concentration occurs, the mind of meditation takes the object of the sign of full concentration sometimes, and falls into the life-continuum sometimes.

However during the full concentration is occurring, factors of absorption arise strongly and efficiently. As an adult strong man can stand up for the whole day, similarly, when the full concentration of absorption occurs, the mind of absorption is able to exist the whole night or the whole day without occurring the life-continuum. The wholesome impulses of absorption occur continuously indeed. This is the significant difference between two kinds of concentrations respectively. (*Visuddhi*-1-123)

The commentator Sayadaw explained the phrase “the mind of absorption is able to exist the whole night or the whole day”, with intended to refer during entering the full absorption (*jhānic* state). (*Mahāṭīkā*-1-148)

3.5.9 To be noticed

Above explanation of commentary, indeed, is an important point with regarding to reasonable situation for a *meditator* who wants to attain *nibbāna* in this very life. Especially during neighbourhood concentration occurs, the mind usually falls into the life-continuum, which is noticeable explanation. If any way of practice among forty meditation subjects is fulfilled thoroughly, when the neighbourhood concentration occurs, the mind of meditation usually falls into the life-continuum sometimes.

When the concentration is developing by taking the object of sign of full concentration of mindfulness of breathing, and the neighbourhood concentration occurs but not reach to the full concentration, the mind can falls into the life-continuum, sometimes.

For every meditation subject, when the concentration is moderately developed after practiced, the mind of meditation usually falls into the life-continuum with the result that misunderstanding of most *meditator* occurs and they usually say that “it is unconscious and peaceful”. Some *meditator* usually say that “both object and consciousness would be ceased”, etc. Those kinds of *meditators* intended to say they are able to enter into *nibbāna*.

Here, it would be presented about the consciousness of the life-continuum.

3.5.10 An explanation the life-continuum

Within a life, it is the same objects of consciousnesses of birth, life-continuum and death, as natural fixed law. Those consciousnesses take the object which was taken by consciousnesses of impulses of near death of adjacent previous life, but not six kinds of

objects of recent life. That object of consciousnesses of impulses of near death may be any one of three signs (*nimitta*), *kamma*, *kamma-nimitta*, *gati nimitta*. The object of consciousness of life-continuum will be apparent when it

PAGE 436

is capable of discerning on object of consciousnesses of impulses of near death of adjacent previous life, generally. In other words, when five aggregates of previous life can be discerned by insight, those *dhamma* which belongs to previous five aggregates, i.e., ignorance (*avijjā*), craving (*tahṇā*), clinging (*upādāna*), *kamma*-formation (*saṅkhāra*), action (*kamma*) and object which is clanged by those *dhamma*, can be understood clearly. Only when clear understood on previous five aggregates in that way noble doctrine of relationship of dependence-origination can be scrutinized and understood by means of three kinds of full understandings (*pariññā*).

For those *meditators* who are unable to discern both five aggregates of previous life including ignorance, craving, clinging, *kamma* formation, *kamma* and the object which is clung by those *dhamma*, it is very difficult to know the actual object of the consciousness of life-continuum. Those *meditator*, therefore, say that “they do not know any more” during the mind falls into the life-continuum continuously. That consciousness of life-continuum does not take various kinds of objects, such as the object of sign of full concentration of mindfulness of breathing and none of present six kinds of objects etc. Thus those *meditators* suggest that they do not know any thing. However according to the Buddha’s scripture, it can not accept that kind of suggestion “they do not know any thing”.

catubhūmakacittañhi no vijānanalakkhaṇam nāma natthi, sabbam vijānanalakkhaṇameva. (*Abhi-Com-1-155*)

= Every consciousness occurring in four realms, sensuous sphere, world of form, formless world, supra-mundane world, which is incapable of knowing object, is absent. All consciousnesses have the nature of discriminating the object indeed. (*Abhi-Com-1-155*)

With regarding to explanation found in commentary called *Aṭṭhasālinī*, the consciousness of life-continuum, as it is also a kind of consciousness occurring in four realms, is not unconscious one but knows the object which is taken by consciousnesses of impulses of near death of previous life.

The seeing consciousness (*cakkhu viññāṇa*) knows the colour object although it is unable to know sound, smell, taste, touching and mind-object (the nature of *dhamma*). It is impossible to say that seeing-consciousness as unconscious one due to lack of ability to know remaining five-sense doors. Similarly, the consciousness of life-continuum is not deserving to say as unconscious one because it knows the object of consciousnesses of impulses of near death of previous life. For a *meditator* who has moderately developed concentration but not full efficiency of factors of absorption, the mind of meditation is unable to support itself not to falls into the life-continuum with the result that he suggests that “he knows nothing”. But the life-continuum is a kind of conscious mind, as mentioned above. Then falling into the life-continuum continuously, is misunderstood as entering into the fruition-absorption (*phala samāpatti*). In order to be clear understood on difference between the fruition-absorption and life-continuum, it would be presented about the fruition-absorption in “*Phalasamāpattikathā*, *Nibbānagāminipaṭipadā*-Volume V”.

PAGE 437

Then it is explained in *Mahāṭīkā* the fact relating to continuous occurrence of the life-continuum and stable deportment, as follows._____

3.5.11 Why deportment (*iriyapatha*) is stable?

kāmāvacare dasa bhavaṅgacittāni, rūpāvacare pañca, tisso manodhātuyo, ekā vipākāhetukamanoviññādhātu somanassasahagatāti ekūnavīsati cittāni rūpameva janayanti, na iriyāpatham, na viññattim. (Visuddhi-2-250)

rūpameva janayanti, na iriyāpatham nirussāhasantabhāvena paridubbhalabhāvato. kiriyāmayacittehi avimissabhavaṅgappavattikāle khandhādisarīrāvayavānam niccalabhāvenāvattihānam. tathā hi abbokiṇṇe bhavaṅge pavattamāne aṅgāni osīdanti pavittihāni viya honti. “dvattimsā”ti pana ādinā vuttesu jāgaraṇacittesu vuttamānesu aṅgāni upatthaddhāni yathāpavattairiyāpathabhāveneva pavattantīti. (Mahāṭīkā-2-402)

These 19 kinds of consciousnesses,

1. In consciousness of sensuous sphere, 10 kinds of life-continuum
2. In consciousnesses of world of form, 5 kinds of life-continuum
3. mind-element (*mano dhātu*), 3 kinds, five-door advertence and two receivings (*sampaṭicchana*)
4. joyful investigating (*santīraṇa*), 1 kind called joyful mind-door-consciousness-element (*manoviññādhātu*), without root *kamma* result, are able to produce pure octad with eight factor nutriment (*cittaja ojaṭṭhamaka rūpa*) only. It is unable to produce deportment (*iriyapatha*), bodily expression (*kāya viññatti*) and verbal expression (*vacī viññatti*) called special expression corporeality (*viññatti rūpa*). (*Visuddhi-2-250*)

The reason why they are unable to produce deportment but pure-octad only is that it lack efficiency of endeavouring in order to occur deportment and inactive ones.

These 32 kinds of consciousnesses,

1. sensuous sphere great wholesome consciousnesses – 8 kinds (*kāmāvacara mahā kusala citta*)
2. unwholesome consciousnesses – 12 kinds
3. mind-door adverting and *hasituppāda citta* which are rootless independent function consciousnesses – 2 kinds
4. great independent function (*mahā kiriya citta*) – 8 kinds
5. wholesome consciousness of world of form which is deserving to occur super-psychic knowledge (*abhiññāṇa*) and independent function consciousness of fifth absorption – 2 kinds

are able to produce

1. both pure-octad with eight factor nutriment
2. four kinds of deportments, reclining, sitting, standing, walking, and
3. bodily expression and verbal expression corporealities. (*Visuddhi-2-250*)

PAGE 438

Owing to carrying out independent function of bodily and verbal expression thoroughly, those 32 kinds of consciousnesses are designated as independent function consciousness (*kriyāmaya citta*).

During pure life-continuum occur continuously without any kind of those *kriyāmaya citta*, the body is stable without any movement of bodily parts, shoulder etc. Therefore when those consciousnesses of life-continuum occur continuously without associating by those

kiriyāmayā citta, the appearance of bodily parts seem to be delayed and contracted. When those 32 kinds of aware consciousnesses (*jāgaraṇa citta*) excluding two kinds of five-door consciousnesses (*dvepañca viññāṇa*), occur successively, the appearance of the body becomes rigid and stable deportment as it's previous situation. (*Mahāṭṭhā-kā-2-402*)

According to explanation of *Mahāṭṭhā-kā*, it should be recognized the fact that during consciousnesses of life-continuum is occurring continuously, the appearance of the bodily parts are stable without any movement or shaking anymore.

3.5.12 Very difficult acquisition

Among those two kinds of concentration, the neighbourhood and full concentration, a such sign of full concentration occurs associating with the neighbourhood concentration. It is very difficult to occur that sign of full concentration. Then if it is possible to obtain the full concentration of absorption by taking the object of that sign within one sitting period, it is very good acquisition for a *meditator*. If it is impossible to obtain the full absorption within one sitting period, the *meditator* must protect the sign of full concentration not to disappear as a chief queen protects her foetus who will become king *cakkavatim*.

The benefit is that — for a *meditator* who protects well the sign of full concentration, the acquired neighbourhood concentration never diminish indeed. If well protection of the sign of full concentration is absent, acquired neighbourhood concentration (= neighbourhood absorption) usually disappears consequently. (*Visuddhi-1-123*)

If acquired sign of full concentration disappears, the absorption which has the object of that sign of full concentration never diminishes indeed. Due to lack of protection on the sign of full concentration, if it disappears, the acquired absorption would be finished consequently. Because there is correlation between the absorption of mindfulness of breathing and sign of full concentration reciprocally. (*Mahāṭṭhā-kā-1-148*)

PAGE 439

Way of protecting on sign of full concentration is those modes mentioned above and it must be fulfilled,

1. by avoiding from seven kinds of unfavourable conditions,
2. by association with seven kinds of favourable conditions, and
3. by endeavouring in accordance with 10 kinds of mastery in full absorption (*appanā kosalla*)

If it is fulfilled in that way, in the field of neighbourhood concentration unwholesome *dhamma* and hindrances (*nīvaraṇa*), which must be rejected in the first absorption, are removed thoroughly. If the concentration can be developed successively by taking the object of sign of full concentration, and mind of meditation is firmly fixed on the sign of full concentration for one hour, two hours, etc. The factors of absorption, initial application, sustained application, pleasurable interest, agreeable feeling, one-pointedness, which are well associating factors of the first absorption (*sampayogaṅga*), will be appeared apparently. In order to show that process the Buddha continued to preach that “*savitakkam savicāram vivekajam pītisukham paṭhamam jhānam upasampajja viharati*” = it is staying by fulfilling the first absorption associating with pleasurable interest (*pīti*), agreeable feeling (*sukha*), which is occurred by avoiding from hindrances but by initial application (*vitakka*) and sustained application (*vicāra*).

3.5.13 *vitakka-vicāra* (initial and sustained application)

tattha vitakkanam vitakko, ūhananti vuttam hoti. svāyam ārammaṇe cittassa abhiniropanalakkhaṇo, āhananapariyāhananaraso, tathā hi tena yogāvacaro ārammaṇam vitakkāhatam vitakkapariyāhatam karotīti vuccati. ārammaṇe cittassa ānayanapaccupaṭṭhāno.

vicaraṇam vicāro, anusañcaraṇanti vuttam hoti. svāyam ārammaṇānumajjanalakkhaṇo, tattha saha-jātānuyojanaraso, cittassa anuppabandhanapaccupaṭṭhāno. (Visuddhi-1-138)

There is no indulgence of the ultimate *dhmma* which occur caused by respective cause, for any person or being. Therefore, the commentary explained that “**vitakkanam vitakka**” = the nature of initial application is called **vitakka** in order to prohibit indulgent occurrence of any kind of person, being. The initial application means that “this object has this kind of nature”, etc.

1. That *vitakka* has the characteristic of the initial application of the mind to the object. Due to occurrence of the mind applying of the object by the help of *vitakka*, the commentary explained that “*vitakka* has the characteristic of the initial application of the mind to the object”. Actually, the nature of ultimate *dhmma* lacks any kind of endeavouring or applying (*byāpāra*). For instance — as a such man who wants to visit the palace, enters into it depending on any relative or friend who is well familiar to the king, the mind applies of the object by depending upon *vitakka*. If it is so, there is a reasonable question that how the mind without “initial application (*vitakka*)” applies on the

PAGE 440

object, it applies by means of efficiency of *vitakka*”, as an answer. As above mentioned a man, after having well practice, can enter the palace without relative or friend who is familiar to king, similarly, the mind without initial application, can apply on the object after having well practice. “After having well practice” (*paricaya*) means frequent occurring of the initial application in the continuum of mind again and again. It is right — The nature of initial application of mind on the object has been well practiced previously for a long time by means of continuous occurrence of that initial application (*vitakka*) in the continuum of mentality. Therefore the mind without initial application can apply to that object sometimes, indeed. As the mind of meditation which has well practiced to discern *sañkhāra dhmma* by means of three general characters, due to occurrence of that mind associating with the *vipassanā* knowledge, can be occurred by means of three general characters without associating *vipassanā* knowledge sometimes, in other words, it should be recognized as the simile that that mind which occurs associating with defilement, although it is free from defilement for a long time, can be occurred by means of previous practice (*paricaya*) and streak of defilement. (*Mahāṭṭkā*-1-166)

2. *vitakka* has the function (*rasa*) of initial applying to the object, leading and applying to the object, repeated applying to object, applying again and again, (*āhānana pariyāhanana raso*).

It should be recognized that the occurrence of mind by striking the object and taking into heart as the ‘in-breath’, the ‘out-breath’, ‘corporeality’, ‘corporeality’, etc. is called *āhānana pariyāhanana*. (*Mahāṭṭkā*-1-166)

“Owing to presence of that function, the *meditator* make initial applying, leading and applying to the object, repeated applying, applying again and again on the object, the sign of full concentration of mindfulness of breathing etc. by the help of that *vitakka*”, it means in this way.

3. That *vitakka* is manifested in the knowledge of *meditator* as “the nature of attracting and inducing the mind to the object”.

vicāra — The nature of applying the object from here to there, sustained application the object from here to there, repeated reflecting the object is called *vicāra*. It means the mind always leading to the object, wandering thoroughly to the object, and grazing again and again on the object.

1. *vicāra* has the characteristic of the sustained application of the mind on the object, such as the sign of full concentration of mindfulness of breathing.
2. *vicāra* has the function (*rasa*) of yoking the mind and mental concomitants, which occur associating each others, within the same mind moment, on the object. [It should be recognized the fact that continuous yoking of mind and mental concomitants called connected *dhamma* which occur

PAGE 441

associating each others within the same moment, occurs on the object by means of sustained application called wandering repeatedly on the object. (*Mahāṭīkā*-1-167)]

3. That *vicāra* is manifested in the knowledge of *meditator* as the nature of yoking successively of preceding and succeeding ones.

3.5.13.a Special notes on *vitakka* and *vicāra*

Although in the first absorption and some consciousnesses of sensuous sphere, it is obviously present the yoking together of *vitakka* and *vicāra*, the *vitakka* is similar to the initial sound produced by striking the bell due to both gross occurrence of the *vitakka* rather than *vicāra* and previous leading to the object. Then *vicāra* which is continuous occurrence of the mind by yoking on the object successively, is similar to sustained sound produced by striking bell due to both subtle occurrence of the *vicāra* rather than *vitakka* and presence of the nature of repeated reflecting on the object. (It is similar to soothing sound produced by echo.)

Then in these *vitakka* and *vicāra*, due to presence of shaking, the *vitakka* is the nature which occurs by means of shivering of the mind at beginning stage, indeed. It is similar to striking downward and upward of the wings of a bird that desires to fly up into the sky. It is also similar to leading and falling of bee that has strong attachment to smell and always follows to smell, on lotus field.

Vicāra, on the other hand, has subtle nature which occurs without shivering of the mind. It is similar to stretching of wings of a bird in the sky. It is also similar to moving round slowly over the lotus field by a bee in order to investigate whether or not any kind of danger is present, after arrived on it.

3.5.13.b Explanation found in commentary of *Dukanipāta*

It should be recognized on *vitakka*, the nature of initial application of the mind on the object, as upward and downward movement of the wings of bird which flies up into the sky. “It should be recognized on *vicāra*, the nature of sustained application of the mind on the object, as steady flying by soothing movement of wings of bird in the sky”, explained in commentary of *Dukanipāta*. That explanation is reasonable during successive occurrence of preceding and succeeding ones, the neighbourhood concentration and full concentration, respectively. Those significant nature of *vitakka* and *vicāra* are obviously apparent in the first and second absorption. (*Visuddhi*-1-138)

The significant nature of *vitakka*, mode of initial application of the mind on object, is apparent in the first absorption due to presence of gross nature. In the pentad method (*pañcaka naya*), the significant

PAGE 442

nature of *vicāra*, mode of sustained application of the mind on object is apparent in the second absorption due to absence of that *vitakka*. (*Mahāṭṭkā*-1-167)

3.5.13.c In other words

For a person who brushes a clear bronze cup, handling it by means of one hand while brushing it with soap, oiled goat-haired brush etc. by other hand, it should be recognized *vitakka* as one hand which firmly handles the cup. *Vicāra*, is similar to brushing hand.

Vitakka is similar to pressing hand of the potter on clay while *vicāra* is similar to other hand which applying around the clay.

Vitakka is similar to an iron wedge which is firmly inserted in the centre of circle on the ground, while *vicāra* is similar to other iron wedge which is applied to make circular rim.

As a tree grows with both flowers and fruits, a such kind of absorption occurs associating with both *vitakka* and *vicāra*. This kind of absorption, therefore, occurs associating with both *vitakka* and *vicāra*, (*savitakka savicāra*), preached by the Buddha. (*Visuddhi*-1-138,139)

Each ultimate nature, called *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*, is designated as **factor of absorption** (*jhānaṅga*) and then that a group of factors of absorption is designated as the **absorption** (*jhāna*).

Although there is no tree free from flowers, fruit, foliages, etc. people usage are present that the tree with flowers, the tree with fruits, similarly, although there is no absorption free from factors of absorption, *vitakka* etc., the commentator Sayadaw gave above simile of a tree with flowers in order to show clearly the fact that the absorption with *vitakka*, the absorption with *vicāra*, should be designated accordingly. (It means that this kind of preaching methodology is called *abedobedupacāra* = a metaphor by which different condition is presented as non-different condition.) (*Mahāṭṭkā*-1-167)

3.5.14 *pīti-sukha* (pleasurable interest-agreeable feeling)

pītisukhanti ettha pīṇayatīti pīti. sā sampiyāyanalakkhaṇā, kāyacittapīnanarasā, pharaṇarasā vā, odagyapaccupaṭṭhānā. (*Visuddhi*-1-139)

Owing to capable of pleasing and developing the body, mind and object, it is designated as *pīti* (pleasurable interest).

1. That *pīti* has the characteristic of the pleasurable interest on object. (It means *pīti* has the characteristic of satisfaction to take the object.)

PAGE 443

2. *pīti* has the function (*rasa*) of pleasing and developing both body and mind. In other words, it has the function of spreading throughout body with superior corporealities produced by mind. [The mind of meditation associating with *pīti* can produce *cittaja rūpa* at it's arising phase (*uppāda*) of every mind moment. Due to occurrence of those *cittajarūpa* are caused by superior mind of absorption, the formers are superior ones. Those superior *cittajarūpa* occur throughout body. It means that that kind of function is carried out by *pīti*.]

3. That *pīti* is manifested in the knowledge of *meditator* as the nature of activating and pleasing both body and mind simultaneously.

3.5.14.A. Five kinds of *pīti* (pleasurable interest)

There are five kinds of pleasurable interest, *khuddikā pīti*, *khaṇikā pīti*, *okkantikā pīti*, *ubbegā pīti*, *pharaṇā pīti*.

1. ***khuddikā pīti*** — It is capable of setting bodily hairs up (goose flesh) only. It is a kind of *pīti* which can not occur frequently after perished away.

2. ***khaṇikā pīti*** — It is a kind of *pīti* which occurs many times in every moments, as lightening.

3. ***okkantikā pīti*** — It is a kind of *pīti* which is embedded throughout body as the wave raising up to beach and perished away.

4. ***ubbegā pīti*** — It is very powerful *pīti* which is capable of flying the whole body into sky as a mass of cotton wool blown by strong wind.

5. ***pharaṇā pīti*** — When this kind of *pīti* occurs, the whole body is soaked with pleasurable interest as a bubble with full of air or as a valley which is flowed with sudden flash of rains. (It means the occurrence of spreading throughout body with superior *cittaja rūpa* produced by mind which is predominated with *pharaṇā pīti*.)

After those five kinds of pleasurable interest (*pīti*) sets the foetus which is the dependence of tranquillity (*passadhi*) and then it is matured, with the result that two kinds of tranquillity, tranquillity of mental concomitants (*kāyapassaddhi*) and that of consciousness (*cittapassaddhi*), would be fulfilled. (It means that *pīti* takes birth the son called *passaddhi*, tranquillity.)

After tranquillity (*passadhi*) sets the foetus which is the dependence of agreeable feeling (*sukha*) and then it is matured, with the result that two kinds of agreeable feelings, bodily agreeable feeling (*kāyika sukha*) and mentally agreeable feeling (*cetasika sukha*) would be fulfilled. (It means that the mother called *passaddhi* takes birth the son called *sukha* again.)

When agreeable feeling, by setting its foetus, becomes matured stage, three kinds of concentrations,

PAGE 444

momentary concentration (*khaṇika samādhi*), neighbourhood concentration (*upacāra samādhi*) and full concentration (*appanā samādhi*), would be fulfilled. (It means that the son of *pīti* is *passaddhi*, while that of *passaddhi* is *sukha*, that of *sukha* is concentration that is the grandson of *pīti*.) Among those five kinds of pleasurable interest (*pīti*), a such kind called *pharaṇā pīti* is the fundamental cause of the full concentration and it occurs associating with the neighbourhood concentration before full concentration previously. When it becomes improved gradually, such kind of *pharaṇā pīti* which is associating with the full concentration is present. That kind of *pharaṇā pīti* is intended to say *pītisukham* which belongs to five factors of absorption, in this case. (*Visuddhi*-1-139,140)

3.5.15.B. Agreeable feeling (*sukha*)

sukhanam sukham, *suṭṭhu vā khādati*, *khanati ca kāyacittābādhanti sukham*, *tam sātālakkhaṇam*, *sampayuttānam upabyūhanarasam*, *anuggahapaccupaṭṭhānam*. (*Visuddhi*-1-140)

= The nature of agreeable feeling is designated as ***sukha***. In other words, such nature is capable of chewing both bodily and mentally disagreeable feelings; that nature, therefore, is

called *sukha*. In other words, such nature is capable of digging both bodily and mentally disagreeable feelings; that nature, therefore, is called *sukha*.

1. That *sukha* has the characteristic of joyable nature of both the person with fulfilled *sukha* and associating mind and mental concomitants within one mind moment. (It means that *sukha* is capable of making happiness of associating mind and mental concomitants within one mind moment. Due to presence of desirable nature, *sukha* has characteristic the agreeable nature for both a person with that *sukha* and mind and mental concomitants within one mind moment.)

2. *Sukha* has the function (*rasa*) of proliferating mind and mental concomitants which are associated *dhamma* of one mind moment.

3. It is manifested in the knowledge of *meditator* as the nature of acceptable the object repeatedly again and again. (Disagreeable feeling usually gives up the object which is dependence of disagreeable feeling, while the neutrality feeling (*upekkhā vedanā*) neutralizes the object which is dependence of neutrality. This agreeable feeling neither gives up the object as disagreeable feeling nor neutralizes the object as neutrality feeling but ability to take the object repeatedly again and again. Thus it is manifested in the knowledge of *meditator*.)

In other words, agreeable feeling is manifested in the knowledge of *meditator* as benefitable and improvable mind and mental concomitants which are associating with it in one mind moment.

Although yoking occurrence of those *pīti* and *sukha* is obviously present in some *dhamma* such as the first absorption, the pleasing which occurs by means of obtaining desirable object is called the pleasurable interest (*pīti*). The agreeable feeling of obtained object is called *sukha*.

PAGE 445

In such mind moment, the pleasurable interest is present. In that mind moment, the agreeable feeling always present. In that mind moment, the agreeable feeling is present. In that mind moment, the pleasurable interest not always present. (It means the pleasurable interest may or not present in order to refer the third absorption of tetrad method (*catukka naya*) or the fourth absorption of pentad method (*pañcaka naya*), where it is yoking with agreeable feeling but not pleasurable interest.)

Pīti belongs to formation-group while *sukha* belongs to feeling-group among five aggregates (*khandhā*).

For a traveller who travels the desert in summer with very tired sees a green forest not so far and when he hears information of another traveller of opposite direction that “there is very fine lake called *jātissara* inside the forest where is little far from here”, the great satisfaction and pleasurable interest appears in him. That is called *pīti*. It should be recognized on *pīti* as the nature of satisfaction and pleasurable interest when desirable object, like sign of full concentration is obtained, similar to those *pīti* mentioned above. When he enters into the forest, reaches under the shade of forest, drinks the water etc., the agreeable feeling occurs in him and that kind of feeling, indeed, is *sukha*. It should be recognized on *sukha* as the nature of agreeable feeling when it is felt the acquired object like that *sukha* mentioned above. It should be recognized on those facts mentioned above depending on various periods due to obvious occurrence of those *dhamma* in various periods. Thus due to presence of both this *pīti* and this *sukha* are present in that absorption, it would be designated as the absorption with *pīti*, *sukha*. (*Visuddhi*-1-140,141)

The absorption with these factors of absorption mentioned above, *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*, which is occurred by taking the object of brilliant sign of full concentration

of mindfulness of breathing, is called the **first absorption**. Thus the first absorption is a kind of absorption with five factors (*pañcaṅgasamannāgata*), indeed.

3.5.18 Five factors would be rejected

It should be recognized on the occurrence of five factors which had been rejected, by means of rejecting five kinds of hindrances (*nīvaraṇa*) which are capable of hindering not to obtain the absorption, as sensual desire (*kāmacchanda*), ill-will (*byāpāda*), sloth-torpor (*thina-middha*), unrest-worries (*uddhacca-kukkucca*), sceptic (*vicikicchā*), mentioned above.

Unless those hindrances are rejected, the absorption can not be occurred. Those hindrances, therefore, would be designated as rejected factors of that absorption. By the time the absorption occurs, other unwholesome deeds besides hindrances are also rejected and disappeared. However only those five kinds of hindrances are capable of making danger of absorption, indeed. Therefore, it is explained on rejecting of five hindrances only (*pañcaṅgavippahīna*).

The nature of desiring to various sensual objects called living and non-living ones is called *kāmacchanda* (sensual desire). That sensual desire is capable of attracting the mind by various objects. The mind which is attracted and persuaded by sensual desire can not firmly fix on one object like sign of full concentration. That mind is capable of fulfilling to obtain absorption which is

PAGE 446

surpassing that sensual desire.

The ill-will (*byāpāda*) is also capable of torturing the mind on various kinds of undesirable objects. The mind which is tortured by ill-will wanders various undesirable objects continuously with the result that it is not stable on one object like the sign of full concentration.

Sloth and torpor of mind and mental concomitants are also incompatible of mind of meditation which is developed by taking the object of practice like sign of full concentration.

Unrest (*uddhacca*) which is wandering on various objects and worries (*kukkucca*) which is remorse about something wrong that one have been done, are also capable of torturing mind not to occur stability on one object like sign of full concentration with the result that mind of meditation is wandering about from here to there continuously.

The nature to sceptic on three triple gems, *kamma* and results of *kamma*, and on three noble trainings called training of virtue, training of concentration, training of wisdom, is *vicikicchā*. Especially, in this stage, sceptic on training of concentration by which the concentration is developed after taken the object of sign of full concentration of full concentration of mindfulness of breathing, is *vicikicchā*. The mind which is tortured by sceptic lacks desire to walk the path of purification which is able to attain the absorption like the practice of mindfulness of breathing. (It is recent paradox on *jhānic* state.)

Thus it is explained on only five hindrances out of other unwholesome *dhmma*, as **rejected factors** (*pahānaṅga*) due to occurrence of complete opposite to absorption. (*Visuddhi*-1-141,142)

3.5.19 Five factors would be fulfilled

Initial application (*vitakka*) is capable of applying the mind to the object, while sustained application (*vicāra*) is capable of connecting of adjacent minds on object not to discontinue. It would be explained in detail as follow.

Initial application is capable of applying the mind to the object of sign of full concentration. Sustained application is capable of sustaining the mind on the object of sign of full concentration not to discontinue mind process.

The pleasurable interest (*pīti*) which is occurred by completion of *bhāvanā payoga* of mind is capable of making satisfying on the sign of full concentration, while the agreeable feeling (*sukha*) is capable of proliferating mind and mental concomitants which are associating with it. (In this case, it should be recognized on *bhāvanāpayoga* as those functions of initial application and sustained application.) If it is capable of making those functions, that mind associating with remaining mental

PAGE 447

concomitants, contact (*phassa*), etc., is supported by initial application to object of sign of full concentration, sustaining the mind on that object, satisfying on that object and proliferating of associated *dhamma*, which are functions of *vitakka*, *vicāra*, *pīti*, *sukha* respectively. The one-pointedness (*ekaggatā*) which is associating with supported mind, is capable of setting mind of meditation up on object by means of balanced five controlling faculties, called faith, effort, mindfulness, concentration, wisdom. Due to occurrence of very far from opposite hindering *dhamma*, the mind of meditation is well set on the object of sign of full concentration by means of lacking retardation and wandering of mind from the object. Therefore it should be recognized the first absorption so as to fulfilled five factors by means of obvious occurrence of there five factors, *vitakka*, *vicāra*, *pīti*, *sukha* *cittakaggatā*.

It is right. — When those five factors occur obviously, it would be said “the absorption occurs well”. Therefore, it can be said those five factors as fulfilled factors. Therefore it should not be assumed that there is other kind of absorption out of the absorption which is fulfilled with five factors, *vitakka* etc. For instance — “as if it can be designated as the soldier with four factors, the musical instrument with five factors, the Noble Path with eight factors, by means of completing partial factors respectively, similarly, by means of completing partial factors of absorption, it is designated as the **absorption which is fulfilled with five factors of absorption**”, it must be recognized in this way. (*Visuddhi*-1-142)

Those five factors of absorption, indeed, are apparently present at the moment of neighbourhood concentration. However it is stronger than usual consciousness of sensuous sphere, at the moment of neighbourhood concentration. Especially, at the moment of full absorption, those five factors of absorption are stronger than those of absorption occurring at neighbourhood absorption with the result that it is reaching to the nature of absorption of fine material sphere. It is right. _____

During this full absorption is occurring, the initial application (*vitakka*) arises obviously and apparently by means of applying the mind on the object of sign of full concentration of mindfulness of breathing. Sustained application, similar to knowledge, appears by reasoning on the sign of full concentration. Pleasurable interest and agreeable feeling occur by spreading throughout body. Therefore, the Buddha preached that — “*nāssa kiñci sabbāvato kāyassa vivekajena pītisukhena apphūṭam hoti*”. (*Dī*-1-70)

= “There is no place without touching by pleasurable interest and agreeable feeling that is

PAGE 448

occurred by avoiding from hindrances of the whole body of the person who attained that absorption”.

As the rim of lower part of casket fits and touches lid of upper part of casket, one-pointedness of mind (*cittakaggatā*) appears by touching thoroughly on the object of sign of

full concentration. This is significant feature of factors of absorption occurring in the stage of fine material sphere rather than those occurring in the stage of neighbourhood concentration.

It is right the fact that among those factors of absorption, one-pointedness of mind (*cittakaggatā*) is not directly referred as factor of absorption like *savitakkam savicāram*, etc., found in Pālī Text mentioned above. But in *Vibhaṅga* Pālī, *Abhidhamma*, 2,267, it is preached that

“*jhānanti vitakka vicāro pīti sukham citte’kaggatā*”

= the absorption means a group of *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*. Due to this reason, *cittakaggatā* is also designated as factor of absorption. It is right. — With the intention to show *jhāna dhamma* which is occurring associated with such *vitakka* etc., the Buddha had been done a brief account of it by showing “*savitakkam, savicāram*” etc. It should be recognized on the fact that with the intention to show *jhāna dhamma* which is occurring associated with that *vitakka* etc., the Buddha had showed clearly in the Pālī Text of *Vibhaṅga*, indeed. (*Visuddhi*-1-142)

3.5.20 Threefold good qualities and 10-fold characteristics

There are threefold good qualities and 10-fold characteristics in the first absorption as follows. —

1. *paṭipadāvisuddhi* = The purification of way of practice leading to the first absorption is designated as the “**beginning**” of the first absorption, in which three characteristics are present.
2. *upekkhābyūhanā* = The development of equanimity (*tatramajjhatsupekkhā*) is designated as the “**middle**” of the first absorption, in which three characteristics are present.
3. *sampahamsanā* = The satisfaction is designated as the “**end**” of the first absorption in which four characteristics are present.

paṭipadāvisuddhi — During the concentration is developing by taking the object of brilliant sign of full concentration of mindfulness of breathing, the impulsion of full absorption appears in such impulsion process (*javana vāra*). By the time that impulsion process occurs those defilements called such hindrances are danger of that first absorption, indeed. The consciousness of the first absorption is purified from danger of absorption called those hindrances. — (1)

Owing to purification of danger of absorption called hindrances, it is avoiding from hindrances which is capable of hindering not to attain absorption, with the result that the sign of practice (*samatha nimitta*) which is middle way, is fulfilled.

PAGE 449

majjimam samathanimittam nāma samappavatto appanāsamādhīyeva. (*Visuddhi*-1-144)

The concentration of full absorption which is compatible to take the object of sign of full concentration without retardation or wandering of mind resulting in leading to the middle way which never falls into two extremities, is called the sign of practice (*samatha nimitta*). It is called the sign of practice due to occurrence of fundamental cause of the upper absorptions and noble supra-mundane *dhamma*.

The consciousness of *gotrabhu* which is previously occurred and capable of benefiting by continuous supporting condition (*anantara paccaya satti*), becomes well

concentrated situation by means of single way (*ekatta naya*) to bend the continuum of mentality toward that kind of situation, resulting in middle way of sign of practice is fulfilled. It is designated as the reaching to middle way of sign of practice (*majjhima samatha nimitta*). — (2)

Due to reaching to middle way of sign of practice resulting in approaching to occurrence of full absorption, it is designated as entering into that sign of practice. [By means of approaching to the concentration of full absorption as soon as the moment of reaching to middle way of sign of practice occurs, it is reached to the stability of mind with concentration of full absorption and then it is called entering into that middle way of sign of practice.] — (3)

By means of the method mentioned previously, it should be recognized on *paṭipadāvisuddhi* on the following situations which are present obviously in consciousness of *gotrabhu*, beforehand the full absorption,

1. purification from dangers of hindrances,
2. reaching to middle way of sign of practice,
3. the way of practice leading to the arising of first absorption, which is capable of finishing to enter into that middle way of sign of practice. (*Visuddhi*-1-144; *Mahāṭṭkā*-1-173)

upekkhābyūhanā — Owing to lack of preparing to purify that consciousness of first absorption which had been purified from hindrances again, with the result that the *meditator* does not perform to purify again and it can be said that he neutralizes the first absorption. — (1)

It can be said that the *meditator*, who has no endeavouring to balance the consciousness of first absorption which leads to proper way of practice due to reaching to full concentration (*appanā samādhi*), neutralizes that consciousness of first absorption. — (2)

It can be said that the *meditator*, who has no endeavouring to firm fix the sign of full concentration of mindfulness of breathing, which has only one nature, in other words, the *meditator* who has no

PAGE 450

endeavouring to situate the consciousness of full concentration without associating of any defilement, neutralizes that consciousness of full absorption.

Thus it should be recognized on development of *upekkhābyūhanā* (= *tatramajjhattupekkhā*) by means of function of mental concomitant called equanimity (*tatramajjhattupekkhā*). — (3)

sampahamsanā — Such yoked *dhamma*, such as concentration and wisdom, which are occurring associated with consciousness of the first absorption which is developed by equanimity, occurs harmoniously without predominated to each others. — (1)

Then owing to deliverance from defilements, five controlling faculties, faith, effort, mindfulness, concentration, wisdom, occur in the presence of same functions, deliverance from defilements. — (2)

Then this *meditator* causes to occur such effort which is compatible to those occurrences, i.e., harmonious function of concentration and wisdom, presence of same function called deliverance from defilements. Such refuting (*āsevanā*) which is occurred during perishing phase (*bhaṅga khaṇa*) of that consciousness of first absorption is present. [After the arising phase (*uppāda*), the refuting (*āsevanā*) begins to occur at the static phase (*ṭhiti khaṇa*). (*Mahāṭṭkā*-1-174)]

The mode of occurrence of all those *dhamma*, concentration, wisdom, which are associated with the consciousness of absorption and are not predominant to each other, by means of knowing of all processes thoroughly (*pārihāriya ñāṇa*) called impurity (*samkilesa*)

and disadvantages of it, purification (*vodāna*) and advantages of it, concentration and wisdom can be occurred without predominating to each others by means of such such modes. Due to occurrence of satisfaction of the concentration of mindfulness of breathing; due to occurrence of finishing to perform by that *pārihāriya ñāṇa*, due to occurrence of circumstantial purified, it is fulfilled by means of that that modes. Therefore, it is explained in *Visuddhi*-1-144,145 that

dhammānam anativattanātdibhāvasāadhanena pariyodāpakassa ñāṇassa kiccanipphattivasena sampahamsanā veditabbā. (Visuddhi-1-144,145)

= It should be recognized on the **satisfaction** (*sampahamsanā*) by means of finishing to occur those *dhamma* called concentration and wisdom, without predominating to each others, and finishing to occur the function of knowledge which is capable of performing and purifying it's function. — (3)

The knowledge is obvious in the mind of mindfulness of breathing by means of equanimity (*tatramajjhattupekkhā*). It is preached in *Paṭisambhidā Magga*, page 221, as follows. _____

PAGE 451

The mind of meditation which is supported by means of such mode of effort, does not falls into one extremity of laziness. Although the effort supports the mind of meditation by means of that mode, the mind of meditation, due to presence to supporting factor of concentration in order to balance with effort, neutralizes well (on the object of sign of full concentration). The controlling faculty of wisdom (*paññindare*) is predominant by means of equanimity (*tatramajjhattupekkhā*) and knowing of all process thoroughly (*pārihāriya ñāṇa*). Owing to occurrence of predominant controlling faculty of wisdom, for a person who neutralizes the object of sign of full concentration, the mind of meditation escapes from defilements by means of efficiency of equanimity. By means of escaping from defilements and efficiency of knowledge which is penetrative knowing on the sign of full concentration, the controlling faculty of wisdom is well predominant. Owing to deliverance from defilements those *dhamma* with faith, wisdom, concentration, effort, have harmonious functions. Owing to presence of harmonious functions of controlling faculties, the concentration of first absorption of mindfulness of breathing would be appeared". (*Paṭisambhidā Magga*-221)

Owing to obvious occurrence of function of knowledge by means of equanimity, it is explained that the satisfying of mind of meditation which is the "function of wisdom of full absorption" (*appanāpaññā*), as the end of concentration of first absorption. — (4) (*Visuddhi*-1-145)

Thus _____

1. by means of *paṭipadāvisuddhi* with which three kinds of purification of the path leading to the first absorption,
2. by means of developing *tatramajjhattupekkhā* of three kinds called *uppekkhābyūhanā*, and
3. four kinds of satisfaction of mind of meditation called *sampahamsanā* had been fulfilled.

Therefore it should be recognized on those threefold good qualities and tenfold characteristics which can be occurred in the first absorption only. (*Mahāṭṭkā*-1-175)

3.5.21 The meaning of absorption (*jhāna*)

ārammaṇūpanijjhānato paccaṇīkajhāpanato vā jhānam (*Visuddhi*-1-145)

Owing to capable of discerning penetratively and firmly fixes to the object of sign of concentration, and owing to capable of burning opposite defilements, hindrances, etc. it is designated as the

PAGE 452

absorption (*jhāna*). (*Visuddhi*-1-145)

According to this explanation it should not be misunderstood on absorption as ability to enter into earth, flying in the sky etc. Those abilities of entering into earth and flying in the sky can be achieved by means of super-psychic knowledge (*abhiññāṇa*), indeed.

3.5.22 For the purpose of maintenance of long lasting in absorption

After that first absorption had been attained, that *meditator* should distinguish and keeps in mind those modes similar to an archer called ‘*vāavedhi*’ who is capable of shooting tip of tail of an animal, or similar to royal cook in the palace.

When very clever archer performs in order to shoot tip of tail of an animal the target is hit directly in such time. As the archer distinguishes and keeps in mind those modes occurring in that time of direct hit the target, such as posture of foots on the ground, style of bow, string of bow and arrow and shoots directly on tip of tail by fulfilling mode of shooting in accordance with previous memorization of mode of shooting, similarly _____

the *meditator* should distinguish and keeps in mind those modes, such as “I had attained the first absorption in this time, by taking this kind of favourable foods, by associating the person who has this kind of nature, in this Buddha’s *sāsanā* with this kind of admonishment, by means of this kind of favourable deportment”, etc. In this way, if it is well reasoned and taken into heart those modes, although immature concentration of the first absorption would be disappeared, it will be capable of occurring that concentration of first absorption by fulfilling those modes such as favourable foods etc. The concentration which is not proficiently studied can be achieved and it is capable of entering into it frequently.

Then when a clever royal cook serves the king with delicious foods, his majesty is delightful to take such kind of food. As he get an extra bonus for serving his majesty with that kind of favourable foods which has been recognized well, similarly —

this *meditator*, if he fulfils those modes which are capable of attaining the absorption previously, such as favourable food by which the absorption had been attained etc., will also attain the concentration of first absorption again and again. The *meditator*, therefore, should distinguish and keep in mind well those modes which are cause of attainment of absorption like the archer who can

PAGE 453

shoot direct hit to tip of tail of animal or like royal cook in palace. (*Visuddhi*-1-145,146)

Owing to keeping in mind those modes which are cause of attainment of absorption and to fulfilling those modes thoroughly for that *meditator*, only the absorption can be fulfilled but maintenance of long lasting in absorption can not be performed. The right way is that — due to finishing to remove hindrances, sensual desire, etc., which are danger of concentration with the result that occurrence of purified condition and then maintenance of long lasting in absorption would be occurred.

- It is right. — If a such *bhikkhu* enters into the absorption,
- (1) without removing sensual desire by means of reasoning on fault of sensual desire, taking into heart mode of repulsiveness (*asubha*),
 - (2) without performing tranquillity of body with stress by means of removing ill-will which is the cause of stress,
 - (3) without removing sloth and torpor by means of taking into heart causes of occurrence of *vīriyasambojjhaṅga*, trying in beginning stage etc.; and perception of light,
 - (4) without removing unrest and worries by means of taking into heart cause of occurrence of *samādhisambojjhaṅga*, taking into heart sign of full concentration etc.,
 - (5) without rejecting causal *dhamma* of sceptic and conceit (*māna*) which are also danger of concentration,

that *bhikkhu* usually emerges from absorption suddenly as either bee and wasp that enter into unclean bamboo hollow where they dwell or the king who enters into unclean royal garden.

It would be said accordingly. — If such *bhikkhu* enters into absorption after well removing hindrances which are danger of concentration, it is possible for that *bhikkhu* in

order to stay in the absorption for a whole day as either bee and wasp that enter into cleaned bamboo hollow where they dwell or the king who enters into cleaned royal garden due to lack of any danger. Owing to the reason that only when hindrances which are danger of concentration had been thoroughly rejected can the concentration be situated for long lasting time, the *meditator* who desires to maintain long lasting in the absorption must enter into that absorption after rejecting well those hindrances called the danger of absorption, indeed. (*Visuddhi*-1-147)

PAGE 454

The reasonable complaint — Is it true that the *bhikkhu* who attained this first absorption had finished to practise the course leading to concentration of absorption after reasoning faults of sensual desire? Moreover, hasn't he remove hindrances by means of neighbourhood concentration even by the time that concentration occurs? It is reasonable complaint that although it is true, why it would be accept to reason faults of sensual desire again? The answer are as follows. —

It is true that by the time this neighbourhood concentration occurs, hindrances had been removed. Although it is true, by the time neighbourhood concentration occurs, it is merely removed hindrances indeed. Therefore it would be accepted to reason faults of sensual desire again for the purpose of maintenance of long lasting in absorption and in order to reject thoroughly these hindrances accordingly. (*Mahāṭṭkā*-1-177)

During it is entering into the absorption hindrances had been removed actually. However when it is emerged from that absorption, those hindrances reappears again depending on unwise attention (*ayoniso manasikāra*). Therefore the *meditator* who desires to maintain long lasting stability in the absorption, must enter that absorption after thoroughly removed hindrances whenever it occurs by means of reasoning faults of sensual desire, etc. Thus it is real meaning.

3.5.23 To be much longer into absorption, but lesser in reflecting

tasmim pana nimitta pattapaṭhamajjhānena ādikampikena samāpajjanabahulena bhavitabbam, na paccavekkhaṇabahulena. paccavekkhaṇabahulassa hi jhānaṅgāni thūlāni hutvā upaṭṭhahanti. athassa tāni evaṃ upaṭṭhitattā upari ussukkanāya paccayatam āpajjanti. so appagune jhāne ussukkamāno pattapaṭhamajjhānā ca parihāyati, na ca sakkoti dutiyam pāpunitum. (*Visuddhi*-1-148)

The *meditator* who attains the first absorption as first experience (*ādikammika jhānalābhī*) must be very much to enter into the absorption but not reflect on factors of absorption actually. The reason is that —

For a person who reflects so much on factors of absorption, that of absorption appears in gross occurrence and in weak efficiency. [Reflecting on factors of absorption is so much that those factors appear obviously resulting in gross appearance of factors of absorption. Due to incapable of reaching to occurrence of proficiently entering into absorption, although factors of absorption are apparent in knowledge, these are weak in efficiency. (*Mahāṭṭkā*-1-178)]

When it is appeared in the knowledge in that way, owing to occurrence of appearing as gross and weak efficiency for that *meditator*, it is impossible to reach the occurrence of cause of improvement

PAGE 455

of the successive upper absorptions by the practice of mindfulness of breathing. Unless the *meditator* develops mastery of acquired absorption, it will be fall back from the first absorption although he tries hard for attainment of upper absorption. It usually becomes impossible to attain the second absorption. The Buddha, therefore, preached *Gāvī upamā sutta* (*Āṅg-3-216*) as follows. _____

3.5.24 An excerpt from *Gāvī upamā sutta*

Bhikkhu ... for instance, there is a cow that is foolish, un-clever, non-understanding on about pasture, unfamiliar to mountain range, staying on hill side. (One day when that cow looks far away from the top of hill, it would be seen a large pond with clear water surrounding with grass and foliages.) The suggestion would be appeared in that cow's mind that "it is very fine to reach inexperienced place, to graze inexperienced pasture and to drink inexperienced water." That cow, (when it goes down from the top of hill) raises hind legs without stepping fore legs in stability on the ground. That stupid cow, (due to slipping down from the top of hill), is impossible to reach inexperienced place, to grazed inexperienced pasture, to drink inexperienced water, and then it is unable to reach well original top of hill where it imagined in that way.

The reason why it occurs in this way is that — *Bhikkhus* ... that stupid cow wanders on the mountain without understanding about pasture and mountain range, indeed.

Similarly, *bhikkhus* ..., in this *sāsanā*, the *bhikkhu* who is stupid, (due to lack of understanding on how to reject dangers of concentration), unskilful (due to lack of understanding on mastery of the absorption), who does not know about the pasture (due to lack of understanding on the fact that mastery of absorption is the proximate cause of successive upper absorption), un-clever (due to lack of efficiency to enter absorption thoroughly), reaches into the absorption, which is avoiding from *vatthukāma* and *kilesākāma* but associating with *vitakka*, *vicāra*, *pīti*, *sukha*.

That *bhikkhu* never develop frequently on that sign and never perform to maintain stable condition.

PAGE 456

In the continuum of mentality of that *bhikkhu*, imagination of this way, "If I am able to reach the second absorption that is associated with pleasurable interest and agreeable feeling, which are occurred by the concentration without initial and sustained application, it will be very fine", would be appeared.

That *bhikkhu* is incapable of performing to attain the second absorption that is associated with pleasurable interest and agreeable feeling, which are occurred by the concentration without initial and sustained application.

In the continuum of mentality of that *bhikkhu*, imagination of this way, ... "If I am able to reach the first absorption that is associated with pleasurable interest and agreeable feeling, which are occurred by avoiding from hindrances but associated with initial and sustained application after voiding of *vatthu kāma*, *kilesākāma* and unwholesome *dhamma* occurred" ... would be appeared again.

That *bhikkhu* is incapable of performing to attain the first absorption that is associated with pleasurable interest and agreeable feeling, which are occurred by the concentration without initial and sustained application.

Bhikkhus ... as so-called cow that is foolish, un-clever, non-understanding on about pasture, unfamiliar to mountain range, it can be designated on that *bhikkhu* who defeats from pair, (called the first and second absorption), who diminishes from pair. (*Āṅg-3-216*)

If it is strenuously tried hard to attain the upper absorption without practicing to attain mastery of acquired absorption, it will usually be fallen back from acquired absorption and then due to impossible to improve upper absorption, it would be thoroughly practiced to have five kinds of mastery (*vasī*) in the first absorption.

3.5.25 Five kinds of mastery (*vasī*)

Vasī means to have learnt or understood, occurring in accordance with one's desire, mastery, the ability to occur in accordance with one's desire. There are five kinds of mastery (*vasī*), mastery of adverting (*āvajjanavasī*), mastery of attaining (*samāpajjanavasī*), mastery of resolve (*adhiṭṭhānavasī*), mastery of emerging (*vutṭhānavasī*) and mastery of reflecting (*paccavekkhanavasī*).

(1) Mastery of adverting (*āvajjanavasī*)

If the first absorption can be reflected by mind-door adverting, wherever, whenever and whatever factor he likes without retardation of occurrence of adverting, this capability is called mastery of adverting.

PAGE 457

The capability of adverting (*manodvārāvajjana*) which is able to discern factors of absorption (*jhānaṅga*) is called mastery of adverting (*āvajjanavasī*).

In the continuum of *meditator* who reflects *vitakka* which is a factor of first absorption previously after emerged from it the mind moments of cognitive process, shaking of life-continuum (*bhavaṅgacalana*), cessation of life-continuum (*bhavaṅgupeccheda*) and then the mind-door advertence which reflects *vitakka* appears successively. Just after that mind-door advertence which reflects *vitakka*, those reflecting impulses (*paccavekkhanājavana*) which also reflect that *vitakka* arise four times for the *meditator* with sharp controlling faculties while five times for the *meditator* with retarded controlling faculties very quickly. (It never occurs to seven times.)

After those four or five times of impulses occurred, shaking of life-continuum and cessation of life-continuum arise again. Then mind-door advertence which reflects *vicāra* arises successively. And then those reflecting impulses which also reflect *vicāra* arise four or five times successively. After that cognitive process finished each reflecting cognitive process which reflects *pīti*, *sukha*, *ekaggatā* respectively, appears successively as shown previously.

In this way, due to taking the objects of only factors of absorption continuously without taking any other objects for such time, it is capable of controlling the mind without interrupting by different objects. During reflecting impulses are occurring, there is no extra life-continuum but essential two times only, shaking of life-continuum and cessation of life-continuum, between those cognitive process which reflect each factor of absorption. When the capability to reflect factor of absorption is so swift in this way, it can be said that mastery of adverting is fulfilled well for that *meditator*.

The so called mastery of adverting which is reaching to excellent one with four times of reflecting impulses separated by only two times of life-continuum can be found when the Buddha shown super-psyhic knowledge called pairs of water and fire, etc. Those Noble-Ones, the most Venerable *Sāriputta* etc., except the Buddha, can also attain this kind of mastery of adverting by the time it is fulfilled with strenuous effort activity. However the

duration of mastery of adverting of disciples is very short resulting in incomparable to that of mastery of adverting of the Buddha. Therefore, “those kinds of super-psychic knowledge like pairs of water and fire never concerned with disciples actually”, preached by the Buddha. There is no mastery of adverting which is swifter than that of adverting with four times of life-continuum in the world. If it is possible to reflect by those impulsions separated by a few extra times of life-continuum, it can be said that mastery of adverting. It means that the mastery of adverting can be designated as “the capability of reflecting on factors of absorption in swiftest rate”. (*Visuddhi*-1-149,150; *Mahāṭīkā*-1-178,179; Sub-commentary of *Abhidhammattha Saṅgaha*-Myanmar-565,566)

PAGE 458

(2.a) Mastery of attaining (*samāpajjanavastī*)

If the first absorption can be entered wherever, whenever and whatever duration he likes without retardation of occurrence of entering into absorption, this capability is called **mastery of attaining**.

The capability of occurrence of desired impulsions of absorption as soon as the wish to enter absorption occurs without extra times of life-continuum arise, but after shaking of life-continuum, cessation of life-continuum, advertence, preliminary object, neighbourhood, successive and *gotrabhu* occurred successively, is called **mastery of attaining** (*samāpajjanavastī*).

Well arriving into the absorption, associating with those mental concomitants *dhamma* which are identical condition of the absorption is called *samāpajjana* (= attaining into absorption). It means the occurrence of fulfilment of absorption.

Just after the wish to enter absorption occurred and then shaking of life-continuum, cessation of life-continuum, mind-door advertence arisen successively, the capability of so swiftly entering into absorption, similar to by the time the most Venerable *Moggallāna* admonished king dragon called *Nandopananda*, is called mastery of attaining. This kind of mastery is morvellous efficiency of great sharp wisdom persons for emergency of showing super-psychic knowledge, indeed. Although a few extra times of life-continuum occur resulting in inability to swift attaining as in that speed, it can be designated as **mastery of attaining** actually. (*Visuddhi*-1-149,150; *Mahāṭīkā*-1-179; Sub-commentary of *Abhidhammattha Saṅgaha*-Myanmar-565,566)

(2.b) Efficiency of speed

Efficiency of speed means the capability of entering into absorption just after mind-door advertence which occurs after two times of life-continuum that follow the wish to enter absorption successively.

This so-called mastery of attaining which is reaching to excellent one, can be found during the Buddha was preaching *Dhamma* actually. With referring to that kind of mastery, the Buddha preached as follows. —

“*Aggivessana* ... Whenever I am preaching *dhamma*, just at the end of that *dhamma* talk, I always put well my mind into *nibbāna* which is usual dwelling of me and the object of concentration of Fourth Fruit-Knowledge previously. It situates well. It makes single object. It put harmoniously. By means of that kind of keeping in mind, I always stays, really”. (*M*-1-316)

There is no mastery of attaining which is swifter than that of attaining of the Buddha indeed. Once upon a time, the most Venerable *Sāriputta* was entering into fourth fruition-

absorption at one full-moon night in a chasm called *Kapota*. At that time one *yakkha* called *Nanda* wielded on bald pate on

PAGE 459

the most Venerable *Sāriputta* with a club which is capable of breaking down even as mountainside. Those *Mahā Theras* who memorizes *Suttanta* said that, “As soon as emerged from the absorption, that *yakkha* called *Nanda* wielded on bald pate”. In this case, this kind of mastery of attaining of Venerable *Sāriputta* is an evidence to show as an example. (*Mahāṭīkā*-1-179)

(3) Mastery of resolve (*adhiṭṭhānavasī*)

The capability of maintaining the continuum of impulsions of absorption for as long a time as one determine to stay into the absorption, i.e., very short instant, about ten times of very short instant, one hour, one morning, one day etc., by prohibiting not to occur the current of life-continuum like a dam stop the flow of the water, is called **mastery of resolve** (*adhiṭṭhānavasī*). (*Visuddhi*-1-150; *Mahāṭīkā*-1-180)

(4) Mastery of emerging (*vuṭṭhānavasī*)

The capability of leaving from the continuum of impulsions of absorption at the time one determine to emerge precisely without more or less any moment rather exact duration of entering into absorption, i.e., very short instant, about ten times of very short instant, about ten times of very short instant, one hour, one morning, one day etc. similarly is called **mastery of emerging** (*vuṭṭhānavasī*).

The continuous occurrence of impulsions of absorption is called “the process of entering into the absorption”, while the occurrence of life-continuum after those impulsions of absorption already ceased if called “the process of emerging from the absorption”. In these two kinds of mastery, it should be recognized that the capability of maintaining to stay into the absorption by means of strong determination which decided to stay in the absorption throughout this duration etc., before he enters into that absorption, is designated as *adhiṭṭhānavasī*, while the capability of emerging from the absorption by means of strong determination which decided to emerge from the absorption fulfilled throughout this duration etc., before he enters into that absorption, is designated as *vuṭṭhānavasī*. The story of Venerable *Buddharakkhita Thera* is good example to show apparently these two kinds of mastery.

When he reached to eight *vassa* as a *bhikkhu*, that Venerable *Buddharakkhita Thera* who is sitting among thirty thousands *bhikkhus* with super-psychic knowledge, created a mountain and entered into that created cave together with king dragon by handling it's shoulder as soon as he saw garuda bird which was flying down swiftly with intention to catch that king dragon that served with rice soup for *Mahārohaṇagutta Thera*, a patient who stayed on the hill where a mango tree was grown up and the most Venerable *Mahāmahinda Thera* landed on it once upon a time. The garuda bird that flew down swiftly from the sky, fled away after the created mountain was collided with it's breast.

PAGE 460

At that time Venerable *Mahārohaṇagutta Thera* said that “*āvuso ...!* Unless *Buddharakkhita* is present, we all us would be deserving to blame, really”. (*Visuddhi*-1-150)

By means of such consciousness of super-psychic knowledge, the mountain would be created. That consciousness of super-psychic knowledge occurs only once actually. However,

in this case, it should be recognized on the fact that the capability of both maintaining and emerging from that absorption which is the fundamental necessity of super-psychic knowledge within very short instant is shown as evidence of these two kinds of mastery. Unless Venerable *Rakkhita* who had well-performed in mastery of both resolve and emerging, is present, about thirty thousands of *bhikkhus* who had super-psychic knowledge would be deserving to blame due to lack of ability to protect from the danger of garuda bird for king dragon really. (*Mahāṭikā*-1-180)

(5) Mastery of reflecting (*paccavekkhaṇavasī*)

paccavekkhaṇavasī pana āvajjanavasiyā eva vuttā. paccavekkhaṇajavanāneva ni tattha āvajjanānantarānīti. (*Visuddhi*-1-150)

āvajjanānantarānīti āvajjanavasībhāvāya yathākkamaṃ vitakkādīnaṃ jhānaṅgānaṃ āvajjanāya parato yāni javanāni pavattāni, tāni tesam paccavekkhaṇāni. yadaggena āvajjanavasī siddhi, tadaggena paccavekkhaṇāvasī siddhi veditavvā. (*Mahāṭikā*-1-180)

After mind-door advertence which reflects factors of absorption, those reflecting impulses which also reflect factors of absorption arise successively. Capability of reflecting of impulses on factors of absorption is called **mastery of reflecting (*paccavekkhaṇavasī*)**. It is ability to reflect continuously without separating by many times of life-continuum between reflecting cognitive processes which reflect factors of absorption continuously, indeed. Therefore it should be recognized that if mastery of adverting (*āvajjanavasī*) is achieved, mastery of reflecting (*paccavekkhaṇavasī*) will also be achieved successively. It should be recognized on the fact that it can be divided into two types: capability of reflecting of mind-door advertence on factors of absorption is designated as mastery of adverting while that of reflecting of reflecting impulses on factors of absorption, as mastery reflecting respectively. (*Visuddhi*-1-150; *Mahāṭikā*-1-180)

The most Venerable **Ledi Sayadaw** explained in his book “Great Scripture of Practice”, that “capability of arising of only four to five times of reflecting impulses without occurring usual seven times, which reflect factors of absorption, in order to re-enter into absorption again as soon as the mastery of reflecting is finished. (**Great Scripture of Practice**-45)

PAGE 461

3.6 *dutiyajjhānakathā* (Explanations relating with second absorption)

The *meditator* who had fulfilled these five kinds of mastery, after emerged from the first absorption, must perform concentration of practice of mindfulness of breathing in order to attain the second absorption by means of —

“*ayaṃ samāpatti āsannanīvaraṇapaccatthikā, vitakkavicārānaṃ olārikattā aṅgadubbalā*” (*Visuddhi*-1-150)

- (1) reasoning that this first-absorption is quite close to the enemy called hindrances (*nīvaraṇa*),
- (2) searching disadvantages of that first absorption, such as it has weak factors of absorption due to occurrence of gross nature of *vitakka*, *vicāra*,
- (3) taking into heart the fact that the second absorption is subtler than the first one,
- (4) relinquishing the attachment on the first absorption. (*Visuddhi*-1-150)

The enemy called hindrances (*nīvaraṇa*)— Those enemies called hindrances are removed at the neighbourhood concentration of first absorption. By the time it is reaching to

the field of neighbourhood concentration by means of taking the object of sign of full concentration, those hindering *dhamma* would be ceased and tranquil. Owing to quite adjacent situations of the first absorption and neighbourhood concentration of it, the former is quite adjacent to enemies called hindrances, indeed.

vitakka, vicāra — Owing to occurrence of the nature of *vitakka*, initial application of the mind on to sign of full concentration and that of *vicāra*, sustained application of the mind on to sign of full concentration, those natures are a kind of gross feature of mentality for a *meditator* who desires efficiency of concentration as a calm situation. It means the fact that it must be continued to develop concentration of mindfulness of breathing with intention of preferring to second absorption and unwillingness to first absorption which has weak factors of absorption due to presence of gross nature of *vitakka* and *vicāra*, by means of taking into heart the reason that “it is better for the mind of meditation to fix the object of practice without initial and sustained application of mind on that object”.

Toward the second absorption —

If he fulfils in that way, for that *meditator*, during he is reflecting on factors of absorption with the help of mindfulness and clear comprehension, after emerged from the first absorption, *vitakka* and *vicāra* arise as gross nature in such time. *Pīti, sukha*, and *cittakaggatā* arise as subtle nature. At that time, in the continuum of *meditator* who is taking into heart repeatedly on only that sign of full concentration in order to reject gross factors of absorption and to attain subtler factors of absorption, when it is deserving to say as the impulsion of cognitive process, that “now ... the second absorption would be occurred”, by means of ceasing the flow of life-continuum, the mind-door advertence

PAGE 462

which is able to reflect sign of full concentration, arises by taking the object of that sign of full concentration continuously. Then four times of impulsions for a person with sharp controlling faculties or five times of impulsions for a person with not sharp controlling faculties, arise by taking the object of that sign of full concentration. Among those four or five impulsions, the last one called the fourth or fifth impulsions is the impulsion of second absorption of fine material sphere indeed. Those remaining three or four impulsions, except the last one are impulsions of the sensuous sphere, which are designated as *parikamma, upacāra, anuloma, gotrabhu* or *upacāra, anuloma, gotrabhu*, as previously mentioned in the first absorption.

By means of these successive process of practice, this *meditator* is staying by fulfilling with the second absorption with pleasurable interest and agreeable feeling but not initial and sustained application of mind on object, which is capable of developing purification and concentration of mind due to cessation of both initial and sustained application of mind. Thus this *meditator* had well attained the second absorption, which has the object of sign of full concentration of mindfulness of breathing, which has two rejected factors of absorption so-called *vitakka, vicāra*, which has fulfilled three factors of absorption so-called *pīti, sukha, ekaggatā*, which has three kinds of good qualities and ten characteristics, indeed. (*Visuddhi*-1-150,151)

3.6.A. Cessation of *vitakka vicāra*

Owing to presence of perishing away just after arising of the ultimate *dhamma*, those ultimate *dhamma* occurring in the first absorption perished away within that absorption but not continuing to occur in stability up to the second absorption. Therefore all kinds of mental

dhamma called 34 kinds of mind and mental concomitants of the first absorption, which occurred by taking the object of sign of full concentration were absent by the time that second absorption occurs actually. It is right. — Those 34 mental *dhamma*, such as *phassa* etc., occurring within the first absorption are specific ones while those 32 mental *dhamma*, such as *phassa*, etc., occurring within the second absorption are specific ones because of the occurrence of different mind moments. Although mental *dhamma* of the first absorption are obviously absent at the moment of the second absorption, in order to show clearly the fact that “owing to surpassing the gross factors of absorption, the second absorption etc., rather than the first absorption can be occurred”, the Buddha preached “***vitakka vicārānaṃ vūpasamā* = due to cessation of *vitakka*, *vicāra***”. It should be recognized on the fact that “the Buddha did not preach as ‘due to cessation of mental *dhamma* associating with *vitakka*, *vicāra*’, actually”. (*Visuddhi*-1-151)

PAGE 463

3.6.B. Faith and concentration

In the explanation of this second absorption, the Buddha emphasized on the fact that “*ajjattam sampasādanam cetaso ekodibhāvam* (M-1-89) = significance of presence of faith which is capable of purifying mind and superior concentration in the continuum of oneself internally”.

Here the reasonable question is that — “Is it true that the faith which is capable of purifying mind and superior concentration called *ekodi* are also present in the first absorption? Why the Buddha preached the fact that only the second absorption has the faith which is capable of proliferating concentration? etc. The answer is as follows.

This first absorption, as the water with surfs and waves, is not well purified yet due to shaking of *vitakka* and *vicāra*. The Buddha never, therefore, preached that the first absorption is capable of purifying mind although it has faith. Owing to both the occurrence of impurity of mind and shaking of *vitakka*, *vicāra*, the concentration is not apparently developed, as a fish in sticky water, although it has balanced faith and concentration, effort and concentration. The Buddha never, therefore, preached that it is capable of proliferating superior concentration (*ekodibhāva*).

Especially in the second absorption, the faith becomes strong due to lack of disturbances of *vitakka* and *vicāra*. Owing to attaining the help of strong and efficient faith, the concentration also becomes apparent. Therefore, it should be recognized the fact that the Buddha emphasized on significance of presence of faith, which is capable of purifying mind and superior concentration in the continuum of oneself internally, as *sampasādanam cetaso ekodibhāvam* for second absorption only. (*Visuddhi*-1-152)

avitakka avicāra — Owing to capable of ceasing *vitakka vicāra* by abandoning the attachment on those *vitakka* and *vicāra*, this second absorption is capable of purifying the mind. It is capable of purifying the mind due to not only cessation of opacity called hindrances as in the moment of neighbourhood concentration but also cessation of *vitakka* and *vicāra* resulting in development of concentration indeed. In this second absorption, development of concentration does not occurs due to abandoning of hindrances as in the neighbourhood absorption and obvious occurrence of factors of absorption as in the first absorption. Thus this phrase, “***vitakkavicārānaṃ vūpasamā* = due to**

PAGE 464

cessation of *vitakka vicāra*”, was said in order to show obviously the cause of improvement of purified mind and concentration.

Then due to cessation of *vitakka vicāra*, this second absorption lacks those *vitakka, vicāra*. It has neither *vitakka* nor *vicāra* dissimilar to either third and fourth absorption or seeing consciousness (*cakkhu viññāṇa*) which also lack those *dhamma* as a nature. Thus the reason of why *vitakka, vicāra* are absent in the second absorption would be shown but not merely the absence of those *dhamma*, indeed.

However, the words, “*avitakkam avicāram* = lacking in *vitakka*, lacking in *vicāra*”, is able to show merely absence of *vitakka vicāra*. Therefore, after previous words, “*vicārānam vūpasamā* = due to capable of ceasing *vitakka, vicāra*”, had been said, it is suitable to say the later words, “*avitakkam avicāram* = lacking in *vitakka*, lacking in *vicāra*”, continuously. Thus it would be said the later words, “*avitakkam, avicāram*”, in order to show the quality of the second absorption actually. (*Visuddhi*-1-152,153)

samādhijam = due to presence of concentration

It would be preached as “*samādhijam* = due to presence of concentration”, because this second absorption occurs due to presence of both dependence condition (*upanissaya*) of the concentration of first absorption and compatibility (*sahajāta*), reciprocal (*aññamañña*), dependence (*nissaya*) conditions of associating concentration which occurs within one mind moment, together with itself (second absorption). In those two absorptions, the first and second one, the first absorption, indeed, would also be occurred by associating concentration which occurs within one mind moment together with itself (first absorption). However only the concentration of this second absorption is deserving to say “*samādhi* = concentration”. It is because the fact that — *vitakka* and *vicāra* are capable of shaking the mind by initial and sustained application. In the second absorption, however, due to lack of shakeable *vitakka, vicāra* and presence of purifying of mind, the concentration of this absorption is deserving to say as “*samādhi*”. Owing to deserving to say as “*samādhi*”, the Buddha preached the fact that only the second absorption is **caused by concentration** = *samādhijam*. (*Visuddhi*-1-153)

After above explanations had been read the following Pāli Text can be well understood easily.

vitakkavicārānam vūpasamā ajjhataṃ sampasādanam cetaso ekodibhāvam avitakkam avicāram samādhijam pītisukham dutiyam jhānam upasampajja viharati. (M-1-89)

PAGE 465

It would be stayed into the second absorption by fulfilled that absorption, which is capable of purifying the mind and proliferating supreme concentration due to cessation of *vitakka, vicāra*, which is lacking in *vitakka vicāra*, which is caused by the concentration of first absorption (or associating concentration within same mind moment together with itself), which has pleasurable interest called *pīti*, agreeable feeling called *sukha*. (M-1-89)

3.6.C. By the time *vitakka vicāra* would be rejected

yathā ca paṭhamajjhānassa upacārakkhaṇe nīvaraṇāni pahīyanti, na tathā imassa vitakkavicārā. appanākkhaṇeyeva ca panetaṃ vinā tehi uppajjati. tenassa te “pahānaṅga”nti vuccanti. pīti sukham cittekaggatāti imesaṃ pana tiṇṇam uppattivasena tivaṅgasamannāgatatā veditabbā. (*Visuddhi*-1-153)

As those hindrances are rejected at the neighbourhood concentration of first absorption, it is not rejected on *vitakka vicāra* at the neighbourhood concentration of second absorption due to lack of both the nature of impurity and burning of *vitakka vicāra* and the capability of rejecting on those *vitakka* and *vicāra*. Actually by the time the impulsion of full absorption arises, this second absorption occurs without associating *vitakka* and *vicāra*. Those *vitakka* and *vicāra* can, therefore, be designated as rejected factors of that second absorption. Then it should be recognized the fact that by means of obvious occurrence of these three *dhamma*, *pīti*, *sukha*, *cittakaggatā*, the second absorption fulfils three kinds of factors. (*Visuddhi*-1-153)

According to explanation of this commentary it should be recognized on the fact that at those impulsions of neighbourhood absorption, i.e., *parikamma*, *upacāra*, *anuloma*, *gotrabhu*, which are called the apex of neighbourhood concentration and belongs to cognitive process of second absorption, *vitakka* and *vicāra* are still present and associating within those mind moments. It must also be practiced on five kinds of mastery of this second absorption. It must be checked on whether *vitakka vicāra* are rejected or not repeatedly. It must also be much longer in entering into absorption but less in reflecting on factors of absorption at the beginning of attainment of second absorption similarly.

PAGE 466

3.7 *Tatīyajjhānakathā* (Explanations relating with third absorption)

evamadhigate pana tasmimpi vuttanayeneva pañcahākārehi cinṇavasina hutvā pagunadutiyaajjhānato vutthāya “ayam samāpatti āsannavitakkavicārapaccatthikā, ‘yadeva tattha pītigatam cetaso uppilāvitam, etenetaṃ olārikam akkhāyati’ ti vuttāya pītiyā olārikattā aṅgadubbala” ti ca tattha dosam disvā tatīyajjhānam santato manasikarivā dutiyaajjhāne nikantiṃ pariyādāya tatīyādhigamāya yogo kātabbo. (*Visuddhi*-1-153,154)

The *meditator* who had fulfilled those five kinds of mastery, after emerged from the second absorption, must perform concentration of practice of mindfulness of breathing in order to attain the third absorption by means of ...

- (1) reasoning that this second absorption is quite close to the enemy called *vitakka*, *vicāra*,
- (2) searching disadvantages of that absorption, such as it has weak factor of absorption due to occurrence of gross nature of *pīti*, with regarding to the preaching that “In that second absorption such *pīti* is present by means of obvious occurrence of waving. Due to presence of this *pīti*, it would be preached that this second absorption is gross one (*Dī*-1-34),
- (3) taking into heart the fact that the third absorption is subtler than the second one,
- (4) relinquishing the attachment on the second absorption. (*Visuddhi*-1-153,154)

During it is practicing in that way in the insight of *meditator* for such time, *pīti* appears as the appearance of gross nature when factors of absorption are reflected by clear comprehension with mindfulness. Mean while *sukha* and *ekaggatā* appear as the appearance of subtle nature. At that time in the continuum of *meditator* who is practicing by taking into heart the object of that sign of full concentration only in order to reject gross factor of absorption called *pīti* and to attain the third absorption which has two factors of absorption, *sukha*, *ekaggatā*, the mind-door advertence which takes the object of sign of full concentration arises after the flow of life-continuum ceased for that process of impulsions which is deserving to say that “now the third absorption will be occurred”. Then four times of impulsions for the *meditator* with sharp controlling faculties, five times of impulsions for the

meditator with not sharp controlling faculties arise by taking the object of that sign of full concentration. At the end of those impulsions, the fourth one or the fifth one is the impulsion of third absorption of fine material sphere. Those remaining three or four impulsions, except the last one are impulsions of sensuous sphere only as previously mentioned in the first absorption. (*Visuddhi*-1-154)

PAGE 467

3.7.A. The person who attains the third absorption

(*ettāvatā ca panesa*) *pītiyā ca virāgā upekkhako ca viharati sato ca sampajāno, sukhañca kāyena paṭisaṃvedeti, yaṃ taṃ ariyā ācikkhanti upekkhako satimā sukhavihārīti, tatiyaṃ jhānaṃ upasampajja viharatīti.* (*Dī*-1-71; *Abhi*-1-45; *Visuddhi*-1-154)

By practicing in this way this *meditator*, due to disgusting and surpassing to *pīti* and due to capable of ceasing *vitakka* and *vicāra*, stays with regardless to happiness of the third absorption. Both bodily and mentally agreeable feelings are felt by mental aggregates (*nāmakāya*) due to occurrence of fulfilling with both the mindfulness which is capable of remembering and keeping in mind the object of sign of full concentration and clear comprehension which is capable of knowing penetratively the object of sign of full concentration. Owing to cause of such third absorption, the person who attains the third absorption is praised by Noble Ones called the Buddha etc. and he is recognized as the person with strong mindfulness and happiness but neutralizes the happiness of third absorption. By fulfilling third absorption, it would be approached and stayed in that absorption. (*Dī*-1-71; *Abhi*-1-45; *Visuddhi*-1-154)

3.7.B. *upekkhako ca viharati*

In this case with regarding to the word *upekkhā*, it should be accepted the fact that it refers to *tatramajjhhattatā* (equanimity) which is the nature of neglecting the happiness of third absorption and is the nature of occurrence of middle one, resulting in referring to *jhānupekkhā*.

That *jhānupekkhā*,

(1) has the characteristic (*lakhaṇa*) as the nature of equanimity and occurrence of middle one on the happiness of third absorption.

(2) It has the function (*rasa*) of regardless to even supreme happiness of the third absorption. (It means that it had the function of opposing to inclination to supreme happiness of third absorption.)

(3) It is manifested in the insight of *meditator* as the nature of lacking of preparing to feel the bliss of third absorption, which reaches to the apex of all kinds of bliss of absorption.

In other words — It is capable of lacking preparation of associating *dhamma* with itself to feel that supreme bliss of third absorption.

(4) It has the proximate cause (*padatṭhāna*) as disgusting to *pīti*.

Here this is reasonable question that ____

“Isn’t the real meaning of *jhānupekkhā*, *tatramajjhattupekkhā*? Isn’t that *tatramajjhattupekkhā* also present in first and second absorptions? Owing to presence of *tatramajjhattupekkhā* in those absorptions, it should be preached for those absorptions that “*upekkhako ca viharati* = stays with regardless to happiness of the third abs”. Why isn’t preached that *tatramajjhattupekkhā*? This is reasonable question indeed. [This question would be appeared due to presence of *tatramajjhhattatā*

PAGE 468

among 34 mental *dhamma* of the first absorption, 32 mental *dhamma* of the second absorption, which are occurring by taking the object of sign of full concentration respectively. See later section *nāmakammaṭṭhāna*, volume 2.]

Due to presence of unapparent function of that mental concomitant, it should not preached in that way. Due to occurrence of suppressing of *vitakka*, *vicāra*, *pīti*, the function of *tatramajjhataṭṭa* is unapparent in those first and second absorption. In this third absorption, due to lack of suppressing of *vitakka*, *vicāra*, *pīti*, it occurs with an apparent function as the occurrence of upright head. Therefore, the Buddha preached for the third absorption only that “*upekkhako ca viharati* = stays with regardless to happiness of the third absorption”. This is the answer indeed. (*Visuddhi*-1-157; *Mahāṭīkā*-1-187)

3.7.C. *sato ca sampajāno*

The nature of ability to fix on the object of sign of full concentration, the nature of ability to remember and reflect on the object of sign of full concentration is called the mindfulness (*sati*). The nature of clear comprehension to the object of sign of full concentration is called *sampajāna*. It would be preached as the person with mindfulness and clear comprehension by **subjective preaching** methodology (*puggala ditṭhāna naya*).

In those two kinds, the mindfulness —

- (1) has the characteristic of remembering on object of sign of full concentration of mindfulness of breathing
- (2) It has the function (*rasa*) of opposing of forgetting of object of sign of full concentration of mindfulness of breathing.

In other words, it has the function of un-forgetting on object of sign of full concentration of mindfulness of breathing.

- (3) It is manifested in the insight of *meditator* as the nature of protecting from defilements (*kilesā*).

In other words, it can cause protection from defilements.

In other words, it is capable of protecting not to disappear both object of sign of full concentration of mindfulness of breathing and consciousness.

The clear comprehension —

- (1) has the characteristic of thorough understanding without confusion on object of sign of full concentration of mindfulness of breathing.

In other words, it has the characteristic of opposing to confusion.

- (2) It has the function (*rasa*) of opposing of forgetting on object of sign of full concentration of mindfulness of breathing.

In other words, it has the function of un-forgetting on object of sign of full concentration of mindfulness of breathing.

- (3) It is manifested in the insight of *meditator* as the nature of protecting from defilements (*kilesā*).

In other words, it can cause protection from defilements.

In other words, it is capable of protecting not to disappear both object of sign of full concentration of mindfulness of breathing and consciousness.

The clear comprehension —

- (1) has the characteristic of thorough understanding without confusion on object of sign of full concentration of mindfulness of breathing.

In other words, it has the characteristic of opposing to confusion.

(2) It has the function (*rasa*) of swimming to reach other bank (the end of way of practice of mindfulness of breathing).

In other words, it has the function of capable swimming to reach the bank of end of function to which facing up and leading straight forward.

(3) It is manifested in the insight of *meditator* as the nature of scrutinizing on object of sign of full concentration of mindfulness of breathing. (*Visuddhi*-1-157)

Among those absorptions, those mindfulness and clear comprehension is also present in two previous absorptions, the first and second absorption actually. (It means that the mindfulness and the knowledge called *sampajāna* are present in 34 or 32 kinds of mental *dhamma* of the first and second absorption respectively.) It is right. — For a person with loose mindfulness and lacking in clear

PAGE 469

comprehension, even the neighbourhood concentration has not been fulfilled yet indeed. It is no need to say for the full absorption. However, due to occurrence of gross nature of those first and second absorptions (compared with upper absorptions), the situation of mind of those absorptions is easy as a man's walking practice on the ground. Those functions of mindfulness and the clear comprehension are unapparent in the first and second absorptions. Actually due to rejection of factors of absorption and subtle nature of this third absorption, it is essential to the situation of mind which is kept by means of functions of mindfulness and clear comprehension for this third absorption as a man's walking practice on the sharp edge of the sword. The Buddha, therefore preached these two words, *sato sampajāno* (= both fulfilment of mindfulness which is capable of keeping object of sign of full concentration of mindfulness of breathing and wisdom which is capable of penetrative knowing object of sign of full concentration of mindfulness of breathing) in this third absorption only. It can be said further detailed as follows._____

As if a calf is left from mother cow without protecting it, the calf approaches her again, similarly, the satisfaction of this third absorption is left from pleasurable interest (*pīti*). If that kind of satisfaction of third absorption is not well protected by mindfulness and clear comprehension, it re-approaches to the pleasurable interest again resulting in associated with *pīti*. (It means the concentration falls into the second absorption.) The next aspect is that — all beings usually desire strongly on satisfaction. This kind of satisfaction of third absorption is extremely superior one due to lack of any kind of satisfaction of mundane, which is beyond the third absorption. [It refers to the fact that the upper absorptions, such as the fourth absorption, are not associated with agreeable feeling (*sukha*) but feeling of neutrality (*upekkhā*).]

Actually due to presence of efficiency of mindfulness and clear comprehension the *meditator* does not desire to satisfaction of this third absorption but not depending on other reasons. It should be recognized on the fact that the Buddha preached on these two words, *sato sampajāno*, in the third absorption only in order to show clearly this significant meaning. (*Visuddhi*-1-158)

3.7.D. *sukhañca kāyena paṭisamvedeti*

The *meditator* who fulfilled with third absorption, indeed, has no intention of taking into heart (*ābhoga*) that it would be felt the satisfaction of third absorption at the moment it occurs. Although it lacks in that way, such agreeable feeling associating with mental aggregates (*nāmakāya*) are present in that *meditator* who fulfilled with the third absorption. That agreeable feeling would be felt by the *meditator* who fulfilled with third absorption. The

next kind is that — the agreeable feeling which is associating with such mental aggregates of third absorption, is present. Very superior corporealities produced by that agreeable feeling (= by the mind of absorption associating with that agreeable

PAGE 470

feeling), are spreading throughout body of that *meditator* who fulfilled third absorption.

Owing to spreading throughout body with such very superior corporealities produced by mind, the *meditator* who fulfilled third absorption feels bodily agreeable feelings (*kāyika sukha*) which is caused by touching of those spreading corporealities produced by mind although he emerged from third absorption. The Buddha, therefore, preached that “*sukhañca kāyena paṭisamvedeti* = mentally and bodily agreeable feelings called the satisfaction of third absorption are felt by mental aggregates”, in order to elaborate those agreeable feelings which occur in mind called *cetasika sukha* and those occur in body called *kāyika sukha* respectively. (*Visuddhi*-1-158)

3.7.E. *upekkhako satimā sukhavīhārī*

Why do those Noble Ones, such as the Buddha etc., praise the person who had fulfilled with third absorption as a person with regardless to satisfaction of third absorption; who has strong mindfulness; and who stays with full of satisfaction. Due to occurrence of deserving to praise those Noble Ones praise in this way.

The person who has fulfilled with this third absorption is able to neutralize even satisfaction of third absorption which has the most supreme bliss and reaches to the apex of all kinds of agreeable feelings. The attachment which is able to stick on that supreme bliss of third absorption is unable to attract the *meditator*. Then the pleasurable interest (*pīti*) is unable to occur by means of such mode. Due to presence of strong mindfulness on object of sign of full concentration of mindfulness of breathing by means of that mode, it is fulfilled with mindfulness. Besides, mentally agreeable feeling which is favoured by those Noble Ones, the Buddha etc., which is deserving to feel by those Noble Ones only, which is never unpurified one, is felt by mental aggregates. Therefore it is deserving to praise indeed. It should be recognized on the fact that it would be praised as “*upekkhako satimā sukha vīhārī* = a person with regardless to satisfaction of third absorption, who has strong mindfulness and who stays with full of satisfaction” in order to elaborate those noble qualities which are the cause of praise for Noble Ones on the person who fulfilled with third absorption because it is deserving to praise in this way. (*Visuddhi*-1-158,159)

This third absorption has one rejected factor called rejection of pleasurable interest (*pīti*) and has two fulfilled factors called fulfilment of agreeable feeling (*sukha*), one-pointedness (*ekaggatā*). It should be recognized the fact that pleasurable interest would be rejected at the moment of full absorption only, but not during neighbourhood absorption, i.e. impulses of *parikamma*, *upacāra*, *anuloma*, *gottrabhu*, occurs. Therefore it should be recognized that those impulses of neighbourhood absorption are still associating with pleasurable interest. Similarly initial and sustained application (*vitakka*, *vicāra*) are also still associating with those impulses, thus it should be recognized well. (*Visuddhi*-1-159)

According to these explanations, it is essential important instruction in order to know how many

PAGE 471

mind and mental concomitants are associated in each mind moment respectively during the practice of mentality is performed systematically. It must be continued to practise for attainment of five kinds of mastery of third absorption. However some *meditators* who have strong desires on pleasurable interest (*pīti*), usually fall into the second absorption frequently. Therefore it must be fulfilled to attain the third absorption by frequent reasoning on disadvantages of pleasurable interest and abandoning the attachment on it. Then it must be practiced on five kinds of mastery thoroughly.

PAGE 472

3.8 *catutthajjhānakathā* (Explanations relating with the fourth absorption)

evamadhigate pana tasmimpi vuttanayeneva pañcahākārehi cīṇṇavasīnā hutvā paṇṇatatiyajjhānato vuttāya “ayaṃ samāpatti āsannapītipaccatthikā, ‘yadeva tattha sukhāmiti cetaso ābhogo, etenetam oḷārikam akkhāyati’ ti evaṃ vuttassa sukhassa oḷārikattā aṅgadubbala” ti ca tattha dosam disvā catuttham jhānam santato manasikatvā tatiyajjhāne nīkantim pariyādāya cattutthādhigamāya yogo kātabbo. (*Visuddhi*-1-159)

After that third absorption had been fulfilled by means of these cascade of practices successively, five kinds of mastery had also been fulfilled as mentioned above, and then emerged from third absorption and it must be endeavoured in order to attain the fourth absorption by means of reasoning two kinds of disadvantages that

- (1) this third absorption has adjacent enemy called pleasurable interest (*pīti*),
- (2) Due to occurrence of agreeable feeling which has gross nature, the third absorption has weak factor of absorption as preached in *Dī*-1-34, that “In that third absorption, the mode of taking into heart on such factor as agreeable feeling (*sukha*), is present, it can be said that that third absorption is gross because of presence of this agreeable feeling”, and reasoning advantage of fourth absorption that
- (3) it is subtler in the fourth absorption (than third absorption), and then
- (4) by means of abandoning strong desires to the third absorption.

If it is fulfilled with great strenuous effort in that way, in a such time, for the *meditator* who reflects factors of absorption with mindfulness and clear comprehension after emerged from third absorption, the agreeable feeling (*sukha*) called mentally bliss (*cetasika somanassa*), appears as gross nature while both feeling of neutrality (*upekkhā*) and one-pointedness (*cittakaggatā*) appear as subtle nature. At that time, for that *meditator* who takes into heart frequently in order to reject agreeable feeling which has gross nature and to attain subtle neutrality and one-pointedness of mind, the mind-door advertence which is capable of reflecting object of sign of full concentration of mindfulness of breathing arises by taking the object of sign of full concentration of mindfulness of breathing after the flow of life-continuum is ceased in proper time. Just after that mind moment, four times of impulses for the person with sharp controlling faculties, or five times of impulses for the person with not sharp controlling faculties, arise successively in him. At the end of those impulses, the fourth one for the person with sharp controlling faculties, or the fifth one for the person with not sharp controlling faculties, is the impulse of fine material sphere (*rūpāvacara javana*). Those remaining impulses of three or four times except the last one, are impulses of sensuous sphere as mentioned above. (*Visuddhi*-1-159,160)

PAGE 473

The followings are significant facts indeed —

The agreeable feeling (*sukha vedanā*) never benefit neutrality feeling (*upekkhā vedanā*) which is neither disagreeable nor agreeable feeling called *adukkhamasukha vedanā*, by means of repeated condition (*āsevana*). It must be occurred neutrality (*upekkhā*) called *adukkhamasukha* in the fourth absorption. Due to this reason, those four times of impulsions within that cognitive process of full concentration are impulsions which are associating with neutrality. Owing to both the occurrence of associating with neutrality and the occurrence of rejecting to pleasurable interest (*pīti*) previously, the pleasurable interest is wanting in the fourth absorption. This is significant notes indeed. (*Visuddhi*-1-160)

During wholesome *dhamma* benefits for wholesome *dhamma* by means of repeated condition (*āsevana*), it can perform in the process of same feeling (*vedanā*). If the preceding impulsion is neutrality, the succeeding one must also be neutrality. If the preceding impulsion is agreeable feeling (*somanassa vedanā*), the succeeding one must be agreeable feeling only. If the preceding impulsion is agreeable feeling and the succeeding one is neutrality, the preceding one is unable to benefit the succeeding one by repeated condition. Thus it is unnecessary to occur agreeable feeling of preceding impulsions due to lack of efficiency to benefit by means of repeated condition on succeeding ones. Therefore it means the fact that the neutrality feeling is associating with not only impulsion of full absorption but also impulsions of neighbourhood concentration, adjacent to that impulsion of full absorption within same cognitive process, which are called *parikamma*, *upacāra*, *anuloma*, *gottrabhu*. (*Mahāṭīkā*-1-189)

3.8.A. The fourth absorption (*catuttha jhāna samāpatti*)

(*ettāvatā cesa*) *sukhassa ca pahānā dukkhassa ca pahānā pubbeva somanassadomanassānam atthaṅgamā adukkhamasukham upekkhā satipārisuddhim catuttham jhānam upasampajja viharatīti*. (*Dī*-1-71; *Abhi*-1-45; *Visuddhi*-1-160)

By means of this way of practice, this *meditator*, due to rejection of both controlling faculty of bodily agreeable feeling (*sukhindare*) and that of bodily disagreeable feeling (*dukkhindare*) and due to cessation of both controlling faculty of mentally agreeable feeling (*somanassindare*), and that of mentally disagreeable feeling (*domanassindare*), reaches into the fourth absorption which is associated with neutrality called *adukkhamasukha* and thoroughly purified mindfulness by fulfilling it successively. Thus this *meditator* had well attained the fourth absorption which has object of sign of full concentration of mindfulness of breathing, which has one rejected factor of absorption so-called *sukha*, which has fulfilled two factors of absorption so-called *upekkhā*, *ekaggatā*, which has three kinds of good qualities and ten characteristics, indeed. (*Visuddhi*-1-160)

It would be ceased

1. ***dukkhindare*** (bodily disagreeable feeling) at the moment of neighbourhood concentration of the first absorption,
2. ***domanassindare*** (mentally disagreeable feeling) at the moment of neighbourhood concentration of the second absorption,
3. ***sukhindare*** (bodily agreeable feeling) at the moment of neighbourhood concentration of the third absorption,

PAGE 474

4. ***somanassindare*** (mentally agreeable feeling) at the moment of neighbourhood concentration of the fourth absorption, respectively. (*Visuddhi*-1-160)

The reason why those cascade of cessation of four kinds of feelings among four absorptions are preached in *Uppaṭipāṭika sutta*. (*Sam*-3-188-190) is as follows. —

atisayanirodhattā. atisayanirodho hi nesam paṭhamajjhānādīsu, na nirodhoyeva. nirodhoyeva pana upacārakkhaṇe, nātisayanirodho. (Visuddhi-1-160)

The Buddha preached on cascades of cessation of four kinds of feelings among four absorptions only due to occurrence of totally cessation. Those bodily disagreeable feeling, mentally disagreeable feeling, bodily agreeable feeling and mentally agreeable feeling called *dukkha*, *domanassa*, *sukha*, *somanassa* respectively, are ceasing extremely and obviously in the first, second, third and fourth absorption successively but not merely partial cessation. However at the moment of neighbourhood concentration of those various absorptions it is partial cessation only but not totally indeed.

1. It is right. — During the neighbourhood concentration of first absorption is occurring, although bodily disagreeable feeling called *dukkhindare* is ceased temporarily, that kind of suffering can be reappeared again due to any of insect bite or unfavourable dwelling place or unfavourable deportment which can cause very hot. However during impulsions of full absorption are occurring continuously, bodily disagreeable feeling never appear in him. Although bodily disagreeable feeling ceases at the moment of neighbourhood concentration, that kind of *dukkhindare* has not ceased totally yet due to lack of rejecting by opposite *dhamma* called agreeable feeling (*sukha vedanā*).

During impulsions of full absorption arise continuously, the whole body falls into very big pit called bliss due to spreading throughout body with superior corporealities produced by mind associated with pleasurable interest (*pīti*). For the person with the whole body which is falling into the big pit of bliss, *dukkhindare* called bodily disagreeable feeling is ceased totally due to presence of rejecting by opposite *dhamma* called agreeable feeling (*sukha vedanā*).

2. Then although *domanassindare* called mentally disagreeable feeling (*domanassa vedanā*) is rejected during impulsions of neighbourhood concentration of second absorption are occurring by taking the object of sign of full concentration of mindfulness of breathing, that mentally disagreeable feeling can be reappeared again, if bodily suffering which is supported by *vitakka*, *vicāra* or

PAGE 475

mentally suffering is present in him. Unless *vitakka*, *vicāra* are wanting, it can not be occurred.

In such consciousness, mentally disagreeable feeling (*domanassindare*) associates with it. In that consciousness, initial application (*vitakka*) and sustained application (*vicāra*) also associates with it certainly. Due to presence of those initial and sustained application, mentally disagreeable feeling would be occurred. In the field of neighbourhood concentration of second absorption, initial and sustained application are not rejected yet. Therefore it is possible to occur that mentally disagreeable feeling in the field of neighbourhood concentration of that second absorption. At the moment of second absorption, it is impossible to occur mentally disagreeable feeling due to finishing of rejection of those initial and sustained application which are supporting cause of mentally disagreeable feeling (*domanassindare*).

3. Then although *sukhindare* called bodily agreeable feeling is rejected during impulsions of neighbourhood concentration of third absorption are occurring, that bodily agreeable feeling can be reappeared again for a person with superior corporealities produced by consciousness of neighbourhood concentration, which is associating with pleasurable interest. It is impossible to reappear that bodily agreeable feeling (*sukhindare*) at the moment of third absorption indeed. It is right. — In the third absorption, the pleasurable interest (*pīti*) which is the supporting cause of bodily agreeable feeling (*sukha*), cease totally. Therefore,

reappearance of *sukkhindare* can never be occurred indeed. [*sukkhindare* means bodily agreeable feeling which occurs associating with touching-consciousness (*kāya viññāṇa*) which is rootless wholesome result with joyful (*ahetuka kusala vipāka sukha sahagata kāyaviññāṇa*). It is also known as *kāyika sukha*.]

4. Then although mentally agreeable feeling (*somanassa vedanā*) called *somanassindare* is rejected during impulsions of neighbourhood concentration of fourth absorption are occurring, that mentally agreeable feeling can be reappeared again due to both occurrence of adjacent to that feeling and lack of efficiency to overcome totally on mentally agreeable feeling in that field of neighbourhood concentration. However, at the moment of the fourth absorption it is impossible to occur mentally agreeable feeling (*cetasika sukha* or *somanassindare*) actually.

With regarding to those reasons mentioned above, when each process of cessation, viz, cessation of *dukkhindare* in the first absorption, cessation of *domanassindare* in the second absorption, cessation of *sukkhindare* (*kāyika sukha*) in the third absorption and cessation of *somanassindare* in the fourth absorption, the Buddha preached as “*aparisesam nirujjhati*” by using the term “*aparisesa*” which shows “totally cessation”. This is the answer indeed. (*Visuddhi*-1-161)

3.8.B. Reasonable question

In this case, it is a reasonable question that — “Why did the Buddha preach commonly on those rejected feelings of various fields of neighbourhood concentration of respective absorptions in this fourth absorption only?” It can be answered that it was preached in that way in order to be easily distinguished.

PAGE 476

The feeling of neutrality (*upekkhā vedanā*) called *adukkhamasukha* (= neither disagreeable nor agreeable feeling) which is preached in the Pāli Text, is very subtle and very difficult to be understood. It is incapable of catching easily by knowledge. For this reason, it is a worldling simile that — the cowherd gathers all bulls and cows inside the farm in order to catch easily a bull that is not easy to be approached and tamed. Then after each bull is brought one by one, and when that untameable bull arrives at the entrance of farm, it can order that “this bull is untameable one that is desired to be catch, please catch it” etc. Similarly, the Buddha preached all kinds of feelings commonly in this fourth absorption in order to be distinguished easily and kept in mind by knowledge.

This is the advantage of this kind of preaching methodology. — After those kinds of feelings are obviously shown as a common, such nature (= feeling) is neither bodily agreeable nor bodily disagreeable, it is neither mentally agreeable nor mentally disagreeable but the feeling of neutrality (*upekkhā vedanā*) called *adukkhamasukha*, indeed, with the result that it is possible to be distinguished it easily.

On other aspect, it should be recognized on the fact that the Buddha preached those feelings commonly in this fourth absorption in order to show indirect cause of attainment of fourth absorption which is the cause of freedom of opposite nature of mind called *a-dukkha-ma-sukha cetovimutti*. Those factors, the first absorption which is capable of rejecting *dukkhindare* etc., are causes of that *a-dukkha-ma-sukha cetovimutti*.

“*Āvuso ... Koṭṭhika ...* those factors of absorption of neutrality which is deliverance of the mind (*a-dukkha-ma-sukha cetovimutti samāpatti*), are of four kinds indeed. *Āvuso Koṭṭhika ...* in this Buddha’s admonishment, due to rejection of *sukkhindare*, due to rejection of *dukkhindare*, due to cessation of *somanassindare*, *domanassindare* at the moment of

neighbourhood absorption, the *meditator* approaches and stays into the fourth absorption by fulfilling with fourth absorption with well purified mindfulness which is caused by neutrality called *a-dukkha-ma-sukha*. *Āvuso ... Kotṭhika* those factors of absorption of neutrality which is deliverance of the mind are of these four kinds indeed. (*M-1-370-Mahāvedalla sutta*)

According to this preaching, the neighbourhood absorptions of those first, second, third and fourth absorptions which are capable of rejecting *dukkhindare*, *domanassindare*, *sukhindare*, *somanassindare*, respectively are significant factors of attainment of *a-dukkha-ma-sukha cetovimutti samāpatti*. It should be recognized on the fact that those four kinds of feelings are preached commonly in the fourth absorption in order to show those factors accordingly. (*Visuddhi-1-161,162*)

In other aspect — although those *dhamma*, such as wrong view on personality (*sakkāya diṭṭhi*) etc. which had been eradicated by lower noble Path-Knowledges, the First-Path-Knowledge (*sotāpatti magga*) etc., in order to praise the nobility of the Third-Path-Knowledge (*anāgāmi magga*), as it would be preached in the Third Path-Knowledge that *pañcannam orambhāgiyānam samyojanānam*

PAGE 477

parikkhayā = due to eradication of the five lower fetters (*samyojana*), similarly, it should be recognized that those feelings are preached commonly in this fourth absorption. (*Visuddhi-1-162*)

In other aspect — it should be recognized on the fact that those feelings, *sukha* etc. were preached in order to show the occurrence of exceedingly distance from lust (*rāga*), anger (*dosa*), delusion (*moha*) in this fourth absorption by eradicating causative *dhamma*. It is right. — Among those feelings, bodily agreeable feeling is the cause of mentally agreeable feeling and then the later is a cause of lust (*rāga*).

Bodily disagreeable feeling is the cause of mentally disagreeable feeling and then the latter is a cause of anger (*dosa*). The fourth absorption, by means of rejecting those feelings, *sukha* etc., rejects lust and anger associating with their caused. The fourth absorption, therefore, is very far from lust and anger. This is the answer.

Sukhāya kho āvuso visākhā vedanāya rāgānusayo anuseti, dukkhāya kho āvuso visākhā vedanāya paṭighānusayo anuseti. (*M-1-377-Cūḷavedalla sutta*)
= “Devotee *Visākhā* ... the underlying tendency of lust (*rāgānusaya*) always follows agreeable feeling. Devotee *Visākhā* ... the underlying tendency of anger (*paṭighānusaya*) always follows disagreeable feeling.

Due to this reason, mentally agreeable feeling occurs as supporting factor of lust while mentally disagreeable feeling, as that of anger. (*Mahāṭīkā-1-191*)

3.8.C. *a-dukkha-ma-sukham* (neither-disagreeable-nor-agreeable feeling)

a-dukkha-ma-sukha means that due to lack of occurrence of disagreeable feeling, it is called *a-dukkha* while due to lack of occurrence of agreeable feeling, it is called *a-sukha*. With regarding to this word, rejecting those occurrences of disagreeable and agreeable ones, the third kind of feeling which is opposite of disagreeable and agreeable ones, would be shown but not merely on lack of occurrence of disagreeable and agreeable ones. The third feeling means neither disagreeable nor agreeable feeling (*a-dukkha-ma-sukha vedanā*), indeed. It is also known as neutrality feeling (*upekkhā vedanā*).

sāiṭṭhānīṭṭhaviparītānubhavanulakkhaṇā, majjhattarasā, avibhūtapaccupaṭṭhānā, sukhadukkhanīrodhapadaṭṭhānā. (Visuddhi-1-162)

1. That neutrality feeling has the characteristic of the nature of feeling the object of middle one (*majjhata ārammaṇa*) which is opposite of those objects either desirable (*iṭṭhārammaṇa*) and non-desirable ones (*anīṭṭhārammaṇa*), or strongly desirable (*ati iṭṭhārammaṇa*) and strongly non-desirable ones (*ati anīṭṭhārammaṇa*).

In other way — it has the characteristic of nature of feeling (on the object of sign of full concentration of mindfulness of breathing) by means of middle way which is opposite of objects of desirable and non-desirable ones.

PAGE 478

2. It has the function (*rasa*) of neutralizing on object. In other words, it has the quality of middle way.

3. It is manifested in the insight of *meditator* as unapparent mode. [Agreeable and disagreeable feelings are apparent ones while this neutrality has unapparent feeling. As it can be reasoned that the prey climbed on the slab here and went down here after footprints were seen on both sides out of the slab, although it is invisible on the slab, this feeling of neutrality has the manifestation of unapparent one (*Mahāṭīkā*-1-191,192).

It is the middle kind of feeling which is associating with the consciousness when agreeable and disagreeable feelings ceased. It means that if it is discerned by paralleling with apparent agreeable and disagreeable feelings, the feeling of neutrality will be apparent.]

4. It should be recognized on the fact that it has the proximate cause (*padaṭṭhāna*) as the field of neighbourhood concentration of the fourth absorption in which agreeable feeling ceases. [Although it is mentioned as *sukha dukkha nirodha padaṭṭhānā* in *Visuddhi Magga*, it is mentioned as *sukha padaṭṭhānā* in *Mahāṭīkā* (1-192).]

3.8.E. *upekkhā sati pārisuddhiṃ*

The meaning of *upekkhā sati pārisuddhiṃ* is the nature of circumstantial purification of mindfulness which is caused by neutrality, [in this case, it is caused by equanimity (*tatramajjhataṭṭā*) which is capable of situating on neutrality of object of sign of full concentration of mindfulness of breathing without reaching two extremities, retardation and enhancing of mind]. In this fourth absorption the mindfulness is circumstantially purified. That circumstantial purification of mindfulness is achieved by that equanimity called *tatramajjhataṭṭā* but not by other *dhamma* indeed. Therefore the fourth absorption is designated as *upekkhā sati pārisuddhi* by commentator. In the *Vibhaṅga* Pāḷi Text (*Abhi*-2-272), it is explained that —

ayaṃ sati imāya upekkhāya visadā hoti parisuddhā pariyodātā. tena vuccati upekkhāsati pārisuddhi. (Abhi-2-272)

= this mindfulness is clear, circumstantially purified and circumstantially brilliant by this equanimity. It can, therefore, be said that “circumstantial purification of mindfulness caused by equanimity”, preached by the Buddha.

Due to the presence of that equanimity, the circumstantial purification of mindfulness occurs in this fourth absorption. It should be known on that kind of *upekkhā* as the mental concomitant called *tatramajjhataṭṭā* (equanimity) in the aspect of the ultimate sense.

In this fourth absorption it is purified not only the mindfulness but also mind and all mental concomitants associating with the fourth absorption by that equanimity (*tatramajjhataṭṭā*). Thus it is

PAGE 479

preached **significantly on mindfulness** (*sati sīsa*). (*Visuddhi*-1-162)

When *pārisuddhi upekkhā* (= the mental concomitant called *tatramajjhhattatā*), which is thoroughly purified from all kinds of opposite *dhamma*, which lacks any kind of preparation to cease opposite *dhamma*, would be occurred, the mindfulness become both thoroughly purified and sharp as the knowledge in fourth absorption. Therefore, the commentator explained that “the circumstantial purification of that mindfulness is achieved by that *upekkhā* but not by other *dhamma*”. (*Mahāṭīkā*-1-192)

3.8.E. The reason why it would be praised

Among those four kinds of absorptions, this kind of *upekkhā* (= *tatramajjhhattatā*) is present in lower three absorptions. Although it is present in those absorptions, as the moonlight is not purified and not brilliant in daytime due to

(1) presence of suppression of sunshine in day-time and

(2) lack of help of darkness of night which is capable of benefiting the moon by means of occurrence of tranquillity, similarly, the moon called this *tatramajjhattupekkhā* is not purified and not brilliant in three lower absorptions due to presence of suppression of sunshine called opposite *dhamma*, such as *vitakka* etc. and lack of help of darkness of night called the feeling of neutrality (*upekkhā vedanā*). As the moonlight is unpurified in daytime, those *dhamma*, such as mindfulness etc., which are associating with that *tatramajjhattupekkhā* in one mind moment, are unpurified. Therefore any kind of absorption among those lower three ones, the first absorption etc., **would never be preached** as “*upekkhā sati pārisuddhim*” = the *dhamma* with nature of circumstantial purification of mindfulness which is caused by neutrality”.

Actually, due to both absence of suppression of opposite *dhamma*, i.e., *vitakka* etc., and presence of help of darkness of night called neutrality feeling (*upekkhā vedanā*), in this fourth absorption, the moonlight called this *tatramajjhattupekkhā* is very purified with circumstances thoroughly. Due to presence of purification of that *tatramajjhattupekkhā*, those associating *dhamma*, i.e., mindfulness etc., of it are also very purified circumstantially. Therefore, it should be recognized on the fact that it **would be preached** on the fourth absorption only as “*upekkhā sati parisuddhim*” = the *dhamma* with nature of circumstantial purification of mindfulness which is caused by neutrality”. (*Visuddhi*-1-162,163)

PAGE 480

tañca pana somanassam ekavīthiyam purimajavanesuyeva pahīyati. (*Visuddhi*-1-163)

“*ekavīthiya*”nti idam tattha somanassassa ekamṣena abhāvato vuttam, na tato purimataresu ekamṣena bhāvato. (*Mahāṭīkā*-1-192)

According to above explanations found in commentary and sub-commentary, it should be recognized the fact that in the field of neighbourhood concentration of fourth absorption, especially, during impulses of cognitive processes of neighbourhood absorption of fourth absorption are occurring, the feeling of neutrality only associates with it but not agreeable feeling. Therefore it should be recognized that the pleasurable interest (*pīti*) never associate with the consciousness of that field of neighbourhood concentration of fourth absorption.

3.8.F. Pentad method (*pañcaka naya*)

Above mentioned method is tetrad method (*catukka naya*) in which two factors of absorption, *vitakka*, *vicāra*, are rejected simultaneously. The Buddha preached this method for the *meditator* with sharp wisdom (*tikkha paññavā*). In pentad method, instead of four absorptions, it would be grouped into five absorptions in which *vitakka* and *vicāra* would be rejected one after another but not simultaneously. This way practice is applied for the *meditator* with little wise (*manda paññavā*).

1. ***puggalajjhāsaya*** = Depending on inner desires of various disciples, it would be preached by two methods, *catukka* (tetrad) and *pañcaka* (pentad).
2. ***desanāvilāsa*** = With intention to adorn preaching methodology, it would also be preached by two methods, *catukka* (tetrad) and *pañcaka* (pentad) methods. (*Mahāṭīkā*-1-193,194)

In tetrad method (*catukka naya*), there are four kinds of absorptions: —

1. the first absorption with five factors of absorption, *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*,
2. the second absorption with three factors of absorption, *pīti*, *sukha*, *ekaggatā*,
3. the third absorption with two factors of absorption, *sukha*, *ekaggata*,
4. the fourth absorption with two factors of absorption, *upekkhā*, *ekaggatā*.

In pentad method (*pañcaka naya*), there are five kinds of absorptions: —

1. the first absorption with five factors of absorption, *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*,
2. the second absorption with three factors of absorption, *vicāra*, *pīti*, *sukha*, *ekaggatā*,
3. the third absorption with two factors of absorption, *pīti*, *sukha*, *ekaggata*,
4. the fourth absorption with two factors of absorption, *sukha*, *ekaggatā*,
5. the fifth absorption with two factors of absorption, *upekkhā*, *ekaggatā*, respectively.

PAGE 481

3.9. Summary of progress to *vipassanā*

evam nibbattacatukkapañcakajjhāno panettha bhikkhu sallakkhaṇāvivattaṇāvasena kammaṭṭhānaṃ vaddhetvā pārisuddhiṃ pattukāmo tadeva jhānaṃ pañcahākārehi vasippattam pagunaṃ katvā nāmarūpaṃ vavatthapetvā vipassanaṃ paṭṭhabeti. katham? so hi samāpattito vutthāya assāsapassāsānaṃ samudaya karajakāyo ca cittañcāti passati. Yathāhi kammāragaggariyā dhamamānāya bhastañca purisassa ca tajjaṃ vāyāmaṃ paṭicca vāto sañcarati, evameva kāyañca cittañca paṭicca assāsapassāsāti. tato assāsapassāse ca kāyañca rūpanti cittañca taṃsampayuttadhamme ca arūpanti vavatthapehi. ayamettha sañkhepo. vitthārato pana nāmarūpavavatthānaṃ parato āvibhavissati.

evam nāmarūpaṃ vavatthapetvā tassa paccayaṃ pariyesati. pariyesanto ca naṃ disvā tīsupi addhāsu nāmarūpassa pavattiṃ ārabha kañkham vitarati, vitinṇakañkho kalāpasammasanavasena tilakkhaṇaṃ āropetvā udayabbayānupassanāya pubbabhāge uppanne obhāsādayo dasa vipassanukilese (Visuddhi-1-278,279)

Thus if the meditating *bhikkhu* with tetrad absorptions (*catukka jhāna*), pentad absorptions (*pañcaka jhāna*), who had achieved into this *kāyānupassanā satipaṭṭhāna*, desires to attain the noble Fruit-Knowledge called *pārisuddhi* (circumstantial purification) by means of *vipassanā* knowledge called *sallakkhaṇā* and noble Path-Knowledge called *vivattaṇā*, it must be fulfilled to attain five kinds of mastery of that absorption and then *vipassanā* knowledge must be occurred by distinguishing and keeping mind mentality and corporeality.

How it would be occurred is that — the *bhikkhu* who had attained that absorption enters into that absorption first and emerges from it and then he discerns the cause of arising (*samudaya*) of both all kinds of corporealities i.e., four great elements and 24 derived corporealities, which are produced by four causes, i.e. *kamma*, mind, temperature, nutriment, which are called *karajakāya*; mind (= consciousness and mental concomitants); and those corporeal *dhamma* called in-breath and out-breath (*assāsa passāsa*).

[kiñcāpi assāsapassāsa cittasamuṭṭhānā, karajakāyaṃ pana vinā tesam appavattanato “kāyañca cittañca paṭicca assāsapassāsā”ti vuttam. (Mahāṭīkā-1-337)

= The in-breath and out-breath are a group of corporeal units produced by mind in which the sound as ninth factor, called *cittaja navaka kalāpa*. Those corporeal *dhamma* consisting in the in-breath and out-breath are corporealities produced by mind (*citta samuṭṭhāna rūpa*) actually. However, due to inability to occur those corporeal *dhamma* of in-breath and out-breath in the absence of underived and derived corporealities called *karajakāya*, the commentator explained that “*kāyañca cittañca*

PAGE 482

paṭicca assāsa passāsa” = “corporeal *dhamma* of in-breath and out-breath occur depending upon both *karajakāya* and mind”. (*Mahāṭīkā-1-337*)

It would be illustrated that — as if the blower is applied to move upward and downward, the air is pumped out depending upon both the blower and appropriate effort of the man which is suitable to occur that air, similarly, it should be recognized on the fact that those in-breath and out-breath occur depending upon both *karajakāya* and mind. After that it would be distinguished as

1. the corporeality on both

(a) all corporeal *dhamma* consisting in in-breath and out-breath and

- (b) un-derived and derived corporealities called *karajakāya*,
- 2. the mentality on both
 - (a) the consciousness (*citta*) and
 - (b) mental concomitants which are associating *dhmma* of that consciousness.

This is summary of this explanation relating with in-breath and out-breath (*ānāpānassati kathā*). Detailed account on distinguishing of mentality and corporeality would be presented later.

After mentality and corporeality are distinguished and kept in mind in this way, those causal *dhmma*, such as ignorance (*avijjā*), craving (*tahṇā*), *kamma* etc., of those mentality and corporeality, must be scrutinized. If the *meditator* who scrutinizes causal *dhmma*, ignorance etc., knows and sees those causal *dhmma* penetratively, he is able to overcome 16 kinds of skeptical doubts, such as ..., “Did I occur in previous life?” etc., which occurs depending upon occurrence of mentality and corporeality for three periods, past, future and present lives.

The *meditator* who had well overcome those skeptical doubts, then, discerned on five aggregates, i.e., corporeality, feeling, perception, *kamma*-formation, consciousness, which are occurring in 11 modes, past, future, present, internal, external, etc., by means of *kalāpa sammāsana naya* through which those *dhmma* were generalized as impermanence (*anicca*) etc. commonly; then he had rejected ten kinds of impurities of *vipassanā* knowledge (*dasa upakkilesa*), light (*obhāsa*) etc., which usually occur before *udayabbayānupassanāñāṇa*, which belongs to the stage of purification of way of practice leading to the Path-Knowledge (*patipadāñāṇadassana visuddhi*); then he reached to knowledge of dissolution (*bhaṅgānupassanāñāṇa*) which is capable of discerning on perishing stage of *saṅkhāra dhmma*, after arising of *saṅkhāra dhmma* which were kept in mind by *udayabbaya ñāṇa*, had been given up; he disgusted and freed from attachment of all kinds of *saṅkhāra dhmma* by means of *bhaṅgānupassanāñāṇa*; then it would be reached to four Noble Path-Knowledges successively and it would be situated into the fourth-Fruit-Knowledge resulting in reaching to the end of 19 kinds of reflecting knowledge (*paccavekkhaṇa ñāṇa*); the arahant who is the most supreme one deserving to accept offerings of all beings including heavenly beings, occurred successively indeed.

By following the way of practice mentioned in this way, the way of practice of mindfulness of breathing of that *bhikkhu* who practiced the mindfulness of breathing from the beginning of counting method called *gaṇanā naya* to the end of *vipassanā* practice had been put through thoroughly.

PAGE 483

These words mentioned above are related to explanation of the first tetrad instructions (*pathama catukka*) (among four tetrads instructions) of mindfulness of breathing by means of all cascade of modes, indeed. (*Visuddhi*-1-278,279)

3.9.A. Special notes

With regarding to these explanations found in above commentary, it will be continued to present,

- (1) how to distinguish and keep in mind corporeal *dhmma* which are called the body of in-breath and out-breath (*assāsa passāsa kāya*) and all kinds of corporealities occurring throughout body (*karajakāya*), in the section of *rūpa kammaṭṭhāna* (= practice on the corporeality),

- (2) how to distinguish and keep in mind mental *dhamma* (= consciousness and mental concomitants), in the section of *nāma kammaṭṭhāna* (= practice on the mentality),
- (3) how to distinguish and keep in mind the mode of occurrence or resultant five aggregates depending upon obvious occurrence of causal *dhamma*, ignorance, craving, clinging, *kamma*-formation, *kamma* etc., within three periods, past, future and present, in the section of *paṭiccasamuppāda* (Dependence-Origination),
- (4) how to distinguish and keep in mind the nature of those *saṅkhāra dhamma* called corporeality, mentality, causes, results, by means of characteristics (*lakkhaṇa*), function (*rasa*), manifestation (*paccupaṭṭhāna*) and proximate cause (*padaṭṭhāna*), in the section of *lakkhaṇādicatukka* (= tetrad modes, characteristics; etc.),
- (5) how to develop *vipassanā* practice on those *saṅkhāra dhamma*, in the section of *vipassanā*, respectively.

Now, it would be continued to present remaining three kinds of tetrad instructions (*catukka*). There is no specific way of practice among those three tetrad instructions. It is because the fact that it would be preached for the *meditator* who had attained absorptions by means of practice of the first tetrad instructions called *kāyānupassanā*, on

1. the second tetrad instructions by means of *vedanānupassanā* (repeated discerning on feeling),
2. the third tetrad instructions by means of *cittānupassanā* (repeated discerning on consciousness),
3. the fourth instructions by means of *dhammānupassanā* (repeated discerning on *dhamma*), respectively.

3.9.B. Second tetrad instructions (*dutiya catukka*)

1. *pītipaṭisaṃvedī assasissāmīti sikkhati, pītipaṭisaṃvedī passasissāmīti sikkhati.*
2. *sukhapāṭisaṃvedī. pa.*
3. *cittasaṅkhārapāṭisaṃvedī. pa.*
4. *passambhayaṃ cittasaṅkhāraṃ. pa.* (page-483, Volume I)

1. *pīti paṭisaṃvedī*

1. It should be practiced by knowing the pleasurable interest (*pīti*) apparently in order to fulfil the occurrence of in-breath.

It should be practiced by knowing the pleasurable interest (*pīti*) apparently in order to fulfil the occurrence of out-breath.

PAGE 484

pītipaṭisaṃvedīti pītim paṭisaṃviditaṃ karonto pākaṭaṃ karonto assasissāmi passasissāmīti sikkhati. tattha dvīhākārehi pītipaṭisaṃviditā hoti ārammaṇato ca asammohato ca.

kathaṃ ārammaṇato pīti paṭisaṃviditā hoti? sappīlike dve jhāne samāpajjati. tassa samāpattikkhaṇe jhānapaṭilābhena ārammaṇato pīti paṭisaṃviditā hoti, ārammaṇassa paṭisaṃviditattā. kathaṃ asammohato? sappīlike jhāne samāpajjitvā vutṭhāya jhānasampayuttaṃ pītim khayato vayato sammasati. tassa vipassanākkhaṇe lakkhaṇapaṭivedhena asammohato pīti paṭisaṃviditā hoti. (Visuddhi-1-279)

The meaning of *pīti paṭisaṃvedī* is that — it would be practiced by knowing the pleasurable interest (*pīti*) thoroughly as a ruby in the hand, in order to fulfil the occurrence of in-breath and out-breath. In that word, *pīti paṭisaṃvedī*, the pleasurable interest would be known thoroughly by means of both

- (1) the nature of object (*ārammaṇa*) and
- (2) the nature of non-delusion (*asammoha*).

(1) How the pleasurable interest would be known by means of the **nature of object**?

As shown in tetrad method of absorptions, two kinds of absorptions, the first absorption and the second absorption, which are associating with pleasurable interest (*pīti*), would be entered one by one. By the time the absorption to be entering, that *meditator* is deserving to know factor of absorption called pleasurable interest which belongs to the first or second absorption which has object of sign of full concentration of mindfulness of breathing due to presence of attainment of absorption and due to taking object of sign of full concentration of mindfulness of breathing. This is because the fact that object of sign of full concentration of mindfulness of breathing is deserving to be known thoroughly indeed. (*Visuddhi*-1-279)

The meaning is as follows: — For instance, if the man who searches the snake knows apparently dwelling site of that snake, it is deserving to know apparently on that snake with the result that it had been trapped. It is because the fact that catching of that snake can be achieved easily by means of reciting *mantra*. Similarly, if object of sign of full concentration of mindfulness of breathing which is dependence of pleasurable interest, is known apparently, it is deserving to know apparently on that pleasurable interest. It is because the fact that it is very easy to distinguish both the specific character object of sign of full concentration of mindfulness of breathing of pleasurable interest, (i.e. the characteristic of nature of satisfying to see object of sign of full concentration of mindfulness of breathing) and the general character (*sāmañña lakkhaṇā*) of pleasurable interest i.e. mode of nature of impermanence, suffering and non-self. (*Mahāṭṭkā*-1-338)

In this case due to the nature of satisfying and pleasing on object of sign of full concentration of mindfulness of breathing is pleasurable interest, if object of sign of full concentration of mindfulness

PAGE 485

of breathing is known apparently, the pleasurable interest will be appeared apparently depending upon the life continuum which occurs depending upon the physical base of mind (*hadaya vatthu*). In the Pāli Text, commentary and sub-commentary of *Anupada sutta*, it is explained that if discerning on both base and object is put through simultaneously, the mental *dhamma* will be appeared clearly in the insight of *meditator*. (Detailed explanation can be seen in section V, Volume II, *Nāma kammaṭṭhāna*.)

(2) How the pleasurable interest would be known apparently by means of the **nature of non-delusion**?

As shown in tetrad method of absorptions, two kinds of absorptions, the first absorption and the second absorption, which are associating with pleasurable interest (*pīti*), would be entered one by one and it would be emerged from it and then that pleasurable interest which is yoking with absorption would be discerned as the nature of dissolution and perishing away. By the time the pleasurable interest is discerned by and seen by *vipassanā* knowledge, the *meditator* penetratively know and see both specific character and general character of pleasurable interest (= associating mental *dhamma* including *pīti* as significant object). That penetrative knowing and seeing on specific and general characters of pleasurable interest is called “it would be known by means of the nature of non-delusion (*asammoha*). Thus the pleasurable interest would be known apparently by means of the nature of non-delusion. (*Visuddhi*-1-279)

yatheva hi ārammaṇamukkhena pīti paṭisaṃviditā hoti, evaṃ taṃsāmpayuttadhammāpi ārammaṇamukkhena paṭisaṃviditā eva hontīti. (*Mahāṭṭkā*-1-339)

As the pleasurable interest would be known apparently by leading to face with object of sign of full concentration of mindfulness of breathing, similarly, it should be recognized the fact that mind and mental concomitants which are associating *dharmā* with pleasurable interest in the same mind moment, would be known apparently by leading to face with object of sign of full concentration of mindfulness of breathing. (*Mahāṭīkā*-1-339)

2. *sukha paṭisamvedī*

3. *citta saṅkhāra paṭisamvedī*

It should be recognized on the meaning of remaining words, *sukha paṭisamvedī*, *citta saṅkhāra paṭisamvedī*, as shown in this way. (It refers to two kinds of knowing by means of both the **nature of object and non-delusion**.) Significant notes are as follows: —

It should be recognized on the fact that agreeable feeling (*sukha*) would be known apparently by means of the first, second, and third absorption for tetrad absorption method, while two kinds of *citta saṅkhāra*, the feeling (*vedanā*) and the perception (*saññā*) would be known apparently by means of four kinds of absorption. Two *dharmā* called feeling and perception are designated as *citta saṅkhāra*.

With relating to the phrase, *sukha paṭisamvedī*, it should be recognized the fact in *Paṭisambhidā magga* Pāli Text, that “*sukhanti dve sukhāni kāyikaṇca sukham cetasikaṇca* = it would be preached on two kinds of agreeable feeling as both bodily agreeable feeling (*kāyika sukha*) and mentally agreeable feeling (*cetasika sukha*), in order to show the fields of *vipassanā* knowledge (*vipassanā bhūmi*) which are occurred by means of three kinds of generalization on five aggregates, corporeality, mentality, and *saṅkhāra dhamma*, occurring in 31 realms, which are occurred by 11

PAGE 486

modes of situations, such as , past, future, present, internal, external etc. called miscellaneous *saṅkhāra* (*pakinnaka saṅkhāra*). This is because the fact that it is impossible to occur bodily agreeable feeling in the absorption. (It means that during the absorption is occurring, mentally agreeable feeling only can be occurred within mind moment of impulsion of absorption but not bodily agreeable feeling. Bodily agreeable feeling can be occurred by associating with touching-consciousness which is joyful, rootless wholesome resultant (*a-hetuka kusala vipāka sukha-sahagata kāyaviññāṇa citta*) but not with consciousness of impulsions of absorption.) (*Visuddhi*-1-280; *Mahāṭīkā*-1-340)

4. *passambhayam citta saṅkhāram*

Passambhayam citta saṅkhāram means that it should be practiced by ceasing the feeling and perception which is called gross *citta saṅkhāra* in order to fulfil the occurrence of in-breath and out-breath. It should be recognized on the cessation, which is intended to be said indirect way as “by ceasing”, as mentioned in detailed on *kāya saṅkhāra*.

vedanānupassanā (= repeated discerning on feeling)

It can be explained in detail. For this second tetrad instructions, in the word “*paṭisamvedī* = by knowing apparently on pleasurable interest”, it would be preached emphatically on associating feeling which occurs together with pleasurable interest with regarding to pleasurable interest (*pīti*) significantly.

In the word “*sukha paṭisamvedī* = by knowing apparently on agreeable feeling”, it would be preached on agreeable feeling as a sample only. In the phrases, “*citta saṅkhāra paṭisamvedī*, *passambhayam citta saṅkhāram*”, it would be preached emphatically on only the feeling which associates with perception due to presence of the preaching that “*saññā ca*

vedanā ca cetasikā ete dhammā citta paṭibhaddhā citta saṅkhāra = these two kinds of *dhamma* called perception and feeling, occur depending upon consciousness. Those are prepared by consciousness (*Paṭisambhidā Magga*-187; *M*-1-376)

[Owing to the Buddha preached in *Paṭiccasamuppāda*, that “*viññāṇpaccayā nāmarūpaṃ* = because presence of consciousness, corporeality and mentality occur” etc. resulting in occurrence of mental concomitants is also due to presence of consciousness, it means the fact that those two *dhamma* called the feeling and perception, occur depending upon and relating to the consciousness indeed.]

It should be recognized the fact that the Buddha preached this second tetrad instructions by means of *vedanānupassanā* in this way. (*Visuddhi*-1-280; *Mahāṭīkā*-1-341)

PAGE 487

3.9.C. Third tetrad instructions (*tatiya catukka*)

1. *cittapaṭsaṃvedī assasissāmīti sikkhati, cittapaṭsaṃvedī passasissāmīti sikkhati.*
2. *abhippamodayaṃ cittaṃ. pa.*
3. *samādahaṃ cittaṃ. pa.*
4. *vimocayaṃ cittaṃ. pa.*

1. *citta paṭisaṃvedī*

It would be practised by knowing apparently on the consciousness in order to fulfil the occurrence of in-breath.

It would be practised by knowing apparently on the consciousness in order to fulfil the occurrence of out-breath.

It should be recognized the fact that the consciousness should be known apparently by means of four absorptions respectively in this third tetrad instructions. It also refers to two kinds of penetrative knowing, viz, the **nature of object** and the **nature of non-delusion**. It would be entered into four absorptions one by one, by taking object of sign of full concentration of mindfulness of breathing. In the continuum of that *meditator*, due to fulfilment of absorption and taking object of sign of full concentration of mindfulness of breathing, it should be known apparently on the consciousness which is associating with the absorption and has the object of sign of full concentration of mindfulness of breathing. It is because the fact that it should be known apparently on object of sign of full concentration of mindfulness of breathing. This is how the consciousness of absorption would be known by means of the nature of object.

Four absorptions would be entered one by one. After it would be from absorption, the consciousness of absorption (including mental concomitants associating with absorption) would be generalized as three general characters by seeing the nature of dissolution and perishing away. During it is carrying out *vipassanā* practice, the *meditator* penetratively knows and sees both specific character and general character of consciousness of absorption. That kind of penetrative knowing can be said that the consciousness of absorption would be known apparently by means of non-delusion. (*Visuddhi*-1-280; *Mahāṭīkā*-1-341)

In the first instruction of the third tetrad, the Buddha instructed to breathe in and out by knowing apparently on the nature of object and non-delusion.

2. *abhippamodayaṃ cittaṃ*

It means that — it should be practiced

(a) by enhancing the consciousness of absorption with the help of pleasurable interest which is associating with absorption,

(b) by pleasing the consciousness of absorption which occurs by taking the object of the nature of dissolution and perishing away of pleasurable interest (*pīti*) of absorption, with the help of pleasurable interest which is the object of *vipassanā* knowledge in order to fulfil the occurrence of in-breath and out-breath.

PAGE 488

The bliss and great satisfaction would be occurred by means of:

- (1) mode of concentration,
- (2) mode of *vipassanā*.

(1) **By means of mode of concentration** is that — it would be entered into the first and second absorptions which are associating with pleasurable interest. At the moment of absorption, that *meditator* enhances and pleases consciousness of absorption with the help of pleasurable interest which is associating with absorption.

(2) **By means of mode of *vipassanā*** is that — after the first and second absorption were entered one by one and then emerged from it and it would be discerned by *vipassanā* knowledge on the nature of dissolution and perishing away of pleasurable interest which is associating with each absorption. If it is discerned in this way, by the time *vipassanā* knowledge are occurring, that pleasurable interest pleases and satisfies the *vipassanā* knowledge which is occurred by taking the object of pleasurable interest. The *meditator* who practices in this way, can be said the person who fulfils in order to occur in-breath and out-breath by pleasing and satisfying the consciousness well. (*Visuddhi*-1-280,281). It should be recognized as a person is very pleasing and satisfying when he see his very beloved friend.

3. *samādaham cittaṃ*

The meaning of “*samādaham cittaṃ* = it should be practiced by putting the mind well in order to fulfil the occurrence of in-breath and out-breath”, is that — it should be practiced by putting and leading the mind on to the object of sign of full concentration of mindfulness of breathing with the help of entering into four kinds of absorption, the first absorption etc., in order to fulfil the occurrence of in-breath and out-breath. (*Visuddhi*-1-281)

It means that — it must be practiced by putting the mind into the absorption for the purpose of stability of the mind on the object of sign of full concentration of mindfulness of breathing after the concentration has been reached up to the apex without shaking the mind but balanced five controlling faculties with the result that the mind of meditation never approach to any kind of extremity, i.e., retardation of the mind to take the object called *līnapakkha* and wandering of the mind from the object called *uddhacca pakkha*, not inclination toward the object of meditation and enhancing of the mind which can cause restlessness of the mind in order to fulfil the occurrence of in-breath and out-breath. (*Mahāṭīkā*-1-342)

If the breathing is performed by occurring and entering into the absorption, it can be said that the mind is putting well and breathing in the *samatha* stage. In the *vipassanā* stage, it must be as follows: _____

For the *meditator* who enters into four kinds of absorptions one by one and emerges from it and discerns the consciousness of the absorption as the nature of dissolution and perishing away, a kind

PAGE 489

of concentration, **momentary one-pointedness** of the mind called *khaṇika cittekkaggatā* occurs by means of penetrative knowing and seeing the general characters called *anicca* (impermanence), *dukkha* (suffering), *anatta* (non-self) of those consciousnesses of absorption

of every mind moment during the *vipassanā* knowledge are occurring. It can be said the *bhikkhu* who puts his mind on the object called the nature of impermanence, of suffering, of non-self of the consciousness of absorption, as “it would be practiced by putting the mind well in order to fulfil the occurrence of in-breath and out-breath”. (*Visuddhi*-1-281)

khanika cittakaggatā — means the concentration which is capable of putting the mind on object momentarily. If that *khanikā samādhi* (momentary concentration) called *khanikā cittakaggatā* occurs continuously by means of taking the objects of

1. **mode of impermanence**, the nature of dissolution just after arising,
2. **mode of suffering**, the nature of being oppressed by continuous process of arising and passing away,
3. **mode of non-self**, the nature of lack of self (*atta*) which is the indestructible essence, of *saṅkhāra dhamma*, the consciousness of *vipassanā* is firmly fixed to those *saṅkhāra dhamma* due to lack of suppressing of opposite *dhamma*, such as delusion (*moha*) etc. The commentator, therefore, explained above words accordingly. (*Mahāṭīkā*-1-342)

It is essential to be noticed the fact this kind of *khanikā samādhi* can be occurred only in the continuum of *meditator* who attained absorption and is able to carry out *vipassanā* practice on *saṅkhāra dhamma* of absorption. (Those remaining kinds of *khanikā samādhi* are presented in previous section.) This is the Buddha’s instruction how to put the mind well on the object and breathe in and out systematically.

4. ***vimocayam cittam***

It would be practiced by means of delivering from opposite *dhamma* for a long time (***vikkhambhana vimutti***), i.e.,

1. from hindering *dhamma* (***nīvaraṇa***) by the first absorption,
2. from initial and sustained application (***vitakka, vicāra***) by the second absorption,
3. from pleasurable interest (***pīṭi***) by the third absorption,
4. from agreeable and disagreeable feelings (***sukha, dukkha***) by the fourth absorption, in order to fulfil the occurrence of in-breath and out-breath. (*Visuddhi*-1-281)

This is the way of breathing with the help of delivering from opposite *dhamma* by concentration. The way of practice by means of *vipassanā* is as follows: —

PAGE 490

It would be entered into those four absorptions one by one and emerged from it. Then discerning on three general characteristics should be performed by seeing the nature of dissolution and perishing away of the consciousness which is associating with the absorption. (the consciousness and mental concomitants)

At the moment of occurrence of *vipassanā* knowledge, that *meditator* who is discerning by taking the object of perishing away or dissolution (*bhaṅga*) of *saṅkhāra dhamma* which are led by the consciousness of absorption, causes the in-breath and out-breath by delivering the mind ...

- (1) from perception of permanence (***nicca saññā***) by *aniccā nupassanā*
- (2) from perception of happiness (***sukha saññā***) by *dukkhā nupassanā*
- (3) from perception of self (***atta saññā***) by *anattā nupassanā*
- (4) from strong desire to *saṅkhāra dhamma*, ***nandī*** called *sappītika taṇhā* by *nibbidā nupassanā*
- (5) from lust (***rāga***) by *virāgā nupassanā* which discerns the nature of dissolution of *saṅkhāra dhamma*

(6) from lust (*samudaya* = *rāga*) by *nirodhā nupassanā* which discerns the nature of cessation of *saṅkhāra dhamma*,

(7) from obsession on **permanence** of *saṅkhāra* by *paṭinissaggā nupassanā* which discerns the perishing away of *saṅkhāra dhamma* and leading to the *nibbāna* by means of mode of momentary rejecting on *saṅkhāra dhamma*, respectively.

The Buddha, therefore, preached that “it would be practiced by delivering the mind from opposite *dhamma* in order to fulfil the occurrence of in-breath and out-breath”. Thus, it should be recognized on the fact that “this third tetrad instructions would be preached by means of *cittā nupassanā* (repeated discerning on consciousness)”. (*Visuddhi*-1-281)

The fact to be noticed

Although it would be preached on the second tetrad by means of *vedanā nupassanā*, while the third tetrad by means of *cittā nupassanā*, it must not discern only either one feeling (*vedanā*) uniquely or one consciousness (*citta*) uniquely. It must be discerned on both associating mental concomitants, physical bases and those mental *dhamma* which are occurred by taking the object of those corporeal *dhamma* respectively. It can be seen detail in *nāma kammaṭṭhāna*, Volume II.

3.9.D. Fourth tetrad instructions (*catuttha catukka*)

1. *aniccānupassī assasissāmīti sikkhati.*
aniccānupassī passasissāmīti sikkhati.
2. *virāgānupassī. pa.*
3. *nirodhānupassī. pa.*
4. *paṭinissaggānupassī. pa.*

PAGE 491

1. *aniccā nupassī*

It should be practised by repeated discerning as *anicca* (impermanence) in order to fulfil the occurrence of in-breath and out-breath.

In this case, the commentator instructed to distinguish among four terms,

1. *anicca* (impermanence)
2. *aniccatā* (mode of impermanence)
3. *aniccā nupassanā* (repeated discerning as impermanence)
4. *aniccā nupassī* (the person who had fulfilled with *aniccā nupassanā* knowledge).

*tattha aniccanti pañcakkhandhā. kasmā? uppādavayaññattabhāvā. aniccatāti tesameva uppādavayaññathattam, hutvā abhāvo vā. nibbattānam tenevākārena aṭṭhatvā khaṇabhaṅgane bhedoti attho. Aniccānupassanāti tassā aniccatāya vasena rūpādīsū aniccanti anupassanā. aniccānupassīti tāya anupassanāya samannāgato. tasmā evaṃ bhūto assasanto passasanto ca idha “aniccānupassī assasissāmi passasissāmīti sikkhati”ti veditabbo. (*Visuddhi*-1-281,282)*

tattha saṅkhatadhammānam hetupaccayehi uppajjanam ahutvā sambhavo attalābho uppādo. uppannānam tesam khaṇanirodho vināso vayo. jarāya aññathābhāvo aññathattam. yathā hi uppādāvattthāya bhinnāya bhaṅgāvattthāyam vatthubhedo natthi, evaṃ ṭhitisaṅkhātāya bhaṅgābhimukhāvattthāyampi vatthubhedo natthi, yathā jarāvohāro. tasmā ekassāpi dhammassa jarā yujjati, yā khaṇikajarāti vuccati. ekamṣena ca

uppādabhaṅgāvatthāsu vatthuno abhedo icchitabbo, aññathā “añño uppajjati, añño bhijjati”ti āpajjeyya. tayimaṃ khaṇikajaram sandhāyāha “aññathatta”nti. (Mahāṭṭikā-1-343,344)

1. *anicca* (impermanence)

Anicca means those five aggregates (*pañcakkhandha*) indeed. Why is it called *anicca*?

Owing to presence of occurrence of

(a) the nature of arising (*uppāda*)

(b) the nature of perishing away (*bhaṅga*)

(c) the nature of static instant which is special mode that bending toward perishing instant just after arising,

it is called *anicca* (**impermanence**). (It means that due to presence of three obvious *saṅkhāra lakṣhaṇā* called arising (*uppāda*) perishing away (*vaya*) and static phase (*aññathatta*), it is designated as *anicca*.)

2. *aniccatā*

Aniccatā means the special mode of occurrence of arising and passing away, static phase which is bending toward the perishing phase, of those five aggregates only. In other words, it means that the momentary perishing away (*khaṇa bhaṅga*) of those ultimate sense of five aggregates without situating as it's arising phase is called *aniccatā*.

3. *aniccā nupassanā*

It means that repeated discerning on those five aggregates, such as corporeality, etc., as *anicca* (impermanence) by means of *aniccatā* through which the momentary perishing away of ultimate

PAGE 492

dhamma is seen by *vipassanā* insight, is called *aniccānupassanā*. In other words, the *vipassanā* knowledge which repeatedly discerns as *anicca* is designated as *aniccānupassanā*.

4. *aniccānupassī*

The meditator who had fulfilled with that *aniccānupassanā* knowledge is called *aniccā nupassī*. Therefore, it should be recognized the fact that the person who fulfils the occurrence of in-breath and out-breath by repeated discerning on those five aggregates as *anicca* can be said the person who is practicing by repeated discerning as *anicca* in this fourth tetrad instructions. (*Visuddhi*-1-281,282)

3.9.E. *uppāda-vaya-aññathattā*

uppāda: — Those corporeal and mental *dhamma* called *saṅkhāra dhamma* which are occurred by unity of various adaptations of respective causes, are called *saṅkhāra dhamma*. The sudden occurrence of newly one without it is present previously, the attaining of the nature of ultimate *dhamma* due to presence of

(a) direct cause called *hetu* or *janaka* which is capable of arising those corporeality and mentality directly, and

(b) supporting cause called *upatthambhaka* or *paccaya* which is capable of supporting to occur those corporeality and mentality, is called the **arising (*uppāda*)**.

vaya: — The cessation of those occurred *saṅkhāra dhamma* as the momentary dissolution (*khaṇa bhaṅga*), is called **perishing away (*vaya*)**.

aññathatta: — The occurrence of ultimate *dhamma* with special mode called static phase (*thiti*), which is bending toward perishing phase just after arising, is called ***aññathatta***.

sañkhata: — The Buddha preached in *Sañkhata lakkhaṇā sutta*, *Aṅguttara Tikanipāta* (*Aṅg*-1-150) that there are three characteristics of *sañkhata*, viz, the arising, static, perishing away, in all kinds of ultimate *dhamma*. The arising *dhamma*, then, perishes away. It is not the fact that the arising *dhamma* is the specific one while the perishing and static *dhamma* is another kind actually. It will be clear understood as follows: —

As it is no difference between the arising phase of one kind of ultimate *dhamma* and the perishing phase of another kind of ultimate *dhamma* [it means that by the time the earth element occurs, it is impossible to occur the perishing away of the water-element or by the time the contact (*phassa*) occurs, it is impossible to occur the perishing away of feeling (*vedanā*)], similarly by the time it is bending toward perishing phase, called the static phase occurs, there is no difference between ultimate *dhamma*. That moment bending toward perishing phase can be designated as *jarā* (decaying). Therefore it is suitable to designate as *jarā* of one ultimate *dhamma* uniquely. That kind of *jarā* can be designated as momentary decaying (*khanika jarā*). It is right. — It is essential to non-difference between the arising and perishing phase of essence of ultimate *dhamma*, actually. If one accepts difference between them except non-different, a kind of misunderstanding that “another kind of ultimate *dhamma* arises while another kind of ultimate *dhamma* perishes away”, can be occurred in those person who prefers difference between them. Therefore it should be recognized on the fact

PAGE 493

that with regarding to that *jarā*, it is intended to say momentary decaying (*khanika jarā*) only, but not refer to old aging (*jarā*) which is applied in conventional truth (*vohāra sacca*), i.e., *pabandha thiti paññatti jarā* = the nature of old aging of being in the aspect of conventional truth. (*Mahāṭīkā*-1-343,344)

Due to presence of such three characteristics called arising – static – perishing away, the designation of five aggregates as *anicca* (impermanence) would be occurred. The term *anicca* is designated on those three characteristics with the result that after it would be said that “*aniccatā ti tesamyeva uppāda vayaññathattam* = *aniccatā* means the arising, perishing away and static phase called *jarā* of those five aggregates only, especially, in order to show the term *aniccatā* refers to momentary cessation (*khanika nirodha*), the commentator said that ‘*huttvā abhāvo vā*’ = the nature voidness after arising is also called *aniccatā*’. In that phrase, due to previous occurrence of the nature of arising before the nature of voidness, it would be said in addition to “*huttvā* = after arising”. With regarding to the word, *huttvā* = after arising, it would be clearly shown the fact that previous voidness occurs before the voidness (*a-bhāva*) called perishing away occurs. (*Mahāṭīkā*-1-344)

The meaning is that — the voidness (*a-bhāva*) are of two kinds: *pāgabhāva* which is a kind of voidances of corporeality and mentality before arising phase (*uppāda*) and *viddhamṣābhāva* which is also another kind of voidances of corporeality and mentality after perishing phase. In the words, “*huttvā a-bhāvo vā*”, *a-bhāvo* refers to the meaning of *viddhamṣābhāva* which is the nature of voidances of corporeality and mentality after perishing phase called *vināsa a-bhāva*. Then, owing to presence of the meaning, “corporeality and mentality arise from voidness called *a-bhāva* before it arise”, of the word, *huttvā*, that word shows the fact that “the voidness of corporeality and mentality before arise (*a-bhāva*) is preceding one while “the voidness of corporeality and mentality after perishing phase” is succeeding one.

Corporeality and mentality are void before it arise and after perished away. Thus these are the nature of *dhamma* which is occurring temporarily as the arising phase, (*uppāda*), static phase(*thiti*), perishing phase (*bhaṅga*), between two kinds of voidness. Those five kinds

of aggregates are only impermanent *dhmma* (*anicca*), and the *meditator* who wants to discern repeatedly as *anicca*, must

1. know five aggregates which are ultimate realities occurring in three periods, two continuums,
2. know causal *dhmma* occurring in three periods of those five aggregates, as they really are,
3. know
 - (a) mode of dissolution after arising
 - (b) modes of perishing away in every moment called *anicca* of five aggregates associating with causal *dhmma*,
4. practise by seeing mode of impermanence and by generalizing as *anicca*, in order to fulfil the occurrence of in-breath and out-breath.

If it would be practiced in that way it can be said that *aniccānupassanā* knowledge had been fulfilled

PAGE 494

thoroughly. The *meditator* with that *aniccānupassanā* knowledge can be designated as the person of *aniccā nupassī*, indeed.

2. *virāgānupassī*

virāgānupassīti ettha pana dve virāgā khayavirāgo ca accantavirāgo ca. tattha khavirāgoti saṅkhārānam khaṇabhaṅgo. accantavirāgoti nibbānam. virāgānupassanāti tadubhayadassanavasena pavattā vipassanā ca maggo. tāya duvidhāyapi anupassanāya samannāgato hutvā assasanto passasanto ca “virāgānupassī assasissāmi passasissāmīti sikkhatī”ti veditabbo. nirodhānupassīpadehi eseva nayo. (Visuddhi-1-282)

In the word, ***virāgā nupassī***, there are two kinds of *virāga*, viz,

- (1) ***khaya virāga*** which is dissolution of *saṅkhāra dhamma*
- (2) ***accanta virāga*** which is cessation of lust (*rāga*) or *saṅkhāra dhamma*, and it is called *nibbāna*.

In those two kinds, the momentary dissolution (*khaṇa bhaṅga*) where momentary cessation (*khaṇa nirodha*) of *saṅkhāra dhamma* occurs continuously, is called *khaya virāga*. *Nibbāna* called *asaṅkhata* where all kinds of *saṅkhāra dhamma* are totally ceased, is called ***accanta virāga***.

The *vipassanā* knowledge which is occurred by means of discerning only on dissolution of *saṅkhāra dhamma* is designated as ***virāgā nupassanā***. The noble Path-Knowledge which is occurred by means of seeing on *nibbāna* called *accanta virāga*, is also known as *virāga nupassanā*. It should be recognized on the fact that the person who fulfils the occurrence of in-breath and out-breath by completion with those two kinds of *virāga nupassanā* knowledge, practices as “*virāga nupassī assasissāmi passasissāmīti sikkhatī*”.

In other words: — The *vipassanā* knowledge, due to capability to discern as three general characters by taking the object of momentary dissolution of *saṅkhāra dhamma*, occurs continuously by means of ***khaya virāgā nupassanā***. Due to bending toward the eternal peace, *nibbāna* called *asaṅkhata*, the *vipassanā* knowledge occurs by means of ***accanta virāgā nupassanā*** simultaneously.

The noble Path-Knowledge is penetratively knowing and seeing the eternal peace, *nibbāna*, called *asaṅkhata* where all kinds of *saṅkhāra dhamma* are totally ceased, with the help of non-delusion (*a-sammoha*). That noble Path-Knowledge which is taking the object of *nibbāna*, eradicates deluding *dhmma* which covers *saṅkhāra dhamma* and prohibits dissolution of those *dhmma*, without any remain. Due to eradication of delusion which is incapable of knowing the dissolution of *saṅkhāra dhamma*, the knowledge (*vijjā*) which is knowing it, had been fulfilled as it's function (*kiṇṇa siddhi*). That kind of knowing by means

of it's function, can be designated as knowing with non-delusion (*a-sammoha*). Due to eradication of delusion (*moha*), if dissolution of *sañkhāra dhamma* are discerned again, it will be known every time indeed. That kind of knowing can be designated as *khaya virāgā nupassanā* which always discerning on dissolution of *sañkhāra dhamma* by means of non-delusion.

PAGE 495

Therefore, the noble Path-Knowledge would be occurred by means of *khaya virāgā nupassanā* which discerns dissolution of *sañkhāra dhamma* by means of non-delusion. It should be recognized on the fact that owing to ability of discerning on *nibbāna* called *asañkhata* where all kinds of *sañkhāra dhamma* are totally ceased, where lust (*rāga*) are totally ceased, by means of facing with the object directly, the noble Path-Knowledge occurs by means of *accanta virāgā nupassanā*, actually. (*Mahāṭīkā*-1-334)

3. *nirodhā nupassī*

Similarly, it should be recognized on the word, *nirodhā nupassī* in which two kinds of cessation includes: dissolution of *sañkhāra dhamma* called ***khaya nirodha*** and the eternal peace, *nibbāna* which is *asañkhata dhātu*, called ***accanta nirodha***. It means that it should be practiced by repeated discerning on dissolution of *sañkhāra dhamma* and by taking the object of *nibbāna* where those *sañkhāra dhamma* and lust are ceased in order to fulfil the occurrence of in-breath and out-breath.

4. *paṭinissaggā nupassī*

In the word, *paṭinissaggā nupassī*, there are two kinds of abandoning (*paṭinissaggā*);

(1) ***pariccāga paṭinissaggā***

(2) ***pakkhandana paṭinissaggā***.

Those *vipassanā* knowledge and noble Path-Knowledge which are capable of abandoning defilements, are called *paṭinissaggā nupassanā*.

vipassanā — *Aniccānupassanā* knowledge which is repeated discerning as *anicca* by taking the object of dissolution of *sañkhāra dhamma*, abandons wrong perception called perception of permanence (*nicca saññā*) which falls on *sañkhāra dhamma* by means of temporary abandoning (*tadaṅga pahāna*). Those defilements which are led by ignorance, craving and clinging, called *kilesa vaṭṭa*, those wholesome and unwholesome actions (*kusala, akusala kamma*) called *sañkhāra* which are caused by that *kilesa vaṭṭa*, which are capable of forming new existence, such resultant aggregates (*vipāka khandha*) which are caused by that *kilesa vaṭṭa* and *kamma vaṭṭa* called *abhi sañkhāra*, can be occurred in future by means of obsession as permanence (*nicca*). If the mode of discerning as impermanence (*anicca*) on dissolution process of *sañkhāra dhamma* occurs continuously, it abandons all kinds of those *kilesa vaṭṭa*, *kamma vaṭṭa* and resultant aggregates called *vipāka vaṭṭa* by means of **non-reoccurable again in future**.

Those *kilesa vaṭṭa*, *kamma vaṭṭa* resultant aggregates called *vipāka vaṭṭa*, which are caused by perception of happiness (*sukha saññā*) and perception of self (*atta saññā*), are abandoned by means of temporarily and non-reoccurable again in future during *vipassanā* practice through which *dukkha nupassanā* knowledge which takes the object of nature of being oppressed by continuous dissolution and perishing away of *sañkhāra dhamma*, abandons the perception of happiness, while

PAGE 496

anattā nupassanā knowledge which takes the object of nature of lack of “self” which is non-destructible essence in those perishing *saṅkhāra dhamma* abandons the perception of self (*atta saññā*), occurs continuously in him. Then, due to knowing and seeing faults of *saṅkhāra dhamma* really, i.e., the fault of impermanence, the fault of suffering, the fault of non-self, the fault of loathsomeness (*asubha*) of all *saṅkhāra dhamma* called *saṅkhata*, which are situated in three worlds, viz, sensuous world, fine-material world and immaterial world, it usually be occurred as entering into eternal peace, *nibbāna* called *a-saṅkhata dhātu* by means of bending toward and inclination to that *nibbāna* which is opposite *dhamma* of *saṅkhāra dhamma*.

The *vipassanā* knowledge can, therefore, be designated as *pariccāga paṭinissaggā*, due to ability to abandon defilements together with resultant aggregates, *abhi saṅkhāra dhamma* temporarily. Due to occurrence of entering into *nibbāna* by bending toward it, it is also designated as *pakkhandana paṭinissaggā*.

If those defilements would be abandoned by eradication (*samuccheda*) without any remain, the noble Path-Knowledge not only abandons both wholesome, unwholesome actions called *abhi saṅkhāra*, which are capable of forming new existence, and the resultant aggregates which are caused by those defilements and *abhi saṅkhāra dhamma*, by means of making a condition which is incapable of reoccurring in future again, but also enters into eternal peace, *nibbāna* called *a-saṅkhata dhātu*, by means of facing with *nibbāna* as it’s object. That noble Path-Knowledge can, therefore, be designated as both ***pariccāga paṭinissaggā*** = the *dhamma* which is able to abandon permanently defilements with aggregates, *abhi saṅkhāra dhamma*, and ***pakkhandana paṭinissaggā*** = the *dhamma* which is able to enter into eternal peace, *nibbāna* called *a-saṅkhata dhātu* by taking as it’s object. Those two kinds of knowledge: *vipassanā* knowledge and noble Path-Knowledge would be designated as *anupassanā* due to ability to follow preceding knowledge and take the object of preceding knowledge and due to ability to discern repeatedly on those preceding knowledge successively.

The meaning is that — the *vipassanā* knowledge repeated discerns as *anicca*, *dukkha*, *anatta* by taking the object of preceding *vipassanā* knowledge, which are always arising and passing away so-called mode of impermanence (*anicca*) etc. Then the succeeding *vipassanā* knowledge repeatedly discerns as *anicca*, *dukkha*, *anatta* by taking the object of arising and passing away processes of preceding *vipassanā* knowledge. Therefore it would be said *anupassanā*. The noble Path-Knowledge, indeed, would also be designated as *anupassanā*, due to ability to follow *gottrabhu* and discern *nibbāna* which is the object of *gottrabhu*. It should be recognized on the fact that the person who completed with those two kinds of knowledge: *vipassanā* knowledge and noble Path-Knowledge in order to fulfil the occurrence of in-breath and out-breath, can be said that he practised

PAGE 497

as “*paṭinissaggā nupassī assasissāmīti sikkhati*, *paṭinissaggā nupassī passasissāmīti sikkhati*”. (*Visuddhi*-1-282; *Mahāṭṭkā*-1-345)

This is the instruction of the Buddha in order to fulfil occurrence of in-breath and out-breath by arising *vipassanā* knowledge and Path-Knowledge successively.

3.9.F. Four kinds of *anupassanā*

*ayam tāvettha kāyānupassanāvasena vuttassa paṭhamacatukkassa
anupubbapadavaṇṇanā.*

*yasmā panettha idameva catukkam ādikammikassa kammaṭṭhānavasena vuttam.
itarāni pana tīṇi catukkāni ettha pattajjhānassa vedanācittadhammānupassanāvasena
vuttāni. (Visuddhi-1-269)*

*idam catutthacatukkam suddhavipassanāvaseneva vuttam. purimāni pana tīṇi
samathavipassanāvasena. evam catunnam catukkānam vasena soḷasavatthukāya
ānāpānassatiyā bhāvanā veditabbā. evam soḷasa vatthuvaseṇa ca pana ayam ānāpānassati
mahapphalā hoti mahānisaṃsā. (Visuddhi-1-282)*

According to above explanations found in *Visuddhi Magga*, the Buddha expounded

1. the first tetrad instruction by means of **kāyānupassanā**,
2. the second tetrad instruction by means of **vedanānupassanā**
3. the third tetrad instruction by means of **cittānupassanā**
4. the fourth tetrad instruction by means of **dhammānupassanā**, respectively.

Among those tetrad instructions, it had been instructed to discern the second, third and fourth tetrad instruction by means of *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā* respectively, for only those persons who had well attained absorptions (*jhāna lābhī*).

In the preaching of the Buddha in that way, this fourth tetrad (*catuttha catukka*) would be preached by means of pure *vipassanā* (*suddha vipassanā*). In those tetrads, the first, second and third ones, it would be expounded by means of both *samatha* and *vipassanā*, commonly. Thus it should be recognized on the practice of mindfulness of breathing which has 16 modes of depending bases by means of four kinds of tetrad instructions. This way of practice so-called the mindfulness of breathing, which has thoroughly developed by means of these 16 modes of depending bases, has great advancement and improvement up to the Fourth Fruit-Knowledge (*arahatta phala ñāṇa*) indeed.

PAGE 498

3.10 Five advantages of concentration

1. *ditṭhadhamma sukha vihāra nisaṃsa*

Those noble arahants who had eradicated all cankers (*āsava*), due to presence of intention to stay peacefully for the whole day in the absorption, are able to occur and develop the concentration of full absorption. The concentration of full absorption of those noble arahants has the advantage called *ditṭha dhamma sukha vihārā nisaṃsā* = staying with partial happiness in recent physical and mental situations, actually. The Buddha, therefore, preached that —

“*Cunda* ... actually, these *jhānic dhamma* which are capable of concentrating the mind on one-pointedness of the object of sign of *samatha*, which are developed by those hermits out of the Buddha’s admonishment, can not be said the practices which are capable of rejecting and eradicating defilements. In the admonishment of me (the Buddha) who is real Noble-One, those *jhānic dhamma* can be said only *dhamma* which are capable of staying with partial happiness in recent physical and mental situations, actually” etc. (*M*-1-49) preached by the B. (*Visuddhi*-1-368)

Those arahants had been achieved to perform the function of Path-Knowledges and Fruit-Knowledges which are deserving to perform under the Buddha’s admonishment. There is no function to do anymore in order to attain the Path-Knowledge. Therefore trying to attain absorptions and entering into those absorptions performed by those noble arahants has advantages to stay with total happiness in recent physical and mental situations only. This is the first advantage of the concentration.

2. *vipassanā nisaṃsā*

The concentration of full absorption of fulfilling noble ones (*sekkha*) and worldlings (*puthujana*), which is developed by intention with the purpose of *vipassanā* practice, is advantage to occur *vipassanā*, due to occurrence of proximate cause of *vipassanā* knowledge.

The neighbourhood concentration which is developed by following the proper way of practice under the opportunity to encounter with the arising of the Supreme Buddha, which is suitable to attain the invaluable results called the Path-Knowledge, Fruit-Knowledge and *nibbāna* along with the rounds of rebirth which is unpurified by those defilements, such as the craving (*tahṇā*) etc., has also the advantages to occur *vipassanā*.

“The duration when the Buddha is appearing” called *buddhuppāda navama khaṇa* is the most difficult opportunity in the world. Due to occurrence of the most difficult opportunity of *buddhuppāda navama khaṇa*, it refers to the neighbourhood concentration of a *meditator* who fulfils *vipassanā* practice in order to overcome the suffering of rounds of rebirth without delaying to attain

PAGE 499

the concentration of full absorption but with great fears of knowledge, actually. Therefore the Buddha preached that —

“*samādhim bhikkhave bhāvētha samāhito bhikkhave bhikkhu yathābhutam pajānati*”. (*Sam*-2-12; *Sam*-3-363) = “*Bhikkhus* ... it should be occurred concentration; it should be

developed concentration; *bhikkhus* ... the *bhikkhu* with the mind that is associating with concentration which is well put on the object (sign of full concentration etc.), distinguishes thoroughly (four Noble Truths)” etc. (*Visuddhi*-1-368; *Mahāṭikā*-1-459,460)

3. *abhiññā nisamsā*

Such noble persons, indeed, fulfil various kinds of absorptions with intention to attain super-psychic-knowledge, such as, creating many people from single one just after emerging from the fourth absorption which is the basic factor of super-psychic-knowledge (*abhiññāna*). If those persons have significant wholesome deeds which were the cause of attainment of the super-psychic-knowledge in previous lives, the concentration of full absorption has advantage of super-psychic-knowledge, due to occurrence of proximate cause of super-psychic-knowledge of the fourth absorption or eight kinds of absorptions (*aṭṭhasamāpatti*) which would be entered. Therefore, the Buddha preached that —

so yassa yassa abhiññāsacchikaraṇīyassa dhammassa cittaṃ abhininnāmeti abhiññāsacchikiriyāya, tatra tatveva sakkebhābhatam pāpuṇāti sati sati āyatane. (*M*-3-138) = “that person leads and bends toward the mind with strong determination in order to face with such such *dhamma*, such as creating of various kinds, which is well developed by means of super-psychic-knowledge. If the significant wholesome deeds called *adhikāra* which were the causes of attainment of super-psychic-knowledge in previous lives, are present apparently, it would be reached into a situation which is deserving to face with that that *dhamma* which can be faced by means of super-psychic-knowledge,” in *M*-1-138. (*Visuddhi*-1-368)

4. *bhava vīsesā nisamsā*

If such persons never fall the absorption with desires to attain the existence of brahma or worldling persons never fall the absorption without desire to attain the existence of brahma, the concentration

PAGE 500

of full absorption has advantage to attain special existence called brahma world (*bhava vīsesā nisamsā*), due to capability to attain special existence called brahma world for those persons with desires to attain the existence of brahma and for those persons who never fall absorption although they have no desires to attain that kind of existence. Therefore, the Buddha preached that —

paṭhamam jhānam parittam bhāvetvā kattha upapajjanti. brahmapārisajjānam devānam saḥabyatam upapajjanti. (*Abhi*-2-439)

“Which realm would be reached as rebirth for him because it would be developed the first absorption with less efficiency? It would be reached into fellowship of brahma called *brahma pārisajjā*,” in *Abhi*-2-439. (*Visuddhi*-1-369)

appatthayamānā vā — The commentator said the words, *appatthayamānā vā* = “although they have no wishes”, in order to show the fact that although it never been wished any existence depending on any kind of *kamma* which are causes of reaching to various existences, the function of wish to existence (*bhava patthanā*) had been achieved due to

occurrence of fulfilment of that *kamma* which are causes of reaching to various existences, indeed”. (*Mahāṭīkā*-1-460)

The meaning is that — although none of wishes for any existence which is corresponding with *kamma* during that *kamma* which is the cause to reaching various existences has being performed, unless those defilements with underlying tendency (*anusaya kilesā*), which are deposited in the continuum of corporeality and mentality of himself, are totally eradicated by the noble Path-Knowledge, presence of those underlying tendency (*anusaya*) is significant cause of occurrence of birth consciousness (*kamma viññāṇa*). Every *kamma* developed in the continuum of any person with underlying tendency, has efficiency to occur resultant *dhamma* whenever opportunity would be occurred. Therefore, those *kamma* which are causes of reaching to various existences, play the significant role in reaching those existences by means of fulfilment of those *kamma* but not depending on whether wishing to attain any existence has been performed or not. Although there was no wish to attain any life during that *kamma* had been developed, for a person with underlying tendency (*anusaya*), the sign of future existence would be appeared at the time of near death impulses, due to presence of efficiency of that *kamma*. At that time, the occurrence of continuum of mind which is bending toward any existence that is correspondence of his or her previous *kamma*, is the fixed natural law for every being. The occurrence of inclination toward any kind of existence is due to presence of efficiency of underlying tendency which had been deposited in continuum of corporeality and mentality during that *kamma* had being performed. (See *Cetanā Sutta*, *Nidāna Vagga Samyutta*.)

Not only the concentration of full absorption is capable of performing to occur new existence in that way but also the neighbourhood concentration is capable of performing good existences of sensual sphere (*kāma sugati*), i.e., existences of human being and heavenly beings of 6 kinds. (*Visuddhi*-1-369)

PAGE 501

5. *nirodhā nisamsā*

By taking into heart that after eight kinds of absorptions (*samāpatti*) had been occurred and cessation absorption (*niroda samāpatti*) had been entered for throughout seven days without consciousness of any kind, it will be reached into the eternal peace called *nibbāna* which is cessation of these three kinds of sufferings,

1. *dukkha dukkha* (bodily disagreeable feeling)
2. *vipariṇāma dukkha* (bodily and mentally agreeable feelings)
3. *saṅkhāra dukkha* (feeling of neutrality associating with all kinds of *saṅkhāra dhamma*),

such Noble Ones called non-returnee (*anāgāmi*) and arahants develop the concentration of full absorption. The concentration of full absorption of those Noble Ones has the advantage of the cessation absorption (*niroda samāpatti*) called *nirodhānisamsā*. (*Visuddhi*-1-369)

The cessation absorption (*niroda samāpatti*) is a kind of absorption in which the consciousness, mental concomitants and corporealities produce by mind are ceased totally. Those corporealities produced by *kamma*, temperature and nutriment remains without cessation take place. Those corporeal *dhamma* are also being oppressed by continuous process of arising and passing away with the result that it is designated as *saṅkhāra dukkha*. The commentator explained that “*sukham viharissāma* = it will be staying with totally happiness” due to absence of mind resulting in similarity to lack of any kind of suffering when cessation absorption occurs although those kind of suffering called *saṅkhāra dukkha* is still present. (*Mahātīkā*-1-460)

These are advantages which can be attained by means of concentration. In this paper, the way of practice of concentration is presented in order to attain the right view on Four Noble Truths as they really are, called *vipassanā nisamsā*, number two advantage only. However, if the *meditator* has desire to practise four protective meditations (*catu rāraṅkha kammaṭṭhāna*) called,

1. loving-kindness (*mettā*)
2. recollection of the nobility of the Buddha (*buddhā nussati*)
3. recollection of the death (*marañā nussati*)
4. loathsomeness (*a-subbha*),

before *vipassanā* practice is carried out, it is very appropriate time after the concentration of the fourth absorption through the mindfulness of breathing has been fulfilled actually. (It can be seen in Section Nine *Samatha kammaṭṭhāna*, Volume V.)

If the *meditator* wants to fulfil *vipassanā* knowledge, it will be better to endeavour in order to complete eight kinds of noble qualities of the fourth absorption previously.

PAGE 502

3.11.A. Eight noble qualities of the fourth absorption

so evaṃ samāhite citte parisuddhe pariyodāte anaṅgaṇe vigatūpakkilese mudubhūte kammaniye ṭhite āneñjappatte āsavānaṃ khayañānāya cittaṃ abhininnāmeti. so idam dukkhanti yathābhūtaṃ pajānāti, ayaṃ dukkhasamudayaṃ yathābhūtaṃ pajānāti, ayaṃ dukkhanirodhoti yathābhūtaṃ pajānāti, ayaṃ dukkhanirodhagāminī paṭipadāti yathābhūtaṃ pajānāti. (M-1-347)

Above Pāli Quotation is an excerpt how *vipassanā* practice can be fulfilled after the concentration of fourth absorption had been developed, found in *Mahāassapura Sutta*. This

kind of preaching methodology in enormous times in Pāli Text. This is the instruction of the Buddha himself in order to know the Four Noble Truths as they really are, by means of endeavouring to fulfil eight noble qualities of the fourth absorption previously. According to those explanations found in *Visuddhi-2-5*, *Vinaya-Commentary-1-127*, each noble quality would be presented in this place.

1. *parisuddha* = the purification

The consciousness of fine material sphere which is occurring as the concentration of the fourth absorption in the continuum of *meditator* is circumstantially purified due to presence of purification of mindfulness caused by equanimity (*upekkhā*). In this case, *upekkhā* means the mental concomitant called *tatramajjhataṭṭā* (equanimity). This equanimity is capable of neutralizing the mind not to reach any kind of extremity, i.e. retarding to take object of sign of full concentration of mindfulness of breathing called laziness (*kosajja*) and enhancing to take object of sign of full concentration of mindfulness of breathing called unrest (*uddhacca*). Due to capability of neutralizing of the mind on the object of sign of full concentration, that mental concomitant is designated as *tatramajjhātupekkhā*. Due to presence of efficiency of *tatramajjhātupekkhā*, the mindfulness which is able to keep in mind that sign of full concentration is well purified. Due to presence of purification of mindfulness caused by that *upekkhā* the consciousness of the fourth absorption is also circumstantially purified. It is well purified not only the mindfulness but also all associating *dhamma*, indeed. It had been preached emphatically on the mindfulness. (*Visuddhi-1-163*)

2. *pariyodāta* = presence of brilliant shyness

“*parisuddhattāyeva pariyodāte pabassareti vuttam hoti*” (*Visuddhi-2-5*, *Vi-Com-1-127*)

Due to presence of circumstantial purification in that way it is shining brilliantly as well purified gold. (According to this explanation it should be recognized on the fact the concentration of fourth absorption has brilliant shines.)

PAGE 503

3. *a-naṅgaṇa* = free from impurities of greed, anger

It is free from impurities of mind called greed and anger due to rejecting for long time (*vikkhambhana pahāna*) of both bodily and mentally agreeable feelings (*sukha, somanassa vedanā*) which are causes of occurrence of greed (*lobha*), and bodily and mentally disagreeable feelings (*dukkha, domanassa vedanā*) which are causes of occurrence of anger (*dosa*).

4. *vigatūpakkilesa* = free from defilements

If the lust and anger are abandoned for a long time, those defilements (*kilesa dhamma*) which are associating with lust and anger are also abandoned well. As those lust and anger are deserving to designated as *aṅgaṇa* (impurity) due to occurrence of unpurified *dhamma* of those lust and anger, similarly, those are deserving to designated as *upakkilesa* (defilement) due to ability to occur dirtiness of mind. Due to free from impurity and dirtiness of mind in that way it is free from defilements which are capable of burning and suppressing the mind. It is right. — Those defilements and impurity (*aṅgaṇa*) such as lust and anger, are capable of burning and suppressing the mind. (*Visuddhi-2-5*; *Mahāṭṭikā-2-6,7*)

5. *mudubhūta* = elasticity

Due to occurrence of well developed by reaching in five kinds of mastery of the fourth absorption thoroughly, the continuum of mind is elastic as a leather which had been well tanned to make easily whatever he likes or a block of sealing wax which had been well treated. In this case, “well developed” means the concentration of fourth absorption would be developed frequently. As an animal skin becomes fine by tanning frequently, this mind of fourth absorption is also very fine and subtle due to entering frequently into it. It means that the fine and subtle mind is reaching into mastery (*vasī bhāva patta*). It is right. — It can be said the mind which occurs in indulgent situation as one wish, is elastic. (*Visuddhi*-2-5; *Mahāṭīkā*-2-7)

6. *kammaniya* = adaptability in practice

As the purified gold is very easy to make any kind of jewellery whatever he likes, such as rings, bracelets etc., due to presence of elasticity of the mind which is free from impurity and defilements is adaptable to perform any function whatever he likes, the function of super-psychic-knowledge (*abhiññāṇa*) or the function of *vipassanā* practice etc.

tañca ubhayampi subhāvitattāyevāti (*Visuddhi*-2-5; *Vi-Com*-1-127)

It should be recognized on the fact that those two kinds, elasticity (*mudubhūta*) and adaptability (*kammaniya*) of the mind would be occurred after it had been well developed proficiently by means of reaching into five mastery of that mind of fourth absorption.

PAGE 504

nāhaṃ bhikkhave aññaṃ ekadhammampi samanupassāmi, yaṃ evaṃ bhāvitam bahulīkatam muduñca hoti kammaniyañca, yathayidaṃ bhikkhave cittaṃ. (*Aṅg*-1-4)

= *Bhikkhus* ... I (the Buddha) never see any *dhamma* which is very elastic and adaptable to perform the function of practice rather than this mind which had been developed frequently to reach in mastery is very elastic and adaptable to perform the function of practice. (*Aṅg*-1-4)

7. *thita* = presence of stability

Due to well developed not to avoid and perish away those noble qualities, such as circumstantial purification (*parisuddha*) etc, the continuum of mind is not loosely in those noble qualities but firmly fixed well actually. That stability of consciousness of the fourth absorption called *thita*.

8. *āneñjappatta* = reaching into unshaken condition

Due to presence of stability in that way it is no shaking anymore in the mind of meditation. It means that due to presence of stability, the mind of meditation is very quiet on the object. It would be preached in this preaching methodology that the consciousness of fourth absorption which is firmly fixed to the object, as both *thita* and *āneñjappatta*.

In the commentary called *Visuddhi Magga*, the meanings of *thita* and *āneñjappatta* are explained in another ways as follows.

7. *thita* = presence of stability

Due to presence of elasticity and adaptability of mind in order to achieve various functions, such as, super-psychic-knowledge, *vipassanā* practice etc., the continuum of mind is stable as one's indulgence whatever he wishes. (*Visuddhi*-2-5)

It means that *thita* (= **stability**) is a situation which occurs as one's desire or a situation which reaches into mastery. In previous method — with regarding to the phrase,

“*vase vattamānam hi cittam muduntī vuccatī*” = “it can be said the mind which occurs in indulgent situation as one’s wish, is elastic”, it had been shown that the consciousness of fourth absorption which reaches into mastery is elastic (*mudu*). It had also been shown that due to presence of elasticity, various functions of practices are adaptable (*kammaniya*). Thus as if it is reaching into mastery it would be recognized as the occurrence of elasticity and adaptability, similarly due to reaching into mastery, the occurrence of stability would be recognized as occurrence of elasticity and adaptability. It means that it should be recognized reciprocally. As the resultant *dhamma* can be explicit by causal *dhamma*, similarly causal *dhamma* should be explicit by resultant *dhamma*. Therefore, by means of occurrence of avoiding from shaking, the stability with firmly fixed situation is called *āneñjappatta*. (*Mahāṭīkā*-2-7)

PAGE 505

8. *āneñjappatta* = reaching into unshaken condition

The continuum of mind which is associating with that concentration of fourth absorption called *āneñjappatta*, occurs by means of efficiency of six kinds of strengths or six chiefs called faith, effort, mindfulness, concentration, wisdom and light (= *obhāsagata*) resulting in the occurrence of both opposite *dhamma*. The efficiency of those six kinds of strengths or six chiefs is so great that there is no trace of shaking caused by opposite *dhamma*, such as faithless laziness, carelessness, unrest, delusion = wrong knowing = misunderstanding, falling in darkness of defilements etc. No trace of faithless can infiltrate in the continuum of mind even as vapour. It will be explicit. —

(a) That consciousness of fourth absorption which had been well developed up to reaching in five kinds of mastery in this way, which had been soaked by firm faith occurred as “it is deserving to face with *abhiññāṇa dhamma* and Four Noble Truths which should be faced with special knowledge”, which had been well supported by strength of faith and chief of faith, would not be shaken by opposite *dhamma*, faithless (*assaddiya*). Actually, it situates as performance in order to occur successive upper supra-mundane *dhamma*.

(b) The consciousness which had been soaked with strenuous effort, which had been supported by strenuous effort that is capable of finishing to admonish the former, would not be shaken by laziness (*kosajja*) that is a kind of unwholesome mind moment, a cause of occurrence of lazy person.

(c) The consciousness which had been soaked with mindfulness, which is capable of finishing not to forget repeated performing the practice of fourth absorption, which is capable of repeated searching the occurrence of wholesome *dhamma*, which had been supported by very strong mindfulness, would not be shaken by carelessness (*pamāda*) which is forgetting to do wholesome deeds.

(d) The consciousness which had been soaked with concentration, which had been supported by concentration that is capable of putting the mind on the object of practice, would not be shaken by unrest (*uddhacca*).

(e) The consciousness which had been soaked with wisdom, which had been supported by wisdom that has the characteristic of discriminating between benefittable and unbenefittable *dhamma* of that practice of mindfulness of breathing, would not be shaken by ignorance (*avijjā*), opposite *dhamma* of knowledge.

(f) “*obhāsagatam kilesandhakārena na iñjati*”. (*Visuddhi*-2-6)

PAGE 506

Obhāsagatanti ñāṇobhāsasahagatam. obhāsabhūtena hi yathāvuttasamādhānasamvaddhitena ñāṇena samkilesapakkham yāthāvato passanto tato utrasanto ottappanto tam adhibhavati, na tena abhibhūyati. tenāha “kilesandhakārena na iñjati”ti. etena ñānapariggahitam hirottappabalam dasseti. (Mahātīkā-2-8)

The concentration of fourth absorption which occurs associating with the light of wisdom, would not be shaken by darkness called defilements. It is right. — Due to occurrence of really knowing and seeing unpurified *dhamma* (*samkilesa*) by the knowledge which had been well developed by concentration associating with the light that has the function of enlightening (*obhāsana rasa*) Four Noble Truths as they really are, it would be suppressed on those all kinds of unpurified *dhamma* by fearing on it. That concentration of fourth absorption associating with knowledge and light would not be suppressed by those all kinds of unpurified *dhamma*. Therefore, the commentator explained that “**the concentration of fourth absorption which occurs associating with the light of wisdom, would not be shaken by darkness called defilements**”. With regarding to this word, it shows apparently on the strength called shame (*hiri*), dread (*otappa*) which are supported by knowledge. (*upekkhā-2-6; Mahātīkā-2-8*)

The consciousness which had been soaked, kept, supported by these six kinds of *dhamma*, (1) faith, (2) effort, (3) mindfulness, (4) concentration, (5) wisdom and (6) *obhāsa gata* = efficiency of light = strength of shame and dread, can be designated as reaching into occurrence of unshaken situation (*āneñjappatta*).

In this method, it would not be counted on *samāhita* as one factor, but *thita* and *āneñjappatta* are separated into two factors. In another method, it would be counted on *samāhita* as one factor and then *thita* and *āneñjappatta* are also united as one factor.

3.11.B. Eight noble qualities of the fourth absorption (another way of explanation)

1. **samāhita** — The continuum of consciousness is well stable by concentration of fourth absorption.
2. **parisuddha** — Due to occurrence of very far from impurities called hindrances the continuum of consciousness is circumstantially purified.
3. **pariyodāta** — Due to occurrence of overcoming on gross factors of absorption called *vitakka*, *vicāra*, *pīti*, *sukha*, which are capable of fearing, and shaking the mind, the continuum of consciousness is well purified with brilliant shininess.

[Notes: — In this method, it mentioned on “*parisuddha*” as free from hindrances which are capable of impurifying the mind; while on “*pariyodāta*” as free from *vitakka* and *vicāra* that are capable of shaking mind, *pīti* that is capable of making conspicuous appearance of mind, *sukha* that is capable of taking into heart and feeling the object with happiness, respectively. Although the first absorption can be attained only when it is far from hindrances, it is not far from those hindrances compared with this fourth absorption, actually. Similarly, although the second absorption is far from *vitakka* and *vicāra*, the third absorption is far from *pīti*, it is not far from those *dhamma* compared with this

PAGE 507

fourth absorption, actually. Therefore, it is explained on this fourth absorption as “*parisuddha*”, “*pariyodāta*”. (*Mahātīkā-2-8*)

4. **a-naṅgana** — Due to absence of unwholesome impurities, such as conceit (*māna*), wickedness (*māyā*), pretension (*sātheya*), which can be infiltrated with inferior wish occurring depending on attainment of absorption, it is far from unwholesome impurities. (*Visuddhi-2-6*)

Depending on attainment of absorption, a kind of conceit which is too much pride in oneself can be occurred. A kind of desire with conceit that “during the Supreme Buddha is

preaching among surroundings of disciples, it will be very good situation as if the Buddha always questions me only that “*bhikkhu ... how do you suggest on this dhamma*” etc., can usually be occurred. The wickedness (*māyā*) which desires to conceal obvious fault can usually be occurred. The pretension (*sātheya*) which is capable of pretending to be full of noble qualities that are not present, can also be occurred. Those *dhamma* called ‘conceit’, ‘wickedness’, ‘pretension’ are commonly known as *pāpaka icchāvacara* (inferior wishes). Although these *dhamma* are not so gross as hindrances, these are **subtle unwholesome deeds** called *aṅgaṇa* (impurity), due to ability to make dirty of continuum of mind. (*Mahāṭī-2-8,9*)

5. ***vīgatūpakkilesa*** — It is free from those *upakkilesa dhamma*, such as greed (*abhijjhā*) etc. which are capable of making dirty of mind. [*abhijjhā* (greed) is a kind of desire which is subtle greed attaching on absorption of oneself but not reach as sensual hindrance (*kāmacchanda nīvaraṇa*). It is unrejectable subtle greed by the first absorption. In the word, “greed (*abhijjhā*) etc.”, with regarding to “etc.”, it should be interpreted on subtle conceit, wickedness and pretension etc. (*Mahāṭī-2-8,9*)]

6. ***mudubhūta*** — Due to occurrence of having in five kinds of mastery, it is well elastic.

7. ***kammaniya*** — Due to reaching in foundation of various efficiency (*iddhi*), it is well adaptable to perform any kind of function of practice relating to *dhamma* whatever he likes.

8. ***thita, āneñjappatta*** — Due to fulfilment of practice of the fourth absorption which is the fundamental factor of the mind leading to desired objects, such as the object of super-psycho-knowledge or the object of *vipassanā*, and due to fulfilment of practice of concentration which is adaptable for “*abhinīhāra*” called all kinds of supreme perfections (*pāramita*) that is capable of leading to any kind of enlightenment, i.e. enlightenment of the Buddha, enlightenment of the *pacceka* Buddha, enlightenment of disciple, by means of absence of further function of concentration rather than the fourth absorption, with the result that that concentration of fourth absorption had reached to significant role in continuing the way of practice, that kind of concentration situates in firmly fixed condition which reaches to superior occurrence without shaking anymore.

(It is ready to lead the mind either toward various kinds of super-psycho-knowledge, such as *iddhi vidha abhiññāṇa* etc, or toward various kinds of knowledge called *vipassanā* knowledge, the Path-Knowledge, the Fruit-Knowledge. The practice of the fourth absorption which is ready to apply in that way is designated as “*abhi nīhārakkhama bhāvanā*”. Due to fulfilment of that “*abhi nīhārakkhama bhāvanā*”, that practice of the fourth absorption plays the most important role in

PAGE 508

various ways of practices called *samāpatti*, *vipassanā*, indeed. That kind of concentration is not only superior but also capable of making non-contentment. It is never content even though it had been entered for a long time in that absorption. Thus it means that this concentration of fourth absorption is very stable due to reaching into unshaken situation resulted from superior occurrence of *abhi nīhārakkhama bhāvanā*.) (*Visuddhi-2-6; Mahāṭī-2-9*)

Actually, this concentration of fourth absorption which is completed with these eight noble qualities is adaptable and ready to lead the mind toward various kinds of functions of practices, such as creating by super-psycho-knowledge, *vipassanā* etc. If the mind of meditation is intended to be led toward the object of *vipassanā* knowledge, those *saṅkhāra dhamma* called the Noble Truth of Suffering and the Noble Truth of Cause of Suffering (= corporeality, mentality, causes and results) will be easily known and seen by penetrative knowledge due to presence of adaptability of the concentration of fourth absorption for various *abhinīhāra*.

Those supreme perfections (*pāramita*) which are factors of reaching to desired Enlightenment called Enlightenment of the Buddha, Enlightenment of the *pacceka* Buddha, Enlightenment of disciple, belong to these practices of *abhiññāna* and *vipassanā*.

These are explanations relating to eight noble qualities of the fourth absorption. In accordance with this explanations, the brief translations of those Pāli Quotations mentioned above in [\(3.11.A, PAGE 502\)](#) (M-1-347), are as follows: —

The meditating *bhikkhu* who had well attained that fourth absorption with the consciousness,

1. if it is circumstantially purified due to presence of purification of mindfulness caused by *upekkhā* (equanimity) called mental concomitant, “*tatramajjhataṭṭā*,” which is capable of well putting the mind on various objects of sign of full concentration, such as object of sign of full concentration of mindfulness of breathing,

2. if it has brilliant shining in colour due to occurrence of **circumstantial purification**,

3. if it lacks those impurities called lust and anger due to presence of abandoned impurities by means of rejecting for a long time (*vikkhambhana pahāna*) resulted from abandoning of both bodily and mentally agreeable feelings which are the causes of lust, and bodily and mentally disagreeable feelings which are the causes of anger,

4. if it is avoiding from those defilements which are capable of burning and suppressing the mind due to occurrence of lacking impurities called lust and anger,

PAGE 509

5. if it is **well subtle** (if it is reaching into five kinds of mastery) due to occurrence of fulfilment to develop thoroughly,

6. if it is well adaptable for various functions of practices, such as endeavouring to know and see the Four Noble Truths (*catusacca kammaṭṭhāna bhāvanā*) due to occurrence of subtle condition,

7. if it is well situated as indulgent condition of oneself, due to presence of elasticity and adaptability of concentration of fourth absorption,

8. if it is reached into occurrence of unshaken condition due to presence of supporting of five controlling faculties i.e. faith, effort, mindfulness, concentration, wisdom, inclines to attain *arahatta magga ñāṇa* (the Fourth Path-Knowledge) called *āsavakkhaya* which is lost of leaking *dhmma* (cankers). That *bhikkhu* knows that

1. this is the Noble Truth of Suffering (*dukkha ariya sacca*)

2. this is the Noble Truth of Cause of Suffering (*samudaya ariya sacca*)

3. this is the Noble Truth of Cessation of Suffering (*nirodha ariya sacca*)

4. this is the Noble Truth of Course leading to cessation of suffering (*magga ariya sacca*) as they really are. (M-1-347) [It would be translated in accordance with explanations found in *Visuddhi-2-5*.]

The *meditator* who wants to improve *vipassanā* practice depending upon the concentration of this fourth absorption must fulfil frequently in order to complete with above noble eight qualities of concentration of fourth absorption. It should be practiced in order to reach five kinds of mastery and to occur the concentration of fourth absorption which is strongly supported by five controlling faculties. Only when it reaches to above situations well, various functions of practices, keeping in mind and discriminating on five aggregates called the Noble Truth of Suffering and causal relationship or the nature of Dependence-Origination called the Noble Truth of Cause of Suffering, will be adaptable. The function of

taking into heart those *saṅkhāra dhamma* called those Noble Truth of Suffering and Noble Truth of Cause of Suffering (*vipassanā bhinivesa*) will be put through successfully.

It would be continued to present on number two quality, “*pariyodāta*”, = “if it is brilliant shining in colour”, as follows. —

PAGE 510

3.12 The light of wisdom — *Obhāsa Sutta*

cattārome bhikkhave obhāsā. katame cattāro, candobhāso sāriyobhāso aggobhāso paññobhāso. ime kho bhikkhave cattāro obhāsā. etadaggaṃ bhikkhave imesaṃ catunnaṃ obhāsānaṃ yadidaṃ paññobhāso. (Aṅg-1-457)

= *Bhikkhus* ... there are four kinds of lights. Which are of four kinds that — the light of moon, the light of sun, the light of fire, the light of wisdom, indeed. *Bhikkhus* ... among those four kinds, the light of wisdom is the supreme one. (*Aṅg-1-457*)

The Buddha preached in similar way by using synonyms, *ābhā* = colour, *pabhā* = rays, *āloka* = light, *pajjota* = shining light. Those explanations relating with the light of wisdom can be found in the Commentary, *Aṭṭhasālinī*, as follows: _____

3.12.A. The light of knowledge

pajānātīti paññā. kiṃ pajānāti? “idaṃ dukkha”ntiādinā nayena ariyasaccāni. atṭhakathāyaṃ pana “paññāpetīti paññā”ti vuttam. kinti paññāpetīti? “aniccam dukkham anattaā”ti paññāpeti. Sāva avijjāya abhibhavanato adhipatīyattṭhena indriyaṃ, dassanalakkhaṇe vā indatṭham kārotīti indriyaṃ, paññāva indriyaṃ paññindriyaṃ.

sā panesā obhāsanalakkhaṇā ca paññā, pajānanalakkhaṇā ca. yathā hi catubhittike gehe rattibhāge dīpe jalite andhakāro nirujjhati, āloko pātubhavati, evameva obhāsanalakkhaṇā paññā. paññobhāsasamo obhāso nāma natthi. paññavato hi ekapallaṅkena nisinnassa dasasahasilokadhātu ekālokā hoti. tenāha thero _____

“yathā mahārāja puriso andhakāre gehe padīpaṃ paveseyya, pavittṭho padīpo andhakāraṃ viddhamseti obhāsaṃ janeti, ālokaṃ vidamseti, pākātāni ca rūpāni karoti, evameva kho mahārāja paññā uppajjamānā avijjandhakāraṃ viddhamseti vijjobhāsaṃ janeti, ñāṇālokaṃ vidamseti, pākātāni ariyasaccāni karoti. evaṃ kho mahārāja obhāsanalakkhaṇā paññā”ti. (Milinda pañhā-38; Abhi-Com-1-165,166)

= The nature of distinguishing knowledge is called **wisdom** (*paññā*). Which would be distinguished by knowledge is that — in the aspect of *Abhidhamma*, the Four Noble Truths would be distinguished that all *dhamma* found in three worlds among 31 realms, except the craving (*tahnā*) are the Noble Truth of Suffering, etc. while in the aspect of *Suttanta*, it would be distinguished that those *dhamma*, birth (*jāti*) etc., are the Noble Truth of Suffering etc. In other words, in the olden days commentary called *Mahā atṭhakathā*, it had been explained that the nature which is capable of distinguishing is called the wisdom (*paññā*). How it would be capable of distinguishing is that — it is distinguishable as *anicca* (impermanence), *dukkha* (suffering), *anatta* (non-self).

PAGE 511

Due to ability to suppress the ignorance called wrong knowing resulting in the meaning as occurrence of chief in penetrative knowing on the Four Noble Truths, that wisdom is called the controlling faculty (*indriya*). In other words, due to ability to occur controlling factor of knowing and seeing on the Four Noble Truths, it is designated as

controlling faculty (*indriya*). That wisdom has both the characteristic, the nature of showing in order to distinguish true nature of the object and the characteristic, “thorough distinguishing”.

For example — When the oil-light is shined at night in dark house covered by four walls, the darkness which is capable of blinding the normal eye would be ceased, and the light shines apparently. Similarly to this example, the wisdom (*paññā*) has the characteristic shining in order to distinguish the real nature of object as oil-light. There is no light similar to the light of wisdom. It is right. If the person with *vipassanā* knowledge practices in sitting position, ten thousand-fold world systems can be shined by single light. [It refers to the light (*obhāsa*) belongs to ten kinds of *upakkilesa dhamma* of *vipassanā*. (*Mūlaṭī*-1-89)] Therefore, (in Pāli Text of *Milinda pañha*) the most Venerable *Nāgasena* Thera explained as follows: —

“Royal devotee the great king ... a man brings an oil-light into the house with full of darkness; as the oil-light which had been brought destroys the darkness, causes to occur the light, shows the light obviously, makes the colour-object easy to see, similarly, if the wisdom would be occurred, ...

1. it is capable of destroying the darkness called ignorance (*avijjā*),
2. it causes the light called wisdom (*vijjā*),
3. it shows apparently the ray called knowledge,
4. it makes the Noble Truths easy to be seen.

Royal devotee the great king ... thus the wisdom (*paññā*) has the characteristic shining in order to distinguish the real nature of object as oil-light”, said by the Venerable *Nāgasena* Thera. (*Abhi-Com*-1-165,166)

Then in Sub-commentary of *Pacalāyamana Sutta*, *Sattaka Nipāta*, *Aṅguttara Nikāya*, it was explained that there are four kinds of lights of wisdom. After the most Venerable *Moggallāna* had ordained, and strenuously endeavoured in order to fulfil the obligation of *bhikkhu* in the forest near *Kallavālaputta* village, Magadha division, he sat down with sloth and torpor at the entrance of corridor, due to presence of fatigue by walking throughout seven days. At that time the Buddha came to there and preached on seven ways of rejecting sloth and torpor. Here it would be presented an excerpt relating to light, number 6, how to reject torpor (*middha*).

PAGE 512

3.12.B. An excerpt of *Pacalāyamāna Sutta*

no ce te evaṃ viharato taṃ middham pahīyetha, tato tvam moggallāna ālokasaññam manasi kareyyāsi, divāsaññam adhiṭṭhaheyyāsi, yathā divā tathā rattim yathā rattim tathā divā, iti vivaṭena cetasā apariyonaddhena sappabhāsam cittam bhāveyyāsi. ṭhānam kho panetaṃ vijjati yaṃ te evaṃ viharato taṃ middham pahīyetha. (Aṅg-2-463)

= *Bhikkhu Moggallāna* ... unless the torpor can be avoided for you even by seeing directions with planets in this way, you must develop the perception of light (*āloka saññā*) due to inability to avoid torpor in that way. You must develop similarly for the night as day-time. You must develop similarly for the day as night-time. Thus the consciousness with the shining light which lacks any kind of circumstantial webs and torpor, must be developed. For you, by developing in this way, it is absolute certainty there will be avoiding the torpor. (*Aṅg*-2-463)

3.12.C. Perception of light (*āloka saññā*)

ālokasaññanti middhavinodanaālokasaññam. divāsaññanti divātisaññam. yathā divā tathā rattinti yathā divā ālokasaññā adhiṭṭhitā, tathā nam rattampi adhiṭṭhaheyyāsi. yathā rattim tathā divāti yathā ca te rattim ālokasaññā adhiṭṭhitā, tathā nam divāpi adhiṭṭhaheyyāsi. sappabhāsanti dibbakkhuñāṇatthāya sahobhāsam. (Aṅg-Com-3-174)

ālokasaññam manasikareyyāsīti divā vā rattim vā sūriya-pajjota-canda-maṇiādīnam ālokaṃ “āloko”ti manasikareyyāsi, citte ṭhapeyyāsi. yathā te subhāvitālokakasiṇassa viya kasiṇāloko yadicchakaṃ yāvadicchakaṇca so āloko rattiyam upatīṭṭhati, yena tattha divāsaññam ṭhapeyyāsi, divā viya vigatathinamiddho bhaveyyāsīti. pa. sahobhāsanti saññānobhāsam. thinamiddhavinodanaālokopi vā hotu kasiṇālokopi vā parikammālokopi vā, upakkilesāloko viya sabboyam āloko ñāṇasamuṭṭhānovāti. (Aṅg-ṭī-3-177,178)

The meaning of those commentary and sub-commentary is as follows: —

The *meditator* who wants to attain super-psychic-knowledge, such as divine eye (*dibba cakkhu abhiññāṇa*), must fulfil eight absorptions for eight kinds of *kasiṇa*, from earth-*kasiṇa* to white-*kasiṇa*, previously. Those 8 kinds of absorptions on 8 kinds of *kasiṇa* must be thoroughly ground by means of fourteen modes (*cudda sākāra*) (see *Visuddhi-2-2*). After it had been ground thoroughly in that way, the *meditator* who wants to attain divine eye must practise in order to ready for such situation which is capable of leading to attain divine eye by means of thorough modes on the fourth absorption with the *kasiṇa* object which is the fundamental factor of that super-psychic-knowledge. After it had been practised in this way, any kind of *kasiṇa* among three kinds called fire-*kasiṇa*,

PAGE 513

white-*kasiṇa*, light-*kasiṇa*, must be extended in order to reach the field of neighbourhood concentration. In this case, it had been explained that ...

“imesu ca pana tīsu āloka kasiṇam yeva seṭṭhataram. (Visuddhi-2-58)

= “Among these three kinds of *kasiṇa*, only the light-*kasiṇa* is the supreme one in order to attain divine eye”. The *meditator* who wants to develop perception of light must take into heart as “*āloka* (light)”, “*āloka* (light)” etc. by taking the object of sunlight, moonlight, blazing fire, the shining light of ruby, etc. When circular shape of light occurs after changed from preliminary object of light at the beginning, it must be spread out those lights on ten directions of desired range with the result that the efficiency of light will become stronger gradually. When the efficiency of light becomes strong in that way —

“ettha āloko hotūti yattakam ṭhānam paricchindati, tattha āloko tiṭṭhatiyeva”.

(*Visuddhi-2-58*)

= it must be perform strong determination as “many the light occurs within this range”, etc. Thus such range would be separated. Within that range, the light would be occurred really. (*Visuddhi-2-58*)

“divasampi nisīdittvā passato rūpadassanam hoti” (Visuddhi-2-58)

For the person with super-psychic-knowledge, who is observing throughout day, the seeing of colour-objects would be occurred really. (*Visuddhi-2-58*)

In *Pacalāyamāna Sutta* mentioned above, the Buddha instructed the most Venerable *Moggallāna* to develop and perform strong determination on the perception of light that is shining throughout day and night continuously. Then the Buddha continued to explain that if the perception of light would be taken into heart in that way, the sloth and torpor that are retardable factors to take the object of practice, will be removed consequently. That kind of light is called “*thinamiddha vinodana āloka*” = the light which is capable of removing sloth

and torpor”, indeed. So as to relate that instruction, the sub-commentator of *Aṅguttara nikāya* explained on four kinds of lights of wisdom (= lights of knowledge).

parikammālokopi vā, upakkilesāloko viya sabboyam āloko ñāṇasamutṭhānovāti.

(*Aṅg-tī-3-178*)

It is explained that there are four kinds of lights of knowledge, viz,

(1) *thina middha vinodana āloka*,

(2) *kaṣiṇāloka*,

(3) *parikammāloka*,

(4) *upakkilesāloka*.

PAGE 514

“upakkilesāloko viya sabboyam āloko ñāṇa samutṭhānova”. (*Aṅg-tī-3-178*)

= “As the light called *upakkilesa*, which is the cause of defilement of *vipassanā* knowledge occurring in *udayavaya* stage is caused by *vipassanā* knowledge, those all kinds of lights mentioned above are caused by knowledge”, explained in sub-commentary, *Aṅg-tī-3-178*.

(3.12.C.i) *thina middha vinodana āloka*

“iti vivaṭena cetasā aparīyonaddhena sappabhsam cittam bhāveyāsi”. (*Aṅg-2-463*)

= It must be developed the mind with the shining light but lacking torpor and circumstantial webs anymore. (*Aṅg-2-463*)

Thus the Buddha instructed Venerable *Moggallāna* to develop the mind with the light (= *sappabhsam cittam*). Those words, “*sappabhsam cittam*”, is commented in commentary as follows: —

“sappabhsanti dibbacakkhu ñāṇatthāya saḥobhāsam”. (*Aṅg-Com-3-174*)

= It must be developed the **mind with the shining light** in order to attain divine eye (*dibba cakkhu abhiññāṇa*). Therefore it should be recognized on the fact that in this *Pacalāyamāna Sutta*, “the light which is capable of removing sloth and torpor” = *thina middha vinodana āloka*, is a kind of light which is developed for the purpose of divine eye or it is a kind of light produced by the mind associating with the knowledge of divine eye. Further explanations can be found in Pāli Text of *Vibhaṅga* and it’s commentary as follows: —

thinamiddham pahāya vigatathinamiddho viharati ālokasaññī sato sampajāno. (*Abhi-2-253*)

“ālokasaññī”ti tattha katamā saññā, yā saññā sañjānanā sañjānitattam, ayam vuccati saññā. ayam saññā ālokā hoti vivaṭa parisuddhā pariyodātā, tena vuccati “ālokasaññī”ti. (*Abhi-2-263,264*)

ālokasaññīti rattimpi divāpi diṭṭhālokasañjānanasamatthāya vigatanīvaraṇāya parisuddhāya saññāya samannāgato. (*Abhi-Com-2-353*)

ālokā hotīti sappabhā hoti. nirāvaraṇatṭhena vivaṭa. nirupakkilesatṭhena parisuddhā. pabhassaratṭhena pariyodātā. (*Abhi-Com-2-354*)

It must be taken into heart as “light, light (*āloka*)”, by seeing any kind of light, such as sunlight, moonlight, the shining light of ruby, blazing fire, etc. It must be taken into heart any kind of light which can be available in proper time and proper way. Developing shining light of light-*kaṣiṇa* would be well situated at night whenever and wherever he likes as well developed light-*kaṣiṇa*. At that time, that *meditator* must keep in mind that shining light as the perception of shining light

PAGE 515

occurring in daytime. The perception of light must be thoroughly developed throughout night time as well as sloth and torpor are avoiding in daytime. It means that the meaning of “*āloka saññī* = perception of light”, is the fact that — it would be fulfilled with circumstantial purified perception, which is capable of memorizing the sunlight occurred in daytime even though in night time, which is lacking hindrances of sloth and torpor totally.

This perception has not only the shining light but also occurrence of lacking in any kind of hindrances called *nīvaraṇa* with the result that it is uncovered due to occurrence of ability to take into heart the object of light. Due to reaching into the field of neighbourhood concentration in this stage, those impurities called hindrances are removed totally and those defilements which have the same depended factors of hindrances are also far from him. Those impurities of defilements are unwholesome *dhamma* which are capable of making dirtiness of mind. Due to absence of impurities of defilements, the mind of meditation is circumstantially purified. Due to presence of brilliant shining light it is circumstantially clear. (*Abhi-2-253,263,264; Abhi-Com-2-354*)

This preaching refers to “*thina middha vinodana āloka*”, which can be produced by mind of meditation at the field of neighbourhood concentration, before the full concentration of first absorption, in the continuum of *bhikkhu* who is practising light-*kaṣiṇa*. Therefore it should be recognized on the fact that those shining lights which are producing during the neighbourhood concentration of the first absorption that has the object of light-*kaṣiṇa*, are also designated as “*thina middha vinodana āloka* = **the light which is capable of removing sloth and torpor.**”

(3.12.C.ii) *kaṣiṇāloka*

The practice of light-*kaṣiṇa* (*āloka-kaṣiṇa*) which is the proximate cause of divine eye has also ability to produce light. It is a way of practice called *kaṣiṇa* at which the sign of light is taken as object and developed frequently. Then the shining light is present in all kinds of super-psychic-knowledge including divine eye and all remaining *kaṣiṇas*, which are fundamental factors of *vipassanā* knowledge, respectively. When it would be reached into sign of full concentration, all circular objects of *kaṣiṇa* usually become brilliant bright. Especially, the fire-*kaṣiṇa*, white-*kaṣiṇa* and light-*kaṣiṇa* have greater efficiency in producing shining light actually. However, in this case, with regarding to the phrase, “*sabboyam āloko ñāṇa samutṭhānova* = all kinds of lights are produced by knowledge”, it should be recognized on the fact that those lights are also produced by knowledge associating with the absorption of *kaṣiṇa*. Then it can be appeared a question whether or not the light of *kaṣiṇa* is produced by knowledge.

kevalañhi samādhilābhino upatṭhānākāramattam saññajametam. (*Visuddhi-1-122*)
= This sign of full concentration of *kaṣiṇa* is a kind of sign which is produced by pure perception of practice (*bhāvanā saññā*) only, which is merely mode of appearance in the knowledge of *meditator* who attains the neighbourhood concentration.

PAGE 516

According to above explanations, due to presence of perception of practice, the sign of full concentration of *kaṣiṇa* occurs consequently and then the perception of practice can not be occurred as a single perception uniquely but associating with the knowledge simultaneously. It can be occurred only in the continuum of *meditator* who attains the neighbourhood or full concentration and then those concentration of neighbourhood and full absorptions and knowledge occur together with in the same mind moment. It should be recognized on the fact that it would be commented emphatically on the perception (*saññā*)”.

Therefore it should be recognized on the fact that the shining light produced by taking the object of sign of full concentration of *kaṣiṇa*, is designated as “*kaṣiṇāloka*”.

(3.12.C.iii) *parikammāloka*

There are two kinds of *parikammāloka*, viz, the *parikamma* which is the fundamental factor of super-psychic-knowledge and the *parikamma* which is the fundamental factor of absorption, respectively.

tattha ukkāloko viya parikammakāle kaṣiṇāloko. (Visuddhi-2-58)

= In that example, by the time making preliminary object (*parikamma*) which is the fundamental factor of super-psychic-knowledge, should be recognized as “the blazing fire of grill”.

Above explanation can be found in the Section of *Dibba cakkhu abhiññāṇa*. In this case, thorough grinding by fourteen modes on eight *kaṣiṇa* objects which are fundamental factor of divine eye, is also a kind of preliminary object (*parikamma*). Then the circular shape of light-*kaṣiṇa* or any other *kaṣiṇa*, is developed by spreading it out up to reach the field of neighbourhood concentration for the purpose of divine eye. It is also designated as preliminary object just before the impulsion of super-psychic-knowledge arises. During that moments of preliminary object, the light is present really.

The next kind is the preliminary object which is fundamental factor of absorption. The practice is performed by taking the object of any circular shaped, such as earth-*kaṣiṇa*, light-*kaṣiṇa*, etc. The circular shape of natural earth or light through which a such kind of practice is developed as it's object and then that kind of practice is designated as “*parikamma bhāvanā*” (= preliminary practice) and those signs of circular shapes are called ***parikamma nimitta*** (= preliminary sign).

When that any kind of *kaṣiṇa* object is taken as object by shutting and opening the eye alternatively, for such time, that sign is kept in mind well. It appears obviously in the mind-door as well as it is seen by natural eye. That object seen obviously in the knowledge is designated as *uggaha nimitta* (= sign of preliminary concentration). Due to ability to take well on previous *parikamma nimitta* by mind, it is designated as ***uggaha nimitta***. That way of practice is called *parikamma bhāvanā* resulting in the occurrence of *parikamma samādhi* (= preliminary concentration) only. However, the preliminary concentration which takes the object of this *uggaha nimitta* is subtler and stronger than the preliminary concentration which takes the object of *parikamma nimitta*.

When the *meditator* who has concentrated mind with preliminary concentration by taking the object

PAGE 517

of *uggaha nimitta*, continues to fulfil the practice for one time a kind of sign, which is the same size and shape of that *uggaha nimitta* situates and firmly fixed in the mind. It appears obviously and it is more brilliant that *uggaha nimitta* about many hundreds times. It is designated as *paṭibhāga nimitta* (= sign of full concentration). The practice which is developed by taking the object of sign of full concentration is designated as *upacāra bhāvanā* (neighbourhood practice) and that kind of concentration is also designated as *upacāra samādhi* (= neighbourhood concentration).

Before it is reached into the field of neighbourhood concentration, the shining light usually appears, due to the knowledge associating with preliminary concentration (*parikamma samādhi*) which is quite adjacent to neighbourhood absorption. Those kinds of lights are designated as *parikammāloka* (the light produced by preliminary concentration). It

should be recognized on the fact that those preliminary concentration of remaining meditation subjects in *samatha* stage are also capable of producing lights similar to *kasina*-object. It is absolutely certain the light will be produced in higher concentrations, neighbourhood and full absorptions with regarding to *Nimitta Sutta* that will be continued to present later.

In the practice of mindfulness of breathing, there are also three kinds of signs, preliminary sign (*parikamma nimitta*), neighbourhood sign (*uggaha nimitta*) and sign of full concentration (*paṭibhāga nimitta*). Preliminary concentration (*parikamma samādhi*) that is taking the object of neighbourhood sign and those concentrations which are taking the objects of sign of full concentration, can produce the shining light really.

In the *Mahāṭṭhā* it is explained that by the time the preliminary and neighbourhood concentrations are occurring before the full absorptions of various meditation subjects, are also designated as “*parikamma*”.

Explanation of *Mahāṭṭhā*

ito pubbe parikammānanti nānāvajjanavīthiyaṃ parikammānam. (*Mahāṭṭhā*-1-161)

One kind of consciousness of impulsion of neighbourhood concentration of sensuous sphere, which is adaptable to occur the impulsion of full absorption called “*mahaggata*”, is designated as *parikamma*. This explanation refers to impulsion of neighbourhood concentration of sensuous sphere, which is known as *parikamma* that belongs to cognitive process of full absorption.

However the real meaning of above quotation found in *Mahāṭṭhā* is as follows. —

ito pubbe parikammānam upari appanāyaca anulomato anulomānīti vuccanti. (*Visuddhi*-1-134)

= Those impulsions of neighbourhood concentration of sensuous sphere, which belongs to cognitive process of full absorption, which is known as “*anuloma*”, carries out not only the function of preceding ‘*parikamma*’, but also to occur succeeding full absorption. Due to adaptability of both preceding *parikamma* and succeeding full absorption, those impulsions of sensuous sphere are designated as *anuloma* (= successive). (*Visuddhi*-1-134)

PAGE 518

With relating to the phrase, “*ito pubbe parikammānam* = preceding ‘*parikamma*’ of cognitive process of full absorption”, the sub-commentator (*Mahāṭṭhā* Sayadaw) explained that the preceding *parikamma* does not mean on an impulsion called *parikamma* which belongs to cognitive process of full absorption. All impulsions belongs to preceding cognitive processes with various advertences, before the cognitive process of full absorption occurs, are known as *parikamma* due to ability to provide the occurrence of impulsions of full absorption, explained by *Mahāṭṭhā* Sayadaw.

According to explanation of *Mahāṭṭhā*, it should be recognized the fact that all impulsions which had been occurred in preceding cognitive processes before the cognitive process of full absorption occurs, are known as “*parikamma*”.

Preceding cognitive process before cognitive process of full absorption arises, are those cognitive processes occurring in the fields of *parikamma samādhi* and *upacāra samādhi*. Due to presence of powerful supporting factor of those cognitive processes, cognitive process of full absorption would be occurred.

In this case, those cognitive processes with various advertences means numerous cognitive processes which had been occurred before cognitive process of full absorption arises. Those cognitive processes which are taking the object of sign of practice (*samatha nimitta*), such as, object of sign of full concentration of mindfulness of breathing etc, are

mind-door cognitive processes. Each cognitive process consists of specific kind of advertence as natural fixed law. With regarding to the words, “cognitive processes with various advertences”, it means not single process but numerous cognitive processes which are designated as “*parikamma*”. It should be recognized on the fact that the shining light produced by the knowledge which is associating with those impulsions called *parikamma* is called “*parikkammāloka*”.

(3.12.C.iv) *upakkilesāloka*

There is a kind of light called *obhāsa* which will be presented in the section of *udayabbaya ñāṇa*. It is also known as *upakkilesāloka*. (It will be explained in detail in Section nine, Volume V.)

With regarding to explanation found in *Aṅguttara-ṭīkā*-3-178, “all kinds of lights are produced by knowledge as the light of *upakkilesa*, that is impurity of *vipassanā* knowledge”, if one can accept the presence of light of *upakkilesa*, it must be accepted the fact that remaining three kinds of lights are also obviously present, due to ability to occur by knowledge only.

What is the light of knowledge?

There is a reasonable question that whether the light is present in mental *dharmā* or not and what is the light of wisdom or the light of knowledge? The answer can be found in the section of *upakkilesa*, *udayabbaya ñāṇa* stage, *Visuddhimagga*, *Mahāṭīkā*, Volume 2. It was explained on those shining lights produced by the knowledge of arising and passing away (*udayabbaya ñāṇa*). It should be

PAGE 519

recognized on the remaining lights in similar way.

vipassanobhāsoti vipassanācittasamutthitam, sasantatipatitam utusamutthānañca bhāsuram rūpam. tattha vipassanācittasamutthitam yogino sarīratthameva pabhassaram hutvā tiṭṭhati, itaram sarīram muñcitvā ñāṇānubhāvānurūpam samantato pattharatti, tam tasseva paññāyati, tena phutthokāse rūpagatampi passati. passantoca cakkhuvīññānena passati, udāhu manovīññānenāti vīmaṃsitabbanti vadanti, dibbacakkhulābhino viya tam manovīññānavīññeyyamevāti yuttam viya dissati. (Mahaṭī-2-428,429)

The meaning of above quotation of *Mahāṭīkā* is as follows. —

vipassanobhāsa* (= the light of *vipassanā* knowledge)** is the shining lights of colour object (rūpārammaṇa***) which are consisting in pure-octads produced by mind of meditation (*cittaja ojaṭṭhamaka rūpa*) and pure-octads produced by temperature (*utuja ojaṭṭhamaka rūpa*). It will be clear understood. — Every mind moment depending on physical base (*hadaya vatthu*) within the heart can produce numerous corporeal units called *cittaja ojaṭṭhamaka rūpa* with the nutriment (*ojā*) as eight factor. Those corporealities are incapable of occurring uniquely but a group called corporeal units (*rūpa kalāpa*). Unit or *kalāpa* is the smallest system of corporeal *dharmā* in the aspect of *Abhidhamma* (Noble philosophical doctrine) of the Buddha. It is about or smaller than the size of “*paramā* minute sub-particles” called “*paramānumyū*”. If each corporeal unit is analysed by knowledge in the aspect of ultimate reality, it consists of at least eight kinds of nature of corporealities, *pathavī*, *āpo*, *tejo*, *vāyo*, *vaṇṇa*, *gandha*, *rasa*, *ojā*, etc. Due to presence of *ojā* (nutriment) as eighth factor, it is designated as *ojaṭṭhamaka rūpa*. It is caused by mind and then it is called *cittaja rūpa*. (Sometimes, if the sound (*sadda*) is also present, the corporeal unit consists of nine kinds of nature of corporealities. In this stage, it is explained emphatically on those corporealities

produced by mind of *samatha* practice or *vipassanā* practice with the result that sound is omitted to explain.)

Among those eight kinds of nature of corporealities, the colour-object called *vaṇṇa*, if it is produced by mind of meditation (*samatha*) of *vipassanā*, is brilliant shining colour (*bhāsura rūpa*).

[Notes: Those concepts, “the birth consciousness can not produce corporeality” and “the death-consciousness of arahant can not produce corporeality”, are accepted by all commentators. However the concept that “whether remaining kinds of death-consciousness can produce corporeality or not”, is controversial in scriptures.]

That **brilliant shining colour** (*bhāsurarūpa*) is present in every corporeal units produced by mind and the more those corporeal units in number, the brighter in shining colour of those corporeal units.

PAGE 520

The brightness of colour object, therefore, depends on efficiency of the knowledge.

Those mental *dharmas* which are associating with the consciousness of (*samatha*) *vipassanā* practice are generally, 34 mind and mental concomitants. [Those are 34 in the first absorption, while 32 in the second absorption, 31 in the third absorption, 31 in the fourth absorption, respectively. The mental concomitant called compassion (*karuṇā*), would be included in the absorption of compassion, while the sympathetic joy (*muditā*) would be included in the absorption of *muditā*. It can be seen in Section 5, *Nāma kammattthāna*.] Among those mental *dharmas* the mental concomitant, knowledge (= wisdom) called *paññindare* is also included. It means that the brightness of colour object depends on efficiency of that knowledge.

[Notes: The efficiency of knowledge also depends on both present factors and fulfilled perfections (*pāramitā*) in previous lives, such as, (1) *sappurisūpanissaya* = associating with noble persons, the Buddha, etc., (2) *saddhammassavana* = listening to *dharmas* preached by noble persons, (3) *yonisomanasikāra* = wise attention, (4) *dharmānudhamma paṭipatti* = respectfully fulfilling those practices which are adaptable to nine kind of Supra-mundane *dharmas*, etc.]

Then each corporeal unit produced by mind consists of temperature (*tejo*) that is called “*utu*”. That temperature (*utu*) can give rise to new corporeal unit with the nutriment as eight factor. Depending on efficiency of knowledge of practice, each temperature or fire-element within corporeal unit produced by mind, is capable of producing many generations of corporeal units called *utuja ojaṭṭhamaka kalāpa* successively. The colour objects (*rūpārammaṇa*) within those corporeal units are also brilliant shining (*bhāsura rūpa*) of which the brightness depends on efficiency of knowledge. Those corporeal units produced by temperature (*utuja rūpa*) are designated as *sasantatipatita utusamutṭhāna* = corporealities produced by temperature, which fall in the continuum of oneself.

[Notes: With regarding to the phrase, “*sasantatipatita utusamutṭhāna*” = “corporealities produced by temperature, which fall in the continuum of oneself”, it should not be assumed on the fact that those corporealities produced by temperature of remaining three kinds, i.e., *kammaja tejo* = temperature within corporeal unit produced by *kamma*, *āhāraja tejo* = temperature within corporeal unit produced by nutriment, *utuja tejo* = temperature within corporeal unit produced by temperature, are also included. In this case, it should be recognized the fact that it refers to only those corporealities produced by mind which is associating with knowledge of (*samatha*) *vipassanā* practice. However, for instance, as if a house is burned, surrounding houses adjacent to burning one are also burned readily,

similarly, when colour objects of corporeal units produced by mind are brilliant shining, those colour-objects of remaining corporeal units produced by *kamma*, nutriment,

PAGE 521

temperature, which are adjacent to the former, also become brilliant shine consequently. Due to quite close to each other, the light produced by various corporeal units usually occur continuously as shining rays. Therefore, it should be recognized on the fact that the phrase, “*sasantatipatita utusamuṭṭhāna*”, is explained in order to know the fact that it is now the light of corporealities produced by temperature, which fall in the continuum of “external (*bahiddha*)”.]

Among those two kinds of corporeal units produced by mind and temperature, the shining lights of colour-objects consisting in corporeal units produced by mind of meditation, situates inside the body only, while those lights of colour-object consisting in corporeal units produced by temperature spreads out both internally and externally up to ten directions of considerable range depending upon efficiency of the knowledge. Those shining lights are obvious in the knowledge of that *meditator* only. (It means that it is not obvious for surrounding persons.)

That *meditator* can see various kinds of colour-objects situating in all directions, which are contact with those shining lights. In this case, noble teachers suggested that it should be scrutinized whether it would be seen by seeing-consciousness or not, but by mind-consciousness (*mano viññāṇa*) only. According to the assumption of *Mahāṭīkā* Sayadaw, as those noble person with divine eye can see those colour-objects by mind-consciousness called super-psychic-knowledge of divine eye (*dibba cakkhu abhiññāṇa*), similarly, it would be reasonable the fact that those various kinds of colour-objects would be seen by mind-consciousness (of *samatha* and *vipassanā* practice). [These are the meaning of above quotations found in *Mahāṭīkā*.]

The proximate cause

In this case, the proximate cause of greater or lesser efficiency of knowledge is the concentration (*samādhi*) because the Buddha preached in *Aṅguttara Nikāya*-3-259, on the fact that “*samāhito yathābhūtaṃ jānāti passati*” = “the person with sufficient concentration knows and sees (*dhmma*) as they really are”. Therefore if one desires to attain the brighter light of knowledge, he must develop the higher concentration accordingly. Those kinds of taking into heart on sign of practice (*samatha nimitta*), such as object of sign of full concentration of mindfulness of breathing is a kind of wise attention (*yoniso manasikāra*), indeed.

It is metaphorical usage

According to above explanations of *Mahāṭīkā* Sayadaw, it should be recognized on the fact that the term, “**light of knowledge**”, is a kind of metaphorical usage only. It should be recognized that it is “*phalūpacāra*” usage in which the term, “light of *vipassanā* knowledge” (*samatha* knowledge), is

PAGE 522

applied metaphorically on causative knowledge by which the resultant corporeal units produced by that knowledge and successive generations of corporeal units produced by temperature, can produce shining lights from their colour-objects. In brief, it should be

recognized on the fact that there is no light in the knowledge but in corporeal *dhamma* produced by that knowledge only.

3.12.D. It can be seen on various kinds of colour objects

With regarding to above quotation of *Mahāṭṭkā*, “*tena phutṭhokāse rūpagatampi passatī*”, it means that the *meditator* can see various kinds of colour-objects situating in all directions, which are contact with those shining lights”, and the efficiency of that light is also explained in the commentary as follows: —

so kho panāyaṃ obhāso kassaci bhikkhuno pallaṅkaṭṭhānamattameva obhāsento uppajjati. kassaci antogabbhaṃ. kassaci bahigabbhampi. kassaci sakalavihāraṃ, gāvutaṃ, addhayaṃjanam, yojanam, dviyojanam, tiyojanam. pa. kassaci pathavīpalato yāva akaniṭṭhabrahmalokā ekālokaṃ kurumāno. bhagavato pana dasasahasīlokadhātum obhāsento udapādi. (Visuddhi-2-270)

= The range of that light occurs at only the surrounding of sitting place for some *bhikkhus*, while inside the room for some *bhikkhus*, and up to outside the room for some *bhikkhus*. It occurs around the whole monastery, about three miles (*gāvuta*), about six miles (*aṭṭha yojana*), about 12 miles (*yojana*), about 24 miles (*dvi yojana*), about 36 miles (*ti yojana*), and from the earth to the highest world of fine material plane (*a-kaniṭṭha brahma loka*), in various ranges for various meditating *bhikkhus* respectively. Those shining lights of the Buddha, indeed, would be occurred obviously all around ten thousands solar systems. (*Visuddhi-2-270*)

Relating to various ranges of those shining lights in various *meditators* had been explained by two examples in the *Visuddhimagga* as follows: —

Two meditating old *Mahā* Theras were staying inside one building with two spires, at Cittala Mountain, very famous monastery in Sri Lanka. The night when two old *Mahā* Theras discussed the *dhamma* relating with efficiency of light was one of moonless nights of *uposatha* days with total darkness due to coverings of clouds in eight directions.

By the time four kinds of factors,

- (1) midnight of moonless day,
- (2) inside the Cittala mountain forest monastery which situated in dense forest,
- (3) it was covered with heavy clouds throughout all directions,
- (4) lacking in any light, lightening etc.,

PAGE 523

were completed resulting in dense darkness was full of in that room. At that time, the younger *Mahā* Thera asked that —

bhante mayhaṃ idāni cetiyaṅgaṇamhi sīhāsane pañcavaṇṇāni kusumāni paññāyanti. (Visuddhi-2-270)

= “*Bhante* ... now it is obviously appeared in the knowledge of me that those flowers with five kinds of colours are present on the noble stage called ‘*sīhāsana*’ in the square of pagoda”.

sāyane tattha santharītāni pañcavaṇṇāni kusumāni, visadaññāssa obhāsena pharitatṭhāne rūpagatañca dibbacakkhuno viya paññāyanti. (Mahaṭṭ-2-429)

The building where *Mahā* Theras usually stay, consists of bedrooms surrounded by corridors and covered by double walls. Those shining lights produced by *vipassanā* knowledge of younger *Mahā* Thera penetrated both two walls and reached up to the square of pagoda. At the time of marvellous sunset, those flowers with five different colours were offered on the noble stage called *sīhāsana* in the square of pagoda with regarding to the

incomparable supreme noble qualities of the Buddha. For the *meditator* with clear *vipassanā* knowledge, various kinds of colour-objects which are situating a such place within the range of shining lights of knowledge contact as the noble person with divine eye. Therefore, the younger *Mahā* Thera asked that “*bhante* ... now it is obviously appeared in the knowledge of me that those flowers with five kinds of colours are present on the noble stage called *sīhāsana* in the square of the pagoda”. (*Mahāṭī*-2-429)

The elder *Mahā* Thera replied to younger one that —

“*anacchariyam āvuso kathesi, mayham panetarahi mahāsamuddamhi yojanaṭṭhāne macchakacchapā paññāyanti*” (*Visuddhi*-2-270)

= “*Āvuso* ... you have say so a little bit wonder at all! Now those fishes and turtles are obviously appeared within one *yojana* (about 12 miles) range of the great ocean”. (*Visuddhi*-2-270)

Here the *meditator* should not neglect the fact that the *meditator* can see both those flowers with five kinds of colours and fishes and turtles, which are situated in such place within the range of shining lights contact. Then it should be accepted the fact that one *meditator* can see various kinds of colour-objects by those shining lights produced by remaining consciousnesses of *samatha* practice, such as *kaṣiṇāloka*, *parikammāloka*, similar to those shining lights produced by *vipassanā* knowledge and super-psychic-knowledge (*abhiññāṇa*). This is because of the fact that although efficiency of lights may be varied depending on knowledge, all those lights have the same root, the knowledge only.

PAGE 524

Unless above explanations are well accepted, it should be continued to read about the fundamental basis of divine eye, *kaṣiṇāloka* and *parikammāloka* as follows: —

3.12.E. *kaṣiṇāloka-parikammāloka*

imesu ca pana tīsu ālokaḥkaṣiṇāmyeva seṭṭhataram. tasmā tam vā itaresam vā aññataram kaṣiṇaniddese vuttanayena uppādetvā upacārabhūmiyamyeva thatvā vaddhetabbam. pa. vaddhutiṭṭhānassa antoyeva rūpagatam passitabbam. rūpagatam passato paṇassa parikammassa vāro atikkamati. tato āloko antaradhāyati. tasmim antarahite rūpagatampi na dissati. athānena punappunam pādakajjhānameva pavisitvā tato vutṭhāya āloko pharitabbo. evam anukkamena āloko thāmagato hoti. (*Visuddhi*-2-58)

The meaning of above Pāli Quotation is as follows: —

The *meditator* who wants to see the world by divine eye must fulfil thorough grinding of the mind by means of fourteen modes on eight *kaṣiṇa*-objects, from the earth-*kaṣiṇa* to whit-*kaṣiṇa* through which eight kinds of absorptions, from the first absorption to the absorption of neither-perception-nor-non-perception, would be performed properly and fulfilling eight kinds of noble qualities of the fourth absorption and then it should be performed the occurrence of proximate cause of divine eye through any one of three *kaṣiṇa*-objects, i.e., the fire-*kaṣiṇa*, white-*kaṣiṇa* and light-*kaṣiṇa*. Then the circular shape of *kaṣiṇa*-object should be extended by making as the object of neighbourhood absorption but not that of full concentration. Unless it is extended up to the field of neighbourhood concentration, the impulsion of super-psychic-knowledge of divine eye can not be occurred in the continuum of *meditator*. If it is extended on the circular shape of *kaṣiṇa*-object up to the field of full absorption, the object of *kaṣiṇa*, which has dependence as fundamental basis of absorption (*pādakajjhāna*) only, can be occurred, but not super-psychic-knowledge which depends on that fundamental basis of absorption. That kind of *parikamma* (preliminary sign), which had been performed up to the field of neighbourhood concentration only has the efficiency to

occur impulsion of super-psychic-knowledge actually. [These explanations refers to only those persons with eight kinds of absorptions for ten kinds of *kasina*, who can thoroughly grind on those absorptions by fourteen modes.]

Among those three kinds of *kasina* objects, only the light-*kasina* is the supreme one for the purpose of attainment of divine eye. Therefore, any one of those three *kasina*-objects, the light-*kasina* or the fire-*kasina* or the white-*kasina*, must be extended up to the field of neighbourhood concentration.

The *meditator* should observe all kinds of colour-objects within the range of shining lights extended and contact with. For the *bhikkhu* who observes various colour-objects which are presenting outside

PAGE 525

the range of shining lights, the process (*vāra*) has reached beyond *parikamma*. (In this case, *parikamma* means neighbourhood concentration by taking the object of light-*kasina* which is extended to such range. If the light-*kasina*-object is given up to observe but various colour objects which are presenting outside the range of light-*kasina*, are observer one-sidedly, the concentration falls back and it can be said that the process has reached beyond *parikamma*. Due to occurrence of decreased concentration, the shining lights disappear and various colour-objects can not be seen. (Due to presence of efficiency of *kasina*āloka, various colour-objects can be seen in knowledge. Then the lights of *kasina* (*kasina*āloka), in turn, is also produced by efficiency of *parikamma* called the practice which is fulfilled in order to reach the field of neighbourhood concentration. Therefore unless *parikamma* is well performed both two processes called lights of *kasina* and seeing on various colour-objects will be doomed to failure.) At that time, that *meditator* must enter the neighbourhood concentration of absorption which is the fundamental basis of divine eye frequently and after emerged from it and then the range of shining lights must be extended again. It must be performed frequently on the process of entering and spreading the lights alternatively. If the *meditator* fulfils continuously in this way, the range of shining lights become larger and stable for long time. At that time —

such range of a place would be separated and strongly determined that “**may shining lights be occurred within this range**”. At that range of a place, the shining lights occurs continuously. The *meditator* can see various kinds of colour-objects throughout day really. (*Visuddhi*-2-58; *Mahāṭī*-2-61,62)

These explanations are very reliable evidence found in scriptures relating to the fact that various kinds of colour-objects can be seen by shining lights called *kasina*āloka, *parikammāloka*.

3.12.F. The reason of noble teachers who have no desire to accept shining lights

Some noble teachers have no desire to accept the fact relating to shining lights which are associating with either minds of meditation of *samatha* and *vipassanā* or wisdom associating with those minds of meditation. The reason why they can not accept is that they rely on the following explanation found in commentary.

kim pana cittassa vaṇṇo nāma atthīti? natthi. (*Aṅg*-Com-1-45)
= Has the mind colour called *vaṇṇa*? No. (*Aṅg*-Com-1-45)

PAGE 526

With regarding to this explanation found in commentary, they have no desire to accept the presence of shining lights in mind of meditation of both *samatha* and *vipassanā*. However, above commentary explained with intended to show the fact that the mind is mental *dhamma* while the colour (*vaṇṇa*) is corporeal *dhamma*, resulting in lacking the colour in mind indeed. In this paper, it is not intended to say the mind has shining light but the latter can be called light of *samatha*, light of *vipassanā*, light of knowledge, resulting from the brightness of colour of corporeal units produced by mind of meditation and that of colour of corporeal units produced by temperature, as mentioned above. If the *meditator* has no desire to accept the brightness of colour of those corporeal units produced by mind and temperature, it should be continued to read the following *Sutta* preached by the Buddha himself.

3.12.G. *Adhicitta Sutta (nimitta sutta)*

adhicittamanuyuttena bhikkhave bhikkhunā tīṇi nimittāni kālena kālaṃ manasi kātābbāni. kālena kālaṃ samādhinimittam manasi kātābbam, kālena kālaṃ paggahanimittam manasi kātābbam, kālena kālaṃ upekkhānimittam manasi kātābbam. sace bhikkhave adhicittamanuyutto bhikkhu ekantaṃ samādhinimittamyeva manasi kareyya. tñānaṃ taṃ cittaṃ kosajjāya samvatteyya. sace bhikkhave adhicittamanuyutto bhikkhu ekantaṃ paggahanimittamyeva manasi kareyya. tñānaṃ taṃ cittaṃ uddhaccāya samvatteyya. sace bhikkhave adhicittamanuyutto bhikkhu ekantaṃ upekkhānimittamyeva manasi kareyya. tñānaṃ taṃ cittaṃ na sammā samādhiyeyya āsavānaṃ khayāya. yato ca kho bhikkhave adhicittamanuyutto bhikkhu kālena kālaṃ samādhinimittam manasi karoti, kālena kālaṃ paggahanimittam manasi karoti, kālena kālaṃ upekkhānimittam manasi karoti. taṃ hoti cittaṃ muduñca kammaniyañca pabhassarañca, na ca pabhaṅgu, sammā samādhiyati āsavānaṃ khayāya. (Aṅg-1-258)

(3.12.G.i) Complete translation of above *Sutta* can be seen in coming section 4 page 595, *rūpa kammatthāna*.

PAGE 527

(3.12.G.ii) The meaning of *adhicitta*

adhicittanti samatha vipassanā cittaṃ (Aṅg-Com-2-227)

(Aṅg-ṭi-2-198,199)

PAGE 528

= The wholesome consciousness which is occurred by fulfilling ordinary wholesome deeds, such as donation (*dāna*), virtue (*sīla*) of worldlings, is designated as consciousness (*citta*). Due to superior occurrence of those consciousnesses compared with that consciousness associating with ten kinds of wholesome deeds (*dasa kusala kammaṭṭhā*), both the consciousness of absorption called eight kinds of absorptions, which are fundamental basis of *vipassanā* practice and the consciousness of *vipassanā* practice are designated as the supreme consciousness (*adhicitta*).

anuyutta: — Repeated endeavouring in order to occur minds of meditation of *samatha* and *vipassanā* by means of both occurrence of inexperienced ones and improvement of experienced ones, is called “*anuyutta*”.

The *bhikkhu* who fulfils strenuously for those minds of meditation can be designated as “*anuyutta bhikkhu*”. After came back from alms round and took the lunch, both the *bhikkhu* who brings witting cloth and leaves with intention that “it will be practised on *bhikkhu*’s obligation in any of the base of tree or in the forest or in the gully”, and the *bhikkhu* who removes dry grass and leaves around sitting place can be designated as the person who fulfil mind of meditation of *samatha* and *vipassanā* called “*adhicitta*”. Although the full absorption has not been attained, the *bhikkhu* who repeatedly tries to develop the fundamental practice after hands and legs were cleaned out, can also be designated as the person who fulfil mind of meditation of *samatha* and *vipassanā* called “*adhicitta*”. Due to attainment of that degree of improvement, that *bhikkhu* can be designated as “*adhicitta manuyutta bhikkhu*”, indeed. (*Aṅg-tī-2-198,199*)

3.12.H. *pabhassara-pariyodāta*

The word, “*pariyodāte*”, which is one of eight noble qualities of the fourth absorption, is explicit in *Visuddhimagga* as follows: —

“*parisuddhattāyeva pariyodāte, pabhassareti vuttam hoti*”. (*Visuddhi-2-5*)

iti = In this way,

hoti = it would be,

vuttam = interpreted that,

parisuddhattāyeva = due to occurrence of merely circumstantial purification,

pariyodāte = when it had been circumstantially purified,

pabhassare = when it has brilliant shining.

Above translation is achieved in accordance with Pyi Sayadaw. With regarding to this explanation, it should be recognized that *pariyodāta* and *pabhassara* are synonyms. Therefore it can be firmly

PAGE 529

decided that the Supreme Enlightened Buddha preached the fact those consciousnesses of practices of both *samatha* and *vipassanā*, called *adhicitta*, have brilliant shining lights (*pabhassara*) in this *Adhicitta Sutta* called *Nimitta Sutta*. In this case, it should be recognized that it is also “*phalūpacāra*” usage explained in previous page (521).

Those significant reasons “why long explanations whether those consciousnesses of both *samatha* and *vipassanā* have shining lights or not, are presented” in this paper are that —

tasamim antarahite rūpagatampi na dissati. (*Visuddhi-2-58*)

= It should be noticed emphatically on the explanation of commentary that — “when that shining lights disappear various colour-objects can not be seen”. That word plays significant

role in attainment of *nāma rūpa pariccheda ñāṇa*, *paccaya pariggaha ñāṇa* and *vipassanā ñāṇa*, indeed. It will be clear understood —

All corporeal *dhamma* always occur as corporeal unit under the natural fixed law. Corporeal unit, in turn, is the smallest system in the aspect of conventional reality (*voḥāra sacca*). Each corporeal unit consists of at least eight kinds of nature of corporealities in the aspect of ultimate reality (*paramattha sacca*), viz, *pathavī* (the earth-element), *āpo* (water-element), *tejo* (fire-element), *vāyo* (air-element), *vaṇṇa* (colour), *gandha* (smell), *rasa* (taste) and *ojā* (nutriment). If *jīvita* (life-faculty) is included, there are nine kinds of nature in some corporeal units, while if clear-sensitivity or sex-corporeality is included, there are ten kinds of nature of corporealities. Thus, corporealities always occur as a group, corporeal unit (*rūpa kalāpa*), under natural fixed law.

The *meditator* can see those colour-objects of corporeal units or those corporeal units with colour-objects due to mind of meditation of *samatha* and *vipassanā*. When those shining lights disappear he can see neither those colour-objects nor those corporeal units with colour-objects consequently. Then it is unable to discern those ultimate natures of corporealities within corporeal unit actually, resulting in failure to know and see the ultimate essence of corporeal *dhamma*. Unless the field of ultimate sense is penetratively reached, the compactness (*ghana*) of corporeality can not be broken down and the knowledge of non-self (*anatta ñāṇa*) can not be occurred. Unless the knowledge of non-self would be appeared, it can not be reached to the Noble Path-Knowledge resulting in failure to face with *nibbāna* consequently.

Then unless those corporeal *dhamma* called un-derived (*bhūta rūpa*) and derived corporealities (*upādā rūpa*) are penetratively known and seen up to the field of ultimate reality, those mental *dhamma* which are occurring depending upon those corporeal *dhamma*, can not be known and seen. This is because of the fact that only when depended corporeality and object or specific door and specific object can be discerned simultaneously, can the *meditator* know the mental *dhamma* of sensuous sphere as they really are. (With regarding to the explanation, *vattārammaṇānam*)

PAGE 530

pariggahitatāya, M-Com—3-60. It will be seen in detailed in Section V, Volume 2, *nāma kammaṭṭhāna*.)

When those mental *dhamma* of sensuous sphere are kept in mind, five clear-sensitivities of corporeal *dhamma*, viz., eye, ear, nose, tongue, body, and clear-sensitivity of mental *dhamma* called *bhavaṅga* mind-clearness, play essential important role in the way of practice. Unless those six sense-doors called six clear-sensitivities-elements are known and seen as they really are, those mental *dhamma* which are occurring depending upon six-sense-doors will not be discerned anymore. Actually those six-clear-sensitivities are only the *dhamma* which can be known and seen by the help of efficiency of shining lights produced by mind of meditation of *samatha* and *vipassanā*.

Unless even corporeal and mental *dhamma* are distinguished by penetrative knowledge, it can not be attained *nāmarūpapariccheda ñāṇa*. In the continuum of *meditator* who has not attained that knowledge yet, the successive knowledge, *paccaya pariggaha ñāṇa* (distinguishing on causal relationship) is very far from him resulting in lacking in the occurrence of true *vipassanā* knowledge indeed. This is because of the fact that only when those ultimate natures of *saṅkhāra dhamma* had been discerned by three general characteristics, can the *vipassanā* knowledge be occurred successively.

aniccādivasena vividhehi ākārehi dhamme passatīti vipassanā. (Abhi-Com-1-175)
pubbe kho susima dhammaṭṭhitiñānam, *pacchā nibbāna ñānam*. (Sam-1-344)

= *Susima* ... the *vipassanā* knowledge called *dhammaṭṭhiti* which situated well on the process of impermanence, suffering, non-self of *saṅkhāra dhamma*, occurs previously. The Noble Path-Knowledge which takes the object of *nibbāna* occurs succeeding. (*Sam*-1-344)

Because the Buddha preached in this way, the Noble Path-Knowledge can be occurred by successive supporting conditions, such as, *upanissaya* (dependence condition) of *vipassanā* knowledge, actually. The most Supreme Eternal Peace called *nibbāna*, therefore, is the *dhamma* which is not deserving to expect for those persons who lacks any kind of *vipassanā* knowledge which takes the object of ultimate essence of *saṅkhāra dhamma* in his continuum.

As a traveller who travels in dense darkness at night requires only light to reach desired place,

PAGE 531

similarly, a person who is shrouded by dense darkness of ignorance (*avijjā*), requires shining lights, which is capable of showing Four Noble Truths as they really are, in order to reach *nibbāna*. That shining light means the light of wisdom or knowledge as mentioned above frequently.

It should be understood the reason why the light of knowledge is essential but it is not to be attached strongly on those lights actually.

It would be presented about the light in detail with regarding to the Buddha's encouragement in various *Suttas*, such as *Mahāassapura Sutta* etc., that the meditating *bhikkhu* who wants to know and see Four Noble Truths must fulfil the fourth absorption with eight noble qualities. Among those eight noble qualities, one factor, "when it is brilliant shining (*pariyodāte*)", is also included as a crucial one. If a *meditator* can accept the reason why the Buddha preached on this factor, "*pariyodāte*" as crucial one, the way of practice leading to *nibbāna* will be straight forward for him indeed.

If the *meditator* wants to improve *vipassanā* practice through any kind of concentration, either neighbourhood concentration which is designated as both *sadisūpacāra* (= indirect usage due to presence of same degree of concentration with neighbourhood one, as mentioned in Section 2) and direct usage (= real neighbourhood concentration) or any other kinds of full concentration rather than the concentration of fourth absorption, as the fundamental basis of *vipassanā* practice, it must be fulfilled those neighbourhood concentration or full concentration with more or less certain degree of eight noble qualities due to ability to produce brilliant shining lights of those consciousnesses of *samatha* practice really.

3.12.I. Confusing between various lights

It would be assumed that the *meditator* can accept the preaching that shining lights can be produced by mind of meditation of both *samatha* and *vipassanā*. Here it will be continued to present confusing between various lights.

When any kind of practice would be begun, some *meditator* usually practise it without differentiating between *samatha* and *vipassanā*. When the concentration had been developed moderately the shining lights usually appear resulting in occurring great impression on himself that he reaches up to *udayabbaya ñāṇa* (the knowledge of arising and passing away).

As mentioned repeatedly above, *udayabbaya ñāṇa* is a kind of knowledge which can be occurred in the continuum of *meditator* who had attained *nāmarūpapariccheda ñāṇa* due to ability to discern up

PAGE 532

to the field of ultimate reality by breaking through three or four kinds of compactness (*ghana*) of corporeality and mentality respectively; who had attained *paccayapariggaha ñāṇa* (knowledge on the causal relationship) due to ability to keep in mind successive occurrence of causal *dhmma* and resultant *dhmma*; who is capable of discerning by knowledge which is penetratively reached up to momentary present (*khaṇapaccupanna*) when he performs *vipassanā* practice by means of three general characteristics of corporeal and mental *dhmma* occurring in three kinds of periods, i.e., past, future, present, and two kinds of continuums, internal and external alternatively.

It is not deserving to expect the attainment of *tīraṇapariññā* (full understanding on propagation of *vipassanā* knowledge) called *sammasana ñāṇa* and *udayabbaya ñāṇa* in the continuum of *meditator* who has not attained penetrative knowledge which is able to reach the field of ultimate reality due to inexperience to see corporeal units or due to inability to analyse to break down the compactness of corporeality although corporeal units had been seen; who has not penetrative knowledge which is able to reach the field of ultimate reality of mental *dhmma* due to inability to break down the compactness of mentality which occurs depending upon six clear-sensitivities that has not been seen anymore; who has not attained the knowledge of causal relationship (*paccayapariggaha ñāṇa*) due to accepting on such kind of assumption that “*vipassanā* practice should not be carried out for past, future and present but present period only”; who has not reached to the stage of *ñātāpariññā* (full understanding on objects) due to inability to keep in mind systematically on corporeality, mentality, causes and results, called *saṅkhāra dhmma*.

If one *meditator* who lacks full understanding on objects (*ñātāpariññā*), misleads himself that he had reached *udayabbaya ñāṇa* when shining lights appear during practising in such way, he will awfully miss to attain *nibbāna* in this very life. This is because of the fact that the Buddha preached in *Aparijānana Sutta* (*Sam*-2-249,250) that those sufferings of rounds of rebirth would be ceased only when all kinds of five aggregates which are clung (*upādānakkhandhā*), are known and seen by three kinds of full understanding (*pariññā*).

Therefore it should not be misled on those lights produced by any way of practice as the light of *udayabbaya ñāṇa*. It is noticeable that the consciousness of *samatha* practices can also produce shining lights indeed.

3.12.J. A reasonable question

If it is true that all consciousnesses of *samatha* and *vipassanā* practices have the efficiency of light, it is a reasonable question that why the light (*obhāsa*) is emphatically explained in the stage of *udayabbaya ñāṇa*. The answer is that — there are significant differences between the light produced by consciousness of *samatha* practice and the light produce by consciousnesses of *udayabbaya ñāṇa* and other *vipassanā* knowledges with the result that it is explained specifically in the stage of *udayabbaya ñāṇa* indeed. It should be continued to read explanations found in commentary as follows: —

PAGE 533

tattha obhāsoti vipassanobhāso. tasmim uppanne yogāvacaro “na vata me ito pubbe evarūpo obhāso uppannapubbo, addhā maggappattosmi phalapattosmī”ti amaggameva “maggo”ti, aphalameva ca “phala”nti gaṇhāti. tassa amaggaṃ “maggo”ti, aphalaṃ “phala”nti gaṇhato vipassanāvīthi ukkantā nāma hoti. so attano mūlakammaṭṭhānam vissajjtvā obhāsameva assādentō nisīdati. (Visuddhi-2-270)

Among those ten kinds of *upakkilesa dhamma*, which are impurities of *vipassanā* knowledge, “*obhāsa*” (= the light) are brilliant shining rays of colour-elements (*vaṇṇa dhātu*) of both corporeal units produced by mind of *vipassanā* practice, which are falling in the continuum of himself, and corporeal units produced by temperature called *utu samutṭhāna rūpa*, which are successive generations of preceding corporeal units produced by mind, indeed.

When those shining lights appear the *meditator* usually obsesses the fact “**this kind of light with this nature is inexperienced for me previously**”, the Path-Knowledge would be reached, the Fruit-Knowledge would be reached”, resulting in misleading to the light which is not-path as path, the light which is not-fruit as fruit actually. The way of practice called cognitive processes of *vipassanā* (*vipassanā vīthi*) of the *meditator* who obsesses the light which is not-path as path, the light which is not-fruit as fruit, is missing from the right course actually. By hiving up usual practice called *vipassanā*, the *meditator* is sitting and pleasing with shining lights. (*Visuddhi-2-270*)

In above explanations, the phrase which is emphatically intended to say is that — “**this kind of light with this nature is inexperienced for me previously**”. It means the fact that “this kind of light with this nature is inexperienced previously but none of any other lights. Good evidences can be found in explanations relating with remaining *upakkilesa* as follows: —

“*na vata me ito pubbe evarūpaṃ ñāṇaṃ uppannapubbam, evarūpā pīti, passaddhi, sukham, adhimokkho, paggaho, upatṭhānam, upekkhā, nikanti uppannapubbā. (Visuddhi-2-273)*

= This kind of *vipassanā* knowledge with this nature is inexperienced for me previously; this kind of *vipassanā pīti* with this nature, this kind of tranquillity (*passaddhi*), this kind of *vipassanā sukha*, this kind of *adhimokkha* = faith, this kind of effort, this kind of mindfulness, this kind of equanimity called *upekkhā* (= *vipassanupekkhā* + *āvajjanupekkhā*), this kind of attachment (*nikanti*) with this nature are inexperienced previously. (*Visuddhi-2-273*)

In above phrases, it means only this kind of *vipassanā* knowledge with this nature is inexperienced previously but none of any other *vipassanā* knowledge, indeed.

If one accepts the assumption that “**none of any other *vipassanā* knowledge is inexperienced**”

PAGE 534

previously”, it would be misinterpreted that even *sammasana ñāṇa* and immature *udayabbaya ñāṇa* has not been experienced previously.

Similarly it means the fact that this kind of *pīti, passaddhi, sukha, saddhā, viriya, sati, upekkhā* with this nature are inexperienced previously but none of any other *pīti, passaddhi, sukha, saddhā, viriya, sati, upekkhā* throughout the life.

Similarly, in the explanation on light (*obhāsa*), it is notably the fact that “**only this kind of light with this nature is inexperienced previously but none of any other lights**”, actually.

If it is so, the reason why the light (*obhāsa*) is emphatically explained in the stage of *udayabbaya ñāṇa* is that — it is emphatically and specifically explained on the light because it is the specific kind of light with quite difference from previous ones and it is capable of misleading to obsess as the supreme lights produced by Noble Path-Knowledge and Fruit-Knowledge.

ettha ca obhāsādayo upakkilesavatthutāya upakkilesāti vuttā, na akusalattā. (Visuddhi-2-273)

= Due to occurrence of depended basis of defilements (*upakkilesa vatthu*), it is preached on these light, knowledge, pleasurable interest, tranquillity, agreeable feeling, faith, effort, mindfulness, equanimity as *upakkilesa dhamma*. It should be recognized the fact that these are not unwholesome *dhamma* (*akusala dhamma*) indeed.

It should be recognized the fact that this light, etc. is emphatically and specifically preached with intention to know the facts that both as if those obsessions of these light etc., that ‘this is I’, ‘this is mine’, ‘this is myself’, ‘this is the Path’, ‘this is the Fruit’, etc., these lights, etc. are depended basis of *upakkilesa dhamma* called the craving (*tahṇā*), conceit (*māna*), wrong view (*diṭṭhi*), and as if it is sitting and pleasing with those lights, etc. but giving up the *vipassanā* practice, the way of practice of *vipassanā* has been missing from right one.

If the *meditator* had been fulfilled the concentration up to the fourth absorption and he wishes to improve the stage of purification of views (*diṭṭhi visuddhi*) through that concentration of fourth absorption as the fundamental basis of *vipassanā* practice, he should continue to practise in order to complete eight kinds of noble qualities of acquired concentration of fourth absorption, indeed.

PAGE-535

SECTION 4 MEDITATION ON CORPOREALITY

(rūpakammaṭṭhāna)

4.1 *Paññābhūmi-mūla-Sariravavutthāna* (discriminating on realm, fundamental and body of wisdom)

Pāli Quotation (Visuddhi-2-73)

Above *Pāli* quotation found in *Visuddhi Magga* is the answer of the question that how to practice and develop *vipassanā* knowledge as a brief account, of which the meaning is as follows.

1. *bhūmi* = Various principles of *dhamma* i.e, aggregates (*khandā*), bases (*āyatana*), element (*dhātu*), faculty (*indriya*), truth (*sacca*), dependent origination (*paṭicca samuppāda*), etc.. are called the realm of *vipassanā* knowledge (*vipassanā bhūmi*).
2. *mūla* = Two kinds of purification (*visuddhi*), i.e, the purification of virtue (*sīla visuddhi*) and the purification of consciousness (*citta visuddhi*) which is free from hindrances (*nīvaraṇa*), are called the fundamental (*mūla*) of *vipassanā* knowledge.
3. *sarīra* = Five kinds of purifications, i.e.,
 - (a) purification of view (*diṭṭhi visuddhi*) (=the discriminative knowledge on the corporeality and mentality = *nāmarūpa pariccheda ñāṇa*)
 - (b) purification by overcoming doubt (*kañkhāvitaraṇa visuddhi*) (=the discriminative knowledge on the causes and results (*paccaya pariggaha ñāṇa*))
 - (c) purification of what is path and not path (*maggā magga ñāṇa dassana visuddhi*) (= *sammasana ñāṇa* and immatured *udayavaya ñāṇa*)
 - (d) purification of the course leading to Path-knowledge (*paṭipadā ñāṇa dassana visuddhi*) (upper *vipassanā* knowledge)
 - (e) purification of the Path-knowledge (*ñāṇa dassana visuddhi*) are called the body of *vipassanā* knowledge (*sarira*).

Therefore, after learning by heart and scrutinize on various principles of *dhamma* called *vipassanā bhūmi*; and then two kinds of purification called *vipassanā mūla* has been fulfilled; and it should be developed and improved five kinds of purification called the body (*sarira*) of *vipassanā* knowledge successively. This is a brief account on “how to practice and develop *vipassanā* knowledge”. (*visuddhi-2-73*).

According to explanation of commentary, mentioned above, a such *meditator* who wants to attain *nibbāna*, must accept “way of practice called seven stages of purification (*visuddhi*)” without any exception, but with full of faith.

Various principles of *dhamma* called *vipassanā bhūmi* or the realm of *vipassanā* knowledge, should be studied systematically from teachers learned in scriptures previously.

Two kinds of purification, i.e., the purification of virtue and the purification of consciousness must be fulfilled in order to attain the fundamental *dhamma* of *vipassanā* knowledge, called *mūla*.

Page-536

4.2 The purification of virtue (*sīla visuddhi*)

There are four kinds of virtue, i.e.,

1. Restraint with disciplinary code (*pātimukkha samvara sīla*)
2. Restraint with regard to faculties (*indariya samvara sīla*)
3. Restraint with thoroughly purified livelihood (*ājhiva pārisuddhi sīla*)
4. Restraint with reflecting on use of four requisites (*paccaya sannissita sīla*)

The *meditator* must be fulfilled those four basic virtue previously.

4.2.1 Restraint with disciplinary code

In the preaching of disciplinary code (*vinaya*), there are various kinds of rules designated by the Buddha. Restraining with both fulfilling some designations that “it should be done and fulfilled in this case,” and abstaining to follow some prohibitions that “it should not be done in this case,” is called *pātimokkha samvara sīla*. Laymen devotees must follow at least five precepts called *pātimokkha samvara sīla*. If it is possible, eight precepts, nine precepts and ten precepts, must also be restrained for those persons.

4.2.2 Restraint with regard to faculties

Restraining of the mind by means of any kind of *samatha* or *vipassanā* practice continuously in order to prevent the invasion of unwholesome *dhamma* through six sense doors called eye-, ear-, nose-, tongue-, body- and mind-door, is called *indariyasamvara sīla*. It is impossible to fulfill this kind of virtue without any kind of practice. The *meditator*, therefore, must fulfill continuous practice by which taking the object of *samatha*, if he is still in the *samatha* stage. If the *meditator* develops concentration by the mindfulness of breathing (*ānāpānassati bhāvanā*), he must try to keep in mind on any sign of concentration such as sign of preliminary concentration (*parikamma nimitta*), sign of neighbourhood concentration (*uggaha nimitta*), sign of full concentration (*paṭibhāga nimitta*). If a such *meditator* is capable of *vipassanā* practice, he must take place continuous discernment on *saṅkhāra dhamma* by means of three general characters called *anicca*, *dukkha*, *anatta*, alternatively. This kind of virtue, *indariya samvara sīla*, can be thoroughly purified for only a person who become arahantship.

PAGE-537

4.2.3 Restraint with thoroughly purified livelihood

There are many rules related with the livelihood of *bhikkhus*. Abstaining from using four requisites which are obtained by misdeed, such as doing wonderful illusions, saying wonderful talk as astrology, persuasion to donate by showing any sign of bodily action, relationship to people by “way of give and take” etc., is called restraint with thoroughly purified livelihood (*ājhiva pārisuddhi sīla*).

For laymen devotees, abstaining from using materials which are obtained by misdeed of both bodily, such as killing, stealing, sexual misconduct and verbally, such as lying, slandering, harsh speech, flattering and earning by trading, farming etc., is called *ājhiva pārisuddhi sīla*.

4.2.4 Restraint with reflecting on use of four requisites

The wholesome volition (*kusala cetanā*) which is occurred by reflecting on use of four requisites during using four requisites, i.e., robes, foods, shelter, medicine, is called *paccaya sannissita sīla*. For arahant, indifferent volition (*kriyā cetanā*) is *paccaya sannissita sīla*.

The *meditator*, if he has fulfilled these four kinds of purified virtue, reaches to the stage of purification of virtue (*sīla visuddhi*)

tattha sīlavisuddhi nāma supārisuddham pātimokkha samvarādi catubbidham sīlam. (Visuddhi-2-222)

4.3 The purification of consciousness (*Citta Visuddhi*)

Cīta visuddhi nāma sapacārā aṭṭha samā pattiyo. (Visuddhi-2-222)

= Eight kinds of absorptions (*samāpatti*) including with neighbourhood absorption (=neighbourhood concentration) are called “the purification of consciousness” (*cittavisuddhi*). (*Visuddhi-2-222*)

Pāli Quotation (Mahāṭṭ-2-350)

PAGE-538

= The neighbourhood concentration can also be called the purification of consciousness because it is the fundamental of *vipassanā* knowledge like full concentration. The commentator, therefore, explained that eight kinds of absorptions including with neighbourhood concentration are called “the purification of consciousness”. (*Mahāṭṭ-2-350*)

Those eight kinds of absorptions including with neighbourhood concentration had been explained in detail in the portion of *samādhiniddesa* (detailed account on the concentration) which is regarded to consciousness. Therefore, it should be known and fulfilled eight kinds of absorptions including with neighbourhood concentration in accordance with the explanation found in *samādhiniddesa*. (*Visuddhi-2-222*)

In this case, “it should be known” (*veditabbā*) means the fact that it should be known by means of occurrence of eight kinds of absorptions including with neighbourhood concentration in the continuum of himself practically.

If it is known by means of occurrence in the continuum of himself, these eight kinds of absorptions, including with neighbourhood concentration are known by practical knowledge (*paccakkha ñāṇa*). Therefore, it means that “it should be known and fulfilled eight kinds of absorptions, including with neighbourhood concentration”. (*Mahāṭṭ-2-350*)

In other words, the phrase “it should be known” (*veditabbā*) means the fact that it should be feels the taste of absorption (*samāpatti*) after attained it.

It is right. It is not the situation of the purification of consciousness merely known about “the absorption”. Then if it is not the situation of the purification of consciousness, it is

not able to fulfil the upper stage of purification successively. It should be known in this way. (*Mahāṭṭ-2-350*)

According to explanations found in commentary and subcommentary, the *meditator* who wants to fulfil successive stages of purification, such as purification of view.. etc., must endeavour to fulfil the purification of consciousness after the purification of virtue. It should be noticed especially the fact that it is unable to reach the upper stages of purification without purification of consciousness has been fulfilled. In this work, the way of practice how to develop four kinds of absorptions of world of form, including neighbourhood concentration, through the mindfulness of breathing, had been presented systematically. The *meditator* who wants to fulfil the purification of view through the mindfulness of breathing, must develop the concentration either neighbourhood concentration or full concentration of any kind, up to the fourth absorption previously.

PAGE-539

4.4.1.1 The purification of view (*diṭṭhi visuddhi*)

- *tattha nāmarūpanam yāthāvadassanan diṭṭhivisuddhi nāma. (visuddhi-2-222)*

= Knowing and seeing the corporeality and mentality up to the field of ultimate reality by means of analytical knowledge as they really are, is called the purification of view (*diṭṭhi visuddhi*)

- *lakkhaṇa-rasa-paccupaṭṭhāna-padaṭṭhānavasena nāmarūpapariggaho diṭṭhivisuddhi nāma. (Abhidhammattha saṅgaha)*

= Discriminative knowledge on the corporeality and mentality by means of characteristic, function, manifestation and proximate cause is called the purification of view (*diṭṭhi visuddhi*). (*Abhidhammattha saṅgaha*)

4.4.2 Genreal rules for two kinds of *meditators*

Pāli Quotation (Mahāṭṭ-2-470)

= The beginning of the process taking to heart *vipassanā* on the corporeal *dhamma* is generally considered for *suddhavipassanāyānika* (SVY) person. The beginning of the process taking to heart on the mental *dhamma* is generally considered for *samathayānika* (STT) person. The term “*abhinivesa*” (the process of taking into to heart) means that the discriminative knowledge on the corporeality and mentality (*nāmarūpaparicchedañña*) which is previous work to be done before *vipassanā* practice. Therefore, previous process of keeping in mind (taking to heart) on the corporeal *dhamma* is called *rupeabhinivesa* (the beginning of the process of taking *vipassanā* on the corporeal *dhamma*). The previous process of keeping in mind (taking to heart) on the mental *dhamma* is called *arupe abhinivesa* (the beginning of the process of taking *vipassanā* on the mental *dhamma*). (*Mahāṭṭ-2-470*)

This is general rule for two kinds of *meditators*.

When STY person takes into to heart the corporeal and mental *dhamma* he is able to begin...

1. either on the mental *dhamma* or

2. on the corporeal *dhamma*, as he likes.

If STY person wants to take to heart mental *dhamma* first, the way of practice has been instructed in *Visuddhi Magga* as follows.

PAGE-540

Pāli Quotation (Visuddhi-2-222) two paragraph

STY person who has the vehicle of absorption or a such meditate who is called STY person because he usually practices *vipassanā* depending on neighbourhood concentration, when they wants to fulfil purification of view, must enter any kind of absorptions of either world of form (*rūpavacara*) or formless world (*arūpavacara*), except the absorption of neither-perception-nor-non-perception (*neva-saññā-nāsaññāyatana*) previously. Then he emerges from that absorption and distinguishes and keep in mind factors of absorption, such as *vitakka*, *vicāra* etc., and associated *dhamma*, such as *phassa*, *vedanā* etc., by means of characteristic, function, manifestation, proximate cause.

After distinguished and kept in mind those mental *dhamma*, it should be recognized separately that “this is called *nāma* (the mentality) because of the ability to approach to the object”.

After it is recognized separately on that mentality called *nāma*, the *meditator* scrutinizes the mentality with its vicinity as a simile that when a man see a snake inside the house and follows it, then he find the shelter of that snake, finally, the *meditator* see physical base of mind (*hadaya vatthu*). After seeing the physical base of mind, both the four great elements which are depended by the physical base of mind and the remaining secondary ones successively by insight knowledge. In this way, the corporeal *dhamma* can be distinguished and kept in mind systematically.

That *meditator* recognized separately the fact that “these four great elements and secondary ones are called *rūpa* (the corporeality) because of the presence of ability to change for the worse”.

After kept in mind both the mentality and the corporeality, the *meditator* discriminates and recognizes separately in brief, as

1. those *dhamma* which is able to approach the object are called *nāma* (the mentality),
2. those *dhamma*, which is able to hange for the worse, are called *rūpa* (the corporeality).

(*visuddhi-2-222*)

PAGE-541

4.4.3 *Samathayānika* (the vehicle of *samatha*)

Pāli Quotation (Mahāṭṭ-2-352)

In the world, a machine with an engine for example a car, that carries people or things from place to place, is called a vehicle (*yāna*). Similarly, two kinds of concentration, neighbourhood and full concentration, (also known as *samatha*), that carries the noble peoples to the realm of *vipassanā*, is also called vehicle of *samatha*, is known as

samathayānika (STY) person. It is the name of a person who practises *vipassanā* depending upon either the full concentration or the neighbourhood concentration which usually occurs adjacent to the full absorption. (*Mahāṭṭi-2-352*)

4.4.4 The absorption of neither-perception-nor-non-perception (*neva saññā nāsaññāyatana jhāna*)

Pāli-Quotation (Mahāṭṭi-2-352)

=The phrase, “except the absorption of neither-perception-nor-non-perception”, had been said by the commentator sayadaw because the fact that the beginner of meditation on the mentality is very difficult to distinguish and keep in mind the mental *dhamma* associating with the absorption of neither-perception-nor-non-perception. (*Mahāṭṭi-2-352*)

4.4.5 To the stage of the purification of view through the way of mindfulness of breathing

When a *meditator* wants to change to the stage of the purification of the view through the way of mindfulness of breathing, according to the instructions found in above commentary and subcommentary, he must develop concentration previously, which is either the neighbourhood concentration or the full concentration. If the fourth absorption could be attained, it is the excellent one.

When the light produced by concentration becomes brilliantly bright, he must emerges from the absorption and takes to heart the factors of absorption firstly. Then mental *dhamma* associating with that absorption must be distinguished and kept in mind one by one. After that the depended physical base of mind (*hadaya vatthu*) associating with the four great elements and secondary ones must be kept in mind continuously. If the *meditator* wants to change from the meditation of corporeality to the purification of view, instead from the meditation of mentality to the purification of view, he must endeavour as the following instructions found in *Visuddhi Magga*.

Pāli Quotation (Visuddhi-2-222)

PAGE-542

SVY person who lacks *samatha* but the vehicle of *vipassanā* only and STY person with the vehicle of *samatha* who wants to begin meditation on the corporeality, if they wants to fulfil the knowledge of purification of view, must discerns and keeps in mind the four great elements by means of either brief account or detailed account explained in the meditation of the four great elements (*catudhātuvavutthāna kammaṭṭhāna*) previously. (*Visuddhi-2-222*)

After the four great elements had been kept in mind, five aggregates, twelve bases, eighteen elements, twenty two controlling faculties, four Noble Truths, and the nature of casual relationship etc., must be scrutinized successively by insight knowledge. This is because those *dhamma* are the realms of *vipassanā* knowledge called *vipassanā bhūmi* indeed. The Buddha, himself preached in *Aparijhānana Sutta (Samyutta-2-249-250)* the fact that only the *meditator* who is able to distinguish those *dhamma* by means of three kinds of full understanding (*ti-pariññā*), will be able to cease the suffering of round of rebirths.

4.4.6 The individual preference (*veneyajjhāsaya*)

In this case, there is a question that why have many *dhamma*, such as aggregates, bases, elements, Noble truths, dependent origination nutriment... etc., occurred as realms of *vipassanā* and hasn't the *meditator* achieved the Path-, Fruit-Knowledge and *nibbāna* through only a realm of *vipassanā*. It can be answered that 'No'. Because the Buddha preached three ways, i.e., the way of five aggregates, the way of twelve bases, the way of eighteen elements in order to praise for three kinds of individual preference.

There are three kinds of disciples who are able to cease suffering of round of rebirths, as follows.

1. *arūpa sammunhā* = the person who wavered on mental *dhamma*
2. *rūpasammunhā* = the person who wavered on the corporeal *dhamma*
3. *ubaya sammunhā* = the person who wavered on both corporeal and mental *dhamma*

Because there are three kinds of disciples, if the Buddha preached only single way, such as the way of five aggregates, it can not be fairly praised for all beings who can able to cease suffering of round of rebirths really.

1. *arūpasammunhā*

Among those three kinds of disciples, some human beings, *devas* and brahmas have clear understanding on the corporeal *dhamma*. They do not waver on the corporeal *dhamma* but on the mental *dhamma* only. For those kind of disciples, the Buddha instructed to practice the way of five aggregates in which the mind, mental factors and corporeality are divided into five parts, i.e., clear understood corporeal *dhamma* consists one-fifth, while not clear understood mental *dhamma*, four-fifth.

PAGE-543

2. *rūpasammunhā*

Some disciples, however, have not clear understanding on the corporeal *dhamma* with the result that there are many difficulties in *vipassanā* practice on the corporeal *dhamma* as totally. But they do not waver on the mental *dhamma* and have clear understanding on it. For those kind of disciples, the Buddha instructed to practice the way of twelve bases in which the mind, mental factors and corporeality are divided into twelve parts, i.e., clear understood mental *dhamma* consist only one and half parts, while not clear understood corporeal *dhamma* about ten and half parts, respectively.

3. *Ubayasammunhā*

Some disciples have not clear understanding on both the corporeal and mental *dhamma*. For those kinds of disciples, the Buddha instructed to practise the way eighteen elements in which the mind, mental factors and corporeality are divided into eighteen parts, i.e., the corporeal *dhamma* consist of about ten and half parts, while the mental *dhamma*, about seven and half parts respectively. (*Mahāṭṭi-2-85*)

4.4.7 Various kinds of controlling faculties (*indariya beda*)

There are also three kinds of controlling faculties (*indariya*) among disciples as follows.

1. *Tikkhindariya* = the person who has brilliant controlling faculties,
2. *Majjhindariya* = the person who has moderate controlling faculties,
3. *Mudindariya* = the person who has weak controlling faculties,

For disciples who have matured and brilliant controlling faculties called faith, effort, mindfulness, concentration and knowledge, the Buddha preached the way of five aggregates. Then the way of twelve bases had been instructed for disciples with moderate controlling faculties, while the way of eighteen elements, for disciples with weak controlling faculties, respectively. (*Mahāṭṭi-2-85*)

4.4.8 Various kinds of preference

There are also three kinds of preference (*ajjhāsayā*) among disciples as follows.

1. *samkhittaruci* = the person who prefers the brief account
2. *majjhimaruci* = the person who prefers the middle account
3. *vittahārarui* = the person who prefers detailed account

Among those three kinds of disciples, the Buddha instructed the way of five aggregates for the person who prefers the brief account, while the way of twelve bases, for the middle ones, the way of eighteen elements for the third ones, respectively. (*Mahāṭṭi-2-85*)

PAGE-544

4.4.9 Important fact to be careful

Although it is instructed by means of ways, such as way of five aggregates, way of twelve bases, way of eighteen elements etc., depending on individual preference of different disciples, the objects of *vipassanā* knowledge are the same among those ways, i.e, the mundane mind, mental factors and corporeal *dhamma* which are individual of some kinds. There is no difference among the ultimate mentality and corporeality although each portion of different ways, as five parts, 12 parts, 18 parts, are different from other preaching methodologically.

4.4.10 Twenty two kinds of controlling faculties

The mind, mental factors and corporeal *dhamma* can be divided into 22 parts which are called controlling faculties (*indariya*). It is instructed to practise by means of the way of controlling faculties in which mundane controlling faculties are the objects of *vipassanā* knowledge.

Those *dhamma* which are able to deserve as controlling faculty, can be occurred a chief of associated *dhamma* as a king with full authority. However, the occurrence of controlling faculty or the occurrence of chief has been achieved by means of the nature of those *dhamma* accordingly. There is no person by which those *dhamma* can be occurred in accordance with his desire, indeed. These *dhamma* known as controlling faculties are void of self (*atta*) with full authority. These *dhamma* are unable to occur according to the desire of self (*atta*) but non-self (*anatta*). In this way, the Buddha instructed to take place *vipassanā* practice by way of controlling faculties in order to attain easily the knowledge of non-self (*anatta*). (*Mahāṭṭi-2-85*)

4.4.11 The Noble Truths and Dependant Origination

1. *pavutti* = the nature of occurrence (= the Noble Truth of Suffering)
2. *pavutti* hetu = the cause of occurrence (= the Noble Truth of Cause of Suffering)
3. *nivutti* = the nature of cessation (= the Noble Truth of Cessation of Suffering)

4. **nivuttihetu** = the cause of cessation(= the Noble Truth of The Course leading to Cessation of Suffering)

Four kinds of **dhamma** known as aggregates, bases, elements and controlling faculties are able to take place effective results only when those **dhamma** has been known by four modes mentioned above, i.e., **pavutti**, **pavuttihetu**, **nivutti**, **nivuttihetu**. The effective results can not be occurred unless it is known by four modes successively. The Buddha, therefore, preached preaching methodology of the Noble Truth and Dependent Origination additionally. (*Mahāṭṭ-2-85*)

In this way, although the desired result can be fulfilled by any one kind of preaching methodology, such as five aggregates, the Buddha preached various kinds of methodologies in order to praise three kinds of disciples whose preference are different to each other. It should not be neglected the fact that although preaching methodologies are different among disciples, the ultimate reality of the corporeal and mental **dhamma** are the same qualitatively, indeed. (*Mahāṭṭ-2-85*)

PAGE-545

4.5 Twenty eight kinds of corporealities

When STY person change to the stage of purification of view from that of purification of consciousness there are two ways, i.e., beginning with mental object and beginning with corporeal object, and the latter would be presented now. Twenty eight kinds of corporealities would like to presented previously, as follows.

4.5.1 The four great elements (*catu mahābhūta*)

(1) The earth-element (*pathavī dhātu*)

heavy group

1. character of hardness
3. character of roughness
5. character of heaviness

(*Abhi-1-170.Dhammasangani*)

light group

2. character of softness
4. character of smoothness
6. character of lightness

Pāli Quotation (Abhi-Com-1-368)

(2) The water-element (*āpo dhātu*)

1. **daravabhāva** = **paggharaṇa lakkhaṇa** = the character of flowing
2. **ābandhanabhāva** = **ābandhana lakkhaṇa** = the character of cohesion

PAGE-546

(3) The fire-element (*tejo dhātu*)

1. (a) **uṇṇhabhāva** = **uṇṇhatejo** = character of heat
(b) **sītabhāva** = **sītatejo** = character of coldness
2. **paripācanabhāva** = the character of mature

(4) The air-element (*vāyo dhātu*)

1. **vitthambhanabhāva** = the character of supporting

2. *samudāraṇabhāva* = the character of pushing

(5) **Five clear sensitivities (*Pasāda rūpa*)**

1. *cakkhupasāda* = eye clear sensitivity
2. *sotapasāda* = ear clear sensitivity
3. *ghānapasāda* = nose clear sensitivity
4. *jihvāpasāda* = tongue clear sensitivity
5. *kāyapasāda* = body clear sensitivity

(6) **seven pasture (object) corporeality (*gocara rūpa*)**

1. *rūpārammaṇa* = colour = visible object
2. *saddārammaṇa* = sound = acoustic object
3. *gandhārammaṇa* = smell = olfactory object
4. *rasārammaṇa* = taste
5. *phoṭṭhabbārammaṇa* = touch = tactile object (= earth-element, fire-element, air-element)

(Notes. The earth-element, the fire-element and the air-element can be sensitive to touch, which are known as tactile elements (*phoṭṭhabbadhātu*) resulting 7 kinds of tactile objects totally. When the number of kinds of corporealities are counted those three elements are already counted in the four great ones and rejected. There are no separated (special) tactile objects but those three elements mentioned above.)

(7) **Sex corporeality (*bhāvarūpa*)**

1. *itthibhāva rūpa* = femininity
2. *purisabhāva rūpa* = virility

(Notes. It is only one sex corporeality in female and male respectively as a general. The sex corporeality spread throughout body. Sometimes hermaphroditism can be occurred in some persons and it is said that “as a general”. However only one kind of sex corporeality can be occurred at specific time of a hermaphrodite alternatively. (*Abhi-Com-1-359*)

(8) **One physical base of mind (*hadaya rūpa*)**

Hadaya (vatthu) rūpa = It is the physical base of mind on which the life-continuum (*manodhātu*) and all consciousness (*pañcaviññāṇa*), i.e., seeing-, hearing-, smelling-, tasting- and touching-consciousness; (*manoviññāṇadhātu*) occur.

[Notes: The physical base of mind is consisting in the base-decad (*hadayasakalāpa*) which is spreading in the blood within a tiny pit of heart, and it is also known as *hadayavatthu* depending on which the life-continuum (*manodhātu*) and all consciousness of thought processes (*manoviññāṇadhātu*), except penta-consciousness, such as seeing-consciousness . etc. This term refers to only the realm of five aggregates (*pañcavokāra bhūmi*)]

PAGE-547

(9) **One life-faculty of corporeality**

jīvitindare = life-faculty of corporeality or life-faculty element

This kind of corporeality protects remaining corporealities within the same corporeal unit produced by *kamma* which are spreading throughout body.

(10) **One nutriment (*āhāraja rūpa*)**

kabaḷṭkāraāhāra = the nutriment consisting the food ingested

(Notes: The nutriment (**āhāraja rūpa**) consists in every kind of corporeal unit, i.e. corporeal unit produced by **kamma**, corporeal unit produced by mind, corporeal unit produced by temperature, corporeal unit produced by nutriment. (see tables of **Rūpa Kammaṭṭhāna**). Those nutriments are called **kammaja aja**, **cittajaojā**, **utuja-ojā** respectively. All ingested food, it may be any kind before eating, after ingested and inside the stomach, or feces in the rectum, are pure octad produced by temperature (**utujaojāṭṭhamaka kalāpa**) which proliferates continuously by temperature.

Pāli Quotation (Visuddhi-2-223)

That kind of nutriment consisting in the pure octad produced by temperature is called **kabaḷṭkāraāhāra** according to Abhi-Com-1-366. When that nutriment consisting in the ingested food are supported by the heat of vital nonad (**jīvita navaka kalāpa**) inside the stomach, they become new generation of octads which have the eight factor, the nutriment, and are called octads produced by nutriment (**ojaṭṭhamaka kalāpa**) successively. It is also known as **āhārasamutthāna rūpa** (the corporeality produced by nutriment). (**Visuddhi-2-251**). The nutriment consisting in the octad produced by nutriment of **utujaojāṭṭhamaka kalāpa** is called **āhārajajā**. When **kammajaojā**, **cittaja ojā** and **utujaojā** are supported by **āhārajajā** in turn, the new generations of **Ojaṭṭhamaka kalāpa** (octads produced by nutriment) can be occurred successively.

PAGE-548

- **ekadivasam paributtahāro sattāhampi uppattambeti. (Visuddhi-2-251)**

= The ingested food for one day will be able to support for throughout seven days. (**Visuddhi-2-251**) According to above quotation, only once ingested **kabaḷṭkāraāhāra** (the nutriment within corporeal units produced by temperature), if it is attained supporting of heat of vital nonad (**jīvita navaka kalāpa**), can give rise to successive generations of corporeal units called **ojaṭṭhāmaka kalāpa** (octad produced by nutriment) throughout seven days without taking foods. In this way the nutriment containing in the previous **ojaṭṭhāmaka kalāpa**, if it is supported by nutriment containing in later **ojaṭṭhāmaka kalāpa** again, can produce new generations of corporeal units produced by nutriment, up to 10-12 generations successively.

According to explanations mentioned above, during the function of nutriment of various kinds i.e., **kamma**, mind, temperature and nutriment, has been taken place, in other words, during the function of nutriment of four resources is producing new generations of corporeal units, it depend on the nutriment produced by temperature (**kabaḷṭkāraāhāra**). Therefore, the commentator explained as follows.

Pāli Quotation (Abhi-A-3-337)

=The nutriment deserving to ingest as a mouthful or morsel of rice is called **kabaḷṭkāra**, which is synonym of ‘nutriment of four resources’ (**catusamutthānika ojā**). It is explained by second way, according to second explanation found in the commentary.

Pāli Quotation (Pahāna-1-7) (Abhi-A-3-377)

According to *Pāli*, and commentary mentioned above, four kinds of nutriment, i.e., the nutriment produced by mind, the nutriment produced by temperature, the nutriment produced by nutriment, are called *kabaḷīkāraāhāra*.

The nutriment deserving to ingest as a mouthful or morsel of rice, a group of corporeal units produced by temperature is called *kabaḷīkāraāhāra*, directly. The nutriment containing in those corporeal units become pure octad produced by nutriment when the heat of vital nonad support conversion of that process. Then the converted nutriment is called *āhāraja ojā* (The nutriment consisting in corporeal units of new generation). Because of the presence of supporting factor of those *āhāraja ojā*, four kinds of nutriment, *kammaja oja*, *sittajaoja*, *utujaoja*, and previous *āhārajaojā*, are able to take place their functions respectively, these nutriment are called *kabaḷīkāraāhāra* as a metaphor known as *ṭhānupacāra* (nutriment of four resources situated on ingested *kabaḷīkāraāhāra*). Detailed account can be seen in later.

PAGE-549

4.5.2 Real corporeality

- (1) (18) kinds of corporealities mentioned above are called “natural corporealities” (*sabhāvarūpa*) because each corporeality has the ultimate specific character (*sabhāva lakkhaṇa*) respectively.
- (2) Those corporealities mentioned above are also called “characteristic corporeality” (*salakkhaṇa rūpa*) because each corporeality has general characters (*sāmañña lakkhaṇa*) which are related to all kinds of corporeal and mental *dhamma*, as follows.
 1. *aniccatā* = mode of perishing away just after arise
 2. *dukkhatā* = mode of being oppressed by the process of arising and perishing away continuously.
 3. *anattatā* = mode of the absence of durable solid called self (*atta*) which is not nondestratable essence.
- (3) Those corporealities mentioned above are also called “conspicuous corporealities” (*nipphanarūpa*) because it can be produced by four causes, i.e., *kamma*, mind, temperature and nutriment
- (4) Those corporealities mentioned above are also called “real corporealities” (*rūpa rūpa*) because they always have ability to change for worse.
- (5) Those corporealities mentioned above are also called “object corporealities” (*samasana rūpa*) because three general characters, i.e., *anicca*, *dukkha*, *anatta*, can be took place on objects of those corporealities.

The following (10) kinds of corporealities are different from (18) kinds mentioned above and are called

- (1) artificial corporeality (*asabhāva rūpa*)
- (2) non-characteristic corporeality (*alakkhaṇarūpa*)
- (3) unconspicuous corporeality (*anipphanna rūpa*)
- (4) false corporeality (*arūparūpa*)

- (5) non-object corporeality (*asammasanarūpa*)

4.5.3 (10) kinds of unobscured corporealities (*anipphanna rūpa*)

- (1) Space corporeality one

1. *ākāsadhātu* = It is inter-*kalāpal* (inter-corporeal units) space between various kinds of corporeal units, which is able to separate corporeal units each other. It is called “space corporeality” (*pariccheda rūpa*) due to separate each other among corporeal units.

- (2) Distinct behavioural corporealities (5)

- (a) Two kinds of expressive corporealities (*viññatti rūpa*)

1. *kaya viññatti* = bodily expression which convey a message or feeling

2. *vacī viññatti* = verbal expression which convey a message or feeling.

PAGE-550

Viññatti (expression)

The special expression (*viññatti*) which is able to convey a message or feeling of oneself in order to know attitude or intentions of that person. Bodily expression (*kāyaviññatti*) is a kind of gesture by which express internal desire to other, eg. Movement of hand. Verbal expression (*vacīviññatti*) is a kind of behavior by which express internal desire to other, eg. Come on! Call by words.

- (b) Behavioral corporealities (3)

1. *lahutā* = physical agility

- (i) character of agility of corporeality produced by mind
- (ii) character of agility of corporeality produced by temperature
- (iii) character of agility of corporeality produced by nutriment

2. *mudutā* = physical elasticity

- (i) character of elasticity of corporeality produced by mind
- (ii) character of elasticity of corporeality produced by temperature
- (iii) character of elasticity of corporeality produced by nutriment

3. *kammaññatā* = physical adaptability

- (i) character of adaptability of corporeality produced by mind
- (ii) character of adaptability of corporeality produced by temperature
- (iii) character of adaptability of corporeality by nutriment

These three kinds of corporealities and two kinds of expressive corporealities are known as distinct behavioural corporealities (*vikāra rūpa*).

- (4) Four physical characters of corporeality (*lakkhaṇa rūpa*)

1. *upacaya* = (a) the nature of the beginning of real corporealities of one life

(b) the nature of improvement of real corporealities up to completion of a life that it should contain

2. *santati* = the nature of continuity of real corporealities from sensual faculties has been completed

[Notes: The Buddha preached two ways separately depending upon individual preference of disciples who were listening *dhamma* talk in *Tavatinsā*, world of *deva*. These two kinds of

corporealities, i.e., *upacaya* and *santati*, are the same in the nature of arising of real corporealities (*rūpassa uppāda*), indeed.]

PAGE-551

3. *jaratā* = the nature of decaying of real corporealities (*rūpassa-ṭhiti*)

4. *aniccatā* = the nature of passing away (perishing away) of real corporealities (*rūpassa bhanaga*)

4.5.4 Underived and derived corporeality (*bhūta rūpa, upādārūpa*)

In this way, there are (18) kinds for real corporealities and (10) kinds of non-real corporealities, totally are of (28) kinds. Among those (28) kinds, four kinds of corporealities, i.e., the earth-, the water-, the fire- and the air-element are called elements (*dhātu*) due to presence of specific character of ultimate reality, such as hardness, cohesion, etc. They are also called ‘great elements’ (*mahābhūta*) because they are massive and more conspicuous than remaining corporealities in both character and feature. They are also called ‘primary-ones’ (*bhūta rūpa*) because they are massive and more conspicuous than remaining corporealities in both character and feature. In the aspect of conventional reality they are known as earth, water, fire and air respectively.

The remaining (24) kinds of corporealities are called derived (secondary-ones) corporealities (*upbhūtadbhūtarūpa*) due to depending upon the four great elements.

4.5.6 The nature of corporealities

Those (28) kinds of corporealities are unable to arise single alone, but a group called corporeal unit (*rūpa kalāpa*). The corporeal unit is the smallest system of corporealities within a compact particle in the aspect of conventional reality. It is a kind of particle of which size about or smaller than *paramānumū*. (The measurement of *paramānumū* is used in older days and it is invisible with the naked eye but by eye of wisdom only.) Actually it is the smallest particle as a form of compactness. Those corporealities consisting in the corporeal unit are..

1. *ekuppāda* = occurring in the same time, (simultaneously)
2. *ekanirodha* = ceasing in the same time,
3. *ekanissaya* = depending upon the same depended factors.

Derived corporealities within a corporeal unit always occur depending upon the four great elements of the same unit but not on the different ones. Then the four great elements within the corporeal unit always occur depending upon each other reciprocally. Only within the same corporeal unit which arises and passes away the four great elements always arise and pass away depending upon each other reciprocally and the derived corporealities also arise and pass away depending upon the former simultaneously.

PAGE-552

It is essential to be able to discern corporeal units by insight previously in order to know the ultimate corporealities as they really are, and to see reciprocal inter-dependence among four great elements and depending derived corporealities on depended four great elements systematically. After knowing and seeing corporeal units, various specific character of each ultimate corporeality, i.e., 8 factors, 9 factors, 10 factors, etc. within a corporeal unit must be distinguished one by one respectively by analytical knowledge. Only when it is able

to distinguish like this, can a **meditator** know the ultimate corporealities actually. In this paper, those kind of discernment is called “analytical knowledge”.

In this way, only when the ultimate corporealities can be seen up to specific character of each corporeal **dhamma** by analytical knowledge respectively, a **meditator** will be also to distinguish the facts that ...

1. “which kinds of corporeal **dhamma** are produced by **kamma**”,
2. which kinds of corporeal **dhamma** are produced by mind,
3. which kinds of corporeal **dhamma** are produced by temperature,
4. which kinds of corporeal **dhamma** are produced by nutriment,
5. which kinds of corporeal **dhamma** never occurred by any cause etc ..

When corporeal units are analysed the compactness of corporeality will be broken down. After the compactness of corporeality had been broken down the knowledge will be reached up to the field of ultimate reality. When the knowledge reach up to the field of ultimate reality, the light of non-self (**anatta**) will be arisen marvelously.

4.6 The way of discerning on the four great elements

In the **Samatha** stage, the Buddha preached (40) kinds of meditation subjects related to develop concentration. When a **meditator** reaches to the stage of **vipassanā**, there are only two kinds of meditation subjects. i.e., meditation on the corporeality (**rūpakammaṭṭhāna**) and meditation on the mentality (**nāmakammaṭṭhāna**). The former is also known as “discriminative knowledge on the corporeality (**rūpapariggaha**), while the latter, “discriminative knowledge on the mentality” (**arūpapariggaha**) respectively.

Pāli Quotation (Abhi-A-2-251) (M-A-1_280)

PAGE-553

When the Buddha instructed the meditation on the corporeality, it is the usual way firstly, by means of

1. brief account (**sankhepa manasikāra**)
2. detailed account (**vitthāra manasikāra**)

on the meditation of the four great elements called **catudhātuvavutthāna**. (**Abhi-A-2-252**) (**M-A-1-280**)

According to explanations found in commentaries, because the Buddha preached only two ways for meditation on the corporeality, both STY person who wants to begin meditation on the corporeality from which the stage of purification of view would be changed, and SVY person who does not depend on **samatha**, must begin by discerning on the four great elements previously. It is the most effective way for every **meditator** by strictly following in accordance with the Buddha’s teaching respectively. It is explained in **Viusuddhi Magga** the fact that those kinds of persons mentioned above must discern on the specific characters of the four great elements previously. (**Visuddhi-2-222**).

It is decided the fact that ‘the meditation on four elements call **catudhātuvavutthāna**’ can give rise to neighbourhood concentration only. (**visuddhi-1-107**). In this case, this kind of neighbourhood concentration due to lack of adjacent full concentration of any absorption. However it is designated as a metaphor called **sadisupacāra** (the condition of same degree of concentration). These are explained in previous chapter.

In this work, the brief account of the meditation on the four great elements would be presented first, according to **Maha satipaṭṭhāna Sutta**.

4.6.1 *Dhātumanasīkāra Pabba*

Pāli Quotation (M-1-73)

= **Bhikkhus!** The next way is that ... the **bhikkhu** discerns, scrutinizes and takes to heart the body which is situating as it's position accordingly like this "this body consists of the earth-element, the water-element, the fire-element, the air-element" etc ... one by one, by means of the nature of elements but not person, begins, **jīva** and self (**atta**). (*M-1-73*)

PAGE-554

Pāli Quotation (M-1-73)

= **Bhikkhus!** As a smile, either the experienced cattle slaughter or his follower killed a cow and then skins and cuts up carcass of cattle at crossroads, the **bhikkhu** discerns, scrutinizes and takes to heart the body which is situating as it's position accordingly like this "this body consists of the earth-element, the water-element, the fire-element, the air-element" etc ... one by one, by means of the nature of elements but not person, begins and living self (**atta**). (*M-1-73*)

4.6.2 The meaning of above quotation

By the time taking foods of the cow, or carrying to the slaughter-house, or trying with the rope, or slaughtering the cow, or after the cow was dead and seeing the carcass of the cow or all the time before skinned and cut up carcass of cow separately such as flesh, bones, colon, liver etc ... the perception (**saññā**) of cow has not disappeared in the continuum of the slaughter. But those kind of perception disappeared in the continuum of the slaughter who is selling beef at crossroads and the new perception called beef appeared in him. In the continuum of that slaughter, the imagination on that "I am selling the cow, these consumers buy and take away the cow", never appeared, but only the imagination that "I am take away beef", appeared indeed.

Similarly, by the time he does not become a node one yet or he is only a worldling (**putthujana**) without eye of wisdom which is able to see the ultimate reality, or he is still a stupid **bhikkhu** without any kind of meditation subject or along with a such time during which the body produced by four causes called **kamma**, mind, temperature and nutriment has not been analysed by analytical knowledge in order to break down three kinds of compactness of form, compactness of function and that body has not been discerned by means of the earth-element, the water-element, the fire-element, the air-element etc ... yet, for along with that time, the perception of human being or the perception of person has not disappeared yet in the continuum of that **bhikkhu**, indeed.

PAGE-555

The **meditator**, who is able to analysed the compactness of corporeality, i.e., the compactness of continuity, the compactness of form, the compactness of function by means of the four-element meditation, i.e., the earth-element, the water-element, the fire-element, the air-element, loses the misperception of begins (**satta saññā**) gradually. (There are two kinds of misperception of begins, i.e., misperception of begins which always follows wrong view of self (**atta diṭṭhi**) by which some one obsesses the fact that the live-body, the

consciousness-body, the self-body is apparently present and misperception of begins which is occurred by means of conventional reality (*vohāra sacca*.) The mind of meditation is situated well on the four great elements only. The Buddha, therefore preached the fact that “*seyathāpi bhikkhave ... pa ... vāyodhātūti*” etc., These *Pāli* has been translated as above. (*M-A-1-276, Vs-1-343*)

4.6.3 Breaking down the compactness (*ganavinibbhoga*)

Pāli Quotation (Visuddhi-1-343, M-Com-1-276)
(*Mahāṭṭ-1-928, M-ti-1-365*)

According to explanations found in above commentaries and subcommentaries, it should be respectfully noticed the fact that “the *meditator* must endeavour previously, in order to fix the object of the four great elements called the earth-element, the water-element, the fire-element, the air-element consisting in the same corporeal unit by means of analytical knowledge which is able to break down three kinds of compactness of corporeality, called the compactness of corporeality, the compactness of form, the compactness of function during practicing on the four great elements.” (Three kinds of compactness of corporeality has been presented in previous section.)

4.6.4 The first instruction of commentary

Visuddhi-1-346-347 1 paragraph

= The way of brief account on the four great elements is suitable for the sharp wisdom person (*tikkha paññavā*), while that of detailed account on the four great elements, for not sharp wisdom person (*nātitikkha paññavā*) respectively. Therefore, the sharp wisdom person who wants to practice the way of brief account on the four great elements, approaches to quiet place firstly and restrains not to wonder on various objects secondly, then he must imagine take to heart and distinguish frequently up to times of hundreds, thousands, thousand thousands etc ... means of the four great elements as follows_____

PAGE-556

1. the character of hardness is ‘the earth-element’ (*pathavī dhātu*),
the character of roughness is ‘the earth-element’ ...
2. the character of flowing is ‘the water-element’ (*āpo dhātu*),
the character of cohesion is ‘the water-element’ ...
3. the character of heat is ‘the fire-element’ (*tejo dhātu*)
the character of ability to mature is ‘the fire-element’ (*tejo dhātu*) ...
4. the character of supporting is the air-element (*vāyo dhātu*) ...
the character of pushing is the air-element ... etc ...

should be discerned and kept in mind by both the specific character and specific function of each element through the whole body which is only the four great elements but neither beings, nor living self. (*Visuddhi-1-346, 347*)

4.6.5 The second instruction of commentary

Pāli Quotation (Visuddhi-1-347)

In other words, the most Venerable Sari Putta who was a chief of *dhamma* preachers among all disciples of the Buddha, preached as follows, in order to show apparently the fact that the four great elements are occurrence of neither beings nor self (*atta*).

1. Depending upon 300 kinds of bones as a base, heel bone on which up right standing bones successively,
2. 2. depending upon 900 kinds of ‘lines of streaks’ which are situating as a net-work on those bones ...
3. 3. depending upon 900 kinds of muscles which are covering on the bones,
4. 4. depending upon the inner thick skin called ‘dermis’ which is covering throughout body, under the outer thin layer of skin called ‘epidermis’,

PAGE-557

Only the space element (*ākāsa dhātu*) which is surrounded by those bones, lines of streaks, muscles, skins or only the space element which is surrounding both internally and externally on those bones, lines of streaks, muscles, skins is designated as ‘body’ (*rūpa*).

(*M-1-248*) In this way, four kinds of bodily parts are preached to discern as four great elements.

After penetrating by hand called analytical knowledge, into four kinds of bodily parts called bones, lines of streaks, muscles, skins, frequently, it should be imagined, taken into heart and scrutinized as

1. the character of ‘hardness’, ‘roughness’ are the ‘earth-element’
2. the character of ‘flowing’, ‘cohesion’ are the ‘water-element’
3. the character of ‘heat’, ‘ability to mature’ are the ‘fire-element’,
4. the character of ‘supporting’, ‘pushing’ are the air element.

Both the specific character and the specific function of each great element should be distinguished and kept in mind frequently up to times of hundreds, thousands, thousand thousands as only the nature of element but neither ‘beings’ nor ‘self’. (*Visuddhi-1-347*)

4.6.6 *rūpantveva sankham gicchatī* (reaching to the term as “*rūpa*”)

For the phrase ‘*rūpatvaneva*’, the word ‘*rūpa*’ means *sariram* (body) and then the phrase *rūpatvaneva* (reach to the term as *rūpa*) means reach to the term “body”. In the world, as the house which is structurally based on woods etc, can be designated as king’s house (palace) *brahman*’s house, etc ..., the space element which is surrounded by bones, lines of streaks, muscles, skins both internally and externally, can be designated as king’s body, *brahman*’s body etc. It means that there is neither such being nor living self (jeva *atta*) in this body called *rūpa*, *atta*. (*Mahāṭṭ-1-347*).

4.6.6 Significance of two instructions

In this way, there are two kinds of instructions for the practice of the four elements meditation in *Visuddhimagga*. In the first method, it is instructed to discern throughout body of himself and therefore both the specific character and function of four great elements must be discerned by taking the object of the whole body generally.

PAGE-558

In the second method, it is instructed to discern by penetrating hand called analytical knowledge, into four kinds of bodily parts called bones, lines of streaks, muscles, skins, and therefore four great elements must be discerned by taking the object of it's between bodily parts with analytical knowledge respectively.

4.6.7 The practice of the four great elements discriminatively (Catudhātuvavutthanabhavana)

= In that phrase *Catudhātuvavutthāna*, the word *vavutthāna* (discrimination) means ... the discriminative knowledge on the specific character of each element, i.e.,

1. the hardness, the character of the earth element,
2. the flowing, the character of the water-element,
3. the heat, the character of the fire-element,
4. the flowing, the character of the air-element, respectively.

Therefore, “determination with the help discriminative knowledge on each specific character of the four great elements respectively” is called *catudhātuvavutthāna*.

The following terms,

1. *dhātumanasīkāra* = “keep in mind” or “take to heart” the elements
2. *dhātukammaṭṭhāna* = meditation on the four great elements
3. *catudhātuvavutthāna* = determination with the help of discriminative knowledge on each specific character of four great elements have the same meaning and these are synonyms. (Vs-1-342)

This *catudhātuvavutthāna kammaṭṭhāna* has been achieved by none of the followings.

1. recognized well the concept of earth like the earth-kasina, (*pathavī kasina*)
2. recognized well the concept of brown colour like the brown-kasina (*nīlakasina*)

PAGE-559

3. recognized well the general character (*sāmañña lakkaṇa*), i.e, impermanence (*anicca*), suffering (*dukkha*), non-self (*anatta*), of *saṅkhāra dhamma* (=corporeality, mentality, cause and results) like *vipassanā* practice, but by means of well determination with the help of discriminative knowledge on each specific character (*sabhāva lakkaṇa*) of the four great elements respectively, indeed. The commentator sayadaw, therefore, explained the fact that “*sabhāvūpalakkaṇavasena*” = by means of well determination with the help of discriminative knowledge on each specific character of the four great elements” ... etc. It means that “this kind of meditation subject must be practiced by means of closely scrutinize on the specific character, such as the hardness etc ..., of the four great elements”. (*Mahāṭṭ-1-425*)

According to explanations found in *Pāli*, commentaries and sub-commentary mentioned above, the *meditator* who wants to practice four elements meditation, must discern both the specific character and the specific function which is uneasy to appear in mind, of the four great elements alternatively. It can not be said “*dhātukammaṭṭhāna*” by which various kinds of objects of the four great elements had been discerned, instead of the specific character and function of the latter.

In accordance with two instructions found in *Visuddhi magga*, the practice of the four great elements must be begun. However, a such *meditator* who has no experience to discern either the specific character or the specific function of the four great elements may be difficult to start the practice. In order to overcome those kinds of difficulties, it would be explained fundamentally.

4.6.8 Two persons who practice the four elements meditation

A person who is either unexperienced with any kind of meditation subject among (40) kinds or had not arrived any kind of sufficient concentration called the neighbourhood or full concentration although experienced with some kind of meditation subjects, must begin to develop concentration by taking the object of any one of the followings,

1. the specific character of four great elements,
2. if the specific character of each element is unapparent, the specific function of each element
3. both the specific character and specific function of the four great elements.

If it is unable to take to heart the specific character and function systematically, the method would be presented continuously. According to *Visuddhimagga-2-222*, this kind of person can be designated as *suddhavipassanāyānika* (SVY) person. (It is explained detail in previous section

PAGE-560

The second kind is *samathayānika* (STY) person. If STY person wants to begin meditation on the corporeality, he must take to heart meditation of the four great elements previously. STY person can begin either brief account or detailed account of the four great elements by taking to heart any one of the objects, the specific character, if it is not apparent, the specific function or both the specific character and the specific function of the four great elements. In this paper, meditation of the four great elements, depending upon the full concentration of fourth absorption of the mindfulness of breathing would be presented. SVY person, however, can also practice by following this method.

4.6.9 The brief account and detailed account

The sharp wisdom person called *tikkhapaññavā* usually think that It is delayed and taking long time to discern the four great elements through 42 bodily parts, such as the hair is the earth-element, the bodily hair is the earth-element etc ... However, for the sharp wisdom *bhikkhu*, the object of meditation will be apparent by taking to heart the specific character only, instead of bodily part, such as ...

1. the character called 'hardness' is the earth-element,
2. the character called 'cohesion' is the water-element,
3. the character called 'ability to mature' is the fire-element,
4. the character called 'supporting' is the air-element.

For the not sharp wisdom *bhikkhu*, if he discern by means of brief account without discerning on bodily part such as, hair, bodily hair etc, the object of meditation will not be apparent and darken for him. If he discern by means of detailed account of the four great elements, such as the hardness of the hair is the earth element, the hardness of the bodily hair is the earth element, etc ..., the object of meditation will be apparent. (*Visuddhi-1-346*)

[Notice: In *Dhātuvibhanga Sutta*, it is preached moderate account of the four great elements, which is neither brief nor detailed. That moderate account is also included in the detailed account. (*Mahāṭṭi-1-426*)]

4.6.10 The meaning of 'apparent' and 'not apparent' of *kammaṭṭhāna*

For those words, ‘apparent’ and ‘not apparent’ of *kammaṭṭhāna*, there are questions that ‘what is *kammaṭṭhāna*, is it either the object or the knowledge? Why is it called *kammaṭṭhāna*? How is it apparent? The answers are as follows:

Pāli Quotation (Mahāṭṭ-1-432)

PAGE-561

= The function by which the mind and mental concomitants of *meditator* has been come into contact with the object of meditation (in this case, the specific character of the four great elements), is called *yogakamma*. The ultimate reality called the specific character of the four great elements, which is the occurrence of that function called *yogakamma*, will be apparent. (*Mahāṭṭ-1-432*)

Tīkā sayadaw explain another way as follows.

Pāli Quotation (Mahāṭṭ-1-432)

In other words, because each specific character of the four great element is quite apparent in the knowledge of the *meditator*, the intension (*manasikāra*) which is occurring by taking the object of each specific character of four great elements, is called *kammaṭṭhāna* and it is purified apparently. It is because of the preference of brief account of the sharp wisdom *bhikkhu* whose five kinds of faculties, i.e., faith, effect, mindfulness, concentration, knowledge, are very sharp. (*Mahāṭṭ-1-432*)

According to this explanation, the meditation which is discerning and knowing each specific character of four great element, or the mind and mental concomitants which are led by the knowledge of meditation are called *kammaṭṭhāna*.

[Note: The first explanation means “discerned object is called *kammaṭṭhāna*, while the second explanation means “discerning mind and mental concomitants are called *kammaṭṭhāna*.]

4.6.11 Sharp wisdom person and not sharp wisdom person

The sharp wisdom person, because his five faculties are brilliant sharp, prefers brief account of the four great elements and the latter is very apparent. However, not sharp wisdom person, because of lack of ability to bear in mind quickly, prefers detailed account of the four great elements and the latter is not apparent. Only when he discern as “the hardness of hairs is the earth element.” “the hardness of bodily hairs is the earth element” etc, his meditation subject become apparently.

Pāli Quotation (Mahāṭṭ-1-432)

4.6.12 What is *dhātu* (element)?

Pāli Quotation (Mahāṭṭ-1-426-427)

PAGE-562

= In other word *pathavī dhātu* (earth-element), the word *dhātuttho* is called *sabhāvuttha* (natural phenomena). The meaning of *sabhāvuttha* (natural phenomena) is

suññatatta [void of living self (*jīva attā*)]. The meaning of **suññatatta** is **nissattatta** (the nature of not person, not beings; the nature of non-self).

It would be explained detailed for some persons. The nature of element (*dhātu*) is the character of the ultimate reality **dhamma**, such as

- (1) the character of hardness, roughness,
- (2) the character of flowing, cohesion,
- (3) the character of heat, ability to mature,
- (4) the character of supporting, pushing, etc ...

The character of the ultimate reality **dhamma** is the nature of **suññatatta** in which living self “termed by the self-theory, is wanting. The nature of **suññatatta** is **nissattatta** which is none of person being, self.

According to the above explanations, the **meditator** must discern and take to heart. The natural specific character of ultimate reality **dhamma**, called **sabhāvuttha** previously. Then he must take to heart that characters in order to reach up to the nature of **suññatatta** and **nissattatta** by insight knowledge. When the specific character of the four great elements within a corporeal unit has been analysed by “analytical knowledge” or “eye of wisdom”, it will be reached up to the nature of **suññatatta** and **nissattatta**, successively. At that time, the ultimate reality called the earth-element, the water-element, the fire-element, the air-element will be known exactly.

If it is said like that, the **meditator** will suggest the fact that **sabhāvuttha**, **suññatatta** and **nissattatta** are different each other. It should not be suggested like this. As soon as he begins the four great element meditation, the ability to see and analyse corporeal units will not be appeared in him, indeed. Firstly, he must endeavour to fix his mind on the object, the specific character of four great elements continuously. It means the fact that by the time beginning of practice, because of lack of ability to see corporeal units; lack of ability to analyse corporeal units; and lack of ability to discriminate each specific character of the four great elements respectively, it is unable to reach the nature of **suññatatta** and **nissattatta**. Only when the compactness of continuity, the compactness of form and compactness of function, called the compactness of corporeality has been broken down by insight, the nature of **suññatatta** and **nissattatta** can be seen. It means the fact that after those three kinds of compactness had been broken down, the eye of wisdom is able to see the ultimate reality with the result that the nature of **sabhāvuttha**, **suññatatta** and **nissattatta** actually.

4.6.13 The character (*lakkaṇa*) and the function (*rasa*)

In the meditation of four great elements, instructed in *Visuddhimagga*, two characters of each element are explained respectively. *Mahāṭṭkā* Sayadaw explained in detail why two characters had been presented, as follows:

- 1.(a) **thaddhabhāva** = the nature of ‘hardness’ is the specific character of the earth-element,
(b) **kharabhāva** = the nature of “roughness” is the specific function of the earth-element.
- 2.(a) **dravabhāva** = the nature of “flowing” is the specific character of the water-element,
(b) **ābandhanabhāva** = the nature of “cohesion” is the specific function of the water-element,
- 3.(a) **unṇhabhāva** = the nature of “heat” is the specific character of the fire-element,
(b) **paripācanabhāva** = the nature of “ability to mature” is the specific function of the fire-element,
- 4.(a) **vitthambhanabhāva** = the nature of “supporting” is the specific character of the air-element,
(b) **samudīraṇabhāva** = the nature of “pushing” is the specific function of air-element, respectively. (*Mahāṭṭī-1-433*)

In this case, the specific function of each element is also known as *upaṭṭhānākāra* with reference to *Mahāṭṭkā* Sayadaw. It's meaning is as follows.

4.6.14 The meaning of “*upaṭṭhānākāra*”

Pāli Quotation (Mahāṭṭ-1-433)

= The term, *Upaṭṭhānākāra*, means “the mode of appearance in the knowledge of a *meditator*, by which the specific function of each element has been manifested respectively. In other words, it means “the mode of discriminative knowledge on the specific function of the four great elements.

In this case, there is a question that why both two kinds of specific character and function has been expressed in the commentary. The answer is that “it is because of individual preference of such *meditator*.”

PAGE-564

For some *meditators*, during practicing in the four elements meditation, the specific character of each element has been discriminated easily in them. However, for some *meditators*, the specific function of each element has been discriminated easily in them. Those kinds of specific functions of four great elements are known as *rasa* or *upaṭṭhānākāra*. The *meditator* should, therefore, like to begin with either the specific character or the specific function of each element gradually by analytical knowledge. (*Mahāṭṭ-1-433*)

In this way, either the specific character or the specific function of each element should be analyzed and take to heart frequently as much as times of hundreds, thousands, thousands thousands etc ... The initial application of thought (*vitakka*) should be took place on the object of the four great elements repeatedly. (*Mahāṭṭ-1-433, 434*).

4.6.14 Choice the more apparent one

Pāli Quotation (Mahāṭṭ-1-434)

For the *meditator* who practicing on the four great elements systematically, either the specific character or the specific function of each element appeared in him clearly. He must take to heart clearer character or function of each element, irrespective of unclear character or function of each element, such as “the earth-element”, “the water-element” etc ... (*Mahāṭṭ-1-434*)

This is the way of brief account on the four great elements, which is explained in *Visuddhi Magga* and *Mahāṭṭkā*, as fundamental rules. With reference to this explanation, some of sharp wisdom persons are able to practice systematically. However, some *meditators* are unable to practice after read this explanation only, and detailed instruction would be presented for those persons continuously.

4.6.15 Twelve kinds of the nature of elements

According to *Dhammasangani*, it is instructed to discern 6 kinds of the nature of the earth-element in this paper. The nature of remaining elements is the same as instructions found in commentary and subcommentary. Therefore various kinds of nature of the four great elements are as follows. _____

1. the earth-element ... 6 kinds ... , hardness, roughness, heaviness, softness, smoothness, lightness.
2. the water-element ... 2 kinds ... , flowing,
cohesion,

PAGE-565

3. the fire-element ... 2 kinds ..., heat,
coldness,
4. the air-element ... 2 kinds ... , supporting,
pushing ...

There are 12 kinds of nature of elements in total. The procedure of meditation of the four great elements will be presented by based on those 12 kinds of nature because of the following reasons.

4.6.16 The reason why all (12) kinds of nature of elements should be discerned

When the concentration (Samadhi) becomes moderately high in strength, it is found that the nature of some elements become powerful and predominant in some *meditators*. Especially, the whole body or some parts of head become apparently with more powerful elements of some kinds extremely. At that time, the power of such nature of elements should be adjusted by each other. In order to obtain equal power of elements, opposite nature of such element should be taken to heart alternatively.

In some *meditators*, the nature of hardness of the earth-element become predominant. The head or the whole body become very rigid and stiff as a result. At that time the *meditator* is unable to resist predominant nature of hardness and the concentration become fall down. At that time the discernment should be changed on the nature of softness of the earth-element alternatively. When the opposite nature of the earth-element are adjusted by each other. The concentration can be developed quite easily.

Sometimes the nature of roughness becomes very apparent and it is unable to resist the nature of that element. In some *meditators*, that kind of nature, roughness, is so apparent that some internal organs, such as, intestine, liver etc... become rough with the result that the concentration fall down. At that time, the nature of softness should be emphasized and taken into heart in order to adjust opposite nature of elements.

Sometimes, the nature of heaviness become predominant as a result of long lasting sitting position before the concentration has been well developed. At that time, the nature of lightness should be emphasized and discerned so as to adjust each other.

When the concentration becomes higher and higher, the nature of lightness appears obviously sometimes, resulting it seems to be floating into the air. Then the concentration can not be reached to required level for that *meditator*. At that time, the nature of heaviness should be emphasized and kept in mind frequently. After opposite nature of each element become equal in power, the concentration become power easily and rapidly.

Similarly, the nature of softness becomes apparent sometimes and it is so apparent that it seems to be soaked into the floor with semi-solid body. At that time, the nature of hardness should be emphasized and kept in mind alternatively.

PAGE-566

Sometimes, the nature of smoothness, which follows the nature of softness, becomes apparent and sensation of tactile object of smoothness can cause sensual desire (*nikanti*) to practice of himself. It is a danger of concentration and the nature of hardness and roughness should be emphasized and kept in mind alternatively.

In accordance with explanations found in *Dhammasaṅgani*, six kinds of nature of the earth-element has been explained in this work, instead of two kinds, found in commentaries and sub-commentary.

4.6.17 One reasonable point

The Buddha usually preaches on the character of the earth-element of which two characters only, i.e., the hardness (*kakkaḥa*), roughness (*kharigata*), had been explained in some *sutta*, such as *Māhārahulovada Sutta*, etc Therefore only the nature of hardness and roughness of the earth-element had usually been expressed in commentaries and sub-commentaries as a general. However, in the *Dhammasaṅgani*, 6 kinds of nature of the earth elements had been preached in detail as mentioned above. It had been preached like that way because the Buddha understood the individual preference of *deva* and *brahmas*.

If it is so there is one reasonable point that whether preaching methodologies of the Buddha are different from each other or not. The preaching methodologies are not different from each other but the same. For instance, let us suppose, there are three kinds of solid mass, such as

1. very soft mud block
2. hard brick after baked in brick kiln
3. very hard natural gneiss block to be considered.

Among those blocks brick is harder than mud block while natural gneiss block is harder than the former. On the other hand, the brick is hard as a result to be compared with mud block, but the brick is soft as a result to be compared with natural gneiss block. For a single kind of block called brick can be designated as “hardness” and “softness” depending upon compared blocks of another kinds. Therefore it can be said the fact that such thing is hard when compared with another thing of softer one while that thing is soft when compared with another thing of harder one, depending upon the standard degree of hardness of compared one. Whatever thing which is so soft to be considered, possess some degree of deserving hardness, such as mud block. It is designated as soft material of which the less degree of hardness occurred while the hard material, the higher degree of hardness possessed, as a conventional truth (*voḥāra sacca*).

PAGE-567

Then it would be suggested on the roughness and smoothness similarly.

Let us suppose, there are three kinds of cloths, such as

1. very smooth woollen cloths
2. rough cotton wool
3. very rough gunny bag, to be considered.

If comparison between each other had been made, woollen cloths is smooth but cotton wool is rough. Then if comparison between cotton wool and gunny bag had been made, cotton wool is smooth and gunny bag is rough. The cotton wool, although it is a single kind of cloths, is smooth when compared with gunny bag, but it is rough when compared with woollen cloths. Therefore it can be said the fact that such thing is rough when compared with another thing of smoother one while that thing is smooth when compared with another thing of rougher one depending upon the standard degree of roughness compared one. Whatever

thing which is so smooth to be considered, possess some degree of deserving roughness, such as woolen cloths. It is designated as smooth cloths of which the less degree of roughness occurred while the rough cloths, the higher degree of roughness possessed, as a conventional truth.

It should be understood between the nature of heaviness and lightness similarly. As a terminal usage, it is designated as heavy material of which the higher degree of hardness occurred while the light material, the less degree of heaviness possessed similarly. Every material possesses some degree of deserving heaviness although it seems to be very light. The nature of heaviness always occurs combination with the nature of hardness and roughness of every material.

Therefore the Buddha preached only two kinds of nature of the earth-element in many Sutta generally.

PAGE-568

Sometimes the nature of flowing become stronger with the result that internal circulation of fluids seems to be water flows rapidly in the pipe. At that time the emotion of *meditator* fluctuates and developed concentration will be broken up. In order to relief that condition, the nature of cohesion must be emphasized and taken to heart frequently.

Similarly the nature of cohesion become stronger sometimes with the result that failure to breath occurred. At that time the concentration become fall down and it should be adjusted by changing discernment on the nature of flowing alternatively. When two kinds of nature of water-element, flowing and cohesion, are equal the concentration becomes higher and higher.

Sometimes the nature of heat become stronger with the result that sweat come through body. At that time the nature of coldness must be emphasized and taken to heart not to fall down concentration.

Sometimes the nature of coldness become stronger with the result that the whole body becomes rigid. At that time the nature of heat and softness must be emphasized and opposite nature of each element become equal. When each opposite nature of the four great elements is equal the feeling of happiness (*sukha*) occurs frequently. Then pleasurable interest (*pīti*) and tranquility of mind and mental concomitant (*kāya passaddhi, citta passaddhi*) appear as a result and the concentration become strong actually.

Sometimes the nature of pushing become stronger with the result that the whole body shaking. At that time the nature of supporting must be emphasized and taken to heart frequently. Sometimes the nature of supporting become stronger with the result that the whole body can not be movable. At that time the nature of pushing must be emphasized alternatively in order to adjust opposite nature of water-element.

Sometimes the nature of pushing is so strong that it can not be adjusted by discerning on the nature of supporting. At that time, the nature of heaviness of the earth-element can be emphasized and shaking body become quiet. It should be recognized on example of a shaking paper on the table, when the wind is blowing, become stable after pressed by a heavy material.

Sometimes, some parts of the body pain continuously as soon as the meditation would be started. At that time, it should be emphasized and observed on that painful part of body at which what kind of element become strong. If pain of that part is produced by strong nature of heat and hardness, the nature of coldness and softness must be emphasized. Then that kind of pain relief when each opposite nature of the fire-element and the earth-element are equal respectively. If it is found that such kind of pain is produced by strong nature of three

elements, the heat, the hardness, the pushing, it must be emphasized on the nature of coldness, softness and supporting of that bodily part. It can be found that kind of pain reduced and finally disappeared when the nature of each opposite character of elements are equal respectively.

Sometimes, if the body is very rigid and stiff, it must be emphasized on the nature of softness, smoothness and lightness continuously. When each opposite nature of elements become equal, it must be discerned both 12 characters of the four great elements again with the result that the concentration become stronger and stronger up to neighbourhood concentration.

In this paper, 12 kinds of nature of the four great elements are presented due to two reasons, firstly, it is important to notice the fact that when the concentration is moderately strong, the opposite nature of each element become unbalanced and in order to solve that problem by adjusting opposite nature of each element; secondly, all kinds of nature of four great elements preached in *Dhammasangani*, should be discerned thoroughly. It should not be misunderstood on the fact that over explanation to the commentary and subcommentary has been made by personal consideration. It is true that if only eight characters of the four great elements, as instructed in the commentary and subcommentary, has been discerned and taken to heart, 12 characters of the four great elements mentioned above will become apparent as a result of strong concentration, indeed.

PAGE-569

4.7 Way of the beginning of the four great elements meditation

Develop concentration up to the fourth absorption by taking the object of sign of full concentration, produced by mindfulness of breathing, then up to brilliant light shine out as a result of the full concentration of fourth absorption, previously. After emerge from that absorption, in order to discern the nature of the earth-element, by means of as following,

- a. beginning from any part at which the hardness is apparent, then the nature of hardness of the whole body must be discerned.
- b. beginning from any part at which the roughness is apparent, then the nature of roughness of the whole body must be discerned.
- c. beginning from any part at which the heaviness is apparent, then the nature of heaviness of the whole body must be discerned.
- d. beginning from any part at which the softness is apparent, then the nature of softness of the whole body must be discerned.
- e. beginning from any part at which the smoothness is apparent, then the nature of smoothness of the whole body must be discerned.
- f. beginning from any part at which the lightness is apparent, then the nature of lightness of the whole body must be discerned.

In order to discern the nature of the water-element,

- g. beginning from any part at which the flowing is apparent, then the nature of flowing of the whole body must be discerned.
- h. beginning from any part at which the cohesion is apparent, then the nature of cohesion of the whole body must be discerned.

In order to discern the nature of the fire-element,

- i. beginning from any part at which the heat is apparent, then the nature of heat of the whole body must be discerned.
- j. beginning from any part at which the coldness is apparent, then the nature of coldness of the whole body must be discerned.

- In order to discern the nature of the air-element,
- k. beginning from any part at which the supporting is apparent, then the nature of supporting of the whole body must be discerned.
 - l. beginning from any part at which the pushing is apparent, then the nature of pushing of the whole body must be discerned.

During the practice of the four great element has being take place, it should be discerned both 12 kinds of nature of the bones, line of streaks, muscles, skins by penetrating the hand called knowledge among those bodily parts one by one. Very sharp wisdom person may be able to discern merely explained in this way. However, not sharp wisdom persons are unable to discern and then way of practice would be continued as follows.

4.8.1 Begin with A, B, C or O

If one who is unable to practice as mentioned above, he must begin with ABC. Some *meditators* are very easy to discern the character of hardness as first step, but it is difficult for some persons beginning with the nature of hardness first. Among 26 alphabets, although 'A' is the first word, a very young student of kindergarten who is very understandable to learn 'O', must begin with 'O'. After learning on 'O', ABC should be taught in turn as a teaching methodology. Similarly, if it is some difficulties to discern on the nature of earth-element for some *meditators*, those persons should begin with the nature of pushing called the air-element which is very easy to understand as learning on 'O' for very young student of kindergarten. After discerning on the nature of element which is very easy to understand, then all kinds of nature of elements must be discerned one by one. When all nature of the four great elements had been discerned proficiently, it must be discerned on 12 kinds of nature of elements orderly as the Buddha preached.

PAGE-570

4.8.2 Develop concentration

The *meditator* who wants to achieve the upper stage of purification, such as purification of view, etc ... must develop concentration first for every sitting period of practice before his usual practice on four great elements has been taken place. Because of the fact that way of developing concentration up to full concentration of the fourth absorption through the mindfulness of breathing has been presented successively in this work, the *meditator* must develop previously, his concentration up to the fourth absorption whenever he takes place any stage of *vipassanā* practice. When the concentration of the fourth absorption complete 8 kinds of qualities which is capable of producing brilliant light inside the whole body, he must emerge from that absorption and discern on either the nature of the earth-element or the air-element as a first step of meditation on the four great elements. Now, the way of discerning on the nature of pushing of the air-element would be presented as a fundamental course for all.

4.8.3 The nature of pushing (*samudāraṇarasa*)

As beginning of practice, it must be discerned the nature of pushing at the respiratory tract. It should be noticed the fact that the way should not be misunderstood and confused with mindfulness of breathing. This way does not take the object of concept of in-and out-breath which is capable of producing full concentration but take the nature (ultimate reality) of elements. The nature of pushing can be found at the object of in- and out- breath which

belongs to 42 bodily parts. According to *Visuddhimagga*, this bodily part of in- and out-breath are corporeality produced by mind. (*Visuddhi-2-223*). Especially for human beings, the process of in- and out- breath will occur along with the whole life associated by mind, as a general. It is exception for some persons who stop respiration process, as mentioned in previous section. Because the process of in- and out- breath always occur in every person and the nature of pushing can be found easily in that place where in- and out- breath occur. The nature of pushing must be discerned inside the respiratory tract as similar process by which food is ground by alternative pushing of upper and lower jaws. After the centre of head had been emphasized and then takes to heart the nature of pushing of either in-breath or out-breath alternatively. During the in-breath occurs, only the nature of pushing must be discerned and taken to heart. During the out-breath occurs, only the nature of pushing must be discerned and taken to heart similarly. It can be understood within a short period.

PAGE-571

If it is not easily understood, incisors of both jaws must be pressed by each other and then take place inhalation process. It must be emphasized on the nature of pushing along with the respiratory tract. When the nature of pushing would be observed, discerning mind should be fixed on the object of the nature of pushing. Then the object of the nature of pushing will become clear and clear in insight gradually. After that it must be discerned the nature of pushing of bodily parts from interior part of the head to exterior part of the head, inside the bones, lines of streaks, muscles, skins and then spread the knowledge inside the head.

When the nature of pushing has been found inside the head, it must be discerned by spreading and penetrating the hand of knowledge into neck, hand, chest, stomach, thigh, calf, legs, etc ... in order to see the nature of pushing continuously. Wherever bodily part has to be changed and observed, the nature of pushing must be emphasized by eye of wisdom, part by part, gradually. Whenever you discern throughout body, if it is able to see only the nature of pushing by insight, you success the course of 'O'. After a such kind of element is proficiently discerned by insight and the concentration is also moderately developed, remaining nature of elements will be easy to discern, indeed.

It should be misunderstood on the fact that the nature of pushing can be started to discern in the respiratory tract only but any part as he likes. Indeed, the bodily part can be found before the compactness called *Ghāna* has not been broken down and it is unable to reach the field of ultimate reality only. After the compactness of corporeality has been broken down and it is able to reach the field of ultimate reality by insight knowledge, the bodily parts will be disappeared. Therefore it is designated a place or part on which the nature of such element must be discerned by beginning with this part, that part etc ... in order to easily understand before the compactness has been broken down only.

Therefore, one who prefers to begin to discern nature of pushing of hand, he can discern on that part as he likes. Similarly, any part of body can be discerned as a starting point, stomach, legs etc. However, it is not enough to discern only one part of the body for the four great elements but throughout body, indeed.

It is instructed to discern throughout body by insight and therefore every *meditator* must endeavour to be able to discern all kinds of nature of the four elements of the whole body. (*Visuddhi-1-346*)

Pāli Quotation (Mahāṭṭi-1-446)

PAGE-572

The purpose of meditation of the four great element is in order to remove two kinds of perception of beings, i.e., the perception of beings which always follows wrong view of personality by which belief the fact that there are living bodies, knowing bodies, living selves firstly and the perception of beings which is also known as worldly usage of personality by which belief the fact that there are human beings, *deva*, *brahmas* apparently in the world in the aspect of conventional reality (*voḥāra sacca*). If any bodily part, such as hand, legs, head, can be found, the shapes of male, female, person, beings will also be found. If the hand will be discerned, there is no hand but the four great elements only. If the leg will be discerned, there is no leg but the four great elements only. If the head will be discerned, there is no head but the four great elements only. If the body will be discerned, there is no body but the four great elements only. In this way, wherever bodily part of the whole body will be discerned, if one see only the four great element, the perception of beings has been removed roughly. When the four great elements or underived and derived corporealities within a corporeal unit can be analyzed by insight, both two kinds of perception of beings has been removed thoroughly.

Therefore, it should be recognized the fact that each nature of elements must be discerned inside bones, lines of streaks, muscles, skins by penetrating hand of knowledge, one by one.

4.8.4a The nature of hardness (*Kakkhalaṭṭa*)

After proficiently discerned on the nature of pushing, the nature of hardness must be discerned. Any part of the body where the hardness is apparent, can be discerned previously. Press two incisors of both jaws and the body must be straight up in position. Then the nature of hardness must be discerned at the region of touching teeth. It must not emphasized on the object of teeth but the nature of hardness only. The nature of hardness will become apparent gradually. Then the knowledge must be spread out the whole body and discern the nature of hardness inside bones, line of streaks, muscles, skins, continuously. Endeavour to see the nature of hardness throughout body. If it is not succeeded to discern the nature of hardness, discern on the nature of pushing alternatively, at the region of touching teeth. After alternative discernment has been taken place at one point for two kinds of nature of elements, the nature of hardness will be spread out the whole body and practice to see that nature of hardness inside body continuously.

4.8.4b It is not “*dhamma* through gritted teeth”

Some suggest and want to designate the way of discerning on the nature of pushing and hardness as “*dhamma* through gritted teeth”.

PAGE-573

Pāli Quotation (M-A-1-271)

The Buddha instructed to perform through clear comprehension during eating, drinking, chewing, licking in the portion of *sampajāna*, *Mahāsatipaṭṭhāna Sutta (M-1-72)*. Especially during eating the food, the latter must be ground by both upper and lower teeth alternatively. Without grinding like this, eating process can not be carried out really. While grinding process is taken place, it must be done with the knowledge of clear comprehension, instructed by the Buddha. It should, therefore, not be criticize as “the *dhamma* through gritted teeth”. The *dhamma* which is to be known during eating, is as follows.

There is never any kind self (*atta*) which is able to take food in the body. Only the mind which desire to take food will be appeared.

Pāli Quotation (M-A-1-271)

(M-A-1-256)

(M-ti-1-352)

= That mind produce a group of corporeal units which is predominant with the nature of air-element. The process of holding the bowl will be occur red by spreading throughout body with corporeal units produced by mind, which are predominant with the nature of air-element. The process of putting the bowl down will be occurred by spreading throughout body with corporeal units produced by mind, which are predominant with the nature of air-element. The processes of preparing morsel of rice, taking morsel of rice out from the bowl, opening of the mouth etc... will be occurred by spreading throughout body with corporeal units produced by mind, which are predominant with the nature of air-element. The process of opening the jaw is carried out by neither crowbar nor machine with the help of someone. The process of grinding of both the upper and lower teeth will be occurred by spreading throughout body with corporeal units produced by mind, which are predominant with the nature of air-element. (M-A-1-271)

In this case, it is performing to discern the causes, which are mind, and mental concomitants, and the results, corporeal units produced by mind, which are predominant with the nature of air-element. If it is able to discriminate the corporeality and mentality, which are occurring during taking the food, and able to discern by means of three general characters, it is the peak of knowledge of clear comprehension. It should, therefore, not criticize on this kind of discerning as “*dhamma* through gritted teeth”.

Similarly, it is the beginning of the meditation on the four great elements by discerning on apparent nature of two elements of such bodily part where is easy to understand and then *vipassanā* practice will be taken place through this stage step by step. Every *meditator* who wants to attain *nibbāna* should, therefore, not criticize one-sidedly as “*dhamma* through gritted teeth. It should be avoid not to criticize on the right way of practice similar to poisonous snakes, such as viper, cobra etc ...

PAGE-574

4.8.5 The nature of roughness (*thaddhabhāva*)

When satisfaction of discerning on the nature of pushing and hardness become appear, the nature of roughness must be discerned continuously. If the nature of roughness is intended to be clear in knowledge previous mentioned elements must be discerned alternatively throughout body from the head to legs and vice versa. After alternative discerning on the nature of pushing and hardness had been taken place frequently, the nature of roughness usually appears as a feeling produced by scrubbing with sand on skin.

If the nature of roughness can not appear in knowledge, it must be emphasized on any part where is apparent in sensation of touch. This is because the earth-element, the fire-element and the air-element are the object of touch or the element of touch called *phutthabba dhātu*. If the touching part of hand with clothes is apparent the practice can be started from that part. If it is not so apparent, clothes must be rubbed by palm. Three kinds of nature, pushing, hardness and roughness, should be discerned alternatively at that part. If the nature of roughness is not apparent yet, tip of upper molar must be rubbed by tongue resulting the nature of roughness, three kinds of nature mentioned above, must be discerned alternatively.

For most of *meditators* after alternative discerning on the nature of pushing and hardness had been taken place frequently, the nature of roughness become apparent gradually, indeed.

4.8.6 The nature of heaviness (*garuka*)

After alternative discerning on three kinds of nature, pushing, hardness, and roughness, had been taken place frequently, the nature of heaviness become apparent gradually. If it is not apparent to discern the nature of heaviness, it must be emphasized on any part where is apparent in sensation of touch. Around the hip is usually apparent to discern the nature of heaviness because it is pressed by weight of the whole body. If it is not apparent yet, presses on thigh by hand with the result that the nature of heaviness becomes apparent. Then it must be discerned throughout body in order to see the nature of heaviness continuously.

PAGE-575

4.8.7 The nature of supporting (*vitthambana*)

Three kinds of nature, hardness, roughness and heaviness are heavy earth-element (*garupathavīdhātu*) while the nature of pushing, the function of air-element. Now, the nature of supporting of air-element become quite easy to discern for the *meditator* who proficiently practiced previous nature of three elements. Indeed, the nature of supporting is ability to maintain the position of body as he likes. The stability of each bodily part, such as desired position of hand, head, body etc., is maintained by means of the function of supporting nature of air-element. If it is not supported to maintain its stability, that position will be broken down. It is quite easy to understand alternative discerning with the nature of hardness. If it is not apparent yet, upper body must be bent down and try to straight up, then the ability to maintain up-right position of body can be seen. In this way, the nature of supporting must be discerned throughout body continuously.

4.8.8 The nature of pushing and supporting (*samudīraṇa, vitthambhana*)

Pāli Quotation (Vs-1-361)

= Then the running element inside internal organs of the body, the air-element, which has

1. the nature of pushing (*samudīraṇa*)
2. the nature of supporting (*vitthambana*), cause such condition to be strong and stability of the body with the help of remaining elements, the earth-element which give rise to situation for standing up: the water-element which give rise to formation of the four great elements; the fire-element which give rise to heat and maturation of elements respectively. The effectiveness is as follows.

This body stands upright by means of the nature of supporting of air-element while bodily expressions, found in walking, standing, sitting reclining, are produced by other kind of air-element which has the nature of pushing in turn. It also cause flexing of hands and legs, making position of hands and legs as he likes.

Pāli Quotation (Mahāṭṭ-1-448)

= In this case, the nature of pushing is the factor of new situations for corporeal units, not to occur at site of original one. The air-element which has the nature of pushing is also

the factor of come in contact with each other for corporeal units. In this way, the continuous process of coming in contact with each other by new corporeal unit is designated as “hand and leg bend, move or stretch” etc., indeed.

PAGE-576

The worldlings misunderstand as “man bends, woman bends etc. because they are unable to see the successive occurrence of new corporeal units in new places by means of the nature of pushing of air-element, by insight knowledge really. In this way, the machine called body which consists of the four great elements only, always occurs the four aspects of deportment (*iriyāpatha*), similar to magic deceive worldlings as male, female etc. It means the fact that although there is no movable self (*atta*), the machine called body consisting only the four great elements continuously occurs the four aspects of deportment, i.e., walking, standing, sitting and reclining. (*Visuddhi-1-361, Mahāṭṭ-1-448*)

Both two kinds of nature of air-element, *samudīraṇa* and *vitthambana* are termed as the specific character of the air-element, it can be translated as ‘pushing’ and ‘supporting’ respectively according to *Visuddhi-1-361*.

In order to understand the nature of air-element, it is essential to discern both two kinds of those nature, and therefore, these are expressed in this paper. In this paper volume 4, the nature of pushing (*samudīraṇa*) is expressed as the specific function, according to *Visuddhi-1-362*.

4.8.9 The nature of softness (*muduka*)

The inner part of lower lips must be touched with tip of tongue in order to discern the nature of softness. While discerning on the nature of softness his taking place, the observing mind should be relaxed without tension. The position of body must also be relaxed. It must be emphasized on any bodily part where the nature of softness is apparent, and then it will be succeeded to discern the nature of softness. It should be discerned on the nature of softness until the feeling appear as the whole body become cotton wool or mud block.

4.8.10 The nature of smoothness (*saṇha*)

After satisfaction had occurred by discerning on the nature of softness of throughout body, soft part of the inner lips must be rubbed by tip of tongue in order to become wet with saliva. The nature of smoothness can be found easily and discerns continuously on that nature. Then it must be discerned throughout body until it seems to be rubbed with edible oil.

PAGE-577

4.8.11 The nature of lightness (*lahuka*)

When the nature of softness and smoothness appear in insight, the nature of lightness will also be apparent consequently. If it is not apparent yet, hand must be put on thigh or knee and fore-finger must be flexed up and down. The nature of lightness will become apparent. If it is emphasized one-sidedly on the nature of lightness of that bodily part, throughout body will be covered with the nature of lightness consequently. If it is not apparent yet, three kinds of nature of the earth-element, i.e. softness, smoothness and lightness, must be discerned alternatively. As soon as the nature of softness and smoothness are apparent throughout body, the nature of lightness usually appear well. If it is not succeeded to discern on the nature of

lightness, the nature of heaviness must be discerned again. Then it must be emphasized one-sidedly on the nature of lightness. In this way, it should be endeavour to see the nature of lightness throughout body clearly.

4.8.12 The nature of heat (*unṇhabhāva*)

It must be discerned on 8 kinds of nature of two elements, i.e., hardness, roughness, heaviness, softness, smoothness, lightness, which are the specific characters of the earth-element, supporting and pushing, which are the specific character and function of the air-element, in order to attain satisfaction by insight knowledge. After proficiently discerned like this, any bodily part where the nature of heat is apparent, must be discerned in order to see the nature of heat. If it is not apparent yet, both of two palms must be overlapped each other with the result that the nature of heat become apparent. Then the nature of heat must be discerned throughout body.

4.8.13 The nature of coldness (*sītabhāva*)

The nature of coldness can be found on the cheek when the wind touches on it. When the in-breath touches on cheek, the nature of coldness can be emphasized and discerned continuously. Then the nature of coldness must be discerned repeatedly throughout body. Now, 10 kinds of nature of three elements had been discerned thoroughly.

4.8.14 The nature of flowing and cohesion (*dravabhāva, paggharaṇa lakkhaṇa*)

Pāli Quotation (Mahāṭṭ-1-430)

= Because the water-element which has the specific character called “flowing”, is also able to provide remaining elements by three conditions, i.e. compatibility (*sahajāta*), mutually (*aññamañña*), supporting (*nissaya*), it is deserving to say the fact that “the water element functions three modes simultaneously, i.e., cohesion after carried to such place by flowing, adhering to each other, clustering to each other for remaining three kinds of great elements. (*Mahāṭṭ-1-430*)

PAGE-578

There may be some difficulties in taking the object of nature of the earth-element, if either both remaining three elements or any one of those, is unapparent in knowledge well, according to explanations, mentioned above. Indeed, the nature of the water-element is more difficult to discern than remaining ones because it is not the object of touch (*phuṭṭhabba dhātu*). For this reason, the nature of the water-element is intended to present lastly in this work.

Before meditation on the four great elements is taken place, it should be developed concentration by the mindfulness of breathing. Then 10 kinds of nature of three elements, mentioned previously, must be discerned alternatively throughout body. When the way of discerning become rapidly, the nature of cohesion usually appear in knowledge. If it is not succeeded to discern the nature of water-element, two kinds of nature, the pushing and the hardness must be emphasized and taken to heart frequently. As a result of, the nature of cohesion will become apparent. If the nature of cohesion is so apparent that it feels as the whole body is tied up with rope, the nature of flowing should be emphasized and discerned alternatively.

It must be discerned on the base of teeth, tongue or on the tip of tongue, where the nature of flowing is apparent. After the nature of flowing inside the mouth has been understood well, it should be emphasized on that nature between bones, lines of streaks, muscles, skins, continuously. There are 12 kinds of bodily parts which are predominant with the water-element, such as, bile, sputum, pus, blood, sweat, etc. The nature of flowing is very apparent in these bodily parts. However, this stage is intended to discern only the nature of flowing but not those bodily parts, indeed.

4.8.15 The suggestion that it is not able to discern on the water-element.

Some teachers suggested the fact that “it is not able to discern on the water-element,” and “it is not essential to this element any more.” It would be explained on this suggestion.

Sabbam bhikkhave abhiññeyam (Sam-2-258, Khud-9-6)

Sabbañca bhikkhave abhijānam (Sam-2-250)

According to these *Pāli* Quotations, the water-element also belongs to *dhamma* which must be understood with three kinds of full understandings for all *meditators*. Then the Buddha preached in *Dhātumanasikāra Pabba, Mahāsatipaṭṭhāna Sutta*, the fact, mentioned above page, 553, that the earth-element, the water-element, the fire-element, the air-element must be discerned by insight knowledge. In that instruction, the water-element is also the object of both *samatha* and *vipassanā* practice. The commentaries and sub-commentaries also explained how to discern the four great elements in brief account or in detailed account respectively. (It can be found in *Vs-1-342, 367*).

PAGE-579

Therefore it is instructed to discern the water-element in the scriptures of the Buddha. There is no instruction on the fact that ‘it is not able to discern on the water-element’ and ‘it is not essential to this element any more’. The reason of those teachers who suggested like this is only the fact that “the water-element is not essential to this element anymore”. The reason of those teachers who suggested like this is only the fact that “the water-element is not *phuṭṭhabba dhātu* which is touchable object”.

In *Dhammasangani Pāli*, page 170, the Buddha preached the fact that the earth-element, the fire-element and the air-element are the object of touch (*phuṭṭhabba dhātu*). Among 28 kinds of corporealities the remaining 25 kinds, except those three great elements, are not tactile object indeed. Although these are not tactile object, it must be discerned on these corporeal *dhamma* by insight. In *Visuddhi Magga-2-225*, it is instructed the fact that real corporeality and non-real corporeality must be discerned in the stage of the discriminative knowledge on the mentality and corporeality (*nāmarūpaparicchedañāṇa*). In the *vipassanā* stage, however, only real corporealities must be discerned by insight but not on non-real corporealities. In *Mahāgopālaka Sutta (M-1-281)*, it is preached the fact that the Path-knowledge, the Fruit-Knowledge and *nibbāna* can not be reached without knowing and seeing the underived and derived corporealities, exactly.

In the commentary of *Mūlapaṇṇāsa*, it is also explained that if corporeal *dhamma* will not be known by means of both quantitatively and causes, the following successive knowledge can not be appeared consequently,

1. *rūpapariggahañāṇa* = The knowledge which is bale to keep in mind corporeal *dhamma*

2. *arūpapariggahañña* = The knowledge which is able to keep in mind mental *dhamma*
3. *rūparūpapariggahañña* = The knowledge which is able to keep in mind both corporeal and mental *dhamma*
4. *paccayapariggahañña* = The knowledge which is able to keep in mind causal *dhamma*
5. *vipassanā* knowledge which is able to generalize by means of three characters of corporeal and mental *dhamma* associated with their causes
6. *maggañña phalañña* = Which are the peak of *vipassanā* knowledge. (*M-com-2-163*)

The water-element belongs to those *dhamma* which must be discerned. It should, therefore, not suggested on the fact that the water-element can not be discerned due to untouchable object. For instance,

1. the visible object (colour) is not tactile object but it can be discerned. If the visible object is not tactile object and it can not be discerned, the eye-door and mind-door cognitive process which are able to know colour can not arise with the result that all beings will be blind.

PAGE-580

2. If any person says that “the acoustic object (sound) is not tactile object and it can not be discerned”, the ear-door and mind-door cognitive process which are able to know sound can not arise with the result that all beings will be deaf.

It should be understood on remaining corporeal *dhamma* which are not tactile object similarly.

Even ordinary worldlings who never interest to practice any more, are able to know colour, sound, smell, taste, etc. which are not tactile objects, and for a *meditator*, who practice three trainings successively, it is impossible to say the fact that it is unable to discern the water-element which is not tactile object, indeed. If one strictly follows instructions systematically, he will be able to discern the water-element as a result.

4.9 Five essential factors for every *meditator*

Every *meditator* who is practicing *samatha* and *vipassanā* in order to attain *nibbāna* must be fulfilled five essential factors (*padhāniyanga*). The faith (*saddhā*), one of the most important factors, both on the knowledge of omniscience of the Buddha and the way of practice leading to eternal peace which is the deliverance of suffering of rounds of rebirth, plays fundamental role in this stage. Therefore, five essential factors will be presented here, as an excerpt from *Bodhirājakumāra Sutta* (*M-2-298-299*).

Pāli Quotation (*M-2-298-299*) 5 paragraph

PAGE-581

(*M-A-3-225*) 2 paragraph
 (*M-ṭī-3-153-154*) 1 paragraph
 (*M-A-3-225*) 1 paragraph

(Mahāṭṭī-1-84) 1 paragraph

4.9 (a) Presence of faith (The first essential factor)

The royal devotee, **Bodhi** prince, there are five essential factors for every *meditator* who is practicing in order to attain *nibbāna*.

1. The royal devotee, **Bodhi** prince.... The *bhikkhu*, under this *sāsanā*, has the faith (*saddhā*) on facts...that... “The Supreme One is called *araham* because deserving to homage and worship by all human beings, *devas* and brahmas. “The Supreme One is called *sammāsambuddha* because knowing and seeing all *dhamma* called *ññeya* which should be known by all the Buddha, i.e., *sañkhāra*, *vikāra*, *lakkhaṇa*, *nibbāna*, *paññatti*, by penetrative knowledge of himself without any teacher. The Supreme One is called *vijjācaraṇasampanna* because fulfilling three kinds of *vijja* (knowledge), eight kinds of knowledge, 15 kinds of *caraṇa* (practice). The Supreme One is called *Sugata* because of the presence of ability to say right speech. The Supreme One is called *lokavidū* because knowing all worlds thoroughly. The Supreme One is called *anuttaro purisadammasārathi* because the Buddha is the person of beyond compare, who has ability to admonish for admonishable beings of various kinds. The Supreme One is called *satthādevamanussāna* because the Buddha is the teacher of beyond compare for all beings. The Supreme One is called Buddha because the presence of ability to know and see the Four Noble Truths for all beings who are deserving to know and see these Truths. The Supreme One is called *bhagavā* because of the presence of ultimate supremacy over all beings”. And then the *bhikkhu* believes the Path-Knowledge, the Fruit-Knowledge and the Knowledge of Omniscience of the Buddha without any doubt. (M-2-298)

PAGE-582

4.9.1 (b) Four kinds of faith and essential faith in this case

There are four kinds of faith i.e. *āgamana saddhā*, *adhigamasaddhā*, *okappana saddhā*, *pasādasaddhā*. The faith of *bodhisattas*, which are carried out successively from the time of wish in order to become the Buddha to the time of appearance of Buddha, is called *āgamanasaddhā* (successive fulfilled faith). The faith of *piccekabodhisatta* is also called *āgamanasaddhā*.

The faith of the Noble Ones (*ariya*) which is attained through the Path-and the Fruit-Knowledge, is called *adhigamadaddhā*.

When one hears about three Noble Gems, such kind of faith on the fact that “The Supreme One is real *sammāsambuddha* who is knowing and seeing all *dhamma* called *ññeya* which should be known by all the Buddha, by penetrative knowledge of himself without any teacher”. Ten kinds of *Dhamma*, i.e., four Path-Knowledge, four Fruit-Knowledge, *nibbāna*, and scriptures, preached by the Buddha are real doctrine which is able to deliver from suffering of rounds of rebirth. The eight kinds of Noble-Ones (*ariya*) are real *bhikkhus* who has been practically tried to reach *nibbāna* with the great respect on three kinds of Noble Gems,” etc... appears in him and that kind of faith is called *okappanasaddhā* (strongly faith without shaking by any disturbance).

The faith of ordinary one, which is occurring merely traditionally on three kinds of Noble Gems, is called *pasādasaddhā*.

Among those four kinds of faith, *okappanasaddhā*, the third one, is designated as essential factor for a *meditator*.

PAGE-583

Pāli Quotation (Sam-2-249-250)

= If all clinging five aggregates had not been known by three kinds of full understanding (*pariññā*), it will not be deserving to cease suffering of rounds of rebirth...(s)....

If all clinging five aggregates had been known by three kinds of full understanding, it will be deserving to cease suffering of rounds of rebirth.

This is one of the Buddha's teachings as an instance of all *dhamma* which are able to deliver from suffering of rounds of rebirth. Among those clinging five aggregates the water-element is also including as a corporeal *dhamma*. Each thought moment and mental factors, which are designated as unobservable *dhamma* due to arising and passing away very quickly within very short moment by some teachers, belong to all clinging five aggregates indeed.

If one accepts such suggestion that "the water-element is unobservable one because it is not object of touch," and "the all clinging five aggregates are unobservable *dhamma* for a disciple", he lacks one essential factor, *okappanasaddhā*, for him. It should be suggested the fact that whether the Path-Knowledge and Fruit-Knowledge will be attained or not without fulfilling five essential factors of a *meditator*.

4.9.1 (c) The Noble Path-Knowledge of the Supreme Buddha

Four kinds of the Noble Path-Knowledge of the Buddha is fundamental factor for the Noble Knowledge of Omniscience (*sabbaññuta ñāṇa*) and are called *bodhi*. In other words, *sammāsambodhiñāṇa*, the ability to know and see all *ññeya dhamma* which should be known by all the Buddha, is called *bodhi*. It is all right. The Noble Path-Knowledge of the Buddha is the proximate cause (*padatṭhāna*) of the Knowledge of Omniscience and vice versa. [The Fourth Noble Path-Knowledge (*arahattamaggañāṇa*) the Buddha is associated with the Knowledge of Omniscience while that of disciples are not associated with the latter.] Therefore the Noble Path-Knowledge (Fruit-Knowledge) associated with the knowledge of Omniscience are called *sammāsambodhiñāṇa*. Then that *sammāsambodhiñāṇa* of the Buddha is called *bodhi*. The *meditator* strongly believes on the fact that "*Sammāsambuddha* called *Tathāgata* (Supreme One who comes well in the world) had been known and seen penetratively Noble *bodhi ñāṇa*". If he believes like this, the *meditator* fulfilled the first essential factor in order to attain *nibbāna*.

PAGE-584

4.9.1 (d) It is only the preaching methodology of supreme importance

Because the meditating *bhikkhu* is able to determine with the help of strongly faith on the fact that "*Sammāsambuddha* called *Tathāgata* has attained well the Noble *Sammāsambodhiñāṇa*", he is able to determine on both ten kinds of noble *Dhamma*, i.e., Four Path-Knowledge, Four Fruit-Knowledge, *nibbāna*, and scriptures as real doctrine which is able to deliver from suffering of rounds of rebirth and eight kinds of Noble-Ones, who had been practically tried to reach *nibbāna*, with the great respect on three kinds of Noble Gems, as the Noble person with nobility of *suppaṭipama* (well practice in conformity with *dhamma*). It can, therefore, be said that it is only the preaching methodology of supreme importance.

According to this phrase, "*saddhahati tathāgatassa bodhin*" = the Noble *bodhiñāṇa* of the Buddha has been believed", the strongly faith on three kinds of Noble Gems,

okappana saddhā, can be designated as essential factor. It is all right! If a *meditator* has strongly faith on both three kinds of Noble Gems, because of the presence of power faith, he will be able to fulfil strenuous effort with the help of faith that “*imāyapaṭipadāya jarāmaraṇato muccissāmi*” I may be deliver from suffering of aging and death by this way of practice in accordance with nine Supra-mundane *dhamma* actually.” (M-A-3-225, M-ṭ-3-153-154)

4.9.2 Presence of health (the second essential factor)

It is lack of any disease and bodily pains. It is presence of ability to digest foods, the heat produced by vital nonad inside the stomach, which is neither extreme cold nor extreme hot but suitable degree of heat for digestion in him.

4.9.3 Absence of guile and boast (the third essential factor)

The misdeed by which non-real nobility of such kind is boasted by himself is called *sāṭheya*. The indeed, by which real fault of such kind is pretended to be clear him, is called *māyā*. The misdeed of lying to the supervisor in meditation can be called the characters of *māyā* and *sāṭheya*. The meditating *bhikkhu* has neither pretending nor boasting to be a good one and confesses whatever he done something wrong in front of either the Exalted-One or wise friendship.

PAGE-585

4.9.4 Presence of strenuous effort (the fourth essential factor)

The meditating *bhikkhu* always has strenuous effort (*sammappadhāna viriya*) in order to remove unwholesome *dhamma* and to fulfill whole some *dhamma*. The ability to strenuous practice is present the wholesome *dhamma* would be never irrespective.

4.9.5 Presence of *vipassanā* knowledge (the fifth essential factor)

It is wise. The knowledge which is able to know the arising and passing away of corporeal and mental *dhamma*, is also present. The *vipassanā* knowledge which is able to break down the bulk of defilement (*kilesa*); able to lead *nibbāna* which is cessation of suffering, has been fulfilled. (M-3-298, 299)

According to the phrase, “*udayatthagāminiyā paññāya*” = “ the knowledge which is able to know the arising and passing away of corporeal and mental *dhamma*”, it means the fact that the presence of ability to discriminate five aggregates by means of 25 kinds of knowledge on the process of arising (*udaya ñāṇa*) and 25 kinds of knowledge on the process of passing away (*vayañāṇa*). [It is the stage of *vipassanā* practice in order to discern both two processes

i.e. (1) the process of arising of resultant five aggregates because of the presence of five causes, ignorance, craving, clinging, *kamma*-formation, action, (2) process of cessation of resultant five aggregates for good without reappearing in future because of the eradication of five causes, ignorance, craving, clinging, *kamma*-formation, action, during the fourth Path-moment occurs. It will be presented in later Volume V.] (M-Com-3-225)

According to above phrase preached in the fifth essential factor, the Buddha preached with the reference of *vipassanā* knowledge. This type of preaching methodology is called *mijjedāpakanaya* (emphasizing on the middle *vipassanā* knowledge, *udayabbaya ñāṇa*, by which refers to both the beginning, *sammasana ñāṇa* and the end, *sañkhārupekkhā ñāṇa*.)

It is all right! Unwise person is unable to fulfill the practice of *samatha* and *vipassanā*, called the essential factor (*padhāna*). These all kinds of essential factors should be known as mundane *dhamma* (*M-Com-3-225*). It means the fact that those *dhamma* must be fulfilled previously before the Noble Path-Knowledge occurs. Among those essential five factors, the penetrative knowledge on the water-element also included; the penetrative knowledge on the clinging five aggregates also included; the fulfillment of *vipassanā* knowledge, by which generalization on those five clinging aggregates up to the Path- and Fruit-Knowledge will be achieved, is also included. These essential five factors must be fulfilled previously as mundane *dhamma* before reaching to the Noble Path-Knowledge, indeed. Then it would be continued meditation on the four great elements in detailed.

PAGE-586

4.10 Practice proficiently

It has been completed to explain 12 kinds of nature of the four great elements. It must be practiced on those 12 kinds of nature throughout body, at least three times within one minutes as quickly as he can. During practicing like this, each nature of elements must be seen from the legs to head thoroughly in order to become proficiency in each element. If it is succeeded, practice again primary level.

4.11 Primary level

After kindergarten level is successful to practice, the nature of the four great elements must be discerned orderly as the Buddha preached, i.e., the earth-element, the water-element, the fire-element, the air-element.

1. hardness, roughness, heaviness, softness, smoothness, lightness, (the earth-element)
2. flowing, cohesion (the water-element)
3. heat, coldness (the fire-element)
4. supporting, pushing (the air-element)

It must be discerned proficiently each nature of elements orderly as mentioned above in accordance with the Buddha's preaching. Try frequently in order to see each nature of elements from the legs to head. When practice become proficiency in each element, grey or white or clear object inside the body usually appears in some *meditators*. However, either grey or white or clear object would be appeared or not, the practice has not been finished yet and the nature of the four great elements must be discerned commonly throughout body in order to develop concentration.

4.12 Develop concentration by taking the object of the four great elements commonly

sakalampo attano rūpakāyam avijjtvā (Visuddhi-1-346)

According to above *Pāli* quotation, it is instructed to discern 12 kinds of the nature of four great elements throughout body commonly. Therefore, develop concentration by discerning like this, as over-view from the top of the mountain.

When the four great elements are discerned commonly with the beginning on the head, the head become rigid and it is difficult to resist tension around head. At that time discerning must be begins from neck region to the lower part of body commonly on each nature of elements one after another. The mind of practice must be fixed on the object of the four great element continuously. Then the concentration becomes developed gradually.

PAGE-587

During developing concentration like this, the higher in concentration, the greater in appearance of elements consequently. If it is so apparent that it can not be resisted to some nature of elements, it must be adjusted by discerning on opposite nature of those elements as previously mentioned above. For instant, if the hardness is so predominant, emphasize on softness or vice versa. It is one important point to notice the fact that the whole body must be discerned equally in order to see the nature of each element fairly but not any part one sidedly and continuously.

4.13 It should not be emphasized the heart one-sidedly during concentration is developing.

When the concentration becomes higher it should not be emphasized the heart region in order to discern some nature of elements one-sidedly and continuously. It can cause a little pain in heart due to predominant nature of some elements, especially, the nature of hardness and pushing. If the nature of heat is discerned one-sidedly on this region, it can not resist to maintain the body quietly. Therefore, during this time, it should be noticed that the heart region must not be emphasized one-sidedly and continuously. It is very important precaution for some persons who experienced with heart attack previous time. If the nature of pushing is emphasized on the heart region, the heart beat becomes rapid. However, by the time the corporeal units can be seen and analyzed by analytical knowledge up to each nature of ultimate corporeality one by one, it is possible to discern and analyze the heart which is also composed of the four great elements only. At that time it is emphasized to discern the heart region or any bodily parts as he likes because the concentration is well developed.

4.14 Discern alternate on four great elements

When 12 kinds of nature of elements are discerned commonly, those kinds of nature become apparent in the insight very quickly. If each nature of the four great elements appears in one's knowledge simultaneously, he should discern only four elements as follows,

1. It is "the earth-element" through discerning on 6 kinds of nature commonly, the hardness, roughness, heaviness, softness, smoothness, lightness.
2. It is "the water-element" through discerning on 2 kinds of nature commonly, the flowing, and cohesion.
3. It is "the fire-element" through discerning on 2 kinds of nature commonly, the heat and coldness.
4. It is "the air-element" through discerning on 2 kinds of nature commonly, the supporting and pushing.

PAGE-588

In this way, the concentration must be developed by taking the object of the four great element continuously. One must endeavour to see the nature of the four great elements by insight knowledge but not merely reciting verbally. Then it should not be moved the object of bodily parts, sometimes seeing the head, sometimes seeing the hand, sometimes seeing the legs, etc. but only on the object of the nature of four great elements. The practicing person should discern the earth-element, the water-element, the fire-element, the air-element throughout body by means of the nature of each element but not bulk of body.

PAGE-588**4.15 10 kinds of proficiency in practice (*manasīkāra kosanla*)*****Pāli Quotation (Mahāṭṭ-1-434)*****4.15.1 Discern orderly (*anupubbato*)**

During practicing on the four great elements it must be discerned each element orderly in accordance with the Buddha's teaching, i.e. the earth-element, the water-element, the fire-element, the air-element. It should not be discerned on various elements randomly as the water-element, the air-element, the earth-element, the fire-element. It means that it must not be discerned one-sidedly on any element which is very apparent and whenever it appears in knowledge. (*Mahāṭṭ-1-434*)

4.15.2 It should not be hurry up (*natisighato*)

During discerning on the nature of four great elements orderly, it must not changed on each nature of elements very quickly. Because alternative discerning on various nature of elements is so quickly that the specific character or function of those elements become up apparent. Then it can not be carried out the function that *rūpapariccheda ñāṇa* (discriminative knowledge on the corporeality) which is able to distinguish corporeality, and successive *vipassanā* knowledge up to the Path-and Fruit-Knowledge must be done systematically. Therefore it must not be taken to heart alternative nature of each element very rapidly. (*Mahāṭṭ-1-434*)

4.15.3. It should not be delay (*natisanikato*)

During discerning on the nature of four great great elements, it must be neither hurry up nor delay of the practice. If it is delay to take to heart alternative nature of each element, the meditation will be unable to reach the end of process (= up to neighbourhood concentration). It will not be carried out the supporting factor for *rūpapariccheda ñāṇa* which is able to distinguish corporeality and the successive *vipassanā* knowledge up to the Path-Knowledge, Fruit-Knowledge and *nibbāna*. It can be shown by simile of travelers who are either very quickly running or very delay walking, both two kinds are unable to achieve their goal. (*Mahāṭṭ-1-434*)

PAGE-589

4.15.4 (a) One must not discern on external objects (*vikkhepapaṭibhāhanato*)

Pāli Quotation (Mahāṭṭ-1-434)

= Now, it is very important rule, for every *meditator* who is practicing four great elements by taking the object of ultimate nature of each element, that it must not discerned on any external object, i.e., concept, feeling, consciousness etc. In other words, he must emphasize only the object of the ultimate nature of the four great elements but not on other objects of concept and ultimate reality.

This is because the fact that if any other objects of concept and ultimate reality, except the ultimate nature of four great elements, has been emphasized and discerned, the practice of the four great elements will be delayed and fallen back. In this case, it can be shown by simile of traveler who walking along very narrow path, the size of a footprint. (*Mahāṭṭ-1-434*)

Why the practice of the four great elements will be delayed and fallen back for a *meditator* who emphasized on any other objects of concept and ultimate reality? This is because the fact that it can be said *dhātumansīkāra*, only when emphasizing and discerning on the nature of the four great elements, but not on any other objects. Then the neighbourhood concentration will not be able to occur as a result. If the development of neighbourhood concentration is unable to be, it will be far from ability to discern the corporeal units, ability to analyze the specific character of each corporeality consisting various corporeal units by breaking down the compactness of corporeality; ability to reach the field of ultimate reality by insight knowledge. If

PAGE-590

It is not able to reach the field of ultimate reality, the purified knowledge on three general characters, i.e., *anicca*, *dukkha*, *anatta*, will not be appeared with the result that the light of *anatta* (non-self) will not be appeared marvelously. If the light of *anatta* had not been appeared and the knowledge is unable to reach the nature of nothingness (sonata), the super opportunity to reach the Path-Knowledge and Fruit-Knowledge will be greatly far from him as the earth and sky indeed.

4.15.4 (b) It should not be misunderstood

In this case, the misunderstood that the *meditator* who is practicing the four great elements never taking to heart any other corporeal and mental *dhamma* every time, should not be appeared in mind. When the corporeal units can be seen by knowledge and the nature of four great elements consisting in the corporeal unit can be analyzed by analytical knowledge, the field of neighbourhood concentration through the way of meditation on the four great elements has been reached. Above instruction is intended to follow before reaching to the field of neighbourhood concentration. After sufficient neighbourhood concentration had been developed, it can be practiced on remaining corporeal and mental *dhamma* and it is able to change *vipassanā* stage indeed.

4.15.4 (c) One must go with great care

If a man who passes through very deep ravine by walking on small bridge the size of a footprint, looks around from here to there, he may fall into ravine easily. In the similar way if a *meditator* wanders on every external objects of concept and ultimate reality, except the nature of the four great elements, the improvement of the practice will be fallen back.

4.15.5 (a) It must be practiced to overcome concept (*paññattisamatikkamanato*)**PAGE-591*****Pāli Quotation (Mahāṭṭ-1-434-435)***

The *meditator* who is practicing the four great elements, must emphasize on the ultimate nature of each element in order to overcome the conceptual terms, such as the earth-element, the water-element, the fire-element, the air-element etc. He must take to heart the object of

1. the nature of hardness, roughness, heaviness, softness, smoothness, lightness of the earth-element,
2. the nature of flowing and cohesion of the water-element,
3. the nature of heat and coldness of the fire-element,
4. the nature of supporting and pushing of the air-element, continuously.

If he takes to heart the object of the earth-element throughout body as a common and it is not able to see the ultimate nature, i.e., hardness, roughness, heaviness, softness, smoothness, lightness, and then he changes on the object of the nature of water-element, it can be said the practice situates only on the concept of the earth-element. That kind of practice can be determined as only “reciting meditation” but not real mind of practice. It should be recognized on the remaining three elements, similarly.

If it is discerned as the earth-element and 6 kinds of nature of the earth-element can be seen by eye of wisdom, then it is alternative discerned on the water-element. It means the process of discerning can overcome conceptual terms well by insight. Similarly, it is discerned as the water-element, and the nature of flowing and cohesion can be seen by eye of wisdom throughout body, then alternative discerning on the fire-element must be carried out.

If it is discerned as the fire-element and the nature of heat and coldness can be seen throughout body, then the alternative discerning on the air-element must be carried out.

If it is discerned as the air-element and the nature of supporting and pushing can be seen throughout body, then the nature of the earth-element must be discerned again by eye of wisdom.

PAGE-592

In this way, if it is able to discern each nature of ultimate reality respectively by eye of wisdom continuously, it can be said that the mind of meditation situated well on the object of the ultimate nature by overcoming the conceptual terms.

4.15.5 (b) *Soñña, Nissatta, Nijjīva*

In this way, the ultimate reality called the nature of the four great elements becomes apparent in the knowledge of *meditator* by abandoning the conceptual terms, such as the earth-element, the water-element etc. By means of frequently take to heart those nature of elements, the mind of the *meditator* can be soaked with the cause of *āsevana* (predisposition). The influence of previous mind of meditation enhances the power of later that of meditation consequently. Throughout body becomes the nature of element only. It will be appeared in insight by means of

1. *soñña* = void of person, beings,

2. *nissatta* = non-beings
3. *nijjīva* = non-living self etc....

It is appeared in insight as a machine, which is controlled by automatic strings in order to move from here to there, composed of nature of all corporeal *dharmā* only. (*Mahāṭṭhāna*-1-434)

4.15.5 (c) Appearance in external aspect

If the specific characters of the four great elements will be scrutinized at external world by analytical knowledge, human beings, animals who are surrounding and dwelling around the *meditator*, will be appeared as only the nature of the four great elements in the insight of the latter. Behavioral actions of those beings will also be appeared as the automatic actions produced by machines of the four great elements in the knowledge of the *meditator*. The ingested foods and drinks of those beings will also be appeared as the four great elements which are put inside the four great elements. (*Mahāṭṭhāna*-1-434, 435)

4.15.6 (a) One can neglect some elements which are unapparent (*anupaṭṭhāna muñcanato*)

There are 12 kinds of nature of the four great elements, as mentioned previously. During developing concentration, sometimes some kinds of nature of element becomes unapparent in knowledge.

PAGE-593

At that time, if those unapparent kinds of nature will be intended to find frequently, the concentration can be fallen consequently. Therefore, those kinds of unapparent ones must be neglected for each element but not on apparent nature. It must be emphasized on any kind of nature of each element, which is very apparent in insight. At least one kind of nature of each element must be apparent and emphasized on that of each element respectively. Thus it can be discerned on the earth-element, the water-element, the fire-element, the air-element in accordance with the Buddha's preaching found in *Dhātumanasikāra pabba, Mahāsatipaṭṭhāna Sutta*. This rule is intended to follow only during the concentration is moderately developed. However, if all kinds of nature of the four great elements are apparent, it is best way for every *meditator*, indeed.

4.15.6 (b) *Sukhasamphassa, Dukkhasamphassa*

In the *Dhammasaṅgani Pāli*, the Buddha preached on *sukhasamphassa* and *dhukkhasamphassa* as addition of the base of touch (*phutthabbayatana*) which is called for the earth-element, the fire-element and the air-element.

Pāli Quotation (Abhi-A-1-368)

= *sukkasamphassa* means desirable object of touch, the earth-element, the fire-element, the air-element, which are the cause of agreeable feeling (*sukha vedana*)

dukkhasamphassa means non-desirable objects of touch, the earth-element, the fire-element and the air-element, which are the cause of disagreeable feeling (*dikkha vedana*). (*Abhi-A-1-368*)

According to this explanations of the commentary, the nature of hardness, roughness, heaviness, softness, smoothness, lightness, heat, coldness, supporting and pushing are desirable objects of touch sometimes. If these are desirable objects of touch, they become the causes of agreeable feeling.

Sometimes the nature of hardness, roughness, heaviness, softness, smoothness, lightness, heat, coldness, supporting and pushing usually occur as non-desirable objects of touch. If these are non-desirable objects of touch, they become the causes of disagreeable feeling.

Because desirable or non-desirable objects are also these 10 kinds of nature of three elements, *sukkkhasamphassa* and *dhukkhasamphassa* are exclude from this section. It will be presented in the section of touching object, Volume II.

PAGE-594

4.15.7 Only the specific character (*lakkhaṇato*) must be discerned emphatically

The specific character of each element such as

1. the hardness of the earth-element (*kakkhaḷatta lakkhaṇa*)
2. the flowing of the water-element (*paggarana lakkhaṇa*)
3. the heat of the fire-element (*uṇṇhatta lakkhaṇa*)
4. the supporting of the fire-element (*vitthambana lakkhaṇa*)

On which the mind of meditation must be fixed together and scrutinized continuously by insight. This instruction is intended for such person who is practicing on 12 kinds of nature of the four great elements and unable to reach neighbourhood concentration well. If the specific character of each element is emphasized and taken to heart frequently about 40 minutes, the mind of meditation is capable of taking these objects continuously and become concentrated on it. Thus, way of practice, which is convenient to concentrate on the object, must be recognized well and practiced continuously by that mean.

Then strong determination, such as “may the mind of meditation be fixed on the object of the four great elements about one hour”..... “about two hours” etc....., must be set in the mind up and practice continuously. After about 10 sitting period had been done with strong determination, it usually reach to the field of neighbourhood concentration well.

Although the *meditator* tries hard continuously, if the mind of meditation, which is soaked with the supporting cause of predisposition, becomes

1. either wander due to strenuous effort or
2. laziness due to diminish effort, resulting the neighbourhood concentration can not be reached in him, at that time, he must endeavour to adjust the effort and concentration in accordance with the way of practice found in these *Sutta*, as follows

PAGE-595

8. *Adhicitta Sutta*
9. *Anuttarasitibhāva Sutta*
10. *Bujjanga Sutta. (Mahāṅg-1-435)*

149

4.15.8 *Adhicitta Sutta*

This *sutta* can be found in *loṇahapanla vagga, tikanipāta, Anguttara Nikāya* Volume I and it's name is called *Nimitta Sutta* in that *Nikāya*. Translation of that *Sutta* would be presented as follows.

Bhikkhus! The meditating *bhikkhu* who strenuously practices the supreme mind of meditation, both *samatha* and *vipassanā*,

1. should be taken to heart the conditional sign of concentration (= *dhamma* which is able to occur concentration), sometimes,
2. should be taken to heart the conditional sign of effort (= *dhamma* which is able to occur effort), sometimes,
3. should be taken to heart the conditional sign of neutrality (*uppekkhā*) (= *dhamma* which is able to occur neutrality), sometimes.

Bhikkhus! If the meditating *bhikkhu* who strenuously practices the supreme mind of meditation, both *samatha* and *vipassanā*, takes to heart the conditional sign of concentration (= *dhamma* which is able to occur concentration) one-sidedly, that mind of *samatha* or *vipassanā* becomes the conditioned laziness. (1)

Bhikkhus! If the meditating *bhikkhu* who strenuously practice the supreme mind of meditation, both *samatha* and *vipassanā*, takes to heart the conditional sign of effort (= *dhamma* which is able to occur effort) one-sidedly that mind of *samatha* and *vipassanā* becomes the conditioned wandering mind. (2)

Bhikkhus! If the meditating *bhikkhu* who strenuously practice the supreme mind of meditation, both *samatha* and *vipassanā*, takes to heart the conditional sign of neutrality (= *dhamma* which is able to occur neutrality) one-sidedly, that mind of *samatha* and *vipassanā* becomes the conditioned insolence which is unable to cease four fluxions (*āsava*). (3)

Bhikkhus! The meditating *bhikkhu* who strenuously practices the supreme mind of *samatha* and *vipassanā*, takes into heart

1. the conditional sign of concentration, sometimes,
2. the conditional sign of effort, sometimes,
3. the conditional sign of neutrality sometimes, and then the mind of meditation becomes

PAGE-596

1. agile,
2. adaptability to carry out *samatha* and *vipassanā* practice, and
3. brilliant light appears
4. It is never fall back
5. It is situated well in solemnity in order to cease four fluxions (*āsava*) (= to attain the Fourth Path-Knowledge).

Bhikkhus! For instance, either the gold-smith or his pupil prepares a kiln and puts a piece of gold within a crucible in it and blows with air sometimes, sprays with water sometimes, neglects it sometimes. **Bhikkhus!** If either the gold-smith or his pupil blows continuously on that gold, it will be melted.(1)

Bhikkhus! If either the gold-smith or his pupil sprays continuously on that gold, it will be cooled. (2)

Bhikkhus! If wither the gold-smith or his pupil neglects continuously that gold, it will not be reached to matured condition. (3)

Bhikkhus! When either the gold-smith or his pupil blows on that gold sometimes, sprays with water sometimes and neglects sometimes, that piece of gold becomes agile, adaptability to carry out jewellery and brilliant light appears. It is never fall down and qualified for future works. If one needs any kind to become, a gold plate or ornamental ear-plug or necklace or bunch of golden flowers or special jewellery as he likes, it can be achieved whatever he needs.

Similarly, **bhikkhus!** The meditating **bhikkhu** who strenuously practices the supreme mind of meditation, both *samatha* and *vipassanā*, should be take to heart three conditional signs of the occurrence of *samatha* and *vipassanā* knowledge, i.e.,

1. conditional sign of concentration sometimes,
2. conditional sign of effort sometimes,
3. conditional sign of neutrality sometimes.

Bhikkhus! If the meditating **bhikkhu** who strenuously practices the supreme mind of meditation, both *samatha* and *vipassanā*, takes to heart the conditional sign of concentration (= *dhamma* which is able to occur concentration) one-sidedly, that mind of *samatha* or *vipassanā* becomes the conditioned laziness. (1)

PAGE-597

Bhikkhus! IfR.....(2)

Bhikkhus! IfR.....(3)

Bhikkhus! The meditating **bhikkhu** who strenuously practices the supreme mind of *samatha* and *vipassanā*, takes into to heart

1. the conditional sign of concentration sometimes,
2. the conditional sign of effort sometimes,
3. the conditional sign of neutrality sometimes and then the mind of meditation becomes
 1. agile,
 2. adaptability to carry out *samatha* and *vipassanā* practice, and
 3. brilliant light appears
 4. It is never fall back.
 5. It is situated well in solemnity in order to cease four fluxions (*āsava*) (= to attain the Fourth Path-Knowledge).

The mind of meditation is intended for faced with such *dhamma* which is deserving to know by supra-mundane knowledge. If it is fulfilled with previous perfections (*pāramitta*) and the presence of fundamental absorptions (*jhāna*) for psychic knowledge (*abhiññāna*), it can be reached to that deserving situations evidently.

“I want to feel various kinds of psychic power”s.....(6 kinds of psychic power can be presented in detailed)

If “he wants to face with the Fruit-Knowledge, which is deliverance of defilements called *cetovimutti*, *paññāvimutti* due to eradication of four fluxions, by himself in present life”, it can be reached to that deserving situations, (psychic power, *vipassanā*, the Path-and-the Fruit-Knowledge etc.), evidently,” preached by the Buddha. (*Ang-1-258-260*)

This is the translation of *Adhicitta Sutta*.

PAGE-598

4.15.9 (a) *Anuttarasītibhāva Sutta*

This *sutta* can be found in *sītivagga*, *Dutiyapaṇṇāsaka*, *Chakka Nipāta*, *Anguttara Nikāya* and its name is called *sītibhāva Sutta*. Translation of that *sutta* would be presented as follows.

Bhikkhus! The *bhikkhu* who had fulfilled with 6 kinds of *dhamma*, is not deserving to face with *nibbāna* which is beyond compare peace.

Bhikkhus! The *bhikkhu* under this *sāsanā*,

1. never suppresses his mind when it is time to suppress his mind,
2. never praises his mind when it is time to praise his mind,
3. never be joyful his mind when it is time to be joyful his mind,
4. never neglects his mind when it is time to neglect his mind,
5. has inferior attention,
6. enjoys in five aggregates with which wrong view of personality.

Bhikkhus! The *bhikkhu* who has fulfilled with this 6 kinds of *dhamma*, is not deserving to face with *nibbāna* which is beyond compare peace.

Bhikkhus! The *bhikkhu* who had fulfilled with 6 kinds of *dhamma*, is deserving to face with *nibbāna* which is beyond compare peace.

Bhikkhus! The *bhikkhu* under this *sāsanā*,

1. always suppresses his mind when it is time to suppress his mind,
2. always praises his mind when it is time to praise his mind,
3. always be joyful his mind when it is time to be joyful his mind,
4. always neglects his mind when it is time to neglect his mind,
5. has superior attention,
6. enjoys in *nibbāna*.

“**Bhikkhus!** The *bhikkhu* who had fulfilled with this 6 kinds of *dhamma*, is deserving to face with *nibbāna* which is beyond compare peace”... preached by the Buddha (*Ang-2-379*)

4.15.9 (b) The basic meaning of this *sutta*

1. If the mind of meditation wanders due to strenuous effort, it must be suppressed by developing concentration.
2. The mind of meditation must be praised or elevated by strenuous effort when it is lazy to practice due to diminish effort.

PAGE-599

3. When the mind of meditation becomes in neutrality, that neutralized mind must be joyful by knowledge. In other way, if the mind of meditation becomes lazy to approach the process of taking the object of the four great elements either due to weak knowledge which must be able to know profound nature of each element or due to

lack of peace which is free from defilement and called *upasamasukha*, the mind must be elevated and be joyful by developing concentration after recognizing 8 kinds of conditions of great fears, such as the suffering of rebirth (*jāti dukkha*), suffering of aging (*jarā dukkha*) etc....

4. Sometimes, the mind of meditation is neither lazy nor wandering; it is not void of joy to take the object and neutralizes on the object; situating well in the way of practice as a result; at that time it must be neither praised nor suppressed on that mind, but neglects like charioteer who regard with indifference on racing horses. (*Ang-Com-3-140, Ang-ṭī-3-146*)

4.15.9 (c) *Panitadhimuttika*

Pāli Quotation (Ang-ṭī-3-146)

= Because the Buddha preached the phrase, *nibbānābhirata* (inclination to *nibbāna*), the sub commentator Sayadaw explained that the phrase *paṇṭādhimuttika* means “strong inclination to the supreme *dhamma* called the Path-and Fruit-Knowledge”. Therefore, the *meditator* who wants to attain *nibbāna*, must be fulfilled with the mind which is inclined to get the Noble Path-and Fruit-Knowledge forever.

4.15.10 *Bojjhanga Sutta (Aggi Sutta) (Sam-3-98-100)*

This *sutta* can be found in *mahāvagga, Bojjaṅgasamyutta* page 98-100, and it is also called *Aggi Sutta*, serial number of 234. This *Sutta* is as a reference to explain *nimitta kosaṇḍa, bhavakosaṇḍa*, in the commentary called *Visuddhimagga* Volume I, page 127. The meaning of this *Sutta* is as follows.

Due to diminish effort; lack of bliss in the practice; diminish the knowledge of great fear, the mind of meditation becomes fall back to take the object of meditation. At that time, it should not be developed *passaddhi sambujjhaṅga*, (tranquility factor), *samādhisambujjhaṅga* (concentration factor) and *upekkhāsambujjhaṅga* (neutrality factor) but *dhammavicayasambujjhaṅga* (wisdom factor) *vīriyasambujjhaṅga* (effort factor), *pīṭisambujjhaṅga* (bliss factor).

Due to predominance in effort; presence of great bliss in the practice, predominance in the knowledge of great fear, the mind of meditation becomes wander from here to there. At that time, it should not be developed *dhammavicayasambujjhaṅga* (wisdom factor), *vīriyasambujjhaṅga* (effort factor), *pīṭisambujjhaṅga* (bliss factor) but *passaddhi sambujjhaṅga* (tranquility factor), *samādhisambujjhaṅga* (concentration factor).

Detailed account had been presented in Section 3, *Ānāpānassatisamādhī*, in which the way of practice in order to equal 7 factors of enlightenment taking the object of brilliant clear sign of full concentration of *Ānāpānassati*, had emphasized to express. In this portion, it must be practice in order to equal 7 factors of enlightenment taking the object of the nature of the four great elements, accordingly. Especially, it must be practiced in order to equal the effort and concentration in accordance with the Buddha’s instructions found in *Nimitta Sutta, Anuttarasītibhāva Sutta, Aggisutta*.

4.16 The practice of the four aspects of deportment (*iriyāpatha*) and clear comprehension (*sampajañña*)

* *yamkiñci kammaṭṭhānam satassa sampajānasseva sampajjhati. (Vs-1-276)*

= Every meditation subject can be fulfilled only when associated with the mindfulness and clear comprehension. Therefore it is essential to practice on the four aspects of deportment (*iriyāpatha*) and clear comprehension (*sampajañña*) in this portion.

During practising on mindfulness of breathing, the way of practice including four aspects of deportment, i.e. waling, standing, sitting, reclining, and clear comprehension, i.e., moving forwards and backwards etc. . can be carried by discerning in-and out-breath occurred within that manner in order to fulfil *gocarasampajañña*. Because it has not fulfilled *asammohasampajañña* which is clear comprehensible on corporeal and mental *dhamma* up to the field of ultimate reality, *gocarasampajañña* must be fulfilled previously.

After *gocarasampajañña* has been fulfilled by developing concentration up to the fourth absorption of the mindfulness of breathing, it must be endeavoured to fulfill *asammohasampajañña* successively for present time. Recent stage is called *dhātumanasīkāra pabba* at which the nature of four great elements are discerned and it is only the stage of developing concentration by taking the object of the four great elements.

Therefore, if only one nature of such element can be discerned, it must be discerned on that nature during walking, standing, sitting, reclining for *iriyāpatha* and during moving forwards and back wards; looking straight forwards and askance; bending and stretch out; handling bowl, robe etc, eating, drinking, chewing, licking, defecating and urinating etc.

If all nature of the four great elements can be discerned during sitting, it must be discerned all nature of the four great elements for remaining ways of *iriyāpatha* and *sampajañña* respectively. Thus the power of concentration becomes strong and sharp every time. Due to presence of supporting factor of previous mind of meditation, the later mind of meditation becomes strong and powerful successively.

4.17 Develop concentration through emphasizing on the specific character

In this stage, concentration must be developed by emphasizing on the specific character of each element.

1. The earth-element

It is designated as “softness” for the less degree of hardness while hardness, for the higher degree of hardness. It is designated as “smoothness” for the less degree of roughness while “roughness”, for the higher degree of roughness. If the hardness and roughness is apparent, the heaviness becomes apparent. It is designates as “lightness” for the less degree of “heaviness”, while the “heaviness” for the higher degree of heaviness. The nature of hardness, roughness and heaviness are significant for the earth-element. Among these, the nature of hardness is the most significant one. If it is apparent, the roughness and heaviness become apparent indeed.

2. The water-element

When cement is mixed with little amount of water, it becomes cluster resulting higher degree of cohesion occurs. When a little amount of cement is mixed with large amount of water, it becomes flowing. Then degree of flowing becomes higher. Therefore less degree of flowing is called or designated as “cohesion” while higher degree of flowing; as “flowing”. The nature of flowing, therefore, is significant for the water-element.

3. The fire-element

A few degree of temperature id designated as “coldness”, while higher degree of temperature, “heat”. The nature of heat, therefore, is significant for the fire-element.

4. The air-element

When an old house which is nearly collapsed, is supported by buttress, that house becomes stable. The nature of supporting is ability to maintain not to collapse by pushing on to the outside of a wall. Ability to move something is called “pushing”.

Ability to maintain a such thing in it’s original situation is designated as “supporting, while ability to move, as “pushing”. Thus the nature of supporting is the specific character of air-element, while that of “pushing”, the specific function of it. Every ultimate *dhamma* usually possesses both the specific function and the specific function as fixed natural law. Thus, if the nature of supporting is emphasized and discerned. It can be known on the nature of pushing simultaneously.

Therefore, during developing concentration by taking the object of the four great elements, it must be emphasized on

1. the nature of hardness roughness of the earth-element,
2. the nature of flowing of the water-element,
3. the nature of heat of the fire-element,
4. the nature of supporting of the air-element, respectively. It must discern frequently by taking the object of the nature of each element, and take into to heart as the earth-element, the water-element, the fire-element, the air-element.

The mind of meditation must be fixed on the objects of the four great elements. One must try to balance among five controlling faculties, seven factors of enlightenment, between the effort and the concentration. Thus, if these are equal, the mind of meditation becomes stable on the objects of the four great elements. It must be carried out with strong resolution that may the mind of meditation be fixed on the object one hour, two hours etc.... When the concentration become higher, the whole body becomes disappears and the bulk of the four great elements can be seen by direct knowledge. At that time, it must be developed concentration continuously by taking the objects of the four great elements in order to attain sufficient concentration.

4.18 The neighbourhood absorption (*āupacarajhana*)

Pāli Quotation (Visuddhi-1-347) (Mahāṭṭi-1-435)

The meaning of above commentary and sub-commentary are as follows.

= The effort which is trying to know the specific character of the four great elements as it really is, the effort which is trying to situate mind of meditation fixed on the object of the four great elements and the concentration which is stability of the mind of concentration on the object of the nature of the four great elements, occur in the mind of meditation, simultaneously.

At such time, in the mind of meditation of a **bhikkhu** who takes to heart the object of the specific character of the four great element after adjusted both kinds of the effort and concentration equally, has equal situations of five faculties, i.e.,

1. the faculty of faith (*saddhindare*), which is strongly belief on the training of concentration, which is the process of developing concentration by taking the objects of the four great elements and on the training of wisdom, which is knowing penetratively the specific character of each element,
2. the faculty of effort which is trying to know the specific character of the four great elements and endeavour to situate mind of meditation fixed on the object of the four great elements,
3. the faculty of mindfulness which is keeping in mind only the specific characters of the four great elements, repeatedly and continuously,

4. the faculty of concentration which is stability of the mind, fixed on the object of the specific characters of four great elements,
5. the faculty of wisdom which is penetrative knowing and seeing each specific character of the four great elements by analytical knowledge.

These five kinds of controlling faculties become balanced and clear. At that time, due to far from opposite **dhamma**, i.e., unbelief, laziness, unawareness, wandering, ignorance which is unable to know the specific characters of the four great elements as it really is, it is supported by very powerful seven factors of enlightenment, i.e.,

1. *satisambojjhaṅga* = the factor of mindfulness which is keeping in mind the specific characters of the four great elements repeatedly and continuously,
 2. *dhammavicāysambojjhaṅga* = the factor of wisdom which is scrutinizing and knowing penetratively each specific character of the four great elements,
 3. *vīriyasambojjhaṅga* = the factor of effort which is trying to know and concentrate the object of the specific characters of the four great elements,
 4. *pītisambojjhaṅga* = the factor of bliss which is complete happiness of the mind of meditation to take the object of the specific characters of the four great elements,
 5. *passaddhisambojjhaṅga* = the factor of tranquility which is calm and peaceful mind of meditation on the object of the specific characters of the four great elements,
 6. *samādhisambojjhaṅga* = the factor of concentration which is stability of the mind in order to fix on the object of the specific characters of the four great elements,
 7. *upekkhāsambojjhaṅga* = the factor of neutrality which is able to equal mind of meditation neither to be enthusiastic nor fall back to take the object of the specific characters of the four great elements and five factors of absorptions (*jhāna aṅga*), i.e.,
-
1. *vitakka* = initial application which is the nature of full attention of the mind towards the specific characters of the four great elements,
 2. *vicāra* = sustained application which is the nature of repeated realizing on the object of specific characters of the four great elements,
 3. *pīti* = pleasurable interest which is the nature of bliss to feel the object of the specific characters of the four great elements,
 4. *sukha* = mentally agreeable which is the nature of delight to feel the object of the specific characters of the four great elements,
 5. *ekaggatā* = one-pointedness of the mind which is fixed together with only one object of the specific characters of the four great elements, become very sharp and apparent in the insight of *meditator*.

PAGE-604

The following five kinds of hindrances,

1. *kāmicchandānīvaraṇa* = the hindrance of sensual pleasure which desires sensual object of various kinds,
2. *byāpadanīvaraṇa* = the hindrance of ill will which is destroyable anger on the objects of beings and *saṅkhāra dhamma*,
3. *thina-middha* = the hindrances of sloth and torpor which are drowsiness of mind and mental concomitants,
4. *uddhacca, kukkucca nīvaraṇa* = hindrances of restlessness and repentance which are wandering and regret about both misdeeds which had been done and right deeds which had not been done yet,
5. *vicikicchānīvaraṇa* = the hindrance of sceptical doubt which is scepticism about both training of concentration which is called the neighbourhood concentration through the objects of the specific characters of the four great elements and training of wisdom which is penetrative knowing and seeing on the specific characters of the four great elements, are opposite *dhamma* of five kinds of factors of absorption and those five hindrances are able to prohibit the mind of meditation not to follow the way of practice. When factors of absorption are very sharp and apparent, because these are opposite *dhamma* of five hindrances, they are able to remove the latter associating with unwholesome *dhamma* simultaneously. Thus *meditator* attains well the

neighbourhood concentration through the object of the specific characters of the four great elements.

In the commentary called *Visuddhimagga-1-347*, it is instructed that it should be discerned only on the nature of element, as the earth-element, the water-element, the fire-element, the air-element but not beings, living self etc..... It should be

1. kept in mind well, and
2. taken to heart the specific characters of elements frequently,
3. scrutinized each specific character of elements repeatedly by eye of wisdom.

It explained that “thus in the continuum of meditating *bhikkhu* who practices by means of way of practice mentioned above, the peak concentration of sensual world, which is unable to reach to full concentration, due to very profound nature of the ultimate *dhamma*, has been occurred by the wisdom which is able to distinguish various kinds of specific characters of elements, like the shining candle light.” This is the meaning of above quotations found in commentary and sub-commentary.

PAGE-605

4.19 Further explanation again

Those *meditators* who understood how to reach neighbourhood concentration through meditation on the four great elements, may be present depending upon above explanation only. However, some *meditators* who are unable to understand well, may also be present. It would be presented repeated explanation again for those kinds of *meditators*.

It must be discerned by adjusting between the faith and knowledge, the effort and concentration with the help of strong mindfulness when the specific character of four great elements had been scrutinized throughout body generally.

Especially if either the faith is not strong on the way of practice of the four great element or it will become criticize by the time the concentration must be developed, the faith and wisdom are still powerless indeed. It is essential to fulfill powerful faith on the way of practice of the four great elements. Very strong wisdom also plays vital important role in the four great-elements meditation in order to see each specific character of four great elements correctly. If either both the faith and the wisdom are weak or the wisdom is predominant but the faith is weak, it is very far to reach the field of neighbourhood concentration, indeed.

Then it is also essential to be balanced between the effort and concentration. Two kinds of effort, physical effort and mental effort, which are strenuous practice to fulfill the concentration situating on each specific character of the four great elements, are very important because the mind of meditation becomes fall back when both kinds of effort diminish. On the other hand, if the effort becomes over, the mind of meditation wanders without fixing on the object of the specific characters of the four great elements, resulting the concentration can not be developed.

Sometimes, with decrease effort but relaxation of the mind, it is stable on the object of specific characters of the four great elements. It is better for mind of meditation knowing each specific character of the four great elements and it becomes stable. But if it is stable without knowing the specific characters of the four great elements, the factors of enlightenment, tranquility, concentration, neutrality, become over in the mind of meditation. At that time, it must be developed wisdom factor, effort factor, bliss factor and endeavoured to see specific characters of the four great elements with the help of mindfulness factor of

enlightenment. As mentioned above, *Adhicitta Sutta*, *Anuttarasātibhava Sutta*, *Bojjhanga Sutta*, one applied to balance five controlling factors, seven factors of enlightenment.

PAGE-606

Sometimes, the mind of meditation wanders from here to there, without situating on the object of the four great elements, due to predominance of effort etc., at that time, it should be developed the factors of tranquility, concentration, neutrality, but not wisdom, effort, bliss.

Sometimes, either due to weakness of wisdom which is able to see each specific character of the four great elements or due to lack of tranquility of mind and mental concomitant called *upasamasukha*, the mind of meditation becomes void of pleasurable interest to practice. At that time, it should be recognized on eight kinds of great fearful bases, (*samvega vutthu*), and it should be developed faith by practicing on recollection of the nobilities of three gems. Especially, recollection of the nobility of the Buddha and recollection of the death are suitable to practice in this time. It is better for every *meditator* the fact that the four protective meditations must be developed previously, i.e., recollection of the nobility of the Buddha, meditation of loving-kindness, recollection of the death and meditation of repulsiveness.

For a such time, as mentioned above, due to ability of practice on balanced five controlling, faculties, seven factors of enlightenment, the mind of meditation in the continuum of *meditator* has neither fall back nor wandering to take the object of the specific characters of the four great elements. It is stable on its object because of the presence of tranquility of mind. The balanced mind follows the path of *samatha*, and it is able to neglect on the object of the specific characters of the four great elements with neutral feeling. Thus it should be practiced as mentioned in previous section, mindfulness of breathing, in order to attain balanced five controlling faculties, seven factors of enlightenment accordingly.

4.20 One usually falls into life-continuum (*Bhavanga*)

By the time the beginning of reaching into the field of access concentration, some *meditators* usually fall into life-continuum (*bhavanga*) sometimes. At that time, the specific characters of the four great elements has been neglected to discern by knowledge. Those kinds of *meditators* usually say that they are in the state of unconsciousness without knowing anything. The *meditator* thinks like that because the mind of the life-continuum (*bhavanga citta*) always takes the object of near death consciousness of adjacent previous life of himself. In this stage it is very difficult to understand the fact that the mind of the life-continuum takes the object of near death consciousness of adjacent previous life, for that *meditator*. Only when he reaches the stage of *paccayapariggaha ñāṇa* (Knowledge of causal relationship), can he understand exactly on the life-continuum.

PAGE-607

If he always enters into the life-continuum (become unconscious state), he must endeavour to fulfill three factors of enlightenment, i.e., wisdom, effort and bliss with the help of mindfulness factor. Then he must try to balance among controlling factors and among factors of enlightenment respectively. The mind of meditation must be fixed onto the object of the specific characters of the four great elements only. Then the concentration should be developed continuously in order to become strong.

4.21 Previous signs

When the mind of meditation fixes onto the object of the specific characters of the four great elements about one or two hours etc. and the concentration becomes strong it must be emphasized only on those characters without reciting or recognizing as the earth-element, the water-element, the fire-element, the air-element. If both specific characters of the four great elements appear in knowledge simultaneously, the mind of meditation must be fixed on those characters. When the mind of meditation and its object become oneness with each other, the concentration becomes stronger and stronger with the result that brilliant light appear in the knowledge indeed.

4.22 Experiences of some *meditators*

When the concentration becomes strong in some *meditators*, they think that their bodies become enlarge gradually before brilliant light appear. It is the sign of significant appearance of elements for them. At that time, it is suitable to discern external objects of the nature of the four great elements gradually.

4.23 Appearance in external aspect

Pāli Quotation (Mahāṭṭ-1-435)

PAGE-608

If the specific characters of the four great elements will be scrutinized at the external world by analytical knowledge, human beings, animals who are surrounding and dwelling around the *meditator*, will be appeared as only the nature of the four great elements in the insight of the latter. Behavioral actions of those beings will also be appeared as the automatic actions produced by machines of the four great elements, in the knowledge of the *meditator*. The ingested foods and drinks of those beings will also be appeared as the four great elements which are put inside the four great elements. (*Mahāṭṭ-1-435*)

However, in this stage, because it is not finished to discern internal thoroughly, it must be continued to discern internal only but not external ones. After thoroughly discerned on internal up to the field of ultimate corporeality and mentality, it is better to discern external ones systematically.

When the characters of elements become apparent and expand, some *meditator* usually afraid of those objects. It must not be fearful on those objects but continued to fulfill developed concentration by trying to balance various nature of elements accordingly. Mostly it can be occurred like that when the time, close to see corporeal units.

In the sight of some *meditators*, the whole body disappears and the bulk of the four great elements become solidified, smaller and smaller. This condition has usually been occurred because the *meditator* emphasizes only any one point inside the body without discerning overall as general. At that time, it must not pay attention on the size of bulk of elements whether it is big or small but only on the nature of elements.

In this stage, due to moderate strong concentration which is developed by taking the object of the four great elements, every element, which is intended to be emphasized, become very apparent. It is essential not to flit about in mind of meditation. This stage is a period before reach to the field of ultimate reality because of lack of ability to break down compactness of corporeality by insight. It is the time unable to overcome the field of concept and if the mind flits about, the signs mixed with conceptual forms usually appear in

knowledge. Therefore this is critical time for developing concentration by emphasizing on the specific characters of the four great elements continuously.

Between two persons, one thinks that the bulk of elements become enlarge and the other, however, thinks it become small, the latter person, sometimes, usually has sharp and strong concentration. For exception, the former one usually has sharp and strong concentration, sometimes.

PAGE-609

4.24 White clear block

When the concentration become stronger, the *meditator* who never reach neighbourhood concentration, usually finds white or grayish white block previously. However, in this stage, the mode of occurrence of this object varies among them. Some *meditator* recognize the light first while some others, white block previously. Those *meditators* with weak power of light recognize white block previously while those with strong power of light, recognize that light first, later on the white block.

The beginning of appearance of white block is grayish coloured, not clear in some *meditators*. If they emphasize only on the object of the four great elements without seeing that white block, and mind of meditation is stable on its object continuously, the grayish white coloured block becomes clear white as cotton wool. This white coloured block is precursor of clear transparent block. If the mind of meditation continues to emphasize on the specific characters of the four great elements without taking to heart that white object, he can understand well on this white block as the bulk of four great elements only.

If he is unable to understand like that but the white block is not easily disappeared, he must discern the nature of hardness of the whole body and that of hardness of the white block alternatively. After frequently practiced, the nature of hardness occurring in the white block can be seen apparently by insight knowledge. Similarly, the remaining 11 kinds of nature of elements must be discerned continuously. Within the white block, if all kinds of nature, i.e., hardness, roughness, heaviness, softness, smoothness, lightness, flowing, cohesion, heat, coldness, supporting, pushing, have been seen apparently by knowledge, discern as the earth-element, the water-element, the fire-element, the air-element. Then develop concentration again.

However, most *meditators* usually find that the beginning of appearance of white block is unstable and appeared for moment and disappear alternatively. At that time, the mind of meditation must be emphasized on original object of the nature of the four great elements, and try to fix onto that object continuously. If the white block always appears as soon as he practice and long lasting about half hour or an hour, 12 kinds of nature of the four great elements must be discerned as mentioned above. Then develop concentration again by discerning as the earth-element, the water-element, the fire-element, the air-element.

PAGE-610

If the four great elements can be discerned at that white block and the concentration is also well developed, it becomes clear and transparent gradually. Then that clear transparent block must be discerned in order to see the nature of the four great elements. The mind of meditation must be fixed on that object. The higher in concentration, the greater in wisdom successively. When the wisdom knowing the nature of the four great elements, become strong the brilliant light usually appear. That light is so bright that it reflects the eye clear sensitivity resulting eyes smart. It can effect tear-drop around the eye as looking on bright

sun. At that time, it should not emphasized on light but on the nature of the four great elements. When he has well-experience with shining light he can resist the effect of brilliant light. The commentator explained, with regard to that kind of shining light, the fact that “*dhātuppabhedāvabhāsa paññāpariggahito*” = “ which is possessing the function to show various specific characters of the four great elements by its light of wisdom, which is kept in mind by wisdom”,. (*Visuddhi-1-347*)

In this case, it is one point to notice that some *meditators*, sometime, find clear or white block in front of him but not inside body. If white block appears external, it should not emphasize on it and he must continue to discern the nature of four great element inside body. After the whole body becomes white, the nature of the four great element within it must be discerned and then the clear transparent block can be found gradually.

In some *meditators* at the beginning of the appearance of clear transparent block, it appears irregular patches in shape, on the breast in some, on the face or on the head in some respectively. At that time it should not emphasized on that white or clear transparent patch but on remaining parts of body without spreading white. Then the white or clear transparent block will spread out throughout body. It can be seen the whole body as icy block or transparent glass block in his knowledge. The body clear sensitivity (*kāya pasāda*) is a kind of corporeality which is spreading the whole body. Because tactile consciousness (*kāyavinñāṇa*) occurs depending upon body clear sensitivity, the latter present all parts of body where is able to know touch. It can be seen clear transparent block inside the whole body due to unable to breakdown the compactness of corporeality. Discern continuously on that icy block or glass block-like body in order to see the nature of the four great elements. Develop concentration by continuous discerning on that object which always appear in knowledge whenever he discern on it.

PAGE-611

If one can not understand the nature of the four great elements within the clear block, he must discern alternately on the whole body and the clear transparent block, which are composed of the hardness, roughness, heaviness, etc. Then develop concentration continuously by taking the object of the nature of the four great elements.

4.25 Wholesome persons with great previous perfection (*pāramita*)

Wholesome persons, because they had experienced with ability to see the ultimate corporeality by knowledge in previous life usually see the corporeal units by merely discern on clear transparent block, as four great elements, after break down clear transparent block, easily.

4.26 (a) Discern the space-element (*ākāsa*)

However, if those *meditators* had not experienced with ability to see the ultimate corporeality by knowledge in previous lives, the clear transparent block never break down to corporeal units by merely discern on clear transparent block as the four great elements. At that time, the space-element on clear transparent block, must be discerned by insight.

The Buddha preached Venerable *Rāhula* to discern the space-element in *Mahā-Rāhulovāda Sutta* (*M-2-86*). The commentator explained the reason of why the Buddha preached to discern the space-element, as follows:

Pāli Quotation (M-A-3-97) (M-ṭī-2-63)

It is reasonable to preach in detail of the four great elements which are deserving to discern by three general characters. However, it is a question that why the Buddha preached in detail of the space-element which is, indeed, not deserving to discern by three general characters. It can be answered that because the Buddha wanted to instruct to discern derived corporealities (*upāda rūpa*), The Buddha preached in detail of the space-element.

* *vuttammhi ekadhamme, ye dhammā ekalakkhanātena.
vuttā bhavanti sabbe, itti vutto lakkhaṇohāro.*

= If the Buddha preaches to discern any kind of ultimate *dhamma*, it is also intended to preach to discern all kinds of ultimate *dhamma* which have same character as that kind. Thus all *dhamma* which have the same character are interpreted as a common, and this kind of preaching methodology is known as *Lakkhaṇāhāra netti*.

In *Mahārāhulovada Sutta*, the Buddha preached to discern the space-element in order to intend to instruct that all derived corporealities, which has same characters, must be discerned, according to *lakkhaṇāhāranetti*. In this *Sutta*, before the space-element had been preached, the Buddha preached the four great element previously, but not on derived corporeality. The Buddha preached in detail of the space-element in order to intend to instruct to discern the space-element associating with derived corporealities. The space-element is a kind of derived corporeality depending upon the four great elements. The remaining 23 kinds of derived corporealities are also occurred depending upon the four great elements. Thus the space-element and remaining 23 kinds of derived corporealities have the same character, way of occurrence depending on the four great elements, due to this reason the Buddha preached only the space-element as a common, according to *lakkhaṇāhāranetti*.

The Buddha preached in detail of the space-element not only intended to instruct to discern as a common but also intended to show easy way of discerning on corporeal *dhamma*. Actually, if a *meditator* is able to discern the space-element which is demarcating between corporeal units not to mix each other, all corporeal units demarcated by space-element is also apparent in the knowledge of the *meditator* vice versa.

In the continuum of *meditator*, who is seeing a group of corporeal units which are demarcated by space-element, it can be reached to know and see the four great elements and derived corporealities within each corporeal unit. The Buddha preached the space-element in order to show the occurrence like that apparently. (*M-A-3-97, M-ṭī-2-63*)

4.26 (b) How to discern the space-element

Although the four great elements had been discerned on the clear transparent block, if the latter has not broken down yet, the space-element within that block must be emphasized by the help of light. When arm is observed, it looks like without opening, but there is many openings of hair-roots which can be seen by careful observation. Similarly, it must be scrutinized on clear transparent block in order to see the space-element. As soon as the space-element has been found, the corporeal units can also be found simultaneously by insight knowledge.

4.27 ‘6’ kinds of clear sensitivities

1. *cakkhupasāda* = eye-clear-sensitivity
2. *sotapasāda* = ear-clear-sensitivity
3. *ghānapasāda* = nose-clear-sensitivity
4. *jhivhāpasāda* = tongue-clear-sensitivity
5. *kāyapasāda* = body-clear-sensitivity

There are 5 kinds of corporeal clear sensitivities.

6. *manopasāda* = mind-clear-sensitivity,

It is one kind only for mental clear sensitivity. Totally, there are all 6 kinds of clear sensitivities.

Body-clear-sensitivities present throughout body where it is able to know tactile object. This is because body-consciousness (touching consciousness) which is able to know tactile object, can occur depending upon body clear sensitivity. Five kinds of corporeal sensitivities including body clear sensitivity can not be seen before the space-element has been seen resulting corporeal units can be seen as clear transparent block continuously.

Pāli Quotation (Visuddhi-2-81)

According to this explanation found in commentary, because five kinds of clear sensitivities, such as, eye clear sensitivity, etc., are dependent factor for respective objects, such as colour-object, etc., these are, like mirror, so clear that called clear sensitivities (*pasād rūpa*). (*Visuddhi-2-81*)

PAGE-614

When the space-element within the clear transparent block can be seen by the help of light produced by knowledge which is associating with the concentration, the corporeal units will be seen simultaneously.

The Buddha preached the fact that “the consciousness of life-continuum (*bhavaṅga*) is brilliant white in colour”, in *iccharāsaṅghāta Vagga, Paṇihitaiccha Vagga, Ekka Nipāta, Anguttara Nikāya (Angl-9)*. The Buddha preached these words so as to intend the fact that the consciousness of the life-continuum is brilliant white due to absence of defilements called *upakkilesa* which are the cause of impurity of mind, such as lust, anger, delusion etc. It means that the consciousness of life-continuum has neither colour nor light, but clear and purified due to lack of impurity. However, the colour consisting in the mind produced pure octad and the colour consisting in pure octad produced by temperature which is consisting in the mind produced pure octad, are bright depending on the power of knowledge associating with the consciousness of the life-continuum. The higher the knowledge, the brighter the colour of those pure octads produced by mind and temperature.

In *Mūlaṭīkā, 1-125*, explained that “*sabhāvovāyam cittassa paṇḍaratā*” = “all kinds of consciousness are, naturally, clear and purified.”.

Pāli-Quotation (Ang-Com-1-46)

= It can be said the fact that the consciousness of life-continuum, which is naturally clear and purified, becomes impurity due to presence of defilements (*upakkilesa*) which are produced by the consciousness associated with attachment, (*lobha*), the nature of adhering to object; the consciousness associated with anger (*dosa*), the consciousness associated with delusion (*moha*), during consecutive occurrence of consciousness of thought processes, as a result of contact of object and door. (*Ang-1-46*)

4.28 Like water flow, like candle flame

For some *meditators*, during developing concentration by taking the object of the specific characters of the four great elements, if he scrutinizes on those characters continuously, the continuous processes of occurrence of the four great elements appear like water flow or candle flame, before clear sensitivities can be found.

PAGE-615

The nature of corporealities are found as beginning stage before compactness of continuity, compactness of form, etc. had been broken by insight knowledge. At that time, it must be continuously discerned on the object of the four great elements and then the nature of the four great elements becomes clearer and clearer gradually. If it is continuously emphasized on those clear transparent block as the nature of the four great elements, the beginning of corporealunits will be found easily. If the corporeal units can not be found easily, the space-element must be discern as mentioned above. At the beginning stage to find corporeal units, it is the same mode to see the occurrence like water flow or candle flame. However, this stage has not reached to the field of ultimate reality indeed.

4.29 The size of block, big or small

When some *meditator* emphasize the space-element on clear transparent block, they find large size of corporeal units which are not natural size, about rice seed or been etc.. In knowledge of some *meditators* these are like small beads of diamonds, spreading on black velvet. At that time, it must be discerned on those corporeal units whether they are big or small in size in order to see the specific characters of the four great elements. Beads of corporeal units will be broken down to smaller ones up to smallest size. If large beads of corporeal units are not easily broken down to smaller ones by discerning as the four great elements, it must be discerned the space-element on the former with the result that the natural size of corporeal units can be seen easily by eye of wisdom.

Some *meditators* with great previous perfections are able to see minute corporeal units which are may be smaller than *paramā* minute particles as soon as they emphasize the space-element on the clear transparent block.

4.30 By the time the beginning of corporeal units can be seen

By the time, the beginning of corporeal units can be seen, it can be found those units are arising and fading away very rapidly. In the commentary of *Sam-yutta Nikāya –Com-2-295*, it is explained that....

“ekiccharakkhaṇe kotisatasahassa sankhā nirujjhati”.

= “the mental *dhamma* arise and pass away million million times within one second”.., and then the life span of mental *dhamma* can be said, only about one millionth per pico-second, indeed.

According to scriptures, it is explained that the corporeal *dhamma* exist 17 times to mental moment (*cittakkhana*), and then the life-span of corporeal *dhamma* can be said, about one trillionth second only. Thus the rate of the processes of arising and passing away of corporeal *dhamma* is also beyond compare rapid indeed.

According to scriptures, it is explained that the corporeal *dhamma* exist 17 times to mental moment (*cittakkhana*), and then the life-span of corporeal *dhamma* can be said, about one trillionth second only. Thus the rate of the processes of arising and passing away of corporeal *dhamma* is also beyond compare rapid indeed.

PAGE-616

If *vipassanā* practice has been taken place by seeing arising and passing away corporeal units, it can be said that it is only in the stage of concept (*paññatti*). That kind of way of practice is unable to lead to *nibbāna* due to lack of ability to see the ultimate reality. Only when one is able to see the underived and derived corporealities, such as the earth-element, the water-element, the fire-element, the air-element consisting in corporeal units, by analytical knowledge, can he reach to the field of ultimate reality by insight knowledge. The ultimate corporeal and mental *dhamma* are deserving to generalize by three characters, such as impermanence, suffering, non-self. Those *dhamma* only are the object of *vipassanā* practice. True *vipassanā* knowledge can be occurred by discerning as three general characters on the ultimate corporeal and mental *dhamma* only.

According to *Susima Sutta*, (*Samyutta-1-344*), the Noble Path-Knowledge, which is able to take the object of *nibbāna*, can be occurred only at the end of true *vipassanā* knowledge. If it is not real *vipassanā* knowledge, the real Noble Path-Knowledge can not be occurred as a result. Thus it can be said that the ultimate *dhamma* called *nibbāna* can be reached through the ultimate realities called corporeality and mentality, indeed.

4.31 The size of corporeal unit

Pāli Quotation (Mahāṭṭi-1-477, Abhi-Com-2-328)

Dust particles, which are raised by car and bullock cart, can be seen by naked eye and are called *rathareṇumyū*. One-thirty sixth part (1/36) of *rathareṇumyū* is a kind of minute particle called *tijjhāremyū*. The mist which can be seen in the sun light penetrating through wall are *tijjhāremyū*. One-thirty sixth part (1/36) of *tijjhāremyū* is called *aṇumyū* sub particle. Then one-thirty sixth part (1/36) of *aṇumyū* is called *paramāṇumyū*.

The size of a corporeal unit is same about *paramāṇumyū*. Those corporeal units, the size of about *paramāṇumyū*, belongs to the space *koṭṭhāsa* (*ākāsa koṭṭhāsika*). It means the fact that a such place where is full of corporeal units seems to be space and those corporeal units can not be seen by naked eye. Actually, those are not the object of natural eye (=seeing consciousness) (*mamsa cakkhu*), but that of divine eye (*dibba cakkhu*).

(It means that those corporeal units can be seen by the help of light produced by super psychic knowledge of divine eye (*dibba cakkhu abhiññāṇa*). However, powerful light can also be produced by mind of *samatha*, *vipassanā* meditation, like super psychic knowledge of divine eye, and those corporeal units can be seen by the help of light produced by the former. It should be recognized the fact that the commentator and sub-commentator explained by means of *lakkhaṇāhāra netti* method. Thus *suddhavipassanā yānika* person

and *samathayānika* person, who are unable to attain super-psychic knowledge, can change to *vipassanā* stage.)

PAGE-617

4.32 One difficult problem

Sometimes, when some *meditators* emphasize the space-element on the clear transparent block, the clear transparent block becomes disappear. At that time, the original object, the four great elements must be discerned again. Then, that clear transparent block will be reappear again as a result of fixed mind of meditation on the object of the four great elements. When those *meditators* who have weak concentration give up the object of the four great elements and emphasize on the space element, clear transparent block will usually be disappeared as a result of insufficient concentration. When the power of concentration becomes powerful, it can not be disappeared easily but it can be seen like water flow or candle flame by insight knowledge continuously.

4.33 Four great elements and clear sensitivity element

Now, it would be presented on the relationship between the four great elements and clear sensitivities of corporeality.

* *rūpābhigāhātārahābhūtappassāda lakkhaṇam....p....cakkhu. (Visuddhi-2-74)*

In *Visuddhi magga*, it is explained that the eye clear sensitivity (*cakkhu pssāda*) has the nature of transparency of the four great elements which are deserving to strike together with colour object. Similarly, it is explained that the ear, the nose, the tongue, the body, clear sensitivities, also have the nature of transparency of the four great elements which are deserving to strike together with respective objects. The clear transparent block of corporeality, therefore, means the nature of transparency of the four great elements, which is deserving to strike together with specific object, such as colour, sound, etc... and respective clear sensitivity, such as eye, ear. etc. Because of this reason, if a *meditator* give up discerning on the four great elements, he can see neither the nature of the four great elements nor the nature of transparency of the four great elements. When he discern on the space-element, he is unable to see the clear transparent block as a result sometimes. Therefore, at that time, it is essential to develop concentration by taking the object of the four great elements continuously. When he has fulfilled powerful concentration, the clear transparent block will never disappear and then the space-element must be discerned again. The corporeal units can be found easily by insight knowledge.

PAGE-618

4.34 Be careful not to misleading path

Corporeal units is the smallest system of corporeality in the field of conventional reality (*samutī sacca*). The smallest corporeal system, a kind of corporeal unit, consists of at least 8 kinds of nature of corporeality, i.e., the earth-element, the water-element, the fire-element, the air=element, colour, smell, taste, nutriment. In some kinds, if the life-faculty is present, it consists of a factors, and if the clear sensitivity or sex-corporeality is present, it consists of 10 factors. Only when those nature of corporealities consisting within each

corporeal unit, 8,9,10, kinds, etc... it can be reached to the field of ultimate reality actually. It can be attained the discriminative knowledge on the corporeality (*rūpapariccheda ñāṇa*) when the specific character of each corporeality can be discerned by insight. Indeed, this stage is only knowing real nature of corporeality but not finished to practice and various ways of practice still remain to be continued.

If a *meditator* takes place *vipassanā* practice by taking the object of arising and passing away of those corporeal units, it can be said that the concept only is discerned as *vipassanā* practice due to unable to uncover compactness of form. Only when he is able to discern specific characters of each corporeality, consisting within various kinds of corporeal units, i.e., 8 factors, 9 factors, 10 factors, etc., by analytical knowledge, the compactness of form will be broken down and it is uncovered from the concept of form. However, if it is taken place *vipassanā* practice on the concept of form, i.e. the bulk of corporeal units, it is not durable for long time. Then the corporeal units become disappear gradually and the clear transparent block reappear again. Indeed, only the ultimate *dhamma* are resistant to discern by *vipassanā* practice. If he fixes his mind of meditation to the transparent block, it is stable on the object due to sufficient concentration. At that time, the *meditator* usually says that “the corporeality is ceased”. Then if he decrease effort to discern the object gradually, he falls into the life-continuum (= sleeping condition) due to lack of ability to sustain by factors of absorption, such as *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā*. Some suggests that “both corporeality and mentality cease” for that condition. Indeed, this stage is still knowing nothing, even real corporeal and mentality as they really are.

PAGE-619

Generally, most peoples who say like that, are without fulfilling strong concentration by any one subject of meditation among forty ways and they are able to see corporeal units, depending on their previous perfection, but not through systematic discerning on the four great elements. They are quite far from ability to discern the nature of four great elements with each corporeal unit because of the absence of systematic approach to the four elements meditation previously. For any *meditator* who is unable to discern very quickly on the nature of four great elements, it is very difficult to discern those nature of corporeal units which are arising and passing away very rapidly. It is able to reach to the field of ultimate reality when it is able to distinguish specific nature of four great elements consisting in corporeal units of various kinds of insight. Corporeal units are only at the stage of smallest system of mass, covered by form-concept, shape-concept etc. It must be changed to the field of ultimate reality from the stage of seeing those kinds of concept. It is similar to unpurified gold and can be said that “it is true gold, but not purified.”

4.35 Toward the field of ultimate reality

If it is impossible to discern the four great elements within each corporeal unit due to rapid rate of processes of arising and passing away of those units, it should not be emphasized on those processes of arising and passing away of corporeal units but on the specific characters of the four great elements. The *meditator* with previous perfection will be successful to discern the ultimate nature of elements easily.

It must be emphasized on many corporeal units as a common or all kinds of corporeal units generally or the whole body generally, and discerned as the specific character of each elements respectively. Develop concentration by taking the object of the specific characters

of the four great elements alternatively. When the concentration become strong an powerful, the specific character of each element within a corporeal unit by penetrative knowledge systematically.

Roughly, all kinds of corporeal units can be divided into two groups, i.e., transparent corporeal unit and non-transparent corporeal unit. Corporeal units with any kind of clear sensitivities of five kinds are transparent ones but remaining, non-transparent ones. Both two kinds of transparent and non-transparent ones mixed together throughout body. It must be discerned on the four great elements within both kinds of transparent and non-transparent corporeal units continuously. Alternative discernment must be taken place on all corporeal units generally, and on each corporeal unit individually. It can be successful.

PAGE-620

4.36 (a) Practise to balance among controlling faculties, factors of enlightenment

If it is not successful, 5 kinds of controlling faculties or 7 kinds of factors of enlightenment must be balanced. Develop concentration again by the way of mindfulness of breathing up to fourth absorption which has 8 qualities. Then develop concentration by taking the object of the nature of the four great elements. When the clear transparent block appears, emphasizes on the space-element in order to see corporeal units. Then it must be discerned generally on the object of the four great elements of those corporeal units. Practise to balance 7 factors of enlightenment.

1. ***satisambojjhaṅga*** = the factor of mindfulness which is keeping in mind the specific characters of the four great elements repeatedly and continuously.
2. ***dhammavicayasambojjhaṅga*** = the factor of wisdom which is scrutinizing and knowing penetratively each specific character of the four great elements,
3. ***vīriyasambojjhaṅga*** = the factor of effort which is trying to know and concentrate the object of the specific characters of the four great elements,
4. ***pīṭhisambojjhaṅga*** = the factor of bliss which is complete happiness of the mind of meditation to take the object the specific characters of the four great elements,
5. ***passaddhisambojjhaṅga*** = the factor of tranquility which is calm and peaceful mind of meditation on the object of the specific characters of the four great elements,
6. ***samādhisambojjhaṅga*** = the factor of concentration which is stability of the mind, in order to fix on the object of the specific characters of the four great elements,
7. ***upekkhāsambojjhaṅga*** = the factor of neutrality which is able to equal mind of meditation neither to be enthusiastic nor fall back to take the object of the specific characters of the four great elements,

It must be practiced to balance among these 7 factors of enlightenment. In order to become strong power in factor of wisdom, effort, bliss, it must be eagerly scrutinized on the specific characters of the four great elements continuously. In order to become strong power in factor of tranquility, concentration, neutrality, it must be fixed the mind of meditation, in relax position, to the object of the four great elements.

When the factor of wisdom and concentration are balanced, or when five kinds of controlling faculties or seven kinds of factors of enlightenment are balanced, it must be discerned 12 kinds of nature of the four great elements alternatively within each corporeal unit.

4.36 (b) Way of practice

Discern the nature of hardness of all corporeal units throughout body as a common. Then discern the nature of hardness of a corporeal unit repeatedly and frequently. Corporeal units will be rapidly arising and passing away. If a corporeal unit which is discerned to see the hardness, disappears in insight, the nature of hardness of the next corporeal unit must be discerned successively. Thus if the nature of hardness can be found in each corporeal unit by eye of wisdom, the nature of roughness must be discerned similarly. Then it must be practiced in order to see both two nature, the hardness and roughness, simultaneously within every corporeal unit by eye wisdom.

In this way, the remaining specific characters of the four great elements must be discerned successively one after another. When 12 kinds of nature of elements can be seen within a corporeal unit, discern to see the object of the four great elements simultaneously within a corporeal unit. When the concentration and wisdom become strong powerful, the nature of the four great elements will be apparent simultaneously in insight. Then it must be discerned on the nature of the four great elements of both transparent and non-transparent corporeal units at 6 doors, i.e., eye, ear, nose, tongue, body and heart. If it is successful to discern the four great elements consisting in each corporeal unit, the concentration which is the peak of concentration of sensuous world, is called the neighbourhood concentration (*upacāra Samādhi*) by means of a metaphor called *sadisupacāra* (same condition).

During the concentration of sensuous world has been developed, it must be recognized to emphasize and discern four kinds of specific characters, i.e.

1. the nature of hardness (for the earth-element)
2. the nature of flowing (for the water-element)
3. the nature of heat (for the fire-element)
4. the nature of supporting (for the air-element).

4.36 (c) The meaning of “as possible as”

It would be explained the fact that 12 kinds of nature of the four great elements can be seen, as possible as he can, within a corporeal unit.

Within a corporeal unit, if hardness, roughness, heaviness are apparent, softness, smoothness, lightness are not apparent and vice versa, for the earth-element.

For the nature of water-element, both the flowing and cohesion can be apparent. However, any one kind usually become stronger powerful in one corporeal unit.

Then, if the nature of heat is apparent, the coldness become unapparent and vice versa, for the fire-element.

Furthermore both the nature of supporting and pushing of the air-element can be apparent within one corporeal unit. The nature of supporting is the specific character, while the pushing, the specific function of the air-element respectively. The practicing *meditator* should like to discern careful on elements. (*Mahāṭṭi-2-108-109*)

4.37 Misperception of being and self can be removed

Thus the Buddha preached, in order to intend a such stage at which it is able to reach the field of ultimate reality after break down of three compactness of corporeality by analytical knowledge, in *Dhātumanasīkārapabba, Mahāsatipatthāna Sutta*, as follows.

Pāli Quotation (M-1-73)

= **Bhikkhus!** As a simile, either the experienced cattle slaughter or his follower killed a cow and then skins and cuts up carcass of cattle at crossroads, the **bhikkhu** discerns, scrutinizes and takes to heart the body which is situating as it's position accordingly like this “this body consists of the earth-element, the water-element, the fire-element, the air-element” etc. one by one, by means of the nature of elements, but not person, beings, and living self. (M-1-73)

It is also explained in commentary and sub-commentary as follows.

Pāli Quotation (Dī-A-2-361, M-A-1-276) (Dī-ṭ-2-309, M-ṭ-1-365, 366)

In the knowledge of **meditator**, who is discerning on the nature of each element, such as, the earth-element, the water-element, the fire-element, the air-element, within each corporeal unit by analytical knowledge, in order to break down, three kinds of compactness, i.e.

1. **santatiḅhāna** = the compactness of continuity of corporeality
2. **samūhaghāna** = the compactness of form of corporeality
3. **kiccaghāna** = the compactness of function of corporeality, two kinds of misperception, i.e.,

PAGE-623

1. **sattasaññā** = misperception of beings which always follows wrong view of self (**atta diṭṭhi**) by which some one obsesses the fact that the live-body, the consciousness-body, the self-body is apparently present, and
2. misperception of beings which is occurred by means of conventional reality (**vohāra sacca**, in accordance with the terminology of human beings, such as, “male, female, person, beings, human beings, **deva**, brahmas are really present in the world”, etc. will be disappeared. Mind of meditation is situated well on the four great element consisting in each corporeal unit. (Dī-Com-2-361, M-Com-1-276, Dī-ṭ-2-309, M-ṭ-1-365, 366)

Pāli Quotation (Mahāṭṭ-1-446)

= This four element meditation which is able to keep in mind and discern and take to heart the nature of element, has a beneficial result to remove misperception of beings. The way of practice by which the ultimate corporeality and mentality are analyzed in order to break down compactness of both corporeal and mental **dhamma**, is essential to remove misperception of beings. Therefore it should be endeavour to know and see ultimate corporealities consisting various bodily parts, such as hair, bodily hair etc., which are of various kinds, 8, 16, 44 kinds etc.. by means of analytical knowledge. (Mahāṭṭ-1-466)

According to these explanations found in **Pāli**, commentary and sub-commentary, if the nature of the four great elements consisting in each corporeal unit can be discerned,

distinguished and kept in mind by analytical knowledge, it begins to reach the field of ultimate reality. The misperception of beings has also been removed. Very strong obsession which is rooted along with the round of rebirths, on the fact that “the living-body, consciousness-body, self-body are really present, male, female, person, beings, human beings, *deva*, brahmas are really present”, begins to be removed. At that time, if the four great elements of the external world are scrutinized by insight knowledge, all living and non-living becomes huge community of corporeal units and those are only bulk of the four great elements.

However, it is essential to practice by means of successive way of systematic approach in order to attain the first Path-Knowledge (*sotapattimagga ñāṇa*) by which three kinds of fire of hell, i.e., misperception of beings, misperception of self, wrong view of personality, will be extinguished for good. The successive way of practice, therefore, will be presented continuously.

PAGE-624

As above mentioned, the peak of concentration of sensuous world can be called the neighbourhood concentration by means of preaching methodology, *sadisūpacāra* (same condition) and it must be noticed on one fact as follow.

During practicing like this, the power of light is strongly present. However, sometimes, when either the concentration become fall back or mind of meditation is shaken by defilements (*nīvaṇa*), the power of light becomes fall back. At that time, develop concentration by means of either mindfulness of breathing or the four great elements meditation and then the brilliant light will be appear again.

4.38. (a) Practise on (32) bodily parts (*koṭṭhāsa*)

When the power of light become strong, it hairs, bodily hairs, nails, claws, teeth, skins are discerned successively, it will be seen easily by insight knowledge. It should be discerned on those bodily parts by group-wise system, i.e. 20 kinds of bodily parts, that are predominant with the earth-element, can be divided into 4 groups, 5 bodily parts in each group and 12 kinds of bodily parts, that are predominant with the water-element, can be divided into 2 groups, 6 bodily parts in each group, etc. At the beginning stage of some *meditators*, the objects of bodily parts usually become unclear in insight. At that time the concentration must be developed again. When the light of concentration become brighter, discern on those bodily parts again. When the objects can be seen like image on the mirror, it is enough to develop sufficient concentration. Then it must be continued to practice in order to see clearly from hair to urine (32nd bodily part) and from urine to hair. If it is able to discern all bodily parts simultaneously, it is proficiently successful in internal object.

4.38 (b) How can be appeared in the insight external objects

Pāli Quotation (Abhi-A-2-242)

32 kinds of various flowers are made to form a garland. When a man with clear sight look at that garland, all 32 kinds of various flowers are apparent in him. Around a piece of land is surrounded by fence with 32 posts. When a man with clear sight look at that fence, all posts are apparent in him. Similarly, 32 bodily parts of external beings are apparently appeared in the knowledge of the *meditator*. That *meditator* is unable to recognize on wandering animals and human beings as beings but only 32 bodily parts of themselves. The

ingested foods and drinks of those beings will be appeared as foods and drinks are put inside 32 bodily parts. (*Abhi-A-2-236, 242, Vs-1-257*).

PAGE-625

4.39 Three ways of practice

Pāli Quotation (Abhi-Com-2-243)

= After proficiently discerns on both internal and external bodily parts, if any one of three entrances to enter *nibbāna* is applied by a *meditator*, it will be free from defilements really.

The object of meditation becomes appears as any one of three kinds, i.e.

1. colour (colour-*kasiṇa*) or
2. the nature of loathsomeness or
3. the nature of nothingness (= the nature of elements) which is void of person, begins, living-self.

Comparison to world similes, as a lady who wants to fry sweet *pancakes* is able to fry dough which is well done mixture of flour and water, as the water flows from the desired side if the pot filled with water is put on even surface of the ground, similarly, after proficiently discerned on both internal and external bodily parts, if any one of three entrances to enter *nibbāna*, is applied, it will be free from defilements really. It will be appeared

1. by means of colour (colour-*kasiṇa*),
2. by means of nature of loathsomeness,
3. by means of the nature of nothingness (= the nature of elements) in accordance with his desire. (*Abhi-A-2-242, 243*)

PAGE-626

Colour-*kasiṇa*

If it is well developed any one of the followings,

1. brown-*kasiṇa* (*nīla kasiṇa*) by taking the object of brown-coloured bodily parts, such as hair,
2. yellow-*kasiṇa* (*pīṭa kasiṇa*) by taking the object of yellow-coloured bodily parts, such as fat droplets, urine etc...
3. red-*kasiṇa* (*lohita kasiṇa*) by taking the object of red-coloured bodily parts, such as blood
4. white-*kasiṇa* (*odāta kasiṇa*) by taking the object of white-coloured bodily parts, such as bones,

It is able to reach 8 kinds of absorptions (*samāpatti*). If it is applied as the fundamental of *vipassanā* practice through those 8 kinds of absorptions, it is able to reach the Fruit-Knowledge called *Arahatta*. Thus four kinds of coloured *kasiṇa* can be developed through 32 bodily parts. In *Mahāparinibbāna Sutta (Dhṛ-2-92, 93, 94)*, the Buddha preached about those absorptions as synonyms, i.e., 1. *abhibhāyatana jhāna* (= the absorptions which

are able to overcome opposite *dhamma* called hindrances and defilement; and objects of *kaṣiṇa*-concept), 2. *vimokkhajhāna* (= absorptions which are cause of deliverance from opposite *dhamma*).

Taking into heart the nature of loathsomeness (*patikūlamanasikāra*)

In *Mahāsatipatṭhāna Sutta (M-1-72)*, the Buddha preached both the way of take to heart the nature of loathsomeness of 23 bodily parts in order to reach the first absorption and the way of *vipassanā* practice which apply that first absorption as it's fundamental object in order to attain the Fourth Fruit-Knowledge (*arahatta phalañāṇa*).

Four elements meditation (*soññata*)

In *Mahāhatthipadopama Sutta (M-1-242)*, and *Mahārāhulovāda Sutta (M-2-83, 89)*, the Buddha preached detailed account of the four elements meditation through the objects of 32 bodily parts and way of practice to attain the Fourth Fruit-Knowledge (*Arahatta phala ñāṇa*).

It is explained in *Sammohavinodanī* commentary, related with meditation of nothingness (*soññata kammaṭṭhāna*) as follows.

Pāli-Quotation (*Abhi-Com-2-249*)

= If 32 bodily parts are discerned as the nature of nothingness, 96 kinds of nature of nothingness will be occurred.

The hairs can be discerned as

1. void of self (*atta*)
2. void of possession of self
3. void of the nature of permanence, durability, stability, without change and alteration etc.

Thus there are three kinds of voidness for hairs, i.e.,

1. void of self (*attasoññatā*)
2. void of possession of self (*attaniyasoññatā*)
3. void of the nature of permanence (*niccabhāvasoññatā*). Then for 32 bodily parts, (32x3 = 96 kinds), 96 kinds of nature of nothingness will be occurred.

PAGE-627

The *meditator* who wants to know the nature of nothingness must discerns and keeps in mind the specific characters of the four great elements consisting in each 32 bodily parts previously. Then, after corporeal units can be seen by insight, the ultimate corporeal *dhamma* must be analyzed and scrutinized systematically. The mental *dhamma*, which are occurring by taking the objects of corporeal *dhamma* and are depending upon the latter, must be kept in mind. Then those combination of both corporeal and mental *dhamma* must be discerned and discriminated each other and recognized well. Then those corporeal, mental, causal and resultant *dhamma* occurring in three successive periods, i.e., past, present, future, must be kept in mid. After it is discerned like that those *saṅkhāra dhamma* (corporeality, mentality, causes and results) must be scrutinized by means of characteristic, function, manifestation and proximate cause. Then, if it is generalized by means of three characters, as

1. **anicca** = impermanence, by taking the object of arising and passing away of **saṅkhāra dhamma**,
2. **dukkha** = suffering, by taking the object of being oppressed by continuous processes of arising and passing away,
3. **anatta** = one-self, by taking the object of the nature of non-self of **saṅkhāra dhamma**, which are lack of undestructable essence and durable self, by the time appearance of **vipassanā** knowledge or if it is generalized by means of three general characters alternatively, as

1. **anicca (aniccam khayatṭhena)** = impermanence by taking the object of dissolution of **saṅkhāra dhamma**
2. **dukkha (dukkham bayatṭhena)** = suffering by taking the object of nature of fearful condition due to continuous dissolution of those **saṅkhāra dhamma**
3. **anatta (anattā asvratatṭhena)** = non-self by taking the object of nature of non-self which is lack of durable essence of self in **saṅkhāra dhamma**, by the time appearance of **vipassanā** knowledge, the following nature of nothingness will be appeared as a result,

1. void of self (**atta soññatā**)
2. void of possession of self (**attaniya soññatā**)
3. void of the nature of permanence (**niccabhāva soññatā**).

This is a brief account on the way of four elements meditation. (*Abhi-Com-2-241, 242*)

Thus three ways of practice are varied only at the stage of concentration developed. If it is able to change **vipassanā** practice by making that concentration as the fundamental of **vipassanā**, it is only one way leading to **nibbāna** from the stage of purification of view (**diṭṭhivisuddhi**) which is also known as discriminative knowledge on the mentality and corporeality (**nāmarūpapariccheda ñāṇa**).

Among those three ways, sonata = the way of four elements meditation will be emphasized and presented in this section. If remaining ways are intended to practice, it can be found in Volume 5, section 9, section of **Samatha** Practice.

PAGE-628

4.40 Four elements meditation, in brief and detailed account

The brief account of four elements meditation, up to the Fourth Fruit-Knowledge, can be found in **Mahāsatipatṭhāna Sutta**, (*M-1-73*). Detailed account of four great elements meditation, up to the Fourth Fruit-Knowledge, can be found in **Mahārāhulovāda Sutta**, **Dhātuvibhaṅga Sutta**. In **Kinsukopama Sutta**, it is explained about an arahant who practiced four elements meditation.

Pāli Quotation (Sam-A-3-98)

= The third arahant who practiced the four great elements meditation both brief and detailed account, and took place **vipassanā** practice, reached to the Fourth-Fruit-Knowledge and he was called **Mahābhūta kammaṭṭhānika** (= who practiced the four great elements meditation). (*Sam-A-3-98*)

In these three ways of practice discerning on the four great elements meditation, up to the Fourth Fruit-Knowledge, both brief and detailed account will be presented continuously.

When the *meditator* is able to discern four great elements of both transparent and non-transparent corporeal units, situating in 6 doors, he can change to discern 32 bodily parts.

Firstly, discern to see hairs, the first bodily part by insight. Then it must be discerned on the four great elements consisting in hairs. When he discerns on the four great elements consisting in hairs, he can find corporeal units easily. Then the four great elements of both transparent and non-transparent corporeal units must be discerned by knowledge. Thus remaining bodily parts must be discerned continuously. Although some bodily parts consist of both transparent and non-transparent corporeal units, some bodily parts consist of only non-transparent corporeal units. If it is successful to discern on corporeal units situating in 32 bodily parts, it must be discerned continuously on the four great elements of corporeal units situating in 6 kinds of bodily parts with air-predominant (*vāyokoṭṭhāsa*) and 4 kinds of bodily parts with fire-predominant (*tejokoṭṭhāsa*). [Way of practice in detail will be presented by tabulating method later.]

PAGE-629

4.41 How derived corporealities are apparent.

Pāli Quotation (Abhi-A-2-241) (Mūlaṭī-2-154) (Anuṭī-2-156)

= In the knowledge of *meditator* who is able to discriminate and keep in mind the nature of four great elements of each corporeal unit, derived corporealities which are occurring, depending up on the four great elements within same corporeal unit, are also apparent really.

The four great elements can be discriminated by derived corporealities. If a such corporeal unit associated with brown colour, that corporeal unit can be distinguished (discriminated) and recognized as brown corporeal unit. If it is associated with yellow colour, that corporeal unit can be discriminated as yellow unit. Similarly, if it is associated with good scent, the smell is good, if it is associated with bad scent, the smell is bad etc. Thus discrimination and recognition occur in knowledge. In any kind of corporeal unit, the four great elements are fundamental matrix and the brown or yellow colour, the good or bad smell are only derivatives of those four great elements.

The cloth is similar to the four great elements. Brown colour, yellow colour, good scent and bad scent etc. which are depending up on the cloth, are similar to derived corporeality called colour, smell etc., which are depending up on the four great elements. Thus the four great elements within one corporeal unit are discriminated and recognized by derived corporealities of same corporeal unit. Alternatively, derived corporealities are discriminated and recognized by the four great elements due to lack of other four great elements of external ones.

Due to presence of sun shine, shades of house, tree etc., appear on the ground. The shade produced by sun shine discriminates each other reciprocally. When it is sunny day, if any patch of the ground is observed, it can be known easily the fact that ‘this is sun shine, this is shade’. In order to distinguish like this, the sun shine and shades are discriminated by each other reciprocally. Similarly, the four great elements are discriminated by derived corporealities, and vice versa. The four great elements are similar to sunshine while, derived corporealities to shades of house, tree etc....

PAGE-630

Derived corporealities are caused by the four great elements. Depending upon the four great elements within a such corporeal unit, colour, smell, taste... etc., called derived corporealities occur in that corporeal units. In order to know and see correctly the four great elements within a corporeal unit, it is essential to see that corporeal unit firstly and to analyze the four great elements secondly. In order to see corporeal units, it is essential to see the colour of that corporeal units. Then there is no corporeal unit without colour, smell, taste etc.... Indeed, the corporeal units are a group consisting ultimate nature of corporealities, i.e., at least 8 factors, and 9 factors or 10 factors in some. Therefore, the four great elements are unable to occur in the absence of derived corporealities and vice versa. Therefore the four great elements and derived corporealities within same corporeal unit are dependent on each other by means of compatibility, mutually and the support condition. The conditioned *dharmma* and the causative (conditional) *dharmma* are able to discriminate each other mutually. It means the fact that 'there is no conditioned *dharmma* without causative *dharmma* and vice versa'. (*Abhi-A-2-241, Mūlaṭṭi-2-154, Anuṭṭi-2-156*).

4.42 Way of discerning on derived corporealities

1. Colour (*vaṇṇa*)

It must be continued to discern derived corporealities after the four great elements of transparent and non-transparent corporealities situating in 6 sense doors are successfully discerned by insight. Every corporeal unit always has the specific colour and various colour can be seen in various kinds of corporeal units. Both transparent and non-transparent corporeal units must be discerned alternatively in 6 sense doors.

2. Smell (*ghandha*)

Every corporeal unit contains either good or bad smell. That smell must be scrutinized continuously by insight. If it is not clear in knowledge, the four great elements must be emphasized inside the nose. When the power of concentration becomes strong, many transparent corporeal units can be found inside the nose. Now the *meditator* is able to discern the life-continuum and then he must keep in mind both the life-continuum and the nose clear sensitivity simultaneously. Both two kinds will appear in knowledge simultaneously. The smell is deserving to know by smelling consciousness (*ghānaviññāṇa*) and mind-door consciousness (*manoviññeya*) and then both the nose clear sensitivity which is depended by smelling consciousness, and the life-continuum which is depended by the mind-door consciousness, simultaneously.

PAGE-631

Generally, all beings usually feel the object of smell by mind and mental concomitants of nose-door thought process and mind and mental concomitants of mind-door thought process which is also able to take object of smell. Those consciousness of thought processes are depending upon nose clear sensitivity and the life-continuum respectively. Therefore those two kinds of clear elements (nose clear sensitivity and the life-continuum) are intended to discern simultaneously and the object of smell can be known systematically by means of both two consciousness of two thought processes.

When both two kinds of clear elements appear in knowledge simultaneously a group of corporeal units or any one of corporeal unit of which the smell are intended to know, must

be emphasized. Then the object of smell of those corporeal units or any one of corporeal unit can be known apparently. If it is not successful to discern the object of smell in this way, it must be discerned continuously on the four great elements of those corporeal unit. When the nature of the four great elements consisting in those corporeal units are very apparent, a kind of derived corporealities, the smell, will become apparent in knowledge successively. Similarly it must be discerned on the smell of both transparent and non-transparent corporeal units situating in 6 sense doors. If it is successful to discern like this frequently, it can be discerned by only mind and mental concomitants of mind-door thought process of *vipassanā* practice without the help of smelling consciousness. (The evidence of this fact can be found volume 2, Meditation on Mentality.)

3. Taste (*rasa*)

After the smell of corporeal units are discerned successfully, the taste must be continued. Every kind of corporeal unit consists of any one of 6 kinds of tastes, i.e., sweet, sour, salt, hot, acrid, bitter. Previously taste of one corporeal unit must be discerned by consciousness of the mind-door thought process alone. If it is not successful, it must be emphasized on the four great elements of tongue in order to see corporeal units with tongue clear sensitivity. Then both tongue clear sensitivity and the life-continuum must be kept in mind simultaneously. The object of taste is deserving to know by tasting consciousness and mind-door consciousness and therefore clear elements, which are depended by those consciousness, are discerned simultaneously. Tasting consciousness occurs depending upon tongue clear sensitivity. The mind-door consciousness occurs depending upon the life-continuum and both two kinds (mind-door consciousness and life-continuum) depend upon *hadaya vatthu* (physical base of the mind). After both two kinds of clear elements are kept in mind simultaneously, if taste of saliva on the tongue is emphasized to take as object, it can be known apparently by insight. Then taste of both transparent and non-transparent corporeal units situating in 6 sense doors must be discerned alternatively.

PAGE-632

When efficiency of the mind of meditation becomes strong, the object of colour, smell and taste can be known by only the consciousness of mind-door thought process of *vipassanā* practice.

sabbopi panesa pabedo manodvārikajavaneyeva labbhati (Abhi-Com-2-388)

Thus it must be recognized the fact that before power of mind of meditation become strong, it is intended to be clear for the object of smell and taste, and then the smelling consciousness and tasting consciousness are discerned simultaneously. If it is not successful yet, the four great elements consisting in corporeal units must be scrutinized repeatedly and frequently. The object of taste, which is belongs to derived corporealities, will become apparent gradually.

4. Nutriment (*ojā*)

This nutriment is called *mano viññeya dhamma*, which is known by only mind-door consciousness. It is a kind of derived corporeality which is difficult to understand for *meditators*. Among derived corporealities which are difficult to understand in knowledge, the

nutriment, life-faculty (*jhīvita*) and sex-corporeality (*bhāvarūpa*) are included for most *meditators*.

After discerning on 7th corporeality (up to taste) of both transparent and non-transparent corporeal units are successful, the nutriment, consisting in all corporeal units must be discerned continuously. There are four kinds of nutriments, i.e. the nutriment produced by *kamma* (*kammajaojā*), the nutriment produced by mind (*cittajaojā*), the nutriment produced by temperature (*utuajaojā*) and the nutriment produced by nutriment (*āhārajaojā*). However, in this stage, it must be discerned on nutriments of transparent and non-transparent corporeal units only. Later it must be analyzed on both four kinds of nutriments separately.

It must be scrutinized inside any kind of corporeal unit continuously. The essence called nutriment can be found like fatty substance on the surface of water in some *meditators*. For some *meditators* it seems to be yolk sac in the centre of egg or pollen-like structure in the centre of corporeal unit. Evidence of the presence of nutriment can be seen a condition that this essence is able to produce new corporeal units continuously. The corporeal units of new generation are not nutriment but the cause of those corporeal units is nutriment of previous one indeed. (It can be found way of production of new corporeal units from that nutriment in later.)

These 8 kinds of nature of corporealities, the earth-element, water-element, fire-element, air-element, colour, smell, taste and nutriment, are fundamental factors of every corporeal unit. These corporealities are inseparable to each other and called *avinibbhoga rūpa* (inseparable corporealities). Any kind of corporeal unit can be occurred in the presence of at least these 8 factors of corporeality. Although these 8 kinds of nature of corporealities are in separable to each other, the specific character of each corporeality are discriminated in the knowledge of *meditator* respectively. It is essential to differentiate various kinds of nature of corporealities within same corporeal unit by analytical knowledge. If it is not successful to discern each nature of corporeality clearly, develop concentration up to the fourth absorption by the mindfulness of breathing. When the light produced by concentration becomes bright, those 8 kinds of nature of corporealities must be scrutinized again in both transparent and non-transparent corporeal units. It will be successful.

PAGE-633

5. Life-faculty (*jhīvita*)

Previously, 8 kinds of nature, from the earth-element to nutriment, must be discerned in transparent corporeal unit only repeatedly. Within transparent corporeal unit, the *meditator* has seen the nature of clear sensitivity by insight previously. Nine kinds of nature of corporeality, therefore, are differentiated in transparent corporeal unit which always has 10 factors of corporeality. The remaining factor is the life-faculty called *jhīvita* for every transparent corporeal unit. Thus every transparent corporeal unit consists of 10 factors, i.e., the earth-element, water-element, fire-element, air-element, colour, smell, taste, nutriment, life-faculty and clear sensitivity (*pssāda rūpa*).

Jhīvita is known as the “life” and it is the nature of living condition. When a such transparent corporeal unit produced by *kamma* is scrutinized, the *meditator* usually recognizes the living nature of that unit. That living nature of corporeality, life-faculty has the characteristic of protection to remaining 9 factors of same corporeal unit produced by *kamma*. It is the nature of protection for corporealities of the same corporeal unit produced by *kamma* from the arising stage (*uppāda*) to the perishing stage (*bhaṅga*).

The life-faculty can be found only corporeal units produced by *kamma*. *Kammajaṇi* are produced by *kamma* (action) of previous life with the result that the mother called

kamma and the offsprings called **kammajarūpa** (corporeities produced by **kamma**) CPK are separated by different lives. **Kammajarūpa** (CPK) are similar to orphans. As an orphan is protected by any other person in order to sustain life, **kammajarūpa** (CPK) are protected by the life-faculty from arising stage to perishing stage. The life-faculty, therefore, is called a protective element for **kammajarūpa** (CPK) of the same corporeal unit. The **meditator** must be able to discern that protective nature of life-faculty within transparent and some non-transparent corporeal units which are produced by **kamma**.

Because the transparent corporeal units are certainly produced by **kamma** and consist of the life-faculty, the nature of protection, life-faculty, must be scrutinized previously in those units. If it is not clear in knowledge, develop concentration up to the fourth absorption by mindfulness of breathing. When the power of light produced by concentration becomes strong, the life-faculty must be scrutinized inside the transparent corporeal unit, but not outside that unit. If it is able to see the living nature or protective nature of corporealities produced by **kamma** within same corporeal unit, it is successful to discern the life-faculty.

PAGE-634

Very important point is the fact that the life-faculty protects **kammajarūpa** (CPK) of the same corporeal unit only but not on different ones. Then the life-faculty is also a kind of corporeality produced by **kamma** and it is achieved to protect itself by protecting other corporealities of the same corporeal unit. It should be recognized the fact that it is similar to the duty of bodyguard by which protects senior officer and himself simultaneously. When **kammajarūpa** (CPK) of the same corporeal unit are perishing away, the life-faculty is also perishing away simultaneously, due to finish it's duty of protection. It should be recognized the fact that it is similar to duty of bodyguards by which protect the meeting of senior officers and when the meeting is finished, the duty of bodyguards is also finished simultaneously. If it is successful to discern the life-faculty of a transparent corporeal unit, it must be discerned similarly on every transparent corporeal units situating in 6 sense doors. Then it must be scrutinized within non-transparent corporeal units continuously. Non-transparent corporeal units consisting life-faculty are vital nonad with life-faculty (**jhīvitānavakakālāpa**), sex-decad with sex-corporeality (**bhavadasakakālāpa**), which two kinds are spreading throughout body, and base-decad (**hadayadasakakālāpa**). Corporeal units produced by mind, corporeal units produced by temperature and corporeal units produced by nutriment are non-transparent units with no life-faculty.

6. Sex corporeality (**bhāvarūpa**)

Gentleman **meditator** has virility called purisa **bhāvarūpa** (male sex corporeality) which is the cause to recognize as male. Lady **meditator** has femininity called **itthibhāvarūpa** (female sex corporeality) which is the cause to recognize as female. Some persons who have both virility and femininity are called **ubato byañjhana** (hermaphrodite). Those persons must be exceptional case. However hermaphrodite has only one kind of sex corporeality for one period alternatively depending on **kamma**. (**Abhi-Com-1-359**)

The base-decad (**hadaya dasakakālāpa**), sex-decad (**bhāvasakakālāpa**), vital-nonad (**jhīvitānavaka kalāpa**), pure-octad produced by mind (**cittaja aṭṭhakālāpa**), pure-octad produced by temperature (**utuja aṭṭhakālāpa**) and pure-octad produced by nutriment (**āhārajaṭṭhakālāpa**) are non-transparent corporeal units due to lack of clear sensitivities.

The sex-decad consisting sex corporeality belongs to non-transparent corporeal units and then the **meditator** who wants to discern sex corporeality must scrutinize the life-faculty

within non-transparent group previously. If the life-faculty is absent in that non-transparent one, the sex-corporeality is unable to present in it. However, every non-transparent corporeal unit with life-faculty not always consists of sex-corporeality. Vita-nonad with 9th factor called life-faculty is also non-transparent one.

PAGE-635

Therefore it can be found 9 kinds of nature of corporeality up to the life-faculty in some non-transparent corporeal units, and the 10th factor, sex corporeality may or may not be found in those units. The corporeal unit with sex corporeality is called sex-decad (*bhāvadasakakalāpa*) while remaining non-transparent corporeal units with the life-faculty are either vital nonads or base-decads.

The male sex corporeality or virility is the sign of recognition as male. Because of presence of this recognition mark, he becomes male. During discerning on the virility by insight, it will usually be understood manly behaviour which is caused by virility in him. Most *meditators* usually understand the fact that the virility is different from the nature of roughness of the earth-element.

The female sex corporeality or femininity is the sign of recognition as female. It must be discerned on the fact that she becomes female because of presence of this recognition mark. During discerning on the femininity by insight, it will usually be understood feminine behaviour which is caused by femininity in her. Most *meditators* usually understand the fact that the femininity is different from the nature of softness of the earth-element.

The gentleman *meditator* is able to discern only virility internally (in himself). The lady *meditator* is able to discern only femininity internally (in herself). Either gentleman or lady *meditator* is able to discern both virility and femininity externally.

If it is not satisfied to discern the sex corporeality, develop concentration again by mindfulness of breathing. When power of light produced by concentration becomes bright, it must be scrutinized on the sex corporeality again. It will be understood not soon later.

When it is successful to discern the sex corporeality both internally and externally it must be discerned on the sex corporeality consisting in sex-decad which are situating in 6 sense doors respectively. According to the Buddha's *Abhidhamma*, sex decades with 10th factor of sex corporeality are present in all 6 sense doors. Differences between eyes, faces, shapes of hands and legs etc. of male and female are caused by different sex corporeality. Thus the different sex corporeality is able to differentiate between male and female in order to know the fact that "this person is male, this person is female". It should, therefore, be recognize the sex corporeality is a kind of derived corporeality spreading throughout body. There are 10 kinds of nature of corporeality in sex decad, i.e., the earth-element, the water-element, the fire-element, the air-element, colour, smell, taste, nutriment, life-faculty, sex corporeality. The *meditator* must scrutinizes and keeps in mind those specific nature of corporealities of sex decad by analytical knowledge.

PAGE-636

Thus if it is successful to discern 10 kinds of nature of both transparent and non-transparent corporeal units, situating in all 6 sense doors by analytical knowledge in order to reach the field of the ultimate reality, it is able to continue to discern again among transparent corporeal units. In this case, the non-transparent corporeal units are referred to only sex decades with 10th factor of sex corporeality. The base decad is also non-transparent one with 10th factor of physical base of mind (*hadaya vatthu*). Way of discerning on the physical base of mind is as follows.

7. Physical base of mind (*hadaya vatthu*)

manodhātumanodhātu viññāṇam nissayalakkhaṇam hadaya vatthu. (Visuddhi-2-77)

= the nature of corporeality, on which the mind-element (*manodhātu*) and the consciousness of thought processes (*manoviññāṇadhātu*) occur as dependence, is called the physical base of mind (*hadaya vatthu*). (*Visuddhi-2-77*)

ittha pana manoti bhavaṅgacittam. (Sam-Com-3-5)

According to preaching methodology of *suttana*, the mind-element (*manodhātu*) is the clear life-continuum. It occurs depending up on the physical base of mind (*hadaya vatthu*). All consciousness of thought processes, except penta-consciousness (*panca viññāṇa*), i.e., seeing-consciousness, hearing-consciousness, smelling-consciousness, tasting-consciousness, tactile (touching)-consciousness, are called the consciousness of thought processes

256

(*manoviññāṇadhātu*). Those consciousness of thought processes occur depending up on the physical base of mind in the realm of five –aggregates (*panca vokāra bhumi*). The seeing-consciousness occurs depending up on the eye-clear-sensitivity while the hearing-consciousness, on ear-clear-sensitivity; the smelling-consciousness, on nose-clear-sensitivity, the tasting-consciousness, on tongue-clear-sensitivity, the tactile-consciousness, on body-clear-sensitivity, respectively. Therefore, the physical base of mind (*hadaya vatthu*) means the nature of corporeality which is dependent factor of consciousness called *manodhātu* (life-continuum) and *manoviññāṇadhātu* (all consciousness of thought processes (*vīthi citta*), except penta-consciousness (*panca viññāṇa*)).

In this stage, it is able to find the life-continuum for a *meditator* who had discerned thoroughly on 10 kinds of nature of corporealities consisting in each transparent and non-transparent corporeal units at 6 sense doors. The host consciousness called *bhāvaṅga* mind clearness or the life-continuum is very clear and brilliant bright. (*Ang-1-9*). All kinds of consciousness of meditation, *samatha* and *vipassanā* practices, are also very clear and brilliant bright. (*Ang-1-258*). Therefore the mind of meditation which is able to reach the field of ultimate corporeality, called *rūpapariggaha ñāṇa* (discriminative knowledge on the corporeality) is very clear and brilliant bright, now indeed.

PAGE-637

For a *meditator* who is discerning on the nature of corporealities consisting in various corporeal units of 6 sense doors, the brilliant bright life-continuum and consciousness of thought processes will be found inside the heart. If it is not understood on those kinds of consciousness easily, it must be emphasized in the heart and taken to heart the life-continuum. Then it must be taken the object of forefinger which is bent and stretched out alternatively. It must be emphasized only on the mind-door but not on fore-finger. It can be found the consciousness which is capable to bend and stretch out forefinger by insight knowledge. The *meditator* who is able to see the life-continuum and consciousness of thought processes, must scrutinizes the fact that “which is the dependence of these mind”. It

must be discerned on the physical base of mind in order to understand it's nature of depended factor of mind.

Corporeal units consisting physical base of mind (*hadaya vatthu*) are non-transparent and these situate at the base of the life-continuum (*bhavaṅga*) which are the most frequently occurring along with the life. It must be discerned frequently on occurrence of the life-continuum and consciousness of thought processes depending up on the physical base of mind, consisting in the base-decad (*hadaya dasakakalāpa*). If power of light produced by mind of meditation is very strong, relationship between those mind and physical base of mind will be understood well. After discerning on physical base of mind is successful, it must be discerned on remaining corporealities within same corporeal unit continuously.

If it is not successful to discern the physical base of mind, it must be discerned frequently on the nature of the four great elements consisting in non-transparent corporeal units lying under the life-continuum. Then derived corporealities which occurs depending up on the four great elements must be discerned one after another gradually. If 9 kinds of nature of corporealities, i.e., earth-element... same...life-faculty, can be seen by insight, it must be continued to scrutinize the physical base of mind. In the heart, vital-nonads and sex-decads are also present. These are also non-transparent corporeal units and containing life-faculty (*jhīvita*) as 9th factor. Therefore, if a such non-transparent corporeal unit with 10 factors can be discerned up to the life-faculty, the physical base of mind can be found in that corporeal unit, unless it is vital-nonad and sex-decad. Indeed, the physical base of mind called *hadayavatthu* is the nature of dependence of the life-continuum (*bhavaṅga*) and consciousness of thought processes (*manoviññāṇadhātu*) in the realm of five-aggregates (*pancavokārabhumi*).

PAGE-638

4.43 Various kind of corporeal units in (6) sense doors

Pāli Quotation (Vs-2-259)

According to explanations found in *Visuddhimagga aṭṭhakathā*, various kinds of corporealities and corporeal units are as follows.

1. In eye-door (*cakkhu dvāra*), there are 6 kinds of corporeal units, i.e., eye-decad (*cakkhu dasakakalāpa*), body-decad (*kāyadasaka kalāpa*), sex-decad (*bhāvadasakakalāpa*), pure-octad produced by mind (*cittaja-aṭṭhakalāpa*), pure-octad produced by temperature (*utuja-aṭṭhakalāpa*), pure-octad produced by nutriment (*āhārajhaaṭṭhakalāpa*) and 54 kinds of corporealities.
2. In ear-door (*sota dvāra*), there are 6 kinds of corporeal units, i.e., ear-decad (*sotadasakakalāpa*), body-decad.....s..... and 54 kinds of corporealities.
3. In nose-door (*ghānadvāra*), there are 6 kinds of corporeal units, i.e., nose-decad (*ghānadasakakalāpa*), body-decad,.....s..... and 54 kinds of corporealities.
4. In tongue-door (*jhīṇhvādvāra*), there are 6 kinds of corporeal units, i.e., tongue-decad (*jhīṇhvādasakakalāpa*), body-decad,.....s..... and 54 kinds of corporealities.
5. In body-door (*kāyadvāra*), there are 5 kinds of corporeal units, i.e., body-decad, sex-decad,s..... and 44 kinds of corporealities.
6. In mind-door or heart (*manodvāra*), there are 6 kinds of corporeal units, i.e., base-decad (*hadayadasakakalāpa*), body-decad,s..... and 54 kinds of corporealities, respectively.

In this case, there are only 6 kinds, 5 kinds of corporeal unit and only 54 kinds, 44 kinds of corporealities etc... in each door qualitatively. However, there are so many corporeal units in each door quantitatively.

For instance, there are many eye-decads, body-decads, sex-decads, etc.. in the eye door quantitatively but kinds of corporeal units are limited numbers in qualitatively. Thus it should be understood remaining doors similarly.

Some *meditators* who are well-informed in the Supreme Doctrine of the Buddha (Buddha *Abhidhamma*) can understand well when they heard how many kinds of corporeal units and corporealities present in eye qualitatively etc.. They are able to understand way of practice after only once teaching.

PAGE-639

However, some *meditators*, who are not well-informed the Supreme Doctrine of the Buddha, cannot understand easily on explanations like this. They are unable to discern and keep in mind the ultimate nature of corporealities by merely explained in this way. For those persons, the following tables of various kinds of corporeal units and corporealities for 6 sense doors are presented. These tables are intended to be clear for only *meditators* who live in countryside and they are not well-informed in scriptures. These may not be essential for sharp wisdom *meditators*, indeed.

Table (1) Structural constituents of the eye (*cakkhu dvāra*), (54) kinds of corporealities

1. eye-decad	2. body-decad	3. sex-decad	4. pure octad produced by mind	5. pure octad produced by temperature	6. pure octad produced by nutriment
1. earth-element	1. earth-element	1. earth-element	1. earth-element	1. earth-element	1. earth-element
2. water-element	2. water-element	2. water-element	2. water-element	2. water-element	2. water-element
3. fire-element	3. fire-element	3. fire-element	3. fire-element	3. fire-element	3. fire-element
4. air-element	4. air-element	4. air-element	4. air-element	4. air-element	4. air-element
5. colour	5. colour	5. colour	5. colour	5. colour	5. colour
6. smell	6. smell	6. smell	6. smell	6. smell	6. smell
7. taste	7. taste	7. taste	7. taste	7. taste	7. taste
8. nutriment	8. nutriment	8. nutriment	8. nutriment	8. nutriment	8. nutriment
9. life-faculty	9. life-faculty	9. life-faculty			
10. eye-clear sensitivity	10. body-clear sensitivity	10. sex-corporeality			
Produced by <i>kamma</i> transparent	Produced by <i>kamma</i> transparent	Produced by <i>kamma</i> non-transparent	Produced by mind non-transparent	Produced by temperature non-transparent	Produced by nutriment non-transparent

1. eye-decad = (transparent) corporeal unit containing eye-clear sensitivity as 10th factor, which is deserving to strike together with colour.
 2. body-decad = (transparent) corporeal unit containing body-clear sensitivity as 10th factor, which is deserving to strike together with tactile objects (earth-, fire- and air-elements)
 3. sex-decad = (non-transparent) corporeal unit, containing sex corporeality as 10th factor.
 4. pure octad produced by mind = (non-transparent) corporeal unit, containing nutriment as 8th factor.
 5. pure octad produced by temperature = (non-transparent) corporeal unit, containing nutriment as 8th factor; it is produced by fire-element (= temperature) within a corporeal unit.
 6. pure octad produced by nutriment = (non-transparent) corporeal unit, containing nutriment as 8th factor
- Note: These (54) kinds of corporealities are known as *sadambhāra cakkhu* (structural constituents of eye) while the eye-clear sensitivity (*cakkhu pssāda*), also known as *pssāda cakkhu* (functional constituent of eye).

4.44 Mode of discerning on the nature of arising of corporeality (*rūpanibbattipassanākāra*)

Now it will be presented on the mode of discerning on the nature of arising of corporeality, in accordance with explanations found in *Visuddhimagga-2-249*, paragraph 700 etc.

These corporeal *dhammas* are arisen through four kinds of causal *dhammas*, i.e., *kamma*, mind, temperature, nutriment. Among those four causes, if the corporeal *dhammas* originate apparently in all beings, the foremost corporealities are produced by *kamma* only for one existence. The remaining corporealities, corporeality produced by mind, corporeality produced by temperature, corporeality produced by nutriment, are fundamentally originated from those corporealities produced by *kamma*, indeed.

In all beings with foetal development in womb, three kinds of corporeal units, which are consisting of 30 kinds of corporealities produced by *kamma*, namely heart base-decad, body-decad and sex-decad, arise by means of continuity of corporeal processes previously. Indeed those 30 kinds of corporealities begin to arise together with the arising phase (*uppāda*) of *paṭisandhi* consciousness simultaneously. Those corporealities also arise at the static phase (*ṭhiti*) and the perishing phase (*bhaṅga*) of *paṭisandhi* consciousness in similar way.

In these mentality and corporeality, the latter has life-span of (17) mind-moments (*ciṭṭakkhaṇa*) and delayed cessation with the result that it has slow rate (of process). The former one, mind, has rapid cessation and fast rate (of process). Due to presence of extremely shorter life-span in the mental *dhammas* compared with corporeal *dhammas*, the Buddha preached as follows.

Pāli. Quotation (Ang-1-9)

= *Bhikkhus* ... I never see any *dhamma* which has the same rate of the mind, excluding extreme fast rate of this mind, although it is looked about by knowledge of omniscience (*sabbaññuta ñāṇa*) of myself. (*Ang-1-9*)

It is right. While the corporeal *dhamma* which arise together with the *paṭisandhi* consciousness simultaneously, are still alive, the mind had arisen and ceased (16) times. (It should be recognized on remaining corporeality similarly.)

The very short instant of the arising phase (*uppāda*), that of the static phase (*ṭhiti*), and that of the perishing phase (*bhaṅga*) of mind are the same as unique. However, only the arising phase and perishing phase of the corporeality are so swift as the rate of those phases of mind. All *saṅkhāra dhammas* have the same duration of the arising and perishing phases. However, the static phase (*ṭhiti*) of corporeality lasts for long time during which (16) mind moments arise and cease.

PAGE-647

Depending up on the physical base of mind called heart-base (*hadaya vatthu*) which has occurred at the arising phase of *paṭisandhi* consciousness simultaneously, meanwhile it reaches to static phase (*ṭhiti*), the second life-continuum (*bhavanga*) occurs after *paṭisandhi* consciousness of a life. The physical base of mind has occurred previously before that life-continuum and therefore it is called *purejāta* (pre-compatibility). Mental *dhammas* are able to arise in the presence of dependence factor, the physical base of mind, in the realm of five

aggregates (*pañca vokāra*). That life-continuum is also able to arise in the presence of the physical base of mind, which reaches to static phase. If there is no dependence factor, it is unable to arise. It can, therefore, be said that the physical base of mind which arises together with the *paṭisandhi* consciousness, benefits the arising of the second life-continuum through efficiency of relation of base-pre-compatible-dependence (*vatthupurejātanissaya*).

Depending up on the physical base of mind, heart-base, which arises at the arising phase of the *paṭisandhi* consciousness simultaneously; meanwhile it reaches to the static phase of corporeality; which is capable of benefiting by the efficiency of relations of base-pre-compatible dependence; the second life-continuum arises. Depending up on the physical base of mind, heart-base, which arises together with that second life-continuum; meanwhile it reaches to the static phase of corporeality, which is capable of benefiting by the efficiency of relation of base-pre-compatible dependence, the third life-continuum arises. Thus it should be known the nature of arising phase of all mind moments along with the whole existence. (It is explained that the second and third refer to successive occurrence of those mind moments in sequence for a life.)

4.45 Special notes

Pāli Quotation (Vs-2-249) (Mahāṭṭ-240)

The special note is that___ in such being who is very close to death, (16) mind moments arise depending upon only one corporeality which is just reaching to the static phase (*thitī*); which is called physical base of mind, heart-base (*hadaya vatthu*) which is able to support by means of efficiency of relation of base-pre-compatible dependence (*vatthu-purejātanissaya*). (*Vs-2-249*)

Excluding the period when it is very close to death, throughout the life, one heart-base corporeality called physical base of mind can carry out as dependence of one mind moment but not dependence of the next mind. Therefore, the commentator explained the fact that “depending upon the physical base of mind, which arises together with that second life-continuum; meanwhile it reaches to the static phase of corporeality; which is capable of benefitting by means of efficiency of relation of base-pre-compatible dependence, the third life-continuum arises. Thus it should be known on the nature of arising of all mind moments throughout the existence in this way.” (*Mahāṭṭ-2-400*).

PAGE-648

Vatthu-purejāta-nissaya- It means that it is ability to support by means of efficiency of previous arising of depended heart-base before arising of depending mind. The former arises one mind moment earlier than the latter (depending mind). Thus the efficiency of physical base of mind called heart-base (*hadaya vatthu*) which arises previously as dependence, is known as *vatthu-purejāta-nissaya satti*.

[By the time when it is very close to death, the corporealities produced by *kamma*, which arise together with 17th mind moment backward counted from death consciousness, are last corporealities. Therefore, the last (16) mind moments, including death consciousness, arise depending upon the same physical base of mind, heart-base which arises together with the arising phase (*uppāda*) of 17th mind moment backward counted from death consciousness].

4.46 The nature of cessation

After explaining on the nature of arising, now the nature of cessation will be presented. The corporeality which arises simultaneously with the arising phase of *paṭisandhi* consciousness, ceases together with 16th mind moment after *paṭisandhi* consciousness had been arisen.

[It means that if the *paṭisandhi* consciousness is also counted, the corporeality ceases together with the perishing phase of 17th mind moment. Then the corporeality lasts (17) times of the mind moment and each mind moment consists of three-time-phases, i.e arising phase (*uppāda*), static phase (*ṭhiti*) and perishing phase (*bhanga*), the corporeality, therefore, lasts (51) sub-mind moments. The static phase of corporeality, therefore, lasts (49) sub-moments or time-phases of the mind indeed.]

The corporeality which arises together with the static phase of *paṭisandhi* consciousness, ceases by the time the arising phase of 17th mind moment after *paṭisandhi* consciousness. [If the *paṭisandhi* consciousness is also counted, it ceases simultaneously with the arising phase of 18th mind moment because it lasts (51) sub-moments of mind.]

The corporeality, which arises at the perishing phase of *paṭisandhi* consciousness, ceases simultaneously with the static phase of 17th mind moment after *paṭisandhi* consciousness had been arisen.

If there are incessant phenomena of such successive *dhammas* or minds along with the rounds of rebirth (*samsāra*), throughout that *samsāra* will occur in this way, (except mindless beings and formless world).

For those beings which have no foetal stage in mother's womb, known as spontaneous born (*opapātika*) beings, (7) kinds of corporeal units, i.e, eye-decad, ear-decad, nose-decad, tongue-decad, body-decad, sex-decad, base-decad, totally (70) kinds of corporealities arise by means of continuity of corporeal processes in similar way.

Pāli Quotation (Vs-2-249)

PAGE-649

It should be recognized similarly for *samsedaja* beings (like oviparous animals, as in insects, etc.) (*Mahāṭṭ-2-400*).

It should be known (6) modes of the arising of corporeality produced by *kamma* as follows.

1. *kamma* = action
2. *kamma samuṭṭhāna* = the *dhamma* produced by *kamma*
3. *kamma paccaya* = the *dhamma* supported by *kamma*
4. *kamma paccaya citta samuṭṭhāna* = the corporeality produced by mind which is supported by *kamma*
5. *kamma paccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by *kamma*
6. *kamma paccaya utusamuṭṭhāna* = the corporeality produced by temperature which is supported by *kamma*.

4.47.1 *Kamma* = action

Pāli-Quotation (Vs-2-249) (mahāṭṭ-2-400) (Abhi-A-3-374)

It is called *kamma* (action) on any volition (*cetanā*) of either wholesome or unwholesome, which is able to support by *nānakkhāṇika-kamma* (supporting factor of *kamma* by which resultant *dhamma* arises in different period.) The volition (*cetanā*) which is able to benefit for mental concomitants of same mind moment, is the relation of compatible action called *sahajhāta kamma* (associated together with each other). But the resultant mere functioning mental *dhammas* and the resultant mere functioning volition (*vipāka kriyā nāma, vipāka kriyā cetanā*) which are able to benefit the occurrence of associated consciousness and mental concomitants, can not be called *kamma* (action) in this case.

Nānakkhāṇika kamma = the causative *kamma* and the resultant corporeal and mental *dhammas* arise at different period which may be separated by enormous million million aeons. A such kind of *kamma* which had been cultivated in previous million million aeons, has potentiality to occur it's resultant in present period. That kind of *kamma*, which is able to produce it's result at different period, is called *nānakkhāṇika kamma*. When the cause of corporeality produced by *kamma* is intended to be said, it can be designated as "*kamma*" on the causative *nānakkhāṇika kamma paccaya*, but not on volition of *sahajhātakamma* (compatible action).

PAGE-650

Natural fixed law ____ It is a natural fixed law for any kind of wholesome or unwholesome *kamma* by which no resultant *dhamma* can arise while it is present in that life. If it is possible, after a human being has done a kind of wholesome action which is able to reach *deva* called heavenly world, he will become *deva*, due to his *kamma* of recent life. But it is impossible.

The milk, just after milking, can become neither curd nor butter. It requires enough time to become matured. Similarly, any *kamma* can not give rise to result immediately but it takes enough time to mature, then the result will arise.

At a such time, the *kamma* is cultivated. After that, at another moment, that volition (= *kamma*) is absent by means of three-time-phases called arising, static and perishing phases.

Although it is absent for that moment, the potentiality of *kamma*, which is able to arise resultant *dhamma* in future, is embedded in the continuum of corporeality and mentality. That volition, although it is perishing away as a nature of ultimate *dhammas*, disappears after embedding it's potentiality of *kamma*, which is called *nānakkhāṇika kamma paccaya*, in the continuum of corporeality and mentality.

Thus, if remaining causes, i.e, the destination of existence (*gati*), time (*kāla*), personality (*upadhi*), effort (*payoga*), will be united, the resultant *dhammas* can be produced in present life, second future life, third future life or any future ones. It should be recognized the fact similar to any practice of previous technology, although it disappeared in any time, it will become the factor of skilfulness in succeeding practice of technology.

In every worldly technology, it is true that the more frequent in practice, the higher in skilfulness. (Practice makes perfect.) Although preceding practice had perished away, it supports succeeding practices in such way. Due to this reason, skilfulness becomes advanced and advanced. For instance, let us imagine to typewriting. The more frequent in practice become the more skilful in typewriting, generally. Systematic practice, therefore, can lead to the culmination of success in every process of technology.

Because the time of cultivation of *kamma* and that of arising of resultant *dhammas* are separated by enormous mind moments or one life or enormous lives, that causative *kamma*, which has asynchronous arising of resultant *dhammas*, is called *nānakkhāṇika kamma paccaya*. (*Abhi-A-3-374*).

4.47.2 Kammasamuṭṭhāna

Pāli-Quotation (Vs-2-249)

Both four mental aggregates consisting in every resultant mind moment of cognitive processes, including *paṭisandhi* consciousness, life-continuum and death consciousness and corporealities produced by *kamma*, such as eye-decad, vital nonad etc, totally (70) kinds, are called the *dhammas* produced by *kamma*.

4.47.3 Kamma paccaya

Pāli-Quotation (Vs-2-249) (Mahāṭṭi-2-400)

Above mentioned resultant four mental aggregates and (70) kinds of corporealities produced by *kamma* are also known as *kamma paccaya*, (= *dhamma* which is supported by *kamma*). It is right. The *kamma* is not only the primary cause of resultant four mental aggregates and corporealities produced by *kamma* but also the secondary cause, *upatthambhaka* (= supporting cause) of those *dhammas*. It means that the *kamma* is a factor of great dependence condition (*upanissaya paccaya*) of those *dhammas*. (*Mahāṭṭi-2-400*).

The *kamma* is also a protective cause (*paripālaka*) of those mental and corporeal *dhammas*. Why is it? The life-faculty of corporeality (*rūpa jhīvitindriya*) protects corporealities produced by *kamma* of same corporeal unit until perishing phase as a maintaining factor. The resultant life-faculty of mentality also protects resultant mental concomitants similarly. The heat consisting in vital nonad, which is produced by *kamma*, also protects corporealities produced by *kamma*, by digestibility of it's heat, called *udaraggi*. Both the life-faculty and the heat produced by *kamma* (*kammajaggi*), always protects for some persons of superior noble ones who are able to attain four requisites very easily. Thus the *kamma* supports to attain easily four requisites as a supporting factor. Therefore, the commentator explained that “the *kamma* is not only the primary cause of resultant four mental aggregates and corporealities produced by *kamma*, but also the secondary cause, *upatthambhaka* (= supporting cause) of those *dhammas*. It should be known the fact that the supporting factor of that *kamma* is naturally able to benefit as efficiency of relation of determinative dependence (*upanissaya satti*) for the *dhamma* produced by *kamma*, indeed. (*Mahāṭṭi-2-400*)

Great attributes and knowledge of *bodhisatta*, *paccekabodhisatta* and *sāvaka-bodhisatta* are due to potentialities of their previous great perfections (*pāramita*) along with their uncountable lives through million millions worlds times and then their *kamma* are not only benefittable for their *dhammas* produced by *kamma* primarily, but also benefittable by secondary cause as supporting factors (*upatthambhaka paccaya*). Indeed, great worldly gains, high attributes and great wise are apparent resultant *dhammas* caused by the supporting factor of previous *kamma*.

4.47.4 Kammapaccaya cittasamuṭṭhāna

* *Kamma paccaya samuṭṭhānam nāma vipāka cittasamuṭṭhānam rūpam. (Vs-2-249)*

In those beings with five aggregates (*pañcavokāra*), every mind moment called *manodhātu* or *manoviññādhātu*, has ability to produce corporeality called *cittaja rūpa*. Those minds which are able to produce corporeality, include *paṭisandhi* consciousness and life-continuum called *vīthimutta citta*, and receiving consciousness (*sampañicchana*), investigating consciousness (*santīraṇa*), registering consciousness (*tad-ārammaṇa*), which are resultant mental *dhammas* (*vipāka ñāma*). The arising phase of those resultant mental *dhammas* are also able to produce corporeality. The corporealities produced by resultant mind moments are called *kammaṇipaccaya citta-samuṭṭhāra*. (*Vs-2-249*).

Pāli Quotation. (Mahāṭṭ-2-400)

It should be known the fact the resultant mental concomitants, associating with the resultant consciousness in the same mind moment are also caused by the resultant consciousness which is supported by *kamma*. (Sub-commentator Sayadaw said this explanation because consciousness and mental concomitants are mutually benefited to each other by means of compatibility (*sahajāta*), mutually (*aññamañña*) and dependence (*nissaya*).] In other words, due to mental concomitants belongs to *kamma samuṭṭhāna dhamma*, *kamma paccaya dhamma* and it is well understood, whereby it should not say again that the resultant mental concomitants are also included in the latter. (*Mahāṭṭ-2-400*)

PAGE-653

4.47.5. Kamma paccaya āhāra samuṭṭhāna

Pāli Quotation (Vs-2-249-250) (Mahāṭṭ-2-401)

Every corporeal unit produced by *kamma*, such as eye-decad, etc., consists of nutriment called *kammaja ojā*. The corporeal *dhamma* usually become strong at the static phase. Thus that *kammaja ojā*, when it reaches to static phase, produces new corporeal units called *ojaṭṭhamaka kalāpa* which consists of eighth factor, nutriment (*ojā*).

The ingested foods, which may be one of any kinds, before ingested or newly ingested food inside the stomach as a part of body (*koṭṭhāsa*), or undigested food in colon and rectum as faeces, are a group of corporeal units called *utuja ojaṭṭhamaka kalāpa* produced by temperature. If four great elements on those foods, or ingested foods, or undigested foods, are discerned, it can be found only four great elements as a clear block. If the space element (*ākāsa dhātu*) between that clear block can be discerned, it will be found a group of corporeal units. Those corporeal units are new generation of corporeal units which are produced by the fire-element consisting in previous corporeal units successively.

Thus the state of edible foods before ingestion or after ingestion or undigested one, faeces, are corporealities produced by temperature, indeed. The foods, before ingestion, are called *Kabalīkāra āhāra*.

Every corporeal unit called *kabalīkāra āhāra* consists of nutriment (*ojā*). That nutriment, inside mouth, pharynx, stomach, intestine, rectum, before spreading throughout body, is called *utuja ojā*, it is produced by temperature. When it gets supporting factor of temperature consisting inside the vital nonads which are situating around stomach, it become new corporeal units with eighth factor, nutriments, called *ojaṭṭhamaka kalāpa*. The nutriment consisting in those corporeal units are new generation of *utujhaojā*, and are called *āhāraja ojā*.

PAGE-654

Notes : It is generally said the fact that “when it gets supporting factor of temperature, consisting inside the vital nonad which are situating around stomach, it becomes new corporeal units with eighth factor, nutriment, called *ojaṭṭhamaka kalāpa*. Indeed, the ingested food can be spread out not only inside the stomach but also inside the mouth, pharynx, intestine etc., where into vital nonads are present and if the temperature consisting in vital nonads are able to support those nutriments, new generation of *āhāraja ojaṭṭhamaka kalāpa* can be produced and spread out the whole body from those parts.

Āhāraja oja = It should be recognized the fact that the nutriments consisting in the new generation of corporeal units which become from original *utujaojaṭṭhamaka kalāpa*, depending upon the supporting factor of temperature within vital nonad, are called *āhāraja oja* (nutriment produced by nutriment).

Union of *Kammajaojā* and *āhāraja oja*

The nutriments, consisting in those corporeal units produced by *kamma*, such as, eye-decad, ear-decad etc..., are called *kammajaojā*. If *kammajaojā* is supported by spreading *āhāraja oja* inside the eye, new generation of corporeal units, called *ojaṭṭhamaka kalāpa* with eighth factor nutriment, can be produced. When new corporeal unit reaches to static phase, the nutriment within that unit can produce new generation of corporeal units successively. In this way, (4) to (5) generations of new corporeal units can be produced by means of the same continuity of corporeality (*sadisa santati*). It means the fact that if it is supported by *āhāraja oja*, the nutriment inside the corporeal unit produced by *kamma*, can produce (4) to (5) generations of new corporeal units successively.

Short Notes

The nutriment consisting in each corporeal unit produced by temperature, if it has got supporting factor of temperature of vital nonad, is able to produce new corporeal units called *ojaṭṭhamaka kalāpa*. Those corporeal units are caused by nutriment and called *āhāraja ojaṭṭhamaka kalāpa*. If the nutriments within corporeal units produced by *kamma* have got supporting factor of *āhāraja oja* in turn, the former are able to produce (4) to (5) generations of new corporeal units successively. Therefore the commentator explained the fact that when it reaches to static phase, *kammaja oja* produces new corporeal units called *ojaṭṭhamaka kalāpa* which consists of eighth factor, nutriment (*oja*). Ancient noble teachers explained that if an extrinsic factor like *deva's* nutriment is available, different processes of continuity of corporealities will be continued as a result.

PAGE- 655

4.47.6 *Kammapaccaya utusamuṭṭhāna*

The corporeality produced by temperature which is supported by *kamma*

Pāli-Quotation (Vs-2-250)

Every corporeal unit produced by *kamma* consists of fire-element called temperature (*utu*). When that fire-element (*utu*) reaches to static phase, it produces new *ojaṭṭhamaka kalāpa* with eighth factor, nutriment. That corporeal unit is produced by temperature (*utu*) and called *utujasamuṭṭhāna rūpa* (corporeality produced by temperature). Then that first generation of octad produced by temperature also consists of the fire-element (= temperature or *utu*), when it reaches to static phase, it produces the second generation of pure octad called *ojaṭṭhamaka kalāpa* again. Thus, (4) to (5) generations of new corporeal units arise in the

same continuity of corporeality. This kind of corporeality is caused by the fire-element (temperature = *utu*) which is supported by *kamma* and it is known as *kamma paccaya utusamuṭṭhāna rūpa* (= the corporeality produced by temperature which is supported by *kamma*). (Vs-2-250)

Every gentleman who wants to attain *nibbāna* must endeavour to fulfil that responsibility by which those processes are essential to be seen by insight knowledge.

4.48 The arising of *cittaja rūpa* (corporeality produced by mind)

It should be known (5) modes of the arising of corporeality produced by mind as follows.

1. *citta* = mind
2. *citta samuṭṭhāna* = the *dhamma* produced by mind
3. *citta paccaya* = the *dhamma* supported by mind
4. *citta paccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by mind
5. *citta paccaya utusamuṭṭhāna* = the corporeality produced by temperature which is supported by mind.

4.48.1 *Citta* = consciousness

One deficit of ninety (90), i.e., (89) kinds of consciousness are called consciousness (*citta*). (Vs-2-250).

Pāli Quotation (Abhi dhammattha sangaha)

= Among (89) kinds of consciousness, except (14) kinds, i.e., (4) resultant consciousness of formless world and (10) *dvipaṇca-viññāṇa*, the remaining (75) kinds of consciousness, are able to produce corporeality called *cittaja rūpa*, at the arising phase of the first consciousness of life-continuum (*bhavanga*), just after *patisandhi* consciousness. Only one consciousness is able to produce many corporealities as one kind of *kamma* which is able to produce various kinds of corporeal units.

PAGE-656

a. *Cittajarūpa, iriyāpatha, viññatti rūpa*

These (32) kinds of consciousness, i.e

1. great wholesome consciousness	...	8
2. unwholesome consciousness	...	12
3. genesis of mirth of <i>arahant</i> (<i>hasituppāda citta</i>) and great mere functioning consciousness (<i>mahākriyācitta</i>)	...	9
4. determining = mind-door-adverting	...	1
5. wholesome <i>abhiññāṇa</i> and mere functioning <i>abhiññāṇa</i> (<i>kriyāabhiññāṇa</i>)	...	2
	total	32

are able to produce, both

1. ordinary *cittaja rūpa*,
2. deportments (*iriyāpatha*), i.e, walking, standing, sitting, reclining and
3. special expression corporeality (*viññatti-rūpa*).

b. Deportments (*iriyāpatha*)

Pāli Quotation (*Mahāṭṭ-2-401*)

Due to the cause of occurrence of bodily expression (*kāyaviññatti*), four kinds of deportments, i.e, walking, standing, sitting, reclining, are called *iriyāpatha*. According to the aspect of ultimate reality, it is the nature of arising of corporealities during moment of walking .. etc. It means that the nature of arising of corporealities by means of walking, of standing, of sitting, of reclining are called *iriyāpatha*. (*Mahāṭṭ-2.401*)

Is it true that there is neither *iriyāpatha* nor *viññatti* free from corporeal *dhmma*? It is a question that why can either *iriyāpatha* or *viññatti* be taken out from corporeal *dhammas*, separately? The answer is as follows.

In this case, there is actually, neither *iriyāpatha* nor *viññatti* free from corporeal *dhammas*. Although it is true, all consciousnesses which are able to produce corporeality, are able to bring forth neither supporting for long lasting stability of *iriyāpatha* nor special bodily expression. Actually a such consciousness is able to occur special bodily expression (*viññatti*), those all kinds of consciousness are able to bring forth both supporting for long lasting stability of *iriyāpatha* and arising of *cittaja rūpa* (ordinary corporeality produced by mind). Due to inseparable condition of special bodily expression (*viññatti*), *iriyāpatha* and *cittaja rūpa*, every mind which can produce special bodily expression corporeality (*viññatti rūpa*) can produce *iriyāpatha* and *cittaja rūpa* (as natural fixed law). (It means *cittajaojattḥamaka rūpa*, excluding *viññatti* and *iriyāpatha*, are called ordinary *cittaja rūpa*.)

PAGE-657

Similarly a such consciousness which is able to supporting for long lasting stability of *iriyāpatha*, can produce ordinary *cittaja rūpa*. It is because no *iriyāpatha rūpa* can arise without *cittaja ojattḥamaka rūpa*. The commentator, in order to express this kind of special note, used the term “both ... and” (= *Ca*) in the phrase, “these (32) kinds of consciousness ... R ... are able to produce, both ... R ... and special expression corporeality (*viññatti rūpa*).

c. *Cittajarūpa* and Deportments (*iriyāpatha*)

The following (26) kinds of consciousness of full concentration impulsions,

- | | | | |
|---|---------|-----|----|
| 1. lofty wholesome impulsion (<i>mahaggata</i>) | ... | 9 | |
| 2. lofty mere functioning impulsion (<i>mahaggatakriya</i>) | ... | 9 | |
| 3. supra mundane consciousness (<i>lokuttara</i>) | ... | 8 | |
| | totally | ... | 26 |

are able to produce both

1. ordinary *cittaja rūpa* .. and
2. deportments (*iriyāpatha*), but not able to produce special bodily expression corporeality (*viññatti rūpa*). (Among these full concentration impulsions, it should be recognized that impulsions of Super-psychic Knowledge (*abhiññāṇa*) are excluded).

The reason why these (26) kinds of consciousness of full concentration impulsions are unable to produce *viññatti rūpa* is that ___ due to calmness and lack of expansion and moving of those lofty wholesome impulsions etc. It is true. ___ Impulsions of sensuous world and psychic knowledge, which have expansion and moving, are able to produce *viññatti rūpa*. Although those consciousness of full concentration impulsions are unable to produce *viññatti rūpa*, they are able to maintain and support for long lasting stability of deportments (*iriyāpatha*), because of the presence of effort (*ussāha*) with the help of absorption (*jhāna*).

Due to presence of apparent effort, those (26) kinds of consciousness have the function of impulsions by which lofty impulsions are able to feel taste of object of either *samatha*, such as *paṭibhāga nimitta* of *kaṣiṇa* etc., or bliss of tranquility of *nibbāna* continuously.

PAGE-658

Pāli Quotation (Mūlaṭṭī-1-151)

Due to unable to produce *viññatti rūpa*, those (26) kinds of consciousness of lofty wholesome impulsions, etc., are unable to produce new deportment (*iriyāpatha*) for which *viññatti rūpa* is essential. However, deportments which are produced by determining (*vuṭṭhāpana*), impulsion of sensuous world and super-psychic Knowledge, can be supported for long lasting stability in it's position by those kinds of consciousness. The meaning of "supported" (*upatthambhanti*) means "it is able to maintain original deportment to be continued, walking, standing, sitting or reclining".

d. Ordinary cittaajarūpa

The following (19) kinds of consciousness,

- | | |
|---|----------------|
| 1.(a) Rootless neutral investigating (<i>ahetuka upekkhā santīraṇa</i>) | ... 2 |
| (b) Great consequence consciousness called consciousness of life-continuum of ...
sensuous world (It refers performing function of life-continuum) | ... 8 |
| 2. Fine-material consequence called Fine-material life-continuum consciousness | ... 5 |
| 3. five adverting and two kinds of receiving | ... 3 |
| 4. Rootless wholesome consequence joyful investigating <i>ahetuka kusala vipāka somanassa santīraṇa</i> | ... 1 |
| | total 19 |

are able to produce only ordinary *cittaja rūpa* (without *iriyāpatha* and *viññatti rūpa*), but are unable to produce *iriyāpatha*, *viññatti*. (*Vs-2-402*)

Pāli Quotation (Mahāṭṭī-2-402)

= Due to lack of diligent effort, presence of calmness and weakness, (19) kinds of these consciousnesses are able to produce only ordinary *cittaja rūpa*, but not *iriyāpatha*, *viññatti rūpa*. (*Mahāṭṭī-2-402*)

e. Efficiency of consciousness

Pāli Quotation (Mūlaṭṭī-1-151) (Anuṭṭī-1-164) (Mahāṭṭī-2-402)

PAGE-659

Above mentioned (32) kinds, and (26) kinds of consciousness are called vigilant consciousness (*jāgarāṇa citta*) or *kriyāmaya citta* (the consciousness which is able to achieve process of behavioural expression). While the consciousness of life-continuums are arising continuously, it is able to maintain the whole body without moving of any bodily parts, such as shoulder etc. (*Mahāṭṭī-2-402*)

It is right. ____ Although the bodily parts, such as .. shoulder, seems to be contracted while the consciousness of life-continuums are arising continuously, those parts do not fall back and contract while vigilant consciousness and *kriyāmaya citta* are arising. While vigilant consciousness and *kriyāmaya citta* are arising, the bodily parts, such as shoulder etc.,

become strong, resulting in continuous positions of walking, standing, sitting or reclining. It should be recognized in this way.

f. Only impulsion of mind-door-cognitive process (*manodvārika javana*)

Pali Quotation (Abhi-A-2-388)

Among above mentioned determining, impulsions of sensuous world, impulsions of Super-psyche Knowledge, which are able to produce both ordinary *cittaja rūpa*, *iriyāpatha* and *viññatti rūpa*, impulsions of Super-psyche Knowledge are only impulsions of mind-door-cognitive process, indeed. The determining and impulsions of sensuous world, however, are both *pañca dvārika* (five-doors-cognitive processes) and mind-door-cognitive process. In this case, it should be recognized mind-door-advertence (= determining) and impulsions of sensuous world of mind-door cognitive process are intended to be meant. Five-doors-cognitive processes are very weak and then determining and impulsions which are included in five-doors-cognitive processes can produce neither *viññatti rūpa* nor *iriyāpatha rūpa*.

g. Various kinds of consciousness which are unable to produce *cittaja rūpa*

The following (16) kinds of consciousness,

1. Fivefold-consciousness (<i>dve pañca viññāṇa</i>) i.e, seeing-consciousness etc.,	... 10
2. <i>paṭisandhi</i> consciousness of all beings	... 1
3. death consciousness of <i>arahants</i>	... 1
4. Immaterial consequence consciousness	... 4
total	16

are unable to produce any kind of

1. ordinary *cittaja rūpa*,
2. *iriyāpatha* (deportments)
3. *viññatti rūpa* (special expressions). (*Vs-2-250*)

PAGE-660

h. The reason of inability to produce *cittaja rūpa* through *paṭisandhi* consciousness

Due to the following reasons,

1. weakness of dependence factor called heart-base (*hṛdaya vatthu*),
 2. lack of stable foot-hold,
 3. lack of supporting factors, such as pre-compatibility (*purejāta*) etc.,
 4. just after arriving as a guest of newly existence,
 5. *kammaja rūpa* have already got occupation which is the cause of existing of *cittaja rūpa*, every *paṭisandhi* consciousness is unable to produce *cittaja rūpa*.
1. At arising phase, corporealities are weak but they become strong at the static phase. This is the natural fixed law of corporeality. Either while *paṭisandhi* consciousness is arising or during life (*pavatti*) it is the fixed law of corporeality, that the arising stage of corporeality is weak, due to lack of supporting factors of relation of post-compatibility (*pacchājāta*) and nourishment (*āhāra*) etc. The *paṭisandhi* consciousness, which occurs depending on weak physical base of mind, is unable to produce *cittaja rūpa*. (*Abhi-A-2-22*)
 2. Due to not only weakness of physical base of mind but also lack of stable foot-hold of just newly existence, as a such man who reaches to edge of chasm, is unable to resist

dependence of others, similarly the *paṭisandhi* consciousness is unable to produce *cittaja rūpa* by means of compatibility (*sahajāta*) and dependence (*nissaya*). (*Abhi-A-2-22*).

3. The consciousness of first life-continuum, etc, just after *paṭisandhi* consciousness, are also lack of stability in newly existence because previous *kamma* produces that resultant mind. However, *paṭisandhi* consciousness supports it by means of efficiency of relation of contiguity (*anantara paccaya*) and the heart-base which arises simultaneously with *paṭisandhi* consciousness, is strong in static phase in order to support it by means of efficiency of relation of pre-compatibility (*purejāta*). The consciousness of the first life-continuum ... etc, therefore, are able to produce *cittaja rūpa*.

The *paṭisandhi* consciousness, on the other hand, arises depending upon the heart-base simultaneously. That physical base of mind called heart-base is unable to support by means of efficiency of relation of pre-compatibility. If it is able to arise previously and to support the *paṭisandhi*-consciousness through efficiency of relation of pre-compatibility, the *paṭisandhi* consciousness is also able to produce *cittaja rūpa*.

The heart-base which arose previously for such mind moment will be able to support through relations of base-pre compatibility- dependence (*vatthupurejātanissaya*) for depending consciousness of such kind. For instance while the eye-clear-sensitivity etc ... is present as corporeal continuity, those other heart-bases are also continuous arising and passing away but those corporealities are adjacent to each others and joined by means of corporeal continuity. It is different from interval of heart-base of death-consciousness of previous life and heart-base of *paṭisandhi*-consciousness of new life, at which the corporeal continuity is discontinuous.

PAGE-661

[An example _____ let us suppose (17th) mind moment after *paṭisandhi* consciousness as an example. *Kammaja rūpa* which arise simultaneously with the *paṭisandhi* consciousness, were passed away, due to expiry of its life-span, i.e., (17) times of mind moments. At the arising, static and perishing phases of (17th) mind moment, *kammaja rūpa* are produced and still present at that moment. Suitable numbers of *cittaja rūpa* and *utujarūpa* are also present at that moment. Then the consciousness of first life-continuum and second life-continuum after *paṭisandhi* consciousness had also produced *kammajarūpa* and *cittaja rūpa* at all three-time-phases respectively. Those corporealities are still present at the time of (17th) mind moment after *paṭisandhi*-consciousness, due to presence of its life span. Thus by the time 17th mind moment after the *paṭisandhi* consciousness, some corporealities are perishing away, while some are arising and static phases respectively, resulting in continuity of corporealities successively. It should be understood the remaining mind moments similarly.]

While the consciousness is getting opportunity to depend heart-base which is able to support by means of relation of base-precompatible dependence (*vatthu purejātanissaya satti*), only when factors of absorption, such as initial application (*vitakka*), sustained application (*vicāra*) etc., factors of eight-fold paths, such as right view (*sammādiṭṭhi*), right thought (*sammāsaṅkappa*) etc... and mental concomitants, such as contact (*phassa*), volition (*cetanā*) etc... are not deficit but are completely available, that consciousness can produce *cittaja rūpa* at that moment. Due to deficiency of those factors, the five consciousness (*pañcaviññāṇa*), such as., seeing-consciousness etc.. are unable to produce *cittaja rūpa*. (*Abhi-A-2-22*) (*Mūlaṭṭi-2-18*)

It is one reasonable complaint. The heart-base, which arises simultaneously with the arising phase of *paṭisandhi*-consciousness, is previously compared with the static phase and perishing phase of *paṭisandhi*-consciousness. If it is said the fact that “due to presence of

efficiency of relation of precompatibility, the static phase and perishing phase of *paṭisandhi*-consciousness are able to produce *cittaja rūpa*”, the commentator explained the following facts in order to prohibit that kind of opinion. (*Mūlaṭṭi-2-18*)

If the consciousness, either at the static phase or at the perishing phase, can produce *cittaja rūpa*, the *paṭisandhi*-consciousness can also produce *cittaja rūpa*. But every consciousness, is unable to produce *cittaja rūpa* at the both static and perishing phases. (*Abhi-A-2-22*)

PAGE-662

In that words, it should not be said the fact that the heart-base which arises simultaneously with the arising phase of *paṭisandhi* consciousness is available as relation of precompatibility (*purejāta*) of the static and perishing phases of the latter. If one says like this, it shows apparently it's fault. If those sub-moments, the static and perishing phases of such consciousness are also able to produce *cittaja rūpa*, the *paṭisandhi* consciousness is also able to produce *cittaja rūpa*. But the static or perishing phase of every consciousness is unable to produce *cittaja rūpa*. Every consciousness, due to very rapid rate of perishing, is unable to produce *cittaja rūpa*, at the perishing phase of itself. At the static phase, due to presence of nature of bending to perish, it is leading to perish away and is unable to produce *cittaja rūpa*. At such phase, due to presence of availability of relations of contiguity (*anantara*), pre-compatibility, etc., the consciousness become strong and *cittaja rūpa* can be arisen at that arising phase of consciousness. That kind of complaint, therefore, is deficient in factors called precompatible dependence (*purejāta nissaya*) for *paṭisandhi*-consciousness. Thus, it should be recognized the fact that *paṭisandhi*-consciousness is unable to produce *cittaja rūpa*. (*Mūlaṭṭi-2-18*)

Mushroom spawn usually arises together with soil dusts on it's top on the earth surface. Similarly, at the arising phase of consciousness, through depending upon heart-base which has arisen previously, the mind arises together with (8) kinds of *ojaṭṭhambhaka rūpa*. [It is due to presence of strong power of the consciousness, just at the arising phase at which it is supported by efficiency of relation of contiguity (*anantara*). (*Mūlaṭṭi-2-19*)] Due to lack of relation of base-precompatible-dependence of heart-base, the *paṭisandhi*-consciousness is unable to produce *cittaja rūpa*. (*Abhi-A-2-22*)

4. Due to lack of authority of new comer in such place, he is unable to say others with hospitality in that place. Similarly, the *paṭisandhi*-consciousness is also a guest of newly existence with the result that it is unable to produce *cittaja rūpa*. (*Abhi-A-2-22*).

5. During life (*pavatti*), the mind and mental concomitants benefit for arising of *cittajarūpa* through efficiency of relations of compatibility (*sahajāta*), dependence. (*Paṭṭhāna-1-5*). The *paṭisandhi* consciousness also benefits for arising of (30) kinds of *kammaja rūpa* with those kinds of supporting factors similarly. Those (30) kinds of *kammajarūpa* are substitutional corporealities of *cittajarūpa*. The *paṭisandhi* consciousness, therefore, is unable to produce *cittaja rūpa*. (*Abhi-A-2-22*).

PAGE-663

i. Death consciousness of arahants

Pāli-Quotation (Abhi-A-2-22-23)

Death consciousness of arahant, due to cessation and extinguishment of roots of cycles called ignorance and craving, is unable to produce *cittaja rūpa*. It is right- In the

continuum of mind of that arahant, roots of cycles called ignorance and craving to all existences had been extinguished, resulting in deserving to non-reappear again. There is no continuity of corporeality for new existence. (*Abhi-4-2-22,23*)

j. Scrutinize and bear in mind on this fact

Pāli-Quotation (Mūlaṭṭhā-2-19)

Mūlaṭṭhā Sayadaw dissatisfied on explanation of commentator, that “death consciousness of arahant, due to cessation and extinguishment of roots of cycles called ignorance and craving, is unable to produce *cittajarūpa*”. The reason why he dissatisfied on commentator’s explanation is that he (*ṭīkā Sayadaw*) reasoned that “the commentator Sayadaw seems to be suggested if death-consciousness of arahant is able to produce *cittajarūpa*, that corporeality will be continuous for next existence”. Then *ṭīkā Sayadaw* reasoned the fact that “the corporeality produced by death-consciousness, similar to corporeality produced by mind which is previous before death-consciousness, never arise again in the next existence”. Thus it should be reasoned and discussed the fact that inability to produce *cittajarūpa* of the death-consciousness of arahant, due to cessation and extinguishment of cycle called ignorance and craving, explained by *Mūlaṭṭhā Sayadaw*.

However, *Madhuṭṭhā Sayadaw* rebutted on misinterpretation of *Mūlaṭṭhā Sayadaw* and explained on the intention of commentator Sayadaw as follows.

“If there are roots of cycles called ignorance and craving, new *paṭisandhi* will be arisen after death. In order to benefit that new consciousness, (if it is able to produce *cittajarūpa*), the death-consciousness of arahant is also worth reaching into availability to efficiency of relation of contiguity (*anantara satti*). Indeed, death-consciousness of arahant has no efficiency of relation of contiguity. Due to lack roots of cycles, *cittajarūpa* can not be produced”, explained by *Madhuṭṭhā Sayadaw*. (But *Mūlaṭṭhā Sayadaw* assumed the fact that every death-consciousness of all beings is unable to produce *cittajarūpa*. It will be clear in later.)

k. Opinions on death-consciousness

Pāli-Quotation (Mūlaṭṭhā-1-151-152) (Mahāṭṭhā-2-402)

PAGE-664

Above *Pāli Text* called *Sankhāra Yamaka (Abhi-6-28,29)* explains about persons who will cease *vacīsankhāra* called *vitakka*, *vicāra* only but not *kāyasankhāra* called in-breath and out-breath (*assāsa passāsa*). Those persons who will not cease in-breath and out-breath means persons who never bring forth in-breath and out-breath in future, who might have to continue journey of rounds rebirth (*samsāra*) or who might not have to continue journey of rounds of rebirth. Those persons who will not cease in-breath and out-breath are as follows. _____

1. The *Arahant* who never into absorption (*jhāna*) but enters into Sensual Fruition-Absorption of *Arahant* who can be said “the person with arising phase (*uppādakkhana samangī*) of (4) kinds of death consciousness and (33) mental concomitants.
2. The *Arahant* who never enter into absorption (*jhāna*) but enters into Sensual Fruition-Absorption of *Arahant*
 - (a) until second registering (opportunity of death consciousness after registering)

- (b) until fifth impulsion adjacent to death (opportunity of death consciousness after impulsion)
- (c) until life-continuum (opportunity of death consciousness after life-continuum) which is contiguous mind of final death-consciousness, from the consciousness which ceases together with last in-breath and out-breath.
- 3. if he will enter into the Eternal Peace called *nibbāna* (will extinguish) with *vitakka vicāra*; if he will enter into the Eternal Peace without *vitakka vicāra*, for whom from the *paṭisandhi*-consciousness to arising of last (death) consciousness; if he who enters or not enter into absorption till arising phase of fifth impulsions adjacent to death, those kinds of persons who have final existences in the world of form and formless world;
- 4. if he will rebirth in the world of form and formless world after death of seven planes of sensuous world and enter into the Eternal Peace, the person who is still dead in sensuous world (*kāmāvacaracavanta*) during the period from cessation of consciousness together with in-breath and out-breath till death-consciousness,
- 5. if he who is opportunity to become the same plane of either world of form or formless world, will enter into the Eternal Peace, those persons of world of form and formless world, except mindless beings and the highest plane of pure-abode (*akaniṭṭha*), for whom the period from birth-consciousness to death-consciousness.

These five kinds of persons have no ability to bring forth in-breath and out-breath (*kāyasankhāra*) in future but availability to cease *vacīsaṅkhāra*.

* *assāsa passāsā cittasamuṭṭhānāva. (Vs-1-362)*

The in-breath and out-breath are only corporealities produced by mind.

PAGE-665

According to above *Sankhāra Yamaka Pali, Mūlaṭṭikā Sayadaw* explained that “death-consciousness of all beings is unable to produce either in-breath and out-breath or other *cittaja rūpa* which are similar to in-breath and out-breath. It is right. ____ If inhibiting factors for arising of in-breath and out-breath, i.e., foetal stage in womb, submerging, coma, dying, entering into the fourth absorption, during existence of world of form and formless world, entering into the Cessation-Absorption (*nirodha samāpatti*), are absent for such mind which is able to produce *cittaja rūpa*, it will be certainty of absent for inability to arise in-breath and out-breath.

The following contradict pairs should not be occurred simultaneously,

1. by the time the moment of death-consciousness. 2. those corporealities produced by mind is still arising.

There is no *Pali Text* for the fact “the death consciousness is able to produce *cittaja rūpa*”. The commentator Sayadaw emphasized and explained the death-consciousness of *arahant*, which is to be intended the fact that the *arahants* who never reappear in future without any junction of new life and it is quite apparent in inability to produce *cittaja rūpa* by their final death-consciousness. This is the suggestion of *Mulāṭṭikā Sayadaw* and *Mahāṭṭikā Sayadaw*.

I. Complaint of *Madhuṭṭikā Sayadaw*

Madhuṭṭikā Sayadaw complained that “The death-consciousness is very weak but in-breath and out-breath are very apparent. “Although the *Buddha* preached inability of death-consciousness to produce *cittaja rūpa* in *Sankhāra Yamaka*, one should not suggest on the fact “that death-consciousness is unable to other kinds of *cittaja rūpa*”. *Mūlaṭṭikā Sayadaw*

explained the fact that “there is no *Pali Text* for the fact “the death-consciousness is able to produce *cittaja rūpa*”. Similarly, there is no *Pali Text* for the fact “the death-consciousness is unable to produce *cittaja rūpa*”, complained by *Madhuṭṭikā Sayadaw*.

m. Inability to produce *cittajarūpa* by *pañcaviññāṇa* (five fold consciousness)

In the consciousness of *dve pañcaviññāṇa*, i.e, seeing-consciousness etc., only (7) mental concomitants, i.e, *phassa*, *vedanā*, *saññā*, *cetanā*, *ekaggatā*, *jīvitā*, *manasikāra*, associated with those consciousnesses. There are no *dhammas* which are deserving to become factors of absorption such as *vitakka*, *vicāra*, *pīti*, *sukha*, *ekaggatā* etc, in those consciousnesses. There are no *dhammas* which are deserving to become factors of eight fold path in those consciousnesses. There are also no rooted *dhammas*, i.e, *lobha*, *dosa*, *moha*, *alobha*, *adosa*, *amoha* in those consciousnesses. Thus due to lack of association with factors of absorption, factors of Eight-fold Path, and rooted *dhammas*, *devepañca viññāṇa* are very weak and unable to produce *cittaja rūpa*. (*Abhi-A-2-23*)

Pāli-Quotation (Paṭṭhāna-1-1; 1-8; 1-8)

PAGE-666

Thus *the Buddha* preached that factors of absorptions, Eight-fold Paths and rooted *dhammas* are able to produce both associated *dhammas* of absorptions, that of Eight-fold Paths, that of rooted *dhammas* and *cittaja rūpa*. Among those *dhammas*, due to ability of absorption of *vitakka*, *vicāra* etc., the consciousness takes the object profoundly but not superficially. The consciousness which associates with absorption, therefore, becomes stronger in power. Factors of absorptions plays very important role in strong power of consciousness while factors of Eight-fold Paths and rooted *dhammas* support to become strong power of consciousness.

With the help of faith (*saddhā*), effort (*vīriya*), mindfulness (*sati*), when the mind is concentrated on the object of either *samatha* or *vipassanā* in order to fix steadfastly on those objects, a factor of Eight-fold Path, called *Samādhi* (concentration), arises in him. When that concentration called *samādhi* becomes strong a kind of ability called *paññā* (knowledge) which is able to know real ultimate *dhammas* as they really are, will be arisen in him in accordance with the Buddha’s teaching that “*samāhito yathābhūtam jānāti passati*” (the person with concentration knows and sees really (*Ang-3-259*)). The consciousness which is fulfilled with faith, effort, mindfulness, concentration, knowledge, is very powerful and able to control the way of noble Eight-fold Path in order to reach other bank of *nibbāna*. Factors of absorption, factors of Eight-fold Path and rooted *dhamma* plays vital important role in improvement of the powerful mind. Any consciousness without those factors is defective mind, resulting inability to produce *cittaja rūpa*, as a disable person is unable to carry out various works compared with normal one (*Abhi-A-2-23*)

Pāli Quotation. (Abhi-A-2-23) (Mūlaṭṭi-2-18)

n. Inability to produce *cittaja rūpa* by *arūpa vipāka* (consequence consciousness of formless world)

Pāli-Quotation. (Abhi-A-2-23)

Four kinds of immaterial consequence consciousness (*arūpa vipāka*) arise to carry out functions of *paṭisandhi*, life-continuum and death of formless world only. Due to lack of corporealities which are deserving to arise by consequence consciousness of formless world, the latter is unable to produce *cittaja rūpa*. In other words, there are no fundamental corporealities in formless world originally. Due to presence of corporeality in world of form, it is apparent to occur corporeality by causal *dhammas* which are able to produce corporeality. But in the formless world, due to lack of fundamental corporealities, four kinds of consequence consciousness are unable to produce *cittaja rūpa*.

PAGE-667

Then the following (42) kinds of consciousness of the formless world, i.e.,

1. sensual great wholesome consciousness		8
2. unwholesome consciousnesses, except two rooted in hate		10
3. adverting and <i>mahākriyā citta</i> (great mere functioning consciousness)		9
4. wholesome consciousness of formless world		4
5. mere functioning consciousness of formless world		4
6. three kinds of Supra-mundane consciousness, i.e, the second, third and fourth Path-Knowledge		3
7. Four kinds of consciousness of Fruit-Knowledge		4
	Total	42

are also unable to produce *cittaja rūpa*, due to absence of corporealities in the formless world. (*Abhi-A-2-23, Mulaṭṭi-2-19*)

Those formless world is the realm of brahmas who are disgusting with corporealities. The absorption of the formless world which is brought forth by practice of disgust on corporeality (*rūpa virāga*) disgusts not only on the corporeal *dhamma* but also on *kasiṇa rūpa* and absorptions of world of form which takes the object of *kasiṇa rūpa*. The Fine-material consciousness, therefore, can not arise in the immaterial sphere.

These are decisions found in commentaries and sub-commentaries, related with the consciousness which are able or unable to produce *cittaja rūpa*, deportment (*iriyāpatha*), bodily expression (*viññatti*).

o. The consciousness is able to produce corporeality at arising phase (*ṭhiti*) only

Pāli-Quotation (Vs-2-250) (Mahāṭṭi-2-402)

Among those consciousness, such kind is able to produce *cittaja rūpa* where as that consciousness is unable to produce *cittajarūpa* at either the static phase (*ṭhiti*) or the perishing phase (*bhanga*). It is right. _____

Neither static phase nor perishing phase of consciousness is strong.

Actually, the arising phase (*uppāda*) of consciousness has strong power, due to presence of supporting factors, such as efficiency of relation of contiguity (*anantara*) etc... That consciousness, therefore, produce *cittaja rūpa*, by the time arising of itself, depending on heart-base which is able to support through efficiency of relations of precompatibility and dependence (*purejāta, nissaya*). (*Vs-2-250*) (*Mahāṭṭi-2-402*).

PAGE-668

P. Consciousness and mental concomitants

Pāli-Quotation (Abhi-A-3-355)

Although it is called *cittaja rūpa* (corporeality produced by mind), it is not produced by only consciousness alone but by the union of consciousness and all mental concomitants. However, it is called *citta samuṭṭhāna rūpa* because the consciousness is the fundamental factor to produce corporeality as a preaching methodology in mundane world. The Buddha, therefore, preached in *sahajāta paccaya*, *Paṭṭhāna*, that

“*Cittacetāsikā dhammā cittasamuṭṭhānanam rūpānam sahajāta paccayena paccayo*”

= Those *dhamma* called mind and mental concomitants are able to benefit for arising of *citta samuṭṭhāna rūpa* (*cittaja rūpa*) by efficiency of relation of compatibility (*sahajāta*). (*Paṭṭhāna-1-5*).

q. Efficiency of one mind moment

Pāli-Quotation (Paṭṭhāna-1-2, 1-5)

According to *Paṭṭhāna*, it should be recognized the fact that one mind moment is able to produce numerous corporeal units because the resultant *cittaja rūpa* are preached as pleural form, i.e., “*tamsamuṭṭhānānañca rūpānam*”. It can be reasoned, in the aspect of conventional reality (*samutī sacca*), the fact that only one corporeal unit is unable to carry the whole body of a person from here to there but numerous corporeal units produced by one mind moment and mental concomitants are able to carry it, hypothetically. In the aspect of ultimate reality (*paramattha sacca*), the ultimate corporeality is unable to move from here to there, due to perishing away itself just after arising in such place. Detailed explanation can be found in later, way of practice of *iriyāpatha*, *sampajañña*.

PAGE-669

4.48.2 Citta samuṭṭhāna = the dhamma produced by mind

1. Three mental aggregates, i.e., feeling-aggregate, perception-aggregate, formation-aggregate;
2. vital nonad which consists of sound as 9th factor, plus basic 8 factors,
3. bodily expression corporeality, verbal expression corporeality, space-element, physical agility, physical plasticity, physical adaptability, *upacaya* (the occurrence of real corporeality from beginning of birth to maturity of controlling faculties, i.e., eye, ear ... etc), and *santati* (continuity of corporeality, i.e., the occurrence of real corporeality from maturity of controlling faculties to death),
thus, three mental aggregates and (17) kinds of corporealities are called *dhamma* produced by mind (*cittasamuṭṭhāna*) (*Vs-2-250*)

Among those corporeal *dhamma*, (8) kinds of corporealities from bodily expression corporeality to *santati*, are called *citta samuṭṭhāna* as a indirect way of preaching methodology by the Buddha. This is because those corporealities are *anipphanna rūpa* which are not produced directly by cause. (*Anipphanna rūpa* are only recognition mark produced by real corporealities but not real ultimate corporealities. Thus those are called *cittaja rūpa* by indirect way.)

4.48.3 *Citta paccaya* = the *dhamma* supported by mind

* *pacchājātā cittasetasikā dhammā purejātassa imassa kāyassa pacchājata paccayena paccayo. (Paṭṭhāna.)*

= The succeeding mind and mental concomitants benefit for arising of preceding corporealities by efficiency of relation of post compatibility. (*pacchājāta paccaya*).

According to this preaching of the Buddha in Conditional Relations (*Paṭṭhāna*), all preceding corporealities produced by *kamma*, mind, temperature, nutriment called *atusamuṭṭhāna rūpa* are called the *dhamma* supported by mind (*citta paccaya*).

This kind of conditional relation occurs between the resultant *dhamma*, i.e., the corporealities which arises previously and during its static phase and the causal *dhammas*, mind and mental concomitants, which arise later, before perishing away of the resultant corporealities. Duration of static phase of corporeality is longer than mind and mental concomitants and it lasts (49) three-time-phases of mind during which the mind and mental concomitants arise and benefit for maintenance of corporealities before they perish away. That kind of benefit of mind and mental concomitants is called *pacchājāta paccaya*. The resultant *dhamma* consist of all kind of *catusamuṭṭhāna rūpa* (corporealities produced by *kamma*, mind, temperature, nutriment). Among these corporealities, *cittaja rūpa* are also included. These *cittaja rūpa* are not produced by mind which is a causal relation as *pacchājāta*, but produced by previous mind and it is still reaching in static phase. Thus the causal relation called *pacchājāta*, means the *dhamma* which is benefittable for (*Ekajakāya*, *dvijakāya*, *Tijakāya*) *Catujakāya* which have been arisen previously by efficiency of relation of post-compatibility. Those *dhammas* includes (85) kinds of consciousnesses in *pañcāvokāra bhūmi* and (52) kinds of mental concomitants which arise succeeding after arising of the resultant corporeal *dhammas*.

PAGE-670

Ekajakāya means *kammaja rūpa* which arises simultaneously with the arising phase of *paṭisandhi* consciousness; and these are supported by efficiency of relation of post-compatibility of mental aggregates of the first life-continuum.

Dvijakāya means two kinds of corporealities, i.e., *kammaja rūpa* and *utujarūpa* which arise simultaneously with static phase of the *paṭisandhi*-consciousness; and these are supported by efficiency of relation of post-compatibility of mental aggregates of the first life-continuum.

Tijakāya means three kinds of corporealities, i.e., *kammaja rūpa*, *utujarūpa* and *cittaja rūpa* which is produced by the consciousness of the first-life-continuum; these are supported by efficiency of relation of post-compatibility of mental aggregates of the second life-continuum.

Catujakāya means four kinds of corporealities, i.e., *kammajarūpa*, *cittajarūpa*, *utuja rūpa* and *āhārajarūpa* which arise in such time of newly existence; and these all *catujakāya* are supported by efficiency of relation of post-compatibility of succeeding mental aggregates.

In the commentary, *Visuddhi magga*, (Vs-2-249) it is explained that *kamma samuṭṭhāna dhamma* is also called *kammapaccaya dhamma*, but not explained the fact that *cittasamuṭṭhāna dhamma* can be called *cittapaccaya dhamma*. It explained *cittapaccaya dhamma* by means of *pacchājāta* only. The resultant *dhamma* are explained by means of *catusamuṭṭhāna rūpa*. It is a question that “why is it explained in order to show what significant factor?” The answer is as follows.

The succeeding mind and mental concomitants benefit only *cittaja rūpa* which are produced by preceding mind and mental concomitants but not *cittaja rūpa* which are produced by itself. In order to show efficiency of succeeding mind and mental concomitants by means of efficiency of relation of post-compatibility (*pacchājāta sattī*) like this, the commentary explained difference between *citta samuṭṭhāna* and *citta paccaya dhamma*.

If it is suggested the fact that *citta samuṭṭhāna dhamma* and *citta paccaya dhamma* are the same as in *kamma samuṭṭhāna dhamma* and *kamma paccaya dhamma*, the mind will support by means of *pacchājāta sattī* for both.

1. *citta samuṭṭhāna rūpa* (= *cittaja rūpa*) produced by that mind and
2. *vedanā, saññā, sankhāra* which arise simultaneously with that mind.

If should be recognized *citta paccaya dhamma* should be explained separately by means of *pacchājāta*, in order to differentiate *cittasamuṭṭhāna dhamma* and *citta paccaya dhamma* respectively. (*Mahāṭṭi-2-402-403*)

PAGE-671

4.48.4 *Cittapaccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by mind

Pāli Quotation (Vs-2-250, 251)

The nutriment (*ojā*) consisting in the corporeal unit produced by mind, while it is still reaching to static phase, is capable of producing new corporeal unit with nutriment as (8)th factor so called *ojaṭṭhamaka rūpa*. Thus two to three successive generations of corporeal units are brought forth connection continuously. This kind of *ojaṭṭhamaka rūpa* is called *cittapaccaya āhārasamuṭṭhāna* (= the corporeality produced by nutriment which is supported by mind.).

4.48.5 *Cittapaccaya utusamuṭṭhāna* = the corporeality produced by temperature which is supported by mind.

Pāli Quotation (Vs-2-251)

The fire-element (= temperature) consisting in the corporeal unit produced by mind, while it is still reaching to static phase, is capable of producing new corporeal unit with nutriment as 8th factor, so called *ojaṭṭhamaka rūpa*. Thus two to three successive generations of corporeal units are brought forth connection continuously. This kind of *ojaṭṭhamaka rūpa* is called *cittapaccaya utusamuṭṭhāna* (= the corporeality produced by temperature which is supported by mind). (*Vs-2-251*)

Efficiency of temperature, nutriment and efficiency of mind

Pāli – Quotation (Mahāṭṭi-2-403)

Due to presence of greater efficiency of temperature and nutriment, consisting in corporeal unit produced by *kamma* (*kamma samuṭṭhāna rūpa*), than that of temperature and nutriment, consisting in corporeal unit produced by mind (*citta samuṭṭhāna rūpa*), the commentator explained that four to five successive new generations of corporeal units arise continuously; it can be compared with two to three successive new generations of corporeal units can arise in the later kind (*citta samuṭṭhāna rūpa*). Actually it is explained for *citta*

samuṭṭhāna rūpa by means of normal consciousness of sensuous world only (*kāmā vacara citta*). However, many successive new generations of corporeal units can be arisen by *cittasamuṭṭhāna rūpa* which are produced by *mahaggata* (lofty) and *lokuttara citta* (consciousness of *jhānic* state and supra-mundane). It can be accepted this fact because *cittaja rūpa* produced by *mahaggata citta* and *lokuttara citta* are great superior kinds, indeed. (*Mahāṭṭ-2-403*)

PAGE-672

In previous section, explanation on light, it is detailed explained about nature of light produced by minds of *samatha* practice and mind of *vipassanā* practice. The light produced by *vipassanā* practice is caused by bright colour of corporeal units produced by mind and bright colour of corporeal units produced by temperature which is supported by mind, internally. The shining light externally is caused by bright colour of corporeal units spreading out external to the body successively, which are striking each other continuously. Therefore it should be accepted these facts that both many generations of corporeal units can be brought forth by *cittasamuṭṭhāna rūpa* during *vipassanā* practice and many generations of corporeal units can be brought forth not only internally but also externally by *utujarūpa* which is produced by temperature (= fire-element) consisting in *citta samuṭṭhāna kalāpa*. (*Mahāṭṭ-2-428, 429*)

* *Evam cittaja rūpassa nibbatti passitabbā, (Vs-2-251).*

Thus the arising nature of *cittaja rūpa* must be discerned in order to see penetratively. (*Vs-2-251*). According to this explanation, every *meditator* who wants to attain *nibbāna* should be recognized to discern the arising nature of *cittaja rūpa* by penetrative knowledge.

4.49 The nature of arising of *āhārajaūpa* (corporeality produced by nutriment)

It should be known (5) modes of the nature of arising of corporeality produced by nutriment as follows.

1. *āhāra* = nutriment
2. *āhārasamuṭṭhāna* = the corporeality produced by nutriment
3. *āhāra paccaya* = the corporeality supported by nutriment
4. *āhārapaccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by nutriment
5. *āhārapaccaya utusamuṭṭhāna* = the corporeality produced by temperature which is supported by nutriment

4.49.1 *Āhāra* = nutriment

Pāli Quotation (Visuddhi-2-251) (Abhi-A-3-377) (Mahāṭṭ-1-455)

PAGE-673

Kabaḷīkāra āhāra (= the nutriment which is not really mouthed as much as mouthful food but assumed like this) is the nutriment (*āhāra*).

Kabḷīkāra āhāra means (4) types of nutriments, i.e.,

1. *kammaja ojā* = the nutriment consisting in the corporeal unit produced by *kamma*;

2. *cittaja ojā* = the nutriment consisting in the corporeal unit produced by mind;
3. *utuja ojā* = the nutriment consisting in the corporeal unit produced by temperature;
4. *āhāraja ojā* = the nutriment consisting in the corporeal unit produced by nutriment.

Although those (4) kinds of nutriments consisting in *catusantatisamuṭṭhāna rūpa* (=continuity of corporealities produced by (4) origins) are called *āhāra*, it is able to carry out its function after ingestion as mouthful part, but not able to carry out its function as put in bowl, dish, etc.

The function of nutriment (to produce new *āhāraja rūpa*) can be accomplished only after it is ingested and due to this reason, the Buddha preached combination with *kabaḷīkāra* as a prefix of *āhāra*. (*Abhi-A-3-377*).

Pāli Quotation (*Mūlaṭṭi-3-190*) (*Anuṭṭi-3-258*).

The meaning of the phrase “it is able to carry out its function after it is ingested as mouthful part”, is as follows. The ingestible nutriment is only corporeality produced by temperature, while it is being put in the bowl, dish, etc ... These are a group of corporeal units produced by temperature. Every corporeal unit consists of nutriment called *utuja ojā* which is impossible to be ingested singly because those corporealities, i.e., (8) factors in every corporeal unit, are inseparable corporealities (*avinibbhoga rūpa*). Thus the function of nutriment can be carried out after it is ingested bulk of corporealities as ingestible food and drink.

PAGE-674

It is right. ____ Such juice which is deserving to drink, such powder which is deserving to lap, are also included in terms of mouthful part. It should be recognized the fact that “only after it is ingested mouthful part of any food or drink, can the function of nutriment be carried out generally. (*Mūlaṭṭi-3-190*, *Anuṭṭi-3-258*).

In other words, *Kabaḷīkāra* is called *catusamuṭṭhānika ojā*, due to presence of situation of the latter in food which is deserving to ingest as mouthful part. (*Abhi-A-3-377*).

According to explanation found in *Abhi-A-3-377*, the word “*ijjoharitabbavatthuka*” means *catusamuṭṭhānika ojā* which is consisting in every corporeal unit produced by four origins, i.e., *kamma*, mind, temperature, nutriment; which is situated in ingestible food and drink. The term, *catusamuṭṭhānika ojā* can be known as *Kabaḷīkāra* because the name of dweller can be called similarly on that of situation by means of metaphor called *ṭhānūpacāra*.

a. *Ijjoharitabba vatthuka*

The meaning of *ijjoharitabbavatthuka* (= *catusamuṭṭhānika ojā* which is situated in ingestible food and drink) is as follows.

Pāli Quotation (*Vs-2-223*)

According to above explanation of *Visuddhimagga*, the ingested food of beings is only *utuja ojaṭṭhamaka rūpa* (= corporeality produced by temperature). It is only *utuja rūpa* whatever condition it might be, either in the bowl or dish, or in the stomach before digestion take place or before physiological processes of absorption and assimilation take place. It

should be discerned on newly ingested food as four great elements. It can be seen a group of corporeal units for sharp wisdom *meditator* in this stage. The fire-element within a corporeal units, when it is reaching to static phase, is able to produce new corporeal units successively.

Those mass of corporeal units produced by temperature, called *kabaḷṭkāra āhāra*, is ingested and reached into pharynx, stomach, intestine etc. Before physiological processes of absorption and assimilation take place, it is only *utuja rūpa*. When it is supported by the fire-element consisting in the vital nonad (*jīvitānavaka kalāpa*) situating around stomach and intestine, it becomes new corporeal units called *Ojaṭṭhamaka Kalāpa* (pure octads with nutriment as 8th factor).

It is made up of nutriment consisting in *Kabaḷṭkāra āhāra* with the help of fire-element of vital nonad and then it is called *Āhāraja ojaṭṭhamaka rūpa*. Those corporealities are spreading throughout body called (6) doors, i.e, eye, ear, nose, tongue, body and heart as a base of mind-door.

When the nutriments consisting in those corporeal units called *āhāraja ojaṭṭhamaka* supports the nutriments consisting in ...

1. every corporeal units produced by *kamma*,
2. every corporeal units produced by mind,
3. every corporeal units produced by temperature,
4. every corporeal units produced by nutrient

which exist in preceding *āhārajarūpakalāpa*, the supported nutriments are able to produce new generation of corporeal units called *ojaṭṭhamaka kalāpa* with nutriment as 8th factor. Thus the function of nutriment of *catusamuṭṭhānika* depends on nutriment consisting in *kabaḷṭkāra āhāra*, in order to achieve it's function. The commentator Sayadaw, therefore, explained as follows.

Pāli Quotation (Abhi-A-3-377)

= *Kabaḷṭkāra* is called *catusamuṭṭhānika ojā*, due to presence of situation of the latter in food which is deserving to ingest as mouthful part. (*Abhi-A-3-377*).

Pāli Quotation (Vs-2-251)

= The nutriment of one-day ingested food can support maintenance of the body throughout (7) days. (*Vs-2-251*)

When the nutriment of preceding corporeal units produced by nutriment get supporting factor of the nutriment of succeeding corporeal units produced by nutriment, the former are able to produce new corporeal units called *āhāraja ojaṭṭhamaka*. It should, therefore, be recognized that “*āhāraja ojaṭṭhamaka* is not only primary cause (*janaka paccaya*) but also secondary cause (*upatthambhaka paccaya*) of the arising of new *āhāraja rūpa*”. However it should not be misunderstood the fact that one nutriment within one corporeal unit is both primary and secondary cause. It means that the nutriment of preceding one is the primary cause, while that of succeeding one the secondary cause, indeed.

PAGE-676

According to above explanations, because intrinsic factor of nutriment is able to produce *āhārajarūpa* but extrinsic factor of nutriment which is situating in bowl, dish etc., is unable to produce *āhārajarūpa*, *Mahāṭṭhikā Sayadaw* explained on *āhāra* as follows.

* *Āhāroti ijjattiko rūpuppādaka āhāro. (Mahāṭṭ-1-455)*

= Four kinds of nutriment consisting in corporeal units produced by four origins (*catusamuṭṭhānika oja*) of internal continuum of corporeality, which are able to produce *āhārarūpa* is called *āhāra* (nutriment). (*Mahāṭṭ-1-455*).

The Knowledge of Omniscience of the Buddha, which is able to instruct to arise very profound knowledge of disciples, is very wonderful, very delightful, and it is deserving to worship exceedingly. Similarly, both commentators and sub-commentators are also deserving to acknowledge exceedingly.

b. General notes

Pāli Quotation (Abhidhammattha sangaha)

Although food and drink which are deserving to ingest are called nutriment only the nutriment consisting in corporeal unit called *utuja ojaṭṭhamaka* must be inferred as nutriment (*āhāraja rūpa*). In order to know this point Venerable *Anuruddha* explained that *ajāsankhāto āhāro* (*āhāra* called nutriment) which is similar to explanation found in *Mūla paṇṇāsa aṭṭhakathā*.

Pāli Quotation (M-A-1-211)

Then the function of nutriment and it's procedure to produce *āhāraja rūpa*, are explained in commentaries as follows.

Pāli Quotation (Vs-2-251) (M-A-1-213)

Venerable *Anuruddha* explained generally in accordance with common commentaries that “*ijjoharaṇakāle samuṭṭhāpeti*” = *Āhāra* called nutriment, while it is still reaching to the static phase, produce *āhāra samuṭṭhāna rūpa* after it is ingested”.

PAGE-677

Indeed, according to explanations found in above commentaries, before it is ingested, just reaching on the tongue, nutriment with *ojaṭṭhamaka kalpa* of some foods spread inside the body. The better the quality of nourishment the higher rate of spreading of nutriment and *ojaṭṭhamaka rūpa*. The low grade nourishment, however, after it is ground by teeth and ingested, is able to spread out it's nutriment and *ojaṭṭhamaka rūpa*. Wherever it spreads inside body, it gets supporting factor of fire-element of vital nonads which are spreading out the whole body. Thus it should be recognized that *ojaṭṭhamaka rūpa* called digested food spreads throughout body from the tongue at which vital nonads are present and those are able to support the function of nutriment. After it is ingested and reached into the stomach, *utuja kalāpa* are digested by the help of fire-element of vital nonads and digested nutriment spread out the whole body through blood vessels called *rasaharaṇī*. The nutriment consisting in *ojaṭṭhamaka kalāpa* is able to produce new *ojaṭṭhamaka rūpa* in everywhere it spread by the help of the fire-element of vital nonads.

Therefore, neither ingestion nor non-ingestion is significant but spreading out of corporeal units called *ojaṭṭhamaka* is main factor. For instance, when *Isiṇṇa*, a virtuous hermit, had unconscious about three years, *āhārajarūpa* arose continuously in him, due to insertion of nutriment made by heavenly being through the pits of bodily hairs.

Recent days, patients who are not able to take food normally, are survival, due to insertion of nutriment through either vessel or nasal feeding and *āhāraja ojaṭṭhamaka rūpa* can be brought forth in them.

A foetus in the womb is able to produce *āhāraja ojaṭṭhamaka rūpa*, due to supporting of nourishment through umbilical cord. Some kinds of nutriment which are rubbing on the skin, are absorbed through skin and able to produce *āhāraja ojaṭṭhamaka rūpa*.

Nutriment of one-day ingested food can support about (7) days for man while about one to two months for heavenly beings, due to successive production of *āhāraja rūpa* generation by generation. (*Vs-2-251, M-A-1-213*)

It is explained that “*ṭhānapattova samuṭṭhāpeti*.” (= the nutriment, only when it is reaching to static phase, produces *āhāraja rūpa*), due to nature of corporeality which becomes strong at the moment of static phase. Although it seems to be original water in the cup, preceding corporeal units produced by temperature always perishing away and succeeding corporeal units of the same kind are produced and they replace previous ones successively. Similarly preceding nutriment which are spreading throughout body always perish away and succeeding nutriment are also newly formed continuously indeed. In other words, in the aspect of ultimate reality,

PAGE-678

preceding corporeal units consisting of nutriment are always perishing away and succeeding corporeal units consisting of nutriment are always substituted for previous ones continuously. During producing new generations of corporeal units, when newly produced corporeal unit reaches to static phase, if it is supported by the fire-element of vital nonads spreading throughout body, the nutriment consisting in that newly produced corporeal unit is able to produce successive generation of corporeal units again. (Detailed explanation can be found in **page 86-94, Volume IV.**)

4.49.2 *Āhāra samuṭṭhāna* = the corporeality produced by nutriment

Pāli Quotation (Vs-2-251, Mahāṭṭ-2-403)

Ojaṭṭhamaka rūpa with nutriment as 8th factor, which is produced by nutriment consisting in corporeal unit produced by *kamma*, when it reaches to static phase, it consists of (8) kinds of corporealities, i.e, earth-element, water-element, fire-element, air-element, colour, smell, taste, nutriment. Then (14) kinds of corporealities, resulting from those (8) kinds plus space-element, physical agility, physical plasticity, physical adaptability, *upacaya*, and continuity (*santati*) are called *āhārasamuṭṭhāna rūpa* (= the corporeality produced by nutriment).

According to the phrase, “*upādinnaṃ kammaja rūpaṃ paccayam labittvā*” (= due to presence of supporting factor of *kammaja rūpa* which is *upādinna*), it shows the fact that the nutriment consisting in inanimate world (*anupādinna ojā*) is unable to carry out the function of *āhāraja rūpa*. Then external nourishments are only a group of corporeal units called *utujaojaṭṭhamaka* which contains only *anupādinna ojā* (the nutriment produced by temperature). That kind of nutriment depends on the four great elements produced by *kamma* in order to produce *āhāraja rūpa*. The commentator, therefore, explained that “*tattha patiṭṭhāya*” (= through depending on the four great elements produced by *kamma*”).

In the explanation of commentary, *cittajarūpa* which are produced by consequence consciousness; which are supported by *kamma*, can also be called *kammaja rūpa* by mean of indirect way. Therefore, in order to exclude *kamma-paccaya cittasamuṭṭhāna rūpa*, the commentator explained by adding adjective “*upādinna*” for the word “*kammaja rūpa*”, resulting in the phrase, “if it is supported by *upādinna kammajarūpa*”, etc... (*Mahāṭṭ-2-403*)

The meaning of explanations found in commentary and subcommentary are as follows.

The nourishment ingested by beings is only *utujaojāṭṭhamaka rūpa* produced by temperature. Although the fire-element consisting in corporeal unit produced by temperature is able to produce new generations of corporeal units successively, the nutriment consisting in those corporeal units is unable to produce new generation of corporeal units called *āhārajarūpa* in the absence of supporting factor of the fire-element of vital nonads. When those beings ingest group of corporeal units called *utujarūpa*, the latter reach into stomach, intestine, etc. Before spreading throughout body, these corporeal units are still *utujarūpa* in which containing nutriment is called *utujaojā*. There are vital nonads produced by *kamma* in the stomach. Every vital nonad consists of four great elements which are *upādinna-kammaja rūpa*, due to occurrence of previous cause called *kamma*. The fire-element consisting in the vital nonad plays fundamental important role in digestion of food and arising of *āhāraja rūpa*. That fire-element is known as *udaraggi* (= digestive fire) and it is impossible to arise without remaining three great elements. It means that if it gets supporting factor of *upādinna kammaja rūpa*, depending on the four great elements produced by *kamma*, internal *utujaojā* can bring forth new generations of corporeal units called *āhārajojāṭṭhamaka kalāpa*.

4.49.3 *Āhārapaccaya* = the corporeality supported by nutriment

Pāli Quotation (Vs-2-251) (Mahāṭṭ-2-403)

“Each nutriment produced by four origins respectively, (*catusamuṭṭhānika ojā*), which is called *kabaḷṭkāra āhāra*, benefits the whole body (= all kinds of corporealities) by *āhārapaccaya*”, preached by the Buddha in *Paṭṭhāna*. All kinds of corporealities produced by four origins called *kamma*, mind, temperature and nutriment (*catusamuṭṭhānika rūpa*), therefore, are called *āhārapaccaya rūpa*. (*Vs-2-251*)

The commentator explained that “*catusamuṭṭhānika rūpa* are called *āhārapaccaya rūpa*”, in order to show “physical nutriment” not only supports *catusamuṭṭhānika rūpa* but also produces them, really” (*Mahāṭṭ-2-403*)

4.49.4 *Āhārapaccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by nutriment

Pāli-Quotation (Vs-2-251)

Kabaḷṭkāra āhāra is only a group of corporeal units produced by temperature. The nutriments produced by temperature (*utujaojā*), consisting in those corporeal units, produce new corporeal units when it gets supporting factor of the fire-element of vital nonad. The resultant new corporeal units are called *āhārasamuṭṭhāna rūpa*, due to occurrence of nutriment as previous cause. The nutriment consisting in those new corporeal units, when it gets supporting factor of nutriment of succeeding *āhārasamuṭṭhāna rūpa*, produces successive generation of new corporeal units again. Thus (10) to (12) new generations of corporeal units arise successively and this kind of *ojjaṭṭhamaka rūpa* is called *āhārapaccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by nutriment.

There is a question that why do (10) to (12) new generations of corporeal units called *āhārapaccaya āhārasamuṭṭhāna rūpa* arise successively? The answer is that _____. The nourishment which is to be ingested for one day is capable of supporting to produce new generations of corporeal units of *ojjaṭṭhamaka rūpa* for throughout (7) days.

The nutriment found in heavenly world is able to support *catusamuṭṭhānika oḷā* for one or two months in order to produce new generations of corporeal units successively. In human world, the food ingested by mother spreads out the foetus through placental cord and it produces new generations of *ojaṭṭhamaka rūpa*. The nourishment rubbed on the skin is also absorbed and it can produce *ojaṭṭhamaka rūpa* inside the body. These are examples of how *anupādinna āhāra* supports *catusamuṭṭhānika oḷā* to produce *ojaṭṭhamaka rūpa*.

The nutriment consisting in every corporeal unit produced by *kamma* is called *kammaja āhāra* or *upādiṇṇaka āhāra*. That *upādiṇṇaka āhāra*, when it reaches to static phase, produces new *ojaṭṭhamaka rūpa*. (if it is supported by nutriment consisting in *āhārasamuṭṭhāna rūpa*). The nutriment consisting in that *ojaṭṭhāna rūpa*, (if it is supported by nutriment consisting in *āhārasamuṭṭhāna rūpa*), when it reaches to static phase, produces new *ojaṭṭhamaka rūpa*. Thus the continuities of (4) to (5) new generations of corporeal units are brought forth connection of new generations of corporeal units successively. It is similar to *kammappaccaya āhārasamuṭṭhāna rūpa* (see 4.47.5).

One point to be observed

Pāli Quotation (Paṭṭhāna-1-7) (Abhi-A-3-378)

Mūlaṭṭhā Sayadaw had remark on one point to be observed in this case.

Although the Buddha preached generally in *paṭṭhāna*, that the nutriment called *kabaḷīkāra āhāra*, which situating in the continuum of *catusamsatisamuṭṭhāna rūpa*, benefits this body by efficiency of relation of nutriment (*āhāra paccaya*), especially, *kabaḷīkāra āhāra* benefits *āhārasamuṭṭhāna rūpa* by means of both direct cause (*janaka āhāra paccaya*) and indirect cause (*upatthambaka āhāra paccaya*) while the remaining three kinds of continuums of corporealities produced by *kamma*, mind and temperature, only by means of indirect cause (supporting cause or *upatthambaka āhāra paccaya*), explained in commentary. (Abhi-A-3-378).

PAGE-682

In this case, *Mūlaṭṭhā Sayadaw* and *Anuṭṭhā Sayadaw* explained as follows.

Pāli Quotation (Mūlaṭṭhā-3-190) (Anuṭṭhā-3-258)

It is previously explained in above that the nutriment consisting in every corporeal unit produced by any kind of *kamma*, mind, temperature, nutriment, is called *kabaḷīkāra āhāra*. It should be accepted the commentator's explanation that *kabaḷīkāra āhāra* benefits continuum of corporeality produced by mind. The reason is as follows.

The *Buddha* never preached *upatthambaka āhāra paccaya* of any one of

1. nutriment called *kabaḷīkāra āhāra* consisting in corporeal unit produced by mind (*cittasamuṭṭhāna rūpa* = CSR),
2. nutriments called *kabaḷīkāra āhāra* consisting in corporeal units produced by *kamma*, temperature and nutriment (*nocittasamuṭṭhāna rūpa* = NCSR),
3. nutriment called *kabaḷīkāra āhāra* consisting in corporeal units produced by both mind (CSR) and remaining three causes (NCSR), benefit *cittasamuṭṭhāna rūpa* by means of indirect cause (supporting cause or *upatthambaka āhāra paccaya*, in sections of *Cittasamuṭṭhāna duka*, *Pañhavāra*, *Paccayānuloma Vibhanga vāra*.

If it benefits *cittasamuṭṭhāna rūpa* by means of indirect cause, the Buddha will preach that

PAGE-683

“*cittasamuṭṭhāno kabaḷīkāro āhāro cittasamuṭṭhānassa kāyassa āhāra paccayena paccayo*”. = the nutriment called *kabaḷīkāra āhāra* consisting in corporeal unit produced by mind benefits corporeality produced by mind through efficiency of relation of nutriment (*āhāra paccaya*)”. But the *Buddha* never preached like this.

The reasonable fact is that the *Buddha* preached that those nutriments called *kabaḷīkāra āhāra* consisting in corporeal units of both *cittasamuṭṭhāna* and *nocittasamuṭṭhāna*, mentioned above, benefit

nocittasamuṭṭhāna rūpa, i.e, corporealities produced by *kamma*, temperature and nutriment, by means of indirect cause (supporting cause or *uppatthambaka āhāra paccaya*). Therefore it means one should accept commentator's explanation after scrutinizing and reasoning on it.

According to explanations found in above sub-commentaries, it should be recognized the fact that the nutriment consisting in corporeal units produced by mind is unable to benefit nutriment of other corporeal units produced by mind by means of *āhāra paccaya*. Similarly, each nutriment consisting in various corporeal units produced by *kamma*, temperature, nutriment respectively is also unable to benefit nutriment of corporeal unit produced by mind respectively.

However the nutriment consisting in corporeal unit produced by mind is able to benefit the nutriment consisting in those corporeal units produced by *kamma*, temperature, nutriment by means of indirect factor of efficiency of relation of nutriment (*upatthambaka āhāra paccaya*). The nutriments consisting in corporeal units produced by *kamma*, temperature, nutriment are able to benefit nutriments of other corporeal units produced by *kamma*, temperature, nutriment respectively. These facts should be recognized well.

4.49.5 *Āhāra paccaya utusamuṭṭhāna* = the corporeality produced by temperature, which is supported by nutriment

Pāli Quotation (Vs-2-251, Mahāṭṭi-2-403)

Every corporeal unit produced by nutriment consists of the fire-element which is called *āhārasamuṭṭhāna tejo dhātu*. That fire-element consisting in corporeal unit produced by nutriment, when it is reaching to the static phase, produce new corporeal unit called *utusamuṭṭhāna ojaṭṭhamaka rūpa*. This kind of *ojaṭṭhamaka rūpa* (pure octad with nutriment as 8th factor) is called *āhārapaccaya utusamuṭṭhāna rūpa* (= the corporeality produced by temperature which is supported by nutriment). (*Vs-2-251*)

PAGE-684

It should be recognized that “the corporeality produced by temperature which is supported by nutriment”, similar to “the corporeality produced by nutriment which is supported by temperature”, is able to produce (10) to (12) new generations of corporeal units successively. Noble teachers said that further explanation is not essential, due to finished to explain it. (*Mahāṭṭi-2-403*)

Pāli-Quotation (Vs-2-251, Mahāṭṭi-2-403, 404)

In the section of occurrence of *āhāraja rūpa*, it had been explained that the ingested *kabaḷīkāra āhāra* or the nutriment consisting corporeal unit produced by temperature, if it gets supporting factor of the fire-element of vital nonad, produces new corporeal unit called *ojaṭṭhamaka rūpa kalāpa* (pure octad with nutriment as 8th factor). Those newly produced *ojaṭṭhamaka rūpa* are called *āhāra samuṭṭhāna rūpa* because of dependence on nutriment (*kabaḷīkāra āhāra*). Therefore the nutriment called *kabaḷīkāra āhāra* benefits *āhārasamuṭṭhāna rūpa* by means of direct cause (*janaka paccaya*). It is able to benefit the remaining corporealities produced by three origins, i.e, *kamma*, mind, temperature, by means of *nissaya*, *āhāra*, *atthi*, *avigata*, so called *uppatthambaka* cause (indirect cause). Thus one should discern the nature of arising of *āhāraja rūpa*. (*Vs-2-251*)

The nutriment called *kabaḷīkāra āhāra* benefits *āhāra samuṭṭhāna rūpa* by means of *janaka* cause (direct cause). The nutriment consisting in corporeal units produced by nutriment benefits both

1. nutriment consisting in other corporeal units produced by nutriment,
2. *kammasamuṭṭhāna rūpa* (= *kammaja ojā*)
3. *cittasamuṭṭhāna rūpa* (= *cittaja ojā*) and
4. *utujasamuṭṭhāna rūpa* (= *utuja ojā*) by means of efficiency of relations of *nissaya* (dependence), *atthi* (presence), *avigata* (non-disappearance), so-called *upatthambaka* cause (indirect cause).

PAGE-685

Nissaya = dependence factor

1. Four mental aggregates benefit mutually each other,

2. Four great elements benefit mutually each other,
3. While *paṭisandhi* consciousness is arising mentality and corporeality benefit mutually each other,
4. Mind and mental concomitants benefit *cittajarūpa*
5. Four great elements benefit derived corporealities (*upādārūpa*) by means of *nissaya paccaya* (efficiency of relation of dependence). (*Paṭṭhanā -1-5*)

In that case, the nutriment, a kind of derived corporeality, is unable to benefit four great elements and remaining derived corporealities by means of dependence factor. Therefore, *Mahāṭṭkā Sayadaw* explained that “*nissaya bhāvo pana paṭṭhāna nayena natthi*”. = there is no efficiency of relation of dependence in the preaching methodology of *Paṭṭhāna*. However, it should be recognized the fact that the commentator Sayadaw explained, by means of *suttanta* method (= indirect way), the fact, “the corporealities produced by nutriment can be called the corporealities which has got efficiency of relation of dependence of nutriment”. It should be recognized on the explanation of relation of dependence of temperature similarly.

Atthi (presence) _____

The ability to benefit, by the time, the causal *āhārasamuṭṭhāna oja* and the resultant *kammaja ojā*, *cittajaojā*, *utujaojā*, *āhāraoja*, so called *catusamuṭṭhānika ojā* are still present simultaneously, is called the relation of presence (*atthi paccaya*).

Avigata (non-disappearance)

The mutual ability to benefit, before both the causal *dhammas* and resultant *dhammas* have not ceased yet, is called relation of non-disappearance *avigata paccaya*. Thus, it should be recognized the fact that the nutriment is able to benefit by means of relations of *atthi*, *avigata*, only when both causal *dhammas* and resultant *dhammas* are still present according to *Paṭṭhāna* method while it is able to benefit by means of relation of dependence (*nissaya*) according to *Suttanta* method. (*Mahāṭṭ-2-403, 404*)

Any *meditators* who wants to attain *nibbāna* should discern penetratively on the nature of arising of *āhāraja rūpa* by insight knowledge. (*Vs-2-251*)

4.50 The nature of *utujarūpa* (corporeality produced by temperature)

It should be known (5) modes of the nature of arising of corporeality produced by temperature as follows.

1. *utu* = temperature
2. *utusamuṭṭhāna* = the corporeality produced by temperature
3. *utu paccaya* = the corporeality supported by temperature
4. *utupaccaya utusamuṭṭhāna* = the corporeality produced by temperature which is supported by temperature
5. *utupaccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by temperature.

PAGE-686

4.50.1 *Utu* = temperature

Pāli-Quotation (*Vs-2-251*)

The fire-element consisting in every corporeal unit produced by four origins, i.e, *Kamma*, mind, temperature, nutriment, is called *utu* (= temperature). There are two kinds of *utu*, i.e, *uṇṇha utu* (= heat) and *sīta utu* (= cold). (*Vs-2-251*)

The commentator explained that the fire-element consisting in every corporeal unit produced by four origins, is called *utu*, due to ability of the fire-element to produce *utujarūpa*. It is divided into two kinds depending on its potency, i.e.,

1. high potential fire-element as *uṇṇautu* (= heat) and
2. low potential fire-element as *sītautu*. (*Mahāṭṭ-2-404*).

In *Mahāṭṭkā*, volume 2 page 108, 109, it is also explained as follows.

Three kinds of elements, the earth-element, the fire-element and the air-element, are called tactile objects (*phuṭṭhabbārammaṇa*). Why doesn't the water-element belongs to this tactile objects? Is it true that the nature of cold can be touched? Isn't true that nature of cold as the water-element?

If any one complains like this, it is true that the nature of cold can be touched.

However, that nature of cold is not the water-element. It is actually, only the nature of the fire element.

It is right. When the nature of the fire-element become low potential, perceiving on the nature of cold become apparent. The nature of cold is not potentiality of any kind of other elements but the fire-element only.

If it is a question that how the meaning of perceiving on the nature of cold become apparent while the nature of the fire-element become low potential, can be understood well? It should be understood similar perceiving on this bank of river and that bank of river alternatively, due to presence of inconstant nature of it.

Let us suppose that a river flows from north to south and there are two banks along with each side, east bank and west bank. For a person who stands, east bank recognized east bank as ‘this bank’, while west bank, ‘that bank’. On the otherhand, in the aspect of a person who stands west bank recognized ‘west bank’ as ‘this bank’, while ‘east bank’ as that bank alternatively. Those the term ‘this bank’ and ‘that bank’ are not constant but varied depending on various situations of persons. Similarly, the term of nature of heat and cold are also not constant usages.

PAGE-687

For, instance in summer, a person who stands under very hot sunshine enters under shade of tree and perceives the nature of cold. However a person who comes out of air-conditioned room perceives the nature of heat under that shade of tree indeed. Thus the term of the nature of heat or cold is not constant usage.

It is also one reasonable point. If the nature of cold is the water-element, there will be two opposite kinds of nature, the nature of heat and cold within the same corporeal unit. It can not exist like this. It should, therefore, be known the nature of cold is not water-element.

This is the answer for those persons who accept that the nature of inseparable condition of the four great elements. However this is also the answer for those persons who do not accept that the nature of inseparable condition of the four great elements, due to perceiving the specific function of each element within the same corporeal unit.

Such teacher assumed that ‘the nature of cold is the air-element. Above mentioned explanation is also the answer for that person. For instance, if the nature of cold is the air-element, there will be two opposite kinds of nature, the nature of heat and cold within the same corporeal unit. It can not exist like this. It should, therefore, be known the nature of cold is not air-element.

PAGE-688

Then, such teachers assumed that the nature of flowing is the water-element, and the flowing nature of a liquid can be perceived by touching it. It can be complained them the fact that “this assumption is caused by great wrong conceit (*ahimāna*) because it is similar to assumption that the shape can be perceived by touching. It is right._____ The elder teachers of olden days explained as follows.

Pāli Quotation (Mahāṭṭi-2-109)

All beings always conceive that they can touch three great elements called the earth-element, the fire-element, the air-element, which arise together with the nature of flowing.

As a person who touches the four great elements impresses in the mind that the shape is touched practically, it should be known on the nature of flowing similarly. (*Mahāṭṭi-2-108,109*)

4.50.2 *Utusamuṭṭhāna* = the corporeality produced by temperature

Pāli Quotation (Vs-2251, 252, Mahāṭṭi-2-404)

The corporeality which is obsessed by means of craving and wrong view as “I, mine”, etc., which is produced by *kamma* surrounded by ignorance, craving, clinging, which had been performed in any previous life is called *upādinna-karūpa*.

After receiving the supporting factor of *upādinna-karūpa*, the fire-element consisting in each corporeal unit produced by four origins is able to produce new corporeal unit called *utuja rūpa* when it reaches to the static

phase. Sound nonad (*sadda navaka kalāpa*) which consists of basic (8) factor plus sound; the space-element; physical agility; physical plasticity; physical adaptability; *upacaya*; and *santati*, totally, these (15) kinds of corporealities are called *utusamuṭṭhāna rūpa*.

The fire-element (*utu*) is able to produce *utujarūpa* in the absence of *upādinna rūpa*. However, due to lack of ability to produce *utujarūpa* in the absence of the *upādinna rūpa* related with corporealities of controlling faculties, such as eye controlling faculty, (*cakkhundare*), ear controlling faculty (*sotindare*) etc., the commentator explained that “*upādinna kam paccyam labittavā*” = “after receiving the supporting factor of *upādinna rūpa*”. Only the fire-element consisting in pure octad produced by temperature is able to produce *utujarūpa* in the absence of *upādinna rūpa*. (*Mahāṭṭ-2-404*) (see 4.50.4. *utupaccaya utusamuṭṭhāna*)

PAGE-689

4.50.3 *Utupaccaya* = the corporeality supported by temperature

Pāli Quotation (Vs-2-252)(Mahāṭṭ-2-404)

The corporealities produced by (4) origins *kamma*, mind, temperature, nutriment, so-called *utupaccaya rūpa* are called *utupaccaya rūpa* (= the corporeality supported by temperature). *Sabhāga utu* favourable temperature and *visabhāga utu* unfavourable temperature (= one-sidedly extreme heat or cold), i.e., favourable and unfavourable temperatures are cause of arising and perishing away of *catusamuṭṭhānika rūpa* respectively. (*Vs-2-252*)

There are (15) kinds of corporealities produced by temperature and other three kinds of corporealities produced by *kamma*, mind, temperature. The favourable temperature (*sabhāga utu*) benefits for arising of those all *catusamuṭṭhāna rūpa* by supporting factor (*uppatthambhaka paccaya*). It should be known like this.

However, unfavourable temperature *visabhāga utu* can bring forth different continuity of corporeality from previous ones, similar to a phenomenon, snow falls on lotus. (It means that before snow falls the continuity of corporeality of lotus is normal but after snow had fallen on it the continuity of corporeality is altered.) Thus, the snow destroys previous continuity of corporeality of lotus through causality of arising of different continuity of corporeality.

Therefore the commentator explained that favourable and unfavourable temperatures are causes of arising and perishing away of *catusamuṭṭhānika rūpa* respectively in order to show commonly on both *sabhāga utu* and *visabhāga utu*. (*Mahāṭṭ-2-400*)

It means that favourable temperature is the cause of arising of *catusamuṭṭhānika rūpa*, while unfavourable temperature, the cause of perishing away of the latter. In this case, the word, “perishing away” refers to succeeding process of the continuity of corporealities which is different from preceding process of the continuity of corporealities.

PAGE-690

4.50.4 *Utupaccaya utu samuṭṭhāna* = the corporeality produced by temperature, which is supported by temperature

Pāli Quotation (Vs-2-252) (Mahāṭṭ-2-404)

The fire-element consisting in every corporeal unit produced by *kamma*, mind, temperature, nutriment, is called *utu* (temperature). The corporeality which is produced by that *catusamuṭṭhāna utu*, is called *utusamuṭṭhāna rūpa*. The fire-element consisting in that corporeal unit produced by temperature is called *utusamuṭṭhāna tejo*. That *utusamuṭṭhāna tejo*, when it reaches to static phase, is able to produce new corporeal unit called pure octad with nutriment as eighth factor (*ojjaṭṭhamaka kalāpa*) again. Then the fire-element consisting in that pure octad produces new pure octad again. Thus (10) to (12) generations of new pure octads arise successively as a group of *anupādinna rūpa*.

Further Explanation

In the first becoming process of human life, (30) kinds of corporealities, i.e., body-decad, sex-decad, and base-decad, arise simultaneously and are produced by previous *kamma* and those are called *kamma samuṭṭhāna rūpa*.

PAGE-691

1. The fire-element consisting in those *kamma samuṭṭhāna rūpa*, when it reaches to static phase, produces new pure octad (*ojjaṭṭhamaka rūpa*) which is called *kamma paccaya utusamuṭṭhāna rūpa* (= the corporeality produced by temperature which is supported by *kamma*). (*Vs-2-250*)
In order to produce new pure octad by temperature, it is essential to attain supporting factors of both *kammaja tejo* and remaining *kammaja rūpa*. If supporting factor this kind is absent, it is unable to produce new pure octad by temperature. Due to this reason, the commentator explained that “*upādiṇṇakam paccayam labittvā*” (= only when it gets supporting factor of *upādiṇṇaka rūpa*).
2. Those *kammaja rūpa* include *hadaya vatthu* (physical base of mind). Only when dependence factor of physical base of mind is available, can *manodhātu*, such as first *bhavanga* (life-continuum) and *manoviññāṇadhātu* arise. In the realm of five group existence (*pañcavokāra*), if dependence factor of physical base of mind called heart-base is absent, *manodhātu* and *manoviññāṇadhātu* can not arise. Thus, only when supporting factor of *kammaja rūpa* including heart-base (*hadaya vatthu*) is available, can the first *bhanvanga* produce *cittaja rūpa* called pure-octad produced by mind (*cittajaojjaṭṭhamaka rūpa*). Those pure-octad produced by mind consists of the fire-element (*tejo-dhātu*) which is able to produce new pure-octad when it reaches to static phase. This kind of pure-octad is called *cittapaccaya utusamuṭṭhāna rūpa*. The arising of *cittapaccaya utusamuṭṭhāna rūpa* is related to presence of dependence factor of *kammaja rūpa* including physical base of mind called heart-base depending on which mind arises. Thus supporting factor of *kammaja rūpa* is really, essential to produce new pure-octad by *cittasamuṭṭhāna tejo*.
3. The fire-element consisting in corporeal units produced by nutriment also produces pure octad when it reaches to static phase. This kind of corporeality is called *āhārapaccaya utu samuṭṭhāna rūpa* (= the corporeality produced by temperature, which is supported by nutriment). It is impossible to arise *āhāra samuṭṭhāna rūpa* without supporting factor of *kammaja rūpa*. Only when supporting factor of the fire-element consisting in vital nonad, the nutriment consisting in ingested pure octad called *kabalīkāra āhāra* can produce *āhārasamuṭṭhāna rūpa* (corporeality produced by nutriment). Consequently, only when *āhāra samuṭṭhāna rūpa* arises, the fire-element consisting in those pure octad produced by nutriment is able to produce new pure octad. Thus it is essential to attain supporting factor of *kammaja rūpa* for production of pure-octad called *utu samuṭṭhāna rūpa*, which is supported by nutriment (*āhāra paccaya utu samuṭṭhāna rūpa*).

PAGE-692

4. The fire-elements consisting in three kinds of *utusamuṭṭhāna rūpa*, i.e., (*kamma paccaya*) *utusamuṭṭhāna*, (*cittapaccaya*) *utusamuṭṭhāna*, (*āhārapaccaya*) *utusamuṭṭhāna*, are able to produce new pure octads, when those reach to static phase. These are called *utusamuṭṭhāna rūpa* which are also interconnected with the supporting factor of *kammaja rūpa*. As *kammaja rūpa*, *cittaja rūpa*, *āhāraja rūpa* are impossible to arise without supporting factor of *kammaja rūpa*, these *kammajatejo*, *cittajatejo*, *āhārajatejo* are also impossible to produce new pure octads without supporting factor of *kammaja rūpa*. Thus the arising of *utusamuṭṭhāna rūpa* depends on supporting factor of *kammaja rūpa*.

Pure octads which are produced by the fire-elements consisting in

1. (*kamma paccaya*) *utusamuṭṭhāna*
2. (*cittapaccaya*) *utusamuṭṭhāna*
3. (*āhārapaccaya*) *utusamuṭṭhāna*

are called *utusamuṭṭhāna rūpa*. That *utusamuṭṭhāna rūpa* consists of the fire-element which is called *utusamuṭṭhāna tejo*. When it reaches to static phase, that *utusamuṭṭhāna tejo* produces new pure octad. The fire-element consisting in that pure octad is also able to produce next generation of pure-octad successively and these are called *utupaccaya utusamuṭṭhāna* (= the corporeality produced by temperature, which is supported by temperature). Thus (10) to (12) generations of pure octads can be produced successively as a group of *anupādiṇṇaka rūpa*. (*Vs-2-252*)

It is right ____ If the supporting factor of favourable temperature is available, the fire-element can bring forth very long continuity of corporealities with same kind even in the absence of *upādiṇṇaka rūpa*. If the

supporting factor of *upādiṇṇaka rūpa* is available, infinite long continuity of corporealities will be resulted. Therefore, the commentator explain that “*anupādinna pakkhe thatvāpi*” = “although it exists as inanimate group”, it can produce *utusamuṭṭhāna rūpa*. [According to the word ‘*pi*’ (= although), “if it is available *upādiṇṇaka rūpa*”, can be understood]

PAGE-693

It means that two kinds of worlds, i.e.,

1. animate world, hairs, bodily hairs, nails, claws, corn, mole, etc., of the living body,
2. inanimate world, the corpse, can be seen very long continuity of corporeality produced by temperature in the absence of supporting factor of *kammaja rūpa*, but as a *anupādinna pakkha*. (*Mahāṭṭ-2-404*)

[Before ingestion is taken place, the foods in the bowl and dishes, etc., are also long continuity of corporealities produced by temperature. It should be understood the fact it also belongs to *anupādiṇṇaka pakkha* (= inanimate world)].

vipassanobhāsa = the light of *Vipassanā* Knowledge

During arising of very strong *Vipassanā* Knowledge, the continuity of *utuja rūpa* which is produced by the fire-element consisting in *cittaja rūpa* can arise for a long time. It can spread from a room to very far external world depending on the power of *Vipassanā* Knowledge. The light of *Vipassanā* Knowledge is the bright colour of pure octads produced by both mind and temperature. The pure-octad produced by mind which is associating with *vipassanā* knowledge, can arise inside the body but not spread out external world. Many successive generations of pure-octads produced by the fire-element consisting in *cittaja rūpa*, are able to spread out not only internal body but also (10) directions of external world for very long distance. Those kinds of corporealities arising in external world successively are called *utupaccaya utusamuṭṭhāna rūpa*, situating as *anupādiṇṇaka pakkha*.

4.50.5 *Utupaccaya āhārasamuṭṭhāna* = the corporeality produced by nutriment which is supported by temperature

Pāli Quotation (Vs-2-252)

PAGE-694

The nutriments consisting in pure-octads produced by four kinds of *utu* (= fire-element) i.e., *kamma samuṭṭhāna utu*, *cittasamuṭṭhāna utu*, *utusamuṭṭhāna utu*, *āhāra samuṭṭhāna utu*, are able to produce new pure octads when they reach to static phase. These nutriment consisting in those pure-octads, if the supporting factor of *āhāraja oja* is available, can produce next generations of pure-octads again. Thus, (10) to (11) generations of pure-octads produced by nutriments arise continuously. (*Vs-2-252*)

Janaka and *upatthambhaka*

Pāli Quotation (Vs-2-252)

(*Mahāṭṭ-2-404*)

For these kinds corporeal units mentioned above, this fire-element benefits for arising of *utusamuṭṭhāna rūpa*, *āhāra samuṭṭhāna utu* by *janaka* cause (= direct cause for arising). The fire-element benefits for arising of the remaining three kinds, *kammassamuṭṭhāna*, *cittasamuṭṭhāna*, *āhāra samuṭṭhāna*, by *paccaya* or *upatthambhaka* cause (indirect cause or supporting) as efficiency of relations of *nissaya*, *atthi*, *avigata* (dependence, presence, non-disappearance).

Thus one should like to discern on the nature of arising of *utujarūpa* by penetrative *vipassanā* insight.

The *meditator*, who is discerning on the nature of arising of corporeality by insight as mentioned above, can be designated as “sometimes he discerns the corporeal *dhamma*”. (*Vs-2-2-252*)

After the nature of arising of corporeal *dhammas* has been known and seen by penetrative insight knowledge, due to presence of very short instant of ultimate *dhammas*, the dissolution of those corporeal *dhammas* is also deserving to see for him. The commentator, therefore, explained that the *meditator* who is

discerning on the nature of arising of corporeality by insight, can be designated as “sometimes he discerns the corporeal *dhamma*”.

It is right.____ Discerning on only the nature of arising can not be designated as “generalizing by three characteristics”. It is, actually, the process of discerning which connects way of discerning on both nature of arising and nature of perishing away”. It should be recognized similarly on way of discerning on arising of corporeal *dhammas* in later explanations. (This refers on *vipassanā* stage) (*Mahāṭṭ-2-404*)

Mode of discerning on the nature arising of corporeality (*rūpanibbattipassanākāra*) has been finished.

PAGE-695

4.51 Way of discerning on transparent corporeal units in eye

It should be read above explanations on the nature of arising of corporeality repeatedly in order to understand it. Then the following way of discerning on corporeal *dhammas* can be accepted well.

There are two kinds of transparent corporeal units, i.e., eye-decad, body-decad, in eye door, as mentioned tables previously (page640). In this stage, the *meditator* can see both transparent and non-transparent corporeal units. Both eye-decad and body-decad are mixed together in eye as mixture rice grains and wheat grains in petri dish.

The seeing-consciousness which perceives the colour arises depending on eye-clear-sensitivity within the eye-decad and the touching-consciousness which perceives the tangible object (= the earth-element, the fire-element, the air-element) arises depending on body-clear-sensitivity within the body-decad.

It can be understood the fact that “if any part of the eye is touched by tiny material, the touching-consciousness can arise. It shows that many body-decads are spreading throughout eye, due to arising of touching-consciousness which always depends on body-clear-sensitivity.

Numerous eye-decads are situated on very small part which is about the size of head of louse within the eye. Body-decads and eye-decads mix together in there and it is very important to differentiate between two transparent corporeal units.

*** *rūpābhigāhātārahābhūtapasādalakkhaṇam cakkhu. (Vs-2-74)***

The corporeality, characterized by transparent four great elements, which is deserving to strike by visible-object, is called *cakkhu pasāda* (= eye-clear-sensitivity). The corporeal unit consisting of eye-clear-sensitivity as tenth factor, is called *cakkhu dasaka kalāpa* (=eye-decad).

*** *Phoṭṭhabbābhigāhātārahābhūtapasādalakkhaṇa kāyo. (Vs-2-74)***

= The corporeality, characterized by transparent four great elements, which is deserving to strike by tangible-object, is called *kāyapasāda* (= body-clear-sensitivity). The corporeal unit consisting of body-clear-sensitivity as tenth factor, is called *kāyadasaka kalāpa* (= body-decad).

PAGE-696

Thus it should be distinguished on each clear-sensitivity by discerning on both striking object and respective clear-sensitivity simultaneously. After it is scrutinized on combination of striking object and respective clear-sensitivity simultaneously, it should be differentiate between eye-decad and body-decad systematically.

Way of discerning on decads existing in eye.

Develop concentration step by step and four great elements must be emphasized in the eye region. When corporeal units can be seen clearly, analyze on transparent one on which (10) kinds of nature of corporealities are consisted. Keep in mind the clear-sensitivity within that transparent decad. Then either transparent decad or non-transparent one adjacent to that transparent decad must be discerned simultaneously. If the colour of adjacent corporeal unit is striking to the clear-sensitivity of that decad, the latter is eye-clear-sensitivity, resulting in determination that decad is eye-decad. When the eye-decad is scrutinized and analyzed

it's constituents one by one, (10) kinds of ultimate nature of corporalities will be found in it. If the colour of adjacent decad does not strike on the clear-sensitivity, that might be body-clear-sensitivity. Thus the practising person should scrutinize frequently on those decads consisting of clear-sensitivity of any kind.

Then any transparent decad inside the eye must be emphasized and analyzed clear-sensitivity of that decad. Then any of three elements, the earth-element, the fire-element, the air-element, called touching element (*phoṭṭhabba dhātu*), consisting in adjacent corporal unit, must be discerned and kept in mind. For instance, if the nature of hardness, i.e., the earth-element, of adjacent corporal unit which is striking to the clear-sensitivity, that decad consisting of clear-sensitivity is body-decad. Then those (10) kinds of nature of corporealities on that decad must be scrutinized one by one. If the touching element does not strike on the clear-sensitivity, it might be the eye-clear-sensitivity. Thus it must be scrutinized again and again in order to differentiate between two kinds of clear-sensitivities inside the eye.

PAGE-697

Now the *meditator* is able to differentiate and keep in mind sex-decad (*bhāva dasaka kalāpa*) mentioned previously and eye-decad, body-decad systematically. These kinds of corporeal units are decads produced by previous *kamma* (*kammaja kalāpa*). It should be recognized the fact that for a *meditator* who is able to discern three kinds of decads produced by *kamma*, discerning on vital nonad (*jīvita navaka kalāpa*) has also been accomplished. Discerning on the vital nonad, therefore, has not been presented separately. [It will be explained kind of *kamma* is able to produce those *kammaja rūpa* and how to discern those kinds of *kamma* by insight in later section, *paccayapariggaha ñāṇa*, due to presence of interrelationship between those corporealities and causal relation of previous *kamma*. In this stage, it should be recognized the fact, “these three decads are produced by *kamma*” only.]

Important facts to be scrutinized

At the beginning stage of discerning on corporeal unit of various kinds, practising person must discern on the earth-element, the water-element, the fire-element, the air-element, colour, smell, taste, nutriment, life-faculty, eye-clear-sensitivity etc., which constitute in eye decad. One should scrutinize to know the fact that only when these (10) kinds of nature of corporealities constitute together with each other, the transparent corporal unit called eye-decad can arise in the eye. When discerning knowledge is able to break through eye-decad and it is situated well on the nature of each corporeality, the form of eye-decad will be disappeared in him. One should discern on body-decad similarly in order to reach ultimate nature of corporealities. If the form of corporeal unit disappears but only the nature of ultimate corporeality becomes apparent in insight knowledge, the compactness of form of corporeality called *samūhaghana* becomes broken down and form-concept (*samūha paññatti*) has been removed. However, one must continue to discern specific function of each corporeal *dhamma* in order to break down the compactness of function of corporeality (*kiṇṇa ghana*). Way of discerning to break down this kind of compactness will be presented in **Volume IV, Lakkhaṇādicatukka**.

In this stage of distinguishing on corporeality (*rūpa pariggaha*), only the specific nature of each corporeality, called ultimate reality of corporeal *dhamma*, must be emphasized and kept in mind one by one. Due to lack of sufficient concentration and sharp wisdom, some corporeal units still remains as particles in the insight knowledge of *meditator*. When the *vipassanā* knowledge becomes powerful in later stage, like knowledge of dissolution (*Bhanga ñāṇa*) by which only dissolution of *sankhāra dhammas* can be discerned; The form of corporeal unit called *saviggaha* will become disappeared; and only the ultimate corporeal *dhamma* can be seen by insight.

PAGE-698

After (10) kinds of nature of corporealities within each decad are able to be distinguished, one must continue to discern nature of simultaneous arising of (10) kinds of corporealities within each decad. He must try to see only ultimate nature of corporealities whenever the object of corporeal units of every kind is intended to be taken clearly. In this stage, it should be emphasized on the nature of hardness, flowing, heat, supporting in order to see the four great elements within each decad. It should be recognized similarly on later explanation for vital-nonad, and pure octad.

When the practising person is able to scrutinize proficiently on eye-decad, body-decad and sex-decad in the eye, three kinds of decads produced by *kamma*, found in the ear, must also be discerned one by one.

4.52. Way of discerning on decads existing in ear

Due to spreading throughout body, body-decad, and sex-decad in remaining doors can be discerned as mentioned above. Now, it will be explained how to discern ear-decad as follows.

Saddābighātārahabhūtappasāda lakkhanam sotam. (Vs-2-74)

The corporeality, characterized by transparent four great elements, which is deserving to strike by sound-object, is called **sotapasāda** (= ear-clear-sensitivity). The corporeal unit consisting of ear-clear-sensitivity as tenth factor, is called **sotadasaka kalāpa** (= ear-decad).

Four-great elements must be emphasized at inner region of ear where clear-sensitivity may be present. After seeing corporeal units, transparent decads must be emphasized and scrutinized the nature of corporealities one by one. Then either internal sound, such as sound of breathing, or external sound, such as bird's sound, should be taken into heart as object. If that sound strikes the clear-sensitivity which is kept in mind by oneself, the latter is ear-clear-sensitivity (**sotapasāda**) and that decad with ear-clear-sensitivity is called ear-decad (**sotadasaka kalāpa**). If ear-decad is analyzed, (10) kinds of ultimate nature of corporealities can be found.

He must scrutinized each specific character of those corporealities consisting in ear-decad one by one. Nature of simultaneous arising of those ultimate corporealities must be discerned by insight. If any kind of sound object never strike on clear-sensitivity, that kind of decad might be body-decad, due to presence of two kinds of transparent corporeal units only in the ear.

PAGE-699

Due to presence of ability to tactile object which strikes on any part of the ear, body-decad which is consisting of body-clear-sensitivity as dependence of touching-consciousness, is also existing in the ear. Similarly, sex-decad which consists of sex-corporeality by which ear of male or female can be differentiate each other, is also existing in ear. Those body-decads and sex-decad should be discerned as mentioned in eye-door previously.

4.53. Way of discerning on decads of nose

** Gandābhighātāraha bhūtappasāda lakkhanam ghānam. (Vs-2-274)*

The corporeality, characterized by transparent four great elements, which is deserving to strike by smell object, is called **ghānapasāda** (= nose-clear-sensitivity). The corporeal unit consisting of nose-clear-sensitivity as tenth factor, is called **ghānadasaka kalāpa** (= nose-decad).

Four great elements must be emphasized at inner region of nose where clear-sensitivity may be present. After seeing corporeal units, transparent decads must be emphasized and scrutinized each nature of corporealities one by one. Then the smell of adjacent corporeal unit must be taken into heart as object. If that smell strikes on the clear-sensitivity which is kept in mind by oneself, the latter is nose-clear-sensitivity (**ghānapasāda**) and that decad with nose-clear-sensitivity is called nose-decad (**ghānadasaka kalāpa**). If nose-decad is analyzed, (10) kinds of nature of corporealities can be found. The practising person must scrutinize each specific character of those corporealities consisting in nose-decad one by one. Nature of simultaneous arising of those ultimate corporealities must also be discerned by insight. If any kind of smell object never strike on clear-sensitivity, that kind of decad, might be body-decad, due to presence of only two kinds of transparent corporeal units in the nose.

Due to presence of ability to know tactile-object which strikes on any part of nose, body-decad with body-clear-sensitivity which is dependence of touching-consciousness is also existing in the nose. Similarly, sex-decad with sex-corporeality by which nose of male or female can be differentiated each other is also existing in the nose. Those body-decads and sex-decads must be discerned as mentioned in eye-door previously. Thus, there are three kinds of corporeal units produced by **kamma** in the nose.

PAGE-700

4.54. Way of discerning on decads existing in tongue

* *Rasābhīghātārahābhūtappasādalakkhaṇājivhā. (Vs-2-74)*

The corporeality, characterized by transparent four great elements, which is deserving to strike by sapid-object, is called *jivhāpasāda* (= tongue-clear-sensitivity). The corporeal unit consisting of tongue-clear-sensitivity as tenth factor, is called *jivhādasakakalāpa* (= tongue-decad).

Four great elements must be emphasized at inner region of the tongue. After seeing corporeal units, transparent decads must be emphasized and scrutinized each nature of corporealities one by one. Then the taste of adjacent corporeal unit must be taken into heart as object. If that taste strikes the clear-sensitivity which is kept in mind by oneself, the latter is tongue-clear-sensitivity and that decad with tongue-clear-sensitivity is called tongue-decad (*jivhādasakakalāpa*). If tongue decad is analyzed, (10) kinds of nature of corporealities can be found. Practising person must scrutinize each specific character of those corporealities consisting in tongue-decad one by one. Nature of simultaneous arising of those ultimate corporealities must be discerned by insight. If any kind of sapid-object never strike on clear-sensitivity, that kind of decad might be body-decad, due to presence of only two kinds of transparent corporeal units in the tongue.

Due to presence of ability to know tactile-object which strikes on any part of tongue, body-decad with body-clear-sensitivity which is dependence of touching-consciousness, is also existing in the tongue. Similarly, sex-decad with sex-corporeality is also existing in the tongue. Those body decads and sex-decads must be discerned as mentioned in eye-door previously. Thus there are three kinds of corporeal units produced by *kamma* in the tongue.

4.55. Way of discerning on decads which are produced by *kamma*, existing on body

Body-clear-sensitivities, as a dependence of touching-consciousness, which are able to know every tactile-object, are situated throughout body. The corporeal unit consisting of body-clear-sensitivity, is called body-decad (*kāyadasaka kalāpa*). Sex-decads (*bhāvadasaka kalāpa*) also spread throughout body. Sex-corporeality consisting in sex-decad, bring forth recognition of male or female in order to differentiate between every parts of body of male and female. The practising person must discern on these body-decads and sex-decads which are produced by *kamma* in body-door as previous mentioned in the eye-similarly.

4.56. Way of discerning on decads which are produced by *kamma* within heart

* *Manodhātumanoviññādhātūnam nissayalakkhaṇam hadayavatthu.* (Vs-2-77)

1. According to *Suttanta* method, the life-continuum (= *bhavanga*) is called mind-element (*manodhātu*).
2. All kinds of consciousness of cognitive processes which arise depending upon base (*hadaya vatthu*), except *dvepañcaviññāṇa* (= two fivefold consciousness, such as seeing-consciousness etc.), called mind-consciousness element (*manoviññādhātu*). The nature of corporeality depending on which those *manodhātu* and *manoviññādhātu* arise, is called heart-base (*hadaya vatthu*). The corporeal unit consisting of heart-base as physical base of mind is called heart-decad (*hadaya dasakakalāpa*). Two-fivefold consciousness called *dvepañca viññāṇa* arise depending on respective clear-sensitivity but not on heart-base corporeality (*hadayavatthu rūpa*). Thus all kinds of consciousness, except *dvepañcaviññāṇa*, are called *manoviññādhātu* (= mind-consciousness element).

Way of discerning on heart-base has been presented in previous pages. Keep in mind the life-continuum (*bhanga*) previously. Due to arising of the life-continuum and mind-consciousness-element depending upon heart-base, the latter (heart-base) can be found in the non-transparent decad adjacent to brilliant life-continuum or mind-consciousness-element.

[*Attha vā sabbampi cittaṃ sabhāvato paṇḍarameva.* (*Mūḷaṭṭi-1-95*)

= Naturally, all kinds of consciousness are clear and purified.]

If that non-transparent decad is analyzed, it can be found (10) kinds of ultimate nature of corporealities in it. The heart-base can be found in base-decad (heart-decad) as tenth factor. After analyzing on each ultimate nature of base-decad, nature of simultaneous arising of those corporealities must be discerned by insight.

There are two kinds of clear elements in the heart, i.e., *bhavanga* mind -clearness and body-clear-sensitivity (= corporeal clear-element). There are difference between mental clear-element and corporeal clear-element. Corporeal clear-element called the body-clear-sensitivity which is deserving to strike by tactile-object spreads within the heart as transparent decad. The mental clear-elements, on the otherhand, arise as two kinds, i.e., *manodhātu* (*bhavanga* or life-continuum) and mind-consciousness-element (*manoviññādhātu*). The mind of *samatha* and *vipassanā* practices called *manoviññādhātu*, is very brilliant relating to strong concentration. *Bhavanga* mind-clear-element or life-continuum called *manodhātu*, is also bright relating to power of previous *kamma*. The light produced by mind of *samatha* and *vipassanā* practices is so bright that it spreads out not only internal but also external, upto hundreds thousands cosmological systems successively.

On the other hand, corporeal clear-element is different from mental clear-element. Degree of brightness depends upon previous *kamma* and it exists as transparent decad. Mental clear-element is able to flash brilliant light, while corporeal clear-element is unable to flash.

The light produced by mind of meditation is caused by the brightness of *cittajaojjaṭṭhamaka kalāpa* and *utujaojjaṭṭhamaka* which is produced by the fire-element

consisting in that *cittajaojaṭṭhamaka kalāpa*. However, those pure octads produced by mind and temperature are non-transparent, due to lack of clear-sensitivities.

Manodhātu and *manoviññādhātu*, called mental clear-elements are only the nature of purified condition. The flash of brilliant light is produced by colour of pure octads called *cittaja ojaṭṭhamaka* and *utujaojaṭṭhamaka rūpa*. Body decad is unable to flash brilliant light.

Then there are many non-transparent decads called sex-decads which consist of sex-corporealities. Thus three kinds of decads produced by *kamma*, i.e, base-decad, body-decad and sex-decad, can be found in the heart. The practising person must scrutinize on each specific ultimate nature of corporealities of every decad by insight. Then nature of simultaneous arising of (10) kinds of ultimate nature of corporealities within each decad must be discerned by insight knowledge.

In order to overcome various kinds of difficulty

During discerning on corporeal units, if it is unclear in insight knowledge, the *meditator* must develop concentration again. If he has got experience to develop concentration up to the fourth absorption, he must develop acquired concentration again up to that absorption. When the light produced by knowledge associating with full concentration becomes brilliant corporeal units must be scrutinized by the help of that light. The stronger concentration, the more brilliant light as a result. The ultimate nature of corporealities within each corporeal unit will be clear as a result of brightness of the light produced by mind of meditation.

PAGE-703

If very fine genuine pearl is intended to be made hole, as very fine sharp awl is essential, similarly if very profound subtle corporeality and mentality are intended to be scrutinized penetratively, the knowledge must be very sharp and subtle. As the axe can be sharpened on the whetstone, the sword of penetrative knowledge can be sharpened by hand of effort on the whetstone of concentration after standing on the ground of virtue. Thus the maturation of five controlling faculties can be achieved by powerful virtue and concentration and the value of thorough purified virtue and sufficient concentration can be understood in this stage.

These are ways of discerning on corporealities produced by *kamma* in (6) sense-doors. Vital nonad (*jīvitānavaka kalāpa*) also belongs to these *kammaja rūpa* and those vital nonads must also be discerned and kept in mind proficiently.

If some derived corporealities are still unapparent in the insight knowledge although concentration is powerful, he must discern on four great elements in those corporeal units. According to instruction of *sammohavinodanī Aṭṭhakathā*, in the insight knowledge of *meditator* who is able to discern and keep four great elements in mind proficiently, those derived corporealities will become very apparent. (*Abhi-A-2-241*)

4.57 Way of discerning on *Cittaja rūpa*

In previous pages modes of the nature of arising of corporeality produced by mind has been presented. According to commentary and sub-commentary, except *paṭisandhi*-consciousness, or except both *paṭisandhi*-consciousness and death-consciousness, all kinds of consciousness which arise depending upon heart-base are able to produce respective kinds of *cittaja rūpa* in continuity of corporeality of beings of five-groups-existence (*pañcavokāra*). Way of discerning is as follows.

Firstly way of discerning on pure octad produced by mind will be presented. After developing acquired concentration previous well experienced *kammajarūpa* must be discerned again. Then the life-continuum called *bhavanga* mind clear-element which arises depending upon heart-base must be emphasized and the nature of arising of *cittaja rūpa* which are caused by life-continuum and mind-consciousness-element (*manoviññādhātu*) must be scrutinized by insight knowledge.

If it is not easily understood, he must emphasize on *bhavanga* mind clear-element and fore-finger must be bent and stretched again and again. At that time he should not emphasize on fore-finger but on *bhavanga* mind clear-element and nature of arising of consciousness which intends to bend or stretch fore-finger. When those consciousness has been seen by insight knowledge numerous *cittajarūpa* produced by mind must be discerned successively. Those pure octads produced by mind are non-transparent ones.

The ultimate nature of corporealities within pure octad, from the earth-element to nutriment, must be scrutinized and kept in mind one by one. Those pure octads found in (6) sense-doors must be discerned and kept in mind. Then processes of arising of every consciousness which arise depending on heart-base and consequence corporealities produced by that consciousness must be discerned and kept in mind. The corporeality produced by consequence consciousness (*vipākacitta*) also belongs to these *cittasamuṭṭhāna rūpa*. Some kinds of *cittasamuṭṭhāna rūpa* which are mixed together with non-real corporeality and ways of discerning on those corporealities will be presented later. In this stage, the practising person must discern and keep in mind causal relationship between consciousness and *cittaja rūpa* clearly by insight knowledge.

4.58. Way of discerning on *utujarūpa*

The fire-elements consisting in corporeal units produced by *kamma*, mind, temperature, nutriment, are called *utu* (= heat or temperature), as explained in previous pages. That fire-element (= heat) is able to produce new pure octad called *utujaojattṭhamaka kalāpa* with nutriment as 8th factor. Here, it will be presented way of discerning on this process in the eye-door as an example.

1. Analyze one of eye-decads in the eye-door in order to see (10) kinds of ultimate nature of corporealities. Among those corporealities, the fire-element is also included and it is called *kammaja utu* due to origin of eye-decad is accomplished by previous *kamma*. Then that *kammaja utu* (fire-element) must be emphasized and scrutinized in order to see production of new pure octad by that *kammaja utu* when it is reaching to static phase. That pure-octad is the first generation of *kammaja utu*. If it is analyzed, (8) kinds of ultimate nature of corporealities can be found. It is called “corporeality produced by temperature” which is supported by *kamma* (*kamma paccaya utusamuṭṭhāna rūpa*). (Vs-2-250)

That pure octad also consists of the fire-element (= *utu*) which is able to produce new generation of pure octad when it reaches to static phase. The pure-octad produced by temperature is the second generation of *kammaja utu* and it is called “corporeality produced by temperature” which is supported by temperature (*utupaccaya utu samuṭṭhāna rūpa*). The fire-element consisting in pure octad of second generation produces third generation of pure-

octad of *kammaja utu* again. It can also be called *utupaccaya utusamuṭṭhāna*. Thus (4) to (5) generations of pure octads arise successively. (*Visuddhi-2-250*)

In this case, the words, “(4) to (5) generations of pure octads arise successively”, are intended to say by means of the same continuity of corporeality. “If it is supported by special extrinsic factors, such as favorable temperature, food, etc., different continuity of corporealities can arise with many generations successively, like, mole, indolent tumour etc..” explained by noble teachers. (*Mahāṭṭ-2-402*)

Pāli-Quotation (Vs-2-252)

= Thus *utusamuṭṭhāna rūpa* can be produced as inanimate condition (*anupādinna*) for a long time. The commentator explained that there is nothing to say if it is situated as animate condition (*upādinna*).

Special factors (*bāhiyapaccaya visesa*) are as follows,

- a. supporting factor of *kamma* (in order to appear mole, indolent tumour etc.,)
- b. supporting factor of supreme mind such as mind of meditation of *samatha*, *vipassanā*, consciousnesses of Path- and Fruit-Knowledge.
- c. favorable or unfavorable temperature
- d. high quality nourishment etc.

These kinds of supporting factors are external special factors, other than primary causative *kamma*.

2. Analyze one of body-decads in eye door in order to see (10) kinds of ultimate nature of corporealities. Among those corporealities, the fire-element is also included, and it is called *kammaja utu*. When it reaches to static phase, the fire-element produces new pure octad called *ojaṭṭhamakakalāpa*. It is called corporeality produced by temperature which is supported by *kamma* (*kammapaccaya utusamuṭṭhāna rūpa*).

The fire-element consisting in that pure octad produces new pure octad which is called corporeality produced by temperature which is supported by temperature (*utupaccaya utusamuṭṭhāna rūpa*). Thus 4 to 5 generations of pure octads arise successively.

PAGE-706

It should be recognized the fact that if it is supported by special extrinsic factors (*bāhiyapaccaya visesa*), *utupaccaya utusamuṭṭhāna rūpa* can arise successively for a long time.

3. Analyze one of sex-decads in eye-door in order to see (10) kinds of ultimate nature of corporealities. Among those corporealities, the fire-element called *kammaja tejo* is also included. When it reaches to static phase, it produces new pure octad which is called *kammapaccaya utusamuṭṭhāna rūpa*.

The fire-element consisting in that new pure octad also produces new generation of pure octad again when it reaches to static phase. It is called *utupaccaya utusamuṭṭhāna rūpa*. Thus (4) to (5) generations of pure octads arise successively. It should be recognized the fact that if it is supported by special extrinsic factors, *utupaccaya utusamuṭṭhāna rūpa* can arise successively for a long time.

4. Analyze one of pure-octads produced by mind which exists in the eye-door in order to see 8 kinds of ultimate nature of corporealities. Among those corporealities, the fire-element called *cittaja utu* is also included. The practising person must discern on the nature of arising of new pure octad by that *cittaja utu*. That kind of new pure octad is called *cittapaccaya utusamuṭṭhāna rūpa*. (It is the first generation of *cittaja utu*). (*Vs-2-251*)

Then the fire-element consisting in pure-octad of the first generation, also produces new pure octad again. Thus (2) to (3) generations of pure octads can arise successively and they are called continuity of *utupaccaya utusamuṭṭhāna rūpa* which are descendants of *cittaja utu*.

In this case, the fact, “(2) to (3) generations of pure octads can arise successively”, is intended to say by means of normal consciousness. However, it is deserving to accept the fact “so many generations of pure octads can arise successively” by means of consciousnesses of absorption (*jhāna*), Path-Knowledge and Fruit-Knowledge. This is due to presence of supreme nobility of corporealities produced by lofty consciousness (*mahaggata citta*) and supramundane consciousness (*lokuttara citta*). (*Mahāṭṭi-2-403*)

In the section of *upakkilesa kathā*, it is explained that *utuja rūpa* can spread out external world while strong *vipassanā* consciousness are arising. (*Mahāṭṭi-2-428-429*). It should be recognized that if it is supported by very powerful mind of meditation of *samatha*, *vipassanā* and consciousness of the Path- and Fruit-Knowledge, *utupaccaya utusamuṭṭhāna rūpa* can arise successively for a long time.

5. Analyze one of pure octads produced by nutriment existing the eye-door in order to see 8 kinds of ultimate nature of corporealities. Among those corporealities, the fire-element called *āhāraja utu* is also included. The practising person must discern on nature of arising of new pure octad by that *āhārajautu*. That kind of new pure octad is called *āhārapaccaya utusamuṭṭhāna rūpa*. (It is the first generation of *āhāraja utu*). (*Vs-2-251*)

PAGE-707

Then the fire-element consisting in pure octad of the first generation, also produces new pure octad again. It is called *utupaccaya utusamuṭṭhāna rūpa* (= the corporeality produced by temperature which is supported by temperature). (It is the second generation of *āhāraja utu*). Thus (10) to (12) generations of pure octads can arise successively. If it is supported by supreme nourishment, such as *deva*’s nourishment, new generations of pure octads can arise for very long time. (These pure octads are descendants of *āhāraja utu*.) (*Vs-2-251,252*)

It will be explained another way of nature of arising of *utupaccaya utusamuṭṭhāna rūpa* as follows.

6. Pāli Quotation (*Vs-2-223*)

According to above explanation of commentary these (4) kinds of bodily parts, newly ingested food, faces, pus, and urine are *utusamuṭṭhāna rūpa* only. Here, the bodily part called newly ingested food and way of discerning on it will be presented as an example.

The *meditator* must develop concentration and keep previous experienced corporealities in mind again. Then he must emphasize on newly ingested food inside the stomach and scrutinize in order to see specific characters of four great elements respectively. He will found only pure octads produced by temperature according to *Visuddhimagga aṭṭhakathā*.

Every pure octad of those corporeal units in the stomach consists of the fire-element. When it reaches to static phase, the fire-element produces new pure octad called *utupaccaya utusamuṭṭhāna rūpa*. Then the fire-element consisting in that new pure octad also produces the next pure octad again. Thus many generations of pure octads will arise throughout the

period it remains as undigested food inside the stomach. One must recognize similarly on faeces, pus, and urine. This kind of *utupaccaya utusamuṭṭhāna rūpa* should be discerned as nature included in body-door.

PAGE-708

According to the explanation of the commentator, “*upādiṇṇakam paccayam labittvā*”, it is essential to attain supporting factor of *kammaja rūpa* while four kinds of *utu*, i.e., *kammaja utu*, *cittaja utu*, *utuja utu*, *āhāraja utu*, produce *utusamuṭṭhāna rūpa*, respectively.

The practising person must discern on remaining doors, such as, ear-door, nose-door, etc., similar to eye-door.

4.59 Way of discerning on *āhārajarūpa*

According to previous mentioned chapter, nature of the arising of corporeality produced by nutriment, the *meditator* should discern on both the process of arising of *āhārajarūpa* through ingested *kabaḷīkāra āhāra* and how *āhārajarūpa* supports various continuities of corporealities produced by other kinds nutriment and remaining three origins, i.e., *kamma*, mind, temperature.

The nutriment consisting in *kabaḷīkāra āhāra* of today intake can produce pure octad directly. It benefits pure octads by means of direct cause (*janaka satti*). It, generally, supports *āhāraja rūpa* which were caused by nutriment consisting in last 7 days ingested food by means of supporting cause (*upatthambhaka satti*). Those supported *āhārajarūpa* are called corporealities produced by other nutriment. Thus available time to discern those *āhārajarūpa* may be both

- (1) while the food is being ingested and
- (2) during the period of discerning on those *āhārajarūpa* after ingestion

Pāli Quotation (M-A-1-213) (M-ṭī-1-308)

The nourishment ingested by animals is really only a group of corporal units called pure octads produced by temperature. The nutriment (*ojā*) consisting in every pure octad, if it can get supporting factor of vital nonad, is able to produce new pure-octads. Only when the nourishment is ingested by animal the nutriment consisting in pure octads can attain supporting factor of the vital nonad which contains digestable fire-element. But if it is not ingested and merely external condition, *āhārajarūpa* can not be produced due to lack of supporting cause of vital nonad.

PAGE-709

In this case, one should not misunderstand the fact that “only when the nourishment is ingested”, means *āhārajarūpa* can not arise in the buccal cavity before ingestion. Indeed, while *kabaḷīkāra āhāra* is still present in the buccal cavity, it can get supporting factor of vital nonads which are spreading out the whole body, new pure octads can be produced successively. The nutriment consisting in every pure octad can produce new pure octad. This phrase is intended to refer *kabaḷīkāra āhāra* which is already finished to reach nutriment supported by vital nonad.

If the *meditator* wants to discern it during ingestion, one must emphasize on the four great elements of both the food in the buccal cavity and newly ingested food in the stomach.

At that time he can see only pure octads produced by temperature. Then he must scrutinize on the nature of arising of new pure octads from pure octads produced by temperature when it gets supporting factor of vital nonads. He must discern on the process of spreading of new pure octads to (6) sense-doors successively. Those kinds of corporealities are called *āhārasamuṭṭhānarūpa* because successive causes of nutriment produce new pure octads generation by generation. (*Vs-2-251*)

If the *meditator* wants to discern it during any period after ingestion has been taken place, inside the stomach, intestine etc., where newly ingested food is present, he must discern that bodily part in similar way. If it is uneasy to see newly ingested food inside stomach, a cup of water must be drunk before practise and discern on it. Then he must discern on the process of spreading of *āhārasamuṭṭhānarūpa* throughout body by insight. It must be noticed that “the nourishment which has been ingested for one day can benefit the whole body throughout (7) days by means of supporting cause (*upatṭhambhaka sattī*). (*Vs-2-251*). After it is successful to discern process of spreading of *āhārasamuṭṭhānarūpa* until reaching into eye-door, he can discern how that *āhārasamuṭṭhānarūpa* supports four kind of nutriments, i.e., *kammaja ojā*, *cittaja ojā*, *utuja ojā*, *āhāraja ojā*, in the eye-door for next step.

PAGE-710

1. *kammapaccaya āhārasamuṭṭhānarūpa*

Analyse any one of eye-decads in eye-door in order to see (10) kinds of ultimate nature of corporealities. Among those corporealities, the nutriment (*ojā*) is also included, and it is called *kammaja ojā*. When it reaches to static phase, if it is supported by nutriment consisting in *āhārasamuṭṭhānarūpa* which is spreading to eye, *kammaja ojā* produces new pure octad called *kammapaccaya āhārasamuṭṭhānarūpa* (*Vs-2-249,250*). It is the first generation of *kammaja ojā* of eye-decad. The nutriment consisting in that pure octad also produces new pure octad again, when it is supported by *āhārasamuṭṭhānaojā*. This kind of octad is the second generation of *kammaja ojā* of eye decad. Thus (4) to (5) generations of pure octads arise successively and they are descendants of *kammaja ojā*.

Similarly, the practising person must discern on ..

2. body-decad and

3. sex-decad which are presenting in eye door, in order to see (4) to (5) generations of pure octads when they are supported by *āhārasamuṭṭhānaojā*. Those are also *kammapaccaya āhārasamuṭṭhānarūpa* indeed.

4. *Cittapaccaya āhārasamuṭṭhānarūpa*

The nutriment consisting in pure octad produced by mind in the eye, if it is supported by nutriment consisting in *āhārasamuṭṭhānarūpa* which is spreading into eye, can produce new pure octad. (It is the first generation of *cittajaojā*). That kind of pure octad is called *cittapaccaya āhārasamuṭṭhānarūpa*. The nutriment consisting in new pure octad also produces new pure octad again when it reaches to static phase. Thus (2) to (3) generations of pure octads arise successively. (These are descendants of *cittaja ojā*.) (*Vs-2-250,251*)

In this case, the fact, “(2) to (3) generations of pure octads arise successively”, is intended to say by means of normal consciousness. However, it is deserving to accept the fact so many generations of pure octads can arise successively by means of consciousness of absorption, Path-Knowledge and Fruit-Knowledge. This is due to presence of supreme nobility of corporealities produced by *mahaggata citta* and *lokuttarā citta* (supramundane consciousness. (*Mahāṭṭi-2-403*)

In this case, *cittaja ojā* supports by means of direct cause (*janaka satti*) while *āhāraojā*, by means of supporting cause (*upathambhaka satti*). Then that *cittaja ojā* is able to support *kammaja ojā*, *utuja ojā*, *āhāraja ojā* by means of supporting cause (*upatthambhaka āhārapaccaya satti*).

(These explanation can be read previous pages. The reasonable points shown by *Mūlaṭṭikā Sayadaw* can also be seen previous pages.)

According to the opinion of *Mūlaṭṭikā Sayadaw*, it should be recognized the fact that “*cittaja ojā* is able to produce new pure octad without supporting factor of *āhāraja ojā* but the supporting factor of either mind or *kamma* is essential.

PAGE-711

5. *Utupaccaya āhārasamuṭṭhānarūpa*

The nutriment consisting in pure octad produced by temperature in the eye, if it is supported by nutriment consisting in *āhārasamuṭṭhānarūpa* which is spreading into the eye, produces new pure octad. (It is the first generation of *utuja ojā*). That kind of pure octad is called *utupaccaya āhārasamuṭṭhānarūpa*. The nutriment consisting in that new pure octad also produces new pure octad again when it reaches to static phase. (This kind of pure octad is the second generation of *utuja ojā*.) Thus (10) to (12) generations of pure octads arise successively and these corporealities are called *utupaccaya āhārasamuṭṭhānarūpa*. (These are descendants of *utuja oja*.) (*Vs-2-252*)

The practising person must discern both the process by which *utujaoja* in eye door is direct cause to arise pure octad when it is supported by *āhāraja ojā* and the process by which it is spreading into eye as supporting cause (*upatthambhaka*) for successive generations of pure octads.

6. *Āhārapaccaya āhārasamuṭṭhānarūpa*

The practising person must discern on the process in which *utuja ojā* called ingested *kabaḷṭkāraāhāra* is converted to *āhāraja ojā* by the help of vital nonad and those spreading *āhārasamuṭṭhānarūpa* throughout body by insight. He must discern on the process in which one day ingested nourishment is able to support the production of new pure octads throughout (7) days and those spreading *āhārasamuṭṭhānarūpa* out the whole body. Then he must discern on the process by which the nutriment consisting in preceding pure octad is supported by the nutriment consisting in succeeding pure octad produced by nutriment. Then he must discern on the process by which the nutriment consisting in preceding pure octad, when it reaches to static phase, produces new pure octad. This kind of pure octad is called *āhārapaccaya āhārasamuṭṭhānarūpa*. (It is the first generation of *āhāraja ojā*.) The nutriment consisting in that pure octad, when it gets supporting factor of nutriment consisting in succeeding pure octad produced by nutriment, also produces new pure octad again. (It is the second generation of *āhārajaojā*.) Thus (10) to (12) generations of pure octads arise successively and these are called *āhārapaccaya āhārasamuṭṭhānarūpa*. (These are descendants of *āhārajaojā*.) (*Visuddhi-2-251*)

PAGE-712

Special notes

While one is discerning on arising of *āhārajarūpa*, one should not suggest the fact that new pure octad arises as a result of combination of two corporeal units each other. He must distinguish and scrutinize on the nature of arising of new pure octads by

1. *kammaja ojā* consisting in eye-decad, body-decad and sex-decad,
2. *cittaja ojā* consisting in pure octad produced by mind,
3. *utuja ojā* consisting in pure octad produced by temperature, when these three kinds of *ojā* are supported by *āhārajaōjā* and
4. he must scrutinize on the nature of arising of new pure octad through preceding *āhārajaōjā* when it is supported by nutriment of succeeding *āhārajarūpa*.

The practising person must discern on both each corporeal unit produced by four origins, which is able to produce new pure octad by means of direct cause (*janaka satti*), and respective corporeal unit which is able to support by means of supporting cause (*upatthambhaka satti*), in order to see the ultimate nature of each corporeal unit after breaking down their compactness of corporeality respectively. Then he must scrutinize and keep in mind every newly produced pure octad in order to see ultimate nature of corporealities.

Bifurcate phenomenon of arising of new pure octads

As mentioned above, the practising person discern on eye-decad, body-decad, sex-decad, pure octad produced by mind, pure octad produced by temperature, pure octad produced by nutriment in eye-door separately. In every corporeal unit, two kinds of ultimate corporeal *dhammas*, i.e.,

1. the fire-element (*tejodhātu*) and
2. the nutriment (*ojā*), are capable of producing new pure octads. The fire-element is also able to produce new pure octad when it is supported by *upādinnaka kammajarūpa*.

PAGE-713

The nutriment is also able to produce new pure octad when it is supported by *upādinnaka kammajarūpa*, according to explanation found in *Visuddhimagga*, 2-251, i.e., “*upādinnam kammajarūpam paccayam labittvā*”. He must recognize on the fact that “generally the fire-element and nutriment consisting in every corporeal unit, when those reach to static phase, are able to produce bifurcating phenomenon of new pure octad.

In this case, it is intended to say “generally” for production of new pure octads up to (4) to (5) generations successively, but the last pure octad with both fire-element and nutriment is unable to produce new pure octads, due to lack of efficiency.

Explanation found in *Mahāṭṭhā*

Pāli Quotation (Mahāṭṭhā-2-401)

In this case, as the commentator explained separately the nature of arising of *kammapaccaya āhārasamuṭṭhāna kammapaccaya utusamuṭṭhāna*, which are second generation of pure octads and not produced by *kamma*, similarly it should be explained in separately on nature of arising of pure octad by means of whether

1. *kammajāhārasamuṭṭhānautu* or
2. *kammaja utusamuṭṭhānāhāra* ... or
3. *kammapaccaya cittajāhāra* ... or
4. *utusamuṭṭhānautuāhāra*, said by noble teachers. (*Mahāṭṭhā-2-401*)

In order to be discerned nature of arising of those kinds of pure octads, summery of way of discerning will be presented as follows.

Six kinds of corporeal units existing in eye-door will be explained as an example.

PAGE-714

1. *Kammajatejo* (= fire-element) consisting in eye decad, when it reaches to static phase, produces new pure octad with the help of *upādinna kammaja rūpa*. It is called corporeality produced by temperature which is supported by *kamma (kammapaccaya utusamuṭṭhāna rūpa)*. The fire-element is also included among (8) kinds of corporealities within that new pure octad and it is called *kamma paccaya utusamuṭṭhāna tejo*. Similarly the nutriment is also included among (8) kinds of corporealities within that new pure octad and it is called *kammapaccaya utusamuṭṭhānaojā*.

1. That *kammapaccaya utusamuṭṭhānatejo* produces new pure octad called *utupaccaya utusamuṭṭhāna rūpa* when it reaches static phase. (Vs-2-252)
2. That *kammapaccaya utusamuṭṭhānaojā* also produces new pure octad called *utupaccaya āhārasamuṭṭhāna rūpa* when it reaches to static phase. (Vs-2-252)

In other words, it is really, called *kammajautusamuṭṭhānāhāraja rūpa*. (Mahāṭī-2-401)

These processes are nature of arising of two kinds of pure octads, i.e,

1. *utusamuṭṭhāna rūpa*,
2. *āhārasamuṭṭhāna rūpa*, from *kammapaccaya utusamuṭṭhāna rūpa*. He must discern on bifurcation of pure octads by insight knowledge.

Then the fire-element and nutriment are consisting in pure octad of *utusamuṭṭhāna rūpa*, shown in number (1) kind, and the fire-element produces new pure octad called (*utupaccaya*) *utusamuṭṭhāna utujarūpa*.

The nutriment also produces new pure octad called (*utupaccaya*) *utusamuṭṭhāna āhāraja rūpa*. (Mahāṭī-2-401) Thus, (4) to (5) generations of pure octads or more than those times of generations arise successively. Therefore, one must discern on bifurcating phenomenon of pure octads from fire-element and nutriment of each generation of pure octads by insight knowledge.

This is the process of bifurcation depending upon the fire-element consisting in eyedecad.

PAGE-175

The nutriment consisting in eye-decad, if it is supported by *āhāraja ojā*, produces new pure octad called *āhārapaccaya āhārasamuṭṭhāna rūpa*. (Vs-2-251) In other words, it produces new pure octad called *kammapaccaya āhārasamuṭṭhāna rūpa*. (Vs-2-250)

That pure octad also consists of both the fire-element and nutriment.

1. The fire-element consisting in *āhārapaccaya āhārasamuṭṭhāna rūpa*, also produces new pure octad called *utusamuṭṭhāna rūpa (kammajāhārasamuṭṭhāna utusamuṭṭhāna rūpa)*. (Mahāṭī-2-401)
2. The nutriment consisting in *āhārapaccaya āhārasamuṭṭhāna rūpa*, also produces new pure octad called *āhārasamuṭṭhānarūpa (kammajāhārasamuṭṭhāna āhārasamuṭṭhāna rūpa)*.

Then each pure octad produced by either the fire-element or nutriment consists of the fire-element and nutriment which are able to produce new generation of pure octads, resulting in bifurcating phenomenon of pure octads successively. The practising person must discern

on (4) to (5) generations of pure octads with bifurcating phenomena, or more than those times of generations of pure octads by insight knowledge.

This is bifurcating nature of arising of pure octads depending upon,

1. the fire-element,
2. the nutriment consisting in eye decad.

Thus those bifurcating processes of pure octads must be discerned in remaining corporeal units, i.e., body-decad, sex-decad, pure octad produced by mind, pure octad produced by temperature, pure octad produced by nutriment, in eye door similarly.

PAGE-716

Those corporealities produced by consequence consciousnesses, i.e., receiving (*sampaṭṭhāna*), investigating (*santīraṇa*), registering (*tad-ārammaṇa*), life-continuum (*hbavaṅga*), which arise depending upon heart-base, are called *kammaṭṭhāna rūpa* (= the corporeality produced by mind which is supported by *kamma*). (Vs-2-249)

That pure octad called *kammaṭṭhāna rūpa* consists of nutriment. When it reaches to static phase, that nutriment produces new pure octad called *kammaṭṭhāna rūpa*. (Mahāṭṭi-2-401)

Special notes

Those explanations mentioned above are the nature of arising of corporealities by means of inseparation of *utūsamūṭṭhāna rūpa* and *āhāra samūṭṭhāna rūpa* within one corporeal unit. Mahāṭṭi Sayadaw explained significance of *kammajaojā* as follow.

Pali-Quotation (Mahāṭṭi-2-401)

In various *utūsamūṭṭhāna* and *āhārasamūṭṭhāna rūpa* mentioned above, if the nourishment derived from *kammajaojā* (= *kammaja ojā*) is supported by supreme nutriment, such as deva's nutriment, it is unable to say that more than (4) to (5) generations of pure octads can not arise successively. It is right. ____ it will be explained as either "(10) to (12) generations of pure octads arise successively" (Vs-2-251) or "thus continuity of *utūpaccaya utūsamūṭṭhāna rūpa* arise for a long time as a group of *anupādinna rūpa*" (Vs-2-252). (Mahāṭṭi-2-401)

PAGE-717

4.60 Six doors- six locations

It has been explained how to discern the ultimate nature of corporealities consisting in corporeal units produced by *kamma*, mind, temperature, nutriment, in eye door, by penetrative knowledge respectively. In eye door, corporeal units are of (6) kinds qualitatively but numerous corporeal units quantitatively for each kind. As mentioned above, among corporeal units produced by *kamma*, vital nonad (*jīvita navaka kalāpa*) is also included in each doors. The practising person must understand remaining doors in similar way.

After understanding on way of discerning on corporealities in eye door, he can easily understand remaining doors and (42) bodily parts similarly. Discern and keep in mind each ultimate nature of corporealities of (6) sense-doors respectively.

Suggestion for meditators

Firstly, the practising person must discern and keep only corporeal *dhamma* in mind by means of the following cascade of analysis,

1. Firstly corporealities produced by *kamma* (*kammaja rūpa*) in (6) doors must be discerned,
2. then corporealities produced by mind (*cittaja rūpa*) in (6) doors,
3. then corporealities produced by temperature (*utujarūpa*) in (6) doors,
4. then corporealities produced by nutriment (*āhārajarūpa*) in (6) doors.

If it is achieved to discern and keep in mind as mentioned above by cascade of analysis, it is easier to discern for both teachers and *meditators* who practically discern on corporealities. For a beginner who discerns *utujarūpa* and *āhāraja rūpa* can face with a little difficulty. However if he experiences to discern each kind one after another, then he is able to discern both *utujarūpa* and *āhārajarūpa* simultaneously. As mentioned above, bifurcating nature of arising of pure octads from both *utujarūpa* and *āhārajarūpa*, must be scrutinized by penetrating knowledge gradually.

He must discern and keep in mind various corporealities which are consisting in

1. (6) kinds of corporeal units, (54) kinds of corporealities in eye door,
2. (6) kinds of corporeal units, (54) kinds of corporealities in ear door,
3. (6) kinds of corporeal units, (54) kinds of corporealities in nose door,
4. (6) kinds of corporeal units, (54) kinds of corporealities in tongue door,
5. (5) kinds of corporeal units, (44) kinds of corporealities in body door,
6. (6) kinds of corporeal units, (54) kinds of corporealities in the heart which, are dependence of mind door respectively.

PAGE-718

The practising person must discern and scrutinize nature of arising of each corporeal *dhamma* systematically as mentioned above. Especially the production of *utujarūpa* and *āhāraja rūpa* depend on quantities of *kammaja rūpa* and *cittaja rūpa* and those can arise many times. After it is successful to discern corporeal *dhamma* in (6) doors, one must continue to discern corporealities found in (42) bodily parts which belongs to body door.

Discern and keep in mind as corporeal *dhamma*

Pāli-Quotation (Vs-2-223)

After discerning and keeping in mind (54) kinds of ultimate nature of corporealities in each door, he must generalize and take into heart as “this is corporeal *dhamma*” or “corporeal *dhamma*, corporeal *dhamma*” by taking the object of nature of change and alteration of corporealities. When all corporealities in (6) doors can be generalized and kept in mind as a whole, he must take into heart as “corporeal *dhamma*, corporeal *dhamma* in similar way.

PAGE-719

4.61 Four great elements meditation, detailed account in (42) bodily parts

4.61.1 *Pathavīkoṭṭhāsa* (20), which are the earth-element predominated

(a) *Taca pañcaka*

1. <i>kesā</i>	= hair	= 44
2. <i>lomā</i>	= bodily hair	= 44
3. <i>nakhā</i>	= claw and nail	= 44
4. <i>dantā</i>	= tooth	= 44
5. <i>taco</i>	= skin (ectoderm + endoderm)	= 44

(44) kinds of corporealities

These (44) kinds of corporealities found in hair etc.. are as follows.

(1) body decad	= 10
(2) sex decad	= 10
(3) pure octad produced by mind	= 8
(4) pure octad produced by temperature	= 8
(5) pure octad produced by nutriment	= 8
total	= 44

(b) *vakka pancaka*

6. <i>mamsam</i>	= flesh	= 44
7. <i>nhāru</i>	= sinew	= 44
8. <i>aṭṭhi</i>	= bone	= 44
9. <i>aṭṭhimiñjam</i>	= bone marrow	= 44
10. <i>vakkam</i>	= kidney	= 44

(c) *papphāsapañcaka*

11. <i>hadayam</i>	= heart	= 44
12. <i>yakanam</i>	= liver	= 44
13. <i>kilomakam</i>	= pleura	= 44
14. <i>pihakam</i>	= spleen	= 44
15. <i>papphāsam</i>	= lung	= 44

PAGE-720

Kilomakam = pleura

There are two kinds of pleurae, i.e., covering plura and uncovering pleura. The covering plura can be found in upper part of body while uncovering plura, both upper and lower parts of body. The covering plura is situated as covering around heart, kidney etc., while uncovering one is situated under endoderm as network of flesh and it acts as a kind of glue by which flesh is connecting with endoderm of skin. Both kinds of pleurae consist of (44) kinds of corporealities. (*Vs-2-248, 249*)

(d) *matthaluñgapañcaka*

16. <i>antam</i>	= alimentary canal	= 44
17. <i>antagūṇam</i>	= mesentery	= 44
18. <i>udariyam</i>	= newly ingested food	= 8
19. <i>karīsam</i>	= faeces	= 8
20. <i>matthalungam</i>	= brain	= 44

Both newly ingested food and faeces consist of only pure octad produced by temperature and then it consists of (8) kinds of ultimate nature of corporealities. These (20) kinds of bodily parts, mentioned above, are the earth-element predominant ones called *pathavīkoṭṭhāsa*.

Antaguṇamti antabhogaṭṭhānesu bundhanam. (Vs-1250)

= As a string that binds circular coiled rope which is used as door mat not to loose, mesentery that binds coiled bowel in the coelom is called *antaguṇa*. (It is not a part of alimentary canal.) This is because the fact that *anta* means along with alimentary canal which extends from the mouth to the anus. (*Vs-1-249*)

4.61.2 *Āpokotṭhāsa* (12) kinds which are predominated with the water-element

(a) *meda chakka*

1. <i>pittam</i>	= bile	= 44
2. <i>semham</i>	= phlegm	= 44
3. <i>pubbo</i>	= pus	= 8
4. <i>lohitam</i>	= blood	= 44
5. <i>sedo</i>	= sweat	= 16
6. <i>medo</i>	= fat	= 44

Bile (*pittam*)

There are two kinds of bile, i.e., *baddha* (= bile salt) and *abaddha* (= bile secretion). Bile salt is present in the gall bladder which lies between two lobes of liver while bile secretion spreads throughout body. Bile secretion is bitter taste liquid, and a group of corporeal units. Both kinds of biles have (44) kinds of nature of corporealities. (*Vs-2-252*)

PAGE-721

Pus (*pubbo*)

It usually exists in a pore of wound. It is pure octad produced by temperature, and it consists of (8) kinds of nature of corporealities.

Blood (*lohitam*)

There are two kinds of blood, i.e., *sannicitalohita* = uncirculating blood inside heart, liver etc, and *samsaraṇa lohika* = circulating blood inside blood vessels and capillaries throughout body. Both kinds have (44) kinds of ultimate nature of corporealities.

Sweat (*sedo*)

It is produced by mind and consists of pure octad produced by mind. It is also produced by temperature and consists of pure octad produced by temperature. Thus it consists of (16) kinds of ultimate nature of corporealities.

(b) *muttachakka*

7. <i>assu</i>	= tear	= 16
8. <i>vasā</i>	= sebum	= 44
9. <i>kheḷo</i>	= spittle	= 16
10. <i>siṅghānikā</i>	= snivel	= 16
11. <i>lasikā</i>	= synovia	= 44
12. <i>muttam</i>	= urine	= 8

Tear (*assu*)

Tear is produced by not only mind but also temperature. Therefore, it consists of (16) kinds of ultimate nature of corporealities as pure octads produced by mind and temperature.

Sebum (*vasā*)

The semifluid secretion of the sebaceous gland lying in the dermis of the skin and that gland opens into a hair follicle. It consists of (44) kinds of ultimate nature of corporealities.

Saliva (*kheḷo*) and snivel (*siṅghānika*)

Spittle and snivel are produced by not only mind but also temperature. Both kinds consist of pure octads produced by mind and temperature and then (16) kinds of ultimate nature of corporealities can be found in each kind.

Synovia (*lasikā*)

A clear, viscid lubricating fluid secreted by membranes in joint cavities, sheaths of tendons, and bursae, is called synovia. It consists of (44) kinds of ultimate nature of corporealities.

4.61.3. *Tejokoṭṭhāsa* (4) kinds which are predominated with the fire-element

1. *santappanatejo* = severely burning heat, like malaria with alternate fever = 33
2. *jīraṇatejo* = burning heat that brings forth maturing and decaying body = 33
3. *dāhatejo* = heat that burns thoroughly vicinity where it arises = 33
4. *pācakatejo* = digestive heat which is the fire-element of vital nonad = 9

These (4) kinds of *tejokoṭṭhāsa* have no form and shape but different from *pathavikoṭṭhāsa* and *āpakotiṭhāsa* which have form and shape. These are a group of corporeal units of non-transparent ones, and are consisting (33) kinds of corporealities, as follows.

PAGE-722

- | | |
|---------------------------------------|------|
| 1. vital nonad | = 9 |
| 2. pure octad produced by mind | = 8 |
| 3. pure octad produced by temperature | = 8 |
| 4. pure octad produced by nutriment | = 8 |
| total | = 33 |

In this case, vital nonad is a non-transparent corporeal unit produced by previous *kamma*, and it consists of vital controlling faculty as ninth factor. *Pācaka tejo* is the fire-element called *udareggi* which is able to digest food in stomach, intestine etc.,. Thus *pācaka tejo koṭṭhāsa* consists of vital nonads only.

4.61.4. *Vāyokoṭṭhāsa* (6) kinds which are predominated with the air-element

- | | | |
|---------------------------------|---|------|
| 1. <i>uddhaṅgamāvātā</i> | = ascending air | = 33 |
| 2. <i>adhogamāvātā</i> | = descending air | = 33 |
| 3. <i>kucchisayāvātā</i> | = the air existing in the coelom external to vowel | = 33 |
| 4. <i>koṭṭhāsasayāvātā</i> | = the air inside the vowel | = 33 |
| 5. <i>aṅgamaṅgānusārīnovātā</i> | = the air inside the vessel, which circulates in various organs | = 33 |
| 6. <i>assāso passāso</i> | = in-breath and out-breath | = 9 |

Pali-Quotation (Vs-I-345, 346)

According to explanation of commentary, in those (5) kinds of *vāyokoṭṭhāsa* from *udaṅgamāvātā* to *aṅgamaṅgānusārino vātā*, each consists of (4) kinds of corporeal units and (33) kinds of corporealities, as follows.

- | | |
|---------------------------------------|------|
| 1. vital nonad | = 9 |
| 2. pure octad produced by mind | = 8 |
| 3. pure octad produced by temperature | = 8 |
| 4. pure octad produced by nutriment | = 8 |
| total | = 33 |

Those in-breath and out-breath are a group of corporeal units called sound nonads produced by mind (*cittajasaddanavaka kalāpa*), consisting of sound as ninth factor.

PAGE-723

4.62 Way of discerning on (42) bodily parts

Hair

During discerning on the four great elements of hair, the practising person must emphasize interior part of hair, which is called follicle in order to see (5) kinds of corporeal units. Exterior part of hair lacks body decads. When he can see (5) kinds of corporeal units, (44) kinds of ultimate nature of corporealities within those corporeal units must be scrutinized and analyzed one by one. If he is unable to see corporeal units by merely discerning on four great elements, he must develop concentration again and try to see space element inside the clear mass of four great elements. Then corporeal units can be seen and he must analyze on (44) kinds of ultimate nature of corporealities. One must recognize bodily hair in similar way.

Nail and claw

The practising person emphasize on interior parts of nails and claws because body-decads are absent in exterior part of each nail and claw.

During discerning on remaining bodily parts, firstly try to see each bodily part and then discern on the four great elements consisting in it. After seeing corporeal units clearly, he must analyze on the ultimate nature of corporealities and keep in mind thoroughly.

Due to presence of each two kinds of bile and blood, he must discern and keep in mind (44) kinds of corporealities consisting in both kinds thoroughly.

Tejokoṭṭhāsa

During discerning on *tejokoṭṭhāsa*, due to absence of shape of those bodily parts, he must scrutinize corporeal units which are predominated with the fire-element (*tejo*). If *santappanatejo* and *dāhatejo* are unapparent in insight knowledge, he must take into heart past experiences with malaria or any kind of severe sick and then he must discern corporeal units which arise during malaria or severe sick. He will understand easily.

Vāyokoṭṭhāsa

Firstly, the practising person must try to see the air which is intended to be discerned by the aid of light produced by concentration. Then the four great elements of those bodily parts must be emphasized. Then corporeal units can be seen easily. If he is unable to see corporeal units, he must emphasize the space-element inside clear block of four great elements. Then he must analyze corporeal units and keep in mind ultimate nature of

corporealities consisting in each corporeal unit. It is very wonderful and respectable on the fact that the Buddha's *Abhidhamma* is very profound and precise teaching which shows both ascending air and descending air consist of (33) kinds of ultimate nature of corporealities. Actually, ways of discerning on ultimate nature of these kinds of bodily parts is the sphere of insight knowledge of the Supreme Buddha and his noble disciples only.

PAGE-724

These corporealities existing in (6) doors and (42) bodily parts are deserving to discern and generalize by three general characteristics, i.e., *anicca*, *dukkha*, *anatta* and those are called *sabhāva rūpa* (natural corporeality with apparent basic structure), *salakkhaṇa rūpa* (corporeality with general character), *rūparūpa* (real corporeality), *sammasana rūpa* (corporeality which is deserving to be discerned and grasped).

4.63 Various kinds of corporeal units

By means of producing causes, there are four kinds of corporeal units as follows.

1. *kammaja rūpa kalāpa* = corporeal units produced by *kamma* = (9) kinds
2. *cittaja rūpa kalāpa* = corporeal units produced by mind = (8) kinds
3. *utuja rūpa kalāpa* = corporeal units produced by temperature = (4) kinds
4. *āhāraja rūpa kalāpa* = corporeal units produced by nutriment = (2) kinds

There are (23) kinds of corporeal units totally.

4.63.1 Corporeal units produced by *kamma* (9) kinds

- (1) *cakkhu dasaka kalāpa* = eye-decad
- (2) *sota dasaka kalāpa* = ear-decad
- (3) *ghānadasaka kalāpa* = nose-decad
- (4) *jivhādasakakalāpa* = tongue-decad
- (5) *kāyadasaka kalāpa* = body-decad
- (6) *itthibhāva dasaka kalāpa* = female sex-decad
- (7) *pumbhāvadaska kalāpa* = male sex-decad
- (8) *hadaya vatthu dasaka kalāpa* = base-decad
- (9) *jīvitānavaka kalāpa* = vital-nonad

These (9) kinds of corporeal units are produced by previous *kamma* and are real corporeality which are deserving to discern as objects of *vipassanā* practice.

4.63.2 Corporeal units produced by mind (8) kinds

- (1) *cittaja suddhaṭṭhaka kalāpa* = pure octad produced by mind, with nutriment as (8)th factor
- (2) *kāyaviññatti navaka kalāpa* = bodily expression nonad (basic (8) factors + bodily expression = 9)

PAGE-725

- (3) *lahutā deka dasaka kalāpa* = unidecad with physical agility etc., (basic (8) factors + physical agility + physical elasticity + physical adaptability = 11)

- (4) *kāyaviññatti lahutādi dvādasaka kalāpa* = duodecad with bodily expression, physical agility etc. (basic (8) factors + bodily expression + physical agility + physical elasticity + physical adaptability = 12)
- (5) *vacīviññatti dasaka kalāpa* = sounddecad with verbal expression as (10) factors (basic (8) factors + sound + verbal expression)
- (6) *vacīviññatti sadda lahutādi terasaka kalāpa* = tridecad with verbal expression + sound, physical agility etc. (basic (8) factors + verbal expression + sound + physical agility + physical elasticity + physical adaptability = 13)
- (7) *(assāsa-passāsa) cittaja saddanavaka kalāpa* = soundnonad produced by mind (of inbreath-outbreath) = (basic (8) factors + sound = 9)
- (8) *(assāsa-passasāsa) saddalahutādidvādasaka kalāpa* = duodecad with sound (of inbreath-outbreath), physical agility etc. (basic (8) factors + sound + physical agility + physical elasticity + physical adaptability = 12)

In the Compendium of Philosophy (*Abhidhamatṭha saṅgaha*), only (6) kinds of corporeal units produced by mind are expressed. However, in the *Visuddhi magga*, it is explained that the in-breath and out-breath are corporealities produced by mind, *assāsa passāsā citta samuṭṭhānāva*, (*Vs-1-346*), and there are (8) kinds of corporeal units produced by mind, indeed.

Pāli Quotation (Vs-2-223)

According to *Visuddhi magga*, the bodily part called the in-breath out-breath are only a group of corporeal units called nonad with sound as ninth factor. Some noble teachers assumed that this bodily part should be varied two kinds. Sometimes breathing is very nice, agile, accommodate and adaptable. Sometime, breathing is not nice, not agile, non-accommodate and unadaptable. Thus the inbreath-outbreath varies as two kinds depending on presence of physical agility etc or not, resulting in arising of (8) kinds of corporeal units produced by mind.

It is better to discern these kinds of corporeal units for a *meditator* who has well experienced to discern corporealities of (6) doors, (42) bodily parts previously. Only when the real corporealities had been discerned up to the ultimate nature by penetrate insight knowledge can a *meditator* discern easily non-real corporealities or those corporeal units with non-real corporealities.

(1) Cittajasuddhaṭṭhaka kalāpa

The practising person must discern pure octad produced by mind with nutriment as (8)th factor similar to ways of discerning on *cittaja rūpa* in (6) doors, (42) bodily parts.

PAGE-726

(2) Kāyaviññatti navaka kalāpa

After emphatic taking into heart the life-continuum he must try to bend and stretch fore-finger.

The practising person must discern the nature of arising of many corporeal units called pure octads which are produced by mind which causes to bend or stretch forefinger. He must continue to discern pure octads produced by mind which are spreading toward forefinger. At that time the shape of fore-finger will be disappeared and only pure-octads can be seen in his insight knowledge. Then he must scrutinize those pure octads produced by mind with bodily expression which intends to bend or stretch continuously. When it can be found

in the insight knowledge, those corporeal units are called bodily expression nonads (*kāya viññatti navaka kalāpa*).

(3) *lahutā dasaka kalāpa*

He must discern pure octads produced by mind previously. Then he must discern those corporeal units associated with non-real corporealities, i.e., physical agility, physical elasticity physical adaptability by insight knowledge.

(4) *kāyaviññattilahutādi dvādasaka kalāpa*

The practising person must discern bodily expression nonad previously. Sometimes it is agile, elastic and adaptable to bend or stretch fore-finger. At that time, bodily expression nonads associated with physical agility can be seen by penetrative insight. If it is not associated by those three special expression corporealities (*viññatti rūpa*), the gesture of bend or stretch is not agile, non-elastic and not adaptable, resulting in appearance as only bodily expression nonads in the insight knowledge. Remaining gestures such as walking, etc., must be discerned similarly. During discerning on four deportments (*iriyāpatha*) and practice of clear comprehension (*sampajañña*), he must scrutinize those two kinds of corporeal units, *kāyaviññatti navaka kalāpa* and *kāyaviññatti lahutādidvādasaka kalāpa* because those corporeal unit are predominant in those gestures.

(5) *vacīviññatti dasaka kalāpa*

The *meditator* must on his *bhavanga* mind clear-element (= life-continuum) and recite ‘A’, ‘B’, etc, by insight knowledge. He must discern nature of continuous arising of pure octads produced by mind which are spreading to larynx. Then the sounds of A, B can arise in larynx where body-decads, etc., are existing as continuity of corporeality. When the earth-element consisting in pure octads produced by mind strike together with the earth-element consisting in body decads of the larynx with the help of the air-element, the sounds of ‘A’, ‘B’ arise as a result. The verbal expression which intends to say A, B also associates with those corporeal units. Thus *vacīviññatti dasaka kalāpa* (sound decads with verbal expression) arise in the larynx which is consisting of the vocal cords enveloped in folds of mucous membrane. He must discern the nature of arising of sounds of remaining alphabets and their origins of sounds similarly.

PAGE-727

(c) *vacīviññatti sadda lahutādi terasaka kalāpa*.

Sometimes it is agile, elastic and adaptable to recite A,B. Thus physical agility, physical elasticity and physical adaptability are also associated with sound decads verbal expression, resulting in arising of tridecads with verbal expression, sound, physical agility, etc., in the larynx. Sometimes, it is not agile, non-elastic, not adaptability to recite A, B. Then it lacks physical agility etc and only sound-decads with verbal expression (*vacīviññatti dasaka kalāpa*) arise in the larynx.

Kammaja pathavī (the earth-element produced by *kamma*) consisting in corporeal units of sound producing site is similar to gong. The earth-element produced by mind *cittajapathavī* consisting in pure octads which are spreading to sound producing site are similar to a mallet. The gesture striking the gong is similar to verbal expression (*vacīviññatti*). That verbal expression is produced by *cittajavāyo* (the air-element produced by mind) which is produced by mind wishing to bring forth such kind of sound of alphabet. Thus one must discern sound of speech which are produced by corporeal units with

predominant air-element while the latter are spreading to larynx or other sound producing site.

(7) (*assāsa-passāsa*) *cittaja sadda navaka kalāpa*

The practising person must discern sound nonad produced by mind (of inbreath-outbreath) called the nature of arising of in-breath out-breath by mind. He must discern the air existing in the respiratory tract previously. Then he must discern the four great elements of inbreath-outbreath. When the concentration becomes powerful, the corporeal units can be found by penetrative insight. If those corporeal units can be analyzed, (9) kinds of nature of corporealities including sound of breath can be found. The sound of breath is brought fourth by the earth-element consisting in corporeal units of respiratory tract, which are struck by the earth-elements consisting in corporeal units of inbreath-outbreath respectively. He must scrutinize and analyze the nature of arising of pure octads produced by mind in the respiratory tract, the sound of breath produced by striking of earth-element consisting in two kinds of corporeal units and he must discern each corporeal unit consisting of (9) factors including sound and basic (8) factors.

If he is unable to see corporeal units of in-breath and out-breath which are arising in the respiratory tract but only clear mass of four great elements can be seen, he must emphasize the space-element within that clear mass of four great elements. Those corporeal units of in-breath-out-breath can be seen easily. It is essential to attain the help of light produced by concentration.

Sometimes it is agile, elastic and adaptable to breathe. Thus physical agility, physical elasticity and physical adaptability are also associated with sound nonads, resulting in ability to see duodecads with sound, physical agility etc, in the respiratory tract. Sometimes, it is not agile, non-elastic and not adaptable to breathe. Then it lacks physical agility etc, and only sound nonads arise in the respiratory tract.

Among these corporealities, bodily expression, verbal expression, physical agility, physical elasticity, physical adaptability and the space-element are non-real corporealities. These corporealities, therefore, are not deserving to discern and generalize by *vipassanā* knowledge. However, it is instructed to discern and keep in mind these non-real corporealities in *Nāmarūpapariccheda Ñāṇa* stage, according to *Visuddhimagga-2-225*.

PAGE-728

4.63.3 Corporeal units produced by temperature, (4) kinds.

- (1) *suddhaṭṭhaka kalāpa* = pure octad produced by temperature
- (2) *sadda navaka kalāpa* = sound-nonad with sound as ninth factor
- (3) *lahutūdeka dasaka kalāpa* = unidecad with physical agility etc...
- (4) *sadda lahutūdi dvādasaka kalāpa* = duodecad with sound, physical agility etc... (basic (8) factors + sound + physical agility + physical elasticity + physical adaptability = 12)

Among these corporeal units, pure octad and sound-nonad are real corporealities which are deserving to discern and generalize by *vipassanā* practice. Pure octads can be found in (6) doors, (42) bodily parts where *utuja rūpa* are available. Sound-nonad is consisting of sound as ninth factor, such as internal sound of stomach. These two kinds of corporeal units can be found in both internal and external inanimate world.

Those corporeal units of number (3) and (4) are associated with non-real corporealities which are not deserving to discern and generalize by *vipassanā* practice. Thus, pure octad and sound nonad only are deserving to discern as objects of practice and he must

discern those corporealities in similar way as shown in previous explanation on *utujarūpa*. Unidecad and duodecad are corporeal units which are deserving to discern in the stage of *nāmarūpa pariccheda ñāṇa*. Those two kinds of corporeal units can not be found in external inanimate world but in animate world only.

4.63.4 Corporeal units produced by nutriment, (2) kinds

- (1) *suddhaṭṭhaka kalāpa* = pure octad produced by nutriment
- (2) *lahutūdeka dasaka kalāpa* = unidecad with physical agility etc... (basic (8) factors + physical agility + physical elasticity + physical adaptability = 11)

Among these corporeal units, pure octad can be found in (6) doors, (42) bodily parts. These corporealities are real ones which are deserving to discern and generalize by *vipassanā* practice.

Unidecad with physical agility etc, is associated with non-real corporealities which are not deserving to discern and generalize by *vipassanā* practice. However, this kind of corporeal unit must be discerned in the stage of *nāmarūpa pariccheda ñāṇa*. Both kinds can be found in only internal or external animate world but not inanimate world.

PAGE-729

4.63.5 Three kinds of sounds

There are three kinds of sounds as follows.

1. sound of breathing = (inbreath-outbreath) (a) sound nonad (b) duodecad with sound, physical agility etc....
2. sound of speech + (a) sound-decad with verbal expression as tenth factor (b) tridecad with verbal expression, sound, physical agility etc
3. internal sound of stomach, etc... = sound-nonad produced by temperature

Thus three kinds of corporeal units with sound can be found in both internal and external animate world. In external inanimate world, however, there are only sound-nonads produced by temperature such as thunder, wind sound, etc... The *meditator* who wants to discern these sounds must discern four great elements of the source of sound. When corporeal units can be seen, he must analyze those corporeal units, up to the field of ultimate reality. For instance, if the sound of thunder is intended to be discerned, he must emphasize four great elements of that sound producing site by the help of light produced by concentration. He can see only sound nonads produced by temperature by insight knowledge. If sound of bird is intended to be discerned, he must emphasize four great elements of bird's sound producing site, syrinx, previously. When corporeal units can be seen, he must analyze it thoroughly. When *vipassanā* practice is intended to be carried out, verbal expression corporeality (*vacīviññatti rūpa*) must be excluded. (Discerning on sound of breathing has been explained in previous pages).

4.64 Characteristic corporealities (*lakkhaṇa rūpa*) must be discerned

1. *upacaya-santati*

The Buddha preached (2) kinds of nature of arising of real corporealities depending on individual preference, i.e., *upacaya, santati*. He must discern nature of *upacaya* by taking objects of phenomena of arising of real corporealities during the period from beginning of the

paṭisandhi to matured controlling faculties. The arising nature of real corporealities in recent (6) doors, (42) bodily parts is called *santati*.

2. *jaratā* (decaying)

The static phase (*thiti khaṇa*) of all real corporealities is called *jaratā* (decaying).

3. *aniccatā* (perishing)

The perishing phase (*bhaṅga*) of all real corporealities is called *aniccatā*.

PAGE-730

Thus, he must keep in mind *santati*, *jaratā*, *aniccatā* by taking the object of arising, static, and perishing-phases of real corporealities within eye-decad etc. He must discern and keep in mind each corporeal unit of remaining doors, bodily parts, similarly. Then he must discern the arising phase, static phase and perishing phase of all real corporealities consisting in (6) doors, (42) bodily parts as a whole. He must keep in mind arising phase, static phase and perishing phase of all real corporealities which are arising during the period from beginning of *paṭisandhi* to the period when controlling factors are completely matured in him.

These explanations are presented as mentioned in *Visuddhimagga-2-225*, in order to keep in mind all real and non-real corporealities for the stage of *nāmarūpa paricchedañña* and purification of view. (*diṭṭhivisuddhi*).

During discerning on real corporealities, the *meditator* will find non-real corporealities as unavoidable condition.

Therefore when real corporealities are intended to be discerned, non-real corporealities are inseparable and the latter must be kept in mind simultaneously. However, according to *Visuddhimagga-2-225*, it is explained as follows.

- 1.(a) Bodily expression and verbal expression corporealities are merely mode of intimation of real corporealities produced by mind.
- (b) Those non-real corporealities, i.e, *upacaya*, *santati*, *jaratā* and *aniccatā* are merely mode of arising phase, static phase and perishing phase of all real corporealities produced by four origins.
2. Physical agility, physical elasticity and physical adaptability are merely mode of distinct feature of corporealities produced by mind, temperature and nutriment.
3. Space-element is merely the nature of factor of separation among corporeal units so as not to mix together, but not real corporeality.

These corporealities are not deserving to discern and generalize by means of three general characteristics as the objects of *vipassanā* knowledge. Although these are not deserving to practise like this, due to occurrence of mode of intimation and distinct feature of real corporealities, and occurrence of factor of separation of corporeal units, these are deserving to reach designation as “Corporeality” (*rūpa*). (*Vs-2-252*)

Among those (28) kinds of corporealities, (4) kinds of characteristic corporealities (*lakkhaṇa rūpa*) are called *nakutocisamuṭṭhāna rūpa* which are not produced by any factor.

4.65.1 Suggestion for practising persons

According to *Mahāgopālaka Sutta*, *Mūlapaṇṇāsa* (*M-1-280, 286*) and explanations found in that commentary, the practising person who wants to attain the Path-Knowledge, the Fruit-Knowledge and *nibbāna* must be able to discern (28) kinds of corporealities by means of both qualitatively and factors of arising (*samuṭṭhāna*), such as,

1. which kinds of corporealities are produced by *kamma*,
2. which kinds of corporealities are produced by mind,
3. which kinds of corporealities are produced by temperature,
4. which kinds of corporealities are produced by nutriment and
5. which kinds of corporealities are not produced by any factor, etc...

Because of this explanation, it has been presented how to discern and keep in mind (28) kinds of corporealities with their factors of arising systematically. Then it has been explained in *Visuddhimagga*, in order to discern those corporealities commonly as a whole, as follows.

4.65.2 Discern all corporeal *dharmas* commonly as a whole

Pāli-Quotation (Vs-2-223)

The practising person must discern all kinds of corporeal *dharmas* existing in (6) doors, (42) bodily parts, as “this is corporeal *dharmas*” through taking object of unique character of “change and alteration”.

According to this explanation, the *meditator* must discern as “corporeal *dharmas*, corporeal *dharmas*” by seeing (54) or (44) kinds of corporealities situating in each door and each bodily part previously. Then all corporealities of (6) doors and (42) bodily parts must be discerned as “corporeal *dharmas*, corporeal *dharmas*”, commonly by insight knowledge.

4.65.3 Summary of practice of *rūpakammaṭṭhāna*

1. The concentration must be developed successively, (through either practice of mindfulness of breathing or any kind of *samatha* practices).
2. During developing concentration by taking object of four great elements in order to reach access concentration before it is unable to see corporeal units, he must emphasize the specific character of each element and discern as “the earth-element, the water-element, the fire-element, the air-element.”
3. When corporeal units are intended to be analyzed, after developing access concentration he must scrutinize each ultimate nature of corporeality as ‘the earth-element’, ‘the water-element’, ‘the fire-element’, ‘the air-element’, colour, smell, taste, nutriment, life-faculty, eye-clear sensitivity.. etc
4. When he is able to generalize commonly by means of the nature of change and alteration of whether
 - (a) real corporealities, i.e, (54) kinds, (44) kinds, of each door and bodily part, or

- (b) real corporealities associated with non-real corporealities, or
- (c) all real corporealities of (6) doors, (42) bodily parts commonly, or
- (d) all real corporealities associated with non-real corporealities of (6) doors, (42) bodily parts commonly,

he must be discern and keep in mind through any way of the followings.

- (1) “this is corporeality” “this is corporeality”, or
- (2) “corporeality”, “corporeality”, or

(3) “corporeal *dhamma*”, “corporeal *dhamma*”.

4.66 The nature of change and alteration

Pāli-Quotation (Mahāṭṭ-2-86) (Khajjanīya sutta, Sam-2-71)

The nature of change and alteration means modification of continuity of corporealities, due to opposite factors, such as heat, cold etc. It can be said that it is the nature of change and alteration when heat is predominant with the result that continuity of corporealities becomes overheat continuously, which is a kind of fever or when cold is predominant with the result that continuity of corporealities becomes overcold continuously, which is also a kind of fever. It means different phenomena of corporeal condition. In other words, the nature of arising of succeeding continuity of corporealities which is different from preceding ones and that kind of various modification can be said the nature of change and alteration.

Similarly, the arising processes of corporealities are different between during hunger and after meal; between during normal condition and after bitten by insects, scorpions, snakes, etc ... or exposed by sunshine etc.

That kind of modification of corporealities can be said the nature of change and alteration and then due to presence of that nature of alteration (*ruppana*) it is called *rūpa*.

Alteration of corporealities caused by overcool is very obvious in the hell called *lokantarika* which exists midst of cosmological systems. It is also very obvious in polar region called Mahimsaka Division where animals can expire, due to excessive cold.

Alteration of corporealities caused by overheat is very obvious in the hell called *avīci* which is existing in very deep interior part of the earth. Alteration of corporealities caused by hungry is very obvious in the realm of ghost (*peta*) (= one kind of four woeful existences called *apāya*) or such place where natural disaster of hunger falls. Alteration of corporealities caused by thirst is very obvious in the realm of *asura* called *kālakañcikā* (one kind of four woeful existences called *apāya*). Malaria is really, a kind of most obvious evidence of alteration of corporealities.

PAGE-733

When the air-element within body changes to worse hand, leg etc., become paralyze; it is unable to move hand, leg etc., as a result of paralysis; cardiac blood vessel, cerebral blood vessel, etc., become block and breakdown; it will become blind, lame, deafness. Alteration of corporealities caused by sunburn is obvious in desert.

Thus the phenomenon of modification of succeeding continuity of corporealities which is different from usual occurrence of preceding continuity of corporealities is called the nature of change to worse (*ruppana sabhāva*). However, due to presence of constant specific nature of the earth-element, the water-element, the fire-element, the air-element, such as, nature of hardness, flowing, heat, supporting, which are existing in that continuity of corporealities, these are called “the ultimate reality” (*paramattha*). (*Sam-A-2-267, 268*)

In mental *dhamma*, it is also obvious in the arising phenomenon of succeeding continuity of mentalities which is different from usual phenomenon of preceding continuity of mentalities, due to presence of opposite causes. However it is not so obvious than change and alteration of corporealities. Thus it is designated that the corporeal *dhamma* only has the nature of “change and alteration” through common usage. (*Mahāṭṭ-2-86*)

4.67 The Buddha's philosophical doctrine on physical relations

As mentioned in above section, it is achieved to present how to discern corporeal *dhammas* taught by the Buddha in *Abhidhammā*. The practising *meditator* who is able to discern corporeal *dhammas* up to the field of ultimate reality by penetrative knowledge, will understand very profound and subtle philosophical doctrine on physical relations, found in *Abhidhammā*.

The body of every being is only a group of very tiny sub-particles called corporeal units (*rūpa kalāpa*). Each corporeal unit consists of at least (8) kinds of ultimate nature of corporealities, i.e., the earth-element, the water-element, the fire-element, the air-element, colour, smell, taste, nutriment. Some kinds of corporeal units consist of (9), (10) kinds etc... of the ultimate nature of corporealities.

PAGE-734

Those ultimate nature of corporealities, indeed, are neither sub particles nor mass with form and shape but mere ultimate nature of hardness, flowing, heat, supporting etc. When those ultimate nature of corporealities, such as, (8) kinds, (9) kinds, etc., are composed in a unit they become a very tiny sub particle called corporal unit (*rūpa kalāpa*). The smallest system of ultimate corporealities which can be seen by the eye of wisdom only but not normal eye, is called corporeal unit. Only when numerous corporeal units are composed, bodily parts, such as (32) bodily parts, (42) bodily parts, etc., can arise as a group. When those bodily parts, in turn, are composed proportionally, depending on previous *kamma*, male, female, person, being etc., exist in the aspect of conventional reality (*voḥāra sacca*).

Thus the fundamental corporealities of human beings are only the nature of hardness, flowing, heat, supporting etc. Those kinds of ultimate nature, indeed, are the natural *dhammas* which arise temporarily within very short instant between two kinds of voidness, i.e., voidness before arising and voidness just after arising. It is a question that how long does it take very short instant? The answer is as follows.

**ekiccharakkhaṇe kotisatasahassasankhā uppajjittvā nirujjati. (Sam-A-2-295)*

= Within a second the mental *dhammas* are arising and perishing away about 10^{12} times (Tera units). (*Sam-A-2-295*) Thus duration of one mind moment (*cittakkhaṇa*) is about one picosecond (10^{-12}) only. Corporeal *dhamma* is (17) times longer than mental *dhamma*, said by the Supreme Buddha. The ultimate corporeality, therefore, has got very short life-span. Only when the *meditator* is able to discern those corporeal *dhammas* with very short life-span by penetrative knowledge, can the knowledge of contemplation of impermanence (*aniccānupassanā ñāṇa*), the knowledge of contemplation of suffering (*dukkhā nupassanā ñāṇa*) and the knowledge of contemplation of non-self (*anattā nupassanā ñāṇa*) appear in him really. Then the light of non-self will shine marvelously in his knowledge. That light of non-self is the supreme essence which can be get only under the Noble Admonishment of the Supreme Buddha, indeed.

However the Noble Path-Knowledge can not arise through discerning mere corporeal *dhammas* as the object of *vipassanā* practice, he must continue to discern and keep in mind mental *dhammas* also according to the commentary of *Abhidhamma-1-271*.

Now it would be presented on how to discern four kinds of deportments (*iriyāpatha*) and practice of clear comprehension (*sampajañña*) relating to corporeal *dhamma*.

PAGE-735

4.68 Discerning on deportment (*iriyāpatha*) and clear comprehension (*sampajañña*)

These ways of discerning on deportment and clear comprehension can be clear understood after five aggregates have been discerned systematically. Here it will be explained in brief account for *meditators* who is able to discern only corporeal *dhamma*.

4.68.1 Pāli text related to *iriyāpatha*

Pāli-Quotation (Dī-2-232)

= And again *bhikkhus* the *bhikkhu* knows on “walking” while he is walking; or knows on “standing” while he is standing; or knows on “sitting” while he is sitting; or knows on “reclining” while he is reclining. All kinds of corporealities of that *bhikkhu* are situated in such mode; those all kinds of corporealities are known by means of that mode, as really it is. (Dī-2-232)

Various interpretations of above Pali texts are widely explained in detail in commentary and sub commentary. The sub-commentator commented on explanation of commentary as follows.

Pali-Quotation (M-ṭī-1-351)

The phrase, “knows on walking while he is walking” etc, concerns with both

1. ordinary nature of knowing of merely walking, standing, sitting, reclining and
2. significant nature of knowing on corporealities existing in each deportment.

In those two kinds of nature of knowing, the first kind, ordinary nature of knowing of merely walking etc... is not necessary in this section of deportment (*iriyāpatha*) but the second kind, significant nature of knowing on corporealities occurring in each deportment. In order to distinguish that necessary kind of nature of knowing, the commentator explained “*tattha kāmam*” etc... (M-ṭī-1-351)

PAGE-736

4.68.2 The explanation of commentary

pāli Quotation (Dī-A-2-357, M-A-1-255, 256)

In above Pāli text of *iriyāpatha* ____ even domestic dogs, foxes, etc, know on “walking” while they are walking. The Buddha preached it without referring to that kind of nature of knowing. It is right, that kind of nature of knowing...

- (1) is unable to reject perception of being,
- (2) is unable to remove perception of self,
- (3) is neither real *samatha* practice nor *vipassanā* practice,
- (4) is not *satipaṭṭhāna bhāvanā* (way of practice by which mindfulness put on object).

Significant nature of knowing of practising *bhikkhu*, on the other hand,

- (1) is able to reject perception of being,
- (2) is able to remove perception of self,
- (3) is real practice of either *samatha* or *vipassanā*,
- (4) is *satipaṭṭhāna bhāvanā*, actually. In order to distinguish the fact
(1) who is walking?

- (2) Whose walking is it?
 (3) Why is he walking? etc., the Buddha preached the phrase “knows on walking while he is walking” etc... evidently. It should be recognized on standing etc., similarly.
 (Dī-A-2-357, M-A-1-255,256)

4.68.3. The concept of being (*satta*)

Pāli Quotation (M-ṭī-1-351, 352)

PAGE-737

Due to presence of common sense by which one obsesses an idea, ‘I walk’, ‘It is my walking’ etc, the ordinary nature of knowing of domestic dogs, foxes etc, is unable to reject perception of being (*satta saññā*).

Due to inability to reject perception of being, it is unable to remove wrong perception called perception of self (*atta saññā*) by which an idea that “the self which is able to do and feel is present”, can arise consequently. That kind of ordinary nature of knowing is unable to remove perception of self because it is not opposite occurrence of that perception of self and it is, really, unable to develop the knowledge of non-self.

For a *meditator* who has “ordinary nature of knowing of mere walking etc, which is unable to reject perception of self, how can real practice be accomplished? Commentator Sayadaw, therefore, commented the fact “that kind of knowing is neither real practice nor *satipaṭṭhānabhāvanā*. (M-ṭī-1-351, 352)

Every *meditator* should like to recognize carefully on above explanations found in commentaries and subcommentaries. It is very important suggestion for every *meditator* who wants to attain *bibbāna* in this very life.

In order to explain the second kind of nature of knowing, the significant nature of knowing, the commentator Sayadaw commented as follows.

Pāli Quotation (Dī-A-2-357, M-A-1-256)

1. The answer for “who is walking?”... is that ____ neither any being nor person is walking actually.

The direct meaning of this question, “who is walking?, is that ____ an expression of inquiry on the nominative person who is the doer of the action of verb, “walking”, without differentiating nominative person and action of the verb. The real meaning of that question is to be rejected “self” which is special effect of the subject. It is because the fact that “mere the nature of *dhmma* called the ultimate corporeality or mentality is the doer of the action of the verb, “walking”, is apparently seen by penetrative knowledge. (M-ṭī-1-352)

PAGE-738

Those ascetics, out of the Buddha’s admonishment, obsess an idea that the ‘self’ (the living being, consciousness-being, self-being) is the doer of the action of various verbs, such as walking, etc. and it is able to feel various objects (*ārammaṇa*)”.

According to *Abhidhammā*, the Buddha’s Supreme Doctrine, in the aspect of the ultimate reality (*paramattha sacca*), there are only bulk of corporeal and mental *dhammas* which are contiguously arising in the continuum of every being. Among (31) realms_____

1. in the realm of mindless beings (*asaññasatta bhūmi*), it can be found corporeal *dhammas* only,
2. in formless worlds (*arūpa bhūmi*), it can be found mental *dhammas* only,

3. in (26) realms of five aggregates (*pañcavokāra*), it can be found corporeal and mental *dhammas* only.

It is no ‘self’ (*atta*) out of corporeality and mentality. It is no indestructible essence of “self” which is transferring from one life to another. It is not ‘self’ which is able to cease after death. So, while the action of walking is taking place, there are only piles of corporality and mentality which are arising as mode of walking but not nominative person, being, ‘self’ which are doers of the action of the verb, ‘walking’. Due to absence of nominative person, being, ‘self’ while the action of walking is being taken place, the commentator Sayadaw answered that “neither being nor person is walking actually”. Those *dhammas* which are able to carry out the action of the verb, ‘walking’, are only piles of corporeally and mentality. It means that neither such being (person) nor ‘self’ is walking because only corporeal and mental *dhamma* achieve to walk and there are no beings, persons, ‘self’ etc, out of corporeal and mental *dhammas*. (*M-ṭī-1-352*)

2. The answer for “whose walking is it? .. is that _____ it is walking of neither any being nor person. The meaning of this question, “whose walking is it?” ... that _____ an expression of the same meaning mentioned above by means of indirect way. It says it’s meaning with differentiating nominative person and action of the verb. It expresses no interconnectedness of the action of the verb with the nominative person. It is right _____ the word, *kin* = “who”, consisting in these two questions,

1. *ko gicchatī* = Who is walking?,

2. *kassa gamanam* = Whose walking is it?

are brought forth with a meaning that opposed to the way which is expressed within interrogative phrase. Thus “*ko gicchatī*” (Who is walking?) means no person is walking. *Kassa gamanam* (Whose walking is it?) means no person’s walking, indeed (*M-ṭī-1-352*).

PAGE-739

Pāli-Quotation (M-ṭī-1-352)

3. Why is he walking? _____ Above two questions express the fact that nominative person called being, self etc, had been rejected to achieve action of the verb, “walking”. Thus this question is an expression of inquiry on the fact which is the ultimate reality as a cause of rejected nominative person.

Those ascetics, out of the Buddha’s admonishment, suggested the fact related to walking as follows _____

“Walking means the ‘self’ (*atta*) is yoked by mind; the mind is yoked by controlling faculties; controlling faculties are yoked by the “self” (*atta*)”. That suggestion is actually, wrong. The third question, “why is he walking?”, indeed, expresses two kinds of causes,

1. the supporting cause (*upatthambaka*) and

2. direct cause (*janaka*) which are free from wrong suggestion, wrong cause etc. The commentator Sayadaw, therefore, explained the phrase “*tattha ko gicchatī*” etc.

The answer for “why is he walking?” is that _____ he is walking because of the presence of movement of the air-element produced by mind. In other words, it is because corporeal units produced by mind are spreading throughout body.

The practising *bhikkhu*, therefore, knows like this.

“The consciousness which desires to walk arises. That consciousness appeared by means of desire to walk brings forth the air-element. In this case, the sub commentator Sayadaw commented as follows.

Although that consciousness which arises by means of desire to walk brings forth the air-element, it produces not only the air-element alone but a group of corporeal units which are predominated with the air-element. In this case, it is not intended to say the fact the air-element's predominance means quantitatively as percentage etc., but only predominant ultimate nature of corporeality called the air-element, it is really intended to say the air-element which is produced by the consciousness with desire to walk and it is able to support all concomitant corporealities produced by that consciousness as a cause of moving. Due to this reason the commentator comments the fact, *vāyo viññattin janeti* (= the air-element brings forth bodily expression corporeality). (M-ṭī-1-352)

Significant gesture which is arisen simultaneously together with the person's inner desire to walk is called bodily expression (*kāyaviññatti*). The commentator explained the fact, *vāyo viññattin janeti*, due to occurrence of predominance of these two kinds of nature of the air-element, i.e., the air-element which is very powerful to support concomitant corporealities and the air-element which has sufficient ability to move all concomitant corporealities produced by consciousness with desire to walk. It is not intended to say the fact only a kind of nature of the air-element is direct cause (*janaka paccaya*) of bodily expression. If it is suggested on the fact, "only a kind of nature of the air-element is direct cause of bodily expression", the words, "bodily expression (*viññatti*) is derived corporeality depending on the four great elements", will be full of bad meaning. (M-ṭī-1-352)

The meaning of explanations found in the commentary is as follows.

The consciousness which desires to walk arises. Due to arising of that consciousness through desire to walk, a group of corporeal units which are predominant with the air-element, are produced as a result. Those corporeal units predominating with the air-element bring forth bodily expression. Due to spreading of corporeal units which are predominated with air-element produced by mind, the phenomenon like conveying forward of all corporealities arises as a result and it is known as "walking". It should be recognized on the standing, etc-similarly. (Dī-A-2-357, M-A-1-256)

4.68.4 Way of discerning

The *meditator* must develop concentration upto full-concentration during standing on such place where is intended to perform practice. Then all kinds of corporeal *dhammas* consisting in (6) doors, (42) bodily parts must be discerned and kept in mind again. Those corporealities produced by four causes are conveyed corporeal *dhamma* called *sakalakāya* which is the usage of commentary.

Two kinds of corporeal units associating with bodily expression, i.e.,

1. bodily expression nonad (*kāyaviññattinavaka kalāpa*)
2. duodecad with bodily expression, physical agility etc, (*kāya viññattinavaka kalāpa*), which are predominant with the air-element and produced by consciousness with desire to walk, are conveying corporeal *dhammas*.

After discerning all kinds of corporeal *dhammas* consisting in (6) doors, (42) bodily parts commonly, a gesture of walking must be carried out. Then he must walk a few yard. After the life-continuum (= *bhavaṅga* mind clearness) has been discerned, he must keep in mind those consciousness with desire to walk, which are arising depending on that life-

continuum successively. Then he must scrutinize either any one kind or both kinds of corporeal units associated with bodily expression which are spreading the whole body out enormously.

After closing both eyes practising person must walk slowly. The conveying corporeal *dhammas* associating with bodily expression must be emphasized and kept in mind gradually. The process of conveying corporeal *dhammas* together with the arising of conveyed corporeal *dhammas* must be discerned by penetrative knowledge.

4.68.5. The nature of the ultimate corporeality

The life-span of the ultimate corporeal *dhamma* is so short that it is no ability to transfer from one place to another. It is only the nature of *dhamma* which perishes away just after arising. Thus conveyable corporeal *dhamma*, indeed, never convey anyone while conveyed corporeal *dhamma* are also not conveyed from one place to another. Due to ability of the air-element and bodily expression it is only the nature of contiguous occurrence of new corporeal *dhammas* which are interconnected to each other in new places. Thus successive arising in new places without repeated arising in new places; without repeated arising in previous places, is caused by ability of the air-element and bodily expression. It is, therefore, explained that “the phenomenon of process like carrying forward of all corporealities is called “walking”.

PAGE-742

It is essential to distinguish between-

1. conveyable corporealities and
2. conveyed corporealities for a *meditator* who is discerning on four deportments (*iriyāpatha*)

According to the commentary, *Dī-A-2-357, M-A-1-256*

1. the conveyable corporealities are consisting in two kinds of corporeal units, bodily expression nonad (*kāyaviññatti navaka kalāpa*), and duodecad with bodily expression, physical agility etc .. (*kāyaviññatti lahutādidvādasaka kalāpa*), which are numerous spreading corporeal units throughout body and are predominated with the air-element, and
2. the conveyed corporealities are all kinds of
 - (a) *kammaja rūpa*
 - (b) *cittaja rūpa*
 - (c) *utuja rūpa*
 - (d) *āhāraja rūpa*, consisting in (6) doors, (42) bodily parts.

4.68.6 Both-sided corporealities produced by mind

Pāli Quotation. (Abhi-A-2-388)

According to explanation of above commentary, all consciousnesses consisting in cognitive processes of fivefold-doors, i.e., eye-door, ear-door etc are unable to produce any kind of deportment. However, remaining consciousnesses consisting in cognitive processes of five-doors, except fivefold-consciousness (*pañcaviññāṇa*), i.e., seeing-consciousness, hearing consciousness etc .. are able to produce ordinary *cittajarūpa* which belong to conveyed corporeal *dhammas*. Then the consciousness of life-continuum called *vūṭhimutta*

citta (= consciousness free from cognitive process) is also able to produce ordinary *cittajarūpa* which belongs to conveyed corporeal *dhammas*.

PAGE-743

Those consciousnesses which are able to produce conveyable corporeal *dhamma* are only consciousnesses of mind-door cognitive process. However some kinds of consciousness of absorption are unable to produce corporealities of deportment (*iriyāpatha rūpa*). These are able to maintain corporealities of deportment which are produced by consciousnesses of mind-door cognitive process. In realms of five-group-existence (*pañcavokāra bhūmi*), consciousnesses of absorption are able to produce ordinary *cittaja rūpa* which belongs to conveyed corporeal *dhamma*. Therefore, it is explained the fact that conveyed corporeal *dhammas* are consisting of all kinds of corporealities produced by four origins.

On the other hand, it is explained on conveyable corporeal *dhammas* which are consisting of corporealities produced by mind only.

Thus it should be recognized on two kinds of *cittaja rūpa*, i.e., corporealities consisting in bodily expression nonad and duodecad with bodily expression, physical etc .. are conveyable corporeal *dhammas*, and remaining *cittaja rūpa* produced by mind which are unable to produce corporealities of deportment are included in conveyed corporeal *dhammas*.

The *meditator* must discern conveyable corporeal *dhammas* in order to breakdown each kind of compactness of corporeality and to see the ultimate nature of each corporeal *dhamma* by penetrative knowledge. Then he must discern conveyed corporeal *dhamma* in order to see the ultimate nature of corporeality similarly. When both sides of corporeal *dhammas* are analyzed up to the ultimate reality, the process of arising in which conveyed corporeal *dhammas* are moved forward by means of conveyable corporeal *dhamma*, must be discerned by penetrative knowledge and he must keep that phenomenon in mind.

In the stage of Knowledge of analyzing Mentality-Materiality (*nāma rūpa pariccheda ñāṇa*), one must distinguish on

1. conveyable corporeal *dhamma*,
2. conveyed corporeal *dhamma*,
3. both conveyable and conveyed corporeal *dhamma* commonly and he must take into heart as “corporeal *dhamma*” “corporeal *dhamma*”.

4.69 Way of discerning on “standing”

Pāli-Quotation (Dī-A-2-357, M-A-1-256)

PAGE-744

The consciousness with desire to stand arises. Due to arising of that consciousness, corporeal units which are predominated with the air-element (CUPA) are produced as a result. Those corporeal units which are predominated with the air-element bring forth bodily expression which is called deportment of standing. In other words, that consciousness produces bodily expression nonads and duodecads with bodily expression, physical agility, etc., . due to spreading of CUPA produced by mind, the process like upright position of the whole body, is appeared consequently and it is designated as “standing”. (*Dī-A-2-357, M-A-1-256*)

When the consciousness with desire to stand arises, the *meditator* must discern that consciousness which arises depending upon the physical base of mind. Thus the life-continuum must be discerned previously and then he must emphasize the consciousness with

desire to stand. After the consciousness with desire to stand has been kept in mind, he must scrutinize bodily expression nonads and duodecads with bodily expression, physical agility, etc., which are produced by the consciousness with desire to stand. Then all kinds of corporealities produced by four origins must be distinguished and kept in mind by penetrative knowledge.

Those corporealities consisting in bodily expression nonads and duodecads with bodily expression, physical agility, etc., are conveyable or supportable corporeal *dharmas* while remaining corporealities produced by four origins are conveyed or supported corporeal *dharmas* in order to arise the upright position of the whole body. He must discern both sides of corporeal *dharmas* up to the field of the ultimate reality and he must take into heart as “corporeal *dharma*”, “corporeal *dharma*”.

4.70 Way of discerning on “sitting”

Pāli-Quotation (Dī-A-2-357, M-A-1-256)

The consciousness with desire to sit arises. Due to arising of that consciousness, corporeal units which are predominated with the air-element (CUPA) are produced as a result. Those CUPA produced by mind, bring forth bodily expression which is called ‘deportment of sitting’. In other words, that consciousness produces bodily expression nonads and duodecads with bodily expression, physical agility, etc... due to spreading of CUPA produced by mind, these processes,

1. like flexion of the lower part of body and
2. upright position of the upper part of body,

are appeared simultaneously and it is designated as “sitting”. (*Dī-A-2-357, M-A-1-256*)

According to explanations found in above commentaries, the *meditator* must be able to differentiate conveyable corporeal *dharmas* and conveyed corporeal *dharmas* systematically.

1. Conveyable corporeal *dharmas* include bodily expression nonad and duodecad with bodily expression, physical agility, etc., which are CUPA produced by consciousness with desire to sit.
2. Conveyed corporeal *dharmas* include all kinds of corporealities produced by four origins, which are situating in both lower and upper parts of body so as to bring forth sitting deportment.

Previously the practising person must discern the life-continuum. Then he must emphasize the consciousness with desire to sit and arising of both conveyable corporeal *dharmas* which are produced by mind with desire to sit and conveyed corporeal *dharmas* which are situated as ‘sitting deportment’. He can discern easily all kinds of corporeal units after the concentration has been developed sufficiently. When those kinds of corporeal units can be seen by penetrative knowledge up to the field of ultimate reality, it will be not difficult to discern sitting deportment for a *meditator* with sufficient concentration, indeed.

4.71. Way of discerning on “reclining”

Pāli-Quotation (Dī-A-2-357, M-A-1-256)

The consciousness with desire to recline arises. Due to arising of that consciousness, CUPA are produced as a result. Those CUPA produced by mind bring forth bodily expression which is called deportment of reclining. In other words, that consciousness produces bodily expression nonads and duodecads with bodily expression, physical agility etc., due to spreading of CUPA produced by mind, the process like leaning or prone position, is appeared and it is called “reclining”. (*Dī-A-2-357, M-A-I-256*)

During reclining is intended to be carried out, he must discern the life-continuum previously. Then he must emphasize the consciousness with desire to recline. He must continue to discern bodily expression nonads and duodecads with bodily expression, physical agility, etc., by penetrative knowledge. Those corporealities are conveyable or supportable corporeal *dhammas* to maintain all kinds of corporealities produced by four origins so as to recline successively. All kinds of corporealities produced by four origins, which bring forth reclining deportment, are conveyed corporeal *dhamma*. He must discern both sides of corporeal *dhammas* in order to breakdown compactness of corporeality. Then he must take into heart as “corporeal *dhamma*” “corporeal *dhamma*”.

In all kinds of deportments, conveyable corporeal *dhammas* consist of two kinds of corporeal units. If those processes of walking, standing, reclining are agile, elastic and adaptable, those consist of physical agility, physical elasticity and physical adaptability. If those processes of deportments are not agile, non-elastic and not adaptable, those lack physical agility, physical elasticity, physical adaptability. If these corporealities are associated with bodily expression, it becomes duodecad. If these corporealities are not associated, it becomes bodily expression nonad. In way of discerning on deportments, those two kinds of corporeal units are significant corporeal *dhammas*. The nature of pushing predominates in walking while that of supporting predominates in standing, sitting and reclining.

PAGE-747

4.72 Neither person nor I walk ! See wisely walking corporeality ...!

In the continuum of mind of meditating *bhikkhu* who is knowing conveyable corporeal *dhammas* and conveyed corporeal *dhammas* up to the field of ultimate reality while every deportment has being carried out, the knowledge like as follows is appeared in him.

The worldling usage is that “the being walks, the being stands”, etc. Though it is real worldling usage, it is a question that “is there such walking being? is there walking being?”. It can be answered that “no”. The simile is as follows.

The worldling usage is that “the bullock-cart goes, the bullock-cart stops, etc... Though it is real world ling usage, it is neither going bullock-cart nor stopping bullock-cart. Actually, as skillful bullock-cart driver drives the cart after yoking with four bullocks, it can be said merely that “the bullock-cart goes, the bullock-cart stops”.. etc, similarly.,

1. conveyed corporeal *dhammas* produced by four origins are similar to cart, due to presence of same meaning that inability to conceive,
2. predominant air-element which is produced by mind, in other words, bodily expression nonads and duodecads with bodily expression, physical agility, etc ... are similar to four bollocks,
3. each consciousness that desires to walk stand, sit, recline is similar to the bullock-cart driver.

When the consciousness which desires to walk, stand, etc, becomes apparent the air-element produced by mind brings forth bodily expression. In other words, when the

consciousness with desire to walk, stand etc., becomes apparent bodily expression nonads and duodecads with bodily expression, physical agility etc... are also produced by that consciousness. Various deportments, walking etc .. are brought forth by spreading of CUPA produced by mind. Those kinds of processes are merely known as “the being walks, the being stands, I walk, I stand” etc. Ancient noble commentators, therefore, said as follows.

Pāli-Quotation (Dī-A-2-357- 358, M-A-1-256-257) (M-ṭī-1-353)

PAGE-748

= As either the boat which lacks mind can reach another place, due to presence of momentum of air or the arrow which lacks mind can reach another place, due to presence of momentum of bow, this body (= all kinds of corporealities) which lacks mind can reach another place, due to presence of the air-element produced by mind.

As a puppet is able to walk, stand, or sit by means of strings or wires, this body (= all kinds of corporealities) is also able to walk, stand or sit by means of efficiency of mind.

Such being might be able to walk or stand without direct cause called consciousness with desire to walk and supporting cause called the air-element produced by that mind. Who is that kind of being in this world? It might be none of that kind of being in this world, indeed. (Dī-A-2-357, M-A-1-256, 257)

Pāli-Quotation (Dī-A-2-358, M-A-1-257)

= Therefore, it should be recognized the fact that meditation **bhikkhu** who is able to keep in mind well both direct cause called the consciousness with desire to walk and supporting cause called the air-element produced by that mind etc.,

1. knows walking while he is walking;
2. knows standing while he is standing;
3. knows sitting while he is sitting;
4. knows reclining while he is reclining.

(Dī-A-2-357, M-A-1-256, 257)

PAGE-749

In this case, due to arising of various consciousnesses with desire to walk, stand, sit, recline, the corporeal **dhammas** called bodily expression nonads and duodecads with bodily expression, physical agility, etc., which are conveyable for all kinds of corporealities produced by four origins, arise in order to bring forth those processes like walking, standing, sitting, reclining deportments respectively. Those kinds of corporeal units are predominated with the air-element. Depending on that air-element or four great elements which are predominated with the air-element, derived corporeality called bodily expression is brought forth. Thus three kinds of natural **dhammas**, i.e., consciousness, the air-element, and bodily expression, are interconnecting to each others.

Pāli Quotation (Paṭṭhāna-1-5)

= Mind and mental concomitants are able to benefit for arising of **cittasamutthāna rūpa** (= corporeality produced by mind) by means of **sahajāta paccaya satti** (efficiency of relation of compatibility). (Paṭṭhāna-1-5). According to **Paṭṭhāna**, these three natural

dhammas, i.e., the causal consciousness and the resultant air-element, the causal air-element and the resultant bodily expression, are compatible *dhammas* which arise simultaneously.

Those conveyable corporeal *dhammas* associated with bodily expression, which are produced by causal mental *dhammas*, are called *iriyāpatha rūpa* (= deportmental corporeality). Only when the meditator is able to discern both arising nature of deportmental corporealities produced by mind, and the processes of conveyable corporeal *dhammas* by which all kinds of corporealities are brought forth so as to walk, stand, sit, recline, can he be said that “he knows walking while he is walking”, “he knows standing while he is standing”, “he knows sitting while he is sitting”, “he knows reclining while he is reclining”. These are the meanings of explanations found in above Pāli Texts, commentaries, and sub-commentaries.

4.73 Causative mental *dhamma*

Although in the aspect of causative *dhamma*, it is mentioned through only the consciousness, every consciousness is unable to arise in the absence of mental concomitants (*setasika*). Therefore, it must be recognized the fact that mind and mental concomitants bring forth the arising of *cittasamuṭṭhāra rūpa*, according to above Pāli Texts found in *Paṭṭhāna-1-5*. It is a kind of preaching methodology that emphasizes on the consciousness only, resulting in common usage *cittaja rūpa* (= corporeality produced by mind). Way of discerning on causative mental *dhamma* will be presented in Section (5), *Nāmakammaṭṭhāna*, Volume II.

PAGE-750

4.74 *yathā yathā vā panassa*

Pāli Quotation (Dī-2-232) (Dī-A-2-358, M-A-1-257) (M-ṭī-1-353)

By means of such and such modes, all kinds of corporealities of that *bhikkhu* are situated, those various kinds of corporealities must be known by means of that and that modes. (*Dī-2-232*)

Above kind of preaching methodology of the Buddha is another way of discerning on deportment again. The meaning of above explanation is as follows.

By means of such mode, the body (= all kinds of corporealities) is situated, that body should be known by means of that mode.

1. By means of walking, the situating body (= all kinds of corporealities) must be distinguished as that mode of ‘walking’.
2. By means of standing, the situating body (= all kinds of corporealities) must be distinguished as that mode of ‘standing’.
3. By means of sitting, the situating body (= all kinds of corporealities) must be distinguished as that mode of ‘sitting’.
4. By means of reclining, the situating body (= all kinds of corporealities) must be distinguished as that mode of ‘reclining’. It means like this. (*Dī-A-2-358, M-A-1-257*)

The phrase, “*sabbasangāhikavacana*”, (= the speech which intends to say all four kinds of deportments), means the fact that ___ because previously the Buddha preached each kind of four deportments respectively, as “knows walking while he is walking” .. etc, this way of preaching, “*yathā yathā vā panassa*”, is intended to say “those all four kinds of deportments commonly”. (*M-ṭī-1-353*)

According to explanations found in commentaries and sub commentary, the first kind of preaching methodology was performed on each department separately as

1. knows walking while he is walking,
2. knows standing while he is standing,
3. knows sitting while he is sitting,
4. knows reclining while he is reclining.

PAGE-751

Then the second kind of preaching methodology was performed on all four kinds of departments commonly as “by means of such and such modes, all kinds of corporealities of that *bhikkhu* are situated, those kinds of corporealities must be known by means of that and that modes”. It should be recognized the fact that both kinds of preaching methodology refer to way of discerning on four departments.

However, *Ṭīkā Sayadaw* explained another way as follows.

Pāli Quotation (M-ṭī-1-353)

In the first kind of preaching methodology, the Buddha preached primarily on bodily expression nonads and duodecads with bodily expression, physical agility etc. Conveyable corporeal *dharmas* play significant role in this way of preaching while all kinds of corporealities produced by four origins which are conveyed corporeal *dharmas*, are non-significant. Because the Buddha preached primarily on the significant corporealities of deportment by means of significant method (*padhāna naya*), discerning on non-significant corporealities produced by four origins has also been performed consequently. Then, in this second kind of preaching methodology, “*yathā yathā vā panassa*”, the Buddha instructed to discern primarily on conveyed corporealities of the whole body, which are produced by four origins. In this way of preaching, conveyed corporeal *dharmas* play significant role while conveyable corporeal *dharmas*, non-significant. If it is performed to discern significant conveyed corporeal *dharmas*, i.e., all kinds of corporealities produced by four origins, discerning on non-significant conveyable corporealities of deportment has also been performed consequently. In order to clarify this concept, the Buddha preached the second kind of preaching methodology. Thus the practising person must know on the significance of these two kinds of preaching methodology. (*M-ṭī-1-353*)

PAGE-752

A worldly simile

Let us suppose that a man carries a bag full of rice on his shoulder. If one sees primarily on carrying man, he will see on carried rice-bag also consequently. Then if one sees primarily on carried rice-bag, he will see carrying man also consequently. It should be understood in this way.

4.75 Way of discerning with clear comprehension (*sampajañña*)

Pāli-Quotation (M-1-72) (M-A-1-265)

According to instructions found in above Pāli Text and commentary, the practising person must discern corporeal and mental *dharmas* only for the purpose of way of discerning with clear comprehension (*sampajañña*), such as while walking forward, while walking backward, etc. In this case, the corporeal *dhamma* means form-aggregate (*rūpakkhandha*). Mind and mental concomitants within each mind moment (*cittakkhaṇa*) are four kinds of mental aggregates (*nāmakkhanda*). Thus the *meditator* must discern

1. five aggregates while he is walking,
2. five aggregates while he is standing,
3. five aggregates while he is sitting,
4. five aggregates while he is reclining,
5. five aggregates while he is walking forward and backward,
6. five aggregates while he is gazing and side glancing,
7. five aggregates while he is bending and stretching,
8. five aggregates while he is handling bowl, robe, etc ...,
9. five aggregates while he is eating, drinking, lapping, chewing,
10. five aggregates while he is eliminating faeces, urinating,
11. five aggregates while he is walking, standing, sitting, sleeping, waking, talking, abiding silently etc...,
in order to perform way of discerning with clear comprehension.

PAGE-753

The Buddha preached on the facts relating with deportments, walking, standing, sitting, reclining, so as to intend long duration of deportments.

The Buddha preached on five conditions, i.e., while he is walking forward and backward, gazing, side glancing, bending and stretching so as to intend middle duration of deportments.

The Buddha preached on the facts relating with deportments mentioned in number 11, i.e., walking, standing, sitting, sleeping, waking, so as to intend very short duration of deportments (*khuddakacuppika iriyāpatha*). (*M-A-1-273*)

In this section of *rūpa kammaṭṭhāna*, the *meditator* must emphasize on the corporeal *dhammas* only. It will be presented discerning on mental *dhamma*, discerning on five aggregates and discerning on corporeal and mental *dhammas* suggested by the most Venerable *Mahāsiva Thero* in later, Section (5), *Nāmakamaṭṭhāna*, Volume II.

4.76 The explanations found in *Aṭṭhasālinī aṭṭhakathā*

In order to attain clear understanding on way of discerning on departments and clear comprehension, the explanation of *Aṭṭhasālinī aṭṭhakathā* will be presented as follows.

Pāli Quotation (Abhi-1-177, rūpa kaṇḍa)

Which is that corporeality called bodily expression (*kāyaviññatti*)? Such nature of supporting of the body, such nature of well supporting, such nature of arising of well supportable corporealities, such nature of expression by which the inner desire is to be known by other, such mode which brings forth the nature to be known, such nature which is able to be known, exists in the continuum of a person whose consciousness is any kind of wholesome or unwholesome or indeterminate or walking forward or walking backward or gazing or side glazing or bending or stretching hands, legs etc. This nature is known as bodily expression (*kāyaviññatti*) of that corporeality. (*Abhi-1-177*)

Pāli Quotation (Abhi-A-1-124)

PAGE-754

While the consciousness with desire to walk forward or backward arises, that consciousness produces *cittaja rūpa* (= corporealities produced by mind). During arising of *cittaja rūpa*, such air-element exist within pure octad which consists of the four great elements and four derived corporealities. That air-element supports the whole body (= all kinds of corporeal *dhammas*) which are concomitant arising nature with itself. It maintains well; it brings forth moving; it brings forth walking forward; it brings forth walking backward nature of the latter. (*Abhi-1-124*)

Pāli Quotation (Abhi-A-1-124)

[Those cognitive processes of five doors which are consisting of five-door advertence and mind-door advertence, called two kinds of *āvajjana*, are unable to produce bodily expression. Mind-door-cognitive process which is consisting of mind-door advertence (*mano dvārāvajjana*) only is able to produce bodily expression. Therefore]

Among the air-elements consisting, in those corporeal units produced by mind, those air-elements consisting in corporeal units which are produced by the first consciousness of (7) impulses of mind-door cognitive process, are able to support and maintain the whole body (= all kinds of corporealities) which arises simultaneously with itself, but it is unable to move from here to there. Air-elements consisting in those corporeal units, which are produced by second, etc... consciousness of (7) impulses of mind door cognitive process, are also similar to this way.

Air-elements consisting in those corporeal units which are produced by the last consciousness of (7) impulses of mind-door-cognitive process are able to perform various functions to support and maintain concomitant body (= all kinds of corporeal *dhamma*); to move, to walk forward; to walk backward; to gaze; to glance; to bend; to stretch, due to attaining of supporting cause of air-elements consisting in those corporeal units which are produced by those previous consciousness of (6) impulses of the same cognitive process. Due to presence of ability of air-elements consisting in corporeal units produced by the consciousness of seventh impulse, the function called going can arise, the function called coming back can arise; the function called going and coming back can arise; it brings forth a condition which is deserving to say that “it has reached to one *yojana* (= about 12 miles); it has reached to (10) *yojana* had been reached”. (*Abhi-A-1-124*)

PAGE-755

Pāli Quotation (Mūlaṭṭī-1-72)

Air-elements consisting in those corporeal units which are produced by the first consciousness of (7) impulsions are unable to move all kinds of corporealities. However, it should be known the fact that although it is unable to do like that, those air-elements arise together with bodily expression simultaneously.

It is because the fact that “among (10) directions, such direction is intended to go; it is desired to face such direction with various organs; that air-element support wells those corporealities facing with desired direction; it maintains well the latter. Thus significant gesture which is facing with that direction arises; that significant gesture which usually arises together with inner desire of himself is also known as bodily expression (*viññatti*). Therefore, it can be known the fact that “those air-elements arise together with bodily expression simultaneously. (*Mūlaṭṭī-1-72*)

Because of this reason, it is suitable to arise bodily expression by even mind-door advertence in accordance with inner desire to arise special expression corporeality (*vikāya rūpa*). Due to presence of suitable arising like that, it has been explained that (32) kinds of consciousness are able to produce ordinary *cittajarūpa*, deportment and bodily expression. Although bodily expression can be brought forth by mind-door advertence, only when numerous air-predominating corporeal units arise frequently, can it be said that “it has been reached, to one *yojana*; (10) *yojana* etc.”.

It means the fact that it is unable to reach any place with that distance by means of arising of only a few corporeal units which are predominated with the air-element. (*Mūṭṭī-1-72*)

PAGE-756

Pāli Quotation (Abhi-A-1-125)

For instance____ In order to convey a loaded bullock-cart with heavy weight which can only be conveyed by (7) pairs of bullocks yoke together with (7) yokes, the first pair of bullocks yoked together, are able to support both yoke and cart well and able to maintain cart leading to it's direction well, but unable to roll wheels up any more. The second pair of bullocks yoked together, etc., are also similar to this way.

After 7th pair of bullocks have been yoked together and the skillful bullock-cart driver sits in front of the cart, handles the ropes tied with those bullocks and touches all of them with a cane stick in order to drive cart. At that time, due to presence of equal force of each bullock, the loaded cart can be conveyed and wheels are also forced to roll up. Then it reaches to a condition which is deserving to say the fact that “the bullock-cart had been conveyed and reached to ten *yojana*, (20) *yojana*”. In this way it should be understood the parallelism of this simile. (*Abhi-A-1-125*)

While a loaded cart is being conveyed by (7) pairs of bullocks yoked together, as previous (6) pairs of bullocks maintain and lead to desired direction, those air-elements consisting in corporeal units which are produced by those previous consciousness of (6) impulsions, maintain concomitant corporeal *dhammas* so as not to reduce their ability and lead to desired direction well. However, as previous (6) pairs of bullocks yoked together are unable to roll wheels up, those air-elements consisting in corporeal units which are produced by previous consciousness of (6) impulsions are unable to move the whole body (= all corporeal *dhammas*). When the supporting factors of those air-elements consisting in corporeal units which are produced by previous consciousness of (6) impulsions are available those air-elements consisting in corporeal units which are produced by consciousness of seventh impulsion are able to move (= to arise successively in new places) the whole body. It means like this. (In this case, numerous impulsions of mind-door cognitive processes will arise as long as process of walking continuously.)

PAGE-757

4.77 The meaning of special expression corporeality (*Viññatti*)

Pāli-Quotation (Abhi-A-1-125)

Although the air-elements consisting corporeal units which are produced by the first consciousness of (7) impulsions are unable to move the whole body (= all corporeal *dhammas*), those corporeal units which are predominated with the air-element arise together with special expression corporality called *viññatti*

simultaneously. It is right ____ If one desires to walk forward, those air-elements consisting in corporeal units which are produced by the first consciousness of impulsion also maintain, support and lead the whole body to forward direction indeed. The nature of leading to forward direction of the whole body is performed by means of special expression corporeality called **viññatti**. It should be recognized the second consciousness of impulsion etc., in similar way.

Among those kinds of corporealities, some kinds of corporealities produced by such mind are also included.

All kinds of corporealities produced by that mind are not special expression corporealities. Actually, there is a significant gesture which is concomitant of air-element produced by mind; which is able to bring forth a factor of maintenance, supporting, leading to desired direction, mobility, of the whole body (= all corporeal **dhammas**). This kind of significant gesture is called “**viññatti**” (= special expression).

That corporeality called “special expression” is not produced by mind while pure octad with nutriment as eighth factor is produced by the latter. (It means that “special expression corporeality” is non-real one with the result that it is not produced by mind.) Although it is not produced by mind, as the Buddha preached the fact that “decaying and death are impermanent **dhamma**, **sañkhata dhamma**, (**sam-1-264**)”, due to presence of static phase (= decaying or **jarā**) and perishing phase (= death or **maraṇa**) of **sañkhāra dhamma** (corporeality, mentality, causes and results), that special expression corporeality can be called **cittasamuṭṭhāna rūpa** (corporeality produced by mind), due to occurrence of significant gesture (**vikāra rūpa**) called special expression of corporeal **dhamma** produced by mind, similarly. (**Abhi-A-1-125**)

Pāli Quotation (Mūlaṭī-1-72)

PAGE-758

= There is a kind of significant mode of the four great elements which are produced by mind, which is able to bring forth the air-element in order to support and move all corporeal **dhamma** called **rūpa kāya** (= the whole body). This kind of significant mode is called “**viññatti**”.

[In **Aṭṭhasālīnī aṭṭhakathā**, it is explained that “significant mode of air-element is called **viññatti**, while “significant mode of four great elements is called **viññatti**”, in **Mūlaṭīkā**. It should be recognized the fact that “in the **aṭṭhakathā**, it is explained only “significant nature” by means of “significant method” (**padhāna naya**), while it is explained both significant and non-significant nature in **ṭīkā**.]

= It is right ____ Due to presence of significant mode of those four great elements produced by mind, the air-element is able to support and move all corporeal **dhammas** called **rūpakāya**.

According to this phrase, “special expression is not produced by mind”, it show that “there is no special expression in the aspect of ultimate reality (**paramatha sacca**)”. This is due to the fact there is no corporeal **dhamma** in the aspect of ultimate reality without apparent cause”. Therefore, it can be known the fact that special expression is not real ultimate corporeality, according to the phrase, “special expression is not produced by mind”.

Due to absence of permanent ultimate **dhamma**, except **nibbāna**, it can not be said that “special expression is **apaccaya dhamma** which is void of cause. That special expression, therefore, is called corporeality produced by mind, due to occurrence of significant mode which is able to know inner desire to other. It should be accepted the fact that special expression corporeality is not only **cittasamuṭṭhāna rūpa** but also derived corporeality of the four great elements, due to occurrence of significant mode of the latter. (**Mūlaṭī-1-72**)

[It means the fact that as that special expression is called **cittasamuṭṭhāna rūpa** by means of indirect way of preaching methodology (**thānupacāra**) the former can be called derived corporeality because it arises apparently depending upon the four great elements.

It is explained by adding the suffix **nāma** with **cittasamuṭṭhānā** in the commentary (**Abhi-A-1-125**), because it is intended to show the fact that “special expression can be termed as **cittasamuṭṭhāna rūpa** by means of **thānupacāra**, a kind of metaphor, in which real term, **cittasamuṭṭhāna** of corporeal units produced by mind called **thāna** (dwelling place), becomes metaphorical term of special expression called **thānī** (dweller).]

PAGE-759

4.78.1 *Manoviññeya dhamma*

(*dhamma which can be known by only mind door cognitive process*)

Pāli Quotation (Abhi-A-1-125)

= According to explanation of the term “*viññāpetīti viññatti*”, due to presence of significant gesture which can be known, it is called *viññatti*. Which is able to be known? The significant gesture or desire of the mind is able to be known. This is the answer.

If a person who is situated at the direction of eye-clear-sensitivity, raises either hand or leg up; shakes either head or eyebrow, this gesture of each kind can be seen by eye-consciousness. But bodily expression (*viññatti*) can no be known by eye consciousness. It can be known by consciousness of mind-door cognitive process (*mano viññāṇa*). It is right ____ Only colour called moving shape can be seen by the eye by means of peculiar gesture of hand etc. Bodily expression, actually, can be known by continuity of consciousness of mind-door cognitive process by means of reasoning that “this person seems to do this function”. (*Abhi-A-1-125*)

Pāli Quotation (Mūlaṭī-1-72,73)

According to the phrase, “*kāreti maññe*” (= “this person seems to have desire to do this function”), such inner desire (= such bodily manner) can be known through bodily expression (*viññatti*) which is deserving to know by following consciousness of eye-door cognitive process and mind-door cognitive process which are causes of taking the object of colour. Bodily expression shows its ability of expression by knowing that inner desires (= that bodily manner).

This is because, such knowing that “this tree seems to have desire to do this function”, can not arise by seeing movement of a tree, etc., which lacks bodily expression.

PAGE-760

It is right ____ Only coming in contact with visible-object is the function of seeing-consciousness (*cakkhu viññāṇa*). Taking the object of special expression called movement associated with inner desire is actually, not the function of seeing-consciousness. Although seeing-consciousness is unable to know special expression associated with inner desire, due to presence of very rapid function of mind, worldly person who are unable to know the significance of ultimate *dhamma*, suggest that special expression corporeality can be seen by seeing-consciousness. As “worldly person without eye of wisdom is unable to know significant difference between two kinds of cognitive processes, i.e., seeing-consciousness of eye-door cognitive process which arises by means of coming in contact with brown colour and the consciousness of mind-door cognitive process which arises by means of knowing as brown colour, the bodily expression corporeality which arises simultaneously with mind; which is significant gesture; which is able to support and move the whole body (= all corporeal *dhammas*), can be known by consciousness of mind-door cognitive process which is misunderstood as seeing-consciousness of eye-door cognitive process after taking the object of special expression corporeality. Then these kinds of knowing that “this person seems to have desire to do this function, this intention is that person’s desire,” is arisen consequently. (*Mūlaṭī-1-72, 73*)

4.78.2 The cognitive process that knows bodily expression (*viññatti*)

Pāli QuotaitonPāli verse page 760 vol I

There are four successive cognitive processes through which bodily expression can be known as follows.

1. seeing-consciousness of eye-door cognitive process which is able to know only colour,
2. consciousness of following mind-door cognitive process which are able to know previous colour object (*tadanuvattika manodvāravīthi*),
3. consciousness of mind-door cognitive process which are able to know bodily expression (*viññatti*),

4. consciousness of mind-door cognitive process which are able to know inner desire through bodily expression,

In this case, according to the words “*vaṇṇaggahaṇānusārena*”(Mūlaṭṭī-1-72), it shown that those successive processes which follow visible-object are seeing consciousness of eye-door cognitive process and consciousness of mind-door cognitive process.

According to this phrase “*gahitāya viññattiyā*” (Mūlaṭṭī-1-72), it shows number (3) mind-door cognitive process which is the cause of knowing as bodily expression.

According to these phrases, “*yam karaṇam viññātabbam, tassa vijjānanena*” (Mūlaṭṭī-1-72), it shows number (4), mind door cognitive process which knows inner desire through bodily expression.

PAGE-761

4.78.3 Kāretimaññe (Abhi-A-1-125)

According to the phrase, “this person seems to have desire to do this function”, it shows how the seer comprehends inner desire of the person who moves hand, leg etc. According to this phrase, “*kāreti maññe*”, bodily expression corporeality which is the source of knowing of inner desire has also been comprehended, due to showing like that. It is right ____ It should be recognized the fact that the inner desire of the person who moves hand, leg, etc., is comprehended by consciousness of fourth mind-door cognitive process after bodily expression corporeality had been known by third mind-door cognitive process, which follows the second mind-door cognitive process knowing previous visible object which is taken by the first seeing-consciousness of eye-door cognitive process.

4.78.4 Clarification by comparison

Pāli Quotation (Abhi-A-1-125, 126)

It will be clarified by the following comparison. ____

In the forest during summer time, people usually make symbols tying palm leaf, etc., up on top branch of tree with intention that “everyone can know that there is water in this place by this symbol”.

There is a flag at the entrance of pub.

Furthermore ____ the wind causes shaking of high tree. When the fish moves under surface of water, small swirls will be arisen. Along with the both sides of upper drainage basin, grasses, leaves and rubbish were left after heavy flood.

According to mentioned above, palm leaf, flag, shaking of tree, swirl, grasses, leaves and rubbish can be seen by seeing-consciousness of the eye-door cognitive process for every person with visible eye. Due to seeing by that ways, although it is invisible by seeing-consciousness, one can reason these facts ____

1. there is water in this place with tied palm leaf,
2. there might be alcohol in this place with flag,
3. this tree might be shaken by wind,
4. there might be a fish in the water,

PAGE-762

5. it might be a phenomenon that about this range of drainage basin had been flooded, etc., through consciousness of mind-door cognitive process.

Similarly, bodily expression can not be seen by the seeing-consciousness but by the consciousness of mind-door cognitive process. It is right ____ the visible-object can be seen by the seeing-consciousness of eye-door cognitive process through hand’s significant gesture etc. Bodily expression, actually, can be known by reasoning of continuity of consciousness of mind-door cognitive process and it is comprehended that “this person seems to have desire to do this function and this function also”. (Abhi-A-1-125, 126)

The palm leaf tied up on top branch of tree in the forest during summer time and the flag set up at the entrance of pub, etc., are similar to visible-object of moving hand. After those palm leaf, flag, etc., had been seen, comprehension on the presence of water, alcohol, etc., is similar to comprehension on bodily expression

by means of mind-door cognitive process after the seeing-consciousness together with eye-door cognitive process and successive following mind-door cognitive processes which know the colour object. This is a parallelism drawn roughly between them. There are more detailed cascade of cognitive processes had been explained in *Mūlaṭṭkā* as follows.

Pāli Quotaiton (Mūlaṭṭī-1-73)

The meaning of this subcommentary is as follows.

When the palm leaf tied up on top branch of tree, etc, has been seen,

1. eye-door cognitive process (*cakku-dvāra vīthi*) which is able to know visible-object of palm leaf etc and
2. mind-door cognitive process which is able to know previous visible-object taken by eye-door cognitive process, arises successively. Just after that mind-door cognitive process called *tadanuvattika manodvāra vīthi*,
3. successive number (3) mind door cognitive process which is impossible to be understood for worldly persons without eye of wisdom, is able to know correlation between symbol of palm leaf, etc., and presence of water.

It should be recognized the fact that correlation between symbol of palm leaf etc., and presence of water which is known by number (3) mind-door cognitive process, and comprehension on recognition mark of presence of water after symbol of palm leaf, are similar to comprehension on bodily expression with inner desire by two successive mind-door-cognitive processes respectively.

PAGE-763

It will be continued.____ Regarding to the phrase, “the water would be present in this place”, it should be recognized the fact that the presence of water is deserving to comprehend by successive mind-door cognitive process which follows previous mind-door cognitive process, i.e., the process of knowing visible-object, due to presence of correlation with water etc... With regard to knowing that water etc., it should be recognized the fact that mode of that symbol of presence of water had been comprehended.

Then it should be recognized the fact that relation of determinative dependence is previous mind-door cognitive process which takes the object of correlation for either mind-door cognitive process which takes the object of gesture arisen in this body-door (= bodily expression) in the aspect of subject of comparison (*upameyya*) or mind-door cognitive process which takes the object of water etc.. in the aspect of object of comparison (*upamāna*).

In those explanations of above sub-commentary _____

With regarding to the phrase, “*tālapaṇṇādirūpāni dissvā*” (= after colour object of palm leaf, etc., has been seen), it shows eye-door cognitive process and successive mind-door cognitive process which continues to take that previous colour object.

With regarding to the phrase, “*tadanantarappavattāya manodvāravīthiyā*” (= by mind-door cognitive process which is contiguous to that two kinds of cognitive processes), it shows mind-door cognitive process which comprehends correlation between palm leaf and water, and mind-door cognitive process which comprehends the fact that palm leaf is recognition symbol of presence of water.

With regarding to the phrase, “*udakādiggahaṇam*”, (= comprehension on the presence of water ..etc..), it shows mind-door cognitive process which comprehends the nature of presence of water. This kind of mind-door cognitive process is similar to mind-door cognitive process which comprehends inner desire of person who shows hand’s shake etc.

With regarding to the phrase, “*udakādisahacārippakāratam saññāṇākāram gahettvā udakādiggahaṇam viya*” (= As taking the object of usual occurrence of palm leaf, etc., associated with water, etc., and the object of presence of water through recognition symbol of that water etc..), it shows the fact that mind-door cognitive process which takes the object of deduction by which comprehends the fact that palm leaf, etc, usually occurs together with water, etc., and mind-door cognitive process which takes the object of recognition symbol of that water etc., are similar to mind-door cognitive process which comprehends bodily expression. It should be recognized the fact that “in order to comprehend bodily expression, another kind of mind-door cognitive process which comprehends correlation between hand’s shake and desire to come is also present”. That kind of mind-door cognitive process is not included in above mentioned verse, “*rūpam pathamacittena*” etc ... According to these words, there is also one kind of cognitive process. If the palm leaf

which is recognition symbol for “presence of water”, is seen, it can be remembered on correlation between palm leaf and water.

The cognitive process which recollects that previous correlation is called *purimasiddha sambandhaggahāṇa vīthi*. It should be recognized similarly on the recollection of previous correlation between hand’s shake and desire to come in this way.

PAGE-764

4.78.5 Explanation by another way

* *Atha panātiādinā viññattiyā anumānena gahetabbatam dasseti. (Anuṭṭi-1-79)*

With regarding to the phrase, “*manodvāraviññāṇena gahite tasamin cittena saheva anuparivatte kāyathambhanavikāra copanasankhāte*” (*Mūlaṭṭi-1-73*), it shows special expression called *viññatti* is deserving to be known directly by consciousness of mind-door cognitive process. Furthermore, it is explained on bodily expression which can be known by deductive reasoning (*anumāna*) as follows.

In other words, although bodily expression is not taken directly as an object of consciousness of mind-door cognitive process, the former is able to benefit for the cognitive process which comprehends inner desire called gesture of body-door in order to take previous experienced correlation by means of efficiency of relation of determinative dependence (*upanissaya paccaya*). It is because it is impossible to arise mind-door cognitive process which arises together with inner desire and bodily expression; which is contiguous process of mind-door cognitive process taking visible-object; which comprehends inner desire of person who shows hand’s shake, in the absence of bodily expression with inner desire of that person.

[It is a question that how bodily expression is able to benefit cognitive process which takes object of inner desire called gesture of body-door although it is not deserving to take as direct object of mind-door consciousness. The answer is _____ “If any one has desire to come, he shows hand’s shake”, for that instance, by means of efficiency of relation of determinative dependence of mind-door cognitive process which recollects correlation between “desire to come” and “hand’s shake”, bodily expression can be the cause of comprehension on inner desire called gesture of body-door nevertheless it is directly taken by the mind-door consciousness. While hand is shaking, the shape of hand arises together with bodily expression. That bodily expression, in turn, arises together with inner desire of person who shows hand’s shake. In the absence of bodily expression, it is impossible to arise mind-door cognitive process which comprehends inner desire; which is contiguous process of eye-door cognitive process and mind-door cognitive process called *tadanuvattika manodvāravīthi*. It, therefore, means that “special expression called *viññatti* benefits for arising of cognitive process which comprehends inner desire called gesture of body-door by means of efficiency of relation of natural determinative dependence (*pakatūpa nissaya*) nevertheless it is directly taken by the mind-door consciousness. With regarding to these words, it shows that special expression called *viññatti* is deserving to know by deductive reasoning on inner desire.

PAGE-765

This is the meaning of explanations found in *Mūlaṭṭikā*. However, it is instructed to discern and keep in mind all kinds of both real and non-real corporeal *dhammas* commonly in the *nāmarūpapariccheda ñāṇa* in *Visuddhimagga-2-225*. Whereas the mind-door consciousness of practising *meditator* who is able to discern and keep in mind both corporeal and mental *dhammas* up to the field of ultimate reality, is possible to take the object of bodily expression directly. It should be recognized on the fact that above explanation of *Mūlaṭṭikā Sayadaw*, “special expression called *viññatti* is deserving to be known by deductive reasoning on inner desire”, refers to worldly persons who are unable to see the ultimate corporeality by insight. It should be reviewed on the word of *Mūlaṭṭikā*, “*Aviññāyamānantarāya*” (*Mūlaṭṭi-1-73*).

As it is apparent that “palm leaf is recognition symbol of presence of water without special regard to it but by means of arising of mind-door cognitive process that comprehends water contiguously after cognitive process which comprehends visible-object of palm leaf etc., during showing hand’s shake, bodily expression (*viññatti*) is also apparent by means of deductive reasoning (*anumāna*), due to contiguous arising of mind-door cognitive process which comprehends inner desire just after arising of mind-door cognitive process which comprehends hand’s shake. With regarding to the phrase, “this person seems to have desire to

do this function”, it, therefore, means the fact that the commentary explained that bodily expression (**viññatti**) is also apparent by means of deductive reasoning (**anumāna**), due to comprehension on inner desire accordingly.]

4.78.6 The *dhamma* that should be known

Pāli-Quotation (Abhi-A-1-126)

It will be continued. _____ This bodily expression corporeality is known as **viññatti**, due to not only the comprehensible nature but also the nature that should be known. [With regarding to this phrase, it should be recognized that it showed “**viññāyatīti viññatti**”, (= It is known as **viññatti**, due to occurrence of nature that should be known), which is a kind of grammatical interpretation.]

For instance _____ The bodily expression is apparent in at least animal behavior. It is right. _____ If a group of domestic dogs, foxes, crows, cows, etc., in such place are shown by an aggressive gesture with something, such as stick, stone piece etc., they comprehend that “this person seems to have desire to beat or throw” and flee away from here to there.

Then, that bodily expression is unobvious in such time for other’s mind who is separated by wall, partition, etc. Whereas it is unobvious in such moment while separation of that wall, partition is present. Though it is unobvious one for that moment, it is known as bodily expression (**viññatti**), due to occurrence of obvious nature for faced person’s mind. (**Abhi-A-1-126**)

PGE-766

Pāli-Quotation (Mūlaṭī-1-73)

With regarding to the phrase, “this person seems to have desire to beat or throw”, (**Abhi-A-1-126**), it shows obvious arising of the bodily expression (**viññatti**), due to comprehension with inner desire of beater or thrower. It is right _____ It is actually, impossible to comprehend inner desire, unless that bodily expression is obvious.

With regarding to the phrase, “it is known as bodily expression (**viññatti**), due to occurrence of obvious nature for faced person’s mind”, (**Abhi-A-1-126**), as it is finished to explain the fact that due to absence of face to face direction, the visible-object, etc ... which never strike eye-clear-sensitivity and **bhavanga** mind-clearness, is the **dhamma** that should be known by seeing-consciousness (**cakkhuvīññeya dhamma**), it is also finished to explain bodily expression called **viññatti**, which is a kind of genuine nature, by two kinds of interpretations,

1. **viññāpetīti viññatti** = it is known as **viññatti**, due to occurrence of comprehensible nature,
2. **viññāyatīti viññatti** = it is known as **viññatti**, due to occurrence of nature that should be known, similarly.

That bodily expression which arises together with mind, is comprehensible to bring forth walking forward, etc., without desire to be known by other. Bodily expression, itself is also should be known and it is deserving to know. It should be recognized bodily expression with two varieties.

4.79.1 Mode of arising of movement

Pāli Quotation (Abhi-A-1-126)

There is a question in this case, that whether three kinds of corporeal **dhammas** produced by **kamma**, temperature, nutriment, are moving or not, while all corporealities produced by mind (call corporeal units produced by mind) are moving. The answer is that _____ those corporeal **dhamma** produced by three origins will be moved as well as all corporeal **dhamma** produced by mind. There are the same nature of arising of the former which always follows all corporeal **dhammas** produced by mind.

PAGE-767

It will be clarified by parallelism.____

When heavy water current flows along with a stream or river from high mountain, dry sticks, dry leaves, dry grasses etc., which fall into water have the same phenomenon with water current.

It should be understood this parallelism with simile in which when that water current stops they will be stopped and when the former flows they will be flowed.

Thus it should be recognized that among all kinds of corporealities produced by mind, this bodily expression corporeality is known as *kāyakamma dvāra* (= the function of body-door). (*Abhi-A-1-126*)

4.79.2 The meaning of movement

desantaruppatti hetubhāvena, (Mūlaṭṭi-1-72)

The nature of corporealities is indeed, the process in which they perish away at the same place where they arise just after arising phase. It is no time to move from one place to another. However, if there are producing causes of corporealities apparently, those benefit production of new ones even though old ones perished away. The movement, indeed, means the successive arising of new corporeal units in another place without arising in previous place. That kind of production of new corporeal units is caused by ability of the air-element consisting in corporal units produced by seventh consciousness of impulsion which are supported by the air-element consisting in preceding corporeal units produced by mind. If corporeal units produced by mind arise in new places, those corporeal units produced by *kamma*, temperature, nutriment also arise that new places concomitantly. Worldly persons usually misunderstand on that inconstant arising in different places as “movement”.

Therefore, if the practising person discerning on deportment (*iriyāpatha*) and clear comprehension (*sampajañña*) reaches to this sage of *rūpakammaṭṭhāna*, he must discern and keep in mind previously

1. conveyable corporeal *dhammas*, and
2. conveyed corporal *dhamma*,
in other words,
 1. corporeal *dhammas* which are able to support and maintain the whole body
 2. the whole body (= all kinds of corporealities) which are supported and maintained,

PAGE-768

in other words,

1. significant corporealities of deportment (= corporealities with special expression)
2. non-significant corporealities produced by four origins (= all kinds of corporealities produced by *kamma*, mind, temperature, nutriment, except corporealities with special expression),

in order to reach the field of ultimate reality by penetrative knowledge which is able to break down compactness of corporeality. It will be continued to present way of discerning on five-aggregates related with those deportments (*iriyāpatha*) and clear comprehension (*sampajañña*) in the next section, Volume 2. *Nāmakammaṭṭhāna*.
